

Summary of Current Issues Regarding Space Flight Habitability

Jennifer Blume Novak (2000). *Aviation Space Environmental Medicine* 2000; 71(9, Suppl.):A131-2.

Abstract: One of the implicit, yet often under-emphasized qualities of human tended spaceflight is the habitability of the spacecraft and mission. This document summarizes some of the points that characterize the current status of this topic. In addition, the summary concludes with goals for future development for this issue.
