We wish to thank everyone at the Marshall Space Flight Center and NASA headquarters who contributed to the completion of this study. Special thanks to Jason Shoemate and Gary Willis for their effective management and coordination of this effort. Clarifications provided by Ms. Alesyn Lowry to our many inquiries about technical data and information were invaluable. We also thank everyone who provided feedback on the content and presentation of the report at various stages of the study.

## EXECUTIVE SUMMARY

This study is an assessment of the economic impacts of the National Aeronautics and Space Administration (NASA) and the Moon to Mars Program (M2M) for the Fiscal Year 2019. The assessment consists of two parts. The first part presents the estimation of NASA impacts on the U.S. as a whole, fifty (50) states, and the District of Columbia (DC). The second part analyzes economic impacts attributable to the M2M program on the same set of regions. The purpose of the economic impact assessment is to quantify the changes in employment, income, levels of business activity, and government revenue throughout the entire economy that result from NASA's activities and that of the M2M program.

### National Aeronautics and Space Administration (NASA)

The National Aeronautics and Space Administration (NASA) supports hundreds of thousands of jobs and contributes hundreds of millions of dollars of tax base for states and the nation. This report tracks and details economic impact of NASA expenditures across the United States, in the fifty states, and Washington, DC for the Fiscal Year 2019. The report estimates the economic benefits generated directly by NASA along with the very substantial additional economic activity created through the purchasing actions, labor income, and consumption spending that follow from the operations of the NASA centers and programs.

At the national level, NASA directly employs 18,694 civil servants (corresponding to 17,022 full-time equivalent (FTE) jobs), paying \$2.9 billion in annual wages and benefits (Fiscal Year 2019). Yet NASA's economic impact goes well beyond its immediate employment footprint. Wide-ranging benefits are created for local and state economies as well as the U.S. economy as a whole as NASA contracts for goods and services boost activity throughout in the economy. The nearly \$19.3 billion in contracting activity originating from NASA is very diverse, involving varied sets of manufacturing and service production sectors.<sup>1</sup>

The impact estimates reported in this study are the sum of three channels of economic impact: (1) the direct contribution of NASA's own activities<sup>2</sup>; (2) indirect (contracting) activities within NASA's U.S. supply chain; and (3) the induced effect that results as federal civil servants at NASA facilities, employees of contractors, and employees within the supply chain of those contractors spend their wages in the wider consumer economy.<sup>3</sup> Some highlights of the economic impacts that occur throughout the national economy from the activities of NASA include:

---

<sup>1</sup> NASA contracting activity and labor income adds up to approximately \$22.2 billion (note that procurement activity is inclusive of PCard purchases).

<sup>2</sup> The economic activities carried out directly by NASA civil servants only. These do not include goods and services provided by NASA contractors.

<sup>3</sup> We used IMPLAN's industry and geography specific induced multipliers. The model we constructed uses a separate induced multiplier for every pair of industries that capture impacts of labor income spending occurring in any given sector on any other sector.

- The total amount of employment sustained by NASA across the U.S. is 312,630 jobs.<sup>4</sup>
- At the national level, NASA supports labor income of \$23.7 billion per year and total economic output of \$64.3 billion annually. The approximately \$75,657 in average annual labor income per job is nearly 20% greater than the average across the U.S. (\$62,977). The difference between average labor income (including wages and benefits) for a NASA civil servant (\$155,370) and the U.S. average (\$62,977) is much more significant (145% greater), indicating the highly skilled, high-paid nature of NASA jobs compared to the average job in the U.S. economy.
- NASA generates an estimated \$6.9 billion in federal, state, and local tax revenues throughout the U.S. annually.
- For every FTE job located at a NASA facility, more than 17 additional jobs are supported throughout the U.S. economy. For each million dollars of labor income earned by NASA civil service employees, an additional \$7 million of labor income is generated in the U.S. And for each million dollars worth of output produced by NASA, an additional \$7.7 million of output—consisting of both intermediary inputs and consumption goods and services—is produced throughout the national economy. These figures are boosted by the large volume of procurement spending administered through NASA.<sup>5</sup>
- The top ten most impacted sectors account for around half of total NASA impacts. Scientific research and development services and management consulting services are the most affected sectors—nearly a quarter of total NASA impacts are concentrated in these two sectors.
- NASA impacts are concentrated geographically as well. The top ten most impacted states account for 92 percent of total NASA impacts. These states are California, Texas, Alabama, Maryland, Florida, Virginia, Colorado, Ohio, Arizona, and Utah. Impacts on Mississippi, Washington, DC, Massachusetts, Louisiana, New York, Indiana, New Mexico, and Pennsylvania are also significant. Figures 1 and 2 below illustrate the employment and output impacts of NASA across the states.
- Finally, approximately 22% of overall NASA agency impacts in the U.S. are attributable to the M2M program.<sup>6</sup> It is still early in the M2M program; consequently, the contribution is expected to grow larger with the addition of other elements beyond 2019. The M2M program-specific employment accounts for 2.4% of overall NASA employment impacts

---

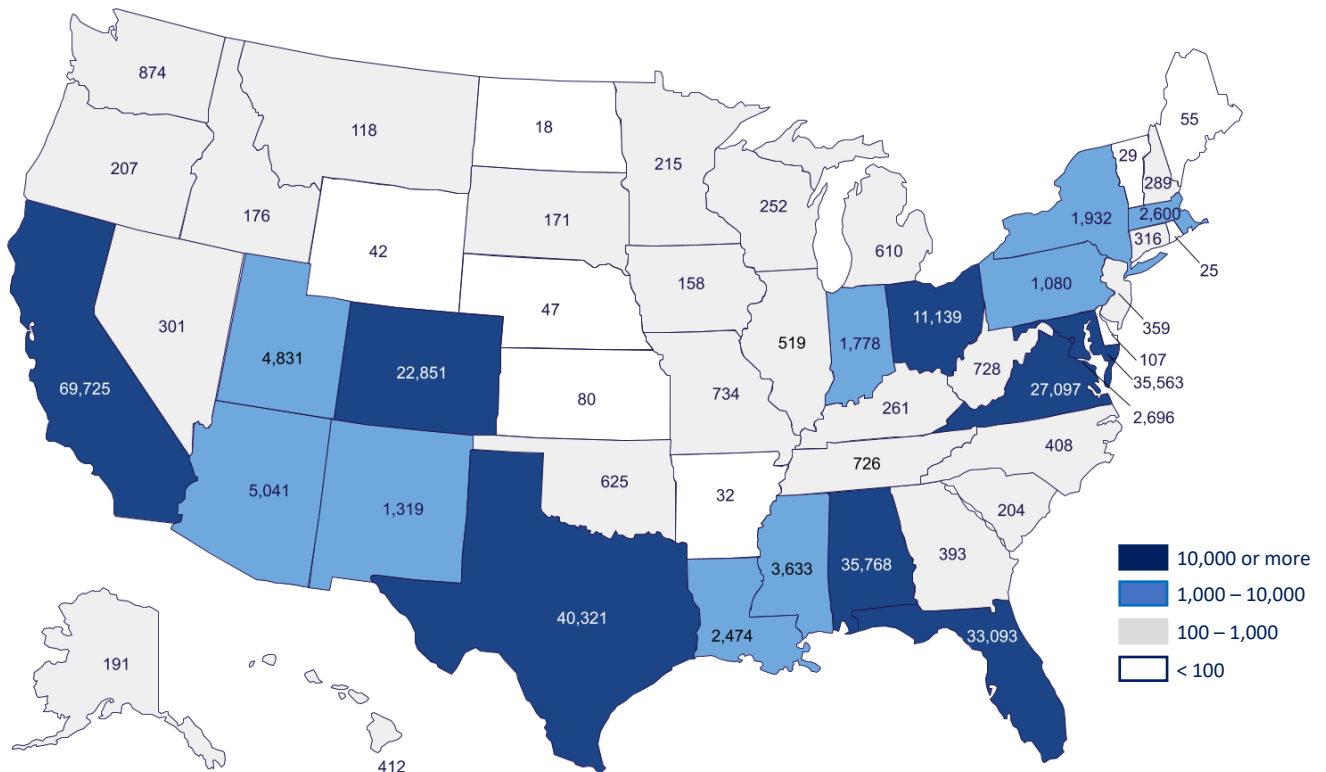

<sup>4</sup> Jobs are reported as an annualized combination of full- and part-time jobs based on the average output per employee for a given industry.

<sup>5</sup> The multipliers reported here are larger than is typical for this kind of study because of the volume of NASA contracting activity, all of which is classified as indirect impact. Additional multipliers calculated in the “conventional” way are reported in the Appendix. Two sets of multipliers are presented: one set for NASA employment and one for NASA procurement spending.

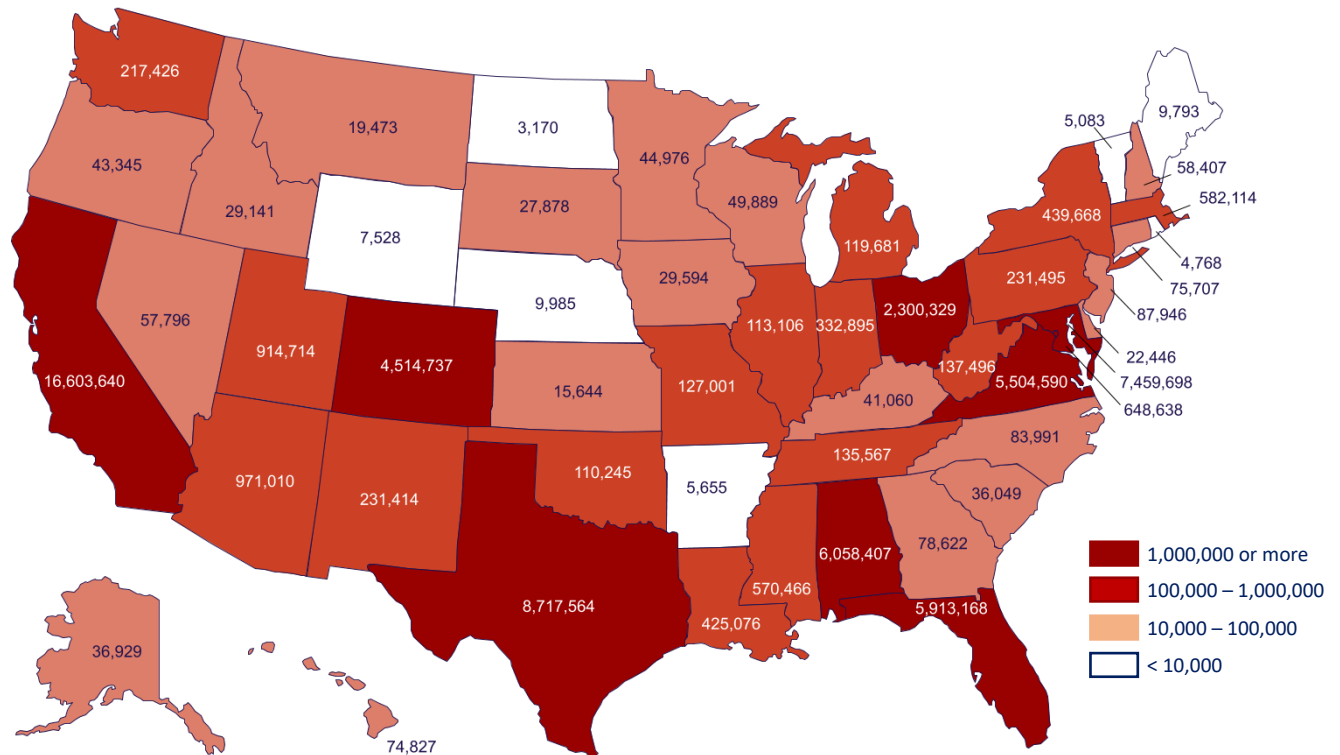

<sup>6</sup> NASA impacts are inclusive of all M2M impacts discussed in the following pages.

while M2M program-related procurement accounts for 19.7% of overall NASA employment impacts. As for economic outputs, the M2M program-specific employment accounts for 3.5% of overall NASA output impacts, while M2M program-related procurement accounts for 18.7% of overall NASA output impacts. The reason the M2M program employment's share of overall NASA output impacts is larger than its share of overall NASA employment impacts is that average output per employee is higher for civil servants than it is for aerospace supply chain employees.

## Moon to Mars (M2M) Program

NASA's Moon to Mars program is focusing on returning humans to the Moon and cislunar space, with eventual missions to Mars and beyond. NASA has developed a phased approach for this activity, starting with robotic lunar landers and progressing to human activity in cislunar space, the lunar surface, then eventually to Mars and beyond. With this program, NASA plans to:

- Fully support integration, testing, and the first flights of the Space Launch System (SLS) and Orion crew capsule, NASA-developed systems required to get to the Moon quickly and safely,
- Complete assembly of the U.S. elements of, and begin supplying and operating from, the Lunar Gateway - establishing the exploration infrastructure orbiting the Moon,
- Demonstrate key exploration technologies, including precision landing, cryogenic fluid management, in-situ resource utilization, and surface nuclear power to support sustainable lunar exploration and future missions to Mars,
- Utilize commercial lunar landers to deliver NASA science instruments and exploration technology demonstration payloads to the lunar surface,
- Launch a Mars Sample Return mission as early as 2026 and initiate a Mars Ice Mapper mission,
- Ensure investments in the required capabilities, workforce, and facilities needed to guarantee safety and mission success.

NASA's Moon to Mars (M2M) program employs hundreds of highly paid skilled professionals, and the U.S. Government channels billions of dollars of federal spending on M2M into the states in the form of contracts. At the national level, NASA directly employs 5,563 civil servants (3,155

FTEs) to support the M2M program, paying more than \$520 million in annual wages and benefits. It is still early in the M2M program; consequently, the share of M2M program in NASA activities is anticipated to grow larger with the addition of other elements beyond 2019. The M2M program's economic impact goes well beyond its immediate economic footprint represented by the employment of M2M-assigned NASA civil servants. Wide-ranging benefits are created for the local and state economies as well as the U.S. economy as its contracting for goods and services boosts economic activity elsewhere in the country. The \$4.4 billion in M2M contracting activity originating from NASA headquarters and centers involves almost every major category of manufacturing or service production. M2M contracts to firms, government agencies, and academia not only support the U.S. aerospace industry but also result in advanced development and innovative solutions in areas including materials, structures, avionics, software, and analysis techniques.

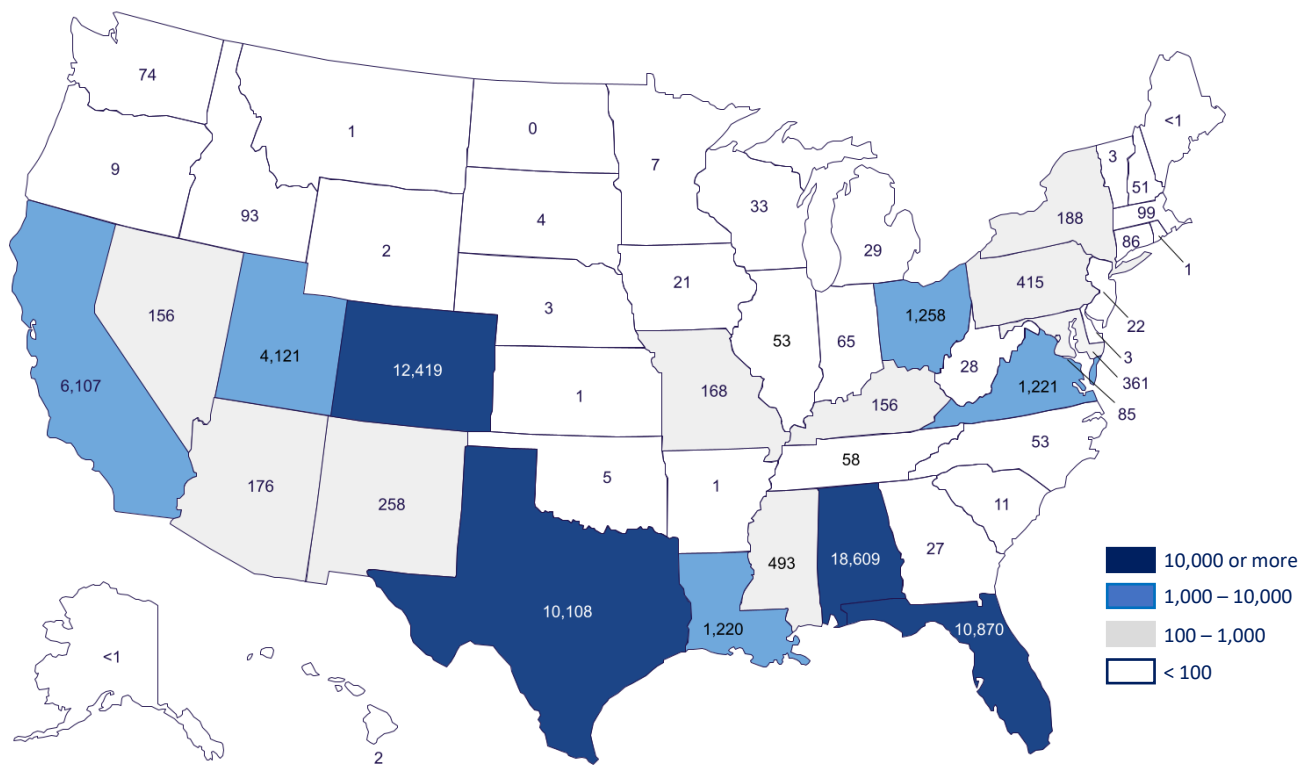

Some highlights of the economic impacts that occur throughout the national economy from M2M activities include:

- The total amount of employment generated by M2M activities across the U.S. is more than 69,200 jobs.<sup>7</sup>
- The M2M program supports labor income of \$5.2 billion per year and total economic output of \$14.1 billion annually.
- The M2M program generates an estimated \$1.5 billion in federal, state, and local tax revenues throughout the U.S. each year.
- For every (FTE) civil service job located at NASA centers related to M2M, nearly 21 additional jobs are supported throughout the U.S. economy. For each million dollars of labor income earned by M2M-assigned NASA employees, an additional \$9 million of labor income is generated in the U.S. And for each \$1 million worth of output produced by the M2M program, an additional \$9.4 million of output—consisting of both intermediary inputs and consumption goods and services—is produced throughout the national economy. These figures are exceptionally large because of the extremely high volume of procurement spending relative to civil service employment.
- Finally, Figures 3 and 4 below illustrate the employment and output impacts of the M2M program across the states. Alabama, Colorado, Florida, Texas, California, Utah, Ohio, Virginia, Louisiana, and Mississippi are the most impacted states, respectively. These ten states account for 96 percent of all M2M-related impacts. As a share of overall NASA impacts, M2M program impacts are heavily concentrated in some states. More than half of overall NASA impacts in Utah, Colorado, and Alabama are attributable to the M2M program (Figure 5).

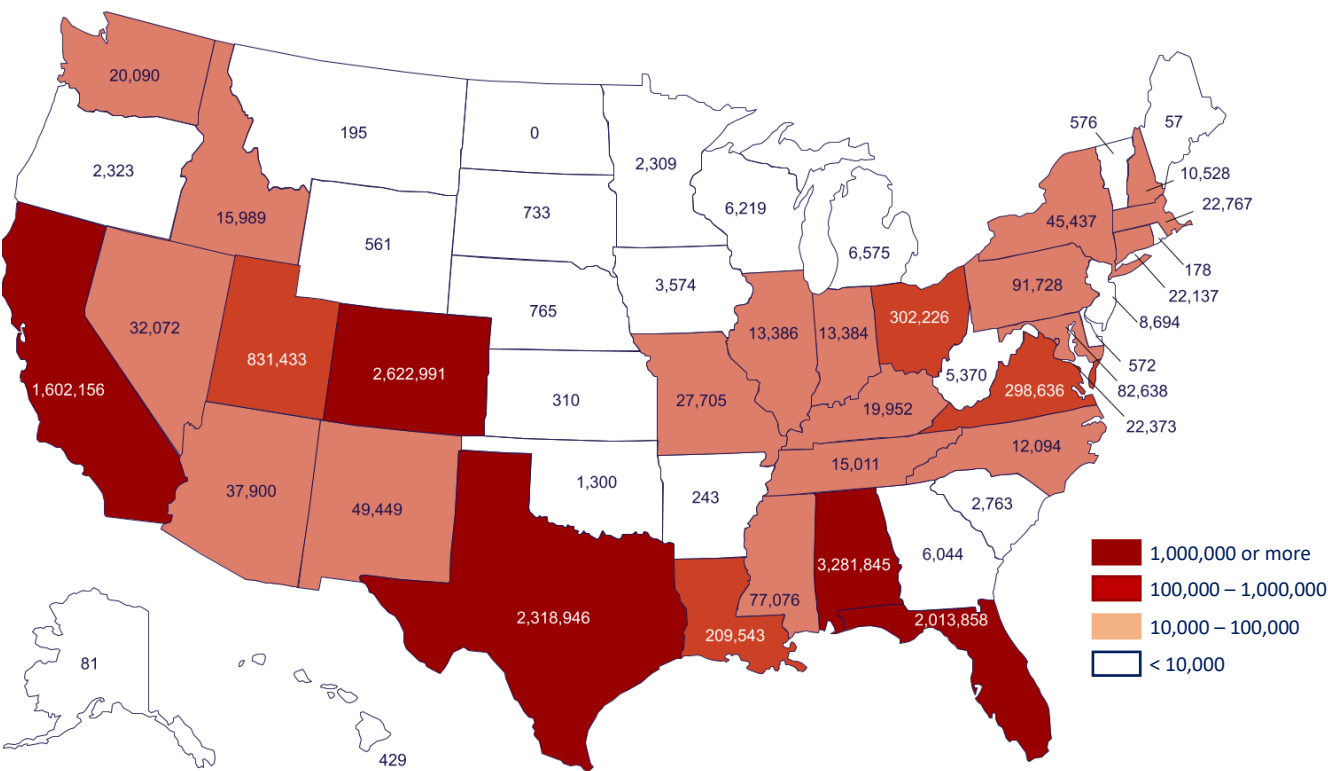

---

<sup>7</sup> M2M impacts are completely a subset of NASA impacts discussed in the previous page.

## 1. INTRODUCTION

This study is an assessment of the economic impacts of the National Aeronautics and Space Administration (NASA) and the Moon to Mars (M2M) Program for the Fiscal Year 2019. The assessment consists of two parts. The first part presents the estimation of NASA impacts on the U.S. as a whole, fifty (50) states, and the District of Columbia (DC). The second part analyzes economic impacts attributable to the M2M program on the same set of regions. The purpose of the economic impact assessment is to quantify the changes in employment, income, levels of business activity, and government revenue throughout the entire economy that result from NASA's activities and the M2M program.

An input-output modeling framework is used to estimate the impacts. We utilize IMPLAN (IMpact analysis for PLANning) software and 2018 industry data, the most current dataset available at the initiation of the study (See Box 1). We present direct, indirect, and induced employment impacts along with output, labor income, and tax revenue impacts for each of the geographic regions mentioned above (See Boxes 2 and 3 for definitions).

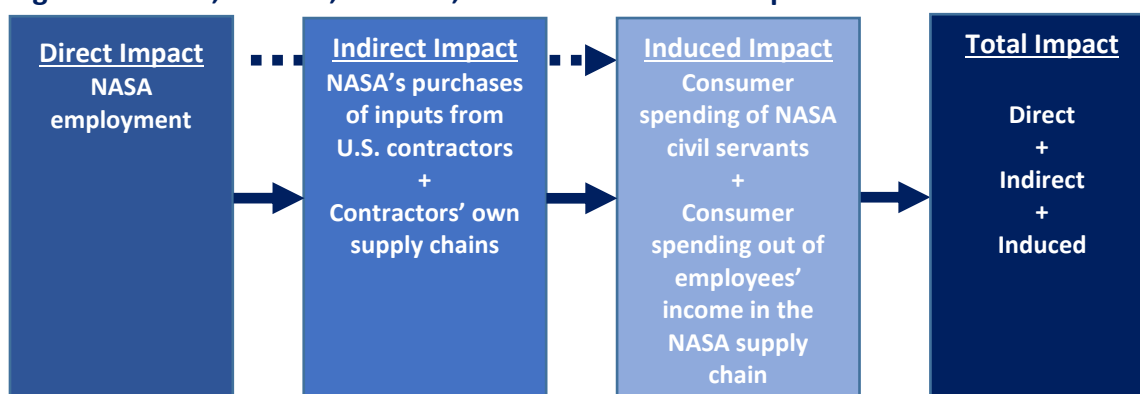

### **Box 1: IMPLAN Industry Data**

We used 2018 industry data (economic modeling data from IMPLAN), FY2019 NASA procurement, and FY2019 NASA labor income data (provided by NASA). The economic modeling data are the estimates of industry-to-industry purchasing and spending interactions that are produced by IMPLAN. Regarding potential impacts on results if we were to use 2019 model data, the implications are not likely to be significant. This is so because IMPLAN model data updates are relatively minor except for every five years when the company makes substantial changes to its database based on the benchmark input-output (I-O) accounts developed by the Bureau of Economic Analysis (BEA). (And even then, most industry supply and purchasing relationships are quite consistent over time, only a few industries change substantially more rapidly.). The 2018 data we used in this study incorporates the latest updated industry statistics and benchmark I-O accounts of BEA. Given the 2018 data incorporates the latest benchmark I-O table and updated industry statistics, 2019 data would not impact the estimates provided in this study significantly.

Benchmark I-O accounts are one of the major elements of the U.S. national and industry economic accounts. They provide detailed statistics on economic processes and relationships, and they provide essential information for other economic accounts. They are used to set the level of GDP in the NIPAs (national income and product accounts), and they provide commodity detail on the composition of the final-use categories. In addition, they provide information on what industries use to produce their output and on what commodities are produced by each industry. The benchmark I-O accounts consist of make tables, use tables, and direct and total requirements tables. They are prepared at about 5-year intervals, primarily from Economic Census data.

**Box 2: Types of Economic Impact**

- **Direct impacts** – the activity or event to be assessed, typically specified as a change in demand for the output of an industry or a change in an industry’s employment.
- **Indirect impacts** – economic activity resulting from the increase or decrease in input purchases within the region by the industry directly impacted in response to the change in demand or employment. In the context of this study, indirect effects are the purchases of goods and services by government agencies and private industry tenants as well as by the industries that supply them. Examples include an aerospace firm carrying out contract work for NASA and that aerospace firm’s purchases of electronic components and engineering consulting services from other firms to enable its own production.
- **Induced impacts** – economic activity resulting from all affected industries paying wages and benefits to their employees and allocating profit to their owners, some portion of which is spent within the region on consumer goods and services.
- **Total impacts** – the sum of direct, indirect, and induced impacts (see Figure 1).

**Figure 1: Direct, Indirect, Induced, and Total Economic Impacts.**

**Note:** This figure is adapted from Oxford Economics (2015). Analogous illustration is applicable to M2M Impact Model as well.

The modeling approach adopted in this study is to represent outcomes of complex economic relations in aggregate form to enable ready connections between impact-generating event categories and their impacts. Accordingly, beside the estimates of the total economic impacts, our report provides impact multiplier factors (or multipliers for short) for different types of outcomes (see Box 4) that can be used to quickly assess the total scope and sectoral impact of relatively small employment and procurement changes in the future. The shift in the triggering or direct event—such as an increase in employment or a decrease in procurement amount—can simply be multiplied by the relevant outcome multiplier to produce an estimate of the total effect magnitude (direct, indirect, and induced). This procedure is appropriate for situations in which major economic features and relationships, such as employee location patterns and industry purchasing linkages, are not expected to change. Small shifts are generally appropriate, but large changes in the economy may alter inter-industry relationships and require

model reevaluation. (The threshold where changes shift from small to large is determined by analyst judgment.)

**Box 3: Types of Economic Activity**

- **Employment** – the annual average of monthly jobs in the economy/industry. The number consists of both *full-time and part-time* jobs.
- **Labor Income** – total of all forms of employment income for a year, including employee compensation (wages and benefits) and proprietor income.
- **Value Added** – the difference between an industry's, or an establishment's, total output and the cost of its intermediate inputs for a year. Value added is, equivalently, payment to labor (employee compensation) and rent to capital (profit) plus business taxes. Value added is a measure of the contribution to gross domestic product (at the national, state, or local scale) made by an individual producer, industry, or sector. Direct value added is calculated using the estimated ratios of value added-to-employee in the following industries: (i) guided missile and space vehicle manufacturing, (ii) propulsion units and parts for space vehicles and guided missiles.
- **Output** – the value of annual industry production. Output is reported in producer prices, separating margins such as for wholesale distribution, transportation, and retail into those respective industries. Production at NASA facilities has three components: (1) The direct output component represents the value of all activities at NASA (research and development, production, and management), including both those outputs that are sold to consumers (final consumption) and those that are inputs into further production (intermediary products and services). Direct output is calculated using the estimated ratios of output-to-employee in the following industries: (i) guided missile and space vehicle manufacturing, (ii) propulsion units and parts for space vehicles and guided missiles (2) The indirect component is the value of the goods and services produced in industries that supply the activities at NASA facilities, and the value of the goods and services that are in the supply chain of those industries. (3) The induced component is the value of goods and services, both intermediary and final consumption, that are produced in response to labor income spending of employees in all affected industries. Please note that the term production as used here is not equivalent to product as used in Gross Domestic Product or Value Added (see above).
- **Tax Revenues** – the annual taxes collected by federal, state, and local governments through income, payroll, import, corporate, and property taxes, as well as some forms of licenses. Tax revenue estimates are generated from the application of average (per capita and per employee) tax rates and license fees averaged across multiple jurisdictions within a study region and should be treated as only rough approximations.

**Box 4: Multipliers**

- **Employment multiplier** – the estimated ratio of the change in total local employment to the change in direct employment. For example, an employment multiplier of 3.00 indicates that the creation of 1 direct new job is expected to support 2 additional jobs in the local economy, for a total impact of 3 new jobs.
- **Income multiplier** – the estimated ratio of the change in total income throughout the local economy to the change in income from direct employment. It is calculated analogously to the employment multiplier. For example, an income multiplier of 2.75 indicates that a \$1.00 change in income in the industry directly affected by the events being considered is expected to result in an additional income of \$1.75 throughout the local economy, for a total income impact of \$2.75.
- **Value added multiplier** – the estimated ratio of the change in total value added throughout the local economy to the change in value added from direct employment. The value added multiplier is calculated analogously to the employment, income, and output multipliers.
- **Output multiplier** – the estimated ratio of the change in total output (i.e., gross sales and additions to inventory) throughout the economy to the change in output from direct employment. The output multiplier is calculated analogously to the employment, income, and value added multipliers.

**1.1. National Aeronautics and Space Administration (NASA)<sup>1</sup>**

The National Aeronautics and Space Administration (NASA) is responsible for unique scientific and technological achievements in human spaceflight, aeronautics, space science, and space applications that have had widespread impacts on our nation and the world. Established in 1958, NASA has been the center of U.S. civil aerospace research and development for more than half a century.

In addition to agency leadership (Headquarters), NASA has research and flight centers and facilities with unique capabilities:

**NASA Research and Flight Centers**

- Ames Research Center (IT, fundamental aeronautics, bio and space science technologies)
- Armstrong Flight Research Center (Flight research)
- Glenn Research Center (Aeropropulsion and communications technologies)
- Goddard Space Flight Center (Earth, the solar system, universe observations, and space communications and navigation)
- Johnson Space Center (Human space exploration)
- Kennedy Space Center (Prepare and launch missions around the Earth and beyond)

<sup>1</sup> Information is obtained from <https://www.nasa.gov/content/nasa-history-overview> and [https://www.nasa.gov/about/org\\_index.html](https://www.nasa.gov/about/org_index.html)

- Langley Research Center (Aviation, space technology and Earth science)
- Marshall Space Flight Center (Space transportation and propulsion technologies)
- Stennis Space Center (Rocket propulsion testing and remote sensing technology)
- Goddard Institute for Space Studies (Broad study of global climate change)

#### ***NASA Facilities and Labs***

- Jet Propulsion Laboratory (Robotic exploration of the solar system)
- Katherine Johnson Independent Verification and Validation Facility (Provides safety and cost-effectiveness for mission critical software)
- Michoud Assembly Facility (Manufacture and assembly of critical hardware for exploration vehicles)
- NASA Engineering and Safety Center (Independent testing, analysis, and assessments of NASA's high-risk projects)
- NASA Safety Center (Development of personnel, processes and tools needed for the safe and successful achievement of strategic goals)
- NASA Shared Services Center (Financial management, human resources, information technology, and procurement)
- Wallops Flight Facility (Suborbital Research Programs)
- NASA Goddard Institute for Space Studies (New York)
- NASA Sands Test Facility (Dona County, New Mexico)

Results from NASA's research and development activities ripple throughout the national economy, supporting high-tech industries and creating or sustaining tens of thousands of knowledge-intensive jobs. In addition, NASA invests in economically valuable technologies that help the nation maintain its competitive advantage. NASA develops hundreds of new technologies each year and transfers thousands of products, services, and processes to private businesses. These transfers improve U.S. businesses productivity and global competitiveness. Given the multidimensional nature of the benefits originating from NASA facilities, no single metric can capture the returns from its activities. This report focuses on NASA's economic impacts that can be reliably and precisely quantified through economic input-output models.

### **1.2. Moon to Mars (M2M) Program<sup>2</sup>**

The Moon to Mars program is focusing on returning humans to the Moon and cislunar space, with eventual missions to Mars and beyond. NASA has developed a phased approach for this activity, starting with robotic lunar landers and progressing to human activity in cislunar space, the lunar surface, then eventually to Mars and beyond. With this program, NASA plans to achieve:

- Fully support integration, testing, and the first flights of the Space Launch System (SLS) and Orion crew capsule, NASA-developed systems required to get to the Moon quickly and safely,
- Complete assembly of the U.S. elements of, and begin supplying and operating from, the Lunar Gateway - establishing the exploration infrastructure orbiting the Moon,
- Demonstrate key exploration technologies, including precision landing, cryogenic fluid management, in-situ resource utilization, and surface nuclear power to support sustainable lunar exploration and future missions to Mars,
- Utilize commercial lunar landers to deliver NASA science instruments and exploration technology demonstration payloads to the lunar surface,
- Launch a Mars Sample Return mission as early as 2026 and initiate a Mars Ice Mapper mission,
- Ensure investments in the required capabilities, workforce, and facilities needed to guarantee safety and mission success.

### ***Deep Space Exploration Systems***

The Human Landing System program will utilize commercial partnerships to develop and jointly deploy an integrated landing system to transport humans to and from the lunar surface. NASA expects its commercial partners will heavily leverage NASA technology and expertise throughout the development process, leading to an integrated lunar transportation system that will deliver humans to the lunar surface in 2024, and develop and demonstrate a more sustainable HLS for subsequent crewed missions. NASA is leading the way by preparing to carry humans farther into deep space than ever before. The Space Launch System (SLS), the Orion Crew Capsule, and Exploration Ground Systems (EGS) together represent a critical piece of the Moon to Mars campaign, and the Artemis program. All three programs will conduct readiness reviews prior to the potential launch of Artemis I, while preparing and upgrading necessary systems for the launches of Artemis II and III. NASA will continue to develop the Gateway, conducting project level design reviews of the Power and Propulsion Element (PPE) and the Habitation and Logistics Outpost (HALO), and continuing development of program-level functions such as avionics, flight software, and future capabilities such as in-space refueling. NASA will use the Gateway infrastructure as part of a broader strategy to enable long term exploration and utilization of the Moon and its surface. Advanced Cislunar and Surface Capabilities and Advanced Exploration Systems will focus on supporting lunar technology development efforts, including flight and surface elements, life support systems, and crew health improvement.

### ***Exploration Technology***

Research and development of new technologies and capabilities lays the groundwork for enhancing and enabling lunar and deep space exploration. Exploration Technology will continue to focus its activities toward lunar and deep space exploration, enabling NASA's

workforce, in concert with industry and academia, to develop innovative ways to further humankind's space exploration from conception to testing to spaceflight. The Exploration Technology request supports the Lunar Surface Innovation Initiative as well as other technology research and development projects along the entire Technology Readiness Level spectrum that align with NASA exploration needs and support commercial expansion in space. The Lunar Surface Innovation Initiative serves as a catalyst for lunar surface technology development priorities such as: surface power, in situ resource utilization (ISRU), autonomous operations, and extreme environment technology. During 2021, the Space Technology Mission Directorate (STMD) aims to deliver the Solar Electric Propulsion in support of the Power and Propulsion Element of Gateway, to complete testing and initiate a flight demonstration of the Laser Communications Relay Demonstration mission, and to continue to advance Space Nuclear technologies to support the Moon to Mars campaign.

### ***Scientific Exploration***

Another critical element of exploration comes from NASA's Science Mission Directorate (SMD), which will continue its efforts to explore and enhance scientific discovery. The Moon to Mars effort within Science is made up of the Lunar Development and Exploration Program (LDEP), the Mars 2020 rover, and future Mars robotic missions including the Mars Sample Return mission and Mars Ice Mapper. Future Mars robotic exploration will support decadal science objectives as well as lay the groundwork for future manned missions to Mars. NASA is developing a series of instruments, experiments, and other payloads for robotic lunar missions to the surface of the Moon, which will launch using the Commercial Lunar Payload Services (CLPS) project. NASA is utilizing innovative acquisition approaches to engage U.S. industry capabilities as the Agency moves toward human exploration of the lunar surface. NASA intends to also work with international partners in this endeavor, delivering meaningful scientific exploration and technology development work in a cost-effective way.

### ***Mission Support***

The technology capabilities and processes pioneered by the Artemis effort will enable the first intrepid crews of the new space age to travel safely to and from the surface of the Moon, mature sustainability on the Moon, and land on the surface of Mars. This will enable new scientific discoveries and promote new technologies, research, and the systems needed to sustain living in deep space for the benefit of all humankind. It will serve as an inspiration to the world and solidify the United States' preeminence in space exploration, making a human presence on the Moon and beyond an expectation, not a dream.

## **1.3. Report Organization**

The extensive activities of NASA and the unique capabilities of the Moon-to-Mars program encompass significant research and development (R&D) as well as

manufacturing in aerospace and related industries that require the hiring of thousands of highly skilled scientists and engineers. NASA expends millions of dollars in many states in the form of direct employment and contracts with private sector vendors. This infusion of federal spending in the form of labor income and procurement in turn supports thousands of additional jobs and millions of dollars of state and local government tax revenues across the country. This study quantifies these economic impacts and analyzes their significance for the economies involved.

The report is organized as follows. Immediately following this introduction, Section 2 surveys the pertinent literature and provides a brief theoretical background for the modeling process, describing the steps taken to conduct the economic impact analysis. Section 3 describes the data used in the study, examining NASA employment at various research and flight centers (including information related to labor income and employee residences) along with contract awards originating from NASA and those related to the M2M program (including the geographic distribution of these contracts). Understanding the data is key to understanding the approach and for interpreting the results of the economic impact analysis. Section 4 discusses the modeling approach, employing data and software from IMPLAN. Section 5 examines additional issues surrounding the impact estimates, focusing largely on the geographic designation of impact regions and the specification of economic activities and events—the inputs into the models. These two sections (4 and 5) detail the modifications we made to the basic IMPLAN model and the most important assumptions that underlie the impact estimates, as well as the rationales behind them. Finally, Section 6 provides estimates of the economic impacts generated by NASA and the M2M program and analyzes the meaning of these impacts for the economies involved.

## 2. LITERATURE SURVEY

### 2.1. The Conceptual Bases of Economic Impact Analysis

Economic impact analysis involves applying a change in final demand to a descriptive economic model and then analyzing the resulting changes in the economy. A concise definition of impact analysis is that it is an assessment of the overall changes in an economy that occur as a result of one or more changes in specific economic activities (IMPLAN, 2004).

Export base theory (also termed economic base theory) provides the conceptual foundation for input-output economic impact assessment models. The first of two fundamental concepts that undergird export base theory is that an area's economy can be divided into two types of economic units: (1) basic and (2) non-basic. The basic sector is defined as those firms that sell goods and services to markets outside the local area. The revenue received by basic sector firms for their exports of goods and services is termed basic income. The remainder of the area's economy consists of those firms that supply goods and services to customers within the area. These firms are referred to as the non-basic sector or sometimes as *residential* or *local trade and service* activities.

The second key concept of export base theory is that the level of non-basic activity in an area is determined by the level of basic activity, and a given change in the level of basic activity brings about a predictable change in the level of non-basic activities. This relationship is known as the *multiplier* effect. Thus, export base theory emphasizes external demand for the products of the basic sector as the principal force determining change in an area's level of economic activity (Leistritz, 1994).

The basis for the multiplier effect is the interdependence of (or linkages between) the basic and non-basic sectors within an area's economy. As the basic sector expands, it requires more inputs (for example, labor and supplies). Some of these inputs are purchased from local firms and households. As the firms in the non-basic sector expand their sales to the basic sector, they too must purchase more inputs, their suppliers in turn must increase their own input purchases, and so on. Increased wages and salaries paid to labor and management in the basic sector, together with similar increases in the non-basic sector, lead to increases in the incomes of area households. Some of this additional income is spent locally for goods and services, some is saved, and some leaves the area economy as payments for imported goods and services (or as additional tax payments to government). To the extent that additional income is spent locally for goods and services, the output of local firms increases further, resulting in additional cycles of input purchases, income increases and consumption expenditures. This cycle of spending and re-spending within the local economy is the basis of the multiplier effect (Leistritz & Murdock, 1981). The magnitude of the multiplier effect is determined by the proportions of a given dollar of additional input purchases and a given dollar of income spent locally.

High multiplier values are associated with high levels of local purchases and spending, which typically reflect a diversified, relatively self-sufficient economy. Larger regions tend to have higher multiplier values.

## **2.2. The Principles of Economic Impact Analysis**

To begin the process of estimating economic impacts, it is important to identify the counterfactual scenario against which the specific changes in economic activity are contrasted (Drucker 2015). For example, if local industries are expected to increase their activity due to a rise in demand for their products or services, the source of that demand—the economic agent or agents seeking the additional products or services—could be considered to have made a choice versus seeking a different set of products or services, or obtaining them instead from industries in a different location. In this study, wherein the federal employees' labor income at NASA facilities and the procurement originating from NASA constitute the changes in economic activity that are examined, we consider these changes relative to a hypothetical situation of zero NASA employment and procurement activity. Although this counterfactual of no activity is unrealistic on a nationwide basis in that the federal government resources currently applied to NASA would likely be expended for other tasks or through different federal agencies, a hypothetical baseline scenario of zero replacement activity is a common strategy for impact analyses seeking to obtain measures of the entire economic impact of a particular institution and its associated activities. For smaller geographic regions, such as a state, the counterfactual scenario of zero activity is more realistic because there is no reason to suppose that the allocation of federal resources in the absence of the NASA would concentrate in that specific state. This principle applies to the M2M program as well.

After determining the counterfactual scenario, the next step is to identify the topic or topics of concern as a set of economic events defined by expenditures. These expenditures constitute the initial changes that stimulate further activity throughout the economy. The actions and the economic activity they stimulate together comprise the impacts. Although impact modeling software (such as IMPLAN) provides a framework to conduct an analysis of economic impacts, each stage of an analysis should be carefully scrutinized to make sure it is logical. Procedures and assumptions ought to be validated prior to entry into the model (IMPLAN, 2004). Furthermore, understanding how an industry and the various parts of its supply chain respond to changes in demand and judging the validity of the assumptions made as part of operationalizing a regional input–output model are essential to usefully interpreting the outputs of an economic impact model (Drucker, 2015; Low & Isserman, 2009). The key assumptions and their implications are detailed in the following sections of the report.

Economic impact analysis is a projection process, and the figures generated should be regarded as reasonable approximations and estimates rather than as accurate predictions. There are several points in the conduct of an economic impact analysis where

modeling choices and underlying assumptions substantially affect the final results. To avoid inadvertent errors or misapplications, economic impact analyses should include clear documentation of the procedures applied to obtain the initial events modeled, key underlying assumptions, and the rationales for both (Crompton *et al.*, 2001).

### **2.3. The Importance of Economic Impact Analysis to Public Policy Making**

Economic impact assessment has developed as a pragmatic approach that attempts to bring appropriate concepts and tools from regional economics and public finance to bear on problems of concern to policy makers (Leistritz, 1994). Practitioners use impact analysis for different purposes. For example, it might be used to measure the impacts of a new factory moving into an area. Governments use impact analysis to inform and guide policy decisions and planning. Researchers use impact analysis to study relationships among different elements in an economy (IMPLAN, 2004).

The increasing demand for economic impact analyses by public agencies can be explained in two ways. First, economic impact assessments are sought by policy makers and resource managers because they address issues that are key to a wide variety of decisions. For example, in determining whether to designate certain public lands as wilderness areas, land managers may need to consider the economic and fiscal impacts of alternative land uses (e.g., wilderness versus ranching or mining). When large-scale mining and resource development projects have been proposed, the local economic and fiscal impacts often have been one of the principal topics of debate.

Second, as state and local governments become more heavily involved in economic development efforts, economic impact analysis tools can be useful in establishing priorities for incentive programs. While a number of states are now using selected measures of direct economic impact (most commonly the number of jobs created) as criteria in awarding financial support, the total economic impact (including secondary effects) is probably a more meaningful criterion (Leistritz, 1994). This also explains why a key purpose of economic impact studies is to measure the economic return to residents (Crompton *et al.*, 2001). Public interest in economic impacts is ultimately a concern about people and their standard of living (Siegfried *et al.*, 2007).

## 3. DATA ANALYSIS

### 3.1. Description of NASA Data

NASA supplied information about activities at NASA headquarters and research and flight centers including salary, benefits, and total labor income in all 50 states as well as in DC. These data contain places of residence for NASA employees living in different states (with all individual identifiers removed). Procurement data for NASA list contract amounts awarded to vendors located in different parts of the country with a brief description of the activity or service that vendors were awarded to carry out for NASA. NASA provides funding not only to private sector firms, but also to colleges and universities, federal government agencies, and civic organizations in the form of research and development contracts as well as grants. Both the recipients and the types of activity contracted by NASA are diverse; the latter involves most of the categories of manufacturing or service industries recognized by the IMPLAN software.

NASA provided M2M-specific procurement data, listing suppliers and corresponding dollar amounts for the program's contractors. In addition to the geographical location of each of these suppliers, including overseas vendors, the items purchased and services provided by these vendors were detailed. Similar to NASA, the contracting activity attributable to the M2M program is diverse in terms of the type of economic activity and vendor locations. The M2M-specific contracting activity originating from NASA is related mostly to scientific research and development services, facilities support services, professional and technical services, software development, and electronic and precision equipment repair and maintenance.

All of the data and outputs of this economic impact analysis pertain to Fiscal Year 2019 (October 1, 2018, through September 31, 2019).

### 3.2. NASA Activities

#### 3.2.1. NASA Employment

NASA employs 18,694 civil servants (17,022 FTEs, see Box 5).<sup>3</sup> Most of the NASA labor force is concentrated in Maryland, Texas, Virginia, Alabama, and Florida (Table 1 and Figure 2). According to FTE counts, those five states account for approximately 74% of total NASA employment. Because impact estimates are based on expenditures, it is important to examine the labor income shares that correspond to the employment figures in each region.<sup>4</sup> The same set of states accounts for the largest portion of labor income earned. As we present in the results (Section 6), the concentration of NASA employment and labor income in those states listed above translates into greater

<sup>3</sup> Throughout this report, NASA employment refers only to federal civil servants, and does not include on-site contractors.

estimated household spending and larger economic impacts relative to the other regions examined.

**Box 5: Civil Servant Employee Counts vs. Full-time Equivalents (FTEs)**

We used FTEs instead of the count of civil servants in the analysis for two reasons. First, given that there are different labor hours/labor income associated with different headcounts in different states, using FTEs provides a more accurate way to compare the share of NASA employment across states. Second, because economic impacts are a function of labor income and changes in labor income are more directly related to FTEs, we used FTEs rather than headcounts. For example, it is possible for labor income to remain the same while the number of employees (civil servant headcounts) decreases. However, changes in FTEs would reflect those changes in labor income and thus will allow the analyst and the reader to more accurately assess the anticipated changes in associated economic impacts.

### 3.2.2. NASA Procurement

NASA procurement refers to contracts for goods and/or services originating from NASA headquarters and individual NASA space and flight centers. In Fiscal Year 2019, NASA allocated nearly \$19.3 billion in expenditures to vendors in 50 states, the District of Columbia, and Puerto Rico and the United States Virgin Islands. Of this amount, \$4.4 billion is specific to the M2M program, accounting for around 23% of total NASA procurement spending. California is the largest recipient state, accounting for approximately \$5.2 billion, or nearly 27% of NASA's total procurement spending.

One feature differentiates NASA procurement spending from NASA employment. First, NASA procurement expenditures are more geographically dispersed. Whereas five states account for more than 81% of NASA employment, 69% of NASA procurement is sourced from the top five states. These different concentrations have implications for the magnitude of the impact estimates attributable to NASA employment and procurement. (Note that on-site contractor employees are not considered directly; the impacts of these contractors are captured through procurement expenditures.)

### 3.3. Moon-to-Mars (M2M) Program Activities

#### 3.3.1. NASA Employment for the M2M Program

NASA directly employs 5,563 civil servants (3,155 FTEs) to support the M2M program.<sup>7</sup> The majority of employees who work on the program reside in Alabama, Texas, and Florida; the three states account for more than 72% of the FTE jobs for the M2M program. Relatively small but notable numbers of employees live in Ohio, Virginia, and California, whereas other states' shares of the M2M labor force are minimal (Table 3 and Figure 4).

### 3.3.2. NASA Procurement for the M2M Program

M2M procurement refers to contracts for goods and/or services originating from the different NASA Centers that support the M2M program. In Fiscal Year 2019, NASA allocated more than \$4.4 billion in expenditures to vendors in 48 states and the District of Columbia, and several foreign countries.<sup>8</sup> Alabama is the largest recipient state, accounting for approximately \$1.1 billion, or 26.6% of NASA's total procurement spending for the M2M program (Table 4 and Figure 5).

