NASA Astronaut Fact Book

Exploration is really the essence of the human spirit.

PREFACE

(NASA) selected the first group of astronauts in 1959. From 500 candidates having the required jet aircraft flight experience and engineering training, as well as height below 5 feet 11 inches, seven military men became the nation's first astronauts. The second and third groups chosen included civilians with extensive flying experience. By 1964, requirements changed, and emphasis was placed on academic qualifications; in 1965, six scientist astronauts were selected from a group of 400 applicants who had a doctorate or equivalent experience in the natural sciences, medicine, or engineering. The group named in 1978, NASA Class 8, was the first of the space shuttle flight crews and the first class with women and minority astronauts. In 2013, the astronaut class was fifty percent women and fifty percent men.

The most recent astronaut candidate group named in December 2021, NASA Class 23, is training for a variety of missions, including performing research on the International Space Station, launching from American soil on spacecraft built by commercial companies, and departing for missions to the Moon with Artemis. The 2021 astronaut candidate class came from more than 12,000 applications. More information about NASA's astronauts can be found at www.nasa.gov/astronauts.

Since inception, NASA has selected 360 astronaut candidates: 299 men, 61 women; 212 military, 138 civilians; 191 pilots, 159 non-pilots.

As of June 2022, there are 44 active astronauts, 18 management astronauts, 10 astronaut candidates, and 288 former astronauts or payload specialists, including those who have left NASA, and those who are deceased.

The spaceflights and statistics listed in this publication resulted from the vertical takeoff of an American space vehicle or Soyuz taxi flight to the International Space Station.

Astronauts listed (unless otherwise noted) are individuals who participated in the United States astronaut program. Additionally, the payload specialist is a professional in the physical or life sciences or a technician skilled in specific equipment or experimentation that will fly. Selection of a payload specialist for a mission is made by the payload sponsor or customer. For NASA-sponsored spacecraft or experiments requiring a payload specialist, the specialist is nominated by an investigator working group and approved by NASA. Payload specialists for major non-NASA payloads or experiments are selected by the sponsoring organization. Payload specialists do not have to be U.S. citizens. However, they must meet strict NASA health and physical fitness standards. These individuals are included in the "Biographical Sketches."

NASA selects astronauts from a diverse pool of applicants with a wide variety of backgrounds. From the thousands of applications received, only a few are chosen for the intensive astronaut candidate training program. For more information on astronaut selection, please check online at www.nasa.gov/astronauts for the latest information.

4.0 CONGRESSIONAL SPACE MEDAL OF HONOR

In honor of NASA's 20th anniversary, President Jimmy Carter visited NASA John F. Kennedy Space Center on October 1, 1978, and awarded the first Congressional Space Medal of Honor to six former astronauts. Authorized by Congress in 1969, the award recognized "any astronaut who in the performance of his duties has distinguished himself by exceptionally meritorious efforts and contributions to the welfare of the Nation and mankind." Recipients are recommended by the NASA Administrator and presented by the President of the United States. These astronauts received this special honor:

Neil A. Armstrong, for actions to overcome problems on the Gemini 8 mission and for Apollo 11 when he took his "...giant leap for mankind."

Frank Borman, who commanded the Gemini 7 and Apollo 8 missions. The latter was the first manned spacecraft to orbit the Moon.

Charles Conrad, Jr., who participated in four space flights of increasing duration, complexity and achievement: Gemini 5, Gemini 11, Apollo 12, and Skylab 2. On the first manned Skylab mission, he commanded the crew that performed repairs to the damaged orbital workshop, thus saving the two-billion-dollar program from potential failure.

John H. Glenn, Jr., who in Mercury 6 was the first American to orbit the Earth. The success of his flight demonstrated the value of the human pilot in space.

Virgil I. Grissom (posthumously), the second American in space, who took part in Mercury and Gemini flights and lost his life during preparations for the first Apollo flight. He flew on Mercury 4 and Gemini 3.

Alan B. Shepard, Jr., who was the first American in space, aboard Mercury 3. He also commanded the Apollo 14 mission.

Roger B. Chaffee (posthumously) was one of the third group of astronauts chosen but lost his life before his first flight during preparations for the first Apollo flight. President William Clinton awarded the medal on December 17, 1997.

Edward H. White (posthumously) piloted Gemini 4 and performed the first U.S. space walk, floating outside the capsule for 21 minutes. President William Clinton awarded the medal on December 17, 1997.

John W. Young, who demonstrated leadership, courage, and technical skill in a space flight career that spanned two decades and five (at that time) space flights pivotal to human progress in space. He flew on Gemini 3, Gemini 10, Apollo 10, Apollo 16, and STS-1 prior to receipt of the medal which was presented May 19, 1981, by President Ronald Reagan.

Thomas J. Stafford, who commanded the first flight of the lunar module to the Moon and the American crew that rendezvoused with a Soviet spacecraft in 1975. He was recognized for his past contributions, and for continuing to serve the Nation in charting a

future vision for our space program. He flew on Gemini 6 and 9, Apollo 10, and the Apollo-Soyuz Test Project. Vice President Dan Quayle at the direction of President George Bush presented the medal in 1992.

James A. Lovell, who flew on Gemini 7 and 12, and Apollo 8 and 13, was presented the medal on July 26, 1995. In his remarks, President Bill Clinton especially commended Lovell for his performance on Apollo 13, which demonstrated, "the kind of resourcefulness, grit, and grace under pressure that is the province of heroes."

Shannon Lucid, who spent 188 days in space on the U.S. space shuttle and the Russian space station Mir, was presented the medal on December 2, 1996. Noting that the medal is given out sparingly because it honors "extraordinary service to the nation," President Bill Clinton added that "Dr. Lucid achieved that kind of service for 188 days this year, the longest flight by an American in space, the longest time for any woman of any nation in space, five shuttle missions altogether."

William Shepherd, who was the first astronaut to command a crew on the International Space Station, received the medal from President George W. Bush on January 15, 2003. Shepherd and the two other members of his crew spent 141 days in space, beginning a new era of international cooperation in space exploration.

Rick D. Husband, Willie C. McCool, David M. Brown, Kalpana Chawla, Michael P. Anderson, Laurel B. Clark and Ilan Ramon were posthumously presented the medal for their ultimate sacrifice in service to their nations and mankind. President George W. Bush presented the medal to their families on February 3, 2004.

Francis R. Scobee, Michael J. Smith, Judith A. Resnik, Ellison S. Onizuka, Ronald E. McNair, Gregory B. Jarvis and Sharon Christa McAuliffe were posthumously presented the medal for their ultimate sacrifice in service to their nation and mankind. President George W. Bush presented the medal to their families on July 23, 2004.

Robert Crippen was presented the medal for his dedicated service to the country as a military aviator, test pilot, engineer, and astronaut, including his assignment as pilot for the historic STS-1 mission, the first orbital spaceflight of the Space Shuttle program. In the same month as the 25th anniversary of STS-1, the medal was presented by NASA Administrator Michael Griffin in the name of President George W. Bush on April 26, 2006.
