

## FD 15 MMT Summary

The MMT met briefly to review mission progress, orbiter systems and entry readiness. The mission is progressing extremely well and Endeavour is performing extremely well.

All of the ground systems are ready for Friday's landing opportunity. Endeavour's consumables will support EOM+2 with LiOH being the limiting consumable. Only KSC will be called up for support on EOM. If a deorbit wave-off occurs on EOM, the alternate landing sites will be called up on EOM+1.
