

# Vehicle Feature Complexity Modeling

Application in the Automotive Industry

Presented by:

Natalie Matevossyan

Jesus Mata Castañeda

# SYSTEM MODELING APPROACH

- System Model proposed to manage the complexity of vehicle programs in the Automotive Industry
- Modeling allows to enhance variants analysis, assessment of changes and improve reliability of the project
- This approach would be applicable to manage the complexity on the Cube Sat, to get similar benefits

# COMPLEXITY IN THE AUTOMOTIVE INDUSTRY

- Diversity of usage profiles and environments
- Multiple Target Customers
- Market Competition
- Government Regulations
- Global Deployment

- Design Variants
- Common/shared vehicle architectures (Platforms)
- Re-use of components
- Customization
- Mass Production

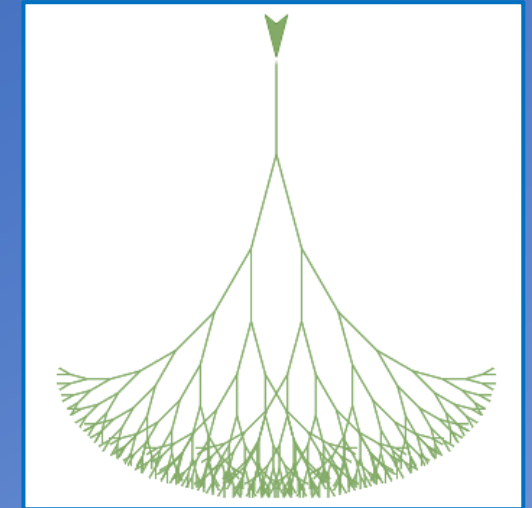

# VEHICLE VARIANTS

- Variants developed to meet customer expectations
- Complexity grows as features combine to form new variants
- High level vehicle variants include:

- Body Style
- Wheel Base
- Box Size
- Trim Levels
- Packages
- Body Colors
- Optional Content

**BOX LENGTH AND POWERTRAIN AVAILABILITY**

	TRIM	CARGO BOX LENGTH	STANDARD ENGINE	OPTIONAL ENGINE	AUTOMATIC TRANSMISSION	DRIVE
<b>REGULAR CAB</b> 	WT	6' 0"	4.3L V6	5.3L V8	6-speed	2WD/4x4
	LS	6' 0"	4.3L V6	5.3L V8	6-speed	2WD/4x4

High Country	6' 6" 6"	5.3L V8	6.2L V8	6-speed	2WD/4x4	

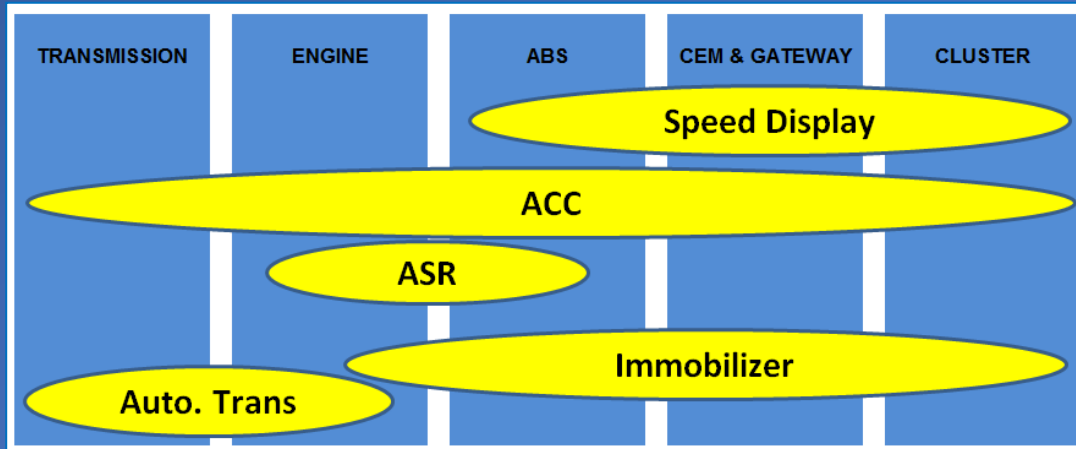

## Typical Modern Vehicle

- 50-70 computers on-board
- > 15 million lines of software code
- > 1 million pages of specifications
- > 10,000 buildable series variants (including ECU variations per vehicle) (1)

# VEHICLE FEATURE COMPLEXITY MATRIX

## Systems

## Features

Feature List	Vehicle Variants			
	USA Single Cab Base	USA Double Cab Luxury	...	South America Single Cab Base
<b>Powertrain</b>				
Engine 1	✓	✗	...	✓
Engine 2	○	✓	...	✗
<b>Suspension</b>				
Tire 1	✓	✗	...	✓
Tire 2	✗	✓	...	○
...	...	...	...	...

