We wish to thank everyone at the Marshall Space Flight Center and NASA headquarters who contributed to the completion of this study. Special thanks to Paul McKinney, Jason Shoemate, and Gary Willis (Project Manager) for their effective management and coordination of this effort. Clarifications provided by John Aitchison to our many inquiries about technical data and information were invaluable. We also thank Rebecca Patton and others who provided feedback on the content and presentation of the report at various stages of the study.

EXECUTIVE SUMMARY

This study is an assessment of the economic impacts of the National Aeronautics and Space Administration (NASA), the agency's Moon to Mars (M2M) campaign, and their investments in climate change research and technology for the Fiscal Year (FY) 2021. The assessment consists of three parts. The first part presents the estimation of NASA impacts on the U.S., each of the fifty (50) states, and Washington, D.C. The second and third parts analyze economic impacts attributable to the M2M campaign and the investments in climate change research and technology, respectively, on the same set of regions. The purpose of the economic impact assessment is to quantify the changes in employment, income, levels of business activity, and government revenue throughout the entire economy that result from NASA's activities, the M2M campaign and investments in climate change research and technology expenditures.

National Aeronautics and Space Administration (NASA)

NASA supports hundreds of thousands of jobs and contributes billions of dollars of tax base for states and the nation. This report tracks and details economic impact of NASA expenditures across the United States, in the fifty states, and Washington, D.C. for the Fiscal Year 2021. The report estimates the economic benefits generated directly by NASA along with the very substantial additional economic activity created through the purchasing actions, labor income, and consumption spending that follow from the operations of the NASA centers and programs.

At the national level, NASA has 17,736 full-time equivalent (FTE) jobs, paying more than \$3.2 billion in annual wages and benefits (Fiscal Year 2021). Yet NASA's economic impact goes well beyond its immediate employment footprint. Wide-ranging benefits are created for local and state economies as well as the U.S. economy as NASA contracts for goods and services boost activity throughout the economy. The more than \$21.2 billion in contracting activity (including pcard transactions) originating from NASA is very diverse, involving varied sets of manufacturing and service production sectors. Total NASA contracting and labor income amounts to \$24.5 billion (including \$3.252 billion of labor income + \$21.173 billion of procurement activity + \$61 million of pcard spending).

The impact estimates reported in this study are the sum of three channels of economic impact: (1) the direct contribution of NASA's own activities; (2) indirect (contracting) activities within NASA's U.S. supply chain; and (3) the induced effect that results as federal civil servants at NASA facilities, employees of contractors, and employees within the supply chain of those contractors spend their wages in the wider consumer economy. Some highlights of the economic impacts that occur throughout the national economy from the activities of NASA include:

- The total employment sustained by NASA across the U.S. is estimated to be 339,645 jobs.¹

¹ Jobs are reported as an annualized combination of full- and part-time jobs based on the average output per employee for a given industry.

- At the national level, NASA supports labor income of \$25.7 billion per year and an estimated economic output of \$71.2 billion annually. The approximately \$75,855 in average annual labor income per job is 18% greater than the average across the U.S. economy (\$64,498). The difference between average labor income (including wages and benefits) for a NASA civil servant (\$168,361) and the U.S. average (\$64,498) is much more significant (261% of the U.S. average), reflecting the highly skilled and high-paid nature of NASA jobs compared to the average job in the U.S. economy.
- NASA generates an estimated \$7.7 billion in federal, state, and local tax revenues throughout the U.S. annually.
- For every FTE job located at a NASA facility, nearly 18 additional jobs are supported throughout the U.S. economy.² For each million dollars of labor income earned by NASA civil service employees, an additional \$6.9 million of labor income is generated in the U.S. And for each million dollars-worth of output produced by NASA, an additional \$7.2 million of output—consisting of both intermediary inputs and consumption goods and services—is produced throughout the national economy. These figures are boosted by the large volume of procurement spending administered through NASA.³
- The top ten most impacted sectors account for approximately half of total NASA employment impacts. Scientific research and development services is the most affected sector—20 percent of total NASA impacts are concentrated in this sector.
- NASA impacts are concentrated geographically as well. The top ten most impacted states account for 90% of total NASA employment impacts. These states are California, Texas, Alabama, Florida, Maryland, Virginia, Colorado, Ohio, Mississippi, and Utah. Impacts on Washington, Arizona, Massachusetts, Louisiana, and New York also are relatively large. Figures 1 and 2 below illustrate the employment and output impacts of NASA across the states.
- Approximately 28% of overall NASA agency impacts in the U.S. are attributable to the M2M campaign. The M2M-specific employment accounts for 2% of overall NASA employment impacts while M2M-related procurement accounts for 26% of overall NASA employment impacts.

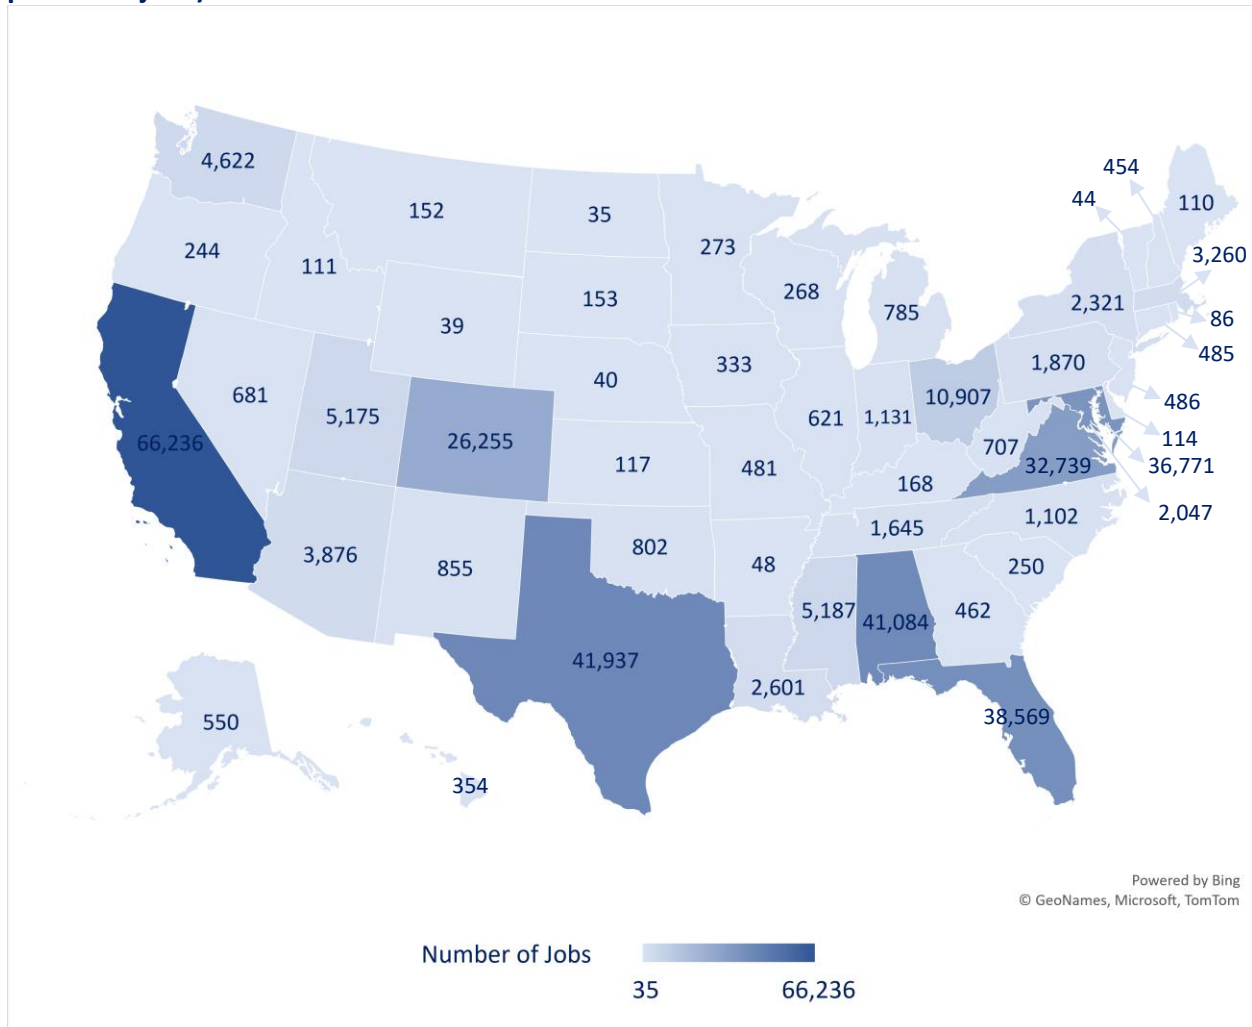

² “Supports” means partial or full support. We use “supported” instead of “created” to be conservative in our attribution of impacts to NASA. While NASA activities create new positions in some sectors of the economy, in many instances NASA helps sustain existing jobs in the economy.

³ The multipliers reported here are larger than is typical for this kind of study because of the volume of NASA contracting activity, all of which is classified as indirect impact. Additional multipliers calculated in the “conventional” way are reported in the Appendix. Two sets of multipliers are presented: one set for NASA employment and one for NASA procurement spending.

- Approximately 11% of overall NASA agency impacts in the U.S. are attributable to the Climate Change activities. The Climate Change-specific employment accounts for 1% of overall NASA employment impacts while the Climate Change-related procurement accounts for 10% of overall NASA employment impacts.⁴

Moon to Mars (M2M) Campaign

NASA’s human lunar exploration plans under Artemis include sending the first woman and first person of color to the surface of the Moon and establishing sustainable exploration by the end of the decade. Working with U.S. companies and international partners, NASA will uncover new scientific discoveries and lay the foundation for long-term lunar exploration and development. The agency will use what it learns on the Moon to prepare for humanity’s next giant leap – sending astronauts to Mars.

It all starts with U.S. companies delivering scientific instruments and technology demonstrations to the lunar surface, followed by a spaceship, called the Gateway, in orbit around the Moon that will support human and scientific missions, and human landers that will take astronauts to the surface of the Moon. The agency’s powerful Space Launch System rocket and Orion spacecraft are the backbone to building the Gateway and transporting astronauts to and from Earth.⁵

NASA's Moon to Mars (M2M) campaign employs thousands of highly paid skilled professionals, and the U.S. government channels billions of dollars of federal spending on M2M into the states in the form of contracts. At the national level, NASA has 2,474 FTEs to support the M2M campaign, paying more than \$440 million in annual wages and benefits. The M2M campaign's economic impact goes well beyond its immediate economic footprint represented by the employment of NASA civil servants. Wide-ranging benefits are created for the local and state economies as well as the U.S. economy as NASA's contracting for goods and services boosts economic activity elsewhere in the country. The nearly \$6.7 billion in M2M contracting activity originating from NASA headquarters and centers involves almost every major category of manufacturing or service production. M2M contracts to firms, government agencies, and academic institutions not only support the U.S. aerospace industry but also result in advanced development and innovative solutions in areas including materials, structures, avionics, software, and analysis techniques.

