

Managing Spaceflight Programs and Projects 7120.5E

Ralph Roe NASA Chief Engineer

Sandra Smalley Science Mission Directorate

April 9, 2015

Key Principles Tailoring Governance Model and Checks and Balances **Separation of Authorities Technical Authority** Categorization **Management Councils** Life Cycle Independent Life Cycle Reviews **Standing Review Boards** Other 7120 Topics **7120.5E Summary Discussion - Exploration Committee Recommendations**

Summary of Key Overarching Program/Project Management Principles

- Programs/projects are managed based on a life-cycle with key decision points before each phase supported by life-cycle reviews and evolving principal documents that govern the conduct of each phase
- Designated Decision Authority to decide transition through the life cycle with review by a Governing Program Management Council
- Governance model provides for checks and balances including, separation of program and institutional authority, independent review, and dissenting opinion

Tailoring is Expected

- It is NASA policy to comply with all prescribed requirements, directives, procedures, and processes unless relief is formally granted by the designated party.
- NASA policy also recognizes the need to accommodate the unique aspects of each program or project to achieve mission success in an efficient and economical manner.
- **Tailoring is the process used to adjust or seek relief** from a prescribed requirement to accommodate the specific needs of a task or activity (e.g., program or project).
- Tailoring is both an expected and accepted part of establishing the proper requirements for a program or project.

Agency Governance Model Key Checks and Balances

- Separation of Authorities
- Technical Authority
- Dissenting Opinion Process
- Independent Life Cycle Review

Separation of Authorities

- NASA's separation of the roles for Programmatic and Institutional Authorities provides an organizational structure that emphasizes the Authorities' shared goal of mission success while taking advantage of the different perspectives each brings.
- The NASA governance structure is designed to provide organizational balances among these entities.

Separation of Authorities

Programmatic Authority resides with the Mission Directorates and their respective programs and projects The Institutional Authority resides with Headquarters and associated Center organizations

Technical Authority

- Technical Authority is formally delegated and originates from the Administrator.
 - TA is delegated to the lowest level possible at the Centers
- Fundamental Aspects of Technical Authority
 - Provide an independent view of program/project activities.
 - Ensure direction to the program or project reflects the view of the Center or, where appropriate, the view of the NASA Technical Authority community
 - Approve changes to and waivers to all Technical Authority responsible requirements
 - The Program/Project Manager remains responsible for the safe conduct and successful outcome of the program/project in conformance with governing requirements.

Three Technical Authorities: Engineering, Safety and Mission Assurance, and Health and Medical

Space Flight Project Categorization

Priority Level	LCC < \$250M	LCC from \$250M to \$1B	LCC > \$1B, significant radioactive material, or human space flight
High	Category 2	Category 2	Category 1
Medium	Category 3	Category 2	Category 1
Low	Category 3	Category 2	Category 1

- Projects vary in scope and complexity and require varying levels of management requirements and Agency oversight.
- Project categorization defines Agency expectations of project managers by determining both the oversight council and the specific approval requirements.
- Provides guidance to tailor requirements to align with scope of project

Decision Authority and Governing Program Management Council

Program/Project	Decision Authority	Governing Program Management Council	
Programs	NASA Associate	Agency Program Management Council	
Category 1 Projects	Administrator		
Category 2 Projects	Mission Directorate	Mission Directorate Program Management Council	
Category 3 Projects	Associate Administrator		

- Governing Program Management Council reviews
 programs/projects and provides Agency oversight
- Decision Authority decides on the readiness for next phase of the life cycle at Key Decision Points (KDPs).
- Center Management Council (CMC) has role in reviewing the programs/projects executed at their Center

Program and Project Life Cycle

- Provides a uniform life cycle for human and robotic missions
 - Common process flow, uniform phases, and KDPs
 - Disciplined review structure for technical requirements and implementation plans
- 5 key elements in execution of the life cycle:
 - Key Decision Points
 - Required independent reviews
 - Required life cycle review gate products
 - GPMC and CMC roles in life cycle process
 - Decision Authority role as gatekeeper

Space Flight Program Life Cycle Simplified

12

Space Flight Project Life Cycle Simplified

13

- Convened by the Decision Authority, Mission Directorate Associate Administrator, Chief Engineer, Center Director, & Director Office of Evaluation
- Conducted by the Standing Review Board (SRB) – members independent of program/project
- Resulting recommendation presented to the Decision Authority
- Decision on readiness for next phase is made by the Decision Authority

Why Independent Life Cycle Reviews?

Provides:

- The program/project with a credible, objective assessment of how they are doing
- NASA senior management with an understanding of whether
 - The program/project is on the right track,
 - Is performing according to plan, and
 - Externally-imposed impediments to the program/project's success are being removed
- A credible basis for a decision to proceed into the next phase
 - Independent review also provides additional assurance to external stakeholders that NASA's basis for proceeding is sound.

Life Cycle Reviews and Standing Review Boards

- NPR 7120.5 requires the use of a single, independent review team called the Standing Review Board (SRB) to conduct certain LCRs
- The SRB process integrates the review requirements of NPR 7120.5, NPR 7123.1, NASA Systems Engineering Processes and Requirements, the Mission Directorate, and the Center into a single LCR set of requirements.
- The standing nature of SRBs (**SRBs stay with project thru lifecycle**) provides a strong advantage in terms of continuity and familiarity with the program's or project's purpose, history, programmatic and technical approach, challenges, risks, and issues.
- NASA accords special importance to maintaining the integrity of its independent review process.
 - SRBs must conduct assessments free of bias through a membership balanced in terms of knowledge, experience, and perspectives.
- SRBs are **not a substitution for proper oversight** by the project, program, MD and Center.

7120.5 Topics

- Introduction & Background
- Programmatic Hierarchy
- Types of Programs
- Project Categories
- Program and Project Life Cycles
- Key Decision Points and Decision Authority
- Governing and Center Management Councils
- Planning Templates
- Independent Life Cycle Reviews

- Separation of Authorities
- Technical Authority
- Role of Center Director
- Dissenting Opinion
- Tailoring of Requirements and the Compliance Matrix
- Baseline Policy
- Joint Confidence Level
- Earned Value Management
- Formulation Agreement
- Maturity Matrix
- Threat Assessments

7120.5E Summary

- 7120 establishes the requirements by which NASA formulates and implements space flight programs and projects
- 7120 provides consistency in requirements and is also designed to be tailored to the unique needs of NASA's programs and projects
- 7120 facilitates common understanding of how projects are implemented in a multi-center environment
- Tailoring is expected and encouraged
- Independent assessment of Life Cycle Reviews is an essential part of NASA's system of checks and balances
- Standing Review Boards are established to provide independent assessment throughout the life cycle of a program or a project
- Selecting competent, current, and independent membership is key to providing programs and projects with constructive recommendations

Cost Performance by Policy

- Historical cost performance comparison from NASA Management and Performance documentation.
 Shows Cost Growth by Project across recent cost
 - Policy Evolution.
- Cost performance showing steady improvement over time.

Discussion Exploration Committee Recommendations

- The Council recommends that NASA take action to make programs and projects more affordable by:
- 1. Examining the current approach for tailoring mandatory NASA management requirements and making changes to expedite the resolution of tailoring requests.
- 2. Working with groups that are currently conducting separate reviews of programs to minimize the number and maximize the benefit of reviews and reviewing groups.