Features meet specific customer requirements and are formed by multiple systems

VFCM is used to keep track of ALL feature combinations that build the vehicle variants

# IMPORTANCE OF THE VFCM

- Primary official source of direction for a Vehicle Program
- Documents all the complexity of options that is able to be built
- Documents what is going to be built for specific market

# TRADITIONAL APPROACH TO VFCM

- Document based matrix
- Features have relationships with vehicle variants
- Relations to other Features
- Require / Exclude Features
- Complex relationships

Downsides:

Re-work  
Manual updates  
Time

Prone to error  
Extensive documents

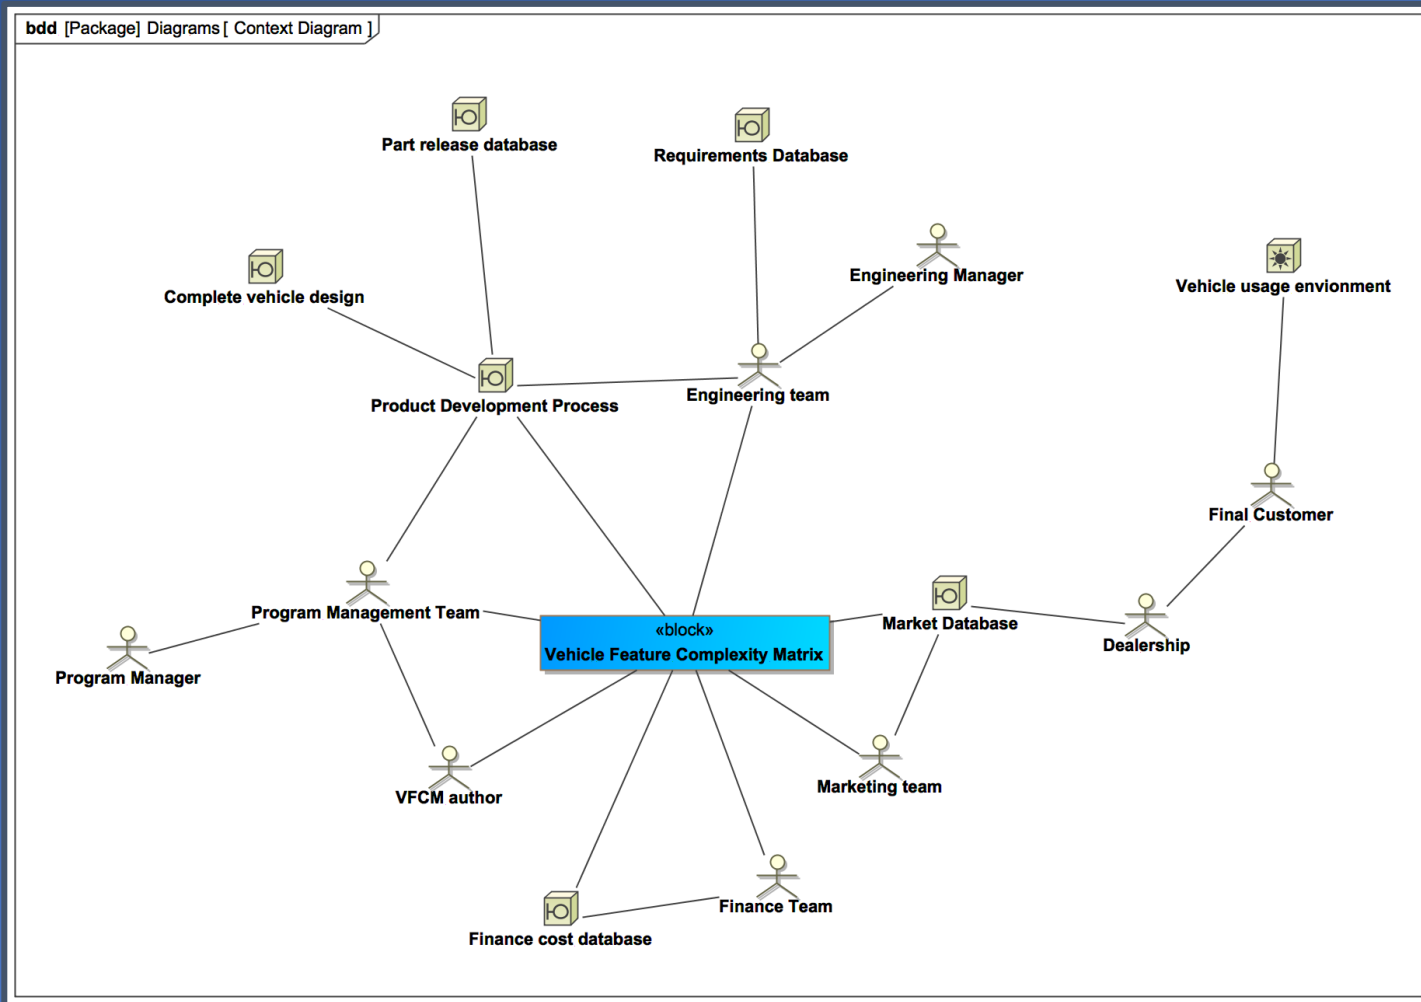

Feature	Feature Code	Vehicle Variant 1
<b>FR WIPER</b>	FC350	
Contains RR MIRROR 1 (FC184) when {BULKHEAD 2 (FC018), BULKHEAD 3 (FC020), BULKHEAD 5 (FC023)} is not present, and when FIXED RR WINDOW (FC462) is present, and when CAMERA 2 (FC612) is not present		Contains
Feature	Feature Code	Vehicle Variant 1
<b>RR MIRROR</b>	FC184	
