

USA AND THE INTERNATIONAL SPACE STATION

*Unrivaled
Experience in ISS
Integration and
Operations*

For more than a decade, United Space Alliance (USA) has been prime contractor for Space Shuttle and International Space Station (ISS) operations. We have an outstanding track record operating the world's most complicated space transportation systems. Our capabilities include

- Professional services
- Program integration/management
- Flight and ground crew training and certification
 - Astronauts, engineers, technicians
- Real-time mission execution

We have put our expertise to work assisting government, academic, nonprofit and commercial customers with flying and integrating payloads on the International Space Station. We can provide essential processing and cargo integration services in conjunction with

- Advanced planning, integration, and design support
- Unique processing of ISS hardware
- Ground support equipment/facility modifications

USA's goal is to increase the potential of mission success for ISS payloads. Our experience has taught us that clearly defining and communicating requirements and expectations leads to safe payload operations and successful research. The ultimate result: maximum science return.

Proven Performance

USA's record of performance over 40 Space Shuttle missions and 19 ISS increments is unrivaled. Documented improvements in every aspect of program performance exemplify USA's dedication and commitment to our customer's success.

Whether it is an end-to-end, cradle-to-grave approach or a single, integrated project tool, our unique combination of space operations skills, capabilities, experience and innovation produce high-efficiency, low-risk solutions for our customers.