After Alabama, Colorado is the second largest state recipient of M2M procurement. Contracts performed in this state account for more than \$919 million, or nearly 21% of NASA's total procurement spending for the M2M program. The State of Texas is the third largest recipient of M2M procurement. Contracts performed in Florida account for approximately \$517 million, or 11.7% of NASA's total procurement spending for the M2M program. California is the fifth largest recipient of M2M procurement. Contracts performed in this state account for \$506 million, or 11.5% of NASA's total procurement spending for the M2M program. Several other states' shares of M2M procurement are smaller but still sizeable. Utah, Louisiana, and Virginia are among such states.

<sup>8</sup> North Dakota and Wyoming are the only states that did not have M2M-specific contracts in FY 2019.

## 4. MODEL DEVELOPMENT

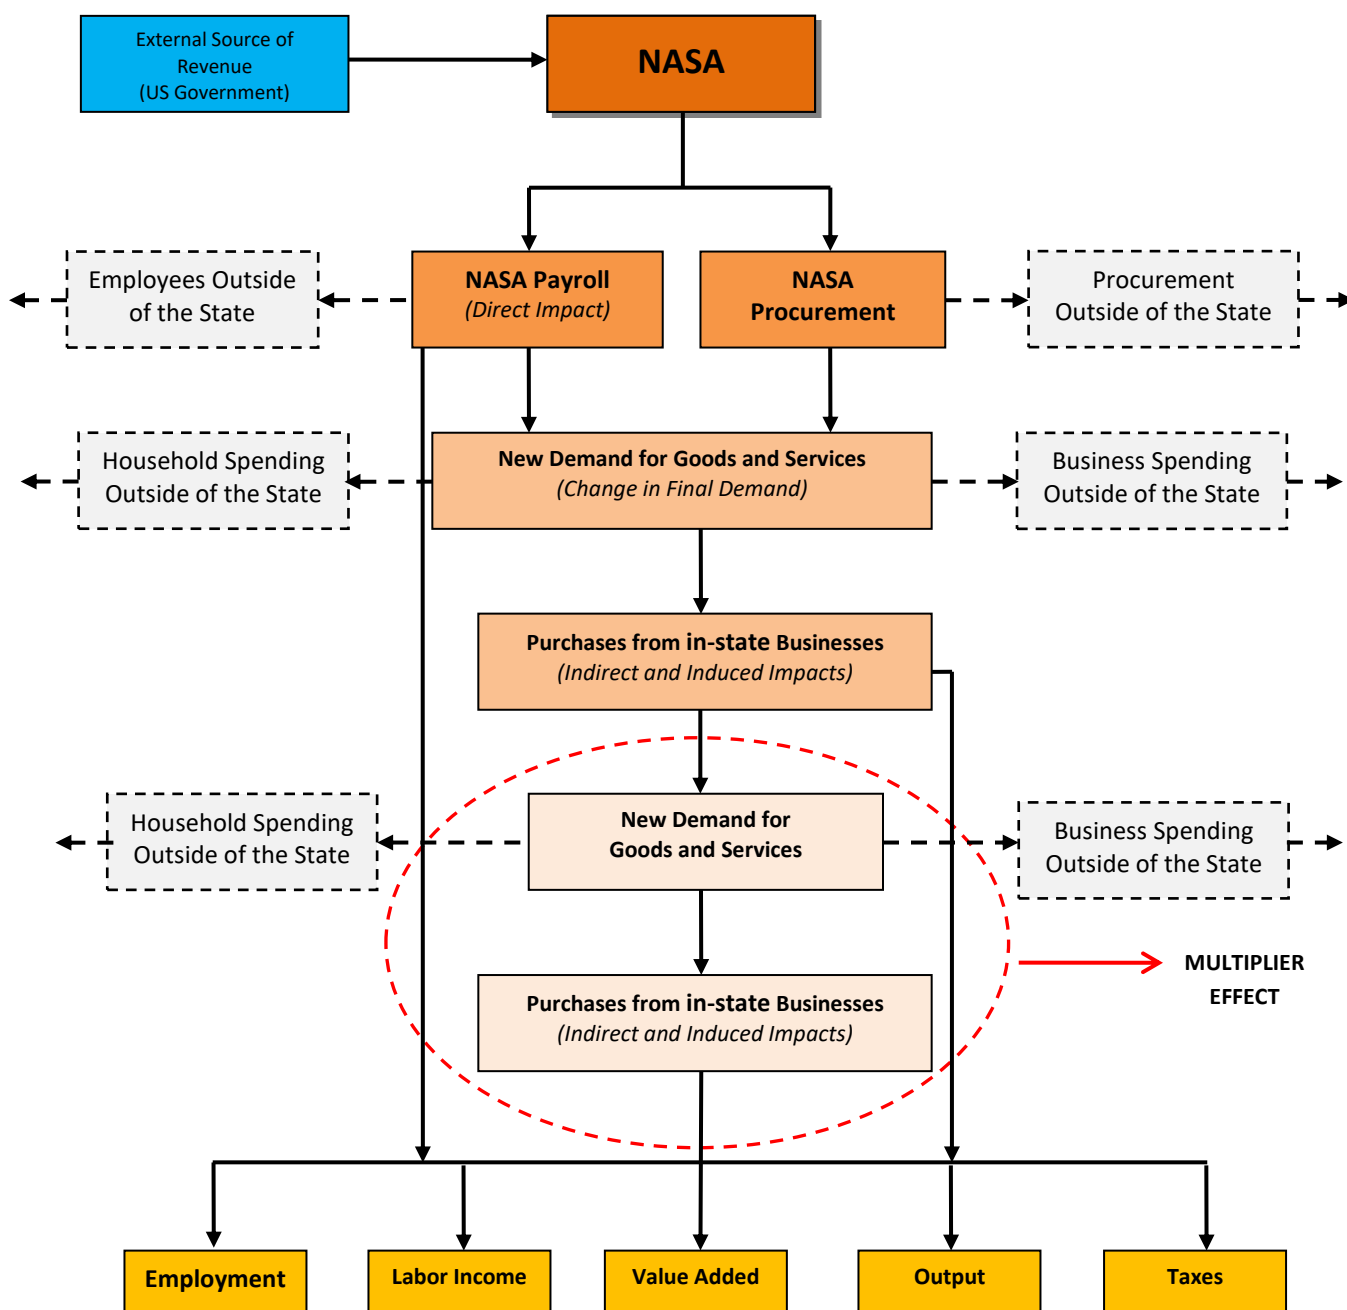

The model development process consists of scenario building and economic modeling stages that involve considerable judgment regarding how to translate the known information describing NASA economic activity (employment and contracting) into model entries, how to set the values of key parameters, and how to generate estimates for missing or incomplete data.

The scenario-building stage involves careful allocation of employment and contracting activities to the most appropriate industry sectors in the model, and determining the geographic location of each of the economic activities to be modeled. This process appears straightforward initially but is more complicated, as it involves questions such as whether a contractor is a manufacturer or a distributor, whether foreign contractors engage with U.S.-based subcontractors, and whether contractors that have a presence in the local area site their main research or organizational units in close proximity or otherwise.

The economic modeling stage consists of building a descriptive input-output model in IMPLAN that can be applied to estimate the effects of the direct employment of NASA, contracting activities, and other aspects of the scenario on all of the sectors of the economy. This stage is where analysts may adjust the default input-output model constructed by the software to represent better the known features of the local economy and match the model assumptions to the particular scenarios being evaluated.

### 4.1. Scenario-Building

The premise of this economic impact assessment is that spending at and through NASA and the M2M program represents an injection of resources into state economies by an external source: the federal government. As described in Section 2, the originator of the event (the source of the resources) determines the counterfactual scenario against which the economic impact analysis is measured. Federal employees' labor income at NASA constitutes an extra-local infusion of resources into the economies examined in this study. According to our scenario, the activities of NASA trigger a cascading series of economic activities in state economies by increasing demand for certain products and services (Figure 6).

**Figure 6: Economic Impact of NASA on a State Economy.**

**Note:** This figure is adapted from Lendel and Park (2012). Payroll refers to the government agency (NASA) Procurement is only associated with government contracting.

In this process:

- **Direct effects** are comprised of NASA employment.
- **Indirect effects** are purchases of goods and services by NASA as well as by the industries that supply NASA. For example, an aerospace firm carrying out contract work for NASA may purchase electronic components and engineering consulting services from other firms to enable its own production.
- **Induced effects** are the impacts of the consumption spending by employees and business proprietors that is engendered by the direct and indirect effects. In other words, induced impacts result from the household spending of employees and owners of business establishments that supply NASA (indirect) and that earn income from employment at NASA facilities (direct). While direct and indirect impacts vary based on the types of goods and services being produced and purchased, induced impacts typically vary much less in type because they support general consumption. Because the average labor income of NASA employees exceeds the per capita income in the local economies examined, on a per capita basis, the induced impacts resulting from the expenditures of NASA employees are anticipated to exceed the induced impacts resulting from expenditures of employees of the industries that supply NASA.<sup>9</sup>

This complex web of industrial relations and market transactions is represented by the input-output model in the IMPLAN software. The resulting mathematical formulae allow examination of the effects of change in one or several economic activities on an entire economy.

#### 4.2. Study Area Designation and Local Expenditures

Defining the study area affects the extent of estimated impacts. The idea is to cover enough area to include the most important aspects of the impact, yet not too much area, or the effects will be swamped by extraneous economic activity. As impact regions become larger, estimated impact figures rise, and the meaning of a specific economic impact finding for a jurisdiction (e.g., a county or a state) becomes ambiguous in terms of its policy implications. A typical approach is to approximate a functional economic area—a reasonably self-contained economic unit. A functional economic area includes the places where a majority of people live, work, and shop, and sometimes can be identified by physical characteristics or resident behavior.

---

<sup>9</sup> The IMPLAN model accounts for local commuting patterns. For example, if 20% of the workers in a particular industry (e.g., retail) who work in the region live outside of the region, the model will allocate 80% of labor's disposable income into the model to generate induced impacts. The model excludes payments to federal and state taxes and savings based on the locality's average local tax and savings rates. Thus, only the disposable incomes of local workers are included in the model.

There are 52 distinct geographic areas examined in this study.<sup>10</sup> As described in Section 3, NASA employee residences are concentrated in certain states. Contracting activity, however, is spread across the U.S.

Every impact analysis starts with local expenditures. Local expenditures are the changes in demand (events) that occur within the study region and constitute the direct impacts. Below, we describe how local expenditure figures were derived for each of the impact regions.

***NASA Impacts:***

1. Fifty (50) states and DC: We estimated the portion of employment and contracting activity using state locations of employee residences and vendors.
2. U.S.: All employment and contracting activities are included in the national model except for contractors.

***M2M Impacts:***

1. Fifty (50) states and DC: We estimated the portion of M2M-specific employment and contracting activity using state locations of employee residences and vendors.
2. U.S.: All employment and contracting activities attributable to the M2M program are included in the national model.

### **4.3. Leakage of Economic Activity in State Models**

Leakage of economic activity from a region occurs because local industries are not able to supply all of the intermediate inputs required to produce the change in final demand. In the short run, this may be due to constraints on supply (i.e., producers cannot quickly produce larger quantities of inputs); in both the short and long run, suppliers that produce the required inputs may not exist within the region.

Because of the leakage of economic activity, initial NASA labor income and procurement spending leads to successive rounds of new spending in the impact area (i.e., states) that diminish in size as some economic activity leaves the region in the form of spending outside the local economy (Bess and Ambargis, 2011). (Savings activity also causes later rounds of spending to decrease in size compared to initial spending.) The higher the level of leakage, the smaller the total economic impact due to the initial change in the economy.

Typically, economic impact analyses assume that economic activity that leaks out of the impact area has no further effect on the local economy. This assumption may yield an underestimate of local economic impact to the extent that some portion of the leakage “returns”. For instance, a non-local input supplier may itself purchase some of its inputs

---

<sup>10</sup> The U.S. as a whole, 50 states, and Washington, DC.

from within the region being analyzed. In most cases it is not possible to model such return leakage. In conducting an analysis of a single region that is relatively small in comparison to the nation (e.g., a state or a county), however, this return leakage normally is negligible relative to other uncertainties in the impact modeling process.

Economic activity leakage represents a more significant challenge when modeling impacts for a group of regions that substantially trade goods and services among one another. In such a case, it becomes important to account for leakage in the modeling process, or impacts for each region would be underestimated. To clarify this concept, consider the example of manufacturing a jet engine. If the production of the engine in state A requires the purchase of turbine blades from state B, then this purchase is a leakage from state A. That means the purchases of goods and services associated with the production of the blades are also excluded from the multiplier of state A. That is to say, if the blade manufacturer in state B purchases quality control services from state A, then the impact of the increase in demand for engineering services from state A is also excluded from the multiplier of state A because the multiplier does not include such feedback effects (return leakage). This is a simple example of unaccounted leakage between two states with three rounds of spending.<sup>11</sup> The challenge in the current study is much greater as we are dealing with leakage occurring among fifty (50) states plus DC with thousands of rounds of spending.

In order to account for the leakage of economic activities from state models, ideally we might estimate a multi-regional input-output model that includes estimates of the supply and purchase interactions among fifty-one regions (50 states plus DC) simultaneously. This is (currently) not feasible due to data and computational limitations. Instead, we follow a three-step, post-modeling approach to capture inter-regional leakage effects. First, we run each state model independently to obtain estimates of the indirect and induced effects occurring in states due to initial NASA spending. Second, we sum these indirect and induced effect estimates across the fifty states (and DC) and subtract this cumulative total from the national total. Third, we allocate the difference found in Step 2 (i.e., the amount un-apportioned due to leakage across state boundaries) to states in proportion to their shares of indirect and induced effects calculated in Step 1. This approach forces the national model and the state-level models to be consistent in terms of the magnitude of impacts.

Although the approach generates total national impact figures that are as accurate as possible, it does retain uncertainty at the regional level, reflecting the assignment of the un-apportioned impacts to particular states. Because we do not have information on the destination of leakages, we probably overestimate the impact in some states and underestimate it in others. Overestimation would occur if a given state in reality captures

---

<sup>11</sup> As noted by Coughlin and Mandelbaum (1991), the inability to fully capture interregional feedback effects is one of biggest limitations of input-output models.

a smaller share of the un-apportioned amount than what we allocate. Underestimation would occur if a given state in reality captures a larger share of the un-apportioned amount than what we allocate. Based on the share of the un-apportioned amount in the national total and the state-level industry information available from IMPLAN, we judge that the typical error is likely approximately 15% for both the NASA and M2M models.

#### **4.4. Economic Modeling**

In this section, we describe how various data items discussed in the previous section are translated into economic events and activities. This step enters the inputs into the impact model, and the economic impact figures (discussed in Section 6) derive from the numbers generated in this step. Before we provide details of the model specification, we briefly review the modeling software, IMPLAN.

IMPLAN is a widely-used impact analysis program based on a regional input-output model. At the heart of the model is a matrix of dollar flows called the social accounting matrix (SAM) that is estimated from a combination of national benchmark input-output data and regional information. This matrix accounts for all the dollar flows among different sectors of the regional economy. Unlike some other input-output models, which represent only the purchasing relationships between industry and household sectors, the SAM in IMPLAN includes the economic relationships among government, industry, and household sectors, allowing the modeling of transfer payments such as unemployment insurance.

Using this information, the IMPLAN software models the way a dollar injected into one sector is spent and then circulated through other sectors of the economy, generating waves of economic activity, or so-called “economic multiplier” effects. The model generates a series of multipliers that, in aggregate, describe the economic repercussions of the original activity. For direct events entered in the form of employment, IMPLAN applies estimates of the average output and compensation per worker to translate the direct effects into monetary value figures. It then applies the value of an event to local and national sector-specific production functions and traces these values through subsequent cycles of transactions and payments to estimate the indirect and induced impacts. During each of these cycles, the procedure removes expenditures to government, savings, and extra-local purchases, so that the results reflect only those transactions that impact the local economy.

The process of model development and impact estimation consists of the following steps:

1. Identify new events (direct impacts) to be introduced into the model.  
The labor income of employees at NASA facilities and the procurement spending originating from NASA are the direct impacts.
2. Identify the industry sectors affected.

For all NASA activity, we allocated vendors and corresponding contracting totals to industry sectors based on NASA's descriptions of what the contract entails. Descriptions of many of the manufactured items and services rendered were provided, and we used this information to allocate corresponding contracting totals to appropriate industries. In cases where a description was not available or was not explicit enough to allow us to select an industry, we conducted additional web searches visiting vendor companies' web sites and made a selection accordingly. We followed the same procedure for activities related to the M2M program.

3. Enter the transaction value dollars based on the year of the model.  
Each dollar value must be specified as either purchaser or producer prices. Producer prices are those paid at the factory door, the amount that a producing firm receives for its output. Input-output models in IMPLAN are specified in producer prices.
4. Customize IMPLAN coefficients as appropriate.  
We utilized 2018 IMPLAN data to construct the input-output model.<sup>12</sup> 2018 was the most current dataset available at the initiation of the study. The NASA employment and procurement figures are for Fiscal Year 2019. Because input-output relationships among industries usually do not change substantially over relatively short periods of time, the relationships that existed among industries in 2018 are reasonable approximations to those that existed in 2019.

Other than the figures entered to signify new events, the ratio of locally purchased to imported goods is perhaps the most significant numerical figure that affects the multipliers and impact estimates derived from an input-output model. The greater the fraction of goods and services purchased locally, the more local economic activity will be stimulated, and hence the larger the resulting multiplier. For all regional models other than the national model, we retained the default model estimates, termed Regional Purchase Coefficients (RPCs). RPCs are derived from an econometric equation that predicts local purchase proportions based on the region's characteristics. In the absence of specific information to justify a different approach, the default RPCs typically are the most appropriate choice.

For the national model, no econometric model exists within IMPLAN and the supply/demand pooling method was used to estimate the RPCs. This method takes into account the national situation where there is no need to estimate interregional (domestic) trade flows, but rather the proportion of demand that is met by the U.S. as opposed to foreign suppliers. The supply/demand pooling method applies data on U.S. foreign exports to estimate the retained portion of each commodity as satisfying domestic demand, and assumes that each commodity is sourced domestically first

---

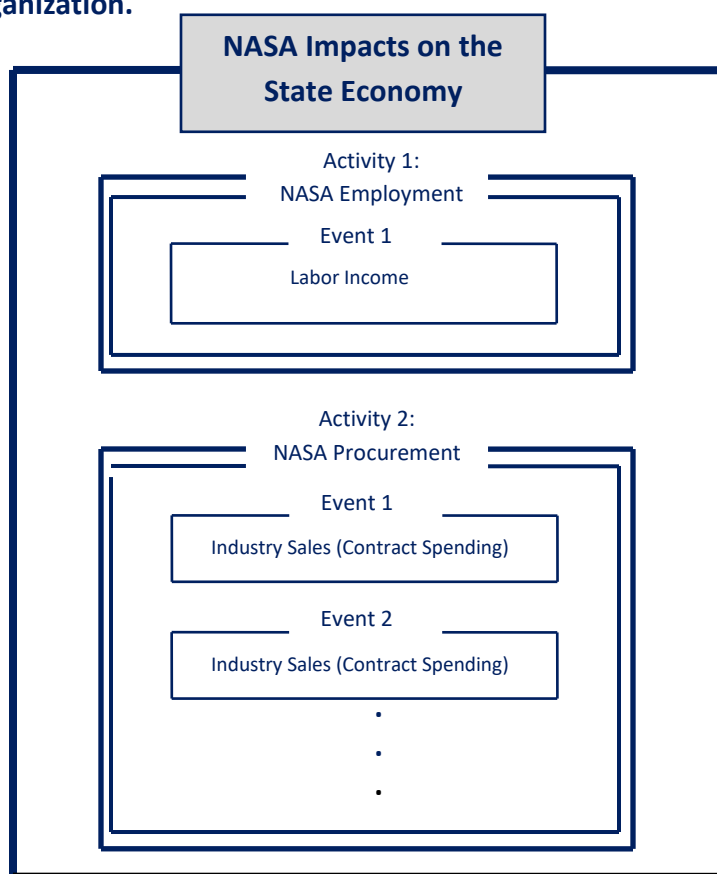

<sup>12</sup> Economic impact modeling data are available at <https://www.implan.com/data/>.

until production is exhausted.<sup>13</sup> In comparison with the regional RPCs, the supply/demand pooling method yields maximum estimates; that is, no more local commodity can be purchased than is locally produced (IMPLAN, 2004). Consequently, we anticipate greater impacts per employee and per dollar of procurement spending nationally than individual states.

5. Operate the software to generate estimates of the impact of the events on the study area economy.

For this study, we generated four separate categories of activities: (1) NASA employment, (2) NASA procurement, (3) M2M employment, (4) M2M procurement. Each of these activities is in turn a collection of events (changes in labor income or industrial sales in particular industry sectors—see Figure 7 below), and is replicated as necessary for the different geographic regions studied (over 50).

**Figure 7: Impact Organization.**

**Note:** This figure is adapted from IMPLAN (2004).

<sup>13</sup> The designers of the IMPLAN software suggest that this assumption is appropriate for the national context, in which typically there is little advantage to procuring substitutable commodities from foreign rather than domestic suppliers, and it makes even more sense for the specialized portions of the supply chains following from NASA procurement.

## 5. IMPACT ESTIMATION DECISIONS

The types of employment and procurement data and the assumptions made in the scenario development and model building stages have implications for impact estimates presented in the following section (see Box 6).

First, there may be slight overestimation involved in our results for certain states where businesses engage in subcontracting activity that deviates from the model assumptions. Contractors whose main research or organizational units are located elsewhere but have a presence in a certain state might engage in subcontracting relations with businesses near the location of their headquarters rather than their remote location. Because we assumed that institutions in these conditions would procure locally (according to the RPCs as estimated in the model) and that the resulting household income/spending would occur locally as well, the impacts of such institutions on certain states may be overestimated.

Second, we chose not to include travel expenditures related to business trips by employees at NASA facilities. The rationale behind this decision is lack of evidence indicating that business transactions related to operations of NASA lead to more-than-average travel (as is modeled automatically). That is, the economic impact model estimates travel-related expenditure impacts as a standard byproduct of business transactions occurring in the economy. If such travel is more frequent than average, the impact results are likely to be underestimated slightly.

Third, our impact modeling, like any other estimation approach using IMPLAN, captures only traceable business transactions occurring in the economic system. Not all positive economic impacts are traceable via input-output transactions. Research and development (R&D) conducted at NASA centers and by its suppliers in the aerospace industry may benefit businesses in related industrial fields, either through NASA activities augmenting those businesses' own research and development efforts, or by making it possible for those firms to employ more efficient production technologies. Either case will result in increases in productivity for the economy as a whole (Jaffe *et al.*, 1993; Shapiro, 2015). These effects are termed externalities or spillovers and cannot be captured in economic impact analyses based on input-output models. Given that the industries deriving the most benefit from direct NASA spending are scientific research<sup>14</sup> and development services (accounting for more 65% of NASA procurement spending), the total economic impacts of NASA activities might exceed the estimates reported in this study.

---

<sup>14</sup> Basic research provides larger spillover benefits than that of development research because development spillovers are largely internalized by patent policy that provides monopoly power to firms with innovative products. Intellectual property rights do not as thoroughly internalize more general and theoretical basic research externalities.

Finally, tourism activity related to the presence of NASA facilities and associated space museums may generate additional economic impacts for states. This impact analysis does not include these tourism effects. Specific data quantifying visitor volume, origin, and expenditure patterns could be used to incorporate tourism impacts in future analysis.

**Box 6: Potential Sources for Over- or Underestimation of Economic Impacts**

**Subcontracting activity:** Impacts are calculated based on a combination of the industry-specific subcontracting relationships that exist nationwide and in the model area. To the extent that businesses engage in subcontracting activity that deviates from the national and regional averages, impacts could be over- or underestimated depending on the direction of deviation. There is likely slight overestimation for states with NASA contractors whose location is different from their parent companies' location (i.e., subsidiaries or branch plants). On the other hand, there is likely slight underestimation for states with NASA contractors whose location is the same as the company's headquarters. Unfortunately, we are not able to quantify the magnitude of the over- or underestimation for different states without specific subcontracting information for NASA contractors.

**Business travel:** To the extent that NASA's business travel is more frequent than the average for the related industry in the model, the impact results are underestimated slightly for states that are the destinations of trips are that host commercial airline headquarters. If NASA's business travel is less frequent than the model industry average, the impact results are overestimated slightly for the same states.

**NASA center & museum visitors:** Due to lack of data on visitor numbers and associated spending, we are not able to model the economic impacts of visitors to NASA facilities. Therefore, impact estimates for states that attract substantial visitors (particularly those hailing from outside of the state) are likely underestimated. Specific data quantifying visitor volume, origin, and expenditure patterns could be used to incorporate tourism impacts in future analyses.

## 6. RESULTS ANALYSIS

In this section, we present estimates of NASA and M2M program impacts on the U.S. as a whole, the fifty (50) states, and Washington, DC. For each region, we first analyze overall NASA impacts and then examine M2M program impacts. Finally, we specify the portion of NASA impacts attributable to the M2M program to highlight the relative contribution of the M2M program in every state.

The economic impact is examined through a detailed analysis of the changes in employment, output (gross sales), labor income, value added<sup>15</sup>, and taxes<sup>16</sup> due to NASA's activities.<sup>17</sup> First, summary impacts are presented, organized by the type of impact. Second, for employment and output, two of the most important impact categories, results are examined by NASA employment and procurement components.<sup>18</sup> The detailed disaggregation of economic impacts by their sources highlights the relative contributions of NASA's employment and procurement activities to the overall NASA impacts. Third, for each of the impact categories, the ten most heavily impacted industries are described.<sup>19</sup>

### 6.1. Economic Impacts on the United States

#### 6.1.1. NASA Impacts

At the national level, NASA directly employs 18,694 civil servants (17,022 FTE jobs), with annual compensation of \$2.9 billion in wages and benefits. The contracting activity originating from NASA (nearly \$19.3 billion) is both large in volume and very diverse— involving most categories of manufacturing or service industry. There are indirect effects from purchases of goods and services by NASA as well as by the firms that supply NASA. Consumption expenditures made by employees of NASA, NASA's suppliers, and suppliers further up the production chain, create induced effects. Taking the domestic portions of these spending streams into account, the total employment impact of NASA across the U.S. is more than 312,000 jobs (including direct, indirect, and induced impacts—see Box 2 in Section 1). The labor income and economic output associated with this total amount of employment are, respectively, \$23.7 billion and \$64.3 billion. Contracting activities along with NASA's direct employment generated an estimated \$6.9 billion in federal, state, and local tax revenues in 2019 (Table 5).

Multipliers give additional insight as to how the economy is affected by an initial economic change (see Box 7 below and Box 4 in Section 1). For every civil service FTE job

---

<sup>15</sup> Please refer to Box 3 in the introduction (Section 1) for the definition of value added.

<sup>16</sup> Unless otherwise mentioned, all monetary values correspond to 2019 dollars.

<sup>17</sup> Please note that due to rounding column and row totals may not be equal to the sum of columns or rows throughout the report.

<sup>18</sup> Separate impacts for NASA employment and procurement components are presented in the Appendix.

<sup>19</sup> This analysis includes only those states in which the total employment impact is greater than 1,000 jobs.

located at NASA, an additional 17.4 jobs are supported throughout the U.S. economy.<sup>20</sup> The income multiplier is 8.1: for each \$1 million of labor income earned by NASA employees, an additional \$7.1 million in labor income is generated in the U.S. economy. The output multiplier is 8.7. For each \$1 million's worth of output generated at NASA, an additional \$7.7 million of output (intermediary and final goods and services) is generated throughout the U.S. economy.

#### Box 7: Multiplier Considerations

The multipliers referenced in this section, and in particular the employment multiplier, are larger than is typical for this kind of impact study because of the volume of NASA's contracting activity, all of which is classified as indirect impact. Please note that if additional (or reduced) civil service employees are not associated with additional (reduced) contracting activity at a comparable scale, then it may be inappropriate to use the employment multiplier to estimate future economic impacts of changes in civil service employment at NASA centers. Multipliers calculated in the conventional way are provided in the Appendix and they are comparable to multipliers found in similar studies.

Multipliers are calculated for only those states with direct NASA employment. Every state has different multipliers, and state multipliers normally are smaller than national multipliers. The size of the multiplier changes depending on the size and diversity of the economy analyzed. Large and sectorally diverse economies such as those of the states of Texas or California tend to have larger multipliers than smaller or less diverse economies such as in the states of Rhode Island or Wyoming.

Multiplier magnitudes are determined by the quantity of supply chain linkages and range of consumer goods and services available within the economy. Therefore, states in which firms often procure inputs locally and consumers generally spend a larger portion of their income locally tend to have larger multipliers than states that do not have strong supply chain linkages and fewer options for consumers.

**Table 5: Summary of NASA Impacts by Types of Impact, the United States.**

Impact Type	Employment <sup>21</sup>	Labor Income (\$ thousands)	Value Added (\$ thousands)	Output (\$ thousands)	Tax (\$ thousands)

<i>Multiplier</i>	<i>18.4</i>	<i>8.1</i>	<i>10.0</i>	<i>8.7</i>	<i>n.a.</i>

<sup>20</sup> "Supports" means partial or full support. We use "supported" instead of "created" to be conservative in our attribution of impacts to NASA. While NASA activities create new positions in some sectors of the economy, in many instances NASA helps sustain existing jobs in the economy.

<sup>21</sup> While direct employment component refers to full-time equivalent (FTE) positions at NASA centers, indirect and induced employment components refer to a combination of full-time and part-time positions.

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

Beside overall impact figures, it is useful to examine the source of impacts to better understand the contribution of different NASA activities to the U.S. economy.<sup>22</sup> Table 6 examines the sources of the employment figures presented in the second column of Table 5. Procurement spending originating from NASA is responsible for the largest portion of overall NASA employment impacts. Nearly 87% of the jobs supported throughout the U.S. economy by NASA are due to procurement spending, leaving the share of NASA's direct employment in the overall employment impact at around 13%.

**Table 6: NASA Employment Impacts by Sources of Impact, the United States.**

Type of Impact	NASA Employment		NASA Procurement		Total		Shares (%)

\*Note that direct employment impact consists of NASA jobs (FTEs) while indirect employment impact consists of NASA contractor employees and employees in the supply chain of those contractors.

Table 7 examines the sources of the output figures in the fifth column of Table 5. Similar to employment impact, procurement spending originating from NASA is responsible for the lion's share of overall NASA output impacts (nearly 82%). NASA employment's share of the overall output impact is around 18%. The reason that NASA employment's share of the output impact exceeds its share of employment impact is that employees at NASA produce more output per worker than the average for employees in the supply chain of NASA procurement.

<sup>22</sup> Here, the focus is on the two most important categories of the economic impact analysis: employment and output. Analogous tables for labor income and value added categories are contained in the Appendix.

\* Note that direct output impact is associated with NASA labor force while indirect output impact is associated with NASA contractor employees and employees in the supply chain of those contractors.

### **312,630 jobs in the U.S. economy were supported by NASA activities in Fiscal Year 2019.**

Of these, 17,022 (5%) were directly located at NASA centers. As a result of the procurement of goods and services in the U.S. economy, 158,161 additional jobs (51%) were created. The remaining employment—137,447 jobs (44%)—was in the form of induced impacts as labor income and proprietor earnings were spent in the wider consumer economy.

Figure 8 depicts the ten most impacted industries by employment. Scientific research and development services and federal government<sup>23</sup> are the most impacted industries, respectively. These two industries together account for 20% of the jobs created. The employment in scientific research and development services is driven largely by NASA procurement spending. This industry accounted for approximately 66% of NASA procurement spending in Fiscal Year 2019. The impact in the federal government sector represents mainly civil service employees working for NASA.

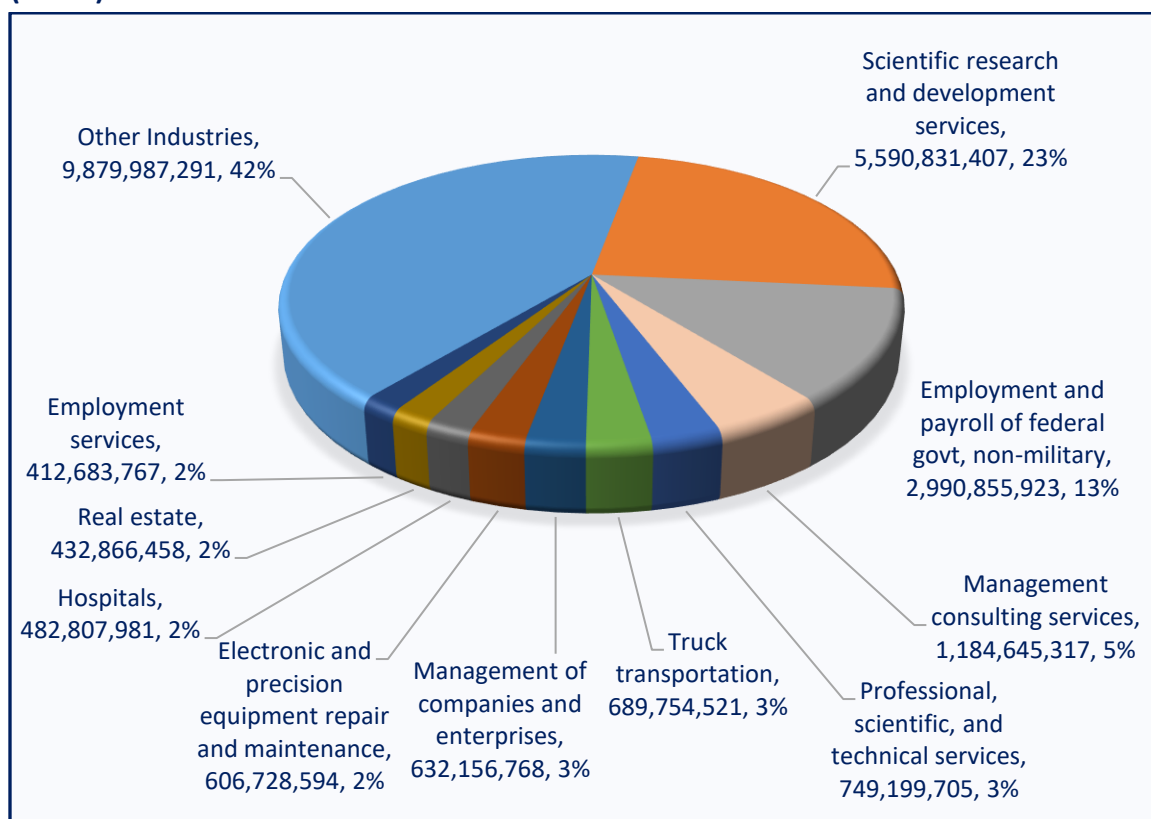

<sup>23</sup> Employment and payroll of federal government (non-military) is only included as an industry in supply chain analysis via employment. We only consider impacts to this industry from employment, not from contracting or indirect purchases.

**Figure 8: Top Ten Most Impacted Industries by Employment, the United States (NASA).**

**The total income impact of NASA in the U.S. was \$23.7 billion in Fiscal Year 2019.** Of this amount, nearly \$3 billion (13%) represented wages and benefits paid to NASA employees (direct impact). Payments to employees of private firms and organizations across the nation that supplied goods and services to NASA (indirect impact) represented \$13.1 billion (55%). The remaining income (induced impact), estimated to be \$7.6 billion (32%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 9 depicts the ten most impacted industries by labor income. Scientific research and development, management consulting services, and professional and technical services are the most impacted industries by income (along with the federal government sector). The four industries together account for 44% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the national average. As of 2018, the average employee compensation in the scientific research and development services industry was \$114,304 (including benefits), compared to an average of \$62,977 across the country.

**Figure 9: Top Ten Most Impacted Industries by Labor Income, the United States (NASA).**

**Box 8: Overlap between Labor Income, Value Added, and Output**

These categories are not mutually exclusive, they overlap significantly (i.e., labor income is a subset of value added, and value added in turn is a subset of output). Therefore, adding these values is double counting of impacts.

**Labor Income** = Employee Compensation + Proprietor Income – Taxes

**Value Added** = Labor Income + Taxes + Other Property Type Income (Profit)

**Output** = Value Added + Intermediate Purchases (Business to Business)

**Labor income** equals employee compensation (wages and benefits) and proprietor income.

**Proprietor income** consists of payments received by self-employed individuals and unincorporated business owners.

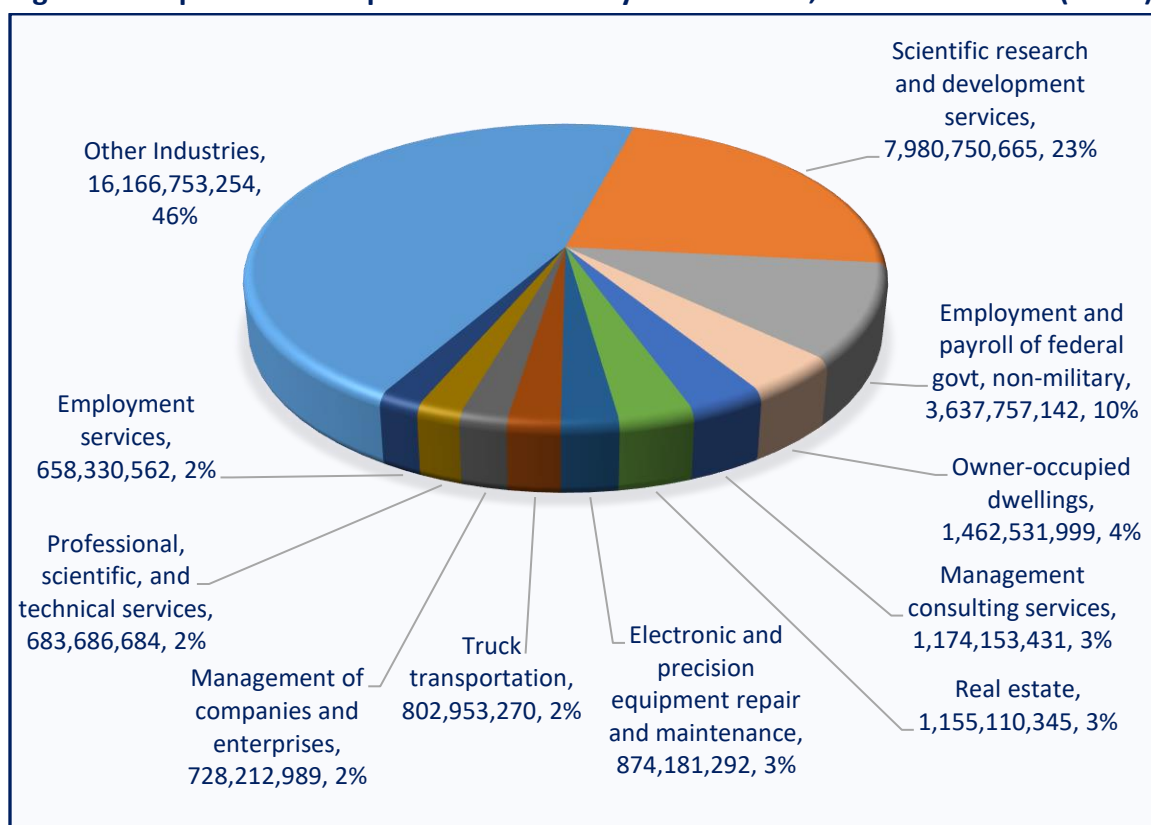

**Profits** (net of taxes), also referred as other property type income, include corporate profits, capital consumption allowance, payments for rent, dividends, royalties and interest income.

**Intermediate purchases (Business to Business)** are purchases of goods and services such as energy and materials that are used for the production of other goods and services rather for final consumption.

**The total value added impact of NASA in the U.S. was \$35.3 billion in Fiscal Year 2019.** Of this amount, more than \$3.5 billion (10%) was created by civil service employees and \$18.4 billion (52%) was created indirectly by the \$19.3 billion in procurement spending across all industry sectors in the country. \$13.4 billion (38%) was generated by increased consumption spending supported by increased earnings.

Figure 10 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development services is the most impacted industry (along with the federal government sector). The two industries together account for a third of the total value added created. NASA activities accounted for an increase of nearly \$8 billion in value added in scientific research and development services. \$3.6 billion dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

**Figure 10: Top Ten Most Impacted Industries by Value Added, the United States (NASA).**

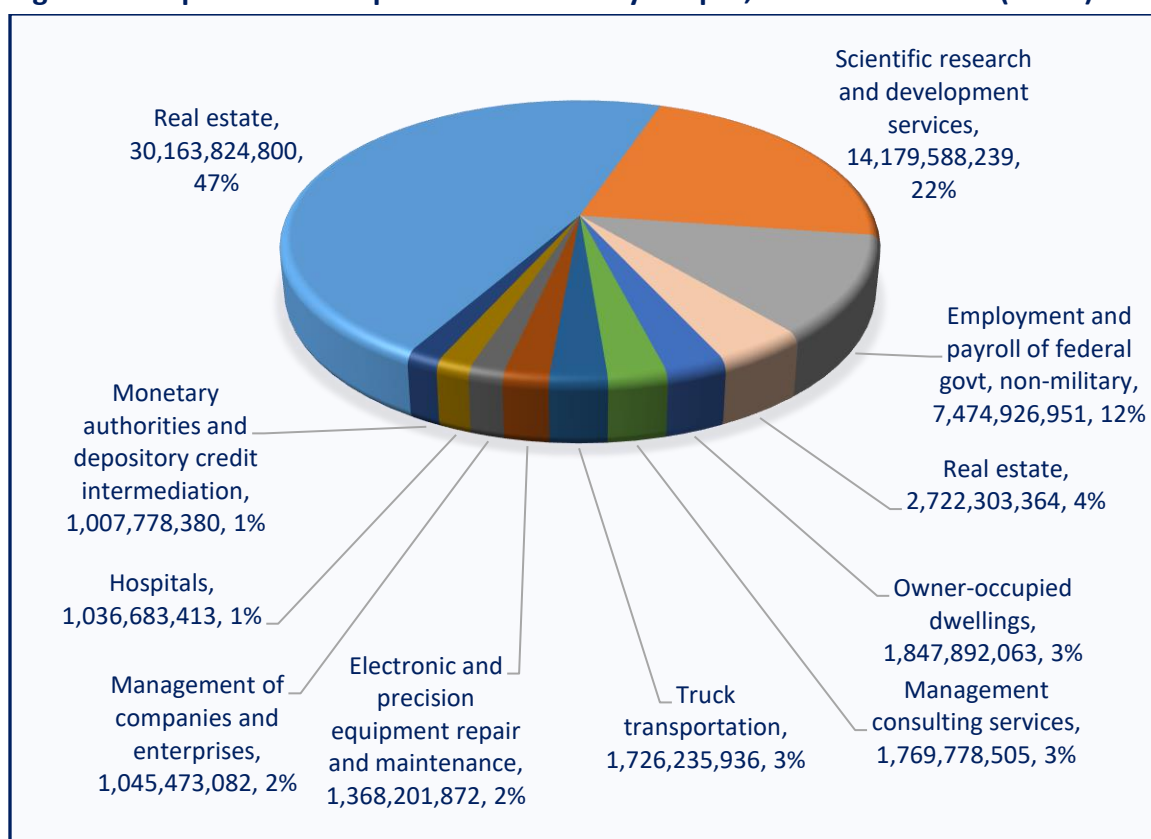

**The total output impact of NASA in the U.S. was \$64.3 billion in Fiscal Year 2019.** The direct impact of \$7.3 billion constitutes the value of production by NASA employees, accounting for around 12% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$19.3 billion resulted in an

additional increase in output (gross sales) of \$13.7 billion across all industry sectors (adding up to the indirect total of \$33 billion in Table 5). \$24 billion (37%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of more than \$14 billion in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services (Figure 11). Similar to employment, impacts in this industry are largely driven by NASA procurement spending; scientific research and development services accounted for approximately 66% of NASA procurement spending in Fiscal Year 2019. Sales in management consulting services, truck transportation, and electronic and precision equipment repair and maintenance are also impacted significantly. The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

**Figure 11: Top Ten Most Impacted Industries by Output, the United States (NASA).**

### 6.1.2. M2M Program Impacts

At the national level, NASA directly employs 5,563 civil servants (3,155 FTEs) for the M2M program, with annual compensation of more than \$520 million in wages and benefits.

The M2M-related contracting originating from NASA (\$4.4 billion) is both large in volume and very diverse—involving almost every major category of manufacturing or service activity. There are indirect effects from the purchases of goods and services by NASA Centers as well as by the firms that supply those centers. Consumption expenditures made by the M2M labor force, by suppliers to the M2M program, and by suppliers further upstream within the production chain, create induced effects. Taking the domestic portions of these spending streams into account, the total employment impact of the M2M program across the U.S. is more than 69,000 jobs (including direct, indirect, and induced impacts—see Box 2 in Section 1). The labor income and economic output associated with this total amount of employment are, respectively, \$5.2 billion and \$14.1 billion. M2M contracting activities along with NASA’s direct employment for the M2M program generated an estimated \$1.5 billion in federal, state and local tax revenues in 2019 (Table 8).

**Table 8: Summary of M2M Program Impacts by Types of Impact, the United States.**

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different M2M-specific NASA activities to the U.S. economy. Eighty-nine (89) percent of the employment impacts and eighty-five (85) percent of the output impacts are due to M2M procurement.

<sup>24</sup> While direct employment component refers to full-time equivalent (FTE) positions at NASA centers, indirect and direct employment components refer to a combination of full-time and part-time positions.

### 6.1.3. The M2M Program's Share of NASA Impacts

Approximately 22% of overall NASA agency impacts in the U.S. are attributable to the M2M program (Table 11 and Figure 12). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 11: The M2M Program Portion of Overall NASA Impacts, the United States.**

## 6.2. Economic Impacts on the State of Alabama

### 6.2.1. NASA Impacts

In 2019, 2,372 NASA civil service employees (2,214 FTEs) residing in Alabama earned \$365 million in labor income. NASA contracts sourced in Alabama in the same year totaled \$1.9 billion. The total economic impact resulting from these activities is 35,768 jobs, \$2.3 billion in labor income, and \$6 billion in economic output. These economic activities generate more than \$189 million in tax revenues for the state and local governments in Alabama (Table 12).

The employment multiplier is 16.2, meaning that for every NASA job located in Alabama, an additional 15.2 jobs are supported in the state economy. The output multiplier of 6.3 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$5.3 million worth of output is sustained throughout the state economy.

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Alabama economy. Table 13 examines the sources of the employment figures in the second column of Table 12. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Eighty-five (85) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 15%.

Table 14 examines the sources of the output figures in the fifth column of Table 12. Procurement spending is responsible for more than 76% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is approximately 24%. The reason that NASA employment's share of the overall output impact is larger than its share of the overall employment impact is that NASA employees produce more output per worker than the average employee in the NASA procurement supply chain. Because NASA's labor force is more concentrated in the state than its procurement (compared to the nationwide impacts), a slightly larger proportion of NASA impacts in Alabama are attributable to the employment of NASA civil service workers.

**Table 14: NASA Output Impacts by Sources of Impact, Alabama.**

**35,768 jobs in the Alabama economy were supported by NASA activities in Fiscal Year 2019.** Of these, 2,214 (6%) were directly located at NASA centers. As a result of the procurement of goods and services in the Alabama economy, 20,226 additional jobs (57%) were created. The remaining employment—13,328 jobs (37%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 13 depicts the ten most impacted industries by employment. Professional and technical as well as scientific research and development services are the most impacted industries, respectively. These industries (along with the federal government sector) account for more than a third of the jobs created. The employment in these industries is

driven largely by NASA procurement spending; these two industries accounted for approximately 72% of NASA procurement spending in Fiscal Year 2019. The impact in the federal government sector represents mainly civil service employees working for NASA.