Included in FR WIPER (FC350) when {BULKHEAD 2 (FC018), BULKHEAD 3 (FC020), BULKHEAD 5 (FC023)} is not present, and when FIXED RR WINDOW (FC462) is present, and when CAMERA 2 (FC612) is not present		Includes

Feature	Feature Code	Variant 1
<b>RHD</b>	FC443	O*/- O <sup>1</sup>
Requires MARKET GROUP 1 (FC656), MARKET GROUP 2 (FC657), MARKET GROUP 3 (FC658)		
<b>HEADLAMP 5</b>	FC624	O*/- O <sup>1</sup>
Excludes MARKET GROUP 2 (FC657), MARKET GROUP 4 (FC659), MARKET GROUP 3(FC658), BULGARIA (FC660), SLOVENIA (FC661), CROATIA (FC662), SLOVAKIA (FC663), MACEDONIA (FC664), ESTONIA (FC665), LATVIA (FC666), LITHUANIA (FC667)}		

Feature	Feature Code	Variant 1
<b>LESS SIDE DOORS</b>	FC674	S* C <sup>1</sup> C <sup>2</sup> C <sup>3</sup>
Contains LESS 2ND ROW R/H WINDOW (FC675)		
Contains LESS 2ND ROW L/H WINDOW (FC676)		
Contains LESS CONFIG UNLOCKING (FC655) when LIFTGATE (FC518) is not present, and when {SPECIAL TRANSPORT PACKAGE (FC669), SPECIAL TRANSPORT PACKAGE 2 (FC671), SPECIAL TRANSPORT PACKAGE 3 (FC673)} is not present		

*“Interface control consists of establishing common understanding of interfaces for all project participants.” (Weiss, 2013)*

