

Software Traceability

“The ability to describe and follow the life of a requirement, in both a forward and backward direction, e.g. from its origins, through its development and specification, to its subsequent deployment and use, and through periods of ongoing refinement and iteration in any of these phases”

Gotel & Finkelstein

Project Document Hierarchy

3

- ▶ How do we verify that all requirements have been met?
- ▶ Is that all design elements exist to satisfy requirements?

Information Retrieval (to the rescue)

4

Information Retrieval (IR)

methods and techniques to identify
relevant documents in documents
given user queries.

Generated Traceability Matrix

- Intersection of Statistics, AI and Data Science
- Proven success

Importance of TMs

5

- Some Software Engineering Activities that Require TMs
 - Criticality analysis
 - Requirement satisfaction
 - Change impact analysis
 - Hazard reachability analysis
 - Regression testing
 - Traceability analysis
 - Risk analysis
 - Test Plan and Test Case Generation
 - Interface analysis
 - Consistency checking

How Ensure TMs are Accurate?

6

- Manual review
 - ▣ Time consuming
 - ▣ Error prone
 - ▣ Mundane
- Spot check
 - ▣ Incomplete
 - ▣ Mundane
- Assisted checking – enter Trace Matrix Analysis

Trace Matrix Analyzer (TMA)

7

- Treat TM as graph (edges, nodes)
- Apply graph heuristics to TM analysis
 - ▣ Children with too many parents?
 - ▣ Parent with no child?
 - ▣ Possible missing links?
 - ▣ Possible bad link?
- Visualize possible issues

Advantages

8

- Greatly reduce workload of those performing requirements assurance
- Simple to operate
- Friendly User Interface (UI)
- Powerful expandability

9

DEMO of TMA

CoEST's vision

10

- The **vision** of the COE for Software Traceability is to provide leadership for traceability research, education, and practice; promoting the pursuit of excellence from research idea to practice, based on a foundation of innovative, ethical, collaborative work
- Seed funding was provided by NASA and NSF

Everyone is welcome to join!

COEST Organization

11

1:44 PM

The screenshot shows the COEST website with a navigation bar containing 'About CoEST', 'Traceability', 'Directions', 'Resources', and 'Contact Us'. The main content area is titled 'Officers' and lists the following roles and names:

- Director:** Jane Huffman Hayes, Associate Professor, University of Kentucky
- Vice Director of Europe:** Andrea Zisman, Professor, City University, London
- Vice Director of the Americas:** Jane Cleland-Huang, Associate Professor, DePaul University, Chicago
- Secretary/Treasurer:** Alexander Egyed, Professor, Johannes Kepler University, Linz, Austria
- Body of Knowledge Coordinator:** Alexander Dekhtyar, CalPoly.
- Grand Challenges Coordinator:** Olly Gotel, Independent Consultant
- Publications Coordinator:** Jonathan Maletic, Professor, Kent State University
- Student Coordinator:** Giulio Antoniol, Ecole Polytechnique Montreal, Canada

On the left sidebar, there is a search bar with the text 'Search CoEST' and a 'Go' button. Below it, a 'NEW BOOK' announcement for 'Software and Systems Traceability' is featured, listing authors Andrea Zisman, Jane Cleland-Huang, and Olly Gotel, published by Springer Verlag, to be released in Fall of 2011.

Ubiquitous Traceability

- **Major Research Project:** RP1.1 Provide automation such that traceability is encompassed within broader software and systems engineering processes, and is integral to all tool support
- **Supporting Research Projects:** RP1.2 Embed traceability into all the software and systems engineering techniques and methods that it facilitates, and transfer this into industrial tool support
- RP1.3 Total automation of trace creation and trace maintenance, with quality and performance levels superior to manual efforts

Benchmarks

- A benchmark is a point of reference by which something can be measured
 - ▣ A program that is specially designed to provide measurements for a particular operating system or application
 - ▣ A set of performance criteria which a product is expected to meet
 - ▣ A set of conditions against which a product or system is measured

Benchmarks

14

- **Define a task**
 - ▣ Retrieve/Generate traces from high level to low level requirements
- **Provide datasets**
 - ▣ CM1, HIPAA to World Vista, IBS
- **Agree on a core set of metrics**
 - ▣ Recall, Precision, Lag, Average Precision
- **Capture/Report benchmarked results**

TraceLab- The Vision

15

- Build a tool, similar to MatLab, but designed specifically for the traceability community
- Equip new researchers with basic algorithms and components
- Make it easier to perform rigorous comparative evaluations
 - ▣ Datasets
 - ▣ Benchmarks
 - ▣ Repeatable experiments
- Permit practitioners to use “best” algorithms for specific benchmark