Some highlights of the economic impacts that occur throughout the national economy from M2M activities include:

- The estimated amount of employment generated by M2M activities across the U.S. is 93,731 jobs.⁶
- The M2M campaign supports labor income of \$7.1 billion per year and an estimated economic output of \$20.1 billion annually.
- The M2M campaign generates an estimated \$2.2 billion in federal, state, and local tax revenues throughout the U.S. each year.
- For every (FTE) civil service job located at NASA centers related to M2M, nearly 37 additional jobs are supported throughout the U.S. economy. For each million dollars of labor income earned by M2M-assigned NASA employees, an additional estimated \$15.2 million of labor income is generated in the U.S. And for each \$1 million worth of output produced by the M2M campaign, an additional \$15.7 million of output—consisting of both intermediary inputs and consumption goods and services—is produced throughout the national economy. These figures are exceptionally large because of the extremely high volume of procurement spending relative to civil service employment.
- Finally, Figures 3 and 4 below illustrate the employment and output impacts of the M2M campaign across the states. Alabama, Colorado, Texas, California, Florida, Utah, Washington, Virginia, Ohio, and Louisiana are the most impacted states, respectively. These ten states account for 96 percent of all M2M-related employment impacts. As a share of overall NASA impacts, M2M campaign impacts are heavily concentrated in some states. Among the top ten most impacted states (by the M2M campaign), more than half

of the NASA impacts in Utah, Washington, Alabama, and Colorado are attributable to the M2M campaign (Figure 5).

Investments in Climate Change Research and Technology

NASA is a global leader in studying Earth’s changing climate. The agency’s observations of Earth from space, the air, and on the ground are helping humans learn how the interconnected systems of the planet interact.

NASA has a broad climate research program. Among the many areas NASA studies are greenhouse gases, temperature change, changes in sea ice and land ice, sea level rise, clouds and precipitation, and air pollution. NASA also develops technologies that can be used to mitigate or adapt to climate change, like sustainable aviation technologies.

In addition to providing the nation and world with unique climate observations, analysis, and modeling, this research helps NASA better assess the impacts of climate change on its mission and ensure the resiliency of its facilities and assets. NASA’s capabilities in researching Earth and its atmosphere will continue to be critical in understanding causes and effects of temperature changes, sea level rise, and other major climate changes.⁷

NASA’s investments in climate change research and technology employs thousands of highly paid skilled professionals, and the U.S. government channels billions of dollars of federal spending into the states in the form of contracts. At the national level, NASA has 1,844 FTEs to support the investments in climate change research and technology, paying approximately \$330 million in

annual wages and benefits. The agency's investments in climate change research and technology goes well beyond its immediate economic footprint represented by the employment of NASA civil servants. Wide-ranging benefits are created for local, state, and national economies as NASA's contracting for goods and services boosts economic activity elsewhere in the country. Approximately \$2.2 billion in contracts originating from NASA headquarters and centers involve different categories of manufacturing or service production. The agency's investments in climate change research and technology contracts to firms, government entities, and academic institutions help the U.S. maintain its global leadership role in collecting and disseminating systematic climate data that are increasingly critical to many aspects of life on Earth from agriculture to energy and national security.

Some highlights of the economic impacts that occur throughout the national economy from NASA climate change research and technology investments include:

- The estimated amount of employment generated through NASA's investments in climate change research and technology across the U.S. was 37,005 jobs.⁸
- The agency's investments in climate change research and technology supports labor income of \$2.7 billion per year and an estimated economic output of \$7.4 billion annually.
- NASA's investments in climate change research and technology generates an estimated \$810 million in federal, state, and local tax revenues throughout the U.S. each year.
- For every (FTE) civil service job located at NASA centers related to investments in climate change research and technology, 19 additional jobs are supported throughout the U.S. economy. For each million dollars of labor income earned by investments in climate change research and technology-assigned NASA employees, an additional \$7.2 million of labor income is generated in the U.S. And for each \$1 million worth of output produced by NASA's investments in climate change research and technology, an additional \$7.2 million of output—consisting of both intermediary inputs and consumption goods and services—is produced throughout the national economy.
- Finally, Figures 6 and 7 below illustrate the employment and output impacts of the agency's investments in climate change research and technology across the states. California, Maryland, Virginia, Colorado, Florida, Ohio, Alabama, Massachusetts, Texas, and New York are the most impacted states, respectively. These ten states account for 86 percent of all climate change research and technology investments related employment impacts. As a share of overall NASA impacts, investments in climate change research and technology's impacts are heavily concentrated in some states. Among the top ten most impacted states (by NASA investments in climate change research and technology), a considerable portion of the overall NASA impacts in Massachusetts and New York are

INTRODUCTION

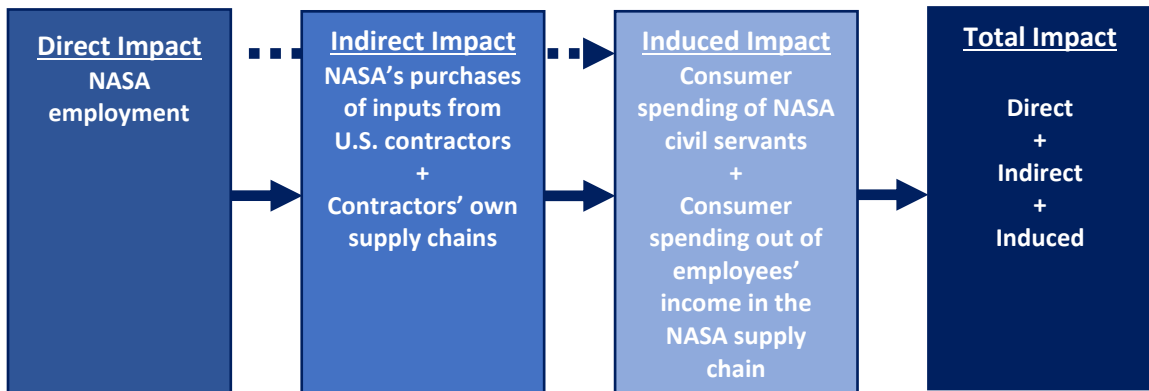

This study is an assessment of the economic impacts of the National Aeronautics and Space Administration (NASA), the Moon to Mars (M2M) campaign, and the investments in climate change research and technology for the Fiscal Year 2021. The assessment consists of three parts. The first part presents the estimation of NASA impacts on the U.S. as a whole, each of the fifty (50) states, and the Washington, D.C. The second part analyzes economic impacts attributable to the M2M campaign on the same set of regions. The third part analyzes economic impacts attributable to the investments in climate change research and technology on the same set of regions. The purpose of the economic impact assessment is to quantify the changes in employment, income, levels of business activity, and government revenue throughout the entire economy that result from NASA's activities, and the M2M campaign and the investments in climate change research and technology.

We present direct, indirect, and induced employment impacts (see Box 1) along with output, labor income, and tax revenue impacts for each of the geographic regions mentioned above (see Box 2).

Box 1: Types of Economic Impact

- **Direct impacts** – the activity or event to be assessed, typically specified as a change in demand for the output of an industry or a change in an industry's employment.
- **Indirect impacts** – economic activity resulting from the increase or decrease in input purchases within the region by the industry directly impacted in response to the change in demand or employment. In the context of this study, indirect effects are the purchases of goods and services by government agencies and private sector contractors as well as by the industries that supply them. Examples include an aerospace firm carrying out contract work for NASA and that aerospace firm's purchases of electronic components and engineering consulting services from other firms to enable its own production.
- **Induced impacts** – economic activity resulting from all affected industries paying wages and benefits to their employees and allocating profit to their owners, some portion of which is spent within the region on consumer goods and services.
- **Total impacts** – the sum of direct, indirect, and induced impacts (see Figure 1).

Figure 1: Direct, Indirect, Induced, and Total Economic Impacts

Note: This figure is adapted from Oxford Economics (2015).

Box 2: Types of Economic Activity

- **Employment** – the annual average of monthly jobs in the economy/industry. The number consists of both *full-time* and *part-time* jobs.
- **Labor Income** – total of all forms of employment income for a year, including employee compensation (wages and benefits) and proprietor income.
- **Value Added** – the difference between an industry’s, or an establishment’s, total output, and the cost of its intermediate inputs for a year. Value added is, equivalently, payment to labor (employee compensation) and rent to capital (profit) plus business taxes. Value added is a measure of the contribution to gross domestic product (at the national, state, or local scale) made by an individual producer, industry, or sector. Direct value added is calculated using the estimated ratios of value added-to-employee in the following industries: (i) guided missile and space vehicle manufacturing, (ii) propulsion units and parts for space vehicles and guided missiles.
- **Output** – the value of annual industry production. Output is reported in producer prices, separating margins such as for wholesale distribution, transportation, and retail into those respective industries. Production at NASA facilities has three components: (1) The direct output component represents the value of all activities at NASA (research and development, production, and management), including both those outputs that are sold to consumers (final consumption) and those that are inputs into further production (intermediary products and services). Direct output is calculated using the estimated ratios of output-to-employee in the following industries: (i) guided missile and space vehicle manufacturing, (ii) propulsion units and parts for space vehicles and guided missiles (2) The indirect component is the value of the goods and services produced in industries that supply the activities at NASA facilities, and the value of the goods and services that are in the supply chain of those industries. (3) The induced component is the value of goods and services, both intermediary and final consumption, that are produced in response to labor income spending of employees in all affected industries. Please note that the term production as used here is not equivalent to product as used GDP for Value Added (see above).
- **Tax Revenues** – the annual taxes collected by federal, state, and local governments through income, payroll, import, corporate, and property taxes, as well as some forms of licenses. Tax revenue estimates are generated from the application of average (per capita and per employee) tax rates and license fees averaged across multiple jurisdictions within a study region and should be treated as only rough approximations.

