

## **Introduction**

Hi I'm Mark Geyer, and from 1994 to 2005 I worked on Space Station, a lot of different jobs. I worked from Russian Elements Integration, where I started, all the way through running the Integration team, where we do integrated performance on the space station assembly sequence, and then also eventually ran the mission management team for space station operations for about 9 months. Since about 2007 to today I have been the Orion Program Manager for NASA.