TraceLab

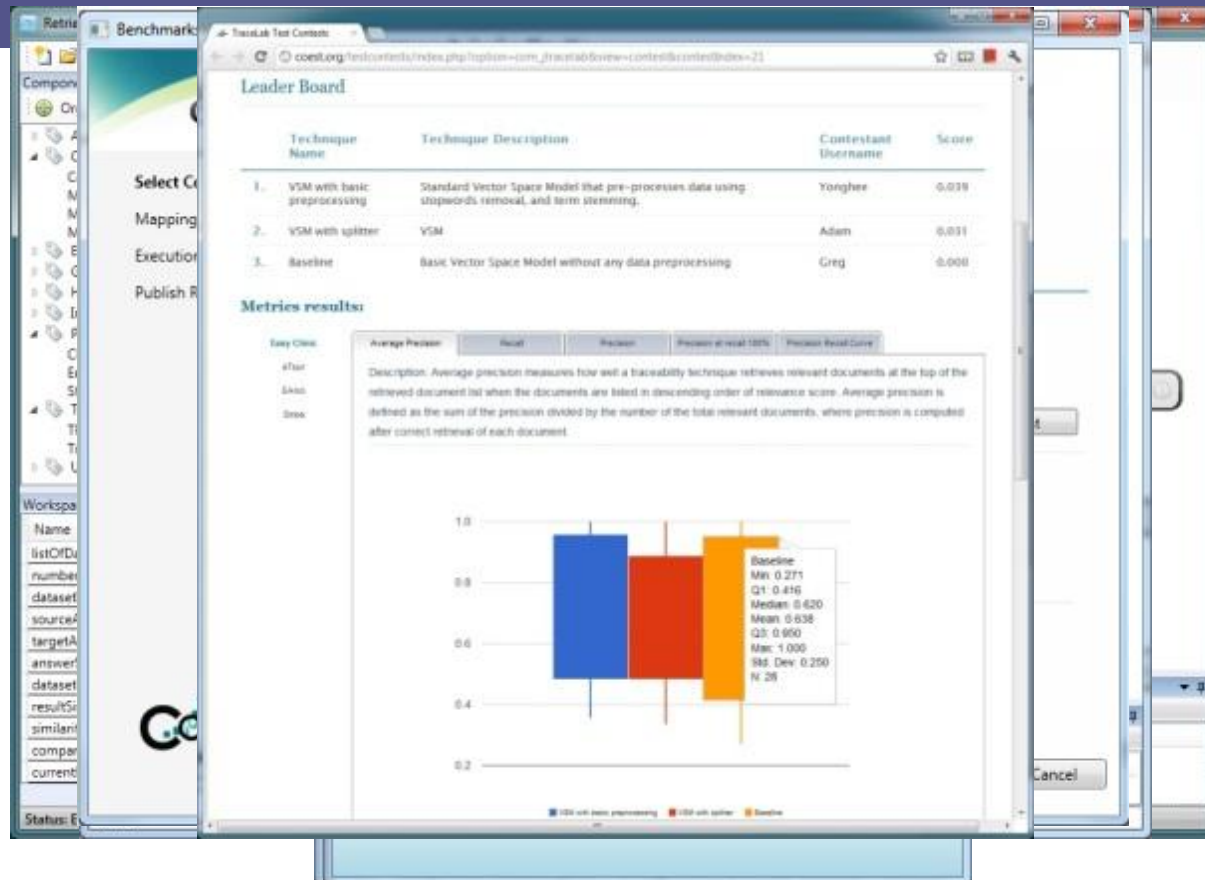

16

- Research environment designed to allow researchers to visually compose, execute traceability experiments using library of shared components
- Components in any memory managed language such as Java, C#, etc. TraceLab also allows calls to tools such as Matlab, R, etc.
- TraceLab currently runs in Windows environment but designed to port to Linux

TraceLab - The Role of Contests

17

- Define contests for community participation
 - ▣ Task (feature location)
 - ▣ Data set (benchmark)
 - ▣ Collection of “frozen” components with one “open”
- Prize to winner
- Permit practitioners to use “best” algorithms for specific benchmark (“player” from contest winner)

TraceLab Environment

19

The screenshot displays the TraceLab environment interface. On the left is the **Components Library** with a tree view containing categories like Algorithms, IO, Preprocessors, Results, and Utilities. Below it is the **Workspace View** table:

Name	Type	Val
answerMatrix	TraceLabSDI	Trac
originalSourceArtifacts	TraceLabSDI	Trac
originalTargetArtifacts	TraceLabSDI	Trac
sourceArtifacts	TraceLabSDI	Trac
targetArtifacts	TraceLabSDI	Trac
dictionaryIndex	TraceLabSDI	Trac

The main workspace shows a workflow diagram starting with a **Start** node, branching into **Target Artifacts Importer and Preprocessor**, **Source Artifacts Importer and Preprocessor**, and **AnswerMatrixImporter**. The **Target Artifacts Importer and Preprocessor** feeds into a **TFIDF Dictionary Index Builder**, which then feeds into a **Tracer Component**. The **Source Artifacts Importer and Preprocessor** also feeds into the **Tracer Component**. The **Tracer Component** feeds into **Results Metric Computation**, which then feeds into **Results Charts**, and finally **End**. A zoom slider on the left is set to **1.00x**.

An inset window titled **TFIDF Dictionary Index Builder** shows the component's configuration:

Input	Mapped to	Type
listOfArtifacts	targetArtifacts	TraceLabSDK.Types.TLArtifactsC

Output	Output as	Type
dictionaryIndex	dictionaryIndex	TraceLabSDK.Types.TLDictionary