The modeling approach adopted in this study is to represent outcomes of complex economic relations in aggregate form to enable ready connections between impact-generating event categories and their impacts. Accordingly, beside the estimates of the total economic impacts, our report provides impact multiplier factors (or multipliers for short) for different types of outcomes (see Box 3) that can be used to quickly assess the total scope and sectoral impact of relatively small employment and procurement changes in the future. The shift in the triggering or direct event—such as an increase in employment or a decrease in procurement amount—can simply be multiplied by the relevant outcome multiplier to produce an estimate of the total effect magnitude (direct, indirect, and induced). This procedure is appropriate for situations in which major economic features and relationships, such as employee location patterns and industry purchasing linkages, are not expected to change. Small shifts are generally appropriate, but large changes in the economy may alter inter-industry relationships and require model reevaluation. (The threshold where changes shift from small to large is determined by analyst judgment.)

Box 3: Multipliers

- **Employment multiplier** – the estimated ratio of the change in total local employment to the change in direct employment. For example, an employment multiplier of 3.00 indicates that the creation of 1 direct new job is expected to support 2 additional jobs in the local economy, for a total impact of 3 new jobs.
- **Income multiplier** – the estimated ratio of the change in total income throughout the local economy to the change in income from direct employment. It is calculated analogously to the employment multiplier. For example, an income multiplier of 2.75 indicates that a \$1.00 change in income in the industry directly affected by the events being considered is expected to result in an additional income of \$1.75 throughout the local economy, for a total income impact of \$2.75.
- **Value added multiplier** – the estimated ratio of the change in total value added throughout the local economy to the change in value added from direct employment. The value-added multiplier is calculated analogously to the employment, income, and output multipliers.
- **Output multiplier** – the estimated ratio of the change in total output (i.e., gross sales and additions to inventory) throughout the economy to the change in output from direct employment. The output multiplier is calculated analogously to the employment, income, and value added multipliers.

An input-output modeling framework is used to estimate the impacts. We utilize IMPLAN (Impact analysis for PLANning) software and 2019 industry data, the most current pre-pandemic dataset available at the initiation of the study (see Box 4).

Box 4: IMPLAN Industry Data

We used 2019 industry data (economic modeling data from IMPLAN), FY2021 NASA procurement, and FY2021 NASA labor income data provided by NASA. The economic modeling data are the estimates of industry-to-industry purchasing and spending interactions that are produced by IMPLAN. We believe it is the better data set to use rather than the COVID-19 impacted 2020 IMPLAN data set as a closer reference for the current and near future economic structure.

Using 2020 IMPLAN data would result in impact estimates that would reflect the disproportionate impacts of the pandemic on certain industries (e.g., hospitality, air transportation, restaurants) as well as the measures taken by the federal government to mitigate the impact of the pandemic on businesses and consumers. Specifically, 2020 IMPLAN data incorporate stimulus payments and expanded unemployment benefits into the Social Accounting Matrix for households, higher observed personal savings rates, reductions in federal taxes on production (due to the paycheck protection program), and reductions in industry activity and earnings due to shutdowns. For example, the treatment of the paycheck protection program as business subsidy by IMPLAN may cause taxes on production and imports (TOPI) to be negative if subsidy is greater than taxes paid. Increased savings may result in lower induced impacts than expected in normal times.

Although some pandemic-induced economic changes may be permanent, more of these changes are expected to be temporary and economic and societal functions to return to something close to their pre-COVID state. We therefore believe 2019 IMPLAN data provides for better comparison estimates of overall economic impacts comparable to past and future.

National Aeronautics and Space Administration (NASA)¹

The National Aeronautics and Space Administration (NASA) is responsible for unique scientific and technological achievements in human spaceflight, aeronautics, space science, and space applications that have had widespread impacts on our nation and the world. Established in 1958, NASA has been the center of U.S. civil aerospace research and development for more than half a century.

In addition to agency leadership (Headquarters), NASA has research and flight centers and facilities with unique capabilities:

NASA Research and Flight Centers

- Ames Research Center (IT, fundamental aeronautics, bio, and space science technologies)
- Armstrong Flight Research Center (Flight research)
- Glenn Research Center (Aeropropulsion and communications technologies)

¹ Information is obtained from <https://www.nasa.gov/content/nasa-history-overview> and https://www.nasa.gov/about/org_index.html.

- Goddard Space Flight Center (Earth, the solar system, universe observations, and space communications and navigation)
- Johnson Space Center (Human space exploration)
- Kennedy Space Center (Prepare and launch missions around the Earth and beyond)
- Langley Research Center (Aviation, space technology, and Earth science)
- Marshall Space Flight Center (Space transportation and propulsion technologies)
- Stennis Space Center (Rocket propulsion testing and remote sensing technology)
- Goddard Institute for Space Studies (Broad study of global climate change)

NASA Facilities and Labs

- Jet Propulsion Laboratory (Robotic exploration of the solar system)
- Katherine Johnson Independent Verification and Validation Facility (Provides safety and cost-effectiveness for mission critical software)
- Michoud Assembly Facility (Manufacture and assembly of critical hardware for exploration vehicles)
- NASA Engineering and Safety Center (Independent testing, analysis, and assessments of NASA's high-risk projects)
- NASA Safety Center (Development of personnel, processes and tools needed for the safe and successful achievement of strategic goals)
- NASA Shared Services Center (Financial management, human resources, information technology, and procurement)
- Wallops Flight Facility (Suborbital Research Programs)
- NASA Goddard Institute for Space Studies (Broad study of global climate change)
- NASA White Sands Test Facility (Engine and hazardous materials, components and systems testing and analysis)

Results from NASA's research and development activities ripple throughout the national economy, supporting high-tech industries and creating or sustaining tens of thousands of knowledge-intensive jobs. In addition, NASA invests in economically valuable technologies that help the nation maintain its competitive advantage. NASA develops hundreds of new technologies each year and transfers thousands of products, services, and processes to private businesses. These transfers improve U.S. businesses productivity and global competitiveness. Given the multidimensional nature of the benefits originating from NASA facilities, no single metric can capture the returns from its activities. This report focuses on NASA's economic impacts that can be reliably and precisely quantified through economic input-output models.

Moon to Mars (M2M) Campaign²

NASA's human lunar exploration plans under Artemis call for sending the first woman and first person of color to the surface of the Moon and establishing sustainable exploration by the end of the decade. Working with U.S. companies and international partners, NASA will uncover new scientific discoveries and lay the foundation for long-term lunar exploration and development. The agency will use what it learns on the Moon to prepare for humanity's next giant leap – sending astronauts to Mars.

It all starts with U.S. companies delivering scientific instruments and technology demonstrations to the lunar surface, followed by a spaceship, called the Gateway, in orbit around the Moon that will support human and scientific missions, and human landers that will take astronauts to the surface of the Moon. The agency's powerful Space Launch System rocket and Orion spacecraft are the backbone to build the Gateway and transport astronauts to and from Earth. The following represents the variety of programs and projects of the M2M campaign:

- The Space Launch System
- Orion spacecraft
- All ground support equipment for development, testing, and launch of SLS/Orion
- Gateway
- Human Landing System
- Space suits for lunar surface operations
- In situ resource utilization, surface power systems, life support, and other advanced technology developments for a sustained lunar presence
- Mars 2020 & Sample Return
- Commercial Lunar Payload Services

Investments in Climate Change Research and Technology³

NASA is a global leader in studying Earth's changing climate. The agency's observations of Earth from space, the air, and on the ground are helping humans learn how the interconnected systems of the planet interact.

NASA has a broad climate research program. Among the many areas NASA studies are greenhouse gases, temperature change, changes in sea ice and land ice, sea level rise,

clouds and precipitation, and air pollution. NASA also develops technologies that can be used to mitigate or adapt to climate change, like sustainable aviation technologies.

In addition to providing the nation and world with unique climate observations, analysis, and modeling, this research helps NASA better assess the impacts of climate change on its mission and ensure the resiliency of its facilities and assets. NASA's capabilities in researching Earth and its atmosphere will continue to be critical in understanding causes and effects of temperature changes, sea level rise, and other major climate changes. The following represents the variety of programs and projects included in NASA's investments in climate change research and technology:

- Earth Science Activities
 - *Earth Science Research*
 - *Earth Systematic Mission*
 - *Earth System Science Pathfinder Applied Science (Pathways, including SERVIR)*
 - *Earth System Explorers*

Report Organization

The extensive activities of NASA and the unique capabilities of the Moon-to-Mars campaign and the investments in climate change research and technology encompass significant research and development (R&D) as well as manufacturing in aerospace and related industries that require the hiring of thousands of highly skilled scientists and engineers. NASA expends millions of dollars in many states in the form of direct employment and contracts with private sector vendors. This infusion of federal spending in the form of labor income and procurement in turn supports thousands of additional jobs and millions of dollars of state and local government tax revenues across the country. This study quantifies these economic impacts and analyzes their significance for the economies involved.

The report is organized as follows. Immediately following this introduction, Section 2 surveys the pertinent literature and provides a brief theoretical background for the modeling process, describing the steps taken to conduct the economic impact analysis. Section 3 describes the data used in the study, examining NASA employment at various research and flight centers (including information related to labor income and employee residences) along with contract awards originating from NASA and those related to the M2M campaign and the investments in climate change research and technology (including the geographic distribution of these contracts). Understanding the data is key to understanding the approach and for interpreting the results of the economic impact analysis. Section 4 discusses the modeling approach, employing data and software from IMPLAN. Section 5 examines additional issues surrounding the impact estimates, focusing largely on the geographic designation of impact regions and the specification of economic activities and events—the inputs into the models. These two sections (4 and 5) detail the modifications we made to the basic IMPLAN model and the most important assumptions that underlie the impact estimates, as well as the rationales behind them. Finally, Section 6 provides estimates of the economic impacts generated by NASA, the M2M campaign, the investments in climate change research and technology and analyzes the meaning of these impacts for the economies involved.

LITERATURE SURVEY

The Conceptual Bases of Economic Impact Analysis

Economic impact analysis involves applying a change in final demand to a descriptive economic model and then analyzing the resulting changes in the economy. A concise definition of impact analysis is that it is an assessment of the overall changes in an economy that occur as a result of one or more changes in specific economic activities (IMPLAN, 2004).

Export base theory (also termed economic base theory) provides the conceptual foundation for input-output economic impact assessment models. The first of two fundamental concepts that undergird export base theory is that an area's economy can be divided into two types of economic units: (1) basic and (2) non-basic. The **basic sector** is defined as those firms that sell goods and services to markets outside the local area. The revenue received by basic sector firms for their exports of goods and services is termed basic income. The remainder of the area's economy consists of those firms that supply goods and services to customers within the area. These firms are referred to as the **non-basic sector** or sometimes as **residential or local trade and service** activities.