# VFCM CONTEXT

## • Interfaces with stakeholders:

- Engineering
- Marketing
- Finance
- Management
- Dealership
- Final Customer

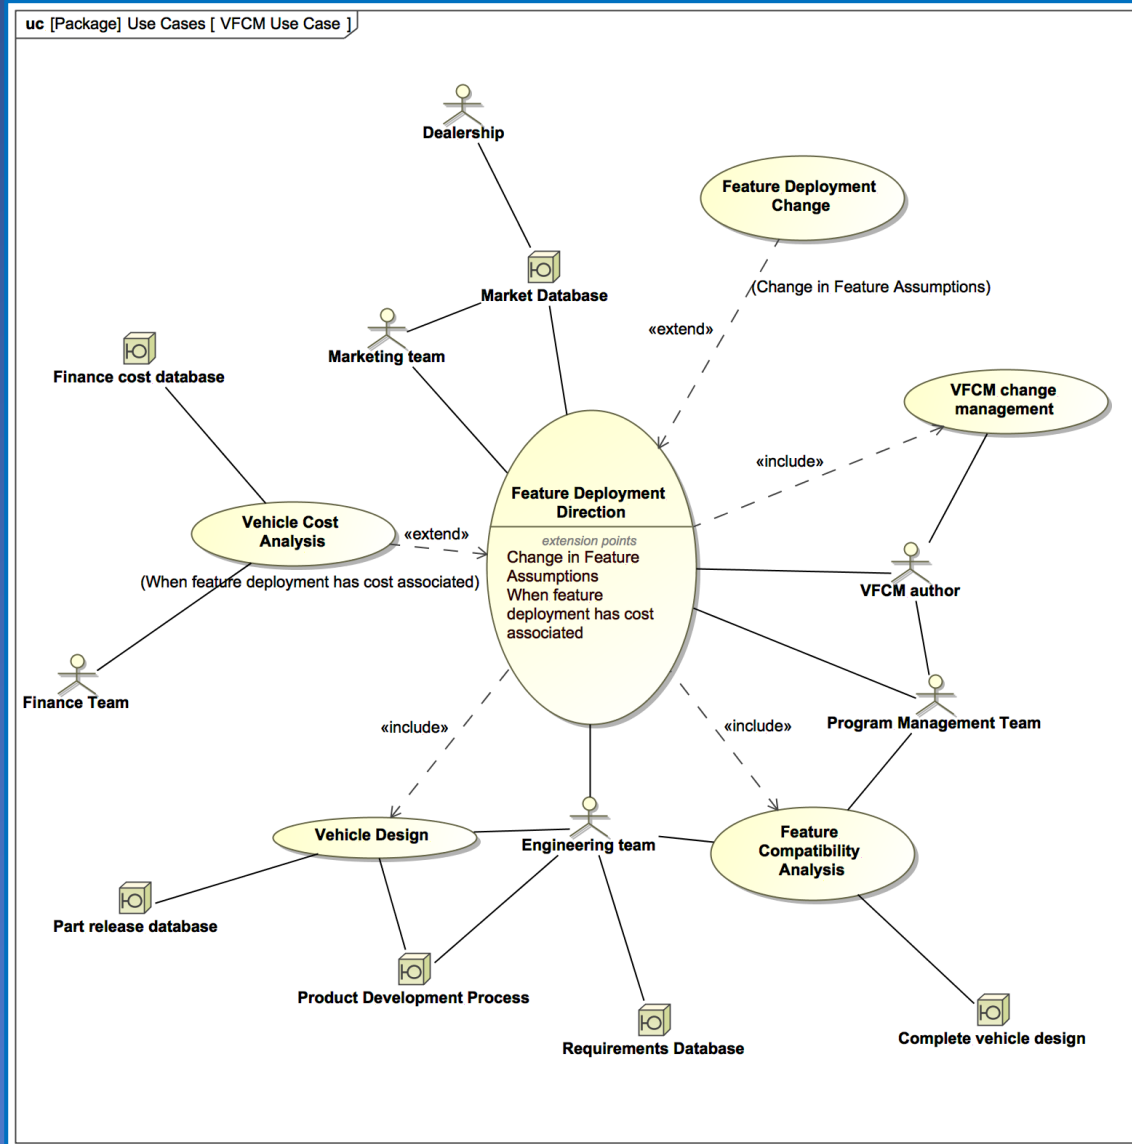

## • Interfaces with boundary systems

- PD Process
- Part release system
- Requirements database
- Complete vehicle design
- Market database
- Finance Cost database

