If any process in this document conflicts with any document in the NASA Online Directives Information System (NODIS), this document shall be superseded by the NODIS document.
Any external reference shall be monitored by the Process Owner for current versioning.
1.0 Purpose

The purpose of this system level procedure (SLP) is to document and establish a consistent method for performing tasks assigned to the IV&V Safety and Mission Assurance (SMA) Support Office (SSO).

2.0 Scope

This SLP addresses SSO team member planning, scoping, performing, reviewing and delivering of the SMA products/services.

3.0 Definitions and Acronyms

Official NASA IV&V roles and terms are defined in the Quality Manual. Specialized definitions identified in this SLP are defined below.

3.1 Scope of Work

Scope of Work is an agreement that represents the size/extent of work to be performed by the SSO for its customers and is documented in the Task Summary.

3.2 Task Summary

The Task Summary is a document/record that captures and summarizes the effort associated with each SSO task. This document covers the scope of work, objectives, planned activities and status, customer feedback, issues and concerns, and task summary status/conclusions. It is updated on a monthly basis, and is closed-out and recreated on a Fiscal Year (FY) basis.

3.3 Product Log

The Product Log captures the completion, peer review, approval, and customer acceptance of a particular product as defined in the Task Summary. These products include, but are not limited to, reports and various analysis results delivered to customers.
3.4 Acronyms

4.0 Process Flow Diagram

The following diagram depicts process of planning, scoping, performing, reviewing, and delivering of the SMA products/services described in this document, and the responsibilities and actions that shall be performed by process participants. Any information supplemental to the depicted process will appear after the diagram.

The IV&V SMA Support Office Lead pre-plans, coordinates, and identifies potential customers in need of software assurance services/products and contacts the appropriate customer’s representatives to discuss and identify specific software assurance needs and available services/products. Once it is determined services/products are needed, a plan is developed and the scope of
work is negotiated and agreed upon with the customer(s) then documented in the Task Summary. The SSO product owner then executes the activities necessary to perform the required services and develop the products. Execution and status of the task is documented in the Task Summary on a monthly basis. When the services/products are completed, a peer review is conducted utilizing an iterative process to disposition comments/changes prior to SSO Lead review and approval. Once approved by the SSO Lead the product(s) are documented in the Product Log prior to release, and delivery to the customer for acceptance.

4.1 SMA Product /Services

4.1.1 Software Hazard Analysis (SWHA)

The SMA Support Office performs analysis on safety and mission critical software to identify and trace software that controls, mitigates, and contributes to the hazards outlined in the Preliminary Hazard Analysis (PHA). SSO performs SWHA from a systems view and, when appropriate, performs SWHA in parallel or in conjunction with personnel performing the hardware hazard analysis. This parallel effort could include generating a single fault tree analysis (FTA) covering both hardware and software faults as well as producing joint hazard reports. A summary of the SWHA products include: FTA reports with fault trees, hazard reports, trace matrices, verification checklists, etc. as defined in the project software safety and/or assurance plan.

4.1.2 Software Assurance (SA) Plan Development

The SMA Support Office supports the development of project Software Assurance and Safety Plans. These plans delineate the SA activities for the software development and maintenance activities required throughout the lifecycle of a project, ultimately to assure software’s contribution to safety and quality. The primary focus of this effort is to provide a plan or product that is approximately 95% complete to be formalized and approved by the customer/project team.
4.1.3 Software Standards Update & Review

The SSO works closely with NASA Headquarters to aid in the development, update and review of agency software standards. The primary focus of the effort is to review and facilitate the development and/or update of new and existing agency software standards. The SSO also provides assessments of current industry standards sharing NASA’s perspective with industry’s standard developers and supports the development of these standards and alternatively incorporates industry’s perspectives as applicable.

4.1.4 NASA Procedural Requirements Handbook Development

The SSO works closely with NASA Headquarters to aid in the development and updating of agency NASA Procedural Handbooks. The primary focus of the effort is to develop/update new and existing handbook(s). The activities include supporting the collection and formulation of data to be used to update handbooks and in some instances create a web based electronic handbook.

4.1.5 Data Requirements Document (DRD) Analysis

The SSO performs analysis of DRDs to ensure that all the necessary information and artifacts needed by the NASA IV&V Program will be made programmatically and/or contractually available by missions/projects selected to receive IV&V services. A secondary objective is to ensure that projects create and deliver artifacts required for SMA. The analysis results will be summarized and reported to the mission/project (DRD owner) and the appropriate center SMA organization.

4.1.6 Software Assurance Product Assurance

The SSO reviews the required project documentation relative to project requirements and NASA-STD-8739.8, NASA Software Assurance Standard. This effort assures that the SA plan, products and related documentation adhere to the project software
management plan and comply with the agency standard, project requirements, and associated contract(s).

4.1.7 Information Assurance (IA) Security Analysis

The SSO performs full-lifecycle (i.e., Concept to Deployment) Information Assurance (IA) security analysis to ensure the logical and systematic conversion of customer or product requirements into total secure systems solutions that acknowledge technical constraints. Independent assessments (e.g., system and software security vulnerability, threat, and risk assessments) and penetration tests are conducted on development and large-scale operational environments.

4.1.8 Control of Nonconforming Product

If the SSO identifies a problem with a Product that has already been delivered to the customer, the SSO Office lead shall immediately inform the Point of Contact (POC) of the problem. If the customer identifies a product produced by the SSO as nonconforming (e.g., in an inappropriate format or performed on the wrong project artifact), the SSO Office Lead shall resolve the issue with the customer.

The SSO Office lead shall determine if the problem is noteworthy of a Corrective Action Request (CAR) per IVV 14, Corrective and Preventative Action. Regardless of how the problem has been identified, the SSO Office Lead shall:

- Ensure that the problem is resolved and that the customer is provided a full explanation of events
- If a CAR was generated, request closure of the CAR once the nonconforming product has been approved and sent to the customer

The nonconforming product shall be subjected to its established verification process once the nonconforming product has been corrected.
5.0 Metrics

Any metrics associated with this SLP are established and tracked within the NASA IV&V Metrics Program. Metrics and data to support SMA Support Office goals will be captured and reported per IVV 12, NASA IV&V Metrics.

6.0 Records

The following records will be generated or updated and filed in accordance with this SLP and IVV 16, Control of Records, and in reference to NASA Procedural Requirement (NPR) 1441.1, NASA Records Management Program Requirements.