The second key concept of export base theory is that the level of non-basic activity in an area is determined by the level of basic activity, and a given change in the level of basic activity brings about a predictable change in the level of non-basic activities. This relationship is known as the **multiplier** effect. Thus, export base theory emphasizes external demand for the products of the basic sector as the principal force determining change in an area's level of economic activity (Leistritz, 1994).

The basis for the multiplier effect is the interdependence of (or linkages between) the basic and non-basic sectors within an area's economy. As the basic sector expands, it requires more inputs (for example, labor and supplies). Some of these inputs are purchased from local firms and households. As the firms in the non-basic sector expand their sales to the basic sector, they too must purchase more inputs, their suppliers in turn must increase their own input purchases, and so on. Increased wages and salaries paid to labor and management in the basic sector, together with similar increases in the non-basic sector, lead to increases in the incomes of area households. Some of this additional income is spent locally for goods and services, some is saved, and some leaves the area economy as payments for imported goods and services (or as additional tax payments to government). To the extent that additional income is spent locally for goods and services, the output of local firms increases further, resulting in additional cycles of input purchases, income increases and consumption expenditures. This cycle of spending and re-spending within the local economy is the basis of the multiplier effect (Leistritz & Murdock, 1981). The magnitude of the multiplier effect is determined by the proportions of a given dollar of additional input purchases and a given dollar of income spent locally.

High multiplier values are associated with high levels of local purchases and spending, which typically reflect a diversified, relatively self-sufficient economy. Larger regions tend to have higher multiplier values.

The Principles of Economic Impact Analysis

To begin the process of estimating economic impacts, it is important to identify the counterfactual scenario against which the specific changes in economic activity are contrasted (Drucker, 2015). For example, if local industries are expected to increase their activity due to a rise in demand for their products or services, the source of that demand—the economic agent or agents seeking the additional products or services—could be considered to have made a choice versus seeking a different set of products or services or obtaining them instead from industries in a different location. In this study, wherein the federal employees' labor income at NASA facilities and the procurement originating from NASA constitute the changes in economic activity that are examined, we consider these changes relative to a hypothetical situation of zero NASA employment and procurement activity. Although this counterfactual of no activity is unrealistic on a nationwide basis in that the federal government resources currently applied to NASA would likely be expended for other tasks or through different federal agencies, a hypothetical baseline scenario of zero replacement activity is a common strategy for impact analyses seeking to obtain measures of the entire economic impact of a particular institution and its associated activities. For smaller geographic regions, such as a state, the counterfactual scenario of zero activity is more realistic because there is no reason to suppose that the allocation of federal resources in the absence of the NASA would concentrate in that specific state. This principle applies to the M2M campaign and the investments in climate change research and technology as well.

After determining the counterfactual scenario, the next step is to identify the topic or topics of concern as a set of economic events defined by expenditures. These expenditures constitute the initial changes that stimulate further activity throughout the economy. The actions and the economic activity they stimulate together comprise the impacts. Although impact modeling software (such as IMPLAN) provides a framework to conduct an analysis of economic impacts, each stage of an analysis should be carefully scrutinized to make sure it is logical. Procedures and assumptions ought to be validated prior to entry into the model (IMPLAN, 2004). Furthermore, understanding how an industry and the various parts of its supply chain respond to changes in demand and judging the validity of the assumptions made as part of operationalizing a regional input–output model are essential to usefully interpreting the outputs of an economic impact model (Drucker, 2015; Low & Isserman, 2009). The key assumptions and their implications are detailed in the following sections of the report.

Economic impact analysis is a projection process, and the figures generated should be regarded as reasonable approximations and estimates rather than as accurate

predictions. There are several points in the conduct of an economic impact analysis where modeling choices and underlying assumptions substantially affect the final results. To avoid inadvertent errors or misapplications, economic impact analyses should include clear documentation of the procedures applied to obtain the initial events modeled, key underlying assumptions, and the rationales for both (Crompton *et al.*, 2001).

The Importance of Economic Impact Analysis to Public Policy Making

Economic impact assessment has developed as a pragmatic approach that attempts to bring appropriate concepts and tools from regional economics and public finance to bear on problems of concern to policy makers (Leistriz, 1994). Practitioners use impact analysis for different purposes. For example, it might be used to measure the impacts of a new factory moving into an area. Governments use impact analysis to inform and guide policy decisions and planning. Researchers use impact analysis to study relationships among different elements in an economy (IMPLAN, 2004).

The increasing demand for economic impact analyses by public agencies can be explained in two ways. First, economic impact assessments are sought by policy makers and resource managers because they address issues that are key to a wide variety of decisions. For example, in determining whether to designate certain public lands as wilderness areas, land managers may need to consider the economic and fiscal impacts of alternative land uses (e.g., wilderness versus ranching or mining). When large-scale mining and resource development projects have been proposed, the local economic and fiscal impacts often have been one of the principal topics of debate.

Second, as state and local governments become more heavily involved in economic development efforts, economic impact analysis tools can be useful in establishing priorities for incentive programs. While a number of states are now using selected measures of direct economic impact (most commonly the number of jobs created) as criteria in awarding financial support, the total economic impact (including secondary effects) is probably a more meaningful criterion (Leistriz, 1994). This also explains why a key purpose of economic impact studies is to measure the economic return to residents (Crompton *et al.*, 2001). Public interest in economic impacts is ultimately a concern about people and their standard of living (Siegfried *et al.*, 2007).

DATA ANALYSIS

Description of NASA Data

NASA supplied information about activities at NASA headquarters and research and flight centers including salary, benefits, and total labor income in all 50 states as well as in D.C. This data contains places of residence for NASA employees living in different states (with all individual identifiers removed). Procurement data for NASA list contract amounts awarded to vendors located in different parts of the country with a brief description of the activity or service that vendors were awarded to carry out for NASA. NASA provides funding not only to private sector firms, but also to colleges and universities, federal government agencies, and civic organizations in the form of research and development contracts as well as grants. Both the recipients and the types of activity contracted by NASA are diverse; the latter involves most of the categories of manufacturing or service industries contained within the IMPLAN model.

NASA provided M2M-specific procurement data, listing suppliers and corresponding dollar amounts for the campaign's contractors. In addition to the geographical location of each of these suppliers, including overseas vendors, the items purchased, and services provided by these vendors were detailed. Similar to NASA, the contracting activity attributable to the M2M campaign is diverse in terms of the type of economic activity and vendor locations. The M2M-specific contracting activity originating from NASA is related mostly to scientific research and development services, facilities support services, professional and technical services, software development, and electronic and precision equipment repair and maintenance.

NASA provided climate change research and technology-specific procurement data, listing suppliers and corresponding dollar amounts for the contractors. In addition to the geographical location of each of these suppliers, including overseas vendors, the items purchased, and services provided by these vendors were detailed. Climate change research and technology-specific contracting activity originating from NASA is related mostly to scientific research and development services, professional and technical services, and grants and contributions.

All data and outputs of this economic impact analysis pertain to Fiscal Year 2021 (October 1, 2020, through September 31, 2021).

NASA Activities

NASA Employment

NASA employs 19,319 civil servants (17,736 FTEs, see Box 5).⁴ Most of the NASA labor force is concentrated in Maryland, Texas, Virginia, Alabama, Florida, California, and Ohio (Table 1 and Figure 2). According to FTE counts, those seven states account for 92% of total NASA employment. Because impact estimates are based on expenditures, it is important to examine the labor income shares that correspond to the employment figures in each region.⁵ The same set of states accounts for the largest portion of labor income earned. As we present in the results (Section 6), the concentration of NASA employment and labor income in those states listed above translates into greater estimated household spending and larger economic impacts relative to the other regions examined.

Box 5: Civil Servant Employee Counts versus Full-time Equivalent (FTEs)

We used FTEs instead of the count of civil servants in the analysis for two reasons. First, given that there are different labor hours/labor income associated with different headcounts in different states, using FTEs provides a more accurate way to compare the share of NASA employment across states. Second, because economic impacts are a function of labor income and changes in labor income are more directly related to FTEs, we used FTEs rather than headcounts. For example, it is possible for labor income to remain the same while the number of employees (civil servant headcounts) decreases. However, changes in FTEs would reflect those changes in labor income and thus will allow the analyst and the reader to more accurately assess the anticipated changes in associated economic impacts.

Table 1: NASA’s Labor Force and Associated Labor Income⁶

State	Employment		Labor Income	
	Jobs (FTE ⁷)	%	Income (\$ thousands)	%
Alabama	2,276	12.8	403,062	12.4
Alaska	2	<0.1	134	<0.1
Arizona	13	0.1	2,230	0.1
Arkansas	3	<0.1	309	<0.1
California	1,812	10.2	353,646	10.9
Colorado	50	0.3	8,899	0.3
Connecticut	9	<0.1	880	<0.1

⁴ Throughout this report, NASA employment refers only to federal civil servants and does not include on-site contractors.

⁵ Unless otherwise mentioned, all monetary values correspond to 2021 dollars.

⁶ Due to rounding decimals, column and row totals may not exactly equal the sums of cell values. This caveat applies to all tables with numerical values throughout the report.