Vehicle Usage Environment

# SYSTEM USE CASES

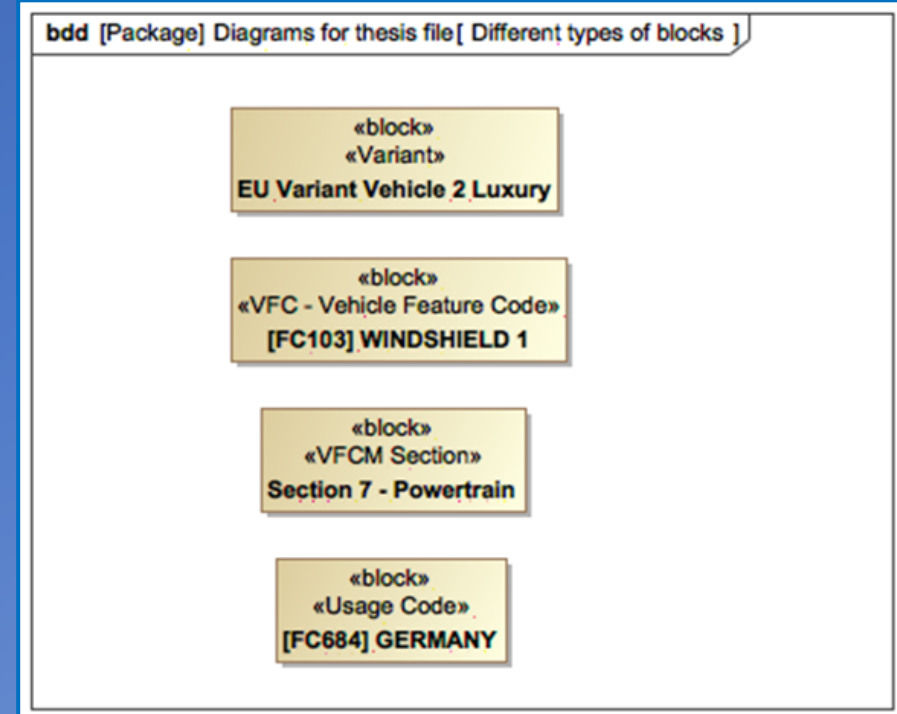

## Main Use Case: Feature Deployment Direction

- Include
  - Vehicle Design
  - VFCM change management
  - Feature compatibility analysis
- Extend
  - Feature Deployment Change
  - Vehicle Cost Analysis

# VFCM SYSTEM MODELING

- Base entities in VFCM are Features with a Feature Code
- Feature = Model Block
- Block Stereotype differentiate features / variants, etc....
- Blocks connected to each other represent the Features relationships
- High complexity of Feature relationships are managed by the System Model

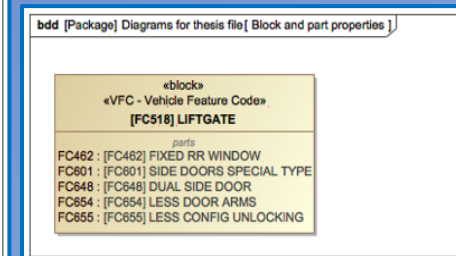

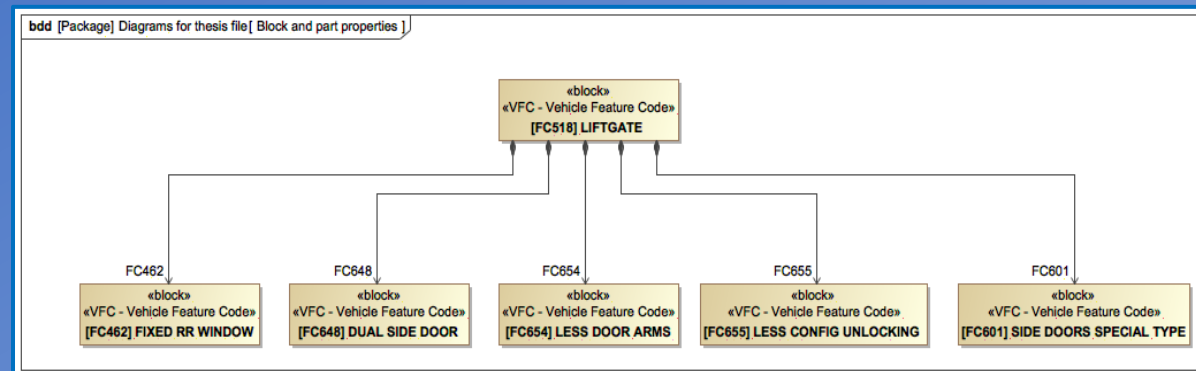

# RELATIONSHIPS AMONG ENTITIES

## Part Properties

Owner	Feature Code
<b>LIFTGATE</b>	FC518
Contains SIDE DOORS SPECIAL TYPES (FC601)	
Contains available DUAL SIDE DOOR (FC648)	
Contains LESS DOOR ARMS (FC654)	
Contains FIXED RR WINDOW (FC462)	
Contains LESS CONFIG UNLOCKING (FC655)	
Parts	Feature Code
<b>SIDE DOORS SPECIAL TYPES</b>	FC601
Included in LIFTGATE (FC518)	
<b>DUAL SIDE DOOR</b>	FC648
Included in LIFTGATE (FC518)	
<b>LESS DOOR ARMS</b>	FC654
Included in LIFTGATE (FC518)	
<b>FIXED RR WINDOW</b>	FC462
Included in LIFTGATE (FC518)	
<b>LESS CONFIG UNLOCKING</b>	FC655
Included in LIFTGATE (FC518)	

- Model Part Properties convey ownership (true connection)
- Diagrams replace complex and repetitive text relation descriptions
- Part Properties represent feature packages