**Figure 13: Top Ten Most Impacted Industries by Employment, Alabama (NASA).**

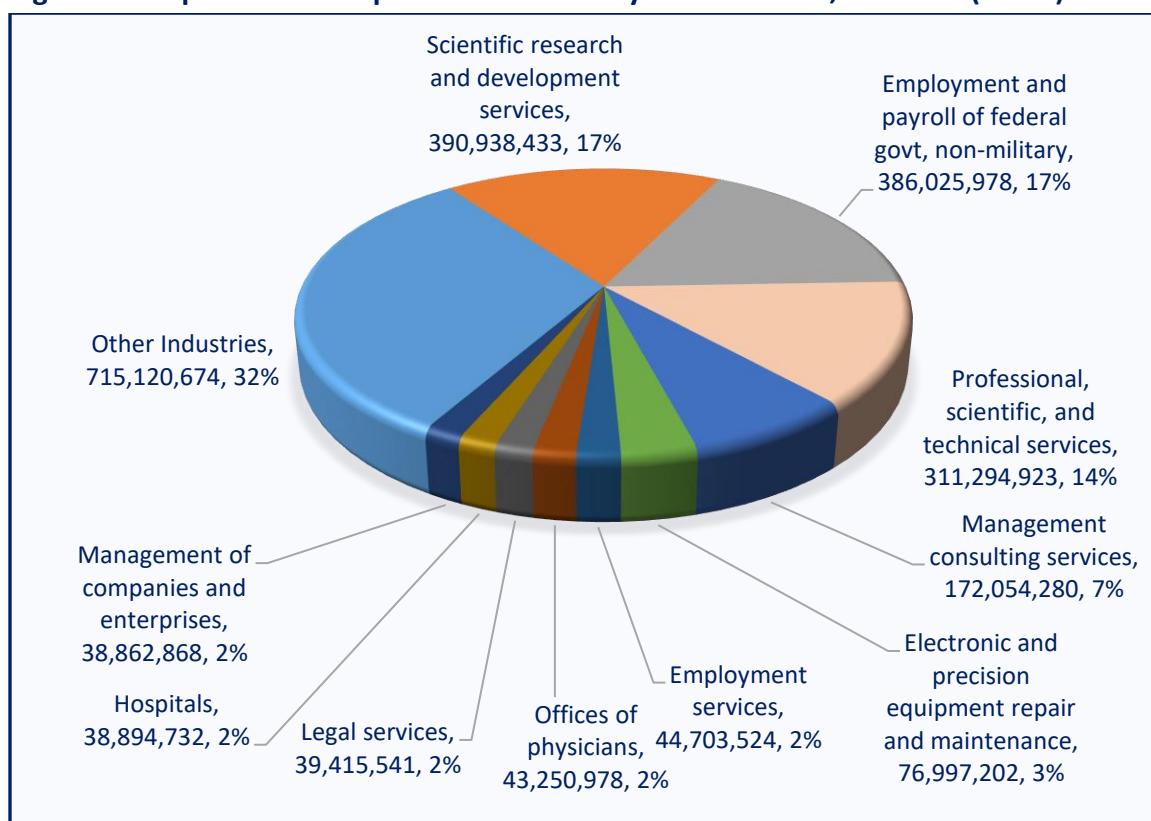

**The total income impact of NASA in Alabama was \$2.3 billion in Fiscal Year 2019.** Of this amount, \$365 million (16%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$1.3 billion (58%). The remaining income (induced impact), estimated to be \$590 million (26%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 14 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, scientific research and development, professional and technical services and management consulting services are the most impacted industries by income (along with the federal government sector). The four industries together account for 55% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the state average. As of 2018, the average employee

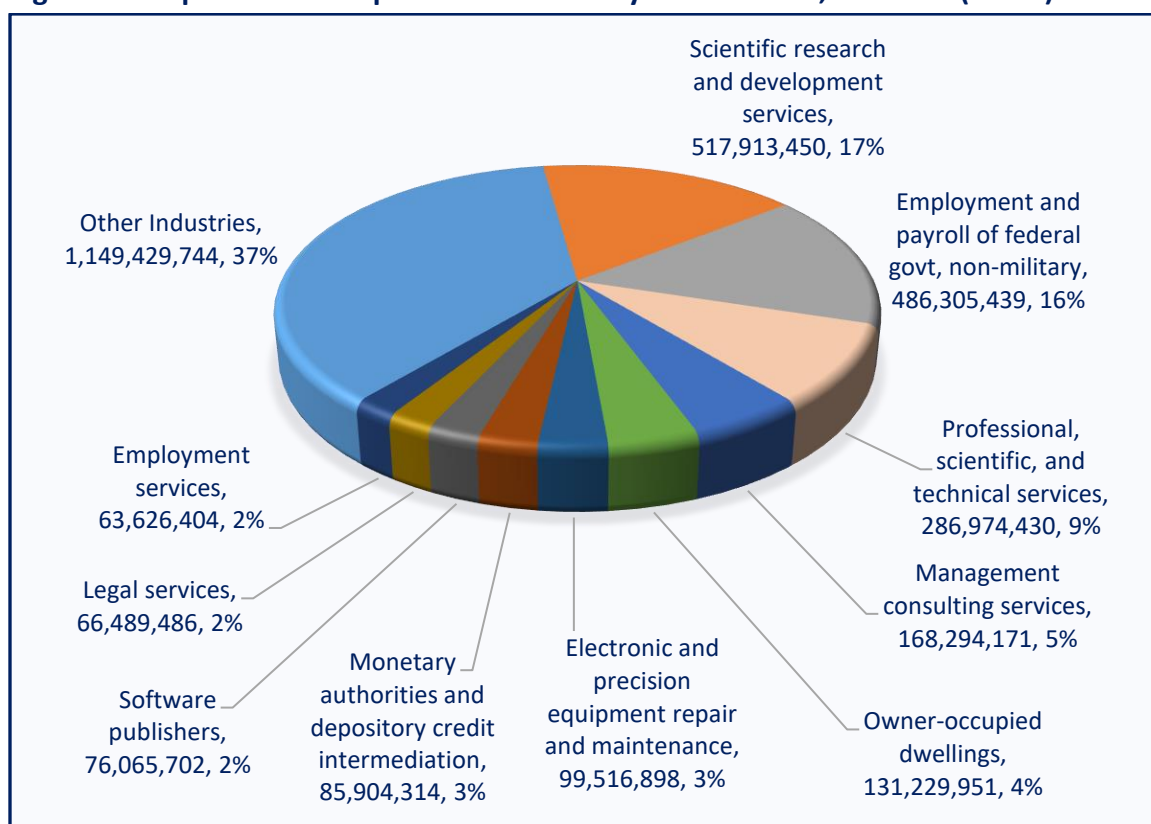

compensation in the scientific research and development services industry was \$83,715 (including benefits), compared to an average of \$51,613 across Alabama.

**Figure 14: Top Ten Most Impacted Industries by Labor Income, Alabama (NASA).**

**The total value added impact of NASA in Alabama was \$3.1 billion in Fiscal Year 2019.** Of this amount, more than \$457.5 million (15%) was created by civil service employees and \$1.6 billion (51%) was created indirectly by the \$1.9 billion in procurement spending across all industry sectors in Alabama. \$1 billion (34%) was generated by increased consumption spending supported by increased earnings.

Figure 15 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development and professional and technical services are the most impacted industries (along with the federal government sector). The three industries together account for 42% of the total value added created. NASA activities accounted for an increase of \$518 million in value added in scientific research and development services, and a \$287 million increase in value added in professional and technical services. Four hundred eighty six (486) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

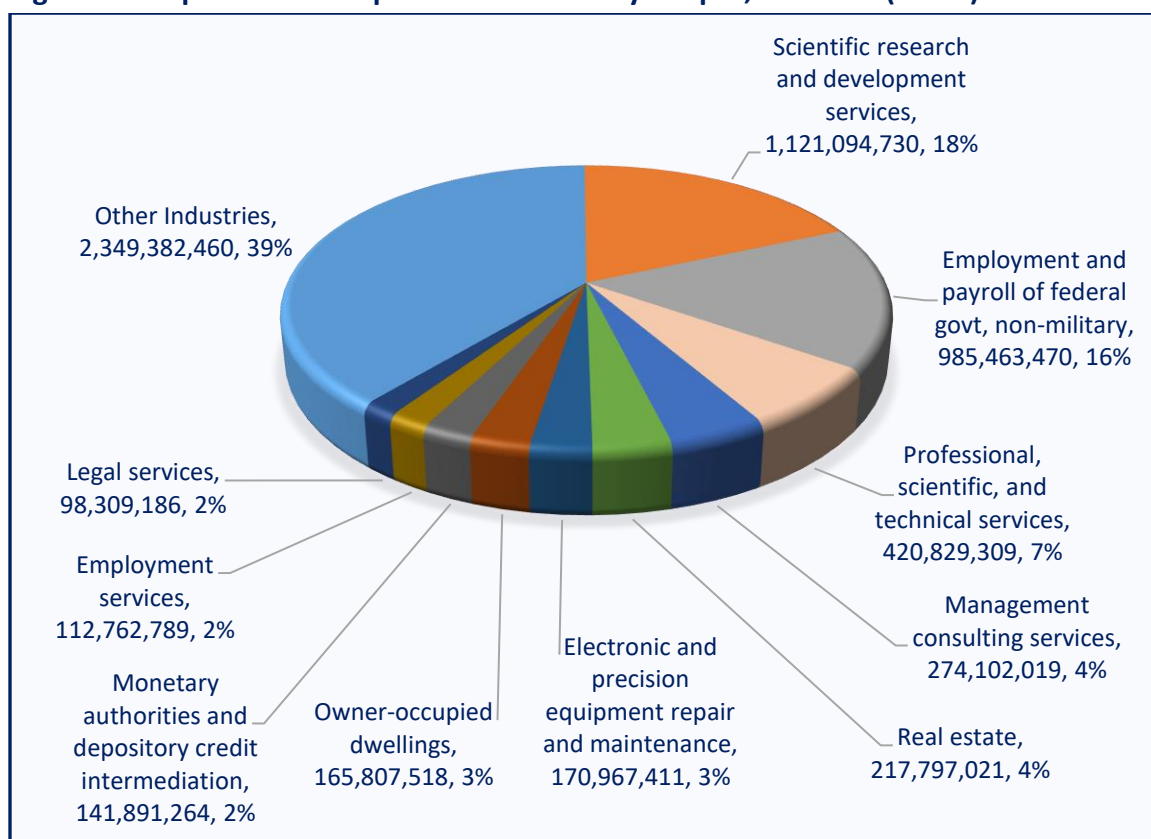

**Figure 15: Top Ten Most Impacted Industries by Value Added, Alabama (NASA).**

**The total output impact of NASA in Alabama was \$6 billion in Fiscal Year 2019.** The direct impact of \$956.7 million constitutes the value of production by NASA employees, accounting for around 16% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$1.9 billion resulted in an additional increase in output (gross sales) of \$1.1 billion across all industry sectors (adding up to the indirect total of \$3 billion in Table 12). \$2 billion (34%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of more than \$1.1 billion in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services, and a \$420.8 million increase in sales in professional and technical services (Figure 16). Similar to employment, impacts in these industries are largely driven by NASA procurement spending; these two industries accounted for approximately 72% of NASA procurement spending in Fiscal Year 2019. Aside from management consulting services and electronic and precision equipment repair and maintenance, the output impacts reported in other industries mainly result from increases in consumption spending (induced impacts). The sizable impacts in the real

estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

**Figure 16: Top Ten Most Impacted Industries by Output, Alabama (NASA).**

### 6.2.2. M2M Program Impacts

In 2019, Alabama had 1,222 M2M-related civil service employees (864 FTEs) jobs with a corresponding labor income of \$138.4 million. M2M program contracts sourced in Alabama in the same year totaled \$1.1 billion. The total Alabama employment impact is 18,609 jobs (including direct, indirect, and induced impacts—see Box 2, Section 1), meaning that for every M2M-related job located in the state, an additional 20.5 jobs are created in the state economy. The labor income and economic output impacts are \$1.2 billion and \$3.3 billion, respectively. These economic activities, along with the M2M program labor force, generate \$99 million in tax revenues for the state and local governments in Alabama (Table 15).

**Table 15: Summary of M2M Program Impacts by Types of Impact, Alabama.**

The following two tables examine the contribution of different NASA activities to the Alabama economy. Eighty-nine (89) percent of the employment impacts and eighty-three (83) percent of the output impacts are due to NASA procurement sourced within the state.

### 6.2.3. The M2M Program's Share of NASA Impacts

Approximately 54% of overall NASA agency impacts in the state are attributable to the M2M program (Table 18 and Figure 17). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 18: The M2M Program Portion of Overall NASA Impacts, Alabama.**

### 6.3. Economic Impacts on the State of Alaska

#### 6.3.1. NASA Impacts

In 2019, 4 NASA civil service employees (2 FTEs) residing in Alaska earned \$131,000 in labor income. NASA contracts sourced in Alaska in the same year totaled \$17.2 million. The total economic impact resulting from these activities is 191 jobs, \$13.5 million in labor income, and \$37 million in economic output. These economic activities generate \$711,000 in tax revenues for the state and local governments in Alaska (Table 19).

The following two tables examine the contribution of different NASA activities to the Alaska economy. Table 20 examines the sources of the employment figures in the second column of Table 19. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly 99% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is around 1%.

### 6.3.2. M2M Program Impacts

There were no M2M-specific NASA employees in Alaska in FY 2019, but approximately \$48,000 in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is less than one job, \$24,000 in labor income, and \$81,000 worth of output (Table 22).

## 6.4. Economic Impacts on the State of Arizona

### 6.4.1. NASA Impacts

In 2019, 21 NASA civil service employees (14 FTEs) residing in Arizona earned more than \$2.5 million in labor income. NASA contracts sourced in Arizona in the same year totaled \$343.7 million. The total economic impact resulting from these activities is 5,041 jobs, \$325.3 million in labor income, and \$971 million in economic output. These economic activities generate \$30 million in tax revenues for the state and local governments in Arizona (Table 24).

**Table 24: Summary of NASA Impacts by Types of Impact, Arizona.**

The following two tables examine the contribution of different NASA activities to the Arizona economy. Table 25 examines the sources of the employment figures in the second column of Table 24. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 99% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 1%.

**5,041 jobs in the Arizona economy were supported by NASA activities in Fiscal Year 2019.** Of these, 14 (<1%) were directly located at NASA centers. As a result of the procurement of goods and services in the Arizona economy, 2,907 additional jobs (58%) were created. The remaining employment—2,119 jobs (42%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 19 depicts the ten most impacted industries by employment. Scientific research and development services is the most heavily impacted industry, accounting for 27% of the jobs created. The employment in this industry is driven largely by NASA procurement spending; scientific research and development services accounted for approximately 94% of NASA procurement spending in the state in Fiscal Year 2019.

**Figure 19: Top Ten Most Impacted Industries by Employment, Arizona (NASA).**

**The total income impact of NASA in Arizona was \$325.3 million in Fiscal Year 2019.** Of this amount, more than \$2.5 million (1%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$214 million (66%). The remaining income (induced impact), estimated to be \$108.8 million (33%), resulted from expenditures by those earning income through the direct and indirect impacts.

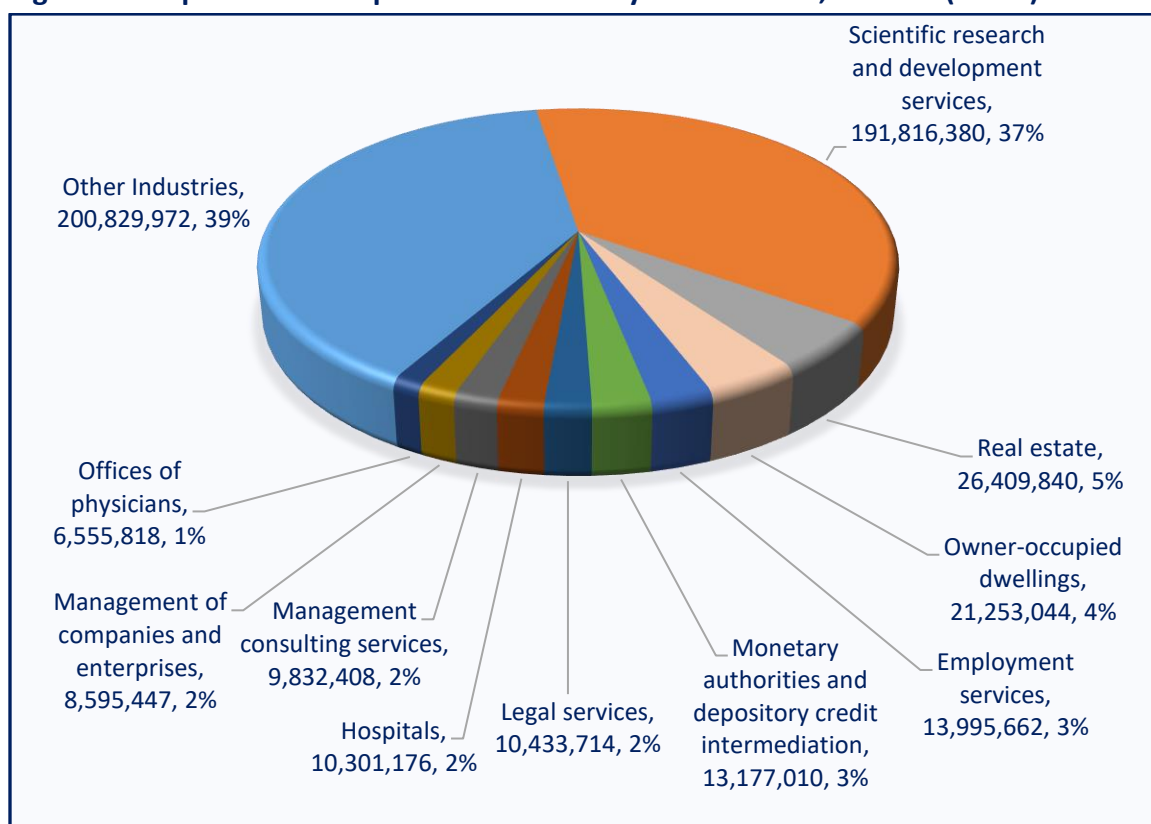

Figure 20 depicts the ten most impacted industries by labor income. As a consequence of its share of total employment, scientific research and development services is the most impacted industry, accounting for 37% of the total labor income earned. The reason that this industry's share of labor income is larger than its share of employment is that employee compensation in this industry is greater than the state average. As of 2018, the average employee compensation in the scientific research and development services industry was \$95,329 (including benefits), compared to an average of \$55,742 across Arizona.

**Figure 20: Top Ten Most Impacted Industries by Labor Income, Arizona (NASA).**

**The total value added impact of NASA in Arizona was \$513.2 million in Fiscal Year 2019.**

Of this amount, more than \$2.9 million (<1%) was created by civil service employees and \$321.5 million (63%) was created indirectly by the \$343.7 million in procurement spending across all industry sectors in Arizona. \$188.7 million (37%) was generated by increased consumption spending supported by increased earnings.

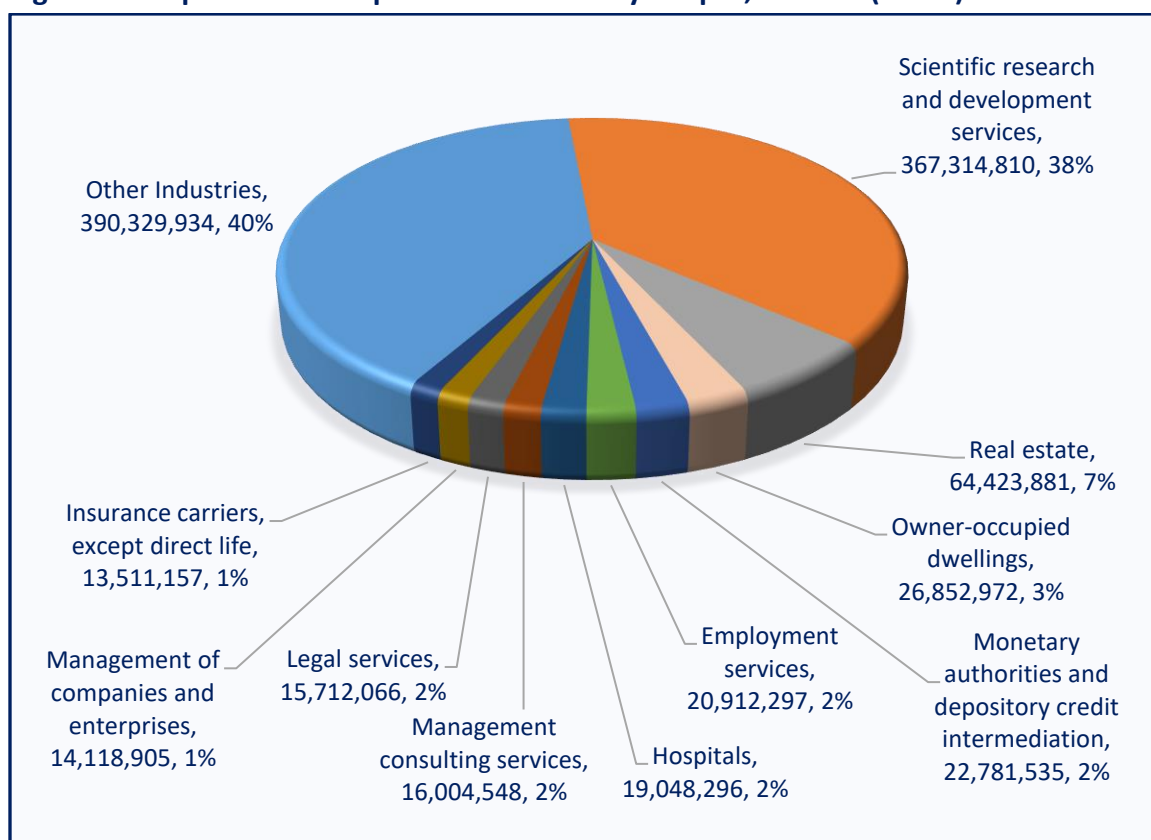

Figure 21 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development services is the most impacted industry. NASA activities accounted for an increase of more than \$191.8 million in value added in scientific research and development services in Arizona.

**Figure 21: Top Ten Most Impacted Industries by Value Added, Arizona (NASA).**

**The total output impact of NASA in Arizona was \$971 million in Fiscal Year 2019.** The direct impact of \$6.1 million constitutes the value of production by NASA employees, accounting for around 1% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$343.7 million resulted in an additional increase in output (gross sales) of \$282 million across all industry sectors (adding up to the indirect total of \$625.7 million in Table 24). Approximately \$339.1 million (35%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of \$367.3 million in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services (Figure 22). Similar to employment, impacts in this industry are nearly completely driven by NASA procurement spending in the state.

### 6.4.2. M2M Program Impacts

In 2019, Arizona had one M2M-related civil service employee (1 FTE) with a corresponding labor income of \$147,000. M2M program contracts sourced in the state in the same year totaled \$13.7 million. The total Arizona employment impact is 176 jobs. The labor income and economic output associated with this employment are \$12.8 million and \$37.9 million, respectively. The M2M program generates approximately \$1.2 million in tax revenues for the state and local governments in Arizona (Table 27).

**Table 27: Summary of M2M Program Impacts by Types of Impact, Arizona.**

employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Arizona economy. Nearly 99 percent of the employment impacts and 98% percent of the output impacts are due to NASA procurement sourced within the state.

#### 6.4.3. The M2M Program's Share of NASA Impacts

Approximately 4% of overall NASA agency impacts in the state are attributable to the M2M program (Table 30 and Figure 23). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 30: The M2M Program Portion of Overall NASA Impacts, Arizona.**

## 6.5. Economic Impacts on the State of Arkansas

### 6.5.1. NASA Impacts

In 2019, 2 NASA civil service employees (1 FTE) residing in Arkansas earned \$158,000 in labor income. NASA contracts sourced in Arkansas in the same year totaled \$2.2 million. The total economic impact resulting from these activities is 32 jobs, \$2 million in labor income, and \$5.7 million in economic output. These economic activities generate \$181,000 in tax revenues for the state and local governments in Arkansas (Table 31).

**Table 31: Summary of NASA Impacts by Types of Impact, Arkansas.**

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Arkansas economy. Table 32 examines the sources of the employment figures in the second column of Table 31. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly 93% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is around 7%.

**Table 32: NASA Employment Impacts by Sources of Impact, Arkansas.**

Table 33 examines the sources of the output figures in the fifth column of Table 31. Procurement spending is responsible for nearly 89% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is around 11%.

### 6.5.2. M2M Program Impacts

There were no M2M-specific NASA employees in Arkansas in FY 2019, but \$107,000 in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is one job, \$75,000 in labor income, and \$243,000 worth of output (Table 34).

### 6.5.3. The M2M Program's Share of NASA Impacts

Around 4% of overall NASA agency impacts in the state are attributable to the M2M program (Table 35 and Figure 24). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.6. Economic Impacts on the State of California

### 6.6.1 NASA Impacts

In 2019, 1,848 NASA civil service employees (1,679 FTEs) residing in California earned \$308 million in labor income. NASA contracts sourced in California in the same year totaled more than \$5.2 billion. The total economic impact resulting from these activities is 69,725 jobs, \$6.3 billion in labor income, and \$16.6 billion in economic output. These economic activities generate more than \$787.2 million in tax revenues for the state and local governments in California (Table 36).

The employment multiplier is 41.5, meaning that for every NASA job located in California, an additional 40.5 jobs are supported in the state economy. The output multiplier of 22.9 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$21.9 million worth of output is sustained throughout the state economy.

**Table 36: Summary of NASA Impacts by Types of Impact, California.**

Impact Type	Employment	Labor Income (\$ thousands)	Value Added (\$ thousands)	Output (\$ thousands)	Tax (\$ thousands)

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the California economy. Table 37 examines the sources of the employment figures in the second column of Table 36. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 93% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 7%.

Table 38 examines the sources of the output figures in the fifth column of Table 36. Procurement spending is responsible for more than 92% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is approximately 8%.

\* Note that direct output impact is associated with NASA labor force while indirect output impact is associated with NASA contractor employees and employees in the supply chain of those contractors.

**69,725 jobs in the California economy were supported by NASA activities in Fiscal Year 2019.** Of these, 1,679 (2%) were directly located at NASA centers. As a result of the procurement of goods and services in the California economy, 34,085 additional jobs (49%) were created. The remaining employment—33,961 jobs (49%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

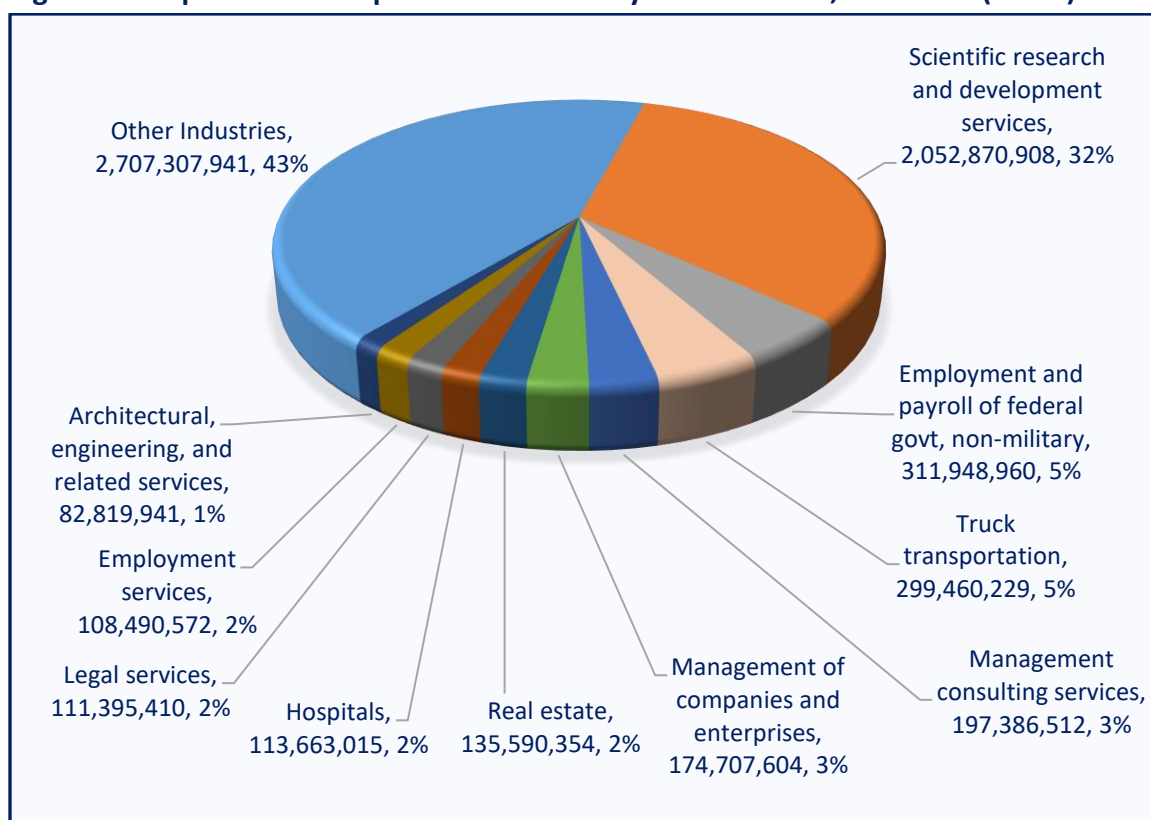

Figure 25 depicts the ten most impacted industries by employment. Scientific research and development services is the most impacted industry, accounting for 18% of the jobs created. The employment in this industry is driven largely by NASA procurement spending; scientific research and development services accounted for approximately 79% of NASA procurement spending in the state in Fiscal Year 2019.

**Figure 25: Top Ten Most Impacted Industries by Employment, California (NASA).**

**The total income impact of NASA in California was \$6.3 billion in Fiscal Year 2019.** Of this amount, more than \$308 million (5%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$3.7 billion (60%). The remaining income (induced impact), estimated to be \$2.2 billion (35%), resulted from expenditures by those earning income through the direct and indirect impacts.

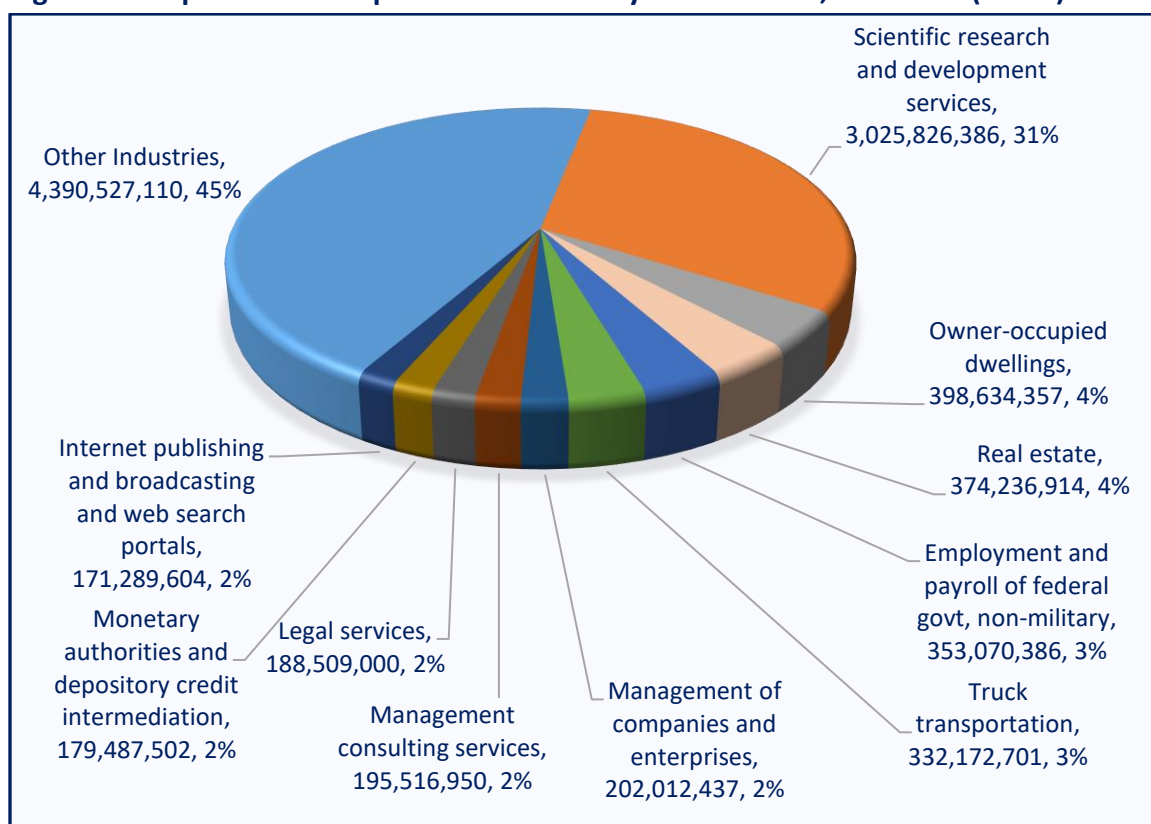

Figure 26 depicts the ten most impacted industries by labor income. Scientific research and development and the federal government sector are the most impacted sectors. The two industries together account for 37% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the state average. As of 2018, the average employee compensation in the scientific research and development services industry was \$166,783 (including benefits), compared to an average of \$74,266 across California.

**Figure 26: Top Ten Most Impacted Industries by Labor Income, California (NASA).**

**The total value added impact of NASA in California was \$9.8 billion in Fiscal Year 2019.**

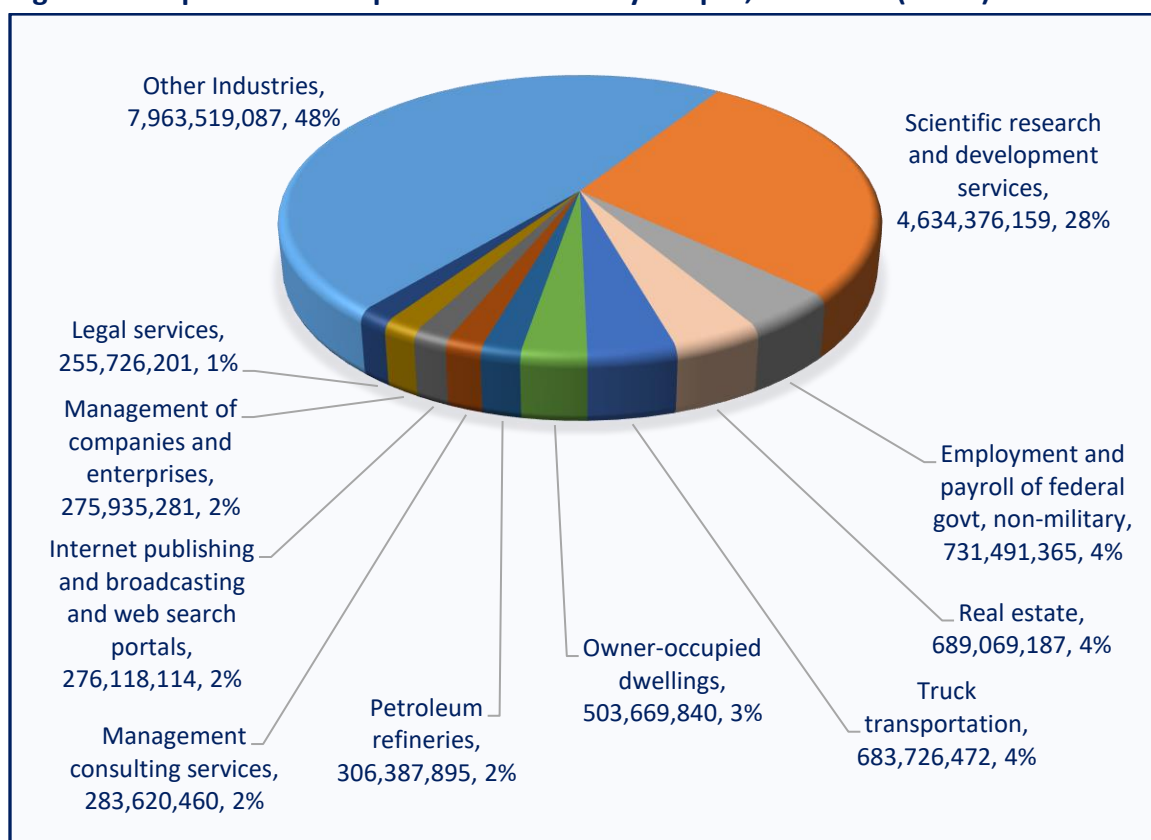

Of this amount, nearly \$346.8 million (4%) was created by civil service employees and \$5.5 billion (56%) was created indirectly by the \$5.2 billion in procurement spending across all industry sectors in California. \$3.9 billion (40%) was generated by increased consumption spending supported by increased earnings.

Figure 27 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development is the most impacted industry, accounting for 31% of the total value added created. NASA activities accounted for an increase of \$3 billion in value added in scientific research and development services. Three hundred fifty three (353) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

**Figure 27: Top Ten Most Impacted Industries by Value Added, California (NASA).**

**The total output impact of NASA in California was \$16.6 billion in Fiscal Year 2019.** The direct impact of \$725 million constitutes the value of production by NASA employees, accounting for around 4% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$5.2 billion resulted in an additional increase in output (gross sales) of \$3.8 billion across all industry sectors (adding up to the indirect total of \$9 billion in Table 36). Approximately \$6.8 billion (41%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of more than \$4.6 billion in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services (Figure 28). Similar to employment, impact in this industry is largely driven by NASA procurement spending; scientific research and development services accounted for approximately 79% of NASA procurement spending in the state in Fiscal Year 2019. The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

**Figure 28: Top Ten Most Impacted Industries by Output, California (NASA).**

### 6.6.2. M2M Program Impacts

In 2019, California had 331 M2M-related civil service employees (162 FTEs) with a corresponding labor income of \$31 million. M2M program contracts sourced in the state in the same year totaled \$506 million. The total California employment impact is 6,107 jobs. The labor income and economic output associated with this employment are \$640.1 million and \$1.6 billion, respectively. The M2M program generates approximately \$73.6 million in tax revenues for the state and local governments in California (Table 39).

### 6.6.3. The M2M Program's Share of NASA Impacts

Around 9% of overall NASA agency impacts in the state are attributable to the M2M program (Table 42 and Figure 29). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 42: The M2M Program Portion of Overall NASA Impacts, California.**

## 6.7. Economic Impacts on the State of Colorado

### 6.7.1. NASA Impacts

In 2019, 49 NASA civil service employees (32 FTEs) residing in Colorado earned \$5.6 million in labor income. NASA contracts sourced in Colorado in the same year totaled \$1.5 billion. The total economic impact resulting from these activities is 22,851 jobs, \$1.6 billion in labor income, and \$4.5 billion in economic output. These economic activities generate more than \$141 million in tax revenues for the state and local governments in Colorado (Table 43).

**Table 43: Summary of NASA Impacts by Types of Impact, Colorado.**

The following two tables examine the contribution of different NASA activities to the Colorado economy. Table 44 examines the sources of the employment figures in the second column of Table 43. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly all of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is less than 1%.

Table 45 examines the sources of the output figures in the fifth column of Table 43. Procurement spending is responsible for more than 99% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is approximately 1%.

**22,851 jobs in the Colorado economy were supported by NASA activities in Fiscal Year 2019.** Of these, 32 (<1%) were directly located at NASA centers. As a result of the procurement of goods and services in the Colorado economy, 13,112 additional jobs (57%) were created. The remaining employment—9,706 jobs (42%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

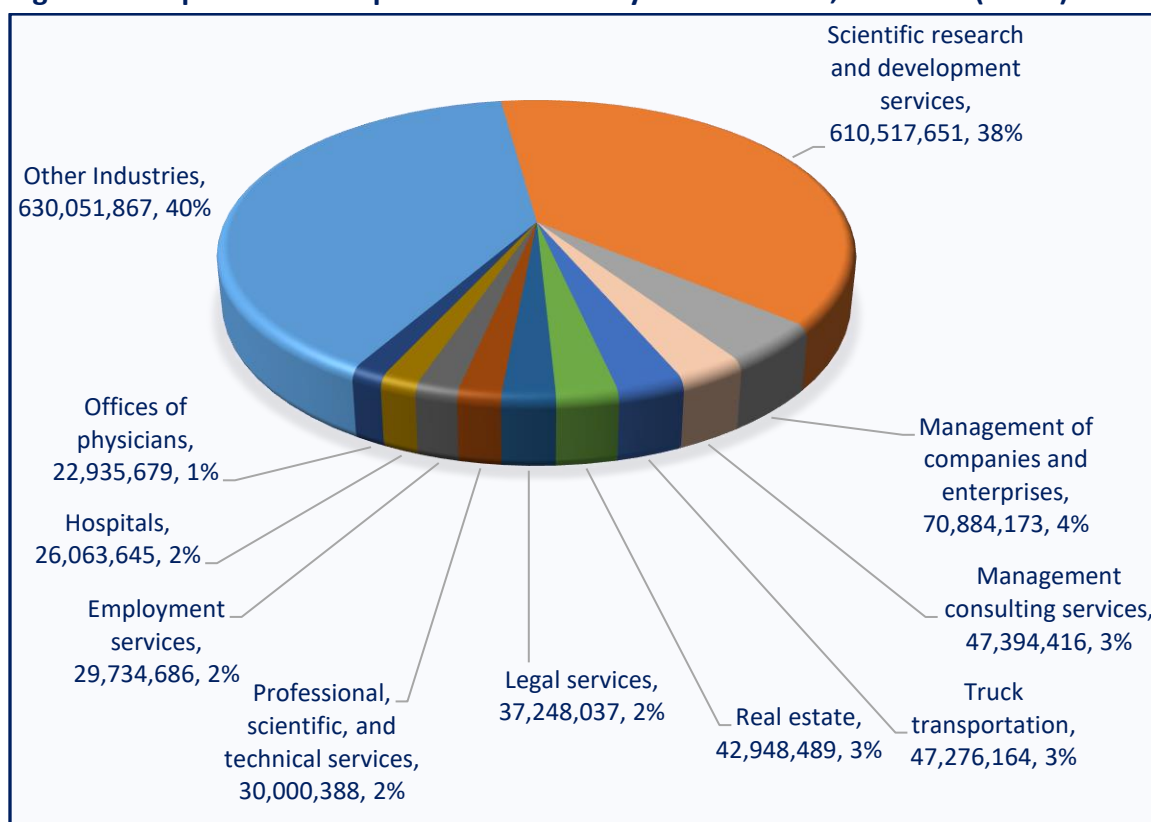

Figure 30 depicts the ten most impacted industries by employment. Scientific research and development services is the most impacted industry, accounting for more than a quarter of the jobs created. The employment in this industry is driven largely by NASA procurement spending; scientific research and development services accounted for approximately 92% of NASA procurement spending in the state in Fiscal Year 2019.

**Figure 30: Top Ten Most Impacted Industries by Employment, Colorado (NASA).**

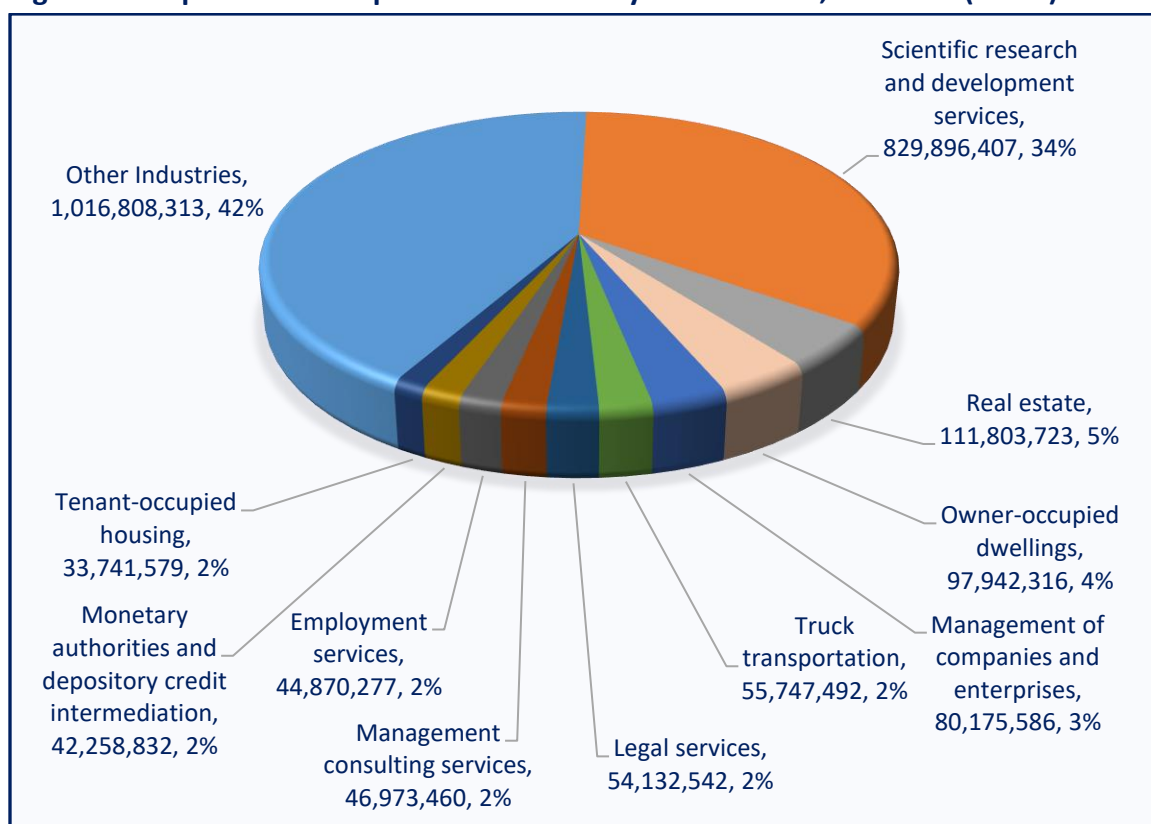

**The total income impact of NASA in Colorado was \$1.6 billion in Fiscal Year 2019.** Of this amount, \$5.6 million (<1%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$1 billion (67%). The remaining income (induced impact), estimated to be \$520 million (33%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 31 depicts the ten most impacted industries by labor income. Scientific research and development services account for 38% of the total labor income earned. The reason that this industry's share of labor income is larger than their share of employment is that employee compensation in this industry is greater than the state average. As of 2018, the average employee compensation in the scientific research and development services industry was \$103,400 (including benefits), compared to an average of \$61,226 across Colorado.

**Figure 31: Top Ten Most Impacted Industries by Labor Income, Colorado (NASA).****The total value added impact of NASA in Colorado was \$2.4 billion in Fiscal Year 2019.**

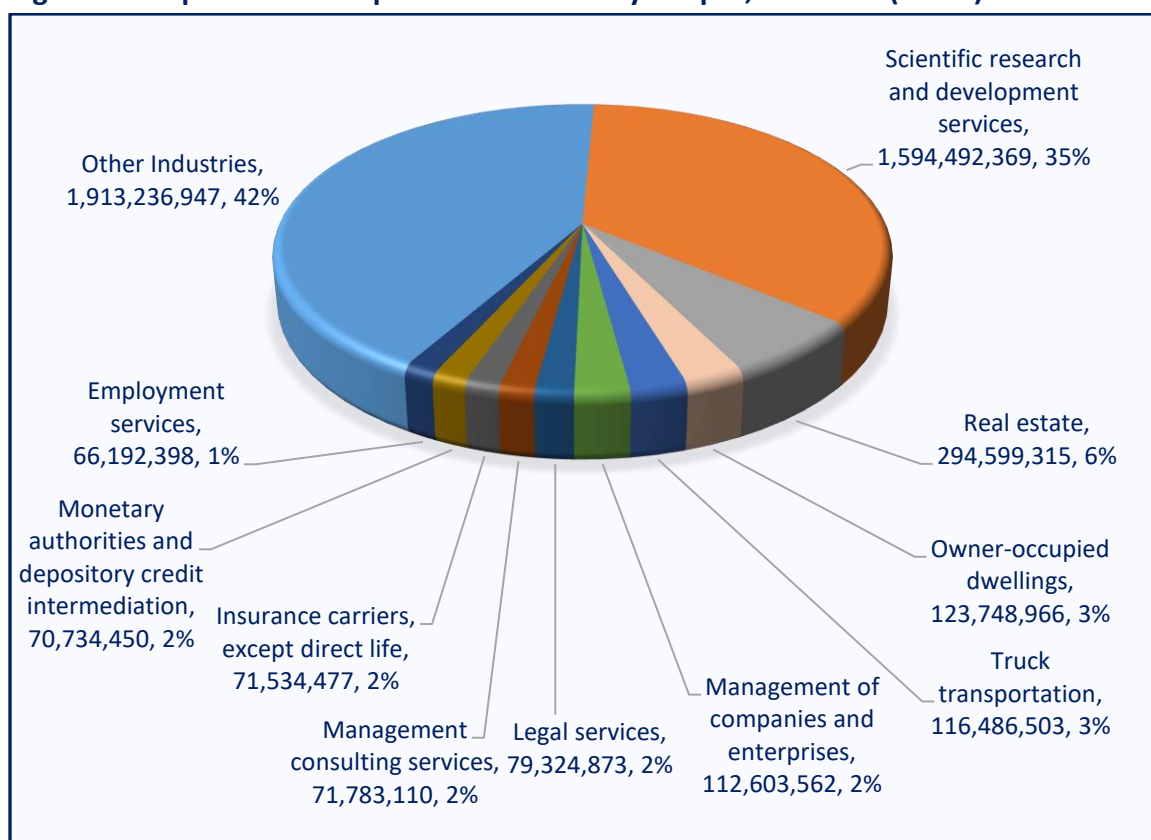

Of this amount, \$6.7 million (1%) was created by civil service employees and \$1.5 billion (62%) was created indirectly by the \$1.5 billion in procurement spending across all industry sectors in Colorado. \$903.3 million (37%) was generated by increased consumption spending supported by increased earnings.

Figure 32 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development services is the most impacted industry, accounting for 34% of the total value added created. NASA activities accounted for an increase of more than \$820 million in value added in scientific research and development services.

**Figure 32: Top Ten Most Impacted Industries by Value Added, Colorado (NASA).**

**The total output impact of NASA in Colorado was \$4.5 billion in Fiscal Year 2019.** The direct impact of \$14 million constitutes the value of production by NASA employees, accounting for around 1% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$1.5 billion resulted in an additional increase in output (gross sales) of \$1.3 billion across all industry sectors (adding up to the indirect total of \$2.8 billion in Table 43). Approximately \$1.6 billion (36%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of approximately \$1.6 billion in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services (Figure 33). Similar to employment, impact in this industry is largely driven by NASA procurement spending; scientific research and development services accounted for approximately 92% of NASA procurement spending in the state in Fiscal Year 2019. The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

### 6.7.2. M2M Program Impacts

In 2019, Colorado had 13 M2M-related civil service employees (6 FTEs) with a corresponding labor income of \$966,000. M2M program contracts sourced in the state in the same year totaled \$919.3 million. The total Colorado employment impact is 12,419 jobs. The labor income and economic output associated with this employment are \$974 million and \$2.6 billion, respectively. The M2M program generates more than \$88 million in tax revenues for the state and local governments in Colorado (Table 46).

**Table 46: Summary of M2M Program Impacts by Types of Impact, Colorado.**

employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Colorado economy. Nearly all employment and output impacts are due to NASA procurement sourced within the state.

### 6.7.3. The M2M Program's Share of NASA Impacts

Around 60% of overall NASA agency impacts in the state are attributable to the M2M program (Table 49 and Figure 34). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 49: The M2M Program Portion of Overall NASA Impacts, Colorado.**

## 6.8. Economic Impacts on the State of Connecticut

### 6.8.1. NASA Impacts

In 2019, 12 NASA civil service employees (4 FTEs) residing in Connecticut earned \$604,000 in labor income. NASA contracts sourced in Connecticut in the same year totaled \$30 million. The total economic impact resulting from these activities is 316 jobs, \$28.1 million in labor income, and \$75.7 million in economic output. These economic activities generate \$3.4 million in tax revenues for the state and local governments in Connecticut (Table 50).