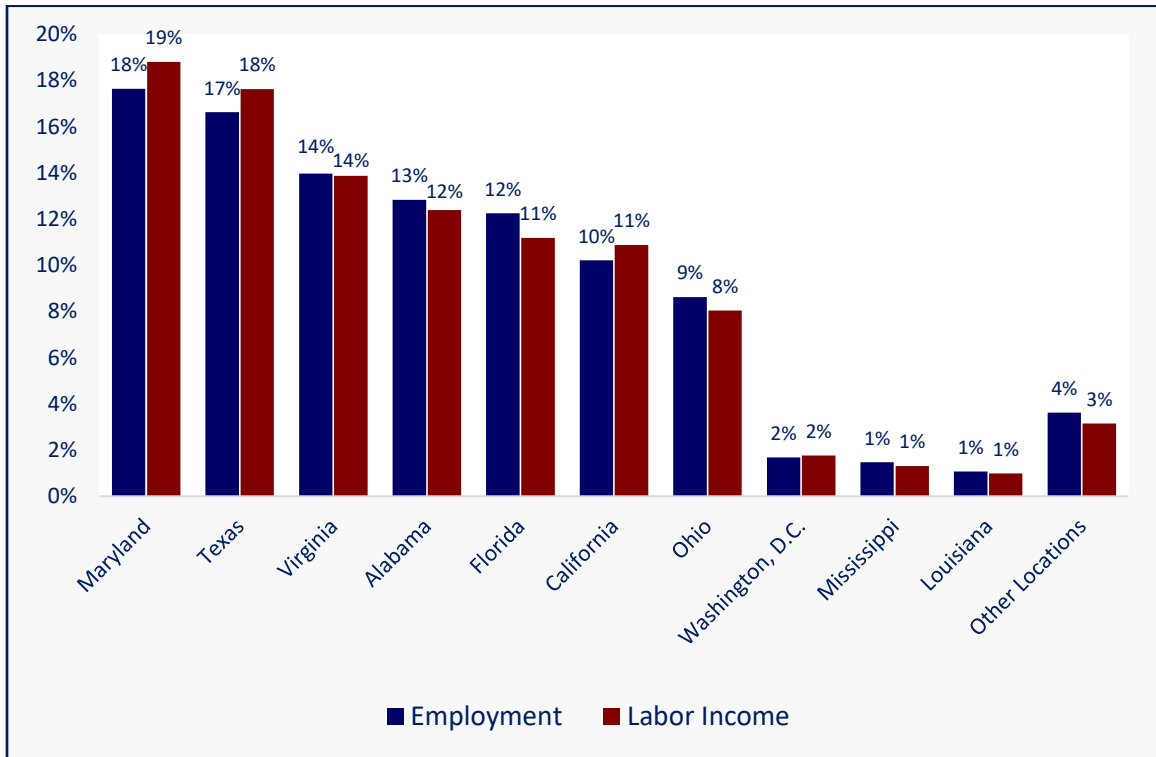

⁷ The acronym FTE stands for “full-time equivalent”.

We include "Other Places" in the national model, but not in any of the state models or D.C. [The Bureau of Economic Analysis's National Economic and Product Accounts](#), which underlie the IMPLAN models, define the domestic economy of the U.S. as the 50 states, the District of Columbia, U.S. military installations, embassies, and consulates abroad. NASA Procurement

NASA procurement refers to contracts for goods and/or services originating from NASA headquarters and individual NASA space and flight centers. In Fiscal Year 2021, NASA

allocated \$21.2 billion in expenditures to vendors in 50 states, the District of Columbia, and Puerto Rico, the United States Virgin Islands, and some foreign countries (Table 2 and Figure 3). Of this amount, approximately \$6.7 billion is specific to the M2M campaign, accounting for around 31% of total NASA procurement spending. Of the same amount (NASA procurement), \$2.2 billion is specific to the investments in climate change research and technology, accounting for around 10% of total NASA procurement spending. California is the largest recipient state, accounting for \$4.5 billion, or 21.5% of NASA's total procurement spending.

One feature differentiates NASA procurement spending from NASA employment. First, NASA procurement expenditures are more geographically dispersed. Whereas seven states account for 92% of NASA employment, 82% of NASA procurement is sourced from the top seven states (Figure 3). These different concentrations have implications for the magnitude of the impact estimates attributable to NASA employment and procurement. (Note that on-site contractor employees are not considered directly; the impacts of these contractors are captured through procurement expenditures.)

NASA Employment for the M2M Campaign

NASA directly employs 4,644 civil servants (2,474 FTEs) to support the M2M campaign.⁸ The majority of employees who work on the campaign reside in Texas, Alabama, and Florida; the three states account for more than 77% of the FTE jobs for the M2M campaign. Relatively small but notable numbers of employees live in Ohio, California, and Virginia, whereas other states’ shares of the M2M labor force are minimal (Table 3 and Figure 4).

NASA Procurement for the M2M Campaign

M2M procurement refers to contracts for goods and/or services originating from the different NASA Centers that support the M2M campaign. In Fiscal Year 2021, NASA allocated nearly \$6.7 billion in expenditures to vendors in 48 states and the District of Columbia, and several foreign countries.⁹ Alabama is the largest recipient state, accounting for approximately \$1.9 billion, or 28.5% of NASA's total procurement spending for the M2M campaign (Table 4 and Figure 5).

After Alabama, Colorado is the second largest state recipient of M2M procurement. Contracts performed in this state account for more than \$998 million, or 15.4% of NASA's total procurement spending for the M2M campaign. California is the third largest recipient of M2M procurement. Contracts performed in this state account for more than \$912 million, or 13.7% of NASA's total procurement spending for the M2M campaign. Texas is the fourth largest recipient of M2M procurement. Contracts performed in this state account for more than \$860 million, or 12.9% of NASA's total procurement spending for the M2M campaign. Florida is the fifth largest recipient of M2M procurement. Contracts performed in Florida account for more than \$509 million, or 7.6% of NASA's total procurement spending for the M2M campaign. Several other states' shares of M2M procurement are smaller but still sizeable. Virginia, Washington, and Utah are among such states.

Note: The Pcard purchase data we received did not identify any spending for the M2M campaign. We assumed that the share of Pcard purchases made for the M2M campaign is proportional to the M2M's share of overall NASA procurement in a given state. For example, 72% of NASA's overall procurement in

Alabama is related to the M2M campaign. That means 72% of Pcard purchases in Alabama is assumed to be specific to the M2M campaign. “Other Places” refers to U.S. military bases overseas (i.e., Armed Forces Europe, Armed Forces Pacific; U.S. Territories include U.S. Virgin Islands and Puerto Rico; “Other Countries” refers to foreign countries. NASA Employment for Climate Change Research and Technology

NASA directly employs 3,669 civil servants (1,845 FTEs) to support investments in climate change research and technology.¹⁰ The majority of employees who work on the program reside in Virginia, California, Maryland, Ohio; the four states account for 90% of the FTE jobs for climate change research and technology. Relatively small but notable numbers of employees live in Alabama and Washington, D.C., whereas other states’ shares of the climate change research and technology labor force are minimal (Table 5 and Figure 6).

¹⁰ Throughout this report, the climate change research and technology labor force figures refer only to federal civil servants and do not include on-site contractors.

NASA Procurement for Climate Change Research and Technology

This procurement refers to contracts for goods and/or services originating from the different NASA Centers that support the investments in climate change research and technology. In Fiscal Year 2021, NASA allocated 2.2 billion in expenditures to vendors in 50 states, the District of Columbia, Puerto Rico, the United States Virgin Islands, and some foreign countries.

California is the largest recipient state, accounting for more than \$641 million, or 28.8% of NASA’s total procurement spending for climate change research and technology (Table 6 and Figure 7). After California, Maryland is the second largest state recipient of climate change research and technology procurement. Contracts performed in this state account for nearly \$418 million, or 18.8% of NASA’s total procurement spending for climate change research and technology. Several other states’ shares of climate change research and technology procurement are smaller but still sizeable. Colorado, Virginia, and Florida are among such states.

Note: The Pcard purchase data did not identify any Pcard spending for the investments in climate change research and technology. We assumed that the share of Pcard purchases made for the investments in climate change research and technology is proportional to the climate change research and technology's share of overall NASA procurement in a given state. For example, 2% of NASA's overall procurement in Alabama is related to climate change research and technology. That means 2% of Pcard purchases in Alabama is assumed to be specific to climate change research and technology. MODEL DEVELOPMENT

The model development process consists of scenario building and economic modeling stages that involve considerable judgment regarding how to translate the known information describing NASA economic activity (employment and contracting) into model entries, how to set the values of key parameters, and how to generate estimates for missing or incomplete data.