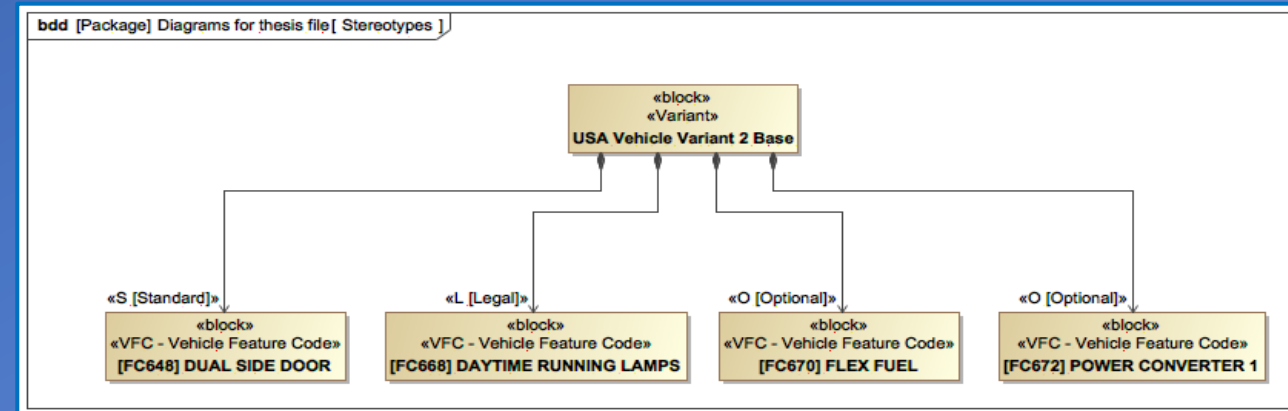

# RELATIONSHIPS AMONG ENTITIES

## Optionality

Optionality is modeled as a part property with stereotypes

- **Standard** – Always present
- **Optional** – Optional can be or not be present depending on customer selection
- **Legal** – Obligatory by legal requirements usually associated with specific markets legislation
- **Mandatory** – Obligatory based on a strong market need or an engineering performance reason

Feature List	Vehicle Variants			
	USA Single Cab Base	USA Double Cab Luxury	...	South America Single Cab Base
<b>Powertrain</b>				
Engine 1	✓	✗	...	✓
Engine 2	○	✓	...	✗
<b>Suspension</b>				
Tire 1	✓	✗	...	✓
Tire 2	✗	✓	...	○
...	...	...	...	...

# RELATIONSHIPS AMONG ENTITIES

## Feature Constraints

Traditional VFCM represents constraints with text:

- **Requires:** One feature/block needs other in order to be deployed
- **Excludes:** Certain feature/block is not deployed when other is present

Feature	Feature Code	Variant 1
<b>RHD</b> Requires {MARKET GROUP 1 (FC656), MARKET GROUP 2 (FC657), MARKET GROUP 3 (FC658)}	FC443	O*-/ O <sup>1</sup>
<b>HEADLAMP 5</b> Excludes {MARKET GROUP 2 (FC657), MARKET GROUP 4 (FC659), MARKET GROUP 3(FC658), BULGARIA (FC660), SLOVENIA (FC661), CROATIA (FC662), SLOVAKIA (FC663), MACEDONIA (FC664), ESTONIA (FC665), LATVIA (FC666), LITHUANIA (FC667)}	FC624	O*-/ O <sup>1</sup>