**Table 50: Summary of NASA Impacts by Types of Impact, Connecticut.**

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Connecticut economy. Table 51 examines the sources of the employment figures in the second column of Table 50. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 97% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 3%.

### 6.8.2. M2M Program Impacts

In 2019, Connecticut had two M2M-related civil service employees (1 FTE) with a corresponding labor income of \$62,000. M2M program contracts sourced in the state in the same year totaled approximately \$9 million. The total Connecticut employment impact is 86 jobs. The labor income and economic output associated with this employment are \$8.1 million and \$22.1 million, respectively. The M2M program generates \$965,000 in tax revenues for the state and local governments in Connecticut (Table 53).

### 6.8.3. The M2M Program's Share of NASA Impacts

Around 28% of overall NASA agency impacts in the state are attributable to the M2M program (Table 56 and Figure 35). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.9. Economic Impacts on the District of Columbia

### 6.9.1. NASA Impacts

In 2019, 308 NASA civil service employees (281 FTEs) residing in DC earned \$50.3 million in labor income. NASA contracts sourced in DC in the same year totaled \$309 million. The total economic impact resulting from these activities is 2,696 jobs, \$308.5 million in labor income, and \$648.6 million in economic output. These economic activities generate \$18.3 million in tax revenues for the local governments in DC (Table 57).

The following two tables examine the contribution of different NASA activities to the DC economy. Table 58 examines the sources of the employment figures in the second column of Table 57. NASA procurement sourced within the region is largely responsible for the overall NASA employment impacts. More than 85% of the jobs supported throughout the regional economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 15%.

### 6.9.2. M2M Program Impacts

In 2019, Washington, DC had 18 M2M-related civil service employees (5 FTEs) with a corresponding labor income of \$772,000. M2M program contracts sourced in the region in the same year totaled approximately \$11.2 million. The total Washington, DC employment impact is 85 jobs. The labor income and economic output associated with this employment are \$11.7 million and \$22.4 million, respectively. The M2M program generates \$633,000 in tax revenues for the local governments in Washington, DC (Table 60).

### 6.9.3. The M2M Program's Share of NASA Impacts

Around 3% of overall NASA agency impacts in the state are attributable to the M2M program (Table 63 and Figure 36). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 63: The M2M Program Portion of Overall NASA Impacts, the District of Columbia.**

## 6.10. Economic Impacts on the State of Delaware

### 6.10.1. NASA Impacts

In 2019, 8 NASA civil service employees (5 FTEs) residing in Delaware earned \$819,000 in labor income. NASA contracts sourced in Delaware in the same year totaled approximately \$8.1 million. The total economic impact resulting from these activities is 107 jobs, \$8.8 million in labor income, and \$22.4 million in economic output. These economic activities generate \$823,000 in tax revenues for the state and local governments in Delaware (Table 64).

**Table 64: Summary of NASA Impacts by Types of Impact, Delaware.**

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Delaware economy. Table 65 examines the sources of the employment figures in the second column of Table 64. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 89% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 11%.

### 6.10.2. M2M Program Impacts

There were no M2M-specific NASA employees in Delaware in FY 2019, but \$234,000 in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is 3 jobs, \$238,000 in labor income, and \$572,000 worth of output (Table 67).

### 6.10.3. The M2M Program's Share of NASA Impacts

Approximately 3% of overall NASA agency impacts in the state are attributable to the M2M program (Table 68 and Figure 37). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.11. Economic Impacts on the State of Florida

### 6.11.1. NASA Impacts

In 2019, 2,270 NASA civil service employees (2,021 FTEs) residing in Florida earned \$317.4 million in labor income. NASA contracts sourced in Florida in the same year totaled \$1.4 billion. The total economic impact resulting from these activities is 33,093 jobs, \$2 billion in labor income, and \$5.9 billion in economic output. These economic activities generate more than \$200 million in tax revenues for the state and local governments in Florida (Table 69).

The employment multiplier is 16.4, meaning that for every NASA job located in Florida, an additional 15.4 jobs are supported in the state economy. The output multiplier of 6.8 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$5.8 million worth of output is sustained throughout the state economy.

**Table 69: Summary of NASA Impacts by Types of Impact, Florida.**

The following two tables examine the contribution of different NASA activities to the Florida economy. Table 70 examines the sources of the employment figures in the second column of Table 69. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly 83% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 17%.

Table 71 examines the sources of the output figures in the fifth column of Table 69. Procurement spending is responsible for more than 75% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is approximately 25%.

**33,093 jobs in the Florida economy were supported by NASA activities in Fiscal Year 2019.** Of these, 2,021 (6%) were directly located at NASA centers. As a result of the procurement of goods and services in the Florida economy, 16,869 additional jobs (51%) were created. The remaining employment—14,204 jobs (43%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 38 depicts the ten most impacted industries by employment. Professional and technical as well as scientific research and development services are the most impacted industries, respectively. These two industries together account for 18% of the jobs created. The employment in these industries is driven largely by NASA procurement spending; these two industries accounted for approximately 60% of NASA procurement spending in the state in Fiscal Year 2019. The impact in the federal government sector represents mainly civil service employees working for NASA.

**Figure 38: Top Ten Most Impacted Industries by Employment, Florida (NASA).**

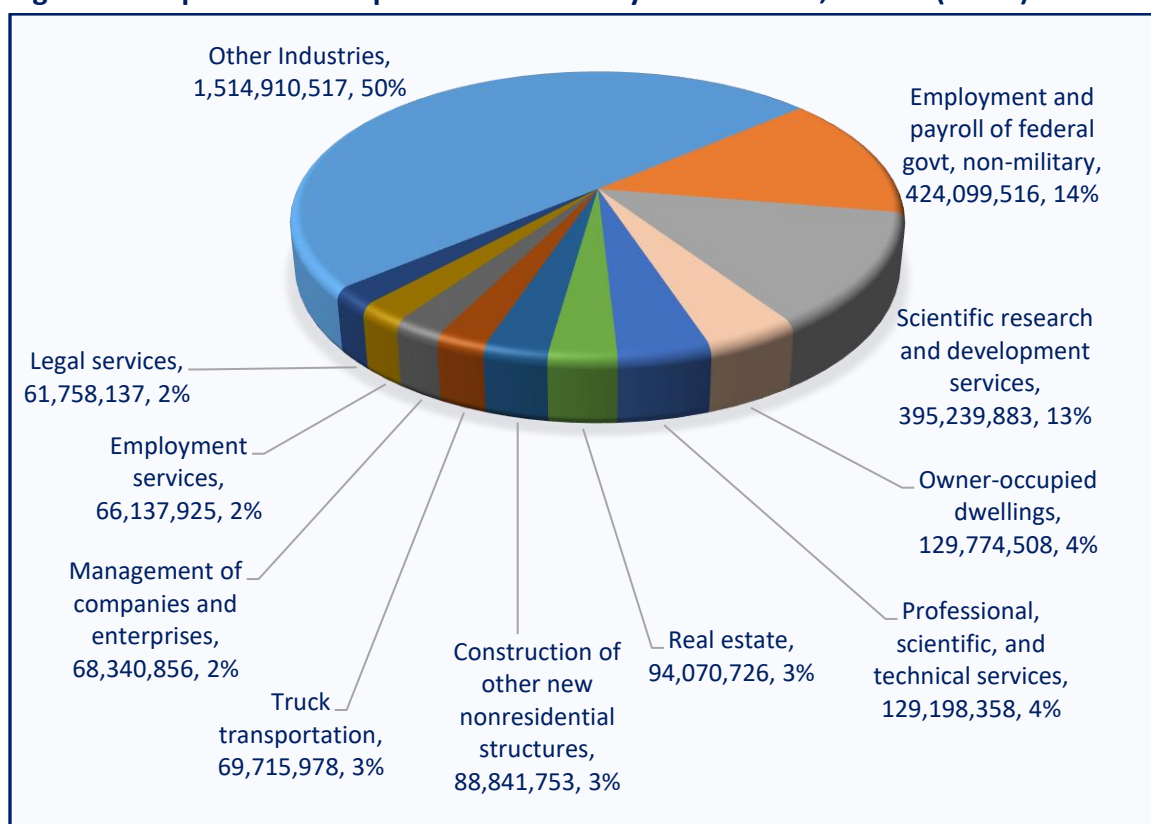

**The total income impact of NASA in Florida was \$2 billion in Fiscal Year 2019.** Of this amount, more than \$317 million (15%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$1 billion (51%). The remaining income (induced impact), estimated to be \$695 million (34%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 39 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, scientific research and development and professional and technical services (along with the federal government sector) are the most impacted industries. The three industries together account for 37% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the state average. As of 2018, the average employee compensation in the scientific research and development services industry was \$87,265 (including benefits), compared to an average of \$51,162 across Florida.

**Figure 39: Top Ten Most Impacted Industries by Labor Income, Florida (NASA).**

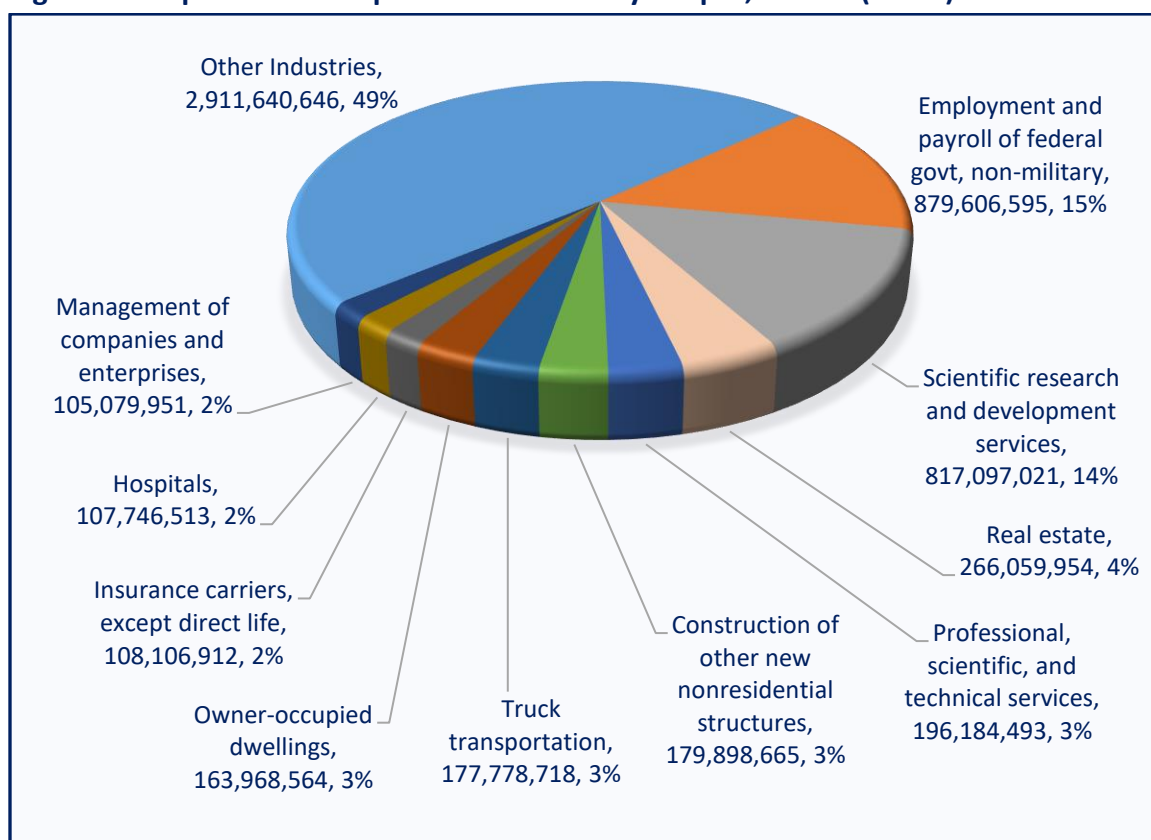

**The total value added impact of NASA in Florida was \$3 billion in Fiscal Year 2019.** Of this amount, more than \$417 million (14%) was created by civil service employees and \$1.4 billion (46%) was created indirectly by the \$1.4 billion in procurement spending across all industry sectors in Florida. \$1.2 billion (40%) was generated by increased consumption spending supported by increased earnings.

Figure 40 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development and professional services and the federal government sector are the most impacted industries. The two industries together account for 27% of the total value added created. NASA activities accounted for an increase of more than \$424 million in value added in scientific research and development services, and a \$129 million increase in value added in professional and technical services. Three hundred ninety five (395) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

**Figure 40: Top Ten Most Impacted Industries by Value Added, Florida (NASA).**

**The total output impact of NASA in Florida was \$5.9 billion in Fiscal Year 2019.** The direct impact of \$873 million constitutes the value of production by NASA employees, accounting for around 15% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$1.4 billion resulted in an additional increase in output (gross sales) of \$1.4 billion across all industry sectors (adding up to the indirect total of \$2.8 billion in Table 69). More than \$2.2 billion (38%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of more than \$879 million in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services, and a \$817 million increase in sales in professional and technical services (Figure 41). Similar to employment, impacts in these industries are largely driven by NASA procurement spending; these two industries accounted for approximately 60% of NASA procurement spending in the state in Fiscal Year 2019. The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

**Figure 41: Top Ten Most Impacted Industries by Output, Florida (NASA).**

### 6.11.2. M2M Program Impacts

In 2019, Florida had 966 M2M-related civil service employees (624 FTEs) with a corresponding labor income of nearly \$99 million. M2M program contracts sourced in the state in the same year totaled approximately \$517 million. The total Florida employment impact is 10,870 jobs. The labor income and economic output associated with this employment are \$744 million and \$2 billion, respectively. The M2M program generates more than \$66 million in tax revenues for the state and local governments in Florida (Table 72).

**Table 72: Summary of M2M Program Impacts by Types of Impact, Florida.**

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Florida economy. Approximately 84 percent of the employment impacts and more than 77 percent of the output impacts are due to NASA procurement sourced within the state.

### 6.11.3. The M2M Program's Share of NASA Impacts

Around 34% of overall NASA agency impacts in the state are attributable to the M2M program (Table 75 and Figure 42). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.12. Economic Impacts on the State of Georgia

### 6.12.1. NASA Impacts

In 2019, 29 NASA civil service employees (14 FTEs) residing in Georgia earned \$1.9 million in labor income. NASA contracts sourced in Georgia in the same year totaled \$24.5 million. The total economic impact resulting from these activities is 393 jobs, \$26.5 million in labor income, and \$78.6 million in economic output. These economic activities generate \$2.5 million in tax revenues for the state and local governments in Georgia (Table 76).

The following two tables examine the contribution of different NASA activities to the Georgia economy. Table 77 examines the sources of the employment figures in the second column of Table 76. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 91% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 9%.

### 6.12.2. M2M Program Impacts

In 2019, Georgia had five M2M-related civil service employees (2 FTEs) with a corresponding labor income of \$305,000. M2M program contracts sourced in the state in the same year totaled \$1.7 million. The total Georgia employment impact is 27 jobs. The labor income and economic output associated with this employment are \$2.1 million and \$6 million, respectively. The M2M program generates \$189,000 in tax revenues for the state and local governments in Georgia (Table 79).

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Georgia economy. Nearly 82 percent of the employment impacts and more than 78 percent of the output impacts are due to NASA procurement sourced within the state.

### 6.12.3. The M2M Program's Share of NASA Impacts

Around 8% of overall NASA agency impacts in the state are attributable to the M2M program (Table 82 and Figure 43). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 82: The M2M Program Portion of Overall NASA Impacts, Georgia.**

## 6.13. Economic Impacts on the State of Hawaii

### 6.13.1 NASA Impacts

In 2019, 2 NASA civil service employees (less than 1 FTE) residing in Hawaii earned \$63,000 in labor income. NASA contracts sourced in Hawaii in the same year totaled \$30.7 million. The total economic impact resulting from these activities is 412 jobs, \$26.9 million in labor income, and \$74.8 million in economic output. These economic activities generate \$3 million in tax revenues for the state and local governments in Hawaii (Table 83).

The following two tables examine the contribution of different NASA activities to the Hawaii economy. Table 84 examines the sources of the employment figures in the second column of Table 83. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly all of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is less than 1%.

### 6.13.2. M2M Program Impacts

There were no M2M-specific NASA employees in Hawaii in FY 2019, but \$179,000 in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is 2 jobs, \$160,000 in labor income, and \$429,000 worth of output (Table 86).

## 6.14. Economic Impacts on the State of Idaho

### 6.14.1. NASA Impacts

In 2019, 3 NASA civil service employees (1 FTE) residing in Idaho earned \$185,000 in labor income. NASA contracts sourced in Idaho in the same year totaled \$13.3 million. The total economic impact resulting from these activities is 176 jobs, \$11.9 million in labor income, and \$29.1 million in economic output. These economic activities generate \$1 million in tax revenues for the state and local governments in Idaho (Table 88).

#### 6.14.2. M2M Program Impacts

In 2019, Idaho had one M2M-related civil service employee (less than 1 FTE) with a corresponding labor income of \$19,000. M2M program contracts sourced in the state in the same year totaled \$8.5 million. The total Idaho employment impact is 93 jobs. The labor income and economic output associated with this employment are approximately \$7.9 million and \$16 million, respectively. The M2M program generates approximately \$590,000 in tax revenues for the state and local governments in Idaho (Table 91).

## 6.15. Economic Impacts on the State of Illinois

### 6.15.1. NASA Impacts

In 2019, 30 NASA civil service employees (15 FTEs) residing in Illinois earned \$1.5 million in labor income. NASA contracts sourced in Illinois in the same year totaled \$33.5 million. The total economic impact resulting from these activities is 519 jobs, \$40.3 million in labor income, and \$113.1 million in economic output. These economic activities generate \$4.2 million in tax revenues for the state and local governments in Illinois (Table 95).

### 6.15.2. M2M Program Impacts

In 2019, Illinois had seven M2M-related civil service employees (4 FTEs) with a corresponding labor income of \$326,000. M2M program contracts sourced in the state in the same year totaled \$3.8 million. The total Illinois employment impact is 53 jobs. The labor income and economic output associated with this employment are \$4.6 million and \$13.4 million, respectively. The M2M program generates \$505,000 in tax revenues for the state and local governments in Illinois (Table 98).

## 6.16. Economic Impacts on the State of Indiana

### 6.16.1. NASA Impacts

In 2019, 28 NASA civil service employees (9 FTEs) residing in Indiana earned more than \$867,000 in labor income. NASA contracts sourced in Indiana in the same year totaled \$131.8 million. The total economic impact resulting from these activities is 1,778 jobs, \$114 million in labor income, and \$332.9 million in economic output. These economic activities generate nearly \$10 million in tax revenues for the state and local governments in Indiana (Table 102).

**Table 102: Summary of NASA Impacts by Types of Impact, Indiana.**

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Indiana economy. Table 103 examines the sources of the employment figures in the second column of Table 102. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Ninety-nine (99) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 1%.

**Table 103: NASA Employment Impacts by Sources of Impact, Indiana.**

Table 104 examines the sources of the output figures in the fifth column of Table 102. Procurement spending is responsible for more than 98% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is approximately 2%.

**1,778 jobs in the Indiana economy were supported by NASA activities in Fiscal Year 2019.** Of these, 9 (<1%) were directly located at NASA centers. As a result of the procurement of goods and services in the Indiana economy, 1,071 additional jobs (60%) were created. The remaining employment—698 jobs (39%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 47 depicts the ten most impacted industries by employment. Scientific research and development services and management consulting services are the most impacted industries, respectively. These two industries together account for 37% of the jobs created. The employment in these industries is driven largely by NASA procurement spending; these two industries accounted for approximately 97% of NASA procurement spending in the state in Fiscal Year 2019.

**Figure 47: Top Ten Most Impacted Industries by Employment, Indiana (NASA).**

**The total income impact of NASA in Indiana was \$114 million in Fiscal Year 2019.** Of this amount, \$867,000 (1%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$77.6 million (68%). The remaining income (induced impact), estimated to be \$35.4 million (31%), resulted from expenditures by those earning income through the direct and indirect impacts.

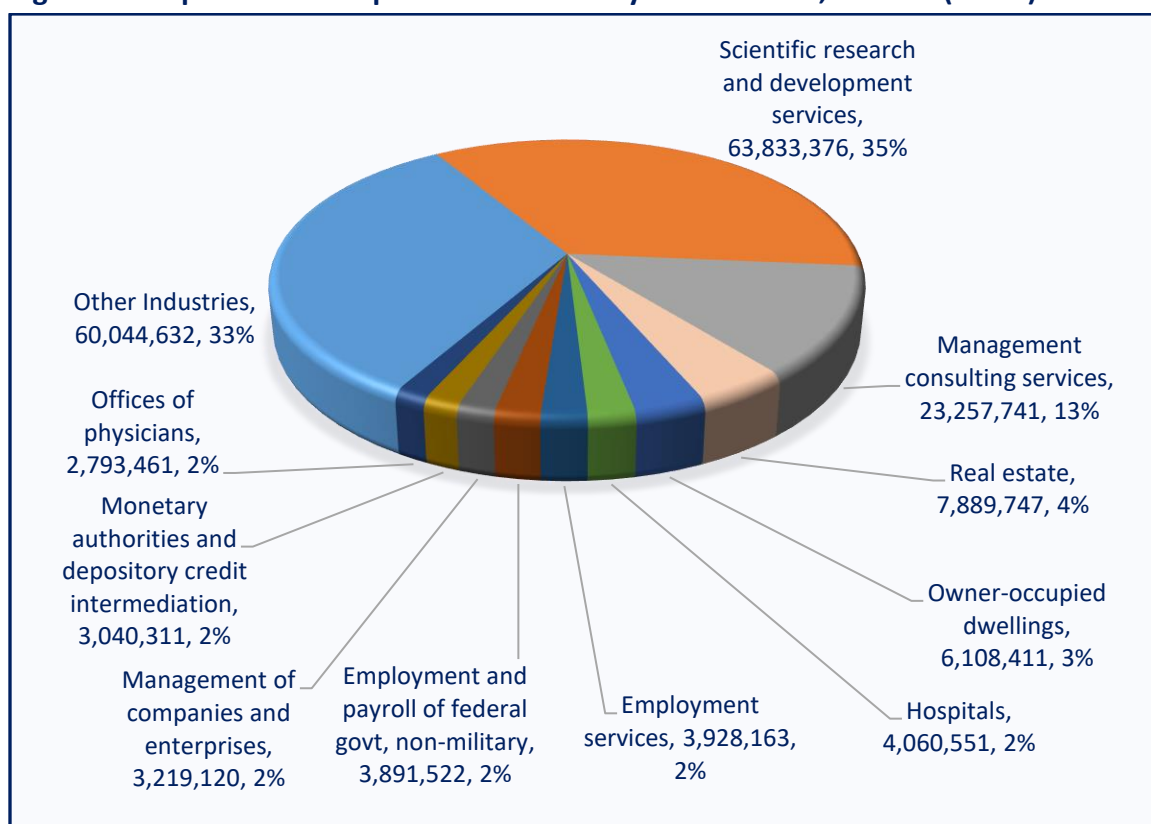

Figure 48 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, scientific research and development services and management consulting services are the most impacted industries by income. The two industries together account for 46% of the total labor income earned.

**Figure 48: Top Ten Most Impacted Industries by Labor Income, Indiana (NASA).**

**The total value added impact of NASA in Indiana was \$182 million in Fiscal Year 2019.**

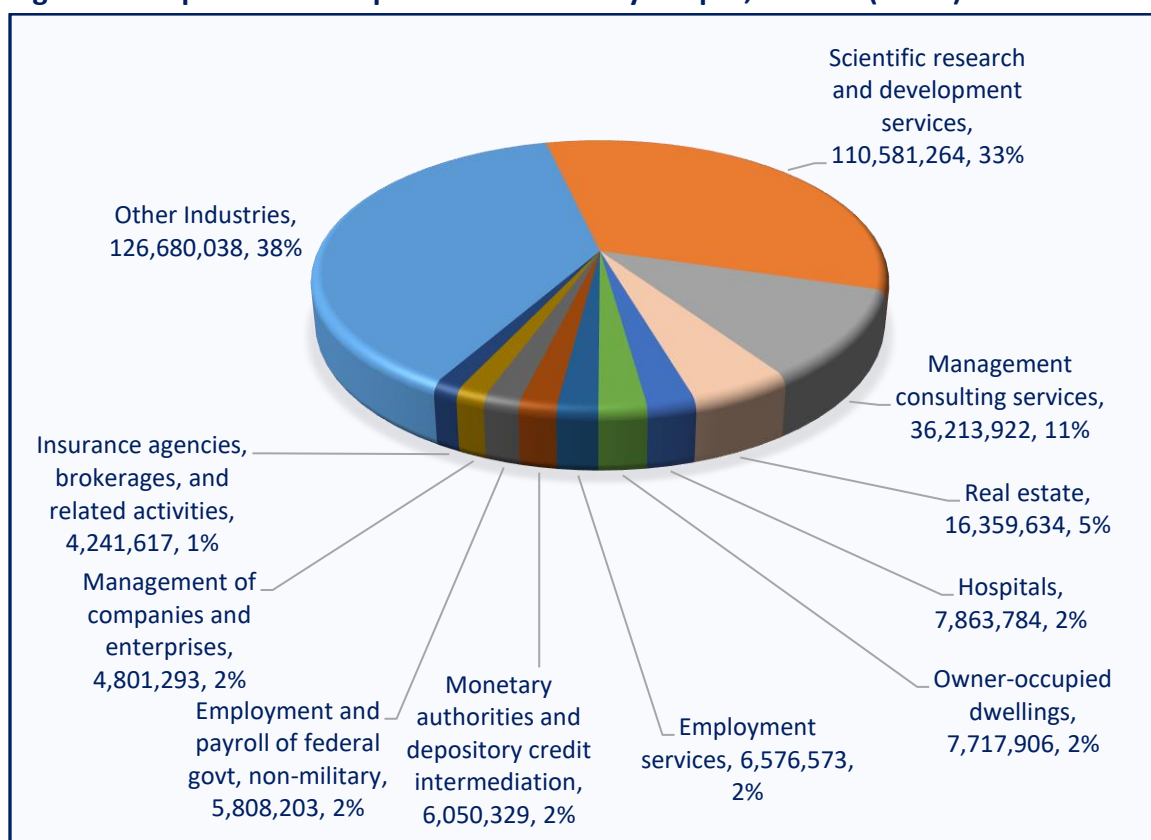

Of this amount, more than \$1.7 million (1%) was created by civil service employees and \$121 million (66%) was created indirectly by the \$131 million in procurement spending across all industry sectors in Indiana. \$59.4 million (33%) was generated by increased consumption spending supported by increased earnings.

Figure 49 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development services and management consulting services are the most impacted industries. The two industries together account for 48% of the total value added created. NASA activities accounted for an increase of \$63.8 million in value added in scientific research and development services and an increase of \$23.3 million in value added in management consulting services.

**Figure 49: Top Ten Most Impacted Industries by Value Added, Indiana (NASA).**

**The total output impact of NASA in Indiana was \$332.9 million in Fiscal Year 2019.** The direct impact of \$3.6 million constitutes the value of production by NASA employees, accounting for around 1% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$131.8 million resulted in an additional increase in output (gross sales) of \$85 million across all industry sectors (adding up to the indirect total of \$216.8 million in Table 102). Approximately \$112.3 million (34%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of approximately \$110.6 million in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services, and an \$36.2 million increase in management consulting services (Figure 50). Similar to employment, impacts in these industries are largely driven by NASA procurement spending; these two industries accounted for approximately 97% of NASA procurement spending in the state in Fiscal Year 2019.

**Figure 50: Top Ten Most Impacted Industries by Output, Indiana (NASA).**

### 6.16.2 M2M Program Impacts

In 2019, Indiana had six M2M-related civil service employees (1 FTE) with a corresponding labor income of \$53,000. M2M program contracts sourced in the state in the same year totaled approximately 4 million. The total Indiana employment impact is 65 jobs. The labor income and economic output associated with this employment are \$4.4 million and \$13.3 million, respectively. The M2M program generates approximately \$415,000 in tax revenues for the state and local governments in Indiana (Table 105).

The following two tables examine the contribution of different NASA activities to the Indiana economy. Ninety-eight (98) percent of the employment impacts and ninety-seven (97) percent of the output impacts are due to NASA procurement sourced within the state.

### 6.16.3 The M2M Program's Share of NASA Impacts

Around 4% of overall NASA agency impacts in the state are attributable to the M2M program (Table 108 and Figure 51). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 108: The M2M Program Portion of Overall NASA Impacts, Indiana.**

## 6.17. Economic Impacts on the State of Iowa

### 6.17.1 NASA Impacts

In 2019, 4 NASA civil service employees (2 FTEs) residing in Iowa earned more than \$270,000 in labor income. NASA contracts sourced in Iowa in the same year totaled \$12.2 million. The total economic impact resulting from these activities is 158 jobs, \$9.4 million in labor income, and \$29.6 million in economic output. These economic activities generate \$983,000 in tax revenues for the state and local governments in Iowa (Table 109).

The following two tables examine the contribution of different NASA activities to the Iowa economy. Table 110 examines the sources of the employment figures in the second column of Table 109. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 97% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 3%.

### 6.17.2 M2M Program Impacts

There were no M2M-specific NASA employees in Iowa in FY 2019, but \$1.3 million in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is 21 jobs, \$1.3 million in labor income, and \$3.6 million worth of output (Table 112).

### 6.17.3. The M2M Program's Share of NASA Impacts

Around 13% of overall NASA agency impacts in the state are attributable to the M2M program (Table 113 and Figure 52). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.18. Economic Impacts on the State of Kansas

### 6.18.1. NASA Impacts

In 2019, 6 NASA civil service employees (2 FTEs) residing in Kansas earned \$326,000 in labor income. NASA contracts sourced in Kansas in the same year totaled \$6 million. The total economic impact resulting from these activities is 80 jobs, \$5 million in labor income, and \$15.6 million in economic output. These economic activities generate \$501,000 in tax revenues for the state and local governments in Kansas (Table 114).

### 6.18.2. M2M Program Impacts

In 2019, Kansas had one M2M-related civil service employee (less than 1 FTE) with a corresponding labor income of \$9,000. M2M program contracts sourced in the state in the same year totaled \$103,000. The total Kansas employment impact is one job. The labor income and economic output associated with this employment are \$94,000 and \$310,000, respectively. The M2M program generates \$9,000 in tax revenues for the state and local governments in Kansas (Table 117).

### 6.18.3. The M2M Program's Share of NASA Impacts

Around 2% of overall NASA agency impacts in the state are attributable to the M2M program (Table 120 and Figure 53). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.19. Economic Impacts on the State of Kentucky

### 6.19.1. NASA Impacts

In 2019, 23 NASA civil service employees (11 FTEs) residing in Kentucky earned more than \$1 million in labor income. NASA contracts sourced in Kentucky in the same year totaled \$13.7 million. The total economic impact resulting from these activities is 261 jobs, \$15 million in labor income, and \$41 million in economic output. These economic activities generate nearly \$1.4 million in tax revenues for the state and local governments in Kentucky (Table 121).

**Table 121: Summary of NASA Impacts by Types of Impact, Kentucky.**

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Kentucky economy. Table 122 examines the sources of the employment figures in the second column of Table 121. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Ninety-two (92) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 8%.

**Table 122: NASA Employment Impacts by Sources of Impact, Kentucky.**

Table 123 examines the sources of the output figures in the fifth column of Table 121. Procurement spending is responsible for 85% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is approximately 15%.

### 6.19.2. M2M Program Impacts

In 2019, Kentucky had seven M2M-related civil service employees (3 FTEs) with a corresponding labor income of \$242,000. M2M program contracts sourced in the state in the same year totaled \$6.7 million. The total Kentucky employment impact is 156 jobs. The labor income and economic output associated with this employment are \$9.2 million and \$20 million, respectively. The M2M program generates \$792,000 in tax revenues for the state and local governments in Kentucky (Table 124).

**Table 124: Summary of M2M Program Impacts by Types of Impact, Kentucky.**

The following two tables examine the contribution of different NASA activities to the Kentucky economy. Nearly 97 percent of the employment impacts and 93 percent of the output impacts are due to NASA procurement sourced within the state.

### 6.19.3. The M2M Program's Share of NASA Impacts

Around 50% of overall NASA agency impacts in the state are attributable to the M2M program (Table 127 and Figure 54). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 127: The M2M Program Portion of Overall NASA Impacts, Kentucky.**

## 6.20. Economic Impacts on the State of Louisiana

### 6.20.1. NASA Impacts

In 2019, 200 NASA civil service employees (182 FTEs) residing in Louisiana earned more than \$29.6 million in labor income. NASA contracts sourced in Louisiana in the same year totaled more than \$116.6 million. The total economic impact resulting from these activities is 2,474 jobs, \$141.5 million in labor income, and \$425 million in economic output. These economic activities generate nearly \$14 million in tax revenues for the state and local governments in Louisiana (Table 128).

The employment multiplier is 13.6, meaning that for every NASA job located in Louisiana, an additional 12.6 jobs are supported in the state economy. The output multiplier of 5.4 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$4.4 million worth of output is sustained throughout the state economy.

**Table 128: Summary of NASA Impacts by Types of Impact, Louisiana.**

Impact Type	Employment	Labor Income (\$ thousands)	Value Added (\$ thousands)	Output (\$ thousands)	Tax (\$ thousands)

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Louisiana economy. Table 129 examines the sources of the employment figures in the second column of Table 128. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly 82% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 18%.

**Table 129: NASA Employment Impacts by Sources of Impact, Louisiana.**

Table 130 examines the sources of the output figures in the fifth column of Table 128. Procurement spending is responsible for nearly 72% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is approximately 28%.

\* Note that direct output impact is associated with NASA labor force while indirect output impact is associated with NASA contractor employees and employees in the supply chain of those contractors.

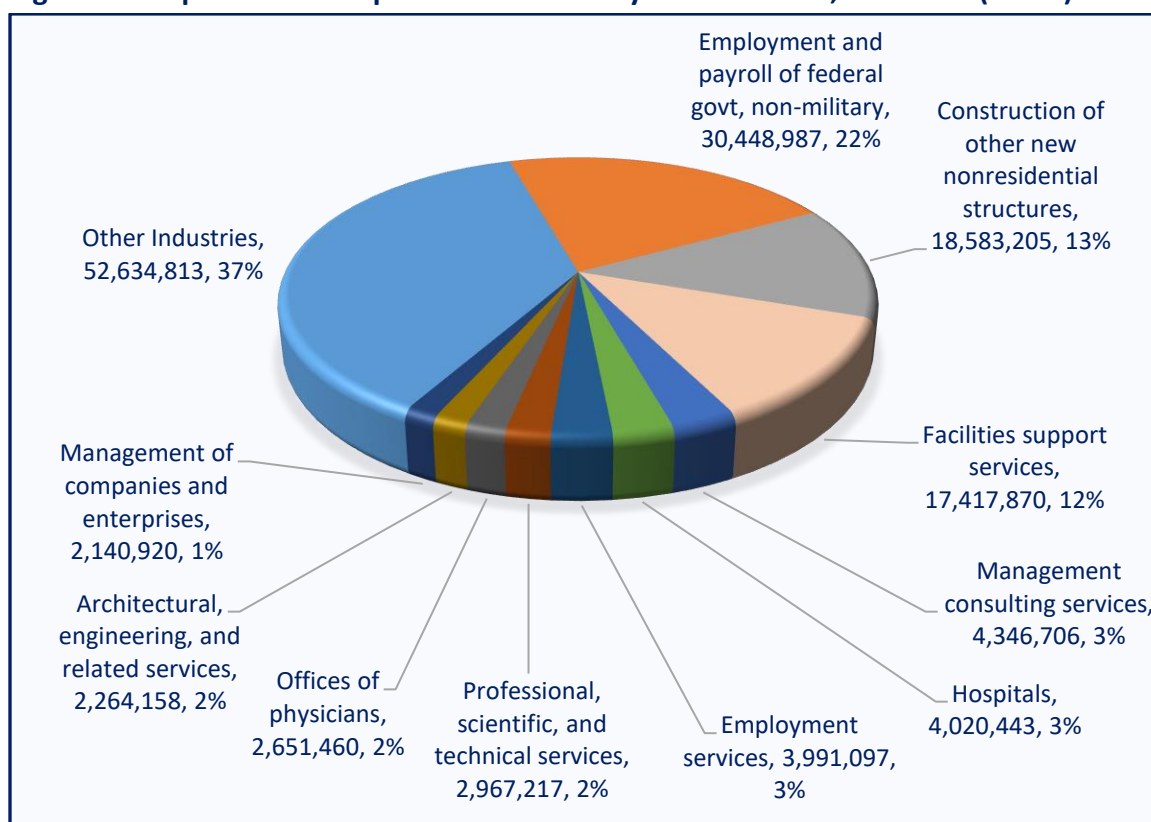

**2,474 jobs in the Louisiana economy were supported by NASA activities in Fiscal Year 2019.** Of these, 182 (7%) were directly located at NASA centers. As a result of the procurement of goods and services in the Louisiana economy, 1,425 additional jobs (58%) were created. The remaining employment—867 jobs (35%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 55 depicts the ten most impacted industries by employment. Facilities support services and construction are the most impacted industries, respectively. These two industries together account for 33% of the jobs created. The employment in these industries is driven largely by NASA procurement spending; these two industries accounted for approximately 64% of NASA procurement spending in the state in Fiscal Year 2019. The impact in the federal government sector represents mainly civil service employees working for NASA.

**Figure 55: Top Ten Most Impacted Industries by Employment, Louisiana (NASA).**

**The total income impact of NASA in Louisiana was \$141.5 million in Fiscal Year 2019.** Of this amount, more than \$29.6 million (21%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$73.4 million (52%). The remaining income (induced impact), estimated to be \$38.4 million (27%), resulted from expenditures by those earning income through the direct and indirect impacts.

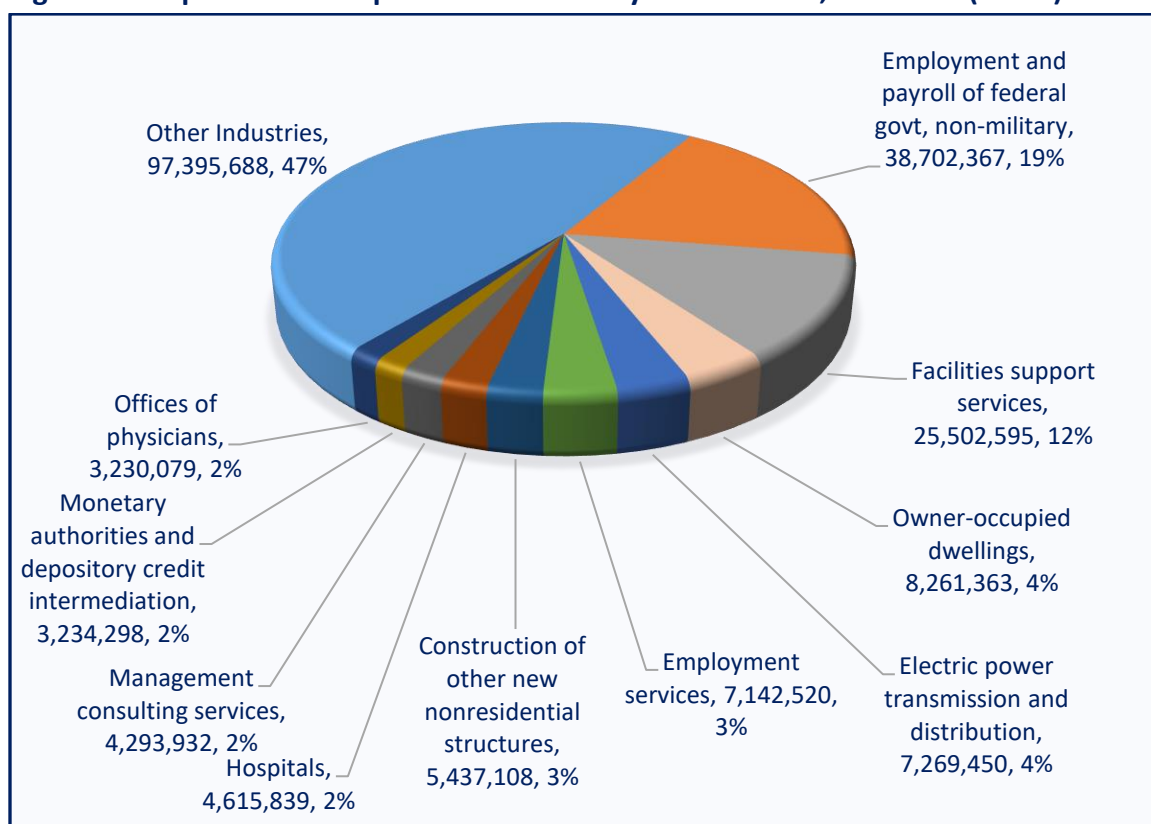

Figure 56 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, construction and facilities support services are the most impacted industries by income (along with the federal government sector). The three industries together account for 47% of the total labor income earned.

**Figure 56: Top Ten Most Impacted Industries by Labor Income, Louisiana (NASA).**

**The total value added impact of NASA in Louisiana was \$205 million in Fiscal Year 2019.**

Of this amount, more than \$37.6 million (18%) was created by civil service employees and \$95.6 million (47%) was created indirectly by the \$116.6 million in procurement spending across all industry sectors in Louisiana. \$71.8 million (35%) was generated by increased consumption spending supported by increased earnings.

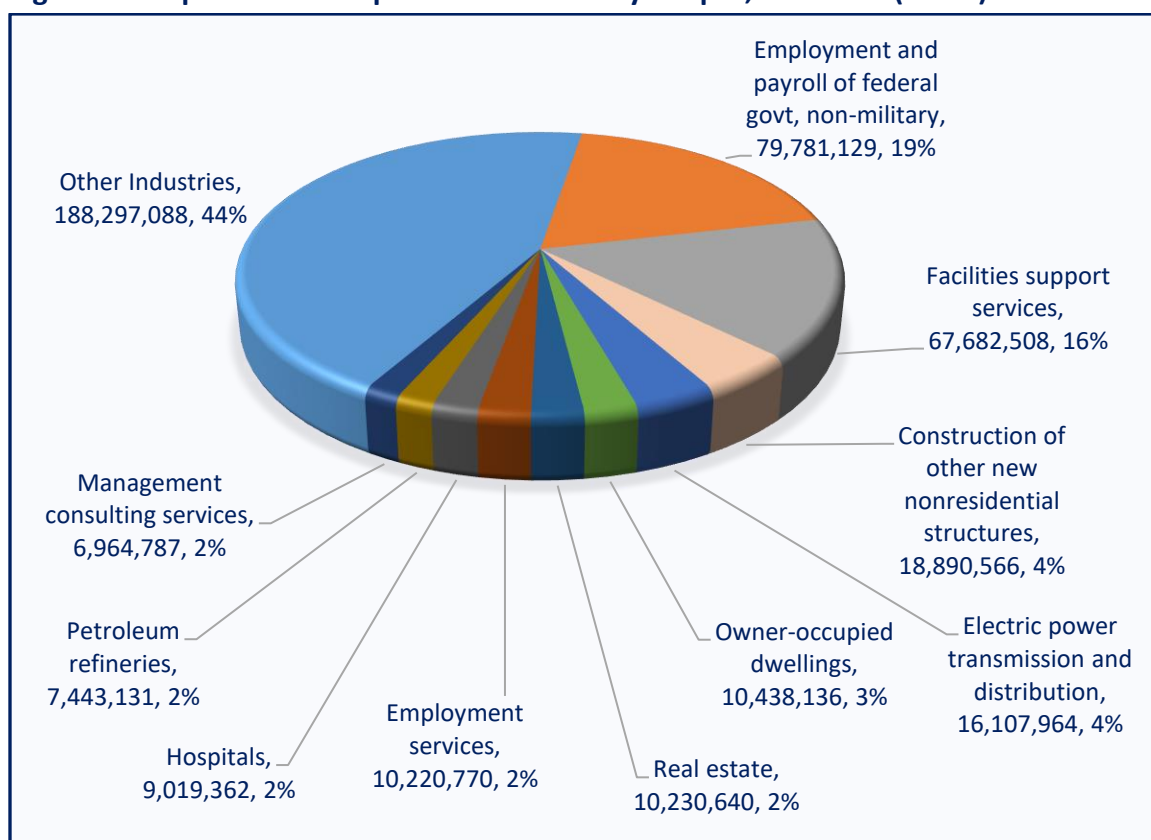

Figure 57 depicts the ten most heavily impacted industries in terms of value added. Facilities support services and the federal government sector are the most impacted industries. The two industries together account for 31% of the total value added created. NASA activities accounted for an increase of \$25.5 million in value added in facilities support services. Thirty eight (38) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

**Figure 57: Top Ten Most Impacted Industries by Value Added, Louisiana (NASA).**

**The total output impact of NASA in Louisiana was \$425 million in Fiscal Year 2019.** The direct impact of \$78.7 million constitutes the value of production by NASA employees, accounting for around 19% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$116.6 million resulted in an additional increase in output (gross sales) of \$97.7 million across all industry sectors (adding up to the indirect total of \$214.3 million in Table 128). Around \$132 million (31%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of more than \$67.6 million in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in facilities support services, and an \$18.8 million increase in construction (Figure 58). Similar to employment, impacts in these industries are largely driven by NASA procurement spending; these two industries accounted for approximately 64% of NASA procurement spending in the state in Fiscal Year 2019.

**Figure 58: Top Ten Most Impacted Industries by Output, Louisiana (NASA).**

### 6.20.2. M2M Program Impacts

In 2019, Louisiana had 79 M2M-related civil service employees (44 FTEs) with a corresponding labor income of nearly \$7 million. M2M program contracts sourced in the state in the same year totaled more than \$71.8 million. The total Louisiana employment impact is 1,220 jobs. The labor income and economic output associated with this employment are \$68.5 million and \$209.5 million, respectively. The M2M program generates approximately \$7.2 million in tax revenues for the state and local governments in Louisiana (Table 131).

**Table 131: Summary of M2M Program Impacts by Types of Impact, Louisiana.**

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Louisiana economy. Ninety-one (91) percent of the employment impacts and eighty-six (86) percent of the output impacts are due to NASA procurement sourced within the state.

### 6.20.3. The M2M Program's Share of NASA Impacts

Nearly half of overall NASA agency impacts in the state are attributable to the M2M program (Table 134 and Figure 59). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 134: The M2M Program Portion of Overall NASA Impacts, Louisiana.**

## 6.21. Economic Impacts on the State of Maine

### 6.21.1. NASA Impacts

In 2019, 19 NASA civil service employees (2 FTEs) residing in Maine earned \$368,000 in labor income. NASA contracts sourced in Maine in the same year totaled \$3.2 million. The total economic impact resulting from these activities is 55 jobs, \$3.4 million in labor income, and \$9.8 million in economic output. These economic activities generate \$379,000 in tax revenues for the state and local governments in Maine (Table 135).

**Table 135: Summary of NASA Impacts by Types of Impact, Maine.**

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Maine economy. Table 136 examines the sources of the employment figures in the second column of Table 135. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 88% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 12%.

**Table 136: NASA Employment Impacts by Sources of Impact, Maine.**

Table 137 examines the sources of the output figures in the fifth column of Table 135. Procurement spending is responsible for more than 83% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is approximately 17%.

### 6.21.2. M2M Program Impacts

There were no M2M-specific NASA employees in Maine in FY 2019, but \$22,000 in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is less than one job, \$19,000 in labor income, and \$57,000 worth of output (Table 138).

### 6.21.3. The M2M Program's Share of NASA Impacts

Less than 1% of overall NASA agency impacts in the state are attributable to the M2M program (Table 139 and Figure 60).

## 6.22. Economic Impacts on the State of Maryland

### 6.22.1. NASA Impacts

In 2019, 3,305 NASA civil service employees (3,117 FTEs) residing in Maryland earned more than \$560 million in labor income. NASA contracts sourced in Maryland in the same year totaled more than \$2.1 billion. The total economic impact resulting from these activities is 35,563 jobs, \$3 billion in labor income, and \$7.5 billion in economic output. These economic activities generate \$321.8 million in tax revenues for the state and local governments in Maryland (Table 140).

The employment multiplier is 11.4, meaning that for every NASA job located in Maryland, an additional 10.4 jobs are supported in the state economy. The output multiplier of 5.5 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$4.5 million worth of output is sustained throughout the state economy.

**Table 140: Summary of NASA Impacts by Types of Impact, Maryland.**

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Maryland economy. Table 141 examines the sources of the employment figures in the second column of Table 140. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 78% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 22%.

Table 142 examines the sources of the output figures in the fifth column of Table 140. Procurement spending is responsible for nearly 72% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is 28%.