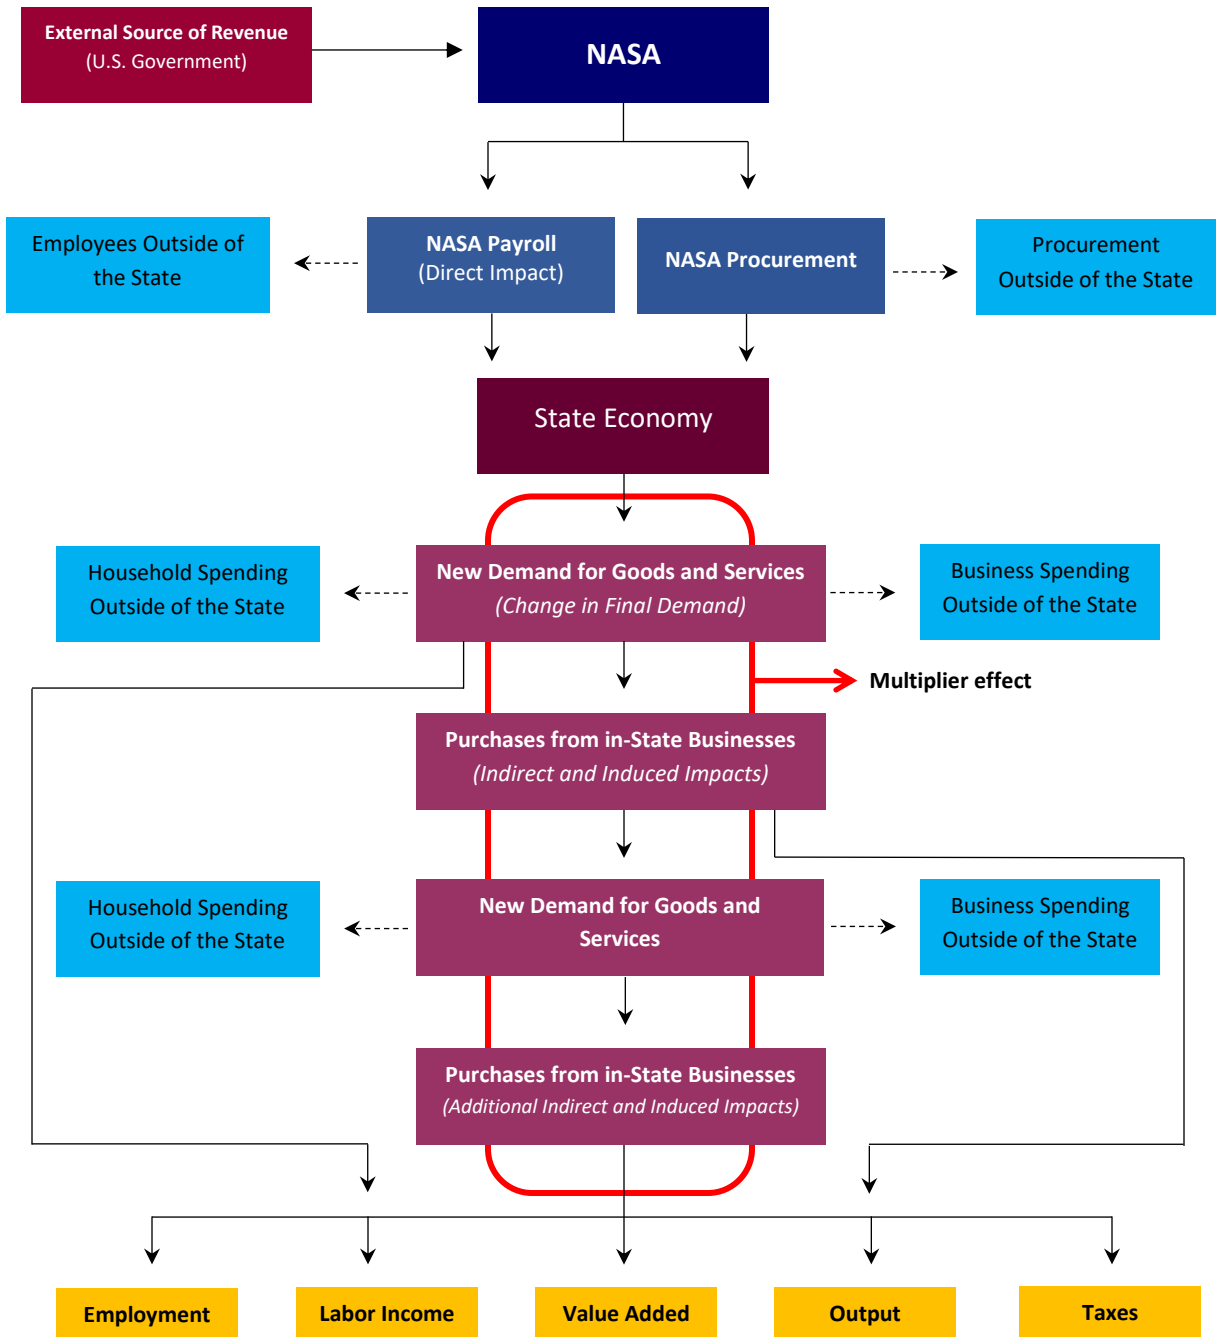

The scenario-building stage involves careful allocation of employment and contracting activities to the most appropriate industry sectors in the model and determining the geographic location of each of the economic activities to be modeled. This process appears straightforward initially but is more complicated, as it involves questions such as whether a contractor is a manufacturer or a distributor, whether foreign contractors engage with U.S.-based subcontractors, and whether contractors that have a presence in the local area site their main research or organizational units in close proximity or otherwise.

The economic modeling stage consists of building a descriptive input-output model in IMPLAN that can be applied to estimate the effects of the direct employment of NASA, contracting activities, and other aspects of the scenario on all of the sectors of the economy. This stage is where analysts may adjust the default input-output model constructed by the software to represent better the known features of the local economy and match the model assumptions to the particular scenarios being evaluated.

Scenario-Building

The premise of this economic impact assessment is that spending at and through NASA, the M2M campaign, and the investment in climate change research and technology represents an injection of resources into state economies by an external source: the federal government. As described in Section 2, the originator of the event (the source of the resources) determines the counterfactual scenario against which the economic impact analysis is measured. Federal employees' labor income at NASA constitutes an extra-local infusion of resources into the economies examined in this study. According to our scenario, the activities of NASA trigger a cascading series of economic activities in state economies by increasing demand for certain products and services (Figure 8).

Figure 8: Economic Impact of NASA on a State Economy

Note: This figure is adapted from Lendel and Park (2012). Payroll refers to the government agency (NASA). Procurement is only associated with government contracting.

In this process:

- **Direct effects** are comprised of NASA employment.
- **Indirect effects** are purchases of goods and services by NASA as well as by the industries that supply NASA. For example, an aerospace firm carrying out contract work for NASA may purchase electronic components and engineering consulting services from other firms to enable its own production.
- **Induced effects** are the impacts of the consumption spending by employees and business proprietors that is engendered by the direct and indirect effects. In other words, induced impacts result from the household spending of employees and owners of business establishments that supply NASA (indirect) and that earn income from employment at NASA facilities (direct). While direct and indirect impacts vary based on the types of goods and services being produced and purchased, induced impacts typically vary much less in type because they support general consumption. Because the average labor income of NASA employees exceeds the per capita income in the local economies examined, on a per capita basis, the induced impacts resulting from the expenditures of NASA employees are anticipated to exceed the induced impacts resulting from expenditures of employees of the industries that supply NASA.¹¹

This complex web of industrial relations and market transactions is represented by the input-output model in the IMPLAN software. The resulting mathematical formulae allow examination of the effects of change in one or several economic activities on an entire economy.

Study Area Designation and Local Expenditures

Defining the study area affects the extent of estimated impacts. The idea is to cover enough area to include the most important aspects of the impact, yet not too much area, or the effects will be swamped by extraneous economic activity. As impact regions become larger, estimated impact figures rise, and the meaning of a specific economic impact finding for a jurisdiction (e.g., a county or a state) becomes ambiguous in terms of its policy implications. A typical approach is to approximate a functional economic area—a reasonably self-contained economic unit. A functional economic area includes the places where a majority of people live, work, and shop, and sometimes can be identified by physical characteristics or resident behavior.

¹¹ The IMPLAN model accounts for local commuting patterns. For example, if 20% of the workers in a particular industry (e.g., retail) who work in the region live outside of the region, the model will allocate 80% of labor's disposable income into the model to generate induced impacts. The model excludes payments to federal and state taxes and savings based on the locality's average local tax and savings rates. Thus, only the disposable incomes of local workers are included in the model.

There are 52 distinct geographic areas examined in this study.¹² As described in Section 3, NASA employee residences are concentrated in certain states. Contracting activity, however, is spread across the U.S.

Every impact analysis starts with local expenditures. Local expenditures are the changes in demand (events) that occur within the study region and constitute the direct impacts. Below, we describe how local expenditure figures were derived for each of the impact regions.

NASA Impacts:

1. Fifty (50) states and Washington, D.C.: We estimated the portion of employment and contracting activity using state locations of employee residences and vendors.
2. U.S.: All employment and contracting activities are included in the national model except for contractors.

M2M Impacts:

1. Fifty (50) states and Washington, D.C.: We estimated the portion of M2M-specific employment and contracting activity using state locations of employee residences and vendors.
2. U.S.: All employment and contracting activities attributable to the M2M campaign are included in the national model.

Investments in Climate Change Research and Technology Impacts:

3. Fifty (50) states and Washington, D.C.: We estimated the portion of climate change research and technology-specific employment and contracting activity using state locations of employee residences and vendors.
4. U.S.: All employment and contracting activities attributable to the investments in climate change research and technology are included in the national model.

Leakage of Economic Activity in State Models

Leakage of economic activity from a region occurs because local industries are not able to supply all of the intermediate inputs required to produce the change in final demand. In the short run, this may be due to constraints on supply (i.e., producers cannot quickly produce larger quantities of inputs); in both the short and long run, suppliers that produce the required inputs may not exist within the region.

Because of the leakage of economic activity, initial NASA labor income and procurement spending leads to successive rounds of new spending in the impact area (i.e., states) that diminish in size as some economic activity leaves the region in the form of spending outside the local economy (Bess and Ambargis, 2011). (Savings activity also causes later

¹² The U.S. as a whole, each of the 50 states, and Washington, D.C.

rounds of spending to decrease in size compared to initial spending.) The higher the level of leakage, the smaller the total economic impact due to the initial change in the economy.

Typically, economic impact analyses assume that economic activity that leaks out of the impact area has no further effect on the local economy. This assumption may yield an underestimate of local economic impact to the extent that some portion of the leakage “returns”. For instance, a non-local input supplier may itself purchase some of its inputs from within the region being analyzed. In most cases it is not possible to model such return leakage. In conducting an analysis of a single region that is relatively small in comparison to the nation (e.g., a state or a county), however, this return leakage normally is negligible relative to other uncertainties in the impact modeling process.

Economic activity leakage represents a more significant challenge when modeling impacts for a group of regions that substantially trade goods and services among one another. In such a case, it becomes important to account for leakage in the modeling process or impacts for each region would be underestimated. To clarify this concept, consider the example of manufacturing a jet engine. If the production of the engine in state A requires the purchase of turbine blades from state B, then this purchase is a leakage from state A. That means the purchases of goods and services associated with the production of the blades are also excluded from the multiplier of state A. That is to say, if the blade manufacturer in state B purchases quality control services from state A, then the impact of the increase in demand for engineering services from state A is also excluded from the multiplier of state A because the multiplier does not include such feedback effects (return leakage). This is a simple example of unaccounted leakage between two states with three rounds of spending.¹³ The challenge in the current study is much greater as we are dealing with leakage occurring among fifty (50) states plus D.C. with thousands of rounds of spending.

In order to account for the leakage of economic activities from state models, ideally, we might estimate a multi-regional input-output model that includes estimates of the supply and purchase interactions among fifty-one regions (50 states plus D.C.) simultaneously. This is (currently) not feasible due to data and computational limitations. Instead, we follow a three-step, post-modeling approach to capture inter-regional leakage effects. First, we run each state model independently to obtain estimates of the indirect and induced effects occurring in states due to initial NASA spending. Second, we sum these indirect and induced effect estimates across the fifty states and D.C. and subtract this cumulative total from the national total. Third, we allocate the difference found in Step 2 (i.e., the amount un-apportioned due to leakage across state boundaries) to states in proportion to their shares of indirect and induced effects calculated in Step 1. This

¹³ As noted by Coughlin and Mandelbaum (1991), the inability to fully capture interregional feedback effects is one of the biggest limitations of input-output models.

approach forces the national model and the state-level models to be consistent in terms of the magnitude of impacts.

Although the approach generates total national impact figures that are as accurate as possible, it does retain uncertainty at the state level, reflecting the assignment of the un-apportioned impacts to particular states. Because we do not have information on the destination of leakages, we probably overestimate the impact in some states and underestimate it in others. Overestimation would occur if a given state in reality captures a smaller share of the un-apportioned amount than what we allocate. Underestimation would occur if a given state in reality captures a larger share of the un-apportioned amount than what we allocate. Based on the share of the un-apportioned amount in the national total and the state-level industry information available from IMPLAN, we judge that the typical error is likely approximately 15% for NASA models; 17%¹⁴ for M2M models; and 15% for CC models.

Economic Modeling

In this section, we describe how various data items discussed in the previous section are translated into economic events and activities. This step enters the inputs into the impact model, and the economic impact figures (discussed in Section 6) derive from the numbers generated in this step. Before we provide details of the model specification, we briefly review the modeling software, IMPLAN.