Constraints modeled as dependency relations

Customizable matrixes allow to track dependencies

# RELATIONSHIPS AMONG ENTITIES

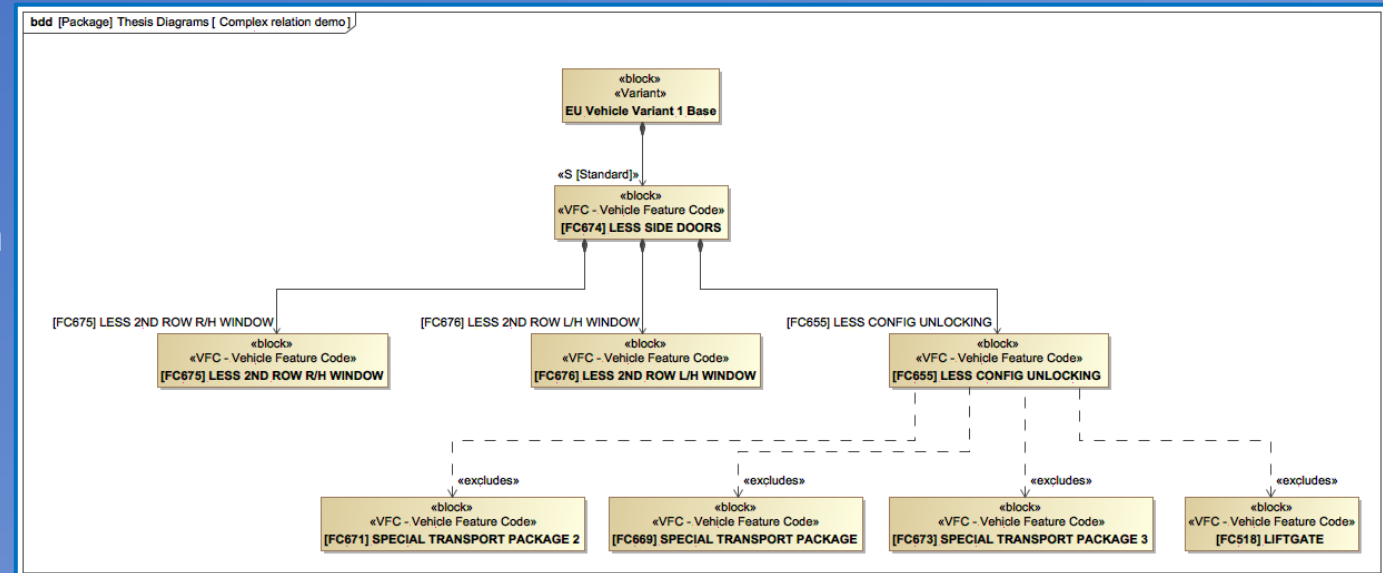

## Feature Constraints

Compatibility is modeled using part properties stereotypes

Compatibility between features is easier to understand graphically

- **Compatibility:** Feature available depending on deployment of other features.

Feature	Feature Code	Variant 1
<b>LESS SIDE DOORS</b>	FC674	S*
Contains LESS 2ND ROW R/H WINDOW (FC675)		C <sup>1</sup>
Contains LESS 2ND ROW L/H WINDOW (FC676)		C <sup>2</sup>
Contains LESS CONFIG UNLOCKING (FC655) when LIFTGATE (FC518) is not present, and when {SPECIAL TRANSPORT PACKAGE (FC669), SPECIAL TRANSPORT PACKAGE 2 (FC671), SPECIAL TRANSPORT PACKAGE 3 (FC673)} is not present		C <sup>3</sup>

# COMPLEXITY OF FEATURE RELATIONS

VFCM model  
contains highly  
complex relations  
between Features

Analysis can be  
customized to define  
levels of depth

# ERROR CHECK TOOL

Custom Analysis tables  
can be developed easily

Errors and  
inconsistencies in the  
model can be minimized

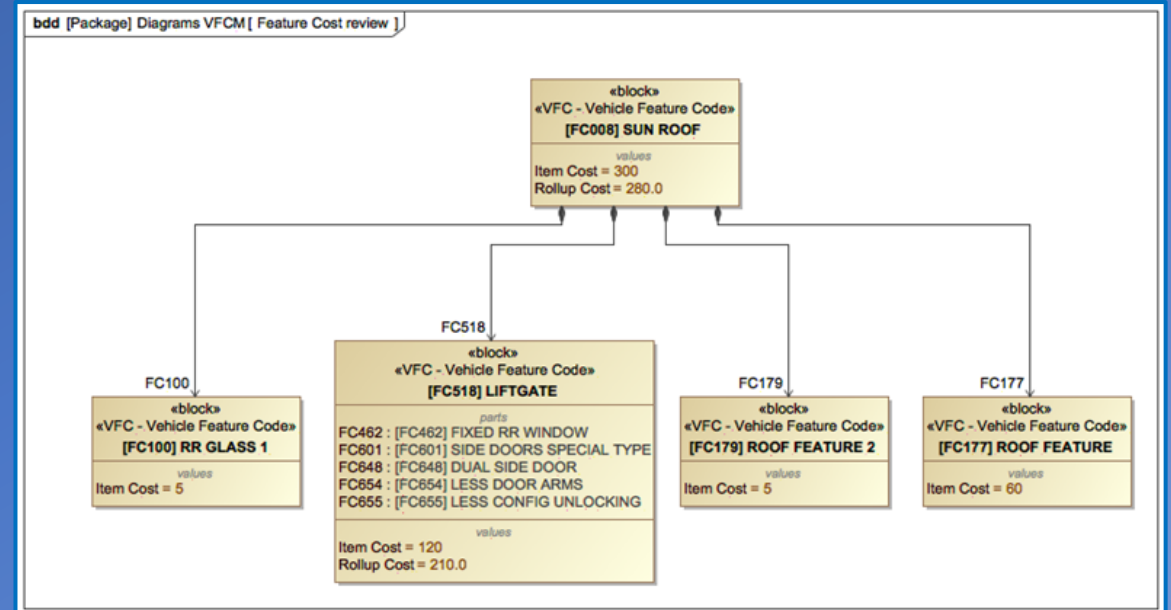

#	Name	Requires	Excludes	Potential Errors

96	[FC446] FDR 3	5	5
97	[FC352] JETS	20	20

#	Owner	▼ Default Value	Type
1	USA Vehicle Variant 2 Base	16570.0	cost [dollars]
2	USA Vehicle Variant 1 Luxury	19766.0	cost [dollars]
3	EU Variant Vehicle 2 Luxury	19598.0	cost [dollars]
4	EU Vehicle Variant 1 Base	10186.0	cost [dollars]