**35,563 jobs in the Maryland economy were supported by NASA activities in Fiscal Year 2019.** Of these, 3,117 (9%) were directly located at NASA centers. As a result of the procurement of goods and services in the Maryland economy, 16,462 additional jobs (46%) were created. The remaining employment—15,984 jobs (45%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

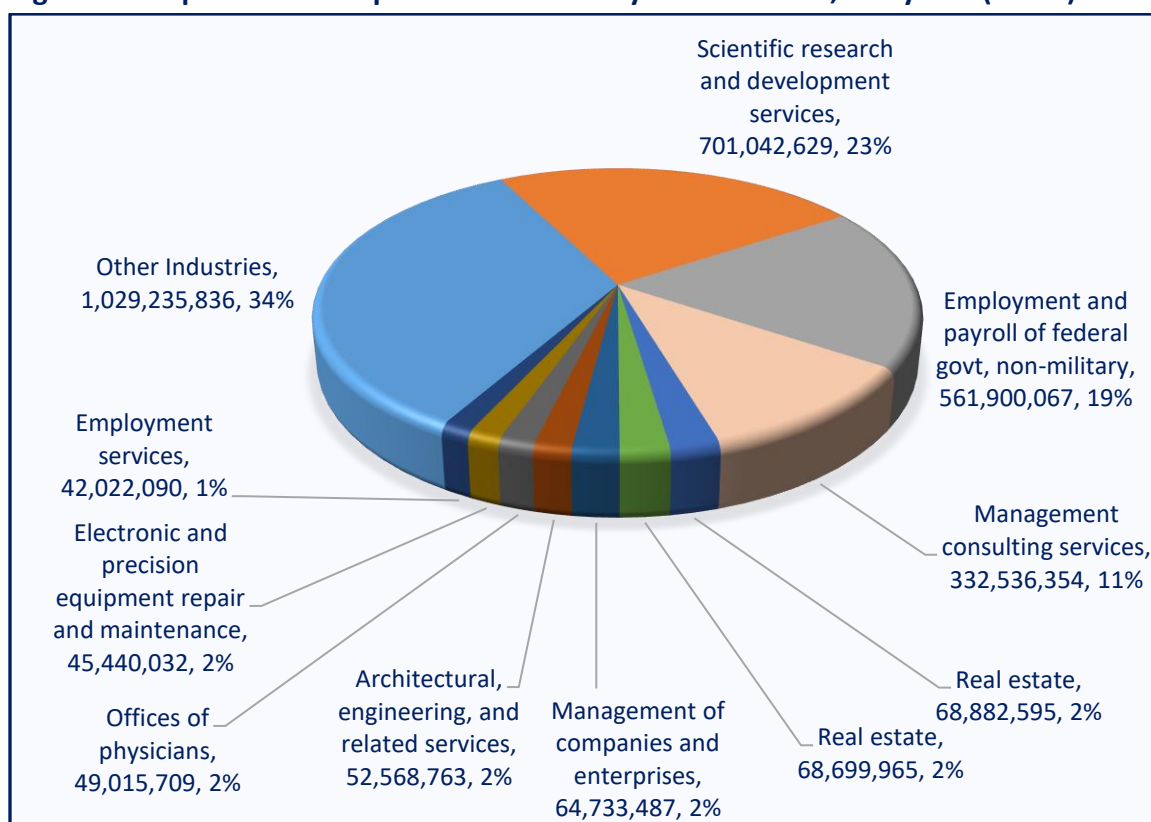

Figure 61 depicts the ten most impacted industries by employment. Management consulting services as well as scientific research and development services are the most impacted industries, respectively. These two industries together account for more than a quarter of the jobs created. The employment in these industries is driven largely by NASA procurement spending; these two industries accounted for approximately 89% of NASA procurement spending in the state in Fiscal Year 2019. The impact in the federal government sector represents mainly civil service employees working for NASA.

**Figure 61: Top Ten Most Impacted Industries by Employment, Maryland (NASA).**

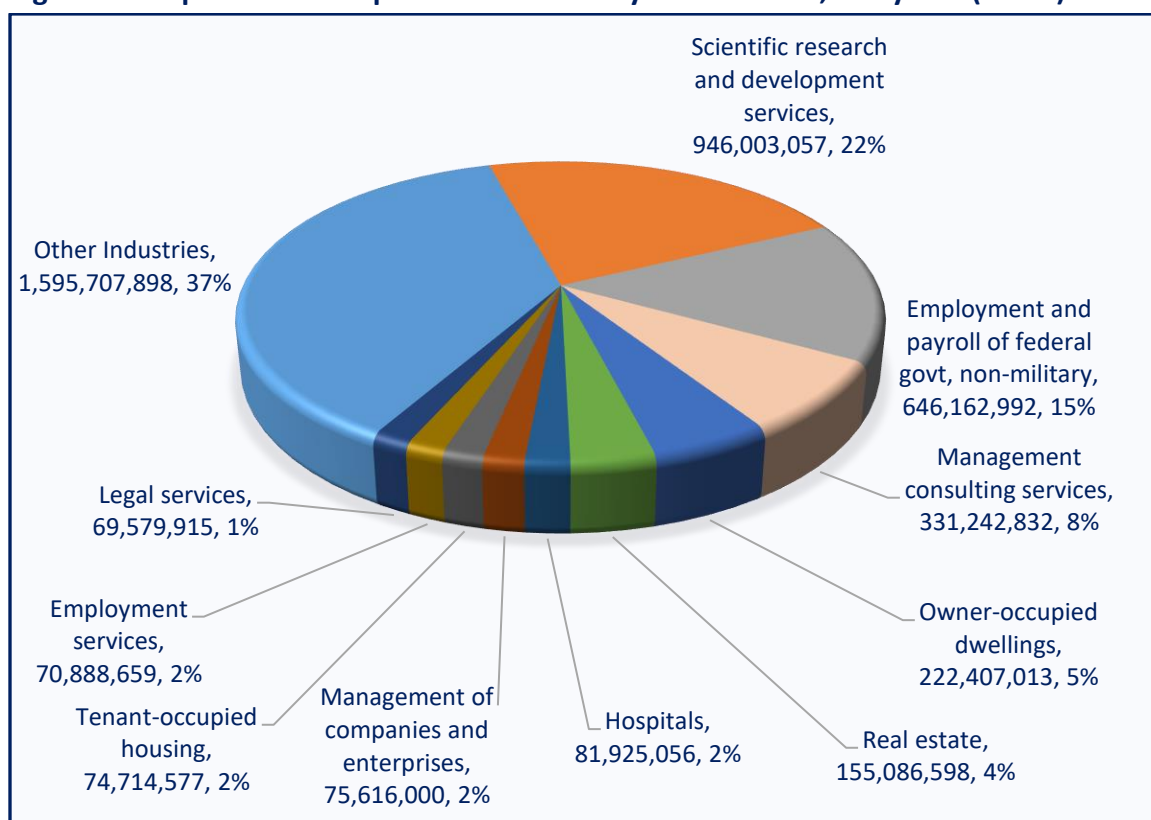

**The total income impact of NASA in Maryland was \$3 billion in Fiscal Year 2019.** Of this amount, more than \$560.5 million (18%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$1.5 billion (51%). The remaining income (induced impact), estimated to be \$924.6 million (31%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 62 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, scientific research and development and management consulting services are the most impacted industries by income (along with the federal government sector). The three industries together account for 53% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the state average. As of 2018, the average employee compensation in the scientific research and development services industry was \$121,891 (including benefits), compared to an average of \$69,673 across Maryland.

**Figure 62: Top Ten Most Impacted Industries by Labor Income, Maryland (NASA).****The total value added impact of NASA in Maryland was \$4.2 billion in Fiscal Year 2019.**

Of this amount, \$644 million (15%) was created by civil service employees and \$2 billion (47%) was created indirectly by the \$2.1 billion in procurement spending across all industry sectors in Maryland. \$1.6 billion (38%) was generated by increased consumption spending supported by increased earnings.

Figure 63 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development services and management consulting services are the most impacted industries (along with the federal government sector). The three industries together account for 45% of the total value added created. NASA activities accounted for an increase of more than \$946 million in value added in scientific research and development services, and a \$331.2 million increase in value added in management consulting services. Six hundred forty six (646) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

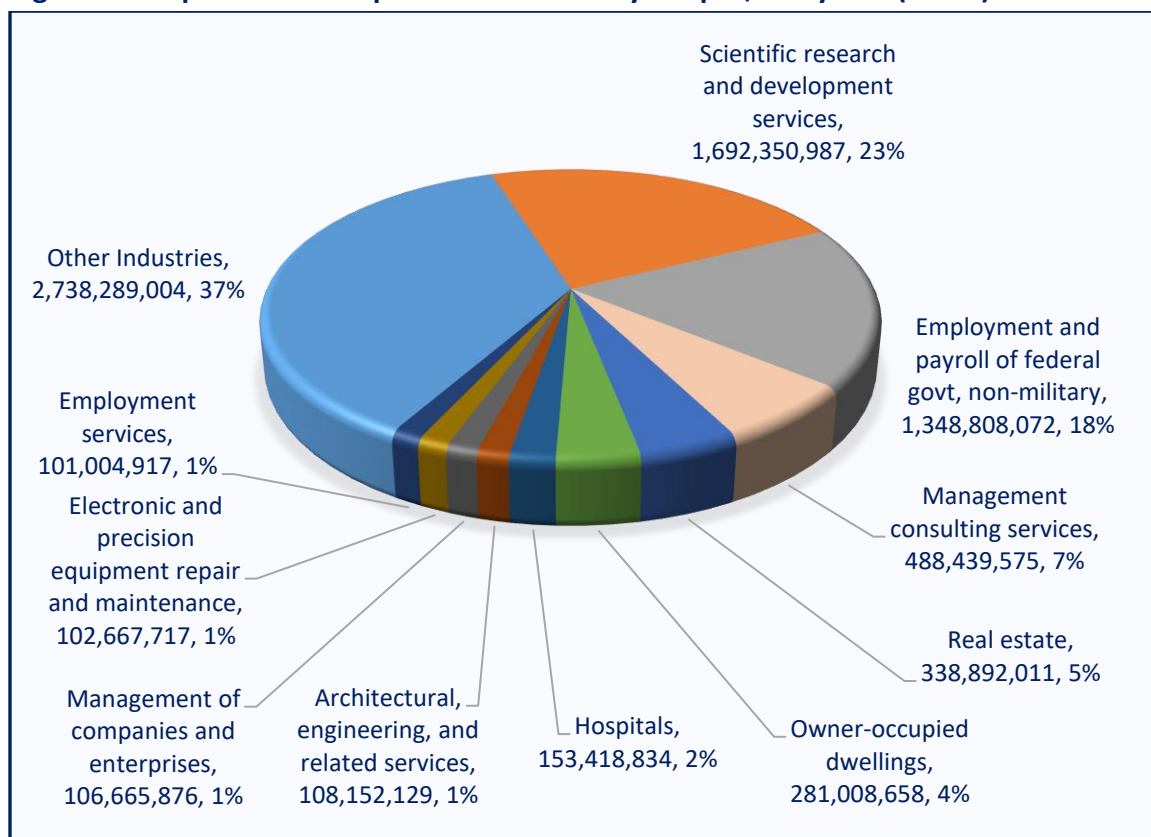

**Figure 63: Top Ten Most Impacted Industries by Value Added, Maryland (NASA).**

**The total output impact of NASA in Maryland was \$7.5 billion in Fiscal Year 2019.** The direct impact of \$1.3 billion constitutes the value of production by NASA employees, accounting for around 18% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$2.2 billion resulted in an additional increase in output (gross sales) of \$1.3 billion across all industry sectors (adding up to the indirect total of \$3.5 billion in Table 140). Approximately \$2.7 billion (36%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of approximately \$1.7 billion in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services, and a \$488.4 million increase in management consulting services (Figure 64). Similar to employment, impacts in these industries are largely driven by NASA procurement spending; these two industries accounted for approximately 89% of NASA procurement spending in the state in Fiscal Year 2019. Aside from equipment repair and maintenance and architectural, engineering, and related services, the output impacts reported in other industries mainly result from increases in consumption spending (induced impacts). The sizable impacts in the real estate industry

are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

**Figure 64: Top Ten Most Impacted Industries by Output, Maryland (NASA).**

### 6.22.2. M2M Program Impacts

In 2019, Maryland had 284 M2M-related civil service employees (55 FTEs) with a corresponding labor income of \$9.7 million. M2M program contracts sourced in the state in the same year totaled more than \$18.6 million. The total Maryland employment impact is 361 jobs. The labor income and economic output associated with this employment are \$34 million and \$82.6 million, respectively. The M2M program generates \$3.4 million in tax revenues for the state and local governments in Maryland (Table 143).

## 6.23. Economic Impacts on the State of Massachusetts

### 6.23.1. NASA Impacts

In 2019, 19 NASA civil service employees (11 FTEs) residing in Massachusetts earned \$1.7 million in labor income. NASA contracts sourced in Massachusetts in the same year totaled approximately \$213.7 million. The total economic impact resulting from these activities is 2,600 jobs, \$241.3 million in labor income, and \$582.1 million in economic output. These economic activities generate nearly \$20.9 million in tax revenues for the state and local governments in Massachusetts (Table 147).

**Table 147: Summary of NASA Impacts by Types of Impact, Massachusetts.**

The following two tables examine the contribution of different NASA activities to the Massachusetts economy. Table 148 examines the sources of the employment figures in the second column of Table 147. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Ninety-nine (99) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 1%.

**2,600 jobs in the Massachusetts economy were supported by NASA activities in Fiscal Year 2019.** Of these, 11 (<1%) were directly located at NASA centers. As a result of the procurement of goods and services in the Massachusetts economy, 1,332 additional jobs (51%) were created. The remaining employment—1,257 jobs (48%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

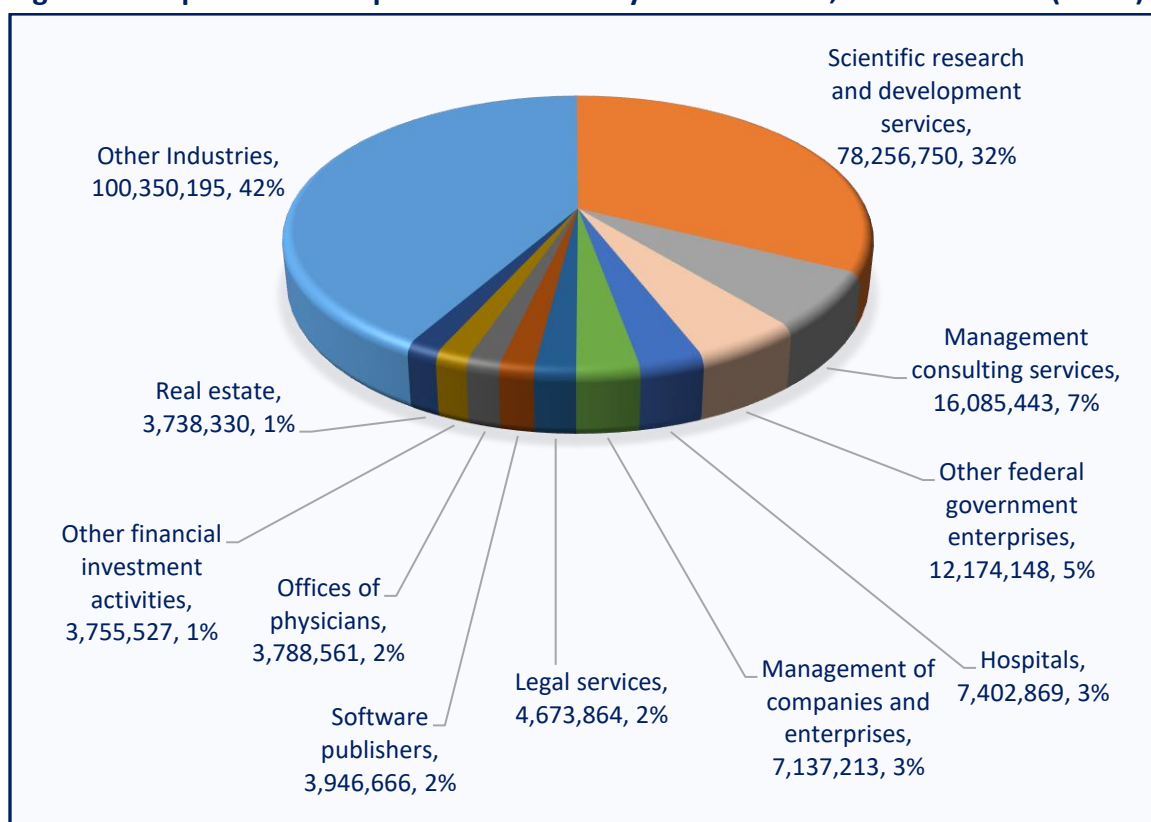

Figure 66 depicts the ten most impacted industries by employment. Scientific research and development services is the most impacted industry, accounting for 19% of the jobs created. The employment in this industry is driven largely by NASA procurement spending; scientific research and development services accounted for approximately 70% of NASA procurement spending in the state in Fiscal Year 2019.

**Figure 66: Top Ten Most Impacted Industries by Employment, Massachusetts (NASA).**

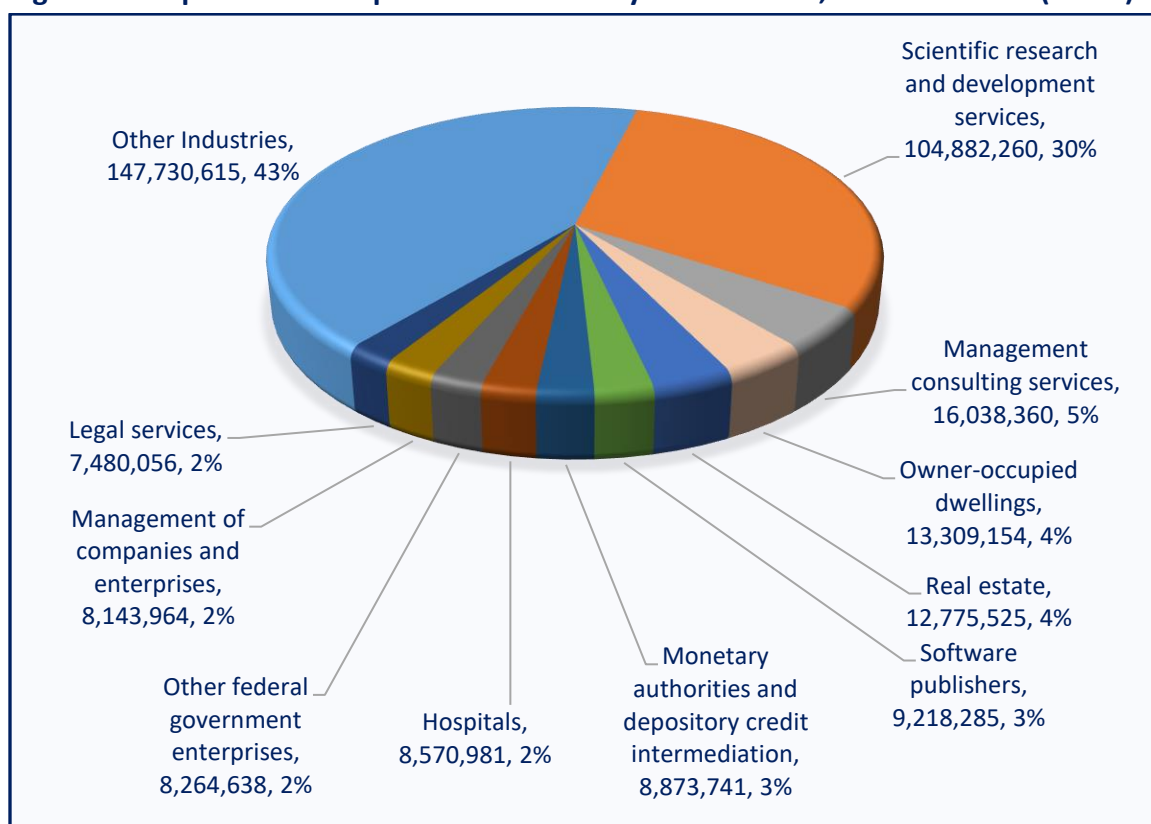

**The total income impact of NASA in Massachusetts was \$241.3 million in Fiscal Year 2019.** Of this amount, approximately \$1.7 million (1%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$154.4 million (64%). The remaining income (induced impact), estimated to be \$85.2 million (35%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 67 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, scientific research and development services is the most impacted industry by income (32%). The reason that this industry's share of labor income is larger than its share of employment is that employee compensation in this industry is greater than the state average. As of 2018, the average employee compensation in the scientific research and development services industry was \$160,380 (including benefits), compared to an average of \$77,247 across Massachusetts.

**Figure 67: Top Ten Most Impacted Industries by Labor Income, Massachusetts (NASA).**

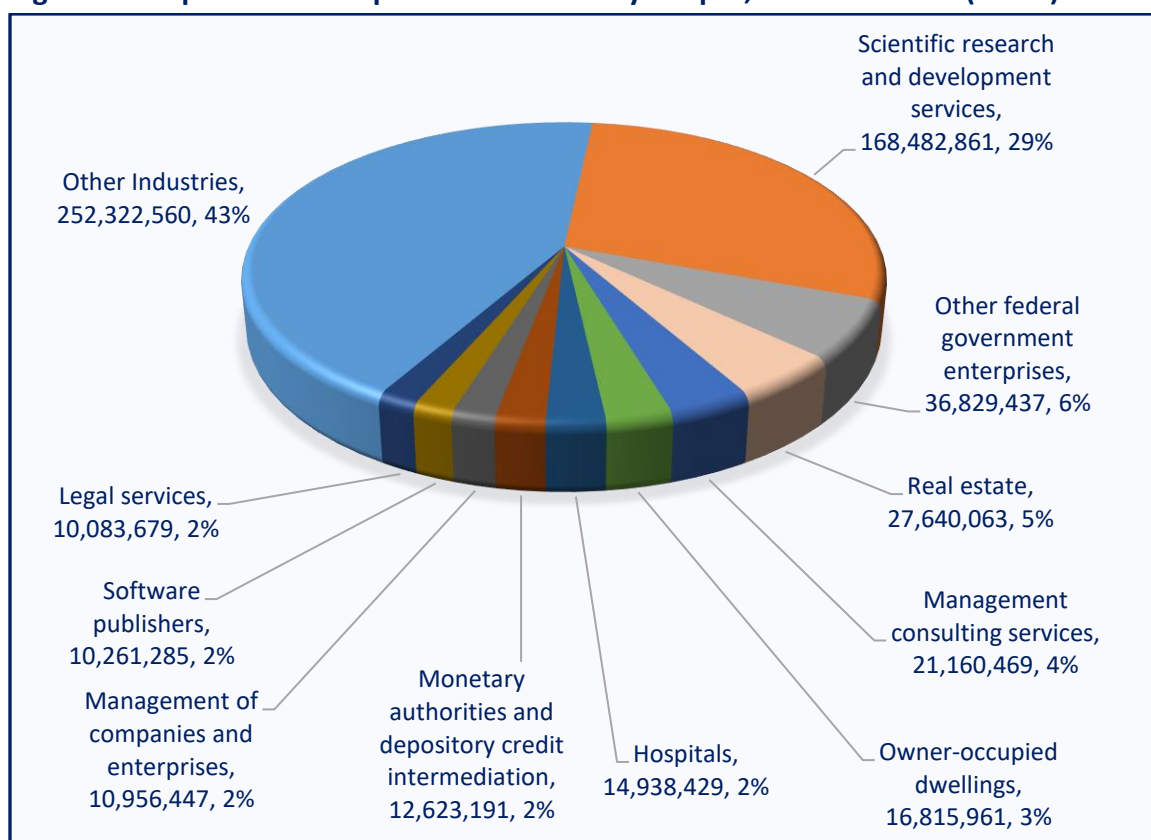

**The total value added impact of NASA in Massachusetts was \$345.2 million in Fiscal Year 2019.** Of this amount, more than \$2.2 million (<1%) was created by civil service employees and \$206.2 million (60%) was created indirectly by the \$213.7 million in procurement spending across all industry sectors in Massachusetts. \$136.7 million (40%) was generated by increased consumption spending supported by increased earnings.

Figure 68 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development services is the most impacted industry, accounting for 30% of the total value added created. NASA activities accounted for an increase of \$104.9 million in value added in this industry.

**Figure 68: Top Ten Most Impacted Industries by Value Added, Massachusetts (NASA).**

**The total output impact of NASA in Massachusetts was \$582.1 million in Fiscal Year 2019.** The direct impact of \$4.7 million constitutes the value of production by NASA employees, accounting for around 1% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$213.7 million resulted in an additional increase in output (gross sales) of 140.3 million across all industry sectors (adding up to the indirect total of \$354 million in Table 147). More than \$223.2 million (38%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of approximately \$168.4 million in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services (Figure 69). Similar to employment, impacts in this industries are largely driven by NASA procurement spending; scientific research and development services accounted for approximately 70% of NASA procurement spending in the state in Fiscal Year 2019.

### 6.23.2. M2M Program Impacts

In 2019, Massachusetts had five M2M-related civil service employees (2 FTEs) with a corresponding labor income of 202,000. M2M program contracts sourced in the state in the same year totaled \$8 million. The total Massachusetts employment impact is 99 jobs. The labor income and economic output associated with this employment are \$10.6 million and \$22.8 million, respectively. The M2M program generates \$868,000 in tax revenues for the state and local governments in Massachusetts (Table 150).

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Massachusetts economy. More than 96 percent of the employment and nearly 95 percent output impacts are due to NASA procurement sourced within the state.

### 6.23.3. The M2M Program's Share of NASA Impacts

Around 4% of overall NASA agency impacts in the state are attributable to the M2M program (Table 153 and Figure 70). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 153: The M2M Program Portion of Overall NASA Impacts, Massachusetts.**

## 6.24. Economic Impacts on the State of Michigan

### 6.24.1. NASA Impacts

In 2019, 18 NASA civil service employees (10 FTEs) residing in Michigan earned nearly \$1.3 million in labor income. NASA contracts sourced in Michigan in the same year totaled \$39 million. The total economic impact resulting from these activities is 610 jobs, \$42 million in labor income, and \$119.7 million in economic output. These economic activities generate \$4.2 million in tax revenues for the state and local governments in Michigan (Table 154).

**Table 154: Summary of NASA Impacts by Types of Impact, Michigan.**

Impact Type	Employment	Labor Income (\$ thousands)	Value Added (\$ thousands)	Output (\$ thousands)	Tax (\$ thousands)

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Michigan economy. Table 155 examines the sources of the employment figures in the second column of Table 154. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Ninety-six (96) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 4%.

**Table 155: NASA Employment Impacts by Sources of Impact, Michigan.**

Table 156 examines the sources of the output figures in the fifth column of Table 155. Procurement spending is responsible for more than 94% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is approximately 6%.

### 6.24.2. M2M Program Impacts

In 2019, Michigan had three M2M-related civil service employees (2 FTEs) with a corresponding labor income of \$212,000. M2M program contracts sourced in the state in the same year totaled \$1.8 million. The total Michigan employment impact is 29 jobs. The labor income and economic output associated with this employment are \$2.2 million and \$6.6 million, respectively. The M2M program generates \$209,000 in tax revenues for the state and local governments in Michigan (Table 157).

**Table 157: Summary of M2M Program Impacts by Types of Impact, Michigan.**

The following two tables examine the contribution of different NASA activities to the Michigan economy. Eighty-four (84) percent of the employment impacts and seventy-

nine (79) percent of the output impacts are due to NASA procurement sourced within the state.

### 6.24.3. The M2M Program's Share of NASA Impacts

Around 5% of overall NASA agency impacts in the state are attributable to the M2M program (Table 160 and Figure 71). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 160: The M2M Program Portion of Overall NASA Impacts, Michigan.**

## 6.25. Economic Impacts on the State of Minnesota

### 6.25.1. NASA Impacts

In 2019, 11 NASA civil service employees (5 FTEs) residing in Minnesota earned \$491,000 in labor income. NASA contracts sourced in Minnesota in the same year totaled \$14.1 million. The total economic impact resulting from these activities is 215 jobs, \$15.6 million in labor income, and \$45 million in economic output. These economic activities generate nearly \$1.8 million in tax revenues for the state and local governments in Minnesota (Table 161).

**Table 161: Summary of NASA Impacts by Types of Impact, Minnesota.**

The following two tables examine the contribution of different NASA activities to the Minnesota economy. Table 162 examines the sources of the employment figures in the second column of Table 161. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 95% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 5%.

### 6.25.2. M2M Program Impacts

In 2019, Minnesota had one M2M-related civil service employee (1 FTE) with a corresponding labor income of \$49,000. M2M program contracts sourced in the state in the same year totaled \$545,000. The total Minnesota employment impact is seven jobs. The labor income and economic output associated with this employment are \$677,000 and \$2.3 million, respectively. The M2M program generates approximately \$86,000 in tax revenues for the state and local governments in Minnesota (Table 164).

### 6.25.3. The M2M Program's Share of NASA Impacts

Around 4% of overall NASA agency impacts in the state are attributable to the M2M program (Table 167 and Figure 72). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.26. Economic Impacts on the State of Mississippi

### 6.26.1. NASA Impacts

In 2019, 267 NASA civil service employees (248 FTEs) residing in Mississippi earned \$37.2 million in labor income. NASA contracts sourced in Mississippi in the same year totaled \$203.3 million. The total economic impact resulting from these activities is 3,633 jobs, \$190 million in labor income, and \$570.5 million in economic output. These economic activities generate \$24 million in tax revenues for the state and local governments in Mississippi (Table 168).

The employment multiplier is 14.7, meaning that for every NASA job located in Mississippi, an additional 13.7 jobs are supported in the state economy. The output multiplier of 5.3 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$4.3 million worth of output is sustained throughout the state economy.

**Table 168: Summary of NASA Impacts by Types of Impact, Mississippi.**

Impact Type	Employment	Labor Income (\$ thousands)	Value Added (\$ thousands)	Output (\$ thousands)	Tax (\$ thousands)

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Mississippi economy. Table 169 examines the sources of the employment figures in the second column of Table 168. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly 85% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 15%.

**Table 169: NASA Employment Impacts by Sources of Impact, Mississippi.**

Table 170 examines the sources of the output figures in the fifth column of Table 168. Procurement spending is responsible for more than 73% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is approximately 27%.

\* Note that direct output impact is associated with NASA labor force while indirect output impact is associated with NASA contractor employees and employees in the supply chain of those contractors.

**3,633 jobs in the Mississippi economy were supported by NASA activities in Fiscal Year 2019.** Of these, 248 (7%) were directly located at NASA centers. As a result of the procurement of goods and services in the Mississippi economy, 2,243 additional jobs (62%) were created. The remaining employment—1,143 jobs (31%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

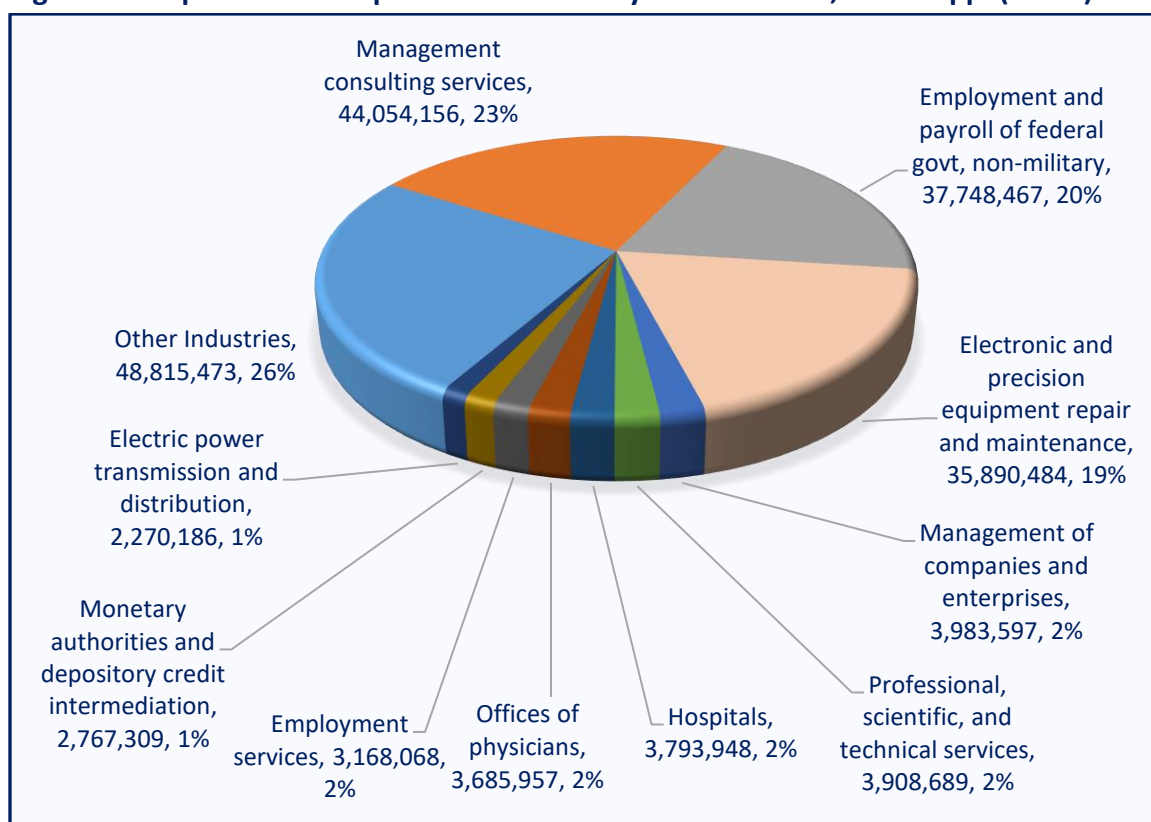

Figure 73 depicts the ten most impacted industries by employment. Management consulting services and electronic and precision equipment repair and maintenance are the most impacted industries, respectively. These two industries together account for 45% of the jobs created. The employment in these industries is driven largely by NASA procurement spending; these two industries accounted for approximately 89% of NASA procurement spending in the state in Fiscal Year 2019. The impact in the federal government sector represents mainly civil service employees working for NASA.

**Figure 73: Top Ten Most Impacted Industries by Employment, Mississippi (NASA).**

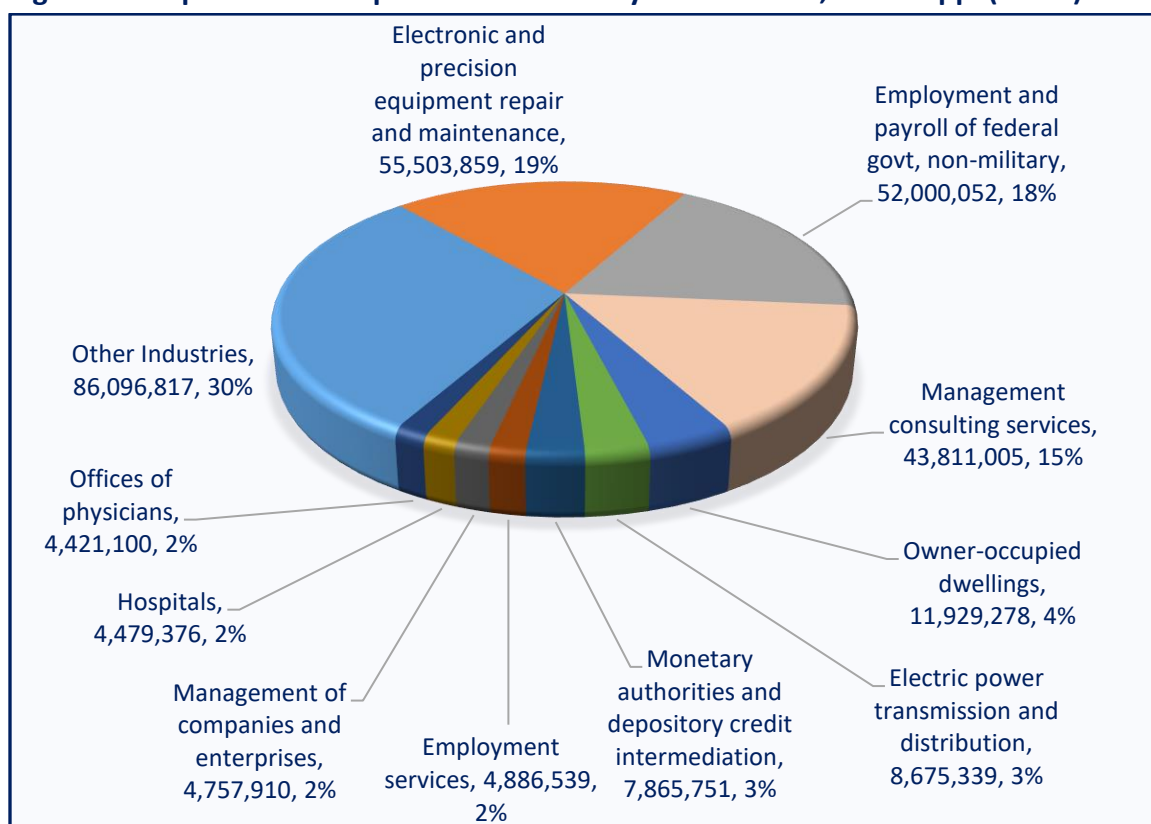

**The total income impact of NASA in Mississippi was \$190 million in Fiscal Year 2019.** Of this amount, \$37.2 million (23%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$108.9 million (61%). The remaining income (induced impact), estimated to be \$44 million (16%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 74 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, management consulting services and electronic and precision equipment repair and maintenance are the most impacted industries by income (along with the federal government sector). The three industries together account for 62% of the total labor income earned.

**Figure 74: Top Ten Most Impacted Industries by Labor Income, Mississippi (NASA).**

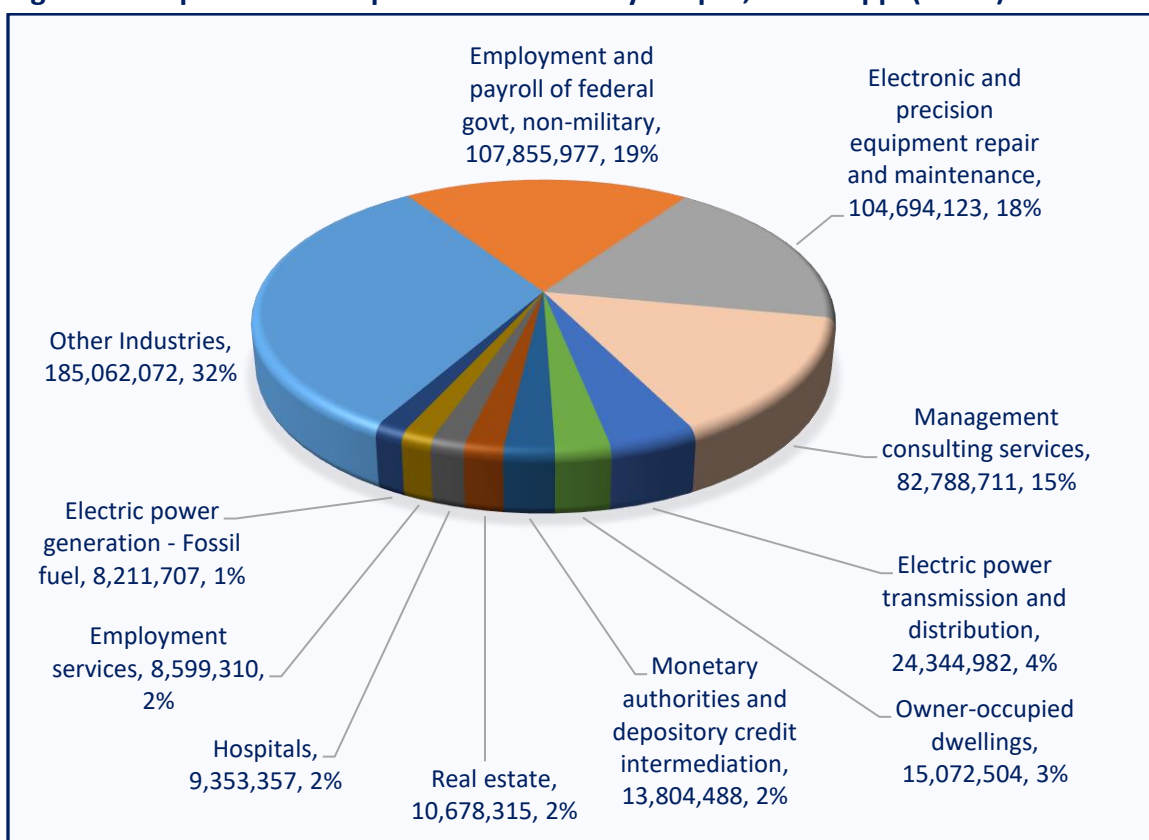

**The total value added impact of NASA in Mississippi was \$284.4 million in Fiscal Year 2019.** Of this amount, \$51.1 million (18%) was created by civil service employees and \$149 million (52%) was created indirectly by the \$203.3 million in procurement spending across all industry sectors in Mississippi. \$84.3 million (30%) was generated by increased consumption spending supported by increased earnings.

Figure 75 depicts the ten most heavily impacted industries in terms of value added. Electronic and precision equipment repair and maintenance and management consulting services are the most impacted industries (along with the federal government sector). The three industries together account for 52% of the total value added created. NASA activities accounted for an increase of \$55.5 million in value added in electronic and precision equipment repair and maintenance, and a \$43.8 million increase in value added in management consulting services. Fifty two (52) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

**Figure 75: Top Ten Most Impacted Industries by Value Added, Mississippi (NASA).****The total output impact of NASA in Mississippi was \$570.5 million in Fiscal Year 2019.**

The direct impact of \$107 million constitutes the value of production by NASA employees, accounting for around 19% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$203.3 million resulted in an additional increase in output (gross sales) of \$93.7 million across all industry sectors (adding up to the indirect total of \$297 million in Table 168). More than \$166.4 million (29%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of approximately \$104.7 million in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in electronic and precision equipment repair and maintenance, and a \$82.7 million increase in sales in management consulting services (Figure 76). Similar to employment, impacts in these industries are largely driven by NASA procurement spending; these two industries accounted for approximately 89% of NASA procurement spending in the state in Fiscal Year 2019.

**Figure 76: Top Ten Most Impacted Industries by Output, Mississippi (NASA).**

### 6.26.2. M2M Program Impacts

In 2019, Mississippi had 73 M2M-related civil service employees (40 FTEs) with a corresponding labor income of \$6 million. M2M program contracts sourced in the state in the same year totaled more than \$26.2 million. The total Mississippi employment impact is 493 jobs. The labor income and economic output associated with this employment are \$28 million and \$77.1 million, respectively. The M2M program generates \$3.3 million in tax revenues for the state and local governments in Mississippi (Table 171).

employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Mississippi economy. Approximately 82 percent of the employment impacts and 68 percent of the output impacts are due to NASA procurement sourced within the state.

### 6.26.3. The M2M Program's Share of NASA Impacts

Around 14% of overall NASA agency impacts in the state are attributable to the M2M program (Table 174 and Figure 77). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.27. Economic Impacts on the State of Missouri

### 6.27.1. NASA Impacts

In 2019, 17 NASA civil service employees (7 FTEs) residing in Missouri earned \$815,000 in labor income. NASA contracts sourced in Missouri in the same year totaled \$41.8 million. The total economic impact resulting from these activities is 734 jobs, \$46.6 million in labor income, and \$127 million in economic output. These economic activities generate \$3.8 million in tax revenues for the state and local governments in Missouri (Table 175).

**Table 175: Summary of NASA Impacts by Types of Impact, Missouri.**

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Missouri economy. Table 176 examines the sources of the employment figures in the second column of Table 175. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly 98% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 2%.

**Table 176: NASA Employment Impacts by Sources of Impact, Missouri.**

### 6.27.2. M2M Program Impacts

In 2019, Missouri had three M2M-related civil service employees (2 FTEs) with a corresponding labor income of \$201,000. M2M program contracts sourced in the state in the same year totaled \$9.1 million. The total Missouri employment impact is 168 jobs. The labor income and economic output associated with this employment are \$12 million and \$27.7 million, respectively. The M2M program generates \$959,000 in tax revenues for the state and local governments in Missouri (Table 178).

## 6.28. Economic Impacts on the State of Montana

### 6.28.1. NASA Impacts

In 2019, 2 NASA civil service employees (less than 1 FTE) residing in Montana earned approximately \$10,000 in labor income. NASA contracts sourced in Montana in the same year totaled \$8.5 million. The total economic impact resulting from these activities is 118 jobs, \$6.3 million in labor income, and \$19.5 million in economic output. These economic activities generate \$528,000 in tax revenues for the state and local governments in Montana (Table 182).

**Table 182: Summary of NASA Impacts by Types of Impact, Montana.**<sup>25</sup>

The following two tables examine the contribution of different NASA activities to the Montana economy. Table 183 examines the sources of the employment figures in the second column of Table 182. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly all of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is less than 1%.

### 6.28.2. M2M Program Impacts

There were no M2M-specific NASA employees in Montana in FY 2019, but \$83,000 in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is one job, \$63,000 in labor income, and \$195,000 worth of output (Table 185).

## 6.29. Economic Impacts on the State of Nebraska

### 6.29.1. NASA Impacts

In 2019, 2 NASA civil service employees (1 FTE) residing in Nebraska earned nearly \$53,000 in labor income. NASA contracts sourced in Nebraska in the same year totaled approximately \$4.3 million. The total economic impact resulting from these activities is 47 jobs, \$3.3 million in labor income, and \$10 million in economic output. These economic activities generate nearly \$303,000 in tax revenues for the state and local governments in Nebraska (Table 187).

### 6.29.2. M2M Program Impacts

There were no M2M-specific NASA employees in Nebraska in FY 2019, but \$350,000 in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is three jobs, \$236,000 in labor income, and \$765,000 worth of output (Table 190).

## 6.30. Economic Impacts on the State of Nevada

### 6.30.1. NASA Impacts

In 2019, 7 NASA civil service employees (3 FTEs) residing in Nevada earned nearly \$405,000 in labor income. NASA contracts sourced in Nevada in the same year totaled \$23.2 million. The total economic impact resulting from these activities is 301 jobs, \$19.7 million in labor income, and \$57.8 million in economic output. These economic activities generate nearly \$1.8 million in tax revenues for the state and local governments in Nevada (Table 192).

### 6.30.2. M2M Program Impacts

There were no M2M-specific NASA employees in Nevada in FY 2019, but \$13.3 million in M2M-related NASA contracts were sourced in the state.<sup>26</sup> The total economic impact attributable to this procurement activity is 156 jobs, \$11.3 million in labor income, and \$32 million worth of output (Table 195). These economic activities generate \$1 million in tax revenues for the state and local governments in Nevada.

### 6.30.3. The M2M Program's Share of NASA Impacts

Around 55% of overall NASA agency impacts in the state are attributable to the M2M program (Table 196 and Figure 81). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending

## 6.31. Economic Impacts on the State of New Hampshire

### 6.31.1. NASA Impacts

In 2019, 4 NASA civil service employees (3 FTEs) residing in New Hampshire earned \$352,000 in labor income. NASA contracts sourced in New Hampshire in the same year totaled \$23 million. The total economic impact resulting from these activities is 289 jobs, \$21.6 million in labor income, and \$58.4 million in economic output. These economic activities generate \$2.1 million in tax revenues for the state and local governments in New Hampshire (Table 197).

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the New Hampshire economy. Table 198 examines the sources of the employment figures in the second column of Table 197. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly 98% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 2%.

## 6.32. Economic Impacts on the State of New Jersey

### 6.32.1. NASA Impacts

In 2019, 28 NASA civil service employees (14 FTEs) residing in New Jersey earned \$1.8 million in labor income. NASA contracts sourced in New Jersey in the same year totaled \$30.1 million. The total economic impact resulting from these activities is 359 jobs, \$33.3 million in labor income, and \$87.9 million in economic output. These economic activities generate nearly \$4 million in tax revenues for the state and local governments in New Jersey (Table 202).

### 6.32.2. M2M Program Impacts

In 2019, New Jersey had six M2M-related civil service employees (2 FTEs) with a corresponding labor income of \$186,000. M2M program contracts sourced in the state in the same year totaled \$3.3 million. The total New Jersey employment impact is 22 jobs. The labor income and economic output associated with this employment are \$2.3 million and \$8.7 million, respectively. The M2M program generates \$341,000 in tax revenues for the state and local governments in New Jersey (Table 205).

### 6.32.3. The M2M Program's Share of NASA Impacts

Around 8% of overall NASA agency impacts in the state are attributable to the M2M program (Table 208 and Figure 83). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

### 6.33. Economic Impacts on the State of New Mexico

#### 6.33.1. NASA Impacts

In 2019, 87 NASA civil service employees (78 FTEs) residing in New Mexico earned \$12.2 million in labor income. NASA contracts sourced in New Mexico in the same year totaled more than \$82.1 million. The total economic impact resulting from these activities is 1,319 jobs, \$68.7 million in labor income, and \$231.4 million in economic output. These economic activities generate \$6.2 million in tax revenues for the state and local governments in New Mexico (Table 209).

**Table 209: Summary of NASA Impacts by Types of Impact, New Mexico.**

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the New Mexico economy. Table 210 examines the sources of the employment figures in the second column of Table 209. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 86% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 14%.

**1,319 jobs in the New Mexico economy were supported by NASA activities in Fiscal Year 2019.** Of these, 78 (6%) were directly located at NASA centers. As a result of the procurement of goods and services in the New Mexico economy, 840 additional jobs (64%) were created. The remaining employment—401 jobs (30%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

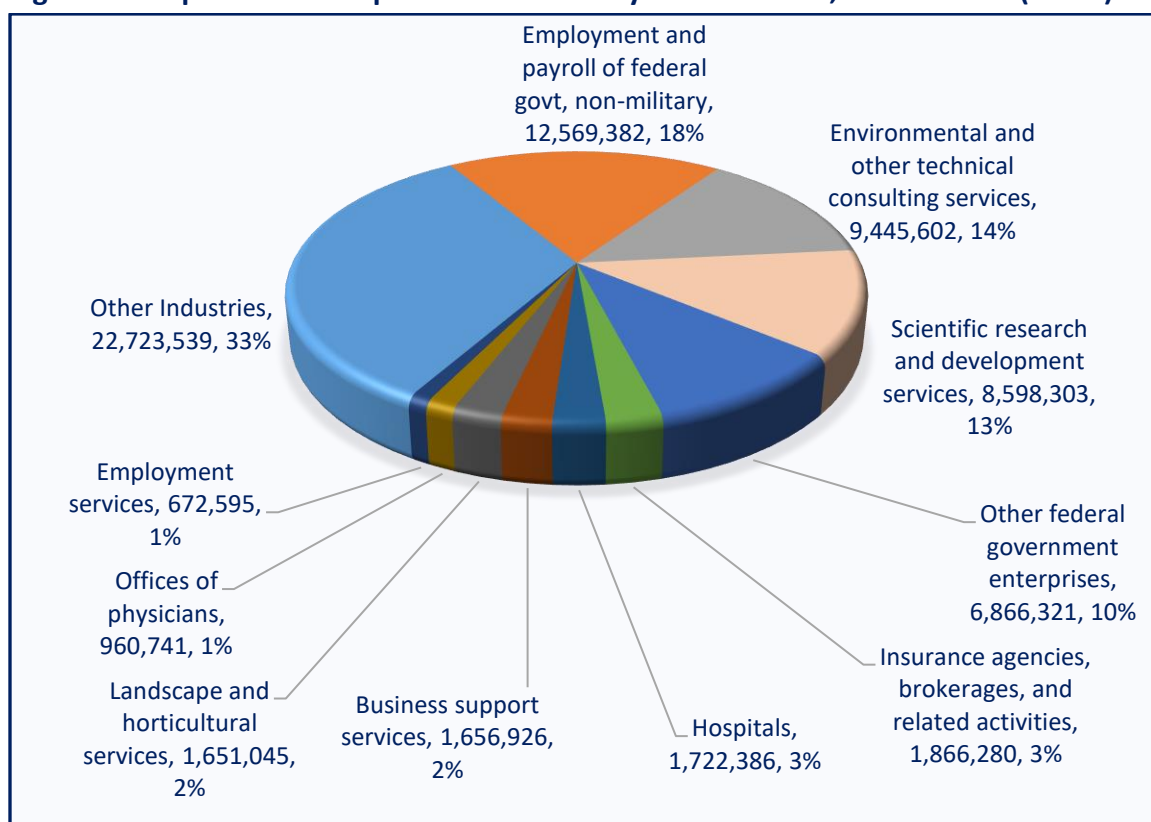

Figure 84 depicts the ten most impacted industries by employment. Environmental and other technical consulting and scientific research and development services are the most impacted industries, respectively (along with the federal government sectors). These four industries together account for 46% of the jobs created.

