

NASA ADMINISTRATOR CALLS CONGRESSIONAL VOTE AN IMPORTANT STEP FORWARD IN SPACE EXPLORATION

NASA Administrator Charles Bolden issued the following statement:

“We are on the verge of an historic vote in the House of Representatives on a comprehensive NASA authorization bill that is expected to chart the future course of human space flight for years to come. I am hopeful that S. 3729 -- the National Aeronautics and Space Administration Authorization Act of 2010-- will receive strong support in the House and be sent onto the President for his signature.

“Earlier this year, President Obama laid out an ambitious new plan for NASA – one that helps blaze a new trail of innovation and discovery. His plan would invest more in NASA; extend the life of the International space station; launch a commercial space transportation industry; foster the development of path-breaking technologies; help create thousands of new jobs; and embark on a fundamentally more ambitious strategy to expand our frontiers in space.

“Passage of this bill represents an important step forward towards helping us achieve key goals the President has laid out. If passed, the bill would help put the U.S. space program on a more sustainable trajectory and inspire a new generation of Americans to pursue careers in science, technology, engineering, and mathematics. This important change in direction will not only help us chart a new path in space, but can help us retool for the industries and jobs of the future that will be vital for long term economic growth. NASA appreciates all of the hard work and effort that has gone into advancing this legislation.

“I also salute our dedicated employees for continuing their good work and keeping their eyes on the prize during these important deliberations. Our workforce has proven time and again that it can meet any challenge. Congress and the President are once again calling on us to step up and move this nation forward in space exploration.

“NASA is grateful for the longstanding, bipartisan support that it receives from the Congress. There is still a lot of work ahead, especially as the 2011 appropriations process moves forward, but the continuing support for NASA ensures America’s space program will remain at the forefront of pioneering new frontiers in science, technology, and exploration.”