IMPLAN is a widely used impact analysis program based on a regional input-output model. At the heart of the model is a matrix of dollar flows called the social accounting matrix (SAM) that is estimated from a combination of national benchmark input-output data and regional information. This matrix accounts for all the dollar flows among different sectors of the regional economy. Unlike some other input-output models, which represent only the purchasing relationships between industry and household sectors, the SAM in IMPLAN includes the economic relationships among government, industry, and household sectors, allowing the modeling of transfer payments such as unemployment insurance.

Using this information, the IMPLAN software models the way a dollar injected into one sector is spent and then circulated through other sectors of the economy, generating waves of economic activity, or so-called “economic multiplier” effects. The model generates a series of multipliers that, in aggregate, describe the economic repercussions of the original activity. For direct events entered in the form of employment, IMPLAN applies estimates of the average output and compensation per worker to translate the direct effects into monetary value figures. It then applies the value of an event to local

¹⁴ This estimate excludes Maine. The value of this estimate would be erroneously higher if we include Maine because the state receives all M2M-specific contracts in one specific sector (other aircraft parts and auxiliary equipment manufacturing).

and national sector-specific production functions and traces these values through subsequent cycles of transactions and payments to estimate the indirect and induced impacts. During each of these cycles, the procedure removes expenditures to government, savings, and extra-local purchases, so that the results reflect only those transactions that impact the local economy.

The process of model development and impact estimation consists of the following steps:

1. Identify new events (direct impacts) to be introduced into the model.
The labor income of employees at NASA facilities and the procurement spending originating from NASA are the direct impacts.
2. Identify the industry sectors affected.
For all NASA activity, we allocated vendors and corresponding contracting totals to industry sectors based on NASA's descriptions of what the contract entails. Descriptions of many of the manufactured items and services rendered were provided, and we used this information to allocate corresponding contracting totals to appropriate industries. In cases where a description was not available or was not explicit enough to allow us to select an industry, we conducted additional web searches visiting vendor companies' web sites and made a selection accordingly. We followed the same procedure for activities related to the M2M campaign and the investments in climate change research and technology.
3. Enter the transaction value dollars based on the year of the model.
Each dollar value must be specified as either purchaser or producer prices. Producer prices are those paid at the factory door, the amount that a producing firm receives for its output. Input-output models in IMPLAN are specified in producer prices.
4. Customize IMPLAN coefficients as appropriate.
We utilized 2019 IMPLAN data to construct the input-output model.¹⁵ 2019 was the most current dataset available at the initiation of the study that is not impacted by the pandemic. The NASA employment and procurement figures are for Fiscal Year 2021. Because input-output relationships among industries usually do not change substantially over relatively short periods of time, the relationships that existed among industries in 2021 are reasonable approximations to those that existed in 2019.

Other than the figures entered to signify new events, the ratio of locally purchased to imported goods is perhaps the most significant numerical figure that affects the multipliers and impact estimates derived from an input-output model. The greater the fraction of goods and services purchased locally, the more local economic activity will be stimulated, and hence the larger the resulting multiplier. For all regional models

¹⁵ Economic impact modeling data are available at <https://www.implan.com/data/>.

other than the national model, we retained the default model estimates, termed Regional Purchase Coefficients (RPCs). RPCs are derived from an econometric equation that predicts local purchase proportions based on the region's characteristics. In the absence of specific information to justify a different approach, the default RPCs typically are the most appropriate choice.

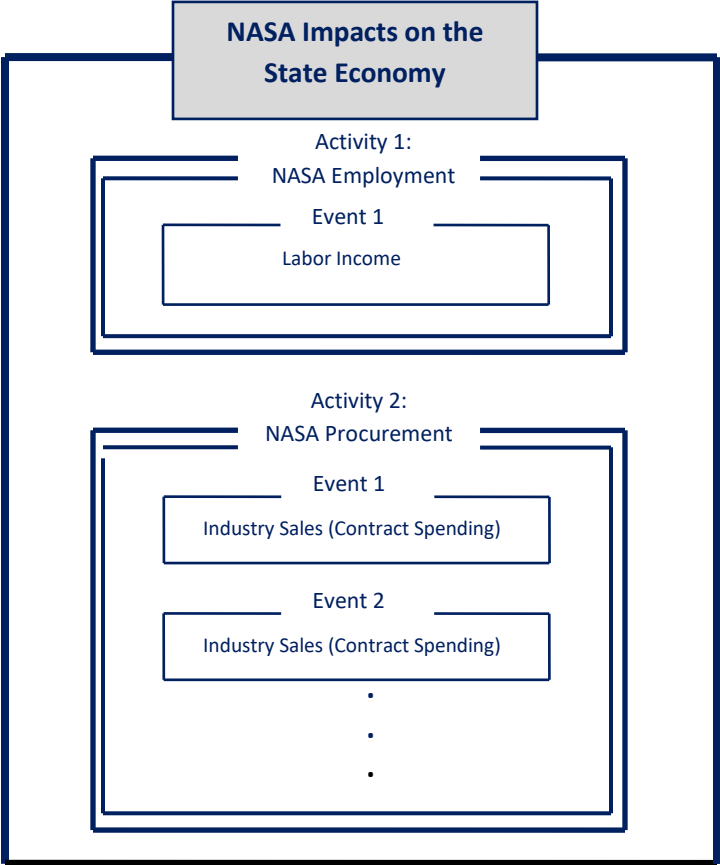

For the national model, no econometric model exists within IMPLAN, and the supply/demand pooling method was used to estimate the RPCs. This method takes into account the national situation where there is no need to estimate interregional (domestic) trade flows, but rather the proportion of demand that is met by the U.S. as opposed to foreign suppliers. The supply/demand pooling method applies data on U.S. foreign exports to estimate the retained portion of each commodity as satisfying domestic demand and assumes that each commodity is sourced domestically first until production is exhausted.¹⁶ In comparison with the regional RPCs, the supply/demand pooling method yields maximum estimates; that is, no more local commodity can be purchased than is locally produced (IMPLAN, 2004). Consequently, we anticipate greater impacts per employee and per dollar of procurement spending nationally than individual states.

5. Operate the software to generate estimates of the impact of the events on the study area economy.

For this study, we generated six separate categories of activities: (1) NASA employment, (2) NASA procurement, (3) M2M employment, (4) M2M procurement, (5) climate change research and technology employment, (6) climate change research and technology procurement. Each of these activities is in turn a collection of events (changes in labor income or industrial sales in particular industry sectors—see Figure 9 below) and is replicated as necessary for the different geographic regions studied (over 50).

¹⁶ The designers of the IMPLAN software suggest that this assumption is appropriate for the national context, in which typically there is little advantage to procuring substitutable commodities from foreign rather than domestic suppliers, and it makes even more sense for the specialized portions of the supply chains following from NASA procurement.

Figure 9: Impact Organization

Note: This figure is adapted from IMPLAN (2004).

IMPACT ESTIMATION DECISIONS

The types of employment and procurement data and the assumptions made in the scenario development and model building stages have implications for impact estimates presented in the following section (see Box 6).

First, there may be slight overestimation involved in our results for certain states where businesses engage in subcontracting activity that deviates from the model assumptions. Contractors whose main research or organizational units are located elsewhere but have a presence in a certain state might engage in subcontracting relations with businesses near the location of their headquarters rather than their remote location. Because we assumed that institutions in these conditions would procure locally (according to the RPCs as estimated in the model) and that the resulting household income/spending would occur locally as well, the impacts of such institutions on certain states may be overestimated.

Second, we chose not to include travel expenditures related to business trips by employees at NASA facilities. The rationale behind this decision is lack of evidence indicating that business transactions related to operations of NASA lead to more-than-average travel (as is modeled automatically). That is, the economic impact model estimates travel-related expenditure impacts as a standard byproduct of business transactions occurring in the economy. If such travel is more frequent than average, the impact results are likely to be underestimated slightly.

Third, our impact modeling, like any other estimation approach using IMPLAN, captures only traceable business transactions occurring in the economic system. Not all positive economic impacts are traceable via input-output transactions. Research and development (R&D) conducted at NASA centers and by its suppliers in the aerospace industry may benefit businesses in related industrial fields, either through NASA activities augmenting those businesses' own research and development efforts, or by making it possible for those firms to employ more efficient production technologies. Either case will result in increases in productivity for the economy as a whole (Jaffe *et al.*, 1993; Shapiro, 2015). These effects are termed externalities or spillovers and cannot be captured in economic impact analyses based on input-output models. Given that the industries deriving the most benefit from direct NASA spending are scientific research¹⁷ and development services (accounting for 61% of NASA procurement spending), the total economic impacts of NASA activities might exceed the estimates reported in this study.

¹⁷ Basic research provides larger spillover benefits than that of development research because development spillovers are largely internalized by patent policy that provides monopoly power to firms with innovative products. Intellectual property rights do not as thoroughly internalize more general and theoretical basic research externalities.

Finally, tourism activity related to the presence of NASA facilities and associated space museums may generate additional economic impacts for states. This impact analysis does not include these tourism effects. Specific data quantifying visitor volume, origin, and expenditure patterns could be used to incorporate tourism impacts in future analysis.

Box 6: Potential Sources for Over- or Under-estimation of Economic Impacts

Subcontracting activity: Impacts are calculated based on a combination of the industry-specific subcontracting relationships that exist nationwide and in the model area. To the extent that businesses engage in subcontracting activity that deviates from the national and regional averages, impacts could be over- or underestimated depending on the direction of deviation. There is likely slight overestimation for states with NASA contractors whose location is different from their parent companies' location (i.e., subsidiaries or branch plants). On the other hand, there is likely slight underestimation for states with NASA contractors whose location is the same as the company's headquarters. Unfortunately, we are not able to quantify the magnitude of the over- or underestimation for different states without specific subcontracting information for NASA contractors.

Business travel: To the extent that NASA's business travel is more frequent than the average for the related industry in the model, the impact results are underestimated slightly for states that are the destinations of trips that host commercial airline headquarters. If NASA's business travel is less frequent than the model industry average, the impact results are overestimated slightly for the same states.

NASA center and museum visitors: Due to lack of data on visitor numbers and associated spending, we are not able to model the economic impacts of visitors to NASA facilities. Therefore, impact estimates for states that attract substantial visitors (particularly those hailing from outside of the state) are likely underestimated. Specific data quantifying visitor volume, origin, and expenditure patterns could be used to incorporate tourism impacts in future analyses.