**Figure 84: Top Ten Most Impacted Industries by Employment, New Mexico (NASA).**

**The total income impact of NASA in New Mexico was \$68.7 million in Fiscal Year 2019.**

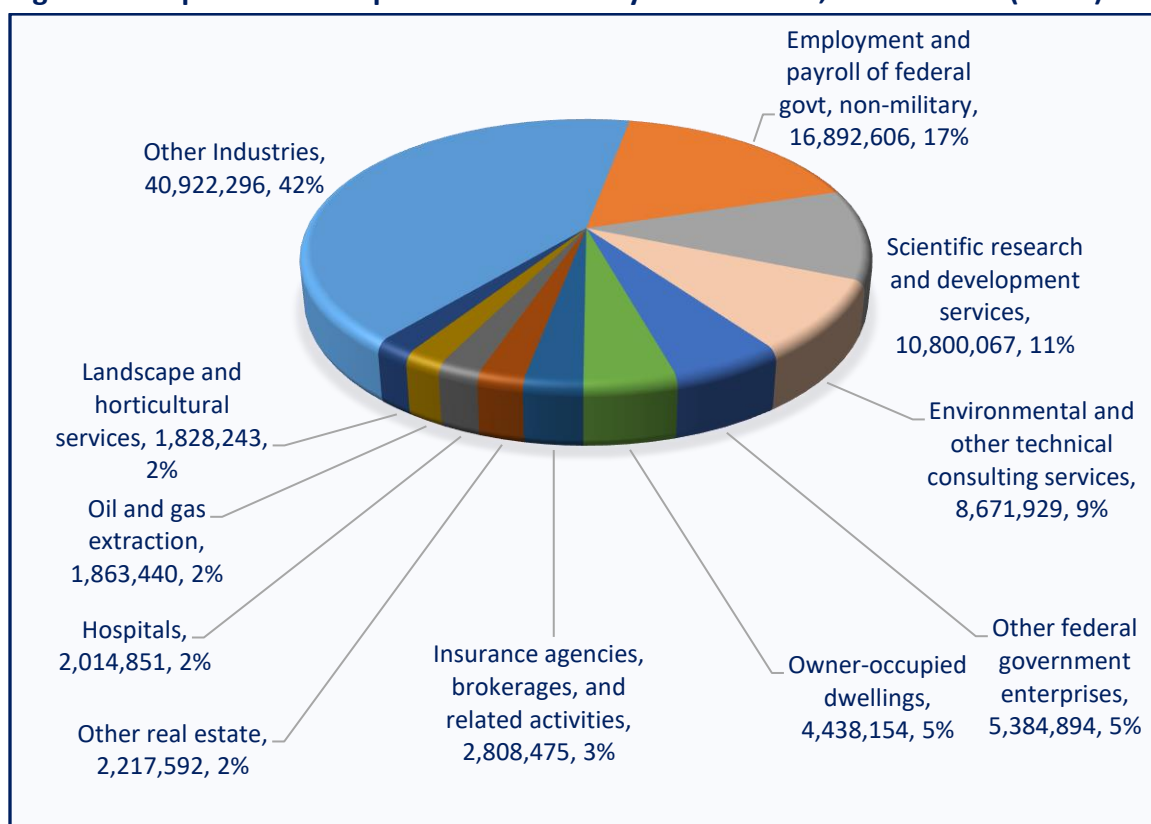

Of this amount, more than \$12.2 million (18%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$39.7 million (58%). The remaining income (induced impact), estimated to be \$16.8 million (24%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 85 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, Environmental and other technical consulting and scientific research and development services are the most impacted industries, respectively (along with the federal government sectors). The four industries together account for 55% of the total labor income earned.

**Figure 85: Top Ten Most Impacted Industries by Labor Income, New Mexico (NASA).**

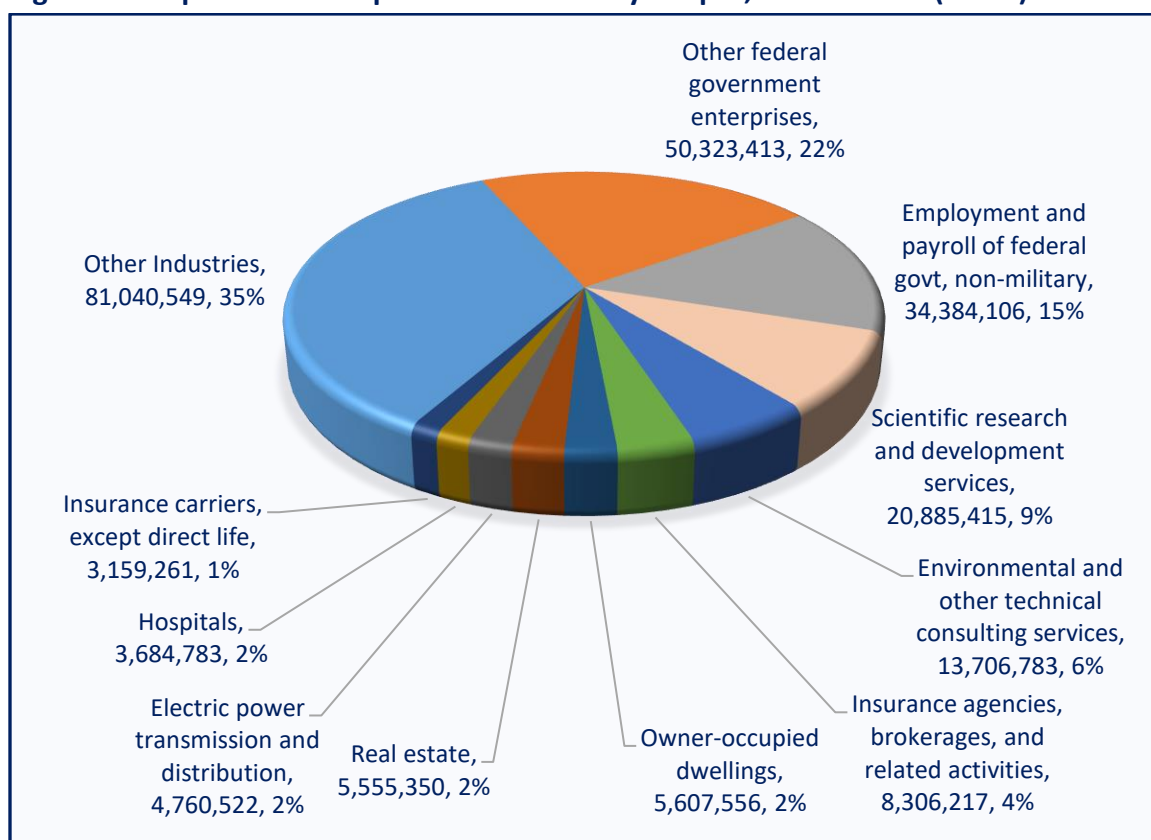

**The total value added impact of NASA in New Mexico was \$97.8 million in Fiscal Year 2019.** Of this amount, \$16 million (16%) was created by civil service employees and \$50.4 million (52%) was created indirectly by the \$82.1 million in procurement spending across all industry sectors in New Mexico. \$31.4 million (32%) was generated by increased consumption spending supported by increased earnings.

Figure 86 depicts the ten most heavily impacted industries in terms of value added. Environmental and other technical consulting and scientific research and development services are the most impacted industries, respectively (along with the federal government sectors). The four industries together account for 42% of the total value added created. NASA activities accounted for an increase of more than \$10.8 million in value added in scientific research and development services, and \$8.7 million increase in value added in environmental and other technical consulting services.

**Figure 86: Top Ten Most Impacted Industries by Value Added, New Mexico (NASA).****The total output impact of NASA in New Mexico was \$231.4 million in Fiscal Year 2019.**

The direct impact of \$33.5 million constitutes the value of production by NASA employees, accounting for around 15% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$82.1 million resulted in an additional increase in output (gross sales) of \$57.1 million across all industry sectors (adding up to the indirect total of \$139.2 million in Table 209). Nearly \$58.7 million (25%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of approximately \$20.9 million in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services and \$13.7 million increase in sales in environmental and other technical consulting services (Figure 87).

**Figure 87: Top Ten Most Impacted Industries by Output, New Mexico (NASA).**

### 6.33.2. M2M Program Impacts

In 2019, New Mexico had 22 M2M-related civil service employees (7 FTEs) with a corresponding labor income of \$1 million. M2M program contracts sourced in the state in the same year totaled more than \$21.8 million. The total New Mexico employment impact is 258 jobs. The labor income and economic output associated with this employment are \$12.7 million and \$49.4 million, respectively. The M2M program generates \$1.3 million in tax revenues for the state and local governments in New Mexico (Table 212).

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the New Mexico economy. Ninety-four (94) percent of the employment impacts and more than 91 percent of the output impacts are due to NASA procurement sourced within the state.

### 6.33.3. The M2M Program's Share of NASA Impacts

Around 20% of overall NASA agency impacts in the state are attributable to the M2M program (Table 215 and Figure 88). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 215: The M2M Program Portion of Overall NASA Impacts, New Mexico.**

## 6.34. Economic Impacts on the State of New York

### 6.34.1. NASA Impacts

In 2019, 65 NASA civil service employees (44 FTEs) residing in New York earned nearly \$6.9 million in labor income. NASA contracts sourced in New York in the same year totaled \$152 million. The total economic impact resulting from these activities is 1,932 jobs, \$170.4 million in labor income, and \$439.7 million in economic output. These economic activities generate \$22.6 million in tax revenues for the state and local governments in New York (Table 216).

**Table 216: Summary of NASA Impacts by Types of Impact, New York.**

Impact Type	Employment	Labor Income (\$ thousands)	Value Added (\$ thousands)	Output (\$ thousands)	Tax (\$ thousands)
Direct	44	6,892	9,030	18,881	309

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the New York economy. Table 217 examines the sources of the employment figures in the second column of Table 216. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 95% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 5%.

**Table 217: NASA Employment Impacts by Sources of Impact, New York.**

\*Note that direct employment impact consists of NASA jobs (FTEs) while indirect employment impact consists of NASA contractor employees and employees in the supply chain of those contractors.

Table 218 examines the sources of the output figures in the fifth column of Table 216. Procurement spending is responsible for more than 93% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is approximately 7%.

\* Note that direct output impact is associated with NASA labor force while indirect output impact is associated with NASA contractor employees and employees in the supply chain of those contractors.

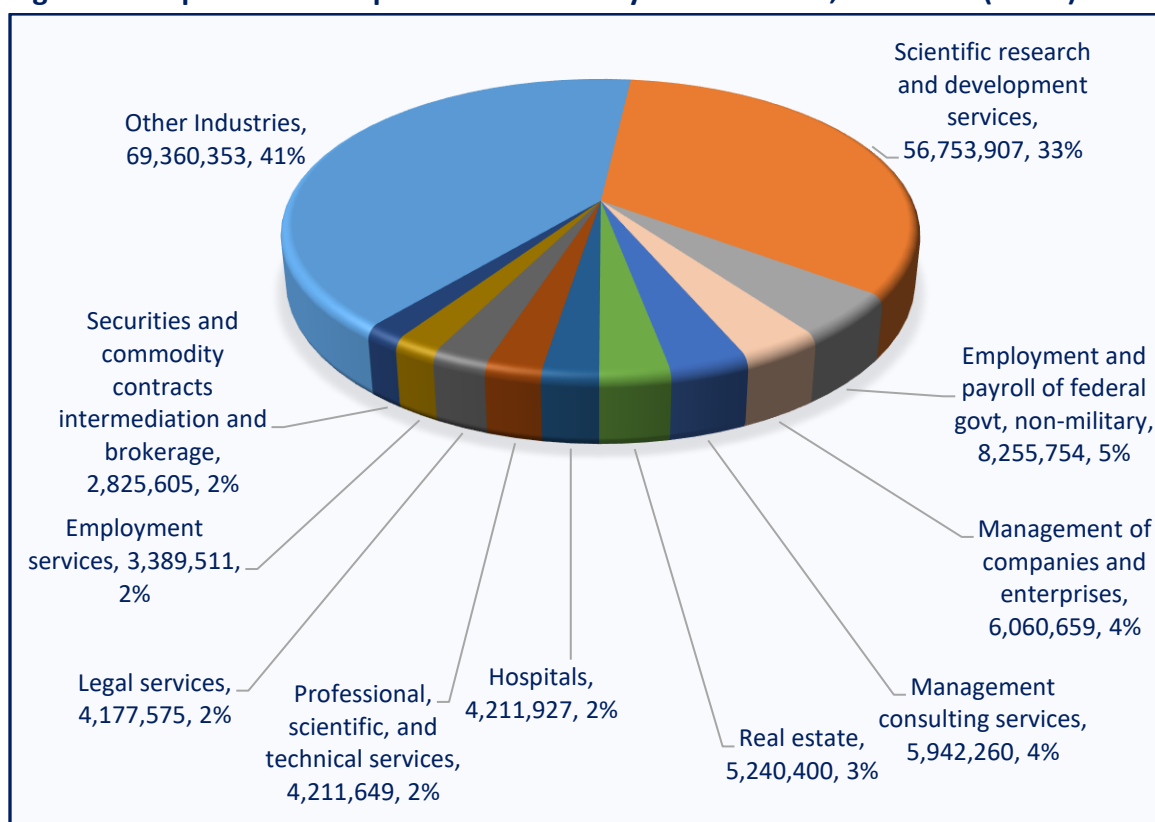

**1,932 jobs in the New York economy were supported by NASA activities in Fiscal Year 2019.** Of these, 44 (2%) were directly located at NASA centers. As a result of the procurement of goods and services in the New York economy, 1,112 additional jobs (58%) were created. The remaining employment—776 jobs (40%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 89 depicts the ten most impacted industries by employment. Scientific research and development services is the most impacted industry, accounting for 28% of the jobs created. The employment in this industry is driven largely by NASA procurement spending; scientific research and development services accounted for approximately 83% of NASA procurement spending in the state in Fiscal Year 2019. The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

**Figure 89: Top Ten Most Impacted Industries by Employment, New York (NASA).**

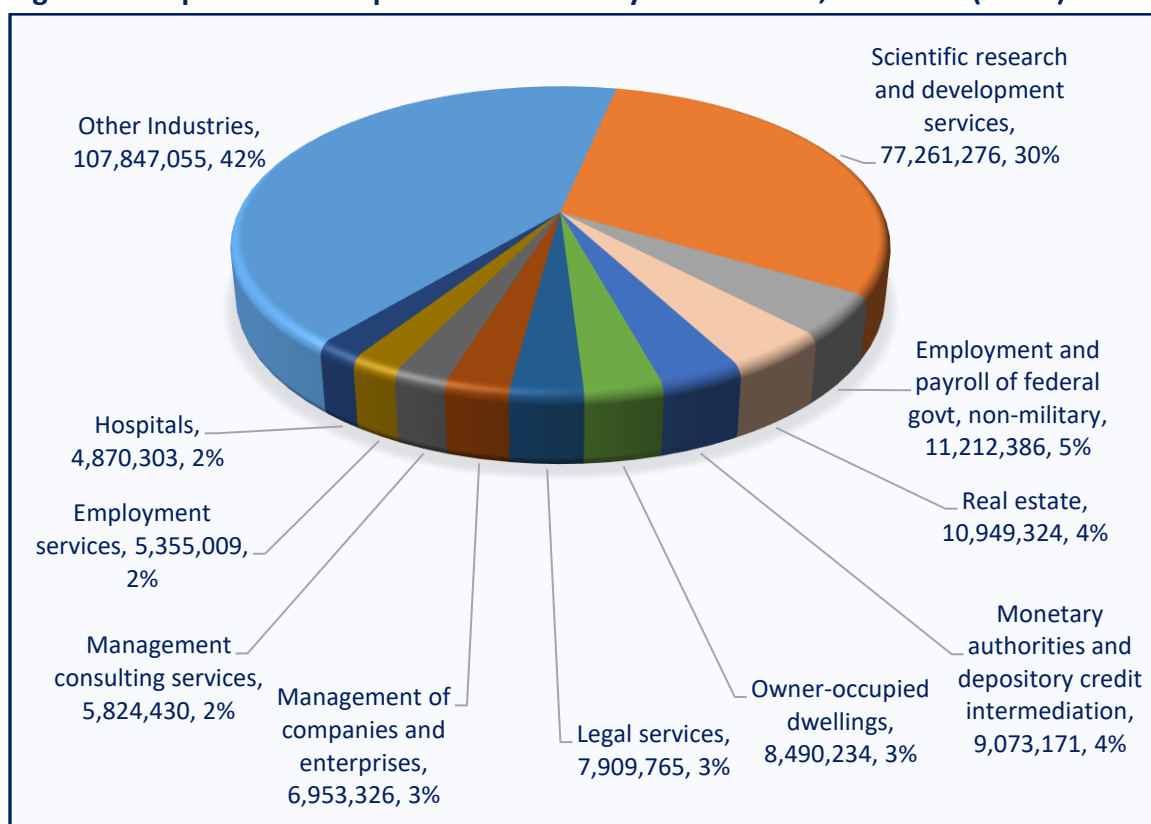

**The total income impact of NASA in New York was \$170.4 million in Fiscal Year 2019.** Of this amount, \$6.9 million (4%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$108.9 million (64%). The remaining income (induced impact), estimated to be \$54.6 million (32%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 90 depicts the ten most impacted industries by labor income. As a consequence of its share of total employment, scientific research and development services is the most impacted industry, account for 33% of the total labor income earned.

**Figure 90: Top Ten Most Impacted Industries by Labor Income, New York (NASA).**

**The total value added impact of NASA in New York was \$255.7 million in Fiscal Year 2019.** Of this amount, \$9 million (4%) was created by civil service employees and \$153.3 million (60%) was created indirectly by the \$152 million in procurement spending across all industry sectors in New York. \$93.4 million (36%) was generated by increased consumption spending supported by increased earnings.

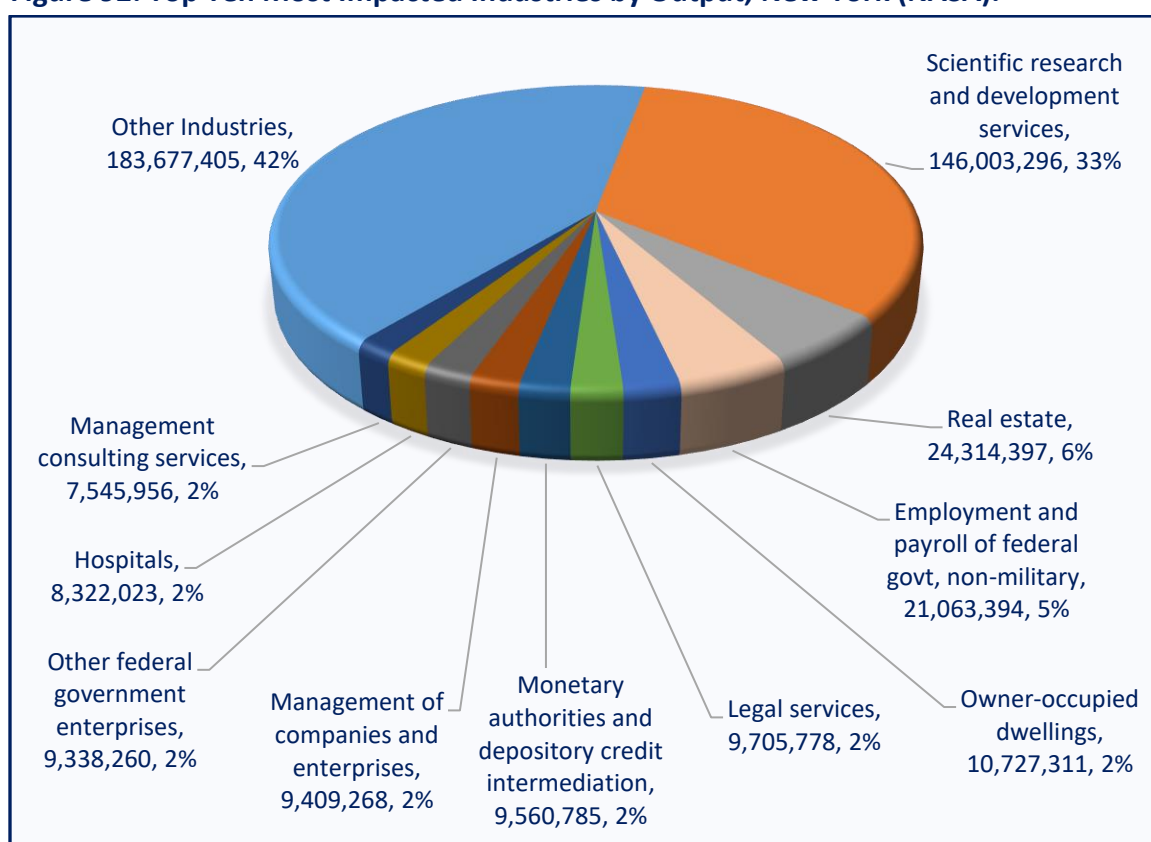

Figure 91 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development services and federal government are the most impacted industries. The two industries together account for 35% of the total value added created. NASA activities accounted for an increase of \$77.2 million in value added in scientific research and development services. Eleven (11) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

**Figure 91: Top Ten Most Impacted Industries by Value Added, New York (NASA).**

**The total output impact of NASA in New York was \$439.7 million in Fiscal Year 2019.**

The direct impact of nearly \$18.9 million constitutes the value of production by NASA employees, accounting for around 4% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$152 million resulted in an additional increase in output (gross sales) of \$122.5 million across all industry sectors (adding up to the indirect total of \$274.5 million in Table 216). Approximately \$146.2 million (33%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of \$146 million in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services (Figure 92). Similar to employment, impacts in this industry are largely driven by NASA procurement spending; scientific research and development services accounted for approximately 83% of NASA procurement spending in the state in Fiscal Year 2019. The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

**Figure 92: Top Ten Most Impacted Industries by Output, New York (NASA).**

### 6.34.2. M2M Program Impacts

In 2019, New York had nine M2M-related civil service employees (4 FTEs) with a corresponding labor income of \$397,000. M2M program contracts sourced in the state in the same year totaled \$15.3 million. The total New York employment impact is 188 jobs. The labor income and economic output associated with this employment are \$18 million and \$45.4 million, respectively. The M2M program generates \$2.2 million in tax revenues for the state and local governments in New York (Table 219).

### 6.34.3. The M2M Program's Share of NASA Impacts

Around 10% of overall NASA agency impacts in the state are attributable to the M2M program (Table 222 and Figure 93). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.35. Economic Impacts on the State of North Carolina

### 6.35.1. NASA Impacts

In 2019, 32 NASA civil service employees (20 FTEs) residing in North Carolina earned \$2.9 million in labor income. NASA contracts sourced in North Carolina in the same year totaled \$27 million. The total economic impact resulting from these activities is 408 jobs, \$27.9 million in labor income, and \$84 million in economic output. These economic activities generate \$2.8 million in tax revenues for the state and local governments in North Carolina (Table 223).

The following two tables examine the contribution of different NASA activities to the North Carolina economy. Table 224 examines the sources of the employment figures in the second column of Table 223. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Eighty-eight (88) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 12%.

### 6.35.2. M2M Program Impacts

In 2019, North Carolina had seven M2M-related civil service employees (3 FTEs) with a corresponding labor income of \$381,000. M2M program contracts sourced in the state in the same year totaled \$4 million. The total North Carolina employment impact is 53 jobs. The labor income and economic output associated with this employment are \$4.1 million and \$12.1 million, respectively. The M2M program generates approximately \$407,000 in tax revenues for the state and local governments in North Carolina (Table 226).

### 6.35.3. The M2M Program's Share of NASA Impacts

Around 14% of overall NASA agency impacts in the state are attributable to the M2M program (Table 229 and Figure 94). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.36. Economic Impacts on the State of North Dakota<sup>27</sup>

### 6.36.1. NASA Impacts

In 2019, there were no NASA civil service employees residing in North Dakota. NASA contracts sourced in North Dakota in the same year totaled \$1.5 million. The total economic impact resulting from this procurement activity is 18 jobs, \$1.2 million in labor income, and \$3.2 million in economic output. These economic activities generate nearly \$78,000 in tax revenues for the state and local governments in North Dakota (Table 230).

## 6.37. Economic Impacts on the State of Ohio

### 6.37.1. NASA Impacts

In 2019, 1,647 NASA civil service employees (1,509 FTEs) residing in Ohio earned \$238.5 million in labor income. NASA contracts sourced in Ohio in the same year totaled nearly \$406.4 million. The total economic impact resulting from these activities is 11,139 jobs, \$805.3 million in labor income, and \$2.3 billion in economic output. These economic activities generate \$76.6 million in tax revenues for the state and local governments in Ohio (Table 231).

The employment multiplier is 7.4, meaning that for every NASA job located in Ohio, an additional 6.4 jobs are supported in the state economy. The output multiplier of 3.5 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$2.5 million worth of output is sustained throughout the state economy.

**Table 231: Summary of NASA Impacts by Types of Impact, Ohio.**

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Ohio economy. Table 232 examines the sources of the employment figures in the second column of Table 231. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 62% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 38%.

**Table 232: NASA Employment Impacts by Sources of Impact, Ohio.**

*\*Note that direct employment impact consists of NASA jobs (FTEs) while indirect employment impact consists of NASA contractor employees and employees in the supply chain of those contractors.*

Table 233 examines the sources of the output figures in the fifth column of Table 231. NASA labor force's share of overall NASA output impact is approximately 48% while procurement spending is responsible for nearly 52% of the increase in output in the state economy arising from NASA. The reason that NASA labor force's share of overall output impact is larger than its share in overall employment impact is that NASA employees produce more output per worker than the average employee that is part of the supply chain of NASA procurement.

**Table 233: NASA Output Impacts by Sources of Impact, Ohio.**

**11,139 jobs in the Ohio economy were supported by NASA activities in Fiscal Year 2019.** Of these, 1,509 (13%) were directly located at NASA centers. As a result of the procurement of goods and services in the Ohio economy, 4,110 additional jobs (37%) were created. The remaining employment—5,520 jobs (50%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 95 depicts the ten most impacted industries by employment. Scientific research and development services, construction, and management consulting services are the most impacted industries, respectively (along with the federal government sector). These four industries together account for 31% of the jobs created. The employment in these industries is driven largely by NASA procurement spending; the three private industries

accounted for approximately 55% of NASA procurement spending in the state in Fiscal Year 2019. The impact in the federal government sector represents mainly civil service employees working for NASA.

**Figure 95: Top Ten Most Impacted Industries by Employment, Ohio (NASA).**

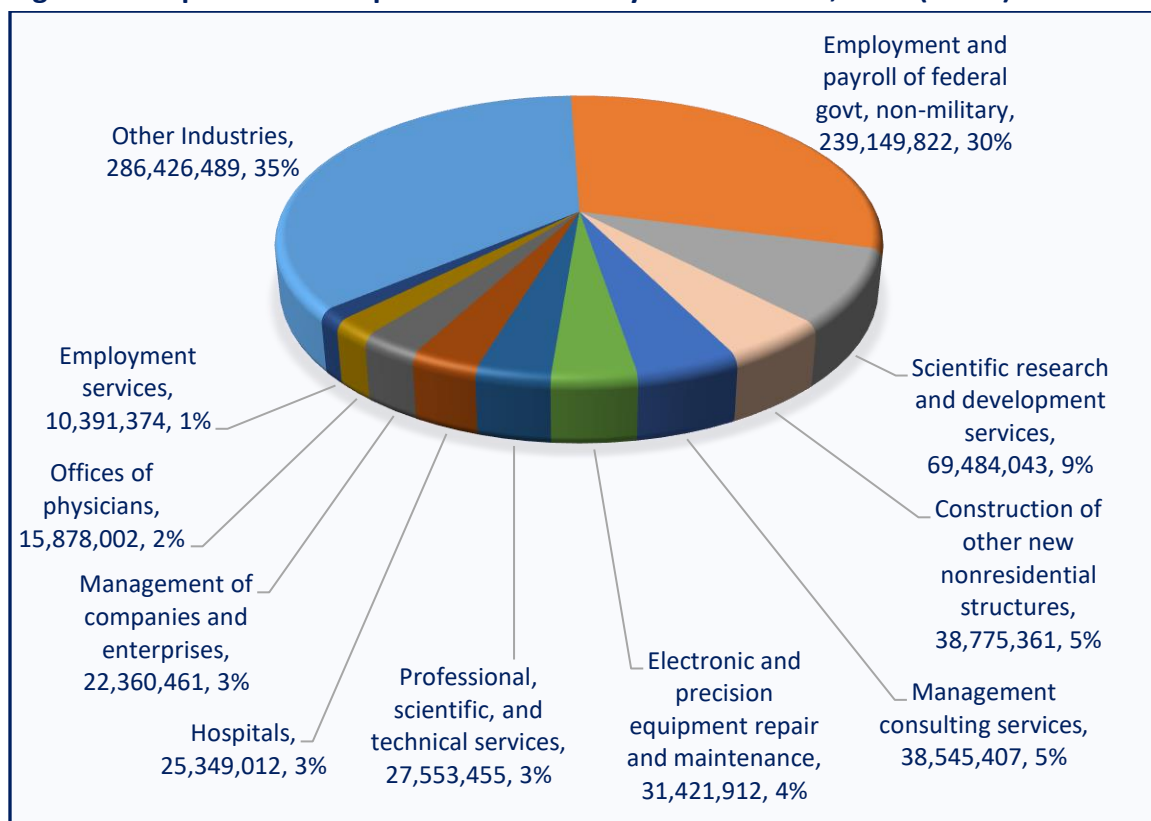

**The total income impact of NASA in Ohio was \$805.3 million in Fiscal Year 2019.** Of this amount, \$238.5 million (30%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$288.4 million (36%). The remaining income (induced impact), estimated to be \$278.5 million (34%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 96 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, scientific research and development services, construction, and management consulting services are the most impacted industries by income (along with the federal government sector). The four industries together account for 49% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the state average. As of 2018, the average employee

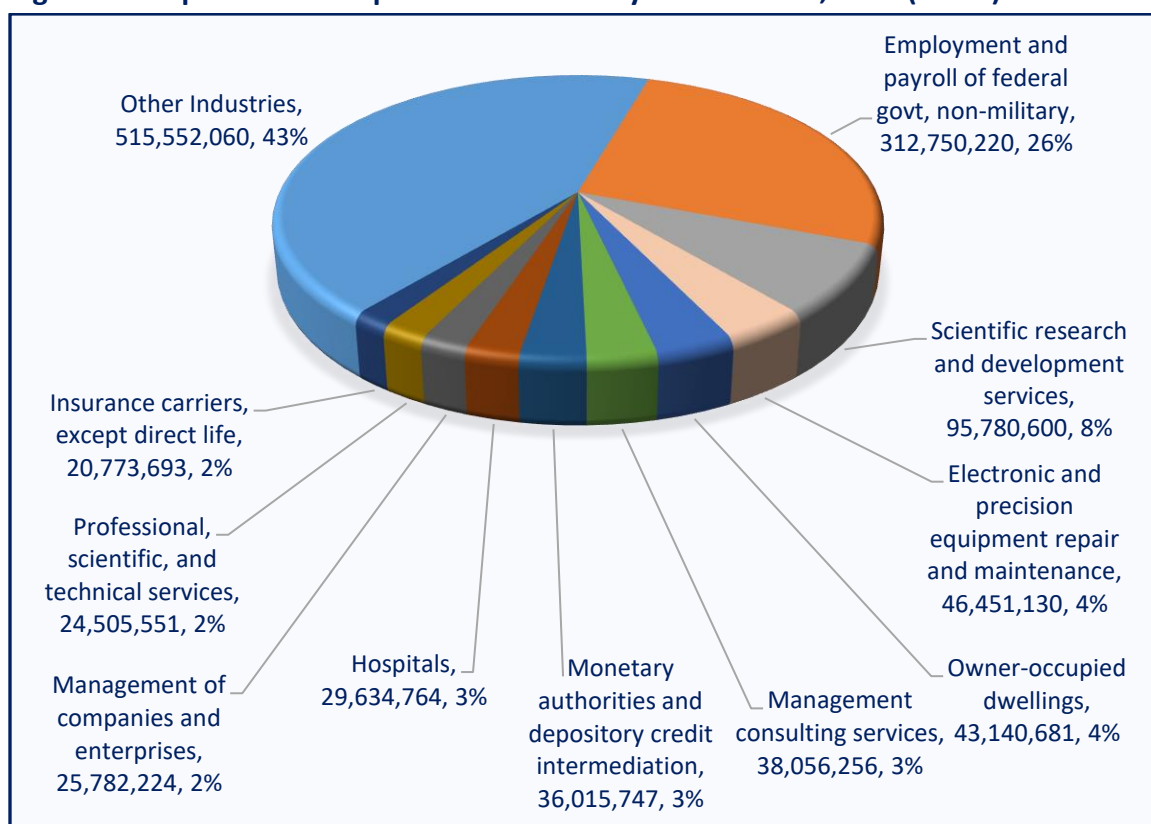

compensation in the scientific research and development services industry was \$83,673 (including benefits), compared to an average of \$57,150 across Ohio.

**Figure 96: Top Ten Most Impacted Industries by Labor Income, Ohio (NASA).**

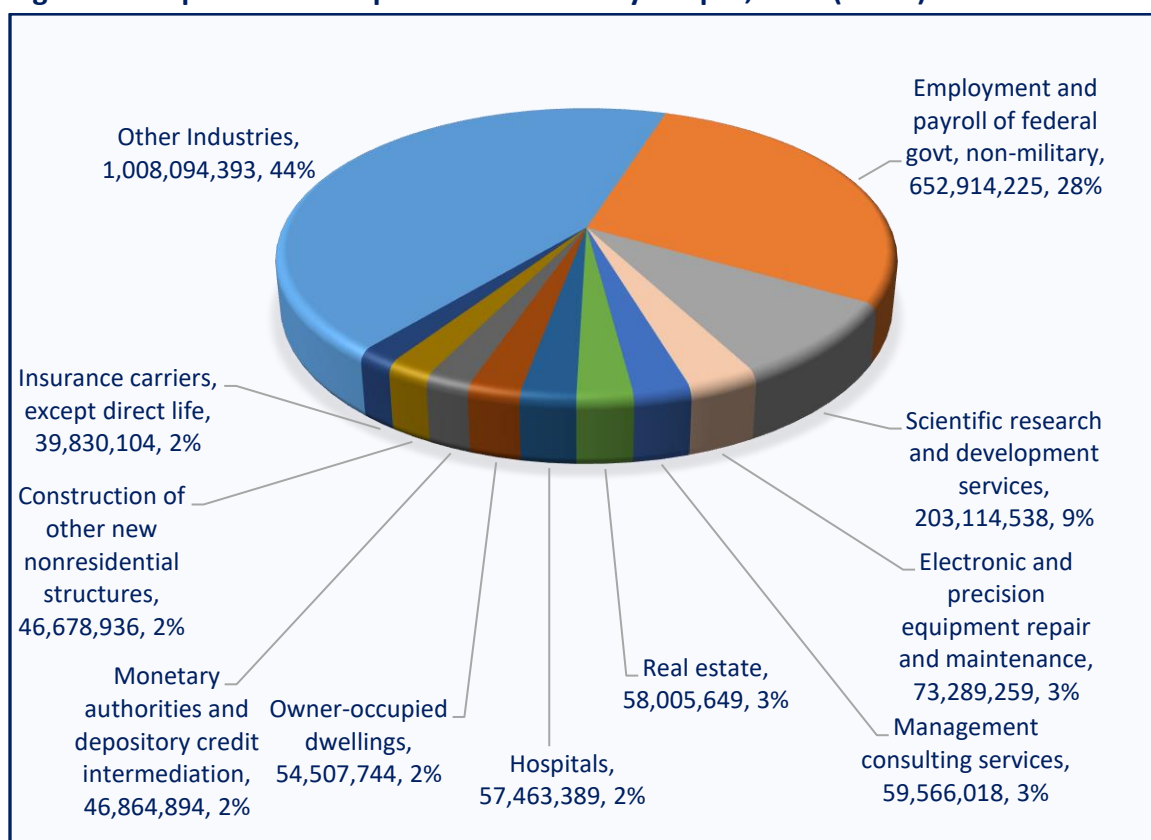

**The total value added impact of NASA in Ohio was \$1.2 billion in Fiscal Year 2019.** Of this amount, \$311.8 million (26%) was created by civil service employees and \$375.1 million (32%) was created indirectly by the \$406.4 million in procurement spending across all industry sectors in Ohio. \$501.6 million (42%) was generated by increased consumption spending supported by increased earnings.

Figure 97 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development services and electronic and precision equipment repair and maintenance are the most impacted industries (along with the federal government sector). The three industries together account for 38% of the total value added created. NASA activities accounted for an increase of \$95.8 million in value added in scientific research and development services, and a \$46.5 million increase in value added in electronic and precision equipment repair and maintenance. Three hundred twelve (312) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

**Figure 97: Top Ten Most Impacted Industries by Value Added, Ohio (NASA).**

**The total output impact of NASA in Ohio was \$2.3 billion in Fiscal Year 2019.** The direct impact of nearly \$652 million constitutes the value of production by NASA employees, accounting for around 28% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$406.4 million resulted in an additional increase in output (gross sales) of \$311.1 million across all industry sectors (adding up to the indirect total of \$717.6 million in Table 231). Approximately \$930.8 million (41%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of \$203.1 million in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services, a \$73.3 million increase in sales in electronic and precision equipment repair and maintenance, and \$59.6 million increase in sales in management consulting services (Figure 98). Similar to employment, impacts in these industries are largely driven by NASA procurement spending; these two industries accounted for approximately 55% of NASA procurement spending in Fiscal Year 2019. Aside from professional, scientific, and technical services, the output impacts reported in other industries mainly result from increases in consumption spending (induced impacts).

### 6.37.2. M2M Program Impacts

In 2019, Ohio had 571 M2M-related civil service employees (282 FTEs) with a corresponding labor income of \$44.3 million. M2M program contracts sourced in the state in the same year totaled more than \$32.6 million. The total Ohio employment impact is 1,258 jobs. The labor income and economic output associated with this employment are \$104.4 million and \$302.2 million, respectively. The M2M program generates \$8.7 million in tax revenues for the state and local governments in Ohio (Table 234).

**Table 234: Summary of M2M Program Impacts by Types of Impact, Ohio.**

The following two tables examine the contribution of different NASA activities to the Ohio economy. More than 38 percent of the employment impacts and 31 percent of the output impacts are due to NASA procurement sourced within the state.

### 6.37.3. The M2M Program's Share of NASA Impacts

Approximately 12% of overall NASA agency impacts in the state are attributable to the M2M program (Table 237 and Figure 99). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 237: The M2M Program Portion of Overall NASA Impacts, Ohio.**

## 6.38. Economic Impacts on the State of Oklahoma

### 6.38.1. NASA Impacts

In 2019, 10 NASA civil service employees (5 FTEs) residing in Oklahoma earned \$587,000 in labor income. NASA contracts sourced in Oklahoma in the same year totaled \$43.8 million. The total economic impact resulting from these activities is 625 jobs, \$35.5 million in labor income, and \$110.2 million in economic output. These economic activities generate nearly \$3 million in tax revenues for the state and local governments in Oklahoma (Table 238).

More than 98% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 2%.

### 6.38.2. M2M Program Impacts

In 2019, Oklahoma had one M2M-related civil service employee (1 FTE) with a corresponding labor income of \$144,000. M2M program contracts sourced in the state in the same year totaled approximately \$238,000. The total Oklahoma employment impact is five jobs. The labor income and economic output associated with this employment are \$421,000 and \$1.3 million, respectively. The M2M program generates \$32,000 in tax revenues for the state and local governments in Oklahoma (Table 241).

The following two tables examine the contribution of different NASA activities to the Oklahoma economy. Fifty-seven (57) percent of the employment impacts and more than fifty-one (51) percent of the output impacts are due to NASA procurement sourced within the state.

### 6.38.3. The M2M Program's Share of NASA Impacts

Around 1% of overall NASA agency impacts in the state are attributable to the M2M program (Table 244 and Figure 100). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 244: The M2M Program Portion of Overall NASA Impacts, Oklahoma.**

## 6.39. Economic Impacts on the State of Oregon

### 6.39.1. NASA Impacts

In 2019, 8 NASA civil service employees (5 FTEs) residing in Oregon earned nearly \$777,000 in labor income. NASA contracts sourced in Oregon in the same year totaled \$16.3 million. The total economic impact resulting from these activities is 207 jobs, \$15.1 million in labor income, and \$43.3 million in economic output. These economic activities generate \$1.6 million in tax revenues for the state and local governments in Oregon (Table 245).

**Table 245: Summary of NASA Impacts by Types of Impact, Oregon.**

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Oregon economy. Table 246 examines the sources of the employment figures in the second column of Table 245. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly 94% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 6%.

### 6.39.2. M2M Program Impacts

In 2019, Oregon had two M2M-related civil service employees (1 FTE) with a corresponding labor income of \$109,000. M2M program contracts sourced in the state in the same year totaled \$801,000. The total Oregon employment impact is nine jobs. The labor income and economic output associated with this employment are \$878,000 and \$2.3 million, respectively. The M2M program generates \$85,000 in tax revenues for the state and local governments in Oregon (Table 248).

**Table 248: Summary of M2M Program Impacts by Types of Impact, Oregon.**

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Oregon economy. More than 81 percent of the employment impacts and nearly 80 percent of the output impacts are due to NASA procurement sourced within the state.

### 6.39.3. The M2M Program's Share of NASA Impacts

Approximately 5% of overall NASA agency impacts in the state are attributable to the M2M program (Table 251 and Figure 101). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 251: The M2M Program Portion of Overall NASA Impacts, Oregon.**

## 6.40. Economic Impacts on the State of Pennsylvania

### 6.40.1. NASA Impacts

In 2019, 49 NASA civil service employees (28 FTEs) residing in Pennsylvania earned more than \$4.5 million in labor income. NASA contracts sourced in Pennsylvania in the same year totaled \$75.4 million. The total economic impact resulting from these activities is 1,080 jobs, \$86.2 million in labor income, and \$231.5 million in economic output. These economic activities generate nearly \$8.5 million in tax revenues for the state and local governments in Pennsylvania (Table 252).

**Table 252: Summary of NASA Impacts by Types of Impact, Pennsylvania.**

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Pennsylvania economy. Table 253 examines the sources of the employment figures in the second column of Table 252. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Ninety-three (93) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 7%.

**Table 253: NASA Employment Impacts by Sources of Impact, Pennsylvania.**

Table 254 examines the sources of the output figures in the fifth column of Table 252. Procurement spending is responsible for more than 91% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is approximately 9%.

**1,080 jobs in the Pennsylvania economy were supported by NASA activities in Fiscal Year 2019.** Of these, 28 (3%) were directly located at NASA centers. As a result of the procurement of goods and services in the Pennsylvania economy, 533 additional jobs (49%) were created. The remaining employment—519 jobs (48%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 102 depicts the ten most impacted industries by employment. Scientific research and development services is the most impacted industry, accounting for 22% of the jobs created. The impact in the federal government sector represents mainly civil service employees working for NASA.

**Figure 102: Top Ten Most Impacted Industries by Employment, Pennsylvania (NASA).****The total income impact of NASA in Pennsylvania was \$86.2 million in Fiscal Year 2019.**

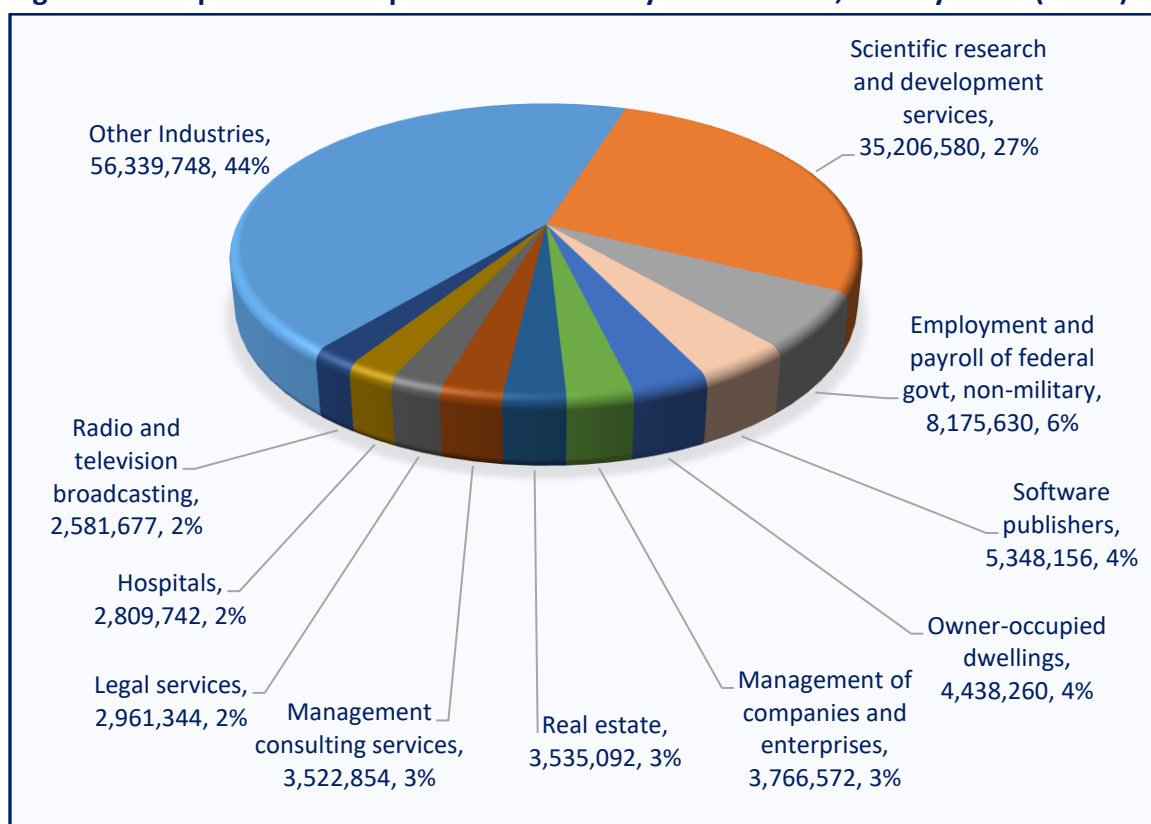

Of this amount, more than \$4.5 million (5%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$51.6 million (60%). The remaining income (induced impact), estimated to be \$30.1 million (35%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 103 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, scientific research and development services is the most impacted industry by income (along with the federal government sector). The two industries together account for 29% of the total labor income earned.

**Figure 103: Top Ten Most Impacted Industries by Labor Income, Pennsylvania (NASA).**

**The total value added impact of NASA in Pennsylvania was \$128.7 million in Fiscal Year 2019.** Of this amount, approximately \$5.8 million (5%) was created by civil service employees and \$73.5 million (57%) was created indirectly by the \$75.4 million in procurement spending across all industry sectors in Pennsylvania. \$49.4 million (38%) was generated by increased consumption spending supported by increased earnings.