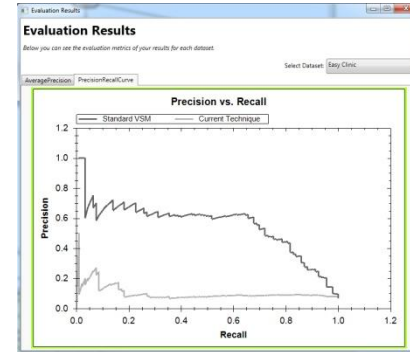

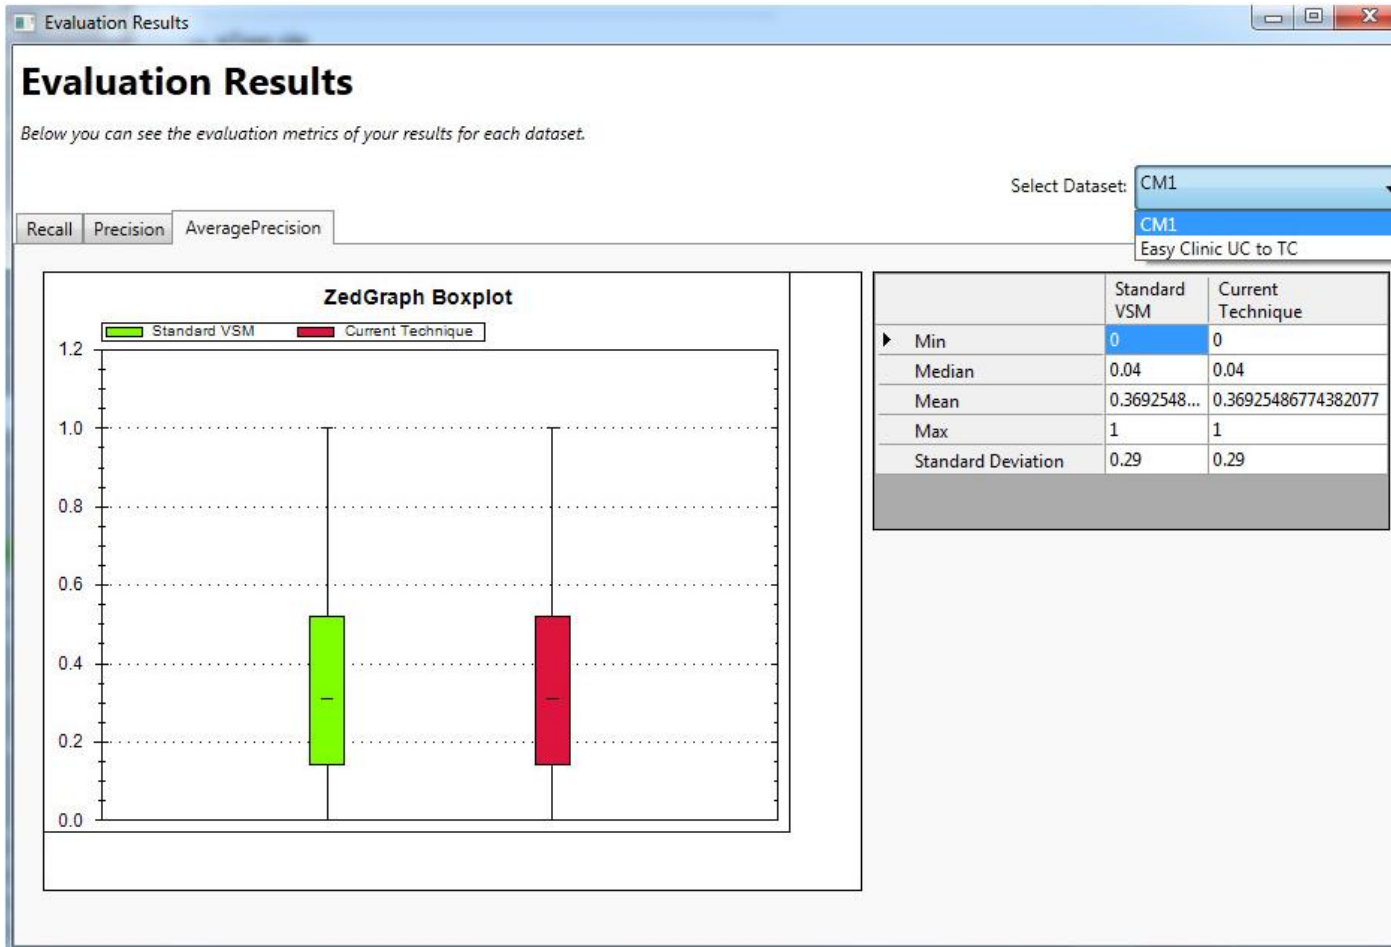

At the bottom, the **Output** window shows the following log entries:

Severity	Source	Message
Trace	Tracer Component	Completed component TracerComponent
Trace	Results Metric Computation	Start component ResultsMetricsComponent
Trace	Results Metric Computation	Completed component ResultsMetricsComponent

Status: Experiment done!

Standardized Metrics

20

Creating Contest for Traceability Techniques

21

The screenshot shows the homepage of the Center of Excellence for Software Traceability (CoEST). The browser address bar displays 'www.coest.org'. The website features a dark teal header with the CoEST logo on the left and navigation links on the right. The main content area includes a large banner image of an airplane flying over a sunset, with a yellow sidebar on the right containing text about the center's vision and a list of research directions.

Evaluation Methods

Center of Excellence for Software Traceability

The vision of the Center of Excellence for Traceability (CoEST) is to provide leadership for traceability research, education, and practice; promoting the pursuit of excellence from research idea to practice, based on a foundation of innovative, ethical, collaborative work.

Supporting regulatory compliance in safety critical software systems.

Example Contests

22

- Contest 1
 - ▣ Task: Trace retrieval from use cases to code
 - ▣ Data Sets: EasyClinic, eTour, Eanci, SMOS
 - ▣ Metrics: Average Precision
- Contest 2
 - ▣ Task: Reducing human effort for relevance feedback
 - ▣ Data Sets: EasyClinic, eTour, Eanci, SMOS
 - ▣ Metrics: Average Precision, Number of feedbacks provided by human analyst

TraceLab Timeline

23

- Currently in beta-use at 6 universities
- Planned public release in July 2012 in conjunction with launching 5-6 research contests – culminating in The Grand Challenges of Traceability at ICSE 2013
- Will be open-sourced towards the Fall of 2012
- <http://www.CoEST.org>

Questions?

26

Backup

Challenges

- 2. **Purposed** - Traceability is fit for purpose and supports stakeholder needs.
- 3. **Cost-Effective** - The return from using traceability is adequate in relation to the outlay of establishing it.
- 4. **Configurable** - Traceability is established as specified, moment-to-moment, and the rich semantics accommodate changing stakeholder needs.
- 5. **Trusted** - All stakeholders have full confidence in the traceability, as it is created and maintained in the face of inconsistency, omissions and change; they can and do depend upon it.
- 6. **Scalable** - More and more artifacts are supported by traceability, of varying types and at variable levels of granularity, as the traceability extends through-life, and across organizational and business boundaries.
- 7. **Portable** - Traceability is exchanged, merged and reused across projects, organizations, domains, product lines and supporting tools.
- 8. **Valued** - Traceability is a strategic priority valued by all, where every stakeholder has a role to play and actively discharges his or her responsibilities.

What is a grand challenge?

28

What
makes this
a good
Grand
Challenge?

Is “Traceability” a grand challenge?

29

- Is traceability **important**? Why?
- Is traceability **difficult** to achieve?
- Do we have a **clear vision** of where we want to go?

" I MUST SAY, SIMMS, WHEN YOU'RE HOT YOU'RE
HOT BUT WHEN YOU'RE NOT YOU'RE NOT!"

Recall vs. Precision
problem – small changes in thresholds can have inordinate impact upon recall vs. precision – creating zigzag graphs. For benchmarking metrics, how do we overcome this?
