DISCOVERY (OV-103)

Discovery was NASA's third space shuttle orbiter to join the fleet at Kennedy Space Center in Florida. Discovery also is known inside the space agency by its designation Orbiter Vehicle-103, or OV-103.

Discovery was the first space shuttle retired from NASA's fleet in 2011.

The spacecraft will be transported to the Udvar-Hazy Center of the Smithsonian Institution's National Air and Space Museum in Chantilly, Va., near Washington, D.C., in 2012 to be put on permanent public display.

Construction of Discovery began on Aug. 27, 1979 and was completed four years later.

Discovery rolled out of the assembly plant building in Palmdale, Calif., in October 1983 and first launched Aug. 30, 1984.

When first flown, Discovery became the third operational orbiter, and it currently is the oldest in service.

It was named after two historic, Earth-bound exploring ships of the past. One was a vessel used by Henry Hudson in the early 1600s to explore the Hudson Bay and search for a northwest passage from the Atlantic to the Pacific.

The other was one of two ships used by the British explorer James Cook in the 1770s. Cook's voyages in the South Pacific led to the discovery of the Hawaiian Islands. Another of his ships was the Endeavour, the namesake of NASA's newest shuttle.

Discovery has had many notable flights and was the Return to Flight shuttle following the Challenger and Columbia accidents.