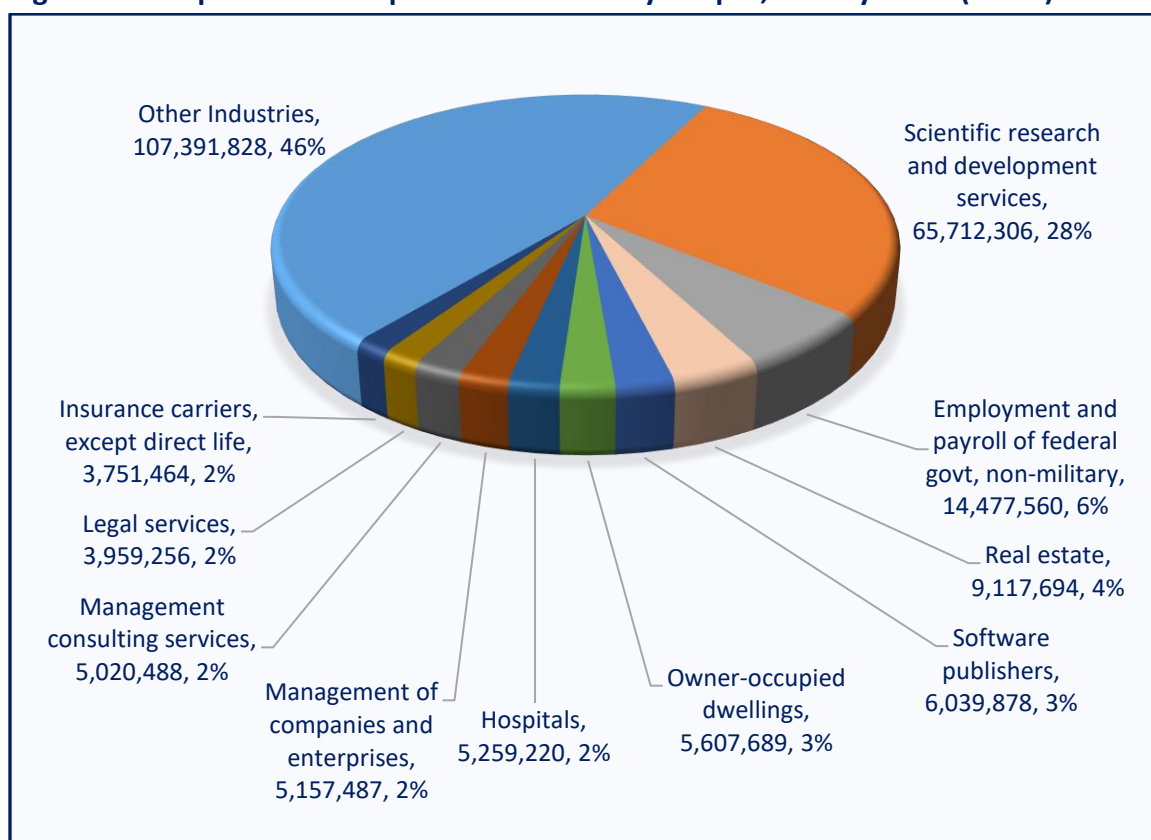

Figure 104 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development services is the most impacted industry (along with the federal government sector). The two industries together account for 33% of the total value added created. NASA activities accounted for an increase of more than \$35.2 million in value added in scientific research and development services. Eight (8) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

**Figure 104: Top Ten Most Impacted Industries by Value Added, Pennsylvania (NASA).**

**The total output impact of NASA in Pennsylvania was \$231.5 million in Fiscal Year 2019.**

The direct impact of approximately \$12.1 million constitutes the value of production by NASA employees, accounting for around 5% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$75.4 million resulted in an additional increase in output (gross sales) of \$56.7 million across all industry sectors (adding up to the indirect total of \$132.1 million in Table 252). Around \$87.3 million (38%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of approximately \$65.7 million in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services. Aside from software publishers and management consulting services, the output impacts reported in other industries mainly result from increases in consumption spending (induced impacts).

**Figure 105: Top Ten Most Impacted Industries by Output, Pennsylvania (NASA).**

#### 6.40.2. M2M Program Impacts

In 2019, Pennsylvania had nine M2M-related civil service employees (3 FTEs) with a corresponding labor income of \$290,000. M2M program contracts sourced in the state in the same year totaled more than \$32.1 million. The total Pennsylvania employment impact is 415 jobs. The labor income and economic output associated with this employment are \$36.2 million and \$91.7 million, respectively. The M2M program generates \$3.4 million in tax revenues for the state and local governments in Pennsylvania (Table 255).

### 6.40.3. The M2M Program's Share of NASA Impacts

Approximately 40% of overall NASA agency impacts in the state are attributable to the M2M program (Table 258 and Figure 106). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 258: The M2M Program Portion of Overall NASA Impacts, Pennsylvania.**

## 6.41. Economic Impacts on the State of Rhode Island

### 6.41.1. NASA Impacts

In 2019, 2 NASA civil service employees (1 FTE) residing in Rhode Island earned \$51,000 in labor income. NASA contracts sourced in Rhode Island in the same year totaled approximately \$1.7 million. The total economic impact resulting from these activities is 25 jobs, \$1.6 million in labor income, and \$4.8 million in economic output. These economic activities generate \$195,000 in tax revenues for the state and local governments in Rhode Island (Table 259).

**Table 259: Summary of NASA Impacts by Types of Impact, Rhode Island.**

The following two tables examine the contribution of different NASA activities to the Rhode Island economy. Table 260 examines the sources of the employment figures in the second column of Table 259. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 95% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 5%.

**Table 260: NASA Employment Impacts by Sources of Impact, Rhode Island.**

### 6.41.2. M2M Program Impacts

There were no M2M-specific NASA employees in Rhode Island in FY 2019, but \$88,000 in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is less than one job, \$53,000 in labor income, and \$178,000 worth of output (Table 262).

**Table 262: Summary of M2M Program Impacts by Types of Impact, Rhode Island.**

### 6.41.3. The M2M Program's Share of NASA Impacts

Approximately 3% of overall NASA agency impacts in the state are attributable to the M2M program (Table 263 and Figure 107). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.42. Economic Impacts on the State of South Carolina

### 6.42.1. NASA Impacts

In 2019, 14 NASA civil service employees (9 FTEs) residing in South Carolina earned \$1.3 million in labor income. NASA contracts sourced in South Carolina in the same year totaled \$12.4 million. The total economic impact resulting from these activities is 204 jobs, \$12.6 million in labor income, and \$36 million in economic output. These economic activities generate \$1.3 million in tax revenues for the state and local governments in South Carolina (Table 264).

**Table 264: Summary of NASA Impacts by Types of Impact, South Carolina.**

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the South Carolina economy. Table 265 examines the sources of the employment figures in the second column of Table 264. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly 90% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 10%.

### 6.42.2. M2M Program Impacts

In 2019, South Carolina had three M2M-related civil service employees (2 FTEs) with a corresponding labor income of \$246,000. M2M program contracts sourced in the state in the same year totaled approximately \$292,000. The total South Carolina employment impact is 11 jobs. The labor income and economic output associated with this employment are \$822,000 and \$2.8 million, respectively. The M2M program generates approximately \$77,000 in tax revenues for the state and local governments in South Carolina (Table 267).

**Table 267: Summary of M2M Program Impacts by Types of Impact, South Carolina.**

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the South Carolina economy. Approximately 62 percent of the employment impacts and 58 percent of the output impacts are due to NASA procurement sourced within the state.

### 6.42.3. The M2M Program's Share of NASA Impacts

Approximately 6% of overall NASA agency impacts in the state are attributable to the M2M program (Table 270 and Figure 108). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 270: The M2M Program Portion of Overall NASA Impacts, South Carolina.**

## 6.43. Economic Impacts on the State of South Dakota

### 6.43.1. NASA Impacts

In 2019, 5 NASA civil service employees (2 FTEs) residing in South Dakota earned \$186,000 in labor income. NASA contracts sourced in South Dakota in the same year totaled \$13.3 million. The total economic impact resulting from these activities is 171 jobs, \$12.5 million in labor income, and \$27.9 million in economic output. These economic activities generate \$262,000 in tax revenues for the state and local governments in South Dakota (Table 271).

**Table 271: Summary of NASA Impacts by Types of Impact, South Dakota.**

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the South Dakota economy. Table 272 examines the sources of the employment figures in the second column of Table 271. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Ninety-eight (98) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 2%.

**Table 272: NASA Employment Impacts by Sources of Impact, South Dakota.**

### 6.43.2. M2M Program Impacts

In 2019, South Dakota had two M2M-related civil service employees (less than 1 FTE) with a corresponding labor income of \$17,000. M2M program contracts sourced in the state in the same year totaled approximately \$370,000. The total South Dakota employment impact is four jobs. The labor income and economic output associated with this employment are \$225,000 and \$733,000, respectively. The M2M program generates approximately \$15,000 in tax revenues for the state and local governments in South Dakota (Table 274).

## 6.44. Economic Impacts on the State of Tennessee

### 6.44.1. NASA Impacts

In 2019, 65 NASA civil service employees (52 FTEs) residing in Tennessee earned \$8.6 million in labor income. NASA contracts sourced in Tennessee in the same year totaled \$28.9 million. The total economic impact resulting from these activities is 726 jobs, \$50.4 million in labor income, and \$135.6 million in economic output. These economic activities generate nearly \$4 million in tax revenues for the state and local governments in Tennessee (Table 278).

**Table 278: Summary of NASA Impacts by Types of Impact, Tennessee.**

The following two tables examine the contribution of different NASA activities to the Tennessee economy. Table 279 examines the sources of the employment figures in the second column of Table 1. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 81% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 19%.

#### 6.44.2. M2M Program Impacts

In 2019, Tennessee had 27 M2M-related civil service employees (18 FTEs) with a corresponding labor income of \$3.2 million. M2M program contracts sourced in the state in the same year totaled \$737,000. The total Tennessee employment impact is 58 jobs. The labor income and economic output associated with this employment are \$5.7 million and \$15 million, respectively. The M2M program generates \$357,000 in tax revenues for the state and local governments in Tennessee (Table 281).

### 6.44.3. The M2M Program's Share of NASA Impacts

Approximately 10% of overall NASA agency impacts in the state are attributable to the M2M program (Table 284 and Figure 110). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.45. Economic Impacts on the State of Texas

### 6.45.1. NASA Impacts

In 2019, 3,063 NASA civil service employees (2,843 FTEs) residing in Texas earned more than \$511 million in labor income. NASA contracts sourced in Texas in the same year totaled more than \$2.2 billion. The total economic impact resulting from these activities is 40,321 jobs, \$3 billion in labor income, and \$8.7 billion in economic output. These economic activities generate \$254.3 million in tax revenues for the state and local governments in Texas (Table 285).

The employment multiplier is 14.2, meaning that for every NASA job located in Texas, an additional 13.2 jobs are supported in the state economy. The output multiplier of 7.1 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$6.1 million worth of output is sustained throughout the state economy.

**Table 285: Summary of NASA Impacts by Types of Impact, Texas.**

Impact Type	Employment	Labor Income (\$ thousands)	Value Added (\$ thousands)	Output (\$ thousands)	Tax (\$ thousands)

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Texas economy. Table 286 examines the sources of the employment figures in the second column of Table 285. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 79% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 21%.

#### **40,321 jobs in the Texas economy were supported by NASA activities in Fiscal Year 2019.**

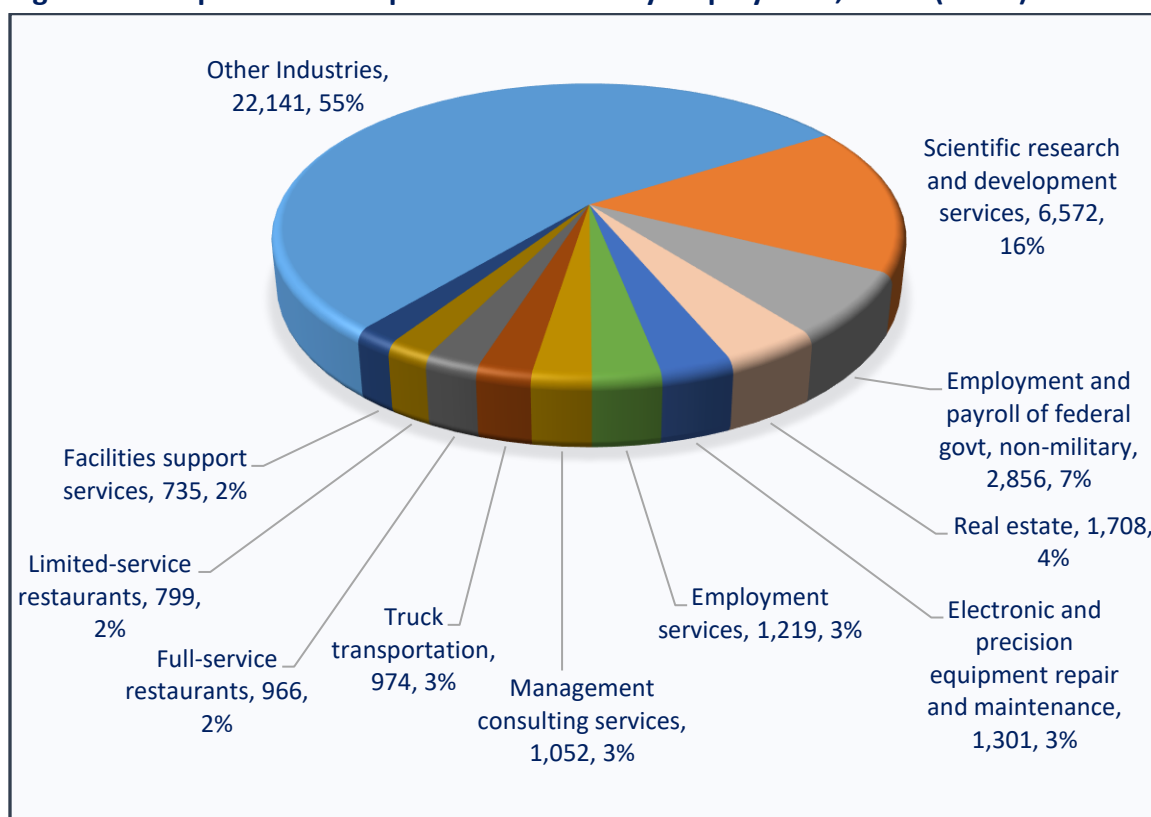

Of these, 2,843 (7%) were directly located at NASA centers. As a result of the procurement of goods and services in the Texas economy, 18,414 additional jobs (46%) were created. The remaining employment—19,064 jobs (47%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 111 depicts the ten most impacted industries by employment. Scientific research and development services and electronic and precision equipment repair and maintenance are the most impacted industries, respectively (along with the federal government and real estate). These three industries together account for 30% of the jobs created. The employment in the two private industries is driven largely by NASA procurement spending; these two industries accounted for approximately 82% of NASA procurement spending in the state in Fiscal Year 2019. The impact in the federal government sector represents mainly civil service employees working for NASA. The

sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

**Figure 111: Top Ten Most Impacted Industries by Employment, Texas (NASA).**

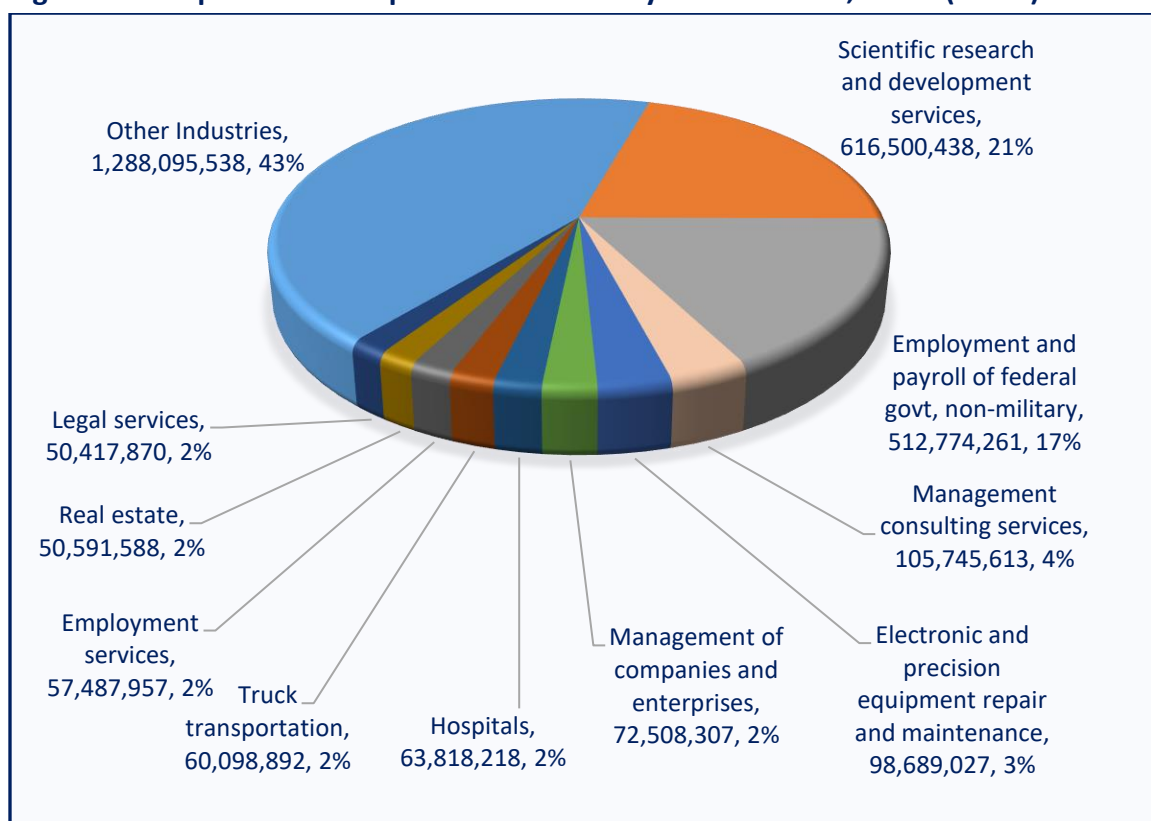

**The total income impact of NASA in Texas was \$3 billion in Fiscal Year 2019.** Of this amount, more than \$511 million (17%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$1.4 billion (49%). The remaining income (induced impact), estimated to be \$1 billion (34%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 112 depicts the ten most impacted industries by labor income. Scientific research and development services, management consulting services, and electronic and precision equipment repair and maintenance are the most impacted industries by income (along with the federal government sector). The four industries together account for 45% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the state average. As of 2018, the average employee compensation in the

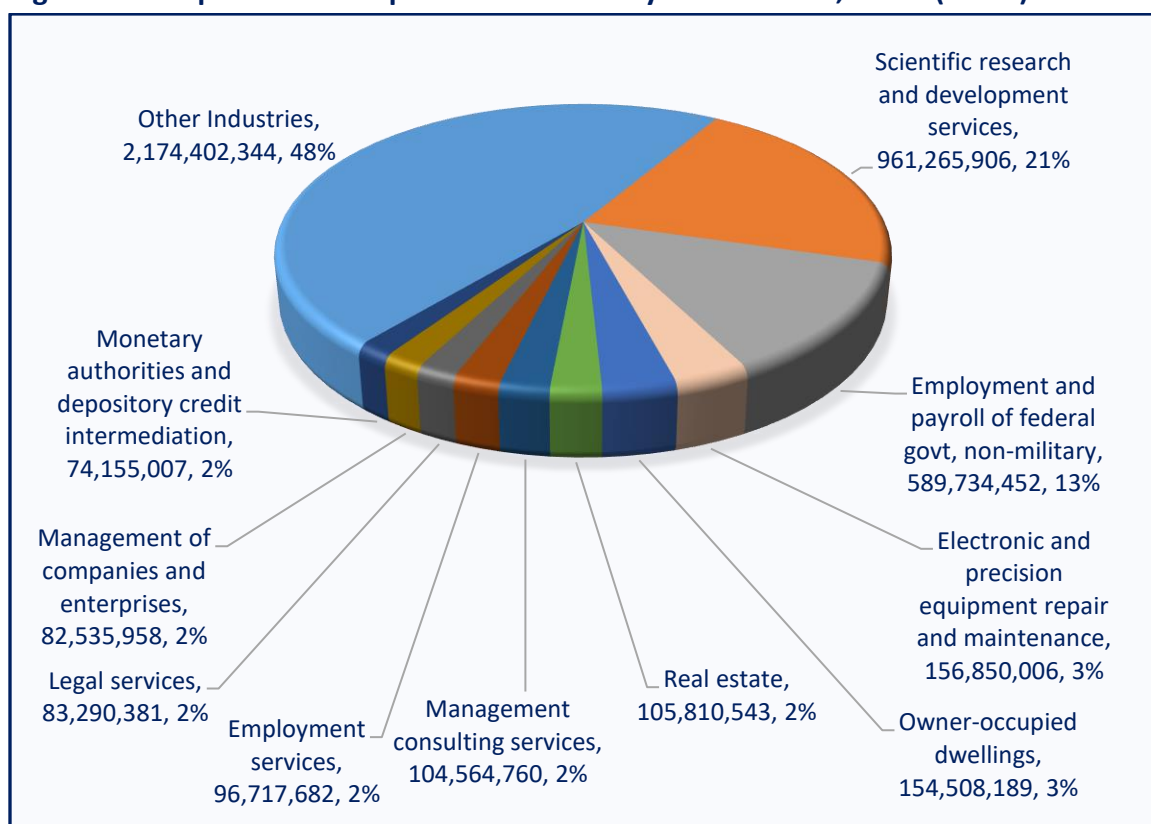

scientific research and development services industry was \$96,077 (including benefits), compared to an average of \$62,012 across Texas.

**Figure 112: Top Ten Most Impacted Industries by Labor Income, Texas (NASA).**

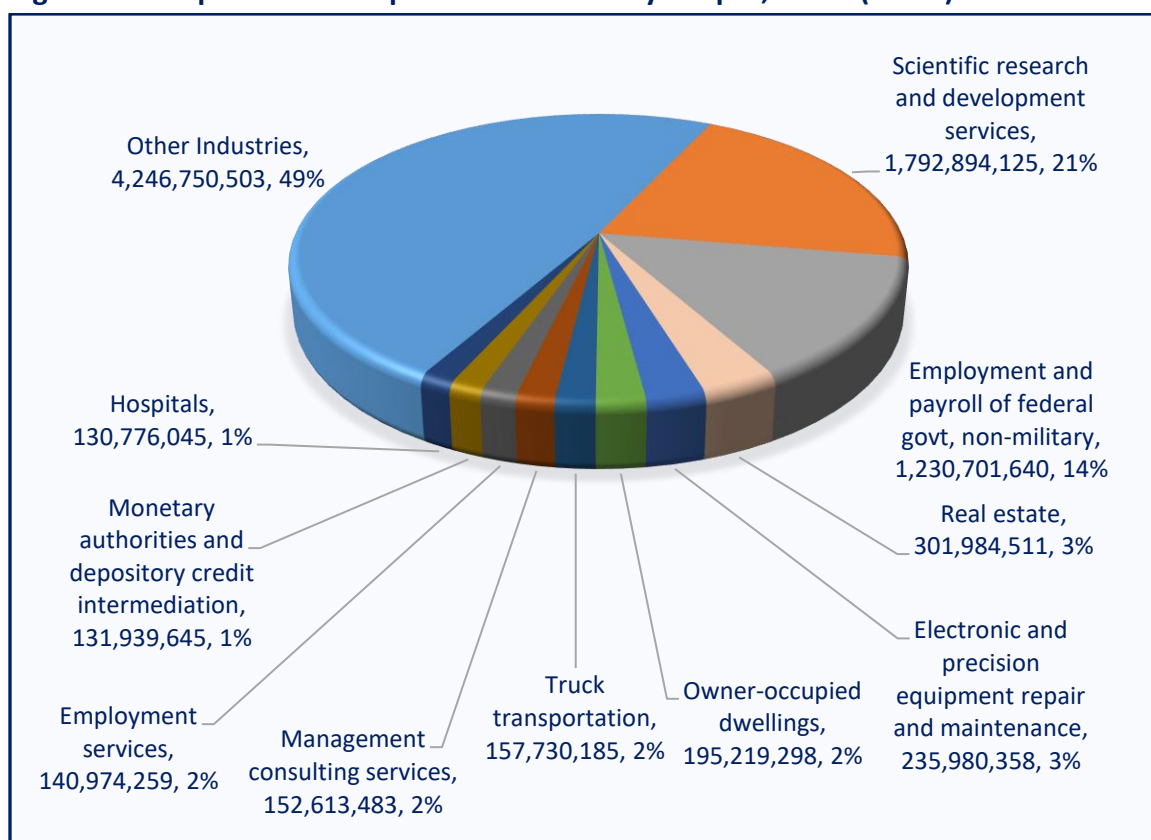

**The total value added impact of NASA in Texas was \$4.6 billion in Fiscal Year 2019.** Of this amount, \$587.5 million (13%) was created by civil service employees and \$2.2 billion (48%) was created indirectly by the \$2.2 billion in procurement spending across all industry sectors in Texas. \$1.8 million (39%) was generated by increased consumption spending supported by increased earnings.

Figure 113 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development and electronic and precision equipment repair and maintenance are the most impacted industries (along with the federal government sector). The three industries together account for 37% of the total value added created. NASA activities accounted for an increase of \$961.3 million in value added in scientific research and development services, and a \$156.9 million increase in value added in electronic and precision equipment repair and maintenance. Five hundred eighty nine (589) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

**Figure 113: Top Ten Most Impacted Industries by Value Added, Texas (NASA).**

**The total output impact of NASA in Texas was \$8.7 billion in Fiscal Year 2019.** The direct impact of \$1.2 billion constitutes the value of production by NASA employees, accounting for around 14% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$2.2 billion resulted in an additional increase in output (gross sales) of \$1.8 billion across all industry sectors (adding up to the indirect total of \$4 billion in Table 285). Approximately \$3.4 billion (39%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of approximately \$1.8 billion in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services, and a nearly \$236 million increase in sales in electronic and precision equipment repair and maintenance (Figure 106). Similar to employment, impacts in these industries are largely driven by NASA procurement spending; these two industries accounted for approximately 82% of NASA procurement spending in the state in Fiscal Year 2019. The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

### 6.45.2. M2M Program Impacts

In 2019, Texas had 1,365 M2M-related civil service employees (793 FTEs) with a corresponding labor income of \$140.4 million. M2M program contracts sourced in the state in the same year totaled approximately \$600 million. The total Texas employment impact is 10,108 jobs. The labor income and economic output associated with this employment are \$818.5 million and \$2.3 billion, respectively. The M2M program generates \$64.7 million in tax revenues for the state and local governments in Texas (Table 288).

**Table 288: Summary of M2M Program Impacts by Types of Impact, Texas.**

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Texas economy. More than 77 percent of the employment impacts and more than 73 percent of the output impacts are due to NASA procurement sourced within the state.

### 6.45.3. The M2M Program's Share of NASA Impacts

Approximately 26% of overall NASA agency impacts in the state are attributable to the M2M program (Table 291 and Figure 115). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 291: The M2M Program Portion of Overall NASA Impacts, Texas.**

## 6.46. Economic Impacts on the State of Utah

### 6.46.1. NASA Impacts

In 2019, 8 NASA civil service employees (6 FTEs) residing in Utah earned \$908,000 in labor income. NASA contracts sourced in Utah in the same year totaled \$310.7 million. The total economic impact resulting from these activities is 4,831 jobs, \$281 million in labor income, and \$914.7 million in economic output. These economic activities generate \$28.8 million in tax revenues for the state and local governments in Utah (Table 292).

**Table 292: Summary of NASA Impacts by Types of Impact, Utah.**

Impact Type	Employment	Labor Income (\$ thousands)	Value Added (\$ thousands)	Output (\$ thousands)	Tax (\$ thousands)

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Utah economy. Table 293 examines the sources of the employment figures in the second column of Table 292. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly all of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is less than 1%.

**Table 293: NASA Employment Impacts by Sources of Impact, Utah.**

Table 294 examines the sources of the output figures in the fifth column of Table 292. Procurement spending is responsible for the majority of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is less than 1%.

**Table 294: NASA Output Impacts by Sources of Impact, Utah.**

**4,831 jobs in the Utah economy were supported by NASA activities in Fiscal Year 2019.**

Of these, 6 (<1%) were directly located at NASA centers. As a result of the procurement of goods and services in the Utah economy, 3,027 additional jobs (63%) were created. The remaining employment—1,798 jobs (37%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

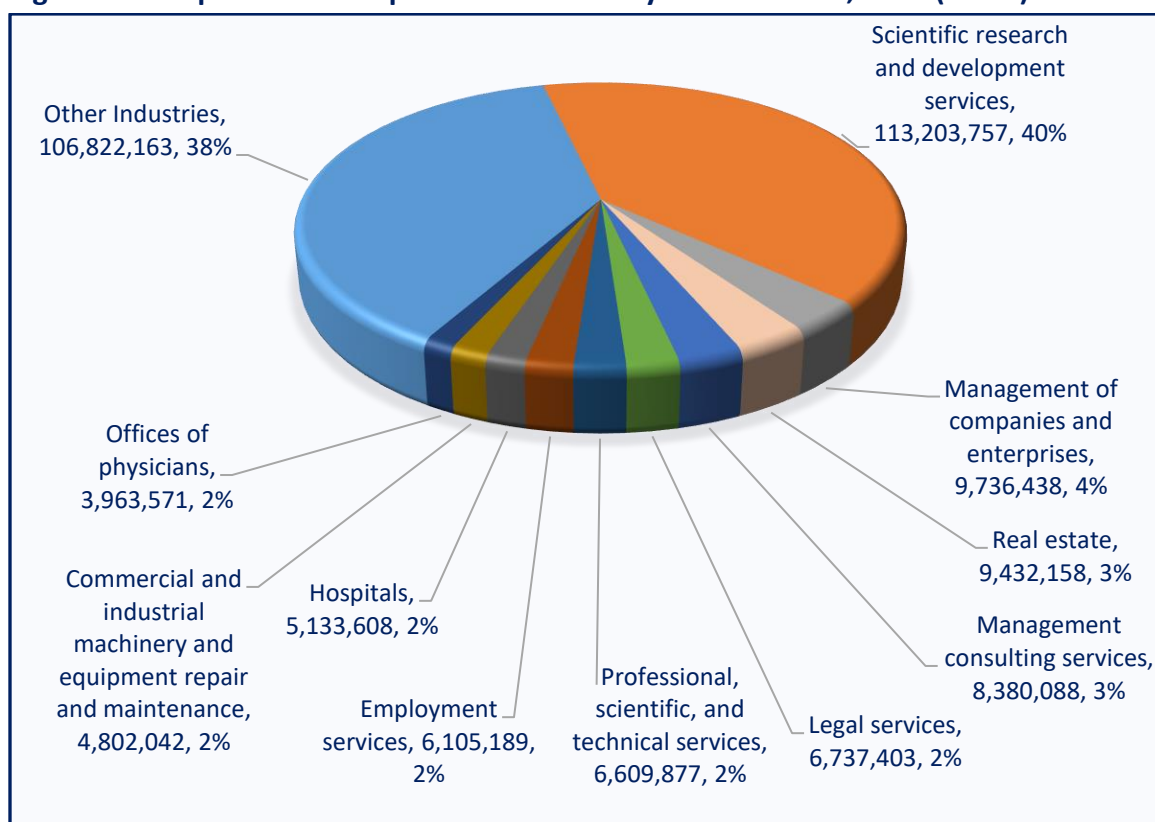

Figure 116 depicts the ten most impacted industries by employment. Scientific research and development services is the most impacted industry, accounting for nearly a third of the jobs created. The employment in this industry is driven largely by NASA procurement spending; scientific research and development services accounted for approximately 97% of NASA procurement spending in the state in Fiscal Year 2019.

**Figure 116: Top Ten Most Impacted Industries by Employment, Utah (NASA).**

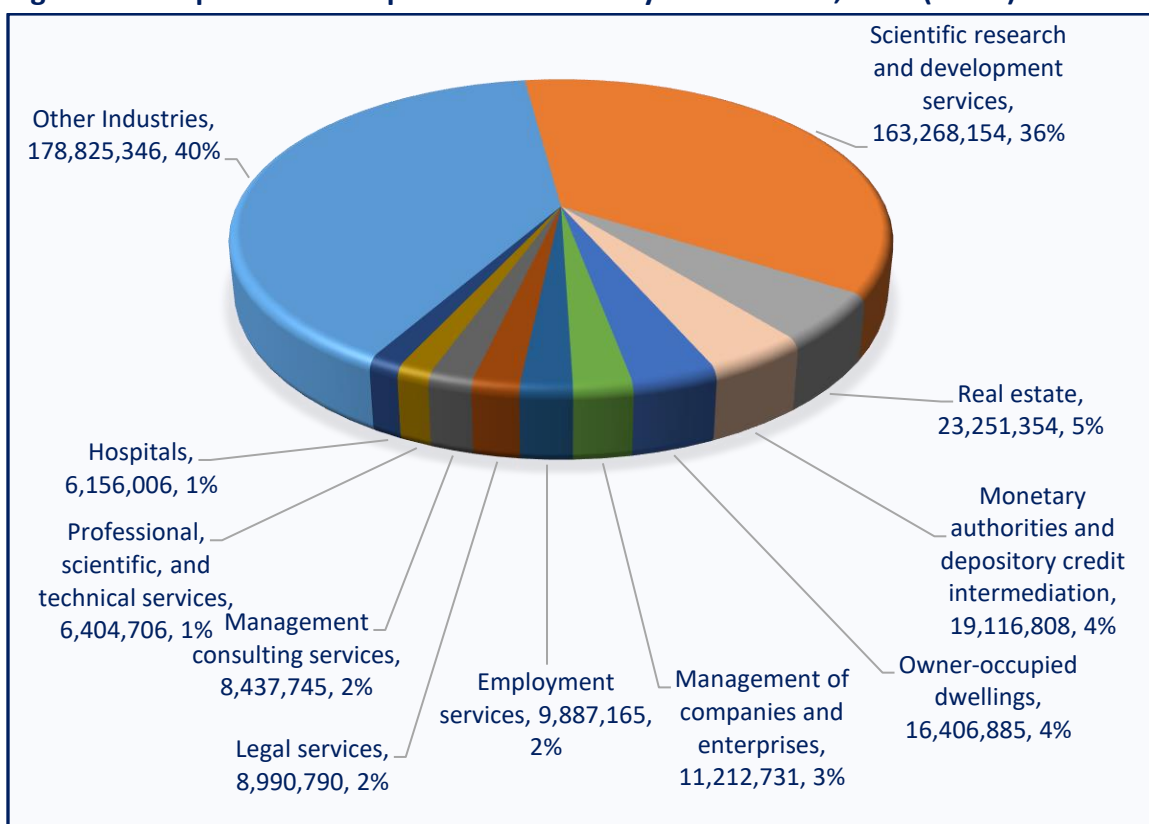

**The total income impact of NASA in Utah was \$281 million in Fiscal Year 2019.** Of this amount, \$908,000 (<1%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$195 million (69%). The remaining income (induced impact), estimated to be \$85 million (30%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 117 depicts the ten most impacted industries by labor income. As a consequence of its share of total employment, scientific research and development services is the most impacted industry by income, accounting for 40% of the total labor income earned. The reason that this industry's share of labor income is larger than its share of employment is that employee compensation in this industry is greater than the state average. As of 2018, the average employee compensation in the scientific research and development services industry was \$77,932 (including benefits), compared to an average of \$52,475 across Utah.

**Figure 117: Top Ten Most Impacted Industries by Labor Income, Utah (NASA).**

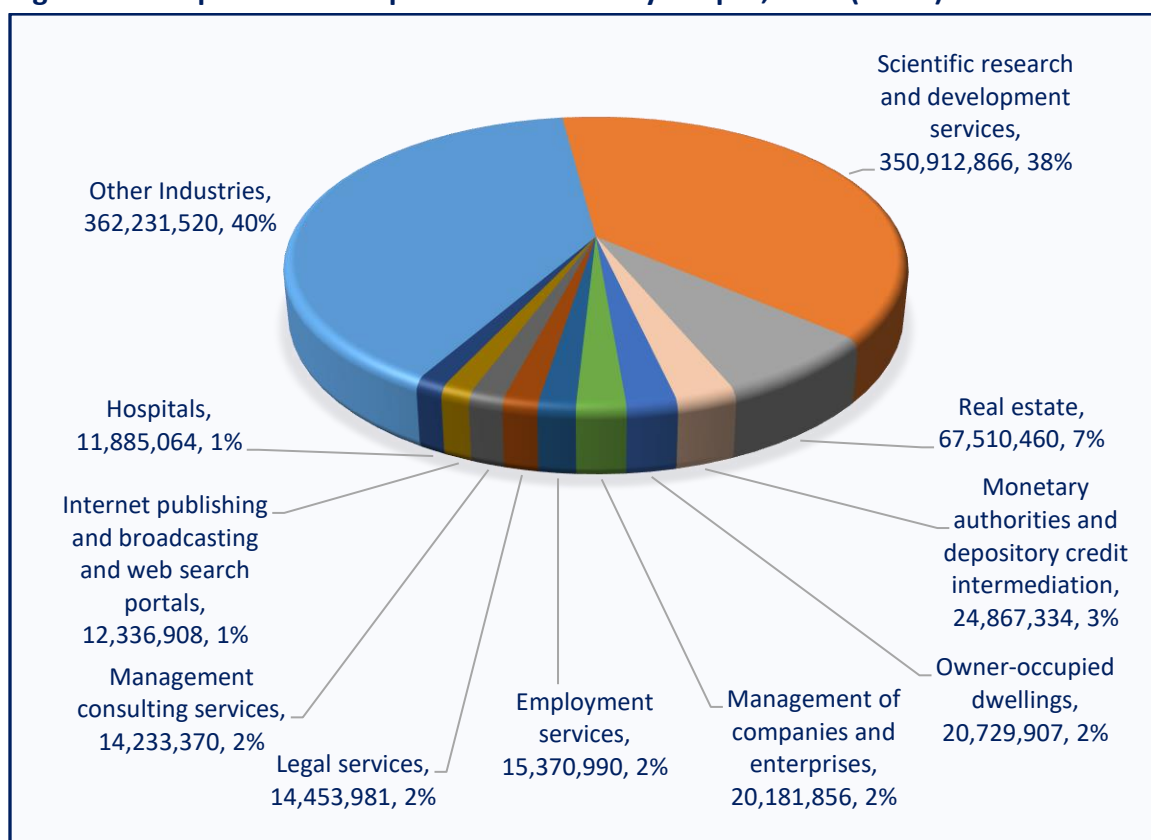

**The total value added impact of NASA in Utah was \$452 million in Fiscal Year 2019.** Of this amount, \$1.2 million (<1%) was created by civil service employees and \$292.2 million (65%) was created indirectly by the \$310.7 million in procurement spending across all industry sectors in Utah. \$158.6 million (35%) was generated by increased consumption spending supported by increased earnings.

Figure 118 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development is the most impacted sector, accounting for 36% of the total value added created. NASA activities accounted for an increase of \$163.3 million in value added in scientific research and development services.

**Figure 118: Top Ten Most Impacted Industries by Value Added, Utah (NASA).**

**The total output impact of NASA in Utah was \$914.7 million in Fiscal Year 2019.** The direct impact of \$2.6 million constitutes the value of production by NASA employees, accounting for around 1% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$310.7 million resulted in an additional increase in output (gross sales) of \$298.8 million across all industry sectors (adding up to the indirect total of \$609.5 million in Table 292). More than \$302.6 million (33%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of approximately \$351 million in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in scientific research and development services (Figure 119). Similar to employment, impacts in this sector are largely driven by NASA procurement spending; scientific research and development services accounted for approximately 97% of NASA procurement spending in the state in Fiscal Year 2019. The output impacts reported in other industries mainly result from increases in consumption spending (induced impacts). The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

**Figure 119: Top Ten Most Impacted Industries by Output, Utah (NASA).**

### 6.46.2. M2M Program Impacts

In 2019, Utah had five M2M-related civil service employees (5 FTEs) with a corresponding labor income of \$850,000. M2M program contracts sourced in the state in the same year totaled more than \$288 million. The total Utah employment impact is 4,121 jobs. The labor income and economic output associated with this employment are \$268.2 million and \$831.4 million, respectively. The M2M program generates \$26 million in tax revenues for the state and local governments in Utah (Table 295).

#### 6.46.3. The M2M Program's Share of NASA Impacts

More than 90% of overall NASA agency impacts in the state are attributable to the M2M program (Table 298 and Figure 120). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.47. Economic Impacts on the State of Vermont

### 6.47.1. NASA Impacts

In 2019, 2 NASA civil service employees (1 FTE) residing in Vermont earned \$212,000 in labor income. NASA contracts sourced in Vermont in the same year totaled \$1.9 million. The total economic impact resulting from these activities is 29 jobs, \$1.9 million in labor income, and \$5.1 million in economic output. These economic activities generate \$201,000 in tax revenues for the state and local governments in Vermont (Table 299).

The following two tables examine the contribution of different NASA activities to the Vermont economy. Table 300 examines the sources of the employment figures in the second column of Table 299. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly 89% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 11%.

### 6.47.2. M2M Program Impacts

There were no M2M-specific NASA employees in Vermont in FY 2019, but \$273,000 in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is three jobs, \$207,000 in labor income, and \$576,000 worth of output (Table 302).

**Table 302: Summary of M2M Program Impacts by Types of Impact, Vermont.**

### 6.47.3. The M2M Program's Share of NASA Impacts

Around 11% of overall NASA agency impacts in the state are attributable to the M2M program (Table 303 and Figure 121). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 303: The M2M Program Portion of Overall NASA Impacts, Vermont.**

## 6.48. Economic Impacts on the State of Virginia

### 6.48.1. NASA Impacts

In 2019, 2,623 NASA civil service employees (2,429 FTEs) residing in Virginia earned \$412.2 million in labor income. NASA contracts sourced in Virginia in the same year totaled more than \$1.6 billion. The total economic impact resulting from these activities is 27,097 jobs, \$2 billion in labor income, and \$5.5 billion in economic output. These economic activities generate \$219.9 million in tax revenues for the state and local governments in Virginia (Table 304).

The employment multiplier is 11.2, meaning that for every NASA job located in Virginia, an additional 10.2 jobs are supported in the state economy. The output multiplier of 5.2 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$4.2 million worth of output is sustained throughout the state economy.

**Table 304: Summary of NASA Impacts by Types of Impact, Virginia.**

Impact Type	Employment	Labor Income (\$ thousands)	Value Added (\$ thousands)	Output (\$ thousands)	Tax (\$ thousands)

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Virginia economy. Table 305 examines the sources of the employment figures in the second column of Table 304. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Seventy-eight (78) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 22 percent.

Table 306 examines the sources of the output figures in the fifth column of Table 304. Procurement spending is responsible for more than 70% of the increase in output in the state economy arising from NASA. NASA labor force's share of overall NASA output impact is approximately 30%.

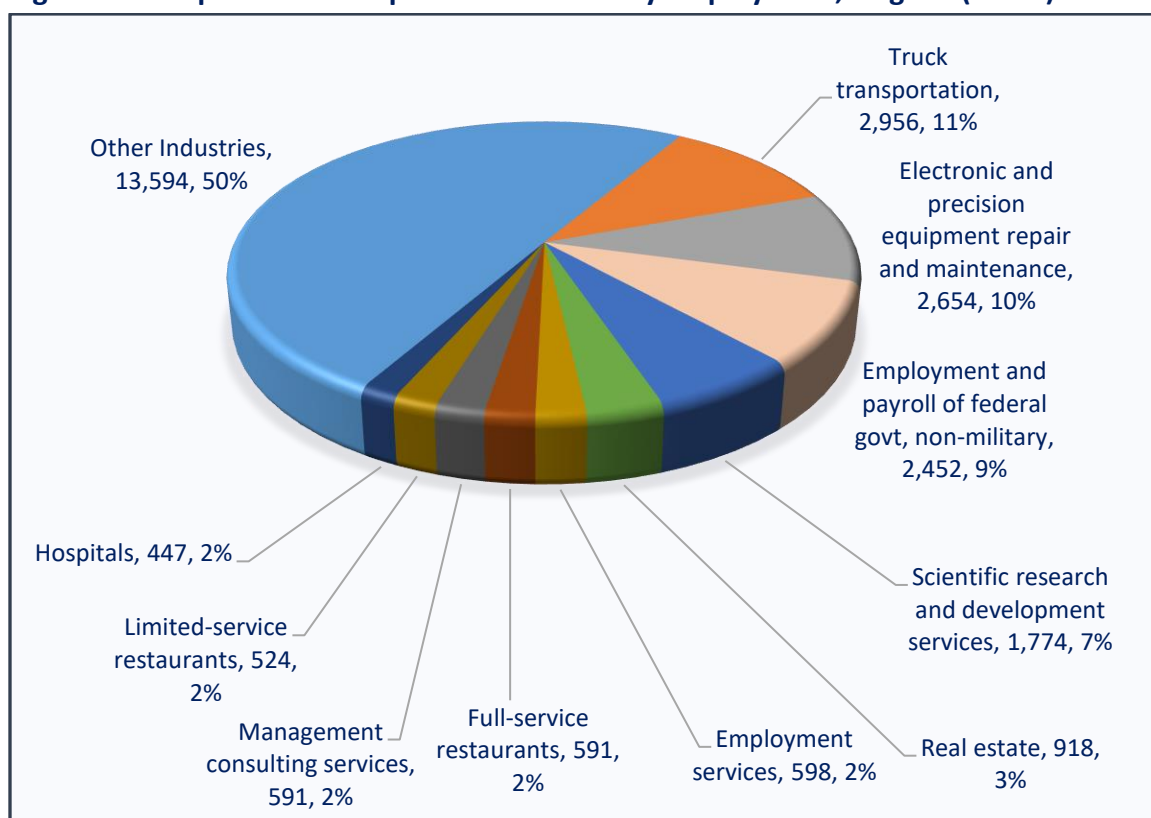

**Table 306: NASA Output Impacts by Sources of Impact, Virginia.**

**27,097 jobs in the Virginia economy were supported by NASA activities in Fiscal Year 2019.** Of these, 2,429 (9%) were directly located at NASA centers. As a result of the procurement of goods and services in the Virginia economy, 13,157 additional jobs (49%) were created. The remaining employment—11,512 jobs (42%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 122 depicts the ten most impacted industries by employment. Truck transportation, electronic and precision equipment repair and maintenance, and scientific research and development services are the most impacted industries, respectively (along with the federal government sector). These four industries together account for 37% of the jobs created. The employment in these industries is driven largely by NASA procurement spending; the three private industries accounted for approximately 81% of NASA procurement spending in the state in Fiscal Year 2019. The impact in the federal government sector represents mainly civil service employees working for NASA.

**Figure 122: Top Ten Most Impacted Industries by Employment, Virginia (NASA).**

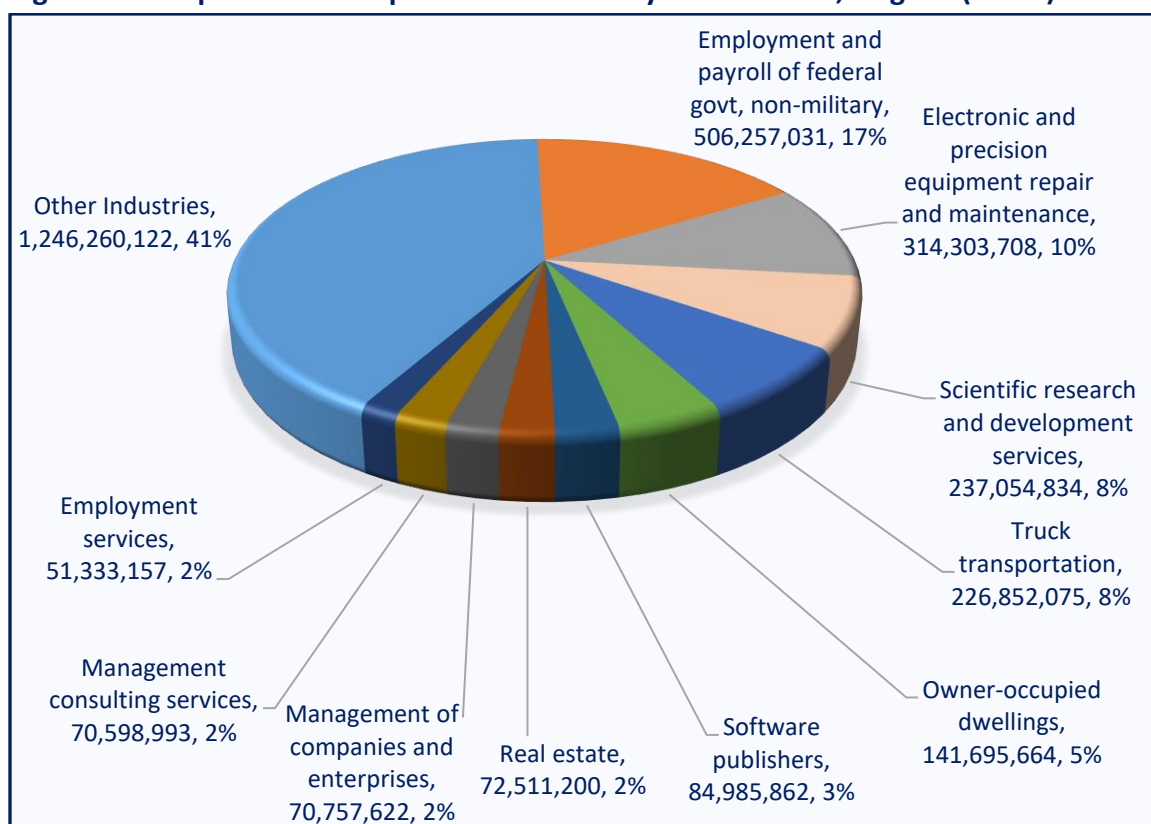

**The total income impact of NASA in Virginia was \$2 billion in Fiscal Year 2019.** Of this amount, \$412.2 million (20%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$1 billion (51%). The remaining income (induced impact), estimated to be \$589.8 million (29%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 123 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, scientific research and development, electronic and precision equipment repair and maintenance, and truck transportation are the most impacted industries by income (along with the federal government sector). The four industries together account for 49% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the state average. As of 2018, the average employee compensation in the scientific research and development services industry was \$108,484 (including benefits), compared to an average of \$64,100 across Virginia.

**Figure 123: Top Ten Most Impacted Industries by Labor Income, Virginia (NASA).**

**The total value added impact of NASA in Virginia was \$3 billion in Fiscal Year 2019.** Of this amount, \$501.9 million (17%) was created by civil service employees and \$1.4 billion (48%) was created indirectly by the \$1.6 billion in procurement spending across all industry sectors in Virginia. \$1.1 billion (36%) was generated by increased consumption spending supported by increased earnings.

