

Ronald Gilliland is an Astronomer at the Space Telescope Science Institute, which manages the Hubble Space Telescope (HST). He received his undergraduate degrees in Physics, Mathematics and Astronomy from the University of Kansas, Lawrence in 1974, and holds a doctorate in Astronomy from the University of California at Santa Cruz in 1979. Gilliland specializes in research that involves precise photometric observations of the type that Kepler is capable of providing, and has made many contributions to the study of exoplanets and stellar oscillations using ground-based telescopes and the HST. He also is the author of more than 150 scientific papers.