Cost rolls up to higher level blocks

A change in any feature is reflected automatically at all levels of the model

# MODELING ADVANTAGES TO MANAGE COMPLEXITY AUTOMOTIVE

- **Meet Function**

- Every block is unique, all its properties and connections reside in it.
- All Diagrams are just representations of blocks
- Block relationships can be analyzed graphically
- Model replaces multiple documents with complexity specifications

- **Robustness**

- Changes are automatically updated in all the model
- Minimization of errors and inconsistency
- Ability to create custom error proof tools using “Custom Properties”

*“The essential aspect of a system is that some new functions emerge”, Crawley*

# MODELING ADVANTAGES TO MANAGE COMPLEXITY

## AUTOMOTIVE

- **Efficiency**

- Changes are done in one model with lower effort, and in a fraction of the time
- Multiple & customizable diagrams to show the information to improve communication to users
- Easier to visualize information and make decisions
- Compatibility with MS Excel allows to import/export large amounts of data

- **Minimization of unintended behavior**

- Avoids inconsistency and contradictions in feature deployment
- Prevent re-work
- Manages Complexity of the VFCM, and can customize scope of the analysis

# EXPOSED TO THE UNKNOWN

## Automotive

## CubeSats

# COMMONALITIES

- **Architecture**
  - Modular vs. Platform
- **Requirements**
  - Size
  - Weight/Mass
  - Cost
  - Buildability
  - Power
- **Failure Modes**
- **Cost Reduction**
- **Design and Development Improvements**

## Requirements Failure Modes

Missing  
Incomplete  
Inconsistent  
Incorrect content  
Incorrect version  
Inappropriate design  
Incorrect Configuration  
Un-accessible  
Non-validated

# MODELING CAN LOWER CUBE SAT COST

- Enhance reusability of technology
- Reduce effort and time to run complexity analysis
- More frequent less costly reviews
- Cost Rollup Analysis can help to to make deployment of features more cost effective
- Variant complexity analysis can aid to find opportunities to combine validation and reduce cost.
- Weight rollup analysis can help to reduce weight (cost)

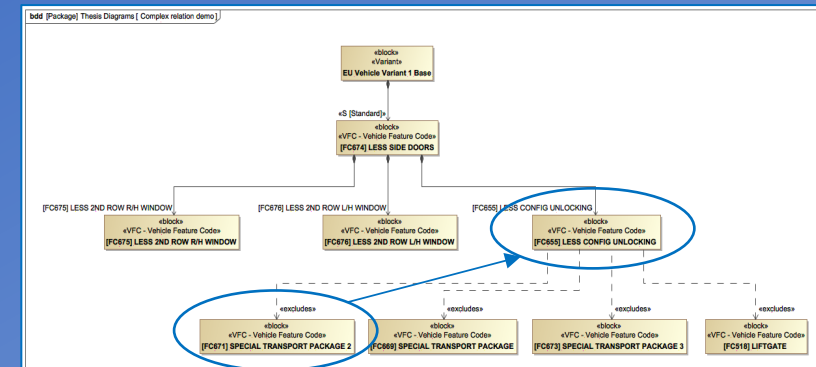

“a single major review of the Earth Observing System Data and Information System (EOSDIS) core system being built for NASA produced over 5,000 pages of material at a cost of several person-years of effort.”

TRW estimates that the Critical Design Review for the Total Ozone Mapping Sensor, now in orbit as part of the Earth Probes program, required 10 person-years of effort.” (2)

# MODELING CAN IMPROVE CUBE SAT ROBUSTNESS

- Risk Management improvement
- More informed and quicker decisions to minimize risk to missions
- Reduce likelihood of errors or outdated information from document to document
- Model Error-proofing tools can locate early possible contradictions in Cube Sat variants
- Ad-Hoc and What If analysis

# CONCLUSIONS

**This system modeling approach:**

- **Improved the consistency of the information, and reduced the amount of resources to manage the changes**
- **Provided a greater capability to display information in more customizable way and make timely and more informed decisions**
- **Increased the efficiency, robustness and minimize the undesired behaviors**
- **Can be expanded to different functional areas of any Product Development, at the desired level of detail**

**SysML Approach creates a very Elegant Solution which is game-changer for the Automotive Industry**