Figure 124 depicts the ten most heavily impacted industries in terms of value added. Electronic and precision equipment repair and maintenance, scientific research and development, truck transportation are the most impacted industries (along with the federal government sector). The four industries together account for 43% of the total value added created. NASA activities accounted for an increase of more than a \$314.3 million increase in electronic and precision equipment repair and maintenance, and \$237.1 million in value added in scientific research and development services. Five hundred six (506) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

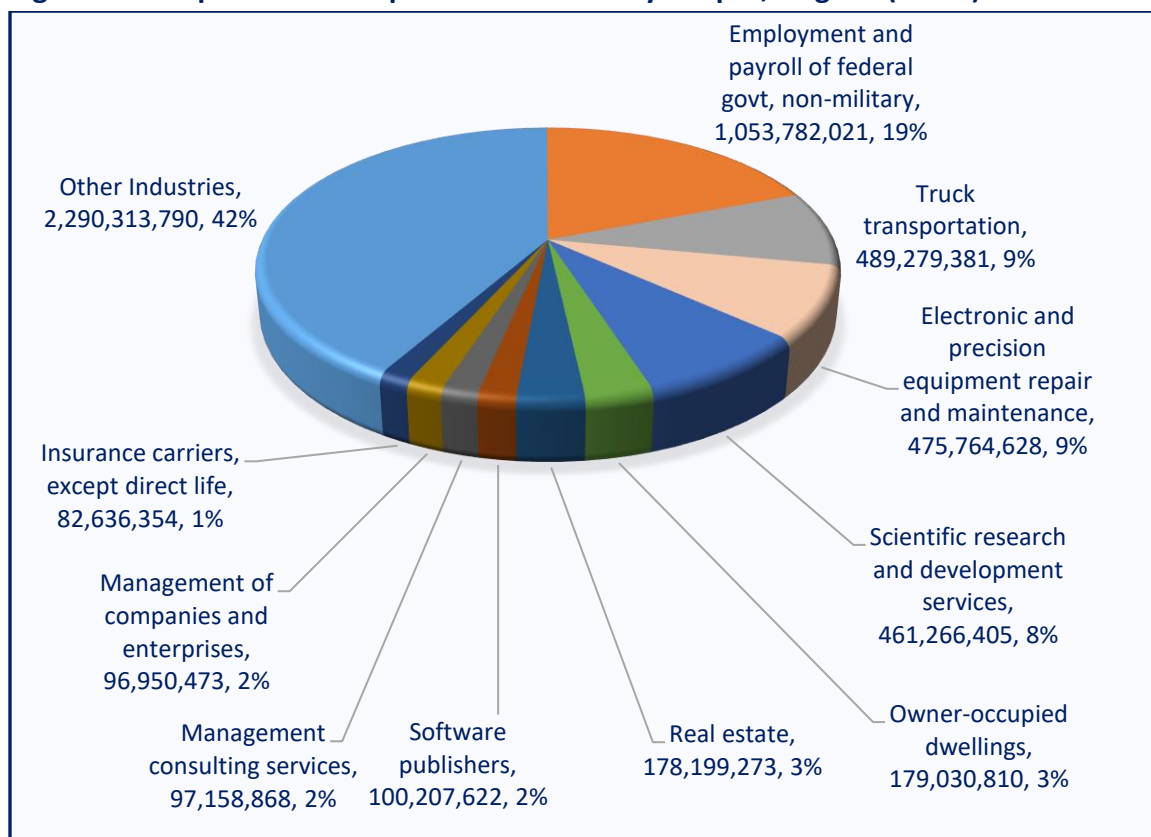

**Figure 124: Top Ten Most Impacted Industries by Value Added, Virginia (NASA).**

**The total output impact of NASA in Virginia was \$5.5 billion in Fiscal Year 2019.** The direct impact of \$1 billion constitutes the value of production by NASA employees, accounting for around 19% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditures of \$1.6 billion resulted in an additional increase in output (gross sales) of \$1 billion across all industry sectors (adding up to the indirect total of \$2.6 billion in Table 304). Approximately \$1.9 billion (34%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of \$489.3 million in sales (including direct, indirect, and induced impacts—see Box 2 in Section 1) in truck transportation, \$475.8 in electronic and precision equipment repair and maintenance, and \$461.3 million in sales scientific research and development services (Figure 125). Similar to employment, impacts in these industries are largely driven by NASA procurement spending; these three industries accounted for approximately 81% of NASA procurement spending in the state in Fiscal Year 2019. Aside from software publishers and management consulting services, the output impacts reported in other industries mainly result from increases in consumption spending (induced impacts). The sizable impacts in the real estate industry

are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

**Figure 125: Top Ten Most Impacted Industries by Output, Virginia (NASA).**

#### 6.48.2. M2M Program Impacts

In 2019, Virginia had 493 M2M-related civil service employees (213 FTEs) with a corresponding labor income of \$33.3 million. M2M program contracts sourced in the state in the same year totaled \$68.3 million. The total Virginia employment impact is 1,221 jobs. The labor income and economic output associated with this employment are \$107.5 million and \$298.6 million, respectively. The M2M program generates \$9.2 million in tax revenues for the state and local governments in Virginia (Table 307).

The following two tables examine the contribution of different NASA activities to the Virginia economy. Approximately 60 percent of the employment impacts and 53 percent of the output impacts are due to NASA procurement sourced within the state.

### 6.48.3. The M2M Program's Share of NASA Impacts

Around 5% of overall NASA agency impacts in the state are attributable to the M2M program (Table 310 and Figure 126). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.49. Economic Impacts on the State of Washington

### 6.49.1. NASA Impacts

In 2019, 14 NASA civil service employees (7 FTEs) residing in Washington earned \$1.2 million in labor income. NASA contracts sourced in Washington in the same year totaled approximately \$88 million. The total economic impact resulting from these activities is 874 jobs, \$78.1 million in labor income, and \$217.4 million in economic output. These economic activities generate \$8 million in tax revenues for the state and local governments in Washington (Table 311).

### 6.49.2. M2M Program Impacts

In 2019, Washington had three M2M-related civil service employees (2 FTEs) with a corresponding labor income of \$391,000. M2M program contracts sourced in the state in the same year totaled \$7.4 million. The total Washington employment impact is 74 jobs. The labor income and economic output associated with this employment are \$7.5 million and \$20.1 million, respectively. The M2M program generates \$753,000 in tax revenues for the state and local governments in Washington (Table 314).

### 6.49.3. The M2M Program's Share of NASA Impacts

Approximately 9% of overall NASA agency impacts in the state are attributable to the M2M program (Table 317 and Figure 127). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.50. Economic Impacts on the State of West Virginia

### 6.50.1. NASA Impacts

In 2019, 58 NASA civil service employees (53 FTEs) residing in West Virginia earned \$8.4 million in labor income. NASA contracts sourced in West Virginia in the same year totaled \$50.3 million. The total economic impact resulting from these activities is 728 jobs, \$48.1 million in labor income, and \$137.5 million in economic output. These economic activities generate \$4.3 million in tax revenues for the state and local governments in West Virginia (Table 318).

**Table 318: Summary of NASA Impacts by Types of Impact, West Virginia.**

**Note:** The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the West Virginia economy. Table 319 examines the sources of the employment figures in the second column of Table 318. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Eighty-three (83) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 17%.

### 6.50.2. M2M Program Impacts

There were no M2M-specific NASA employees in West Virginia in FY 2019, but \$2.6 million in M2M-related NASA contracts were sourced in the state. The total West Virginia employment impact is 28 jobs. The labor income and economic output associated with this employment are \$1.8 million and \$5.4 million, respectively. The M2M program generates approximately \$173,000 in tax revenues for the state and local governments in West Virginia (Table 321).

### 6.50.3. The M2M Program's Share of NASA Impacts

Approximately 4% of overall NASA agency impacts in the state are attributable to the M2M program (Table 322 and Figure 128). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

**Table 322: The M2M Program Portion of Overall NASA Impacts, West Virginia.**

## 6.51. Economic Impacts on the State of Wisconsin

### 6.51.1. NASA Impacts

In 2019, 21 NASA civil service employees (11 FTEs) residing in Wisconsin earned \$1.2 million in labor income. NASA contracts sourced in Wisconsin in the same year totaled \$15.8 million. The total economic impact resulting from these activities is 252 jobs, \$16.3 million in labor income, and \$49.9 million in economic output. These economic activities generate \$1.5 million in tax revenues for the state and local governments in Wisconsin (Table 323).

**Table 323: Summary of NASA Impacts by Types of Impact, Wisconsin.**

NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 94% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 6%.

### 6.51.2. M2M Program Impacts

In 2019, Wisconsin had four M2M-related civil service employees (2 FTEs) with a corresponding labor income of \$230,000. M2M program contracts sourced in the state in the same year totaled approximately \$818,000. The total Wisconsin employment impact is 33 jobs. The labor income and economic output associated with this employment are \$2.3 million and \$6.2 million, respectively. The M2M program generates approximately \$235,000 in tax revenues for the state and local governments in Wisconsin (Table 326).

### 6.51.3. The M2M Program's Share of NASA Impacts

Approximately 13% of overall NASA agency impacts in the state are attributable to the M2M program (Table 329 and Figure 129). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M program is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

## 6.52. Economic Impacts on the State of Wyoming

### 6.52.1. NASA Impacts

In 2019, 3 NASA civil service employees (2 FTEs) residing in Wyoming earned \$378,000 in labor income. NASA contracts sourced in Wyoming in the same year totaled \$3.2 million. The total economic impact resulting from these activities is 42 jobs, \$2.7 million in labor income, and \$7.5 million in economic output. These economic activities generate \$234,000 in tax revenues for the state and local governments in Wyoming (Table 330).

The following two tables examine the contribution of different NASA activities to the Wyoming economy. Table 331 examines the sources of the employment figures in the second column of Table 330. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly 83% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 17%.

### 6.52.2. M2M Program Impacts<sup>28</sup>

In 2019, Wyoming had one M2M-related civil service employee (1 FTE) with a corresponding labor income of \$160,000. The total economic impact attributable to this income is two jobs, \$195,000 in labor income, and \$561,000 worth of output (Table 333).

<sup>28</sup> Wyoming along with North Dakota are the only states with no M2M program-related procurement activity.

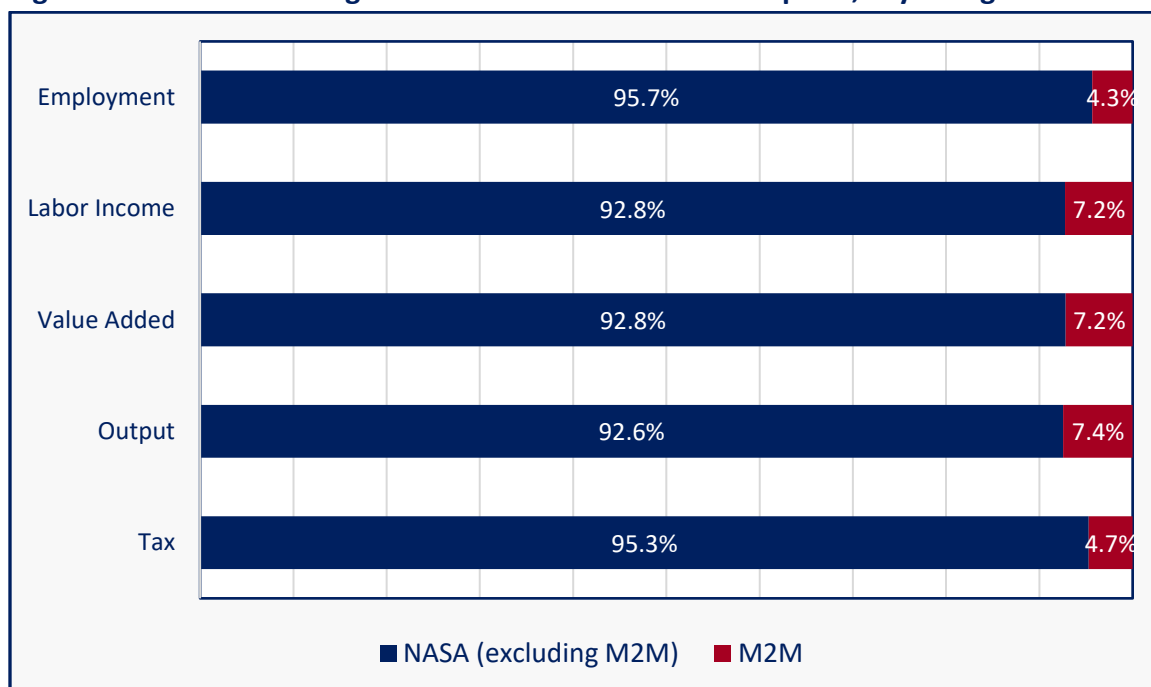

### 6.52.3. The M2M Program's Share of NASA Impacts

Around 7% of overall NASA agency impacts in the state are attributable to the M2M program (Table 334 and Figure 130). The primary reason the M2M program's output share is larger than other shares is that per employee productivity (employee output of goods/services per hour worked) is higher for civil servants than aerospace supply chain employees.

**Table 334: The M2M Program Portion of Overall NASA Impacts, Wyoming.**

## 7. CONCLUSION

In this study, we examined the economic impacts of National Aeronautics and Space Administration (NASA) and the Moon to Mars (M2M) program on the U.S., the fifty (50) states, and Washington, DC for the Fiscal Year 2019. We first presented economic impacts of NASA on each region and then examined M2M program impacts. We distinguished the portion of NASA impacts attributable the M2M program to highlight the relative contribution of the M2M program in every state as well as the nation.

The impact estimates reported in this study are the sum of three channels of economic impact: (1) the direct contribution of NASA's own activities; (2) indirect (contracting) activities within NASA's U.S. supply chain; and (3) the induced effect that results as federal civil servants at NASA facilities, employees of contractors, and employees within the supply chain of those contractors spend their wages in the wider consumer economy. The economic impact was examined through a detailed analysis of the changes in employment, output (gross sales), labor income, value added, and taxes due to NASA's activities.

### NASA

At the national level, NASA directly employs 18,694 civil servants (corresponding to 17,022 full-time equivalent (FTE) jobs), paying \$2.9 billion in annual wages and benefits (Fiscal Year 2019). The \$19.3 billion in contracting activity originating from NASA is very diverse, involving almost every category of manufacturing or service industry. Taking the domestic portions of these spending streams into account, the total employment impact of NASA across the U.S. is more than 312,600 jobs (direct, indirect, and induced). The labor income and economic output associated with this total amount of employment are, respectively, \$23.7 billion and \$64.3 billion. Contracting activities along with NASA's direct employment generated an estimated \$6.9 billion in federal, state and local tax revenues in 2019.

For every FTE civil service job located at NASA facilities, more than 17 additional jobs are supported throughout the U.S. economy. For each million dollars of labor income earned by NASA civil service employees, an additional \$7 million of labor income is generated in the U.S. And for each million dollar worth of output produced by NASA, an additional \$7.7 million of output—consisting of both intermediary inputs and consumption goods and services—is produced throughout the national economy. These figures are boosted by the large volume of procurement spending administered through NASA.

NASA's economic impacts are concentrated both geographically and sectorally. The top ten most impacted states account for 91% of total NASA impacts. These states are California, Texas, Alabama, Maryland, Florida, Virginia, Colorado, Ohio, Arizona, and Utah. Impacts on Mississippi, Washington, DC, Massachusetts, Louisiana, New York, Indiana,

New Mexico, and Pennsylvania are also significant. The top three most impacted industries (scientific research and development services, management-consulting services, and professional and technical services) account for nearly a quarter of total NASA impacts.

Finally, approximately 22% of overall NASA agency impacts in the U.S. are attributable to the M2M program. It is still early in the M2M program; consequently, the contribution is expected to grow larger with the addition of other elements beyond 2019. The M2M program-specific employment accounts for 2.4% of overall NASA employment impacts while M2M program-related procurement accounts for 19.7% of overall NASA employment impacts.

### **M2M Program**

At the national level, NASA directly employs 5,563 civil servants (3,155 FTEs) to support the M2M program, paying more than \$520 million in annual wages and benefits. The M2M contracts originating from NASA are both large in volume and very diverse— involving almost every major category of manufacturing or service activity. There are indirect effects from the purchases of goods and services by NASA Centers as well as by the firms that supply those centers. Consumption expenditures made by the M2M labor force, by suppliers to the M2M program, and by suppliers further upstream within the production chain, create induced effects. Taking the domestic portions of these spending streams into account, the total employment impact of the M2M program across the U.S., is more than 69,000 jobs. The labor income and economic output associated with this total amount of employment are, respectively, \$5.2 billion and \$14.1 billion. M2M contracting activities along with NASA’s direct employment for the M2M program generated an estimated \$1.5 billion in federal, state and local tax revenues in 2019.

For every (FTE) civil service job located at NASA centers related to M2M, nearly 21 additional jobs are supported throughout the U.S. economy. For each million dollars of labor income earned by M2M-assigned NASA employees, an additional \$9 million of labor income is generated in the U.S. And for each \$1 million worth of output produced by the M2M program, an additional \$9.4 million of output—consisting of both intermediary inputs and consumption goods and services—is produced throughout the national economy. These figures are exceptionally large because of the extremely high volume of procurement spending relative to civil service employment.

The M2M program related labor and procurement activity is concentrated in certain states, as a result the economic impacts resulting from those activities. Alabama, Colorado, Florida, Texas, California, Utah, Ohio, Virginia, Louisiana, and Mississippi are the most impacted states, respectively. Ten states account for 98 percent of all M2M-related employment impacts. The share of M2M program in overall NASA impacts is

particularly high in Utah, Colorado, and Alabama. More than half of overall NASA impacts in those states are attributable to the M2M program.

NASA and M2M program impacts in the state and national economies go beyond the dollars they generate and the jobs they support. In addition to the economic benefits they generate, they help drive an innovation-based economy with the infusion of billions of dollars of spending in research and development in the aerospace sector.

## About the Authors

**Zafer Sonmez** is a post-doctoral research associate at the University of Illinois at Chicago (UIC). His academic research focuses on innovation mechanisms in knowledge-intensive industrial sectors. He is investigating the role of spatial proximity in the innovation process, the extent to which spatial co-location of firms facilitates collaborative invention efforts at the firm level.

**Joshua Drucker** is Associate Professor in the Urban Planning and Policy Program at UIC. His expertise is in economic development, in particular in concepts and analysis of regional industrial structure, agglomeration, technology, and practical techniques for economic analysis. Dr. Drucker has worked as a consultant and researcher in the fields of economic and technology-based development in the government, non-profit, and educational sectors, on projects ranging from industry and impact studies to analyses of technology policy and the development of automated tools for economic analysis. He has master's and doctorate degrees in City and Regional Planning from the University of North Carolina at Chapel Hill.

**Yittayih Zelalem** is Research Assistant Professor and Co-Director of the Voorhees Center. Having been Director of Housing Development and Policy as well as Executive Director with various non-profit developers, he brings significant experience and expertise in development and finance. Professor Zelalem has law degrees from Addis Ababa University and the Yale Law School, as well as a master's degree in Urban Development; he was professor of law and currently teaches development finance courses.

### A. ECONOMIC MODELING WITH IMPLAN

Economic impact analysis using IMPLAN depends on input-output models of the economy. Input-output models are powerful tools for estimating the economy-wide effects of an initial change in economic activity: they trace purchasing relationships among businesses, government, and consumers to provide a full accounting of the way spending flows through a regional economy. By accounting for linkages across industries and other economic sectors, studies that use these models are able to document the multiple ways in which a change in one industry impacts other industries and consumers.

To effectively use these models and interpret the results, readers as well as analysts should be aware of the basics of the model structure as well as the assumptions and limitations of these models. In this section, we briefly discuss the mechanics of the input-output models and the assumptions underlying them.

#### 1. Input-Output Analysis

Francois Quesnay first described inter-industry relationships in 1758. Wassily Leontief developed the concept of multipliers from input-output tables, receiving a Nobel Prize in 1973 for his work. Input-output analysis is a means of examining relationships within an economy, both between businesses and between businesses and final consumers. It captures all monetary market transactions for consumption in a given time period. The resulting mathematical formulae allow examination of the effects of a change in one or several economic activities on an entire economy (impact analysis).

A primary input-output study is based on data collected directly from industries. An example is the United States Bureau of Economic Analysis' Benchmark Study of Input-Output accounts (the data is based on economic censuses collected directly from firms). Other countries have conducted primary national level input-output studies as well. Primary state or local level input-output studies are not common due to the high cost of data collection.

Secondary input-output studies rely on data collected from other sources to construct the accounts. The inter-industry transaction information usually comes from some other primary study. IMPLAN is an example of a secondary input-output modeling system that relies on the data from the national Benchmark Input-Output accounts along with a variety of sources of regional information.

There are two phases in input/output analysis:

1. Descriptive modeling
2. Predictive modeling

## APPENDIX

### 1.1. Descriptive Model

A Descriptive Model includes information about local economic interactions known as regional economic accounts. These tables describe a local economy in terms of the flow of dollars from purchasers to producers within the region.

Trade Flows are also part of the descriptive model. They describe the movement of goods and services within a region and the outside world (regional imports and exports). The initial IMPLAN data details all purchases, including imported goods and services. When regional economic accounts are created, imports to the region are isolated from the initial data, allowing examination of local inter-industry transactions and final purchases.

By adding Social Accounting data, an analyst can examine non-industrial transactions, such as payment of taxes by businesses and households. Social accounting data include tax collection by governments and payments to households and businesses. Input-output accounting describes the flow of commodities from producers to intermediate and final consumers. Social Accounting Matrices (SAMs) show the flow of money among institutions. Both are part of the descriptive model.

### 1.2. Predictive Model

The regional economic accounts are used to construct local multipliers. Multipliers describe the response of the economy to a stimulus (a change in demand or production). The multipliers represent the Predictive Model. Purchases for final use (final demand) drive an input-output model.

Industries producing goods and services for consumption purchase goods and services from other producers. These other producers, in turn, purchase goods and services. These indirect purchases (indirect effects) continue until compounding leakages from the regional purchasing cycle (imports, wages, profits, etc.) halt the cycle or shrink it to negligible size. The indirect effects and the effects of increased household spending (induced effects) can be mathematically derived as sets of multipliers. The derivation is called the *Leontief inverse*. The resulting sets of multipliers describe the change of output for each industry caused by a one dollar change in final demand for any given industry.

#### **Multipliers**

Final consumption (or final demand) drives input-output models. Industries respond to meet demands directly or indirectly (by supplying goods and services to industries responding directly). Each industry that produces goods and services generates demands for other goods and services and so on, round by round. Multipliers describe these iterations.

Based on a production function of the industry, which shows where an industry spends and in what proportions to generate each dollar of output, IMPLAN develops the A Matrix. Through algebraic manipulation of the A Matrix, it then derives the multipliers. The resulting equation is the predictive model:

## APPENDIX

$$X = (I - A)^{-1} \cdot Y$$

Where;

X = Total industry output

I = Identity matrix

A = A Matrix

Y = Final Demand.

This can also be interpreted as:

$$\Delta X = (I - A)^{-1} \cdot \Delta Y$$

or,

Change in Total Industry Output =  $(I - A)^{-1}$  multiplied by Change in Final Demand.

The predictive model shows how output will change with a given change in final demand. The  $(I - A)$  inverse is the matrix of multipliers also known as the *Leontief inverse*.

Multipliers break the effects of stimuli on economic activity down into three components.

1. **Direct effects** are the changes in the industries to which a final demand change was made.
2. **Indirect effects** are the changes in inter-industry purchases as they respond to the new demands of the directly affected industries.
3. **Induced effects** typically reflect changes in spending from households as income increases or decreases due to the changes in production.

The Type I multiplier measures the direct and indirect effects of a change in economic activity. It captures the inter-industry effects only, i.e. industries buying from local industries.

The Type II multiplier captures direct, indirect, and induced effects. In addition to the inter-industry effects, the Type II also takes into account the income and expenditures of households. The household income and the household expenditures are treated as industries. This internalizes the household sector, including the induced or household spending, effects. This report employs Type II multipliers.

### 1.3. Key Assumptions

The accounting conventions that form the basis of an Input-Output (I-O) model and the way IMPLAN makes estimations impose assumptions that readers ought to be aware of when interpreting the results. Since many of these assumptions can lead to an overstatement of the

## APPENDIX

impacts of a project or program, many users of Impact models consider the estimates as upper bounds (Bess & Ambargis, 2011).

Input-output modeling is based on several assumptions:

- Constant Returns to Scale
- No Supply Constraints
- Fixed Commodity Input Structure
- Homogenous Sector Output
- Industry Technology Assumption

The first assumption is that the production functions (an industry's list of expenditures) are assumed to embody constant returns to scale. This means the production functions are linear; if additional output is required, all inputs increase proportionately. Under this assumption, if \$1 of new business in the impact area triggers \$2 in total economic activity, then \$1,000 will trigger \$2,000, \$1 million will trigger \$2 million, and \$1 billion will trigger \$2 billion. In reality, this might not be the case. A plant operating at full capacity might not be able to increase its capacity without undertaking aggressive capital investment, hiring new workers in a tight labor market, or acquiring expensive new property – realities that will impact the ratio of total economic activity to the direct impact. These common business practices are examples of the “non-linear” reality of business.

Second, no supply constraints means supplies are unlimited. An industry has unlimited access to raw materials and its output is limited only by the demand for its products. In the world of business, rising demand creates scarcity. Just as the housing boom of the mid-2000s drove up prices for construction materials and China's rising industrial output has created scarcities in concrete and energy supply, diverting hundreds of millions in federal contracts to a region might create short-term shortages in labor, materials, services and raw inputs.

Third, a fixed commodity input structure implies that price changes do not cause a firm to buy substitute goods. This structure assumes that changes in the economy will affect the industry's output but not the mix of commodities and services it requires to make its products. Input-output analysis will not be as accurate in cases in which a long-term spike in costs or a shortage in supply induces businesses to locate new suppliers or make their products differently (by substituting advanced machinery for labor, for example). Consequently, our analysis can only establish how spending would flow through the economy at a fixed point in time, not how the structure of the economy would change as a result of that spending.

Fourth, there is homogeneous sector output. That is, the proportions of all the commodities produced by that industry remain the same, regardless of total output. An industry will not increase the output of one product without proportionately increasing the output of all its other products.

Finally, the industry technology assumption comes into play when data are collected on an industry-by-commodity basis and then converted to industry-by-industry matrices. The assumption is that an industry uses the same technology to produce all its products. In other words,

## **APPENDIX**

an industry has a primary or main product and all other products are byproducts of the primary product.

### B. SUMMARY IMPACTS BY SOURCES OF IMPACT

This section presents summary impact results by the source of impact (employment and procurement). The examination of summary impacts by NASA employment and procurement components highlights the relative contributions of NASA's employment and procurement activities to the overall NASA impacts. In addition, it allows the reader to assess economic multipliers associated with NASA employment and NASA procurement separately. The analogous tables for the M2M Program are provided following the NASA section.

### C. LABOR INCOME AND VALUE ADDED IMPACTS BY SOURCES OF IMPACT

In this section, for labor income and value added the results are examined by NASA employment and procurement components. The disaggregation of economic impacts by their sources highlights the relative contributions of NASA's employment and procurement activities to the overall NASA impacts (the equivalent tables for employment and output categories are provided in the text).

**Note:** Due to rounding, sum of columns may not be equal to the total figures. Employment figures that appear as zero may be greater than zero (but less than 1) if the corresponding labor income/value added/output figure is not zero. Figures in such cases appear as zero due to rounding. All monetary values are in 2019 dollars.

**Table 373: Detailed NASA Impacts by Types of Impact, Alaska.**

Industry Description	Employment	Labor Income (\$)	Value Added (\$)	Output (\$)
<i>Total</i>	<i>155</i>	<i>11,344,274</i>	<i>15,150,554</i>	<i>30,054,520</i>
Oilseed farming	0	0	0	0
Grain farming	0	15	32	197
Vegetable and melon farming	0	166	252	1,329
Fruit farming	0	2	6	46
Tree nut farming	0	0	0	0
Greenhouse, nursery, and floriculture production	0	491	556	1,260
Tobacco farming	0	0	0	0
Cotton farming	0	0	0	0
Sugarcane and sugar beet farming	0	0	0	0
All other crop farming	0	248	268	712
Beef cattle ranching and farming, including feedlots and dual-purpose ranching and farming	0	(61)	24	899
Dairy cattle and milk production	0	3	10	194
Poultry and egg production	0	9	11	129
Animal production, except cattle and poultry and eggs	0	365	1,549	5,781
Forestry, forest products, and timber tract production	0	212	215	258
Commercial logging	0	261	256	360
Commercial fishing	0	295	761	1,701
Commercial hunting and trapping	0	852	967	1,053
Support activities for agriculture and forestry	0	3,467	1,990	2,945
Oil and gas extraction	0	10,333	62,665	71,790
Coal mining	0	513	1,819	3,125
Copper, nickel, lead, and zinc mining	0	560	7,830	10,330
Iron ore mining	0	0	0	0
Gold ore mining	0	800	2,164	4,751
Silver ore mining	0	417	1,188	1,853
Uranium-radium-vanadium ore mining	0	0	0	0
Other metal ore mining	0	0	0	0
Stone mining and quarrying	0	69	894	2,514
Sand and gravel mining	0	117	645	2,975

## APPENDIX

Other clay, ceramic, refractory minerals mining	0	0	0	0
Potash, soda, and borate mineral mining	0	0	0	0
Phosphate rock mining	0	0	0	0
Other chemical and fertilizer mineral mining	0	0	0	0
Other nonmetallic minerals	0	143	401	1,010
Drilling oil and gas wells	0	4	12	18
Support activities for oil and gas operations	0	93	151	269
Metal mining services	0	738	4,040	4,757
Other nonmetallic minerals services	0	82	437	520
Electric power generation - Hydroelectric	0	5,302	12,953	23,414
Electric power generation - Fossil fuel	0	8,500	28,350	101,640
Electric power generation - Nuclear	0	0	0	0
Electric power generation - Solar	0	0	0	0
Electric power generation - Wind	0	136	1,358	6,771
Electric power generation - Geothermal	0	0	0	0
Electric power generation - Biomass	0	253	788	2,836
Electric power generation - All other	0	0	0	0
Electric power transmission and distribution	0	26,678	80,114	230,565
Natural gas distribution	0	8,173	21,861	45,070
Water, sewage and other systems	0	5,010	9,281	16,848
Construction of new health care structures	0	0	0	0
Construction of new manufacturing structures	0	0	0	0
Construction of new power and communication structures	0	0	0	0
Construction of new educational and vocational structures	0	0	0	0
Construction of new highways and streets	0	0	0	0
Construction of new commercial structures, including farm structures	0	0	0	0

## APPENDIX

Construction of other new nonresidential structures	0	0	0	0
Construction of new single-family residential structures	0	0	0	0
Construction of new multifamily residential structures	0	0	0	0
Construction of other new residential structures	0	0	0	0
Maintenance and repair construction of nonresidential structures	0	37,429	44,257	95,785
Maintenance and repair construction of residential structures	0	15,992	20,335	45,449
Maintenance and repair construction of highways, streets, bridges, and tunnels	0	30	14	34
Dog and cat food manufacturing	0	10	22	242
Other animal food manufacturing	0	231	469	3,731
Flour milling	0	34	64	1,022
Rice milling	0	0	0	0
Malt manufacturing	0	0	0	0
Wet corn milling	0	0	0	0
Soybean and other oilseed processing	0	0	0	0
Fats and oils refining and blending	0	0	0	0
Breakfast cereal manufacturing	0	0	0	0
Beet sugar manufacturing	0	0	0	0
Sugar cane mills and refining	0	0	0	0
Nonchocolate confectionery manufacturing	0	5	5	21
Chocolate and confectionery manufacturing from cacao beans	0	0	0	0
Confectionery manufacturing from purchased chocolate	0	17	21	148
Frozen fruits, juices and vegetables manufacturing	0	0	0	0
Frozen specialties manufacturing	0	0	0	0
Canned fruits and vegetables manufacturing	0	0	0	0
Canned specialties	0	0	0	0
Dehydrated food products manufacturing	0	228	253	1,452
Cheese manufacturing	0	0	0	0

## APPENDIX

Dry, condensed, and evaporated dairy product manufacturing	0	0	0	0
Fluid milk manufacturing	0	0	0	0
Creamery butter manufacturing	0	0	0	0
Ice cream and frozen dessert manufacturing	0	26	28	108
Frozen cakes and other pastries manufacturing	0	361	464	830
Poultry processing	0	0	0	0
Animal, except poultry, slaughtering	0	197	255	2,645
Meat processed from carcasses	0	310	359	3,297
Rendering and meat byproduct processing	0	14	20	92
Seafood product preparation and packaging	0	1,183	1,465	7,423
Bread and bakery product, except frozen, manufacturing	0	2,285	2,853	7,093
Cookie and cracker manufacturing	0	53	61	235
Dry pasta, mixes, and dough manufacturing	0	0	0	0
Tortilla manufacturing	0	196	231	990
Roasted nuts and peanut butter manufacturing	0	318	341	1,408
Other snack food manufacturing	0	296	325	1,524
Coffee and tea manufacturing	0	12	17	142
Flavoring syrup and concentrate manufacturing	0	0	0	0
Mayonnaise, dressing, and sauce manufacturing	0	0	0	0
Spice and extract manufacturing	0	5	5	28
All other food manufacturing	0	20	23	122
Bottled and canned soft drinks & water	0	191	369	2,776
Manufactured ice	0	57	25	223
Breweries	0	1,146	3,116	10,697
Wineries	0	0	0	2
Distilleries	0	2	18	58
Tobacco product manufacturing	0	0	0	0
Fiber, yarn, and thread mills	0	1	2	12
Broadwoven fabric mills	0	0	0	0
Narrow fabric mills and schiffli machine embroidery	0	0	0	0
Nonwoven fabric mills	0	0	0	0
Knit fabric mills	0	0	0	0

## APPENDIX

Textile and fabric finishing mills	0	0	0	0
Fabric coating mills	0	0	0	0
Carpet and rug mills	0	0	0	0
Curtain and linen mills	0	0	0	0
Textile bag and canvas mills	0	14	24	73
Rope, cordage, twine, tire cord and tire fabric mills	0	0	0	0
Other textile product mills	0	5	9	43
Hosiery and sock mills	0	0	0	1
Other apparel knitting mills	0	1	1	3
Cut and sew apparel contractors	0	2	2	4
Mens and boys cut and sew apparel manufacturing	0	0	1	2
Womens and girls cut and sew apparel manufacturing	0	1	1	15
Other cut and sew apparel manufacturing	0	0	1	18
Apparel accessories and other apparel manufacturing	0	0	0	15
Leather and hide tanning and finishing	0	0	0	1
Footwear manufacturing	0	0	0	0
Other leather and allied product manufacturing	0	0	0	1
Sawmills	0	111	290	1,457
Wood preservation	0	0	0	0
Veneer and plywood manufacturing	0	0	0	0
Engineered wood member and truss manufacturing	0	9	21	158
Reconstituted wood product manufacturing	0	0	0	0
Wood windows and door manufacturing	0	727	1,704	5,146
Cut stock, resawing lumber, and planing	0	0	0	0
Other millwork, including flooring	0	15	44	684
Wood container and pallet manufacturing	0	58	104	509
Manufactured home (mobile home) manufacturing	0	0	0	0
Prefabricated wood building manufacturing	0	72	108	320
All other miscellaneous wood product manufacturing	0	302	639	1,292

## APPENDIX

Pulp mills	0	0	0	0
Paper mills	0	0	0	0
Paperboard mills	0	0	0	0
Paperboard container manufacturing	0	0	0	0
Paper bag and coated and treated paper manufacturing	0	0	0	0
Stationery product manufacturing	0	0	0	0
Sanitary paper product manufacturing	0	0	0	0
All other converted paper product manufacturing	0	4	23	34
Printing	0	2,905	3,769	9,960
Support activities for printing	0	14	18	39
Petroleum refineries	0	3,092	38,903	117,240
Asphalt paving mixture and block manufacturing	0	289	558	1,860
Asphalt shingle and coating materials manufacturing	0	0	0	0
Petroleum lubricating oil and grease manufacturing	0	0	0	0
All other petroleum and coal products manufacturing	0	0	0	0
Petrochemical manufacturing	0	0	0	0
Industrial gas manufacturing	0	43	90	750
Synthetic dye and pigment manufacturing	0	0	0	0
Other basic inorganic chemical manufacturing	0	0	0	0
Other basic organic chemical manufacturing	0	0	0	0
Plastics material and resin manufacturing	0	2	2	35
Synthetic rubber manufacturing	0	0	0	0
Artificial and synthetic fibers and filaments manufacturing	0	0	0	0
Nitrogenous fertilizer manufacturing	0	12	23	179
Phosphatic fertilizer manufacturing	0	0	0	0
Fertilizer mixing	0	0	0	10
Pesticide and other agricultural chemical manufacturing	0	0	0	0
Medicinal and botanical manufacturing	0	0	0	1

## APPENDIX

Pharmaceutical preparation manufacturing	0	1	2	14
In-vitro diagnostic substance manufacturing	0	0	0	0
Biological product (except diagnostic) manufacturing	0	0	0	0
Paint and coating manufacturing	0	0	0	0
Adhesive manufacturing	0	0	0	0
Soap and other detergent manufacturing	0	7	20	1,301
Polish and other sanitation good manufacturing	0	0	0	0
Surface active agent manufacturing	0	0	0	0
Toilet preparation manufacturing	0	1	2	168
Printing ink manufacturing	0	0	0	0
Explosives manufacturing	0	0	0	0
Custom compounding of purchased resins	0	0	0	0
Photographic film and chemical manufacturing	0	52	92	560
Other miscellaneous chemical product manufacturing	0	16	22	193
Plastics packaging materials and unlaminated film and sheet manufacturing	0	0	0	0
Unlaminated plastics profile shape manufacturing	0	0	0	0
Plastics pipe and pipe fitting manufacturing	0	0	0	0
Laminated plastics plate, sheet (except packaging), and shape manufacturing	0	0	0	0
Polystyrene foam product manufacturing	0	78	92	364
Urethane and other foam product (except polystyrene) manufacturing	0	3	3	11
Plastics bottle manufacturing	0	0	0	0
Other plastics product manufacturing	0	61	69	220
Tire manufacturing	0	4	4	18
Rubber and plastics hoses and belting manufacturing	0	0	0	0
Other rubber product manufacturing	0	29	32	111

## APPENDIX

Pottery, ceramics, and plumbing fixture manufacturing	0	7	8	101
Brick, tile, and other structural clay product manufacturing	0	0	0	0
Flat glass manufacturing	0	0	0	0
Other pressed and blown glass and glassware manufacturing	0	37	55	799
Glass container manufacturing	0	0	0	0
Glass product manufacturing made of purchased glass	0	0	0	0
Cement manufacturing	0	0	0	0
Ready-mix concrete manufacturing	0	1,375	4,082	9,814
Concrete block and brick manufacturing	0	184	638	1,213
Concrete pipe manufacturing	0	0	0	0
Other concrete product manufacturing	0	889	2,087	3,554
Lime manufacturing	0	0	0	0
Gypsum product manufacturing	0	0	0	0
Abrasive product manufacturing	0	0	0	0
Cut stone and stone product manufacturing	0	0	0	0
Ground or treated mineral and earth manufacturing	0	0	0	0
Mineral wool manufacturing	0	0	0	0
Miscellaneous nonmetallic mineral products manufacturing	0	0	0	0
Iron and steel mills and ferroalloy manufacturing	0	0	0	50
Iron, steel pipe and tube manufacturing from purchased steel	0	2	3	19
Rolled steel shape manufacturing	0	0	0	0
Steel wire drawing	0	0	0	0
Alumina refining and primary aluminum production	0	0	0	0
Secondary smelting and alloying of aluminum	0	0	0	0
Aluminum sheet, plate, and foil manufacturing	0	0	0	0
Other aluminum rolling, drawing and extruding	0	0	0	0
Nonferrous metal (exc aluminum) smelting and refining	0	0	1	3

## APPENDIX

Copper rolling, drawing, extruding and alloying	0	0	0	0
Nonferrous metal, except copper and aluminum, shaping	0	0	0	0
Secondary processing of other nonferrous metals	0	0	1	8
Ferrous metal foundries	0	0	0	0
Nonferrous metal foundries	0	0	0	0
Custom roll forming	0	7	9	71
Crown and closure manufacturing and metal stamping	0	0	0	0
Iron and steel forging	0	0	0	0
Nonferrous forging	0	0	0	0
Cutlery, utensil, pot, and pan manufacturing	0	1	1	8
Handtool manufacturing	0	0	0	0
Prefabricated metal buildings and components manufacturing	0	69	82	342
Fabricated structural metal manufacturing	0	143	175	805
Plate work manufacturing	0	71	73	224
Metal window and door manufacturing	0	0	0	0
Sheet metal work manufacturing	0	28	31	115
Ornamental and architectural metal work manufacturing	0	7	7	49
Power boiler and heat exchanger manufacturing	0	0	0	0
Metal tank (heavy gauge) manufacturing	0	6	6	19
Metal cans manufacturing	0	0	0	0
Metal barrels, drums and pails manufacturing	0	0	0	0
Hardware manufacturing	0	0	0	0
Spring and wire product manufacturing	0	19	22	99
Machine shops	0	244	262	517
Turned product and screw, nut, and bolt manufacturing	0	0	0	0
Metal heat treating	0	0	0	0
Metal coating and nonprecious engraving	0	6	7	40
Electroplating, anodizing, and coloring metal	0	13	14	49

## APPENDIX

Valve and fittings, other than plumbing, manufacturing	0	3	4	29
Plumbing fixture fitting and trim manufacturing	0	0	0	0
Ball and roller bearing manufacturing	0	0	0	0
Small arms ammunition manufacturing	0	0	0	0
Ammunition, except for small arms, manufacturing	0	0	0	0
Small arms, ordnance, and accessories manufacturing	0	0	0	0
Fabricated pipe and pipe fitting manufacturing	0	22	24	83
Other fabricated metal manufacturing	0	60	68	309
Farm machinery and equipment manufacturing	0	0	0	0
Lawn and garden equipment manufacturing	0	0	0	0
Construction machinery manufacturing	0	0	0	0
Mining machinery and equipment manufacturing	0	0	0	0
Oil and gas field machinery and equipment manufacturing	0	3	3	14
Semiconductor machinery manufacturing	0	0	0	0
Food product machinery manufacturing	0	0	0	0
Sawmill, woodworking, and paper machinery	0	0	0	0
Printing machinery and equipment manufacturing	0	0	0	0
All other industrial machinery manufacturing	0	0	0	0
Optical instrument and lens manufacturing	0	0	0	0
Photographic and photocopying equipment manufacturing	0	0	0	0
Other commercial service industry machinery manufacturing	0	2	3	12
Air purification and ventilation equipment manufacturing	0	0	0	0

## APPENDIX

Heating equipment (except warm air furnaces) manufacturing	0	5	8	41
Air conditioning, refrigeration, and warm air heating equipment manufacturing	0	0	0	0
Industrial mold manufacturing	0	0	0	0
Special tool, die, jig, and fixture manufacturing	0	0	0	0
Cutting tool and machine tool accessory manufacturing	0	0	0	0
Machine tool manufacturing	0	0	0	0
Rolling mill and other metalworking machinery manufacturing	0	0	0	0
Turbine and turbine generator set units manufacturing	0	0	0	0
Speed changer, industrial high-speed drive, and gear manufacturing	0	0	0	0
Mechanical power transmission equipment manufacturing	0	2	3	7
Other engine equipment manufacturing	0	0	0	0
Pump and pumping equipment manufacturing	0	0	0	0
Air and gas compressor manufacturing	0	0	0	0
Elevator and moving stairway manufacturing	0	0	0	0
Conveyor and conveying equipment manufacturing	0	0	0	0
Overhead cranes, hoists, and monorail systems manufacturing	0	0	0	0
Industrial truck, trailer, and stacker manufacturing	0	0	0	0
Power-driven handtool manufacturing	0	0	0	0
Welding and soldering equipment manufacturing	0	0	0	0
Packaging machinery manufacturing	0	0	1	1
Industrial process furnace and oven manufacturing	0	0	0	0
Fluid power cylinder and actuator manufacturing	0	0	0	0

## APPENDIX

Fluid power pump and motor manufacturing	0	0	0	0
Scales, balances, and miscellaneous general purpose machinery manufacturing	0	1	1	3
Electronic computer manufacturing	0	0	0	0
Computer storage device manufacturing	0	0	0	0
Computer terminals and other computer peripheral equipment manufacturing	0	0	0	0
Telephone apparatus manufacturing	0	0	0	0
Broadcast and wireless communications equipment manufacturing	0	0	0	0
Other communications equipment manufacturing	0	0	0	0
Audio and video equipment manufacturing	0	0	0	0
Printed circuit assembly (electronic assembly) manufacturing	0	0	0	0
Bare printed circuit board manufacturing	0	0	0	0
Semiconductor and related device manufacturing	0	0	0	0
Capacitor, resistor, coil, transformer, and other inductor manufacturing	0	0	0	0
Electronic connector manufacturing	0	0	0	0
Other electronic component manufacturing	0	0	0	0
Electromedical and electrotherapeutic apparatus manufacturing	0	0	0	0
Search, detection, and navigation instruments manufacturing	0	0	0	1
Automatic environmental control manufacturing	0	0	0	1
Industrial process variable instruments manufacturing	0	0	0	2
Totalizing fluid meter and counting device manufacturing	0	0	0	0

## APPENDIX

Electricity and signal testing instruments manufacturing	0	0	0	0
Analytical laboratory instrument manufacturing	0	0	0	1
Irradiation apparatus manufacturing	0	0	0	0
Watch, clock, and other measuring and controlling device manufacturing	0	0	0	0
Blank magnetic and optical recording media manufacturing	0	0	0	0
Software and other prerecorded and record reproducing	0	0	0	0
Electric lamp bulb and part manufacturing	0	0	0	0
Lighting fixture manufacturing	0	0	0	0
Small electrical appliance manufacturing	0	0	0	0
Household cooking appliance manufacturing	0	0	0	0
Household refrigerator and home freezer manufacturing	0	0	0	0
Household laundry equipment manufacturing	0	0	0	0
Other major household appliance manufacturing	0	0	0	0
Power, distribution, and specialty transformer manufacturing	0	0	0	1
Motor and generator manufacturing	0	0	0	0
Switchgear and switchboard apparatus manufacturing	0	0	0	0
Relay and industrial control manufacturing	0	0	0	0
Storage battery manufacturing	0	0	0	0
Primary battery manufacturing	0	0	0	0
Fiber optic cable manufacturing	0	0	0	0
Other communication and energy wire manufacturing	0	0	0	0
Wiring device manufacturing	0	2	2	29
Carbon and graphite product manufacturing	0	0	0	0
All other miscellaneous electrical equipment and component manufacturing	0	0	0	2

## APPENDIX

Automobile manufacturing	0	0	0	0
Light truck and utility vehicle manufacturing	0	0	0	0
Heavy duty truck manufacturing	0	0	0	2
Motor vehicle body manufacturing	0	2	3	11
Truck trailer manufacturing	0	0	0	2
Motor home manufacturing	0	0	0	0
Travel trailer and camper manufacturing	0	31	34	154
Motor vehicle gasoline engine and engine parts manufacturing	0	0	0	5
Motor vehicle electrical and electronic equipment manufacturing	0	4	9	33
Motor vehicle transmission and power train parts manufacturing	0	0	0	0
Motor vehicle seating and interior trim manufacturing	0	0	0	3
Motor vehicle metal stamping	0	0	0	0
Other motor vehicle parts manufacturing	0	1	2	18
Motor vehicle steering, suspension component (except spring), and brake systems manufacturing	0	0	0	0
Aircraft manufacturing	0	0	0	3
Aircraft engine and engine parts manufacturing	0	0	0	2
Other aircraft parts and auxiliary equipment manufacturing	0	2	2	10
Guided missile and space vehicle manufacturing	0	0	0	0
Propulsion units and parts for space vehicles and guided missiles manufacturing	0	0	0	0
Railroad rolling stock manufacturing	0	0	0	0
Ship building and repairing	0	187	192	557
Boat building	0	430	456	2,482
Motorcycle, bicycle, and parts manufacturing	0	0	0	0
Military armored vehicle, tank, and tank component manufacturing	0	0	0	0
All other transportation equipment manufacturing	0	0	0	8

## APPENDIX

Wood kitchen cabinet and countertop manufacturing	0	38	80	178
Upholstered household furniture manufacturing	0	0	0	0
Nonupholstered wood household furniture manufacturing	0	14	20	55
Other household nonupholstered furniture manufacturing	0	0	0	0
Institutional furniture manufacturing	0	0	0	0
Wood office furniture manufacturing	0	0	0	0
Custom architectural woodwork and millwork	0	0	0	0
Office furniture, except wood, manufacturing	0	0	0	0
Showcase, partition, shelving, and locker manufacturing	0	5	10	19

**Note:** Due to rounding, sum of columns may not be equal to the total figures. Employment figures that appear as zero may be greater than zero (but less than 1) if the corresponding labor income/value added/output figure is not zero. Figures in such cases appear as zero due to rounding. All monetary values are in 2019 dollars.

**Note:** Due to rounding, sum of columns may not be equal to the total figures. Employment figures that appear as zero may be greater than zero (but less than 1) if the corresponding labor income/value added/output figure is not zero. Figures in such cases appear as zero due to rounding. All monetary values are in 2019 dollars.

**Note:** Due to rounding, sum of columns may not be equal to the total figures. Employment figures that appear as zero may be greater than zero (but less than 1) if the corresponding labor income/value added/output figure is not zero. Figures in such cases appear as zero due to rounding. All monetary values are in 2019 dollars.

**Note:** Due to rounding, sum of columns may not be equal to the total figures. Employment figures that appear as zero may be greater than zero (but less than 1) if the corresponding labor income/value added/output figure is not zero. Figures in such cases appear as zero due to rounding. All monetary values are in 2019 dollars.

**Note:** Due to rounding, sum of columns may not be equal to the total figures. Employment figures that appear as zero may be greater than zero (but less than 1) if the corresponding labor income/value added/output figure is not zero. Figures in such cases appear as zero due to rounding. All monetary values are in 2019 dollars.

**Note:** Due to rounding, sum of columns may not be equal to the total figures. Employment figures that appear as zero may be greater than zero (but less than 1) if the corresponding labor income/value added/output figure is not zero. Figures in such cases appear as zero due to rounding. All monetary values are in 2019 dollars.