RESULTS ANALYSIS

In this section, we present estimates of NASA, M2M, and the investments in climate change research and technology impacts on the U.S. as a whole, the fifty (50) states, and Washington, D.C. For each region, we first analyze overall NASA impacts and then examine M2M and the investments in climate change research and technology impacts. Finally, we specify the portion of NASA impacts attributable to the M2M campaign and the investments in climate change research and technology, respectively, to highlight the relative contribution of activities in every state.

The economic impact is examined through a detailed analysis of the changes in employment, output (gross sales), labor income, value added¹⁸, and taxes¹⁹ due to NASA's activities.²⁰ First, summary impacts are presented, organized by the type of impact. Second, for employment and output, two of the most important impact categories, results are examined by NASA employment and procurement components.²¹ The detailed disaggregation of economic impacts by their sources highlights the relative contributions of NASA's employment and procurement activities to the overall NASA impacts. Third, for each of the impact categories, the ten most heavily impacted industries are described.²²

Economic Impacts on the United States

NASA Impacts

At the national level, NASA directly employs 19,319 civil servants (17,736 FTE jobs)²³, with annual compensation of more than \$3.2 billion in wages and benefits. The contracting activity originating from NASA (\$21.2 billion) is both large in volume and very diverse— involving most categories of manufacturing or service industry. There are indirect effects from purchases of goods and services by NASA as well as by the firms that supply NASA. Consumption expenditures made by employees of NASA, NASA's suppliers, and suppliers further up the production chain, create induced effects. Taking the domestic portions of these spending streams into account, the total employment impact of NASA across the U.S. is 339,645 jobs (including direct, indirect, and induced impacts—see Box 1 in Section 1). The labor income and economic output associated with this total amount of employment are, respectively, \$25.7 billion, and \$71.2 billion. Contracting activities along

¹⁸ Please refer to Box 2 in the introduction (Section 1) for the definition of value added.

¹⁹ Unless otherwise mentioned, all monetary values correspond to 2021 dollars.

²⁰ Please note that due to rounding column and row totals may not be exactly equal to the sum of columns or rows throughout the report.

²¹ Separate impacts for NASA employment and procurement components are presented in the Appendix.

²² This analysis includes only those states in which the total employment impact is greater than 10,000 jobs.

²³ The number of civil servants excluding those residing in U.S. territories is 19,312 (17,732 FTEs). These are the figures used in the national economic impact model.

with NASA’s direct employment generated \$7.7 billion in federal, state, and local tax revenues in 2021 (Table 7).

Multipliers give additional insight as to how the economy is affected by an initial economic change (see Box 7 below and Box 3 in Section 1). For every civil service FTE job located at NASA, an additional 18.2 jobs are supported throughout the U.S. economy.²⁴ The income multiplier is 7.9: for each \$1 million of labor income earned by NASA employees, an additional \$6.9 million in labor income is generated in the U.S. economy. The output multiplier is 8.2. For each \$1 million’s worth of output generated at NASA, an additional \$7.2 million of output (intermediary and final goods and services) is generated throughout the U.S. economy.

Box 7: Multiplier Considerations

The multipliers referenced in this section, and in particular the employment multiplier, are larger than is typical for this kind of impact study due to the volume of NASA’s contracting activity, all of which is classified as indirect impact. Please note that if additional (or reduced) civil service employees are not associated with additional (or reduced) contracting activity at a comparable scale, then it may be inappropriate to use the employment multiplier to estimate future economic impacts of changes in civil service employment at NASA centers. Multipliers calculated in the conventional way are provided in the Appendix and they are comparable to multipliers found in similar studies.

Multipliers are calculated for only those states with direct NASA employment. Every state has different multipliers, and state multipliers normally are smaller than national multipliers. The size of the multiplier changes depending on the size and diversity of the economy analyzed. Large and sectorally diverse economies such as those of the states of Texas or California tend to have larger multipliers than smaller or less diverse economies such as in the states of Rhode Island or Wyoming.

Multiplier magnitudes are determined by the quantity of supply chain linkages and range of consumer goods and services available within the economy. Therefore, states in which firms often procure inputs locally and consumers generally spend a larger portion of their income locally tend to have larger multipliers than states that do not have strong supply chain linkages and fewer options for consumers.

²⁴ “Supports” means partial or full support. We use “supported” instead of “created” to be conservative in our attribution of impacts to NASA. While NASA activities create new positions in some sectors of the economy, in many instances NASA helps sustain existing jobs in the economy.

Note: The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

Beside overall impact figures, it is useful to examine the source of impacts to better understand the contribution of different NASA activities to the U.S. economy.²⁶ Table 8 examines the sources of the employment figures presented in the second column of Table 7. Procurement spending originating from NASA is responsible for the largest portion of overall NASA employment impacts. Nearly 87% of the jobs supported throughout the U.S. economy by NASA are due to procurement spending, leaving the share of NASA’s direct employment in the overall employment impact at around 13%.

Table 9 examines the sources of the output figures in the fifth column of Table 7. Similar to employment impact, procurement spending originating from NASA is responsible for the lion’s share of overall NASA output impacts (81%). NASA employment’s share of the

overall output impact is 19%. The reason that NASA employment’s share of the output impact exceeds its share of employment impact is that employees at NASA produce more output per worker than the average for employees in the supply chain of NASA procurement.

339,645 jobs in the U.S. economy were supported by NASA activities in Fiscal Year 2021.

Of these, 17,732 (6%) were directly located at NASA centers. As a result of the procurement of goods and services in the U.S. economy, 174,748 additional jobs (51%) were created. The remaining employment—147,165 jobs (43%)—was in the form of induced impacts as labor income and proprietor earnings were spent in the wider consumer economy.

Figure 10 depicts the ten most impacted industries by employment. Scientific research and development services and federal government²⁷ are the most impacted industries, respectively. These two industries together account for 22% of the jobs created. The employment in scientific research and development services is driven largely by NASA procurement spending. This industry accounted for approximately 61% of NASA procurement spending in Fiscal Year 2021. The impact in the federal government sector represents mainly civil service employees working for NASA.

²⁷ Employment and payroll of federal government (non-military) is only included as an industry in supply chain analysis via employment. We only consider impacts to this industry from employment, not from contracting or indirect purchases.

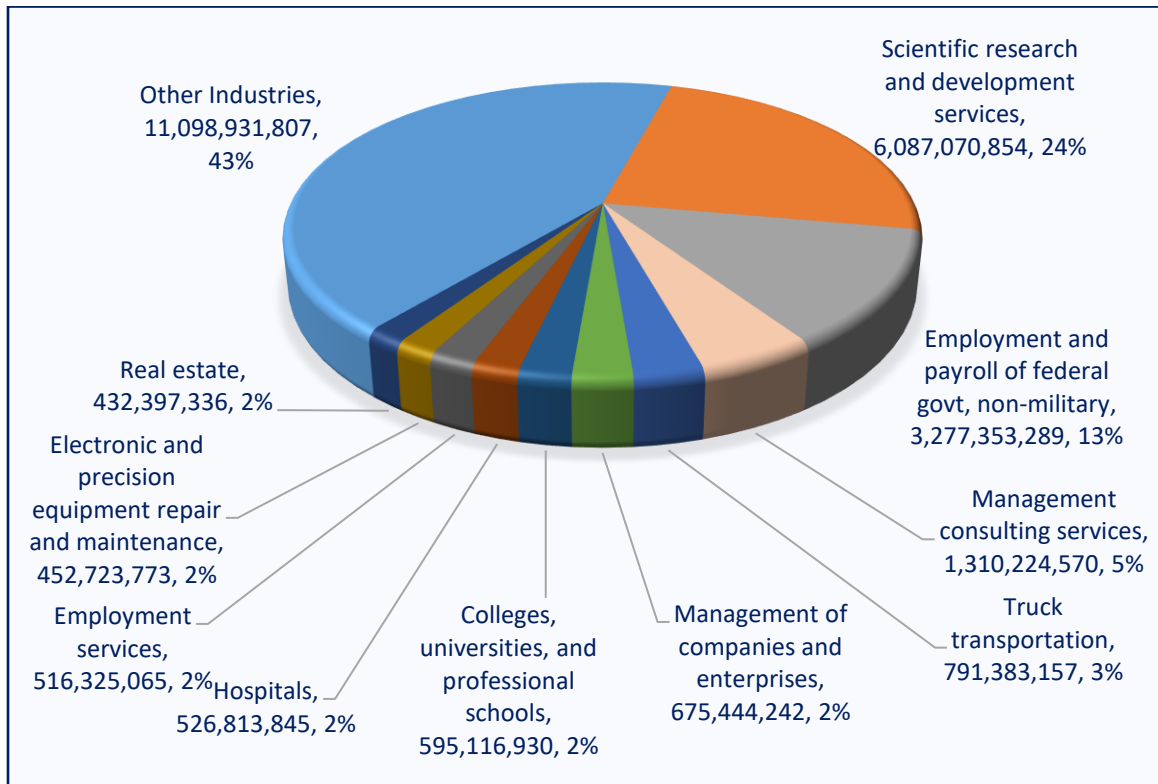

Figure 10: Top Ten Most Impacted Industries by Employment, the United States (NASA)

The total income impact of NASA in the U.S. was \$25.7 billion in Fiscal Year 2021. Of this amount, \$3.2 billion (13%) represented wages and benefits paid to NASA employees (direct impact). Payments to employees of private firms and organizations across the nation that supplied goods and services to NASA (indirect impact) represented \$14.2 billion (55%). The remaining income (induced impact), estimated to be \$8.3 billion (32%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 11 depicts the ten most impacted industries by labor income. Scientific research and development and management consulting services are the most impacted industries by income (along with the federal government sector). The three industries together account for 42% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the national average. As of 2019, the average employee compensation in the scientific research and development services industry was \$105,727 (including benefits), compared to an average of \$64,498 across the country.

Figure 11: Top Ten Most Impacted Industries by Labor Income, the United States (NASA)

Box 8: Overlap between Labor Income, Value Added, and Output

These categories are not mutually exclusive—they overlap significantly (i.e., labor income is a subset of value added, and value added in turn is a subset of output). Therefore, adding these values is double counting of impacts.

Labor Income = Employee Compensation + Proprietor Income – Taxes

Value Added = Labor Income + Taxes + Other Property Type Income (Profit)

Output = Value Added + Intermediate Purchases (Business to Business)

Labor income equals employee compensation (wages and benefits) and proprietor income.

Proprietor income consists of payments received by self-employed individuals and unincorporated business owners.

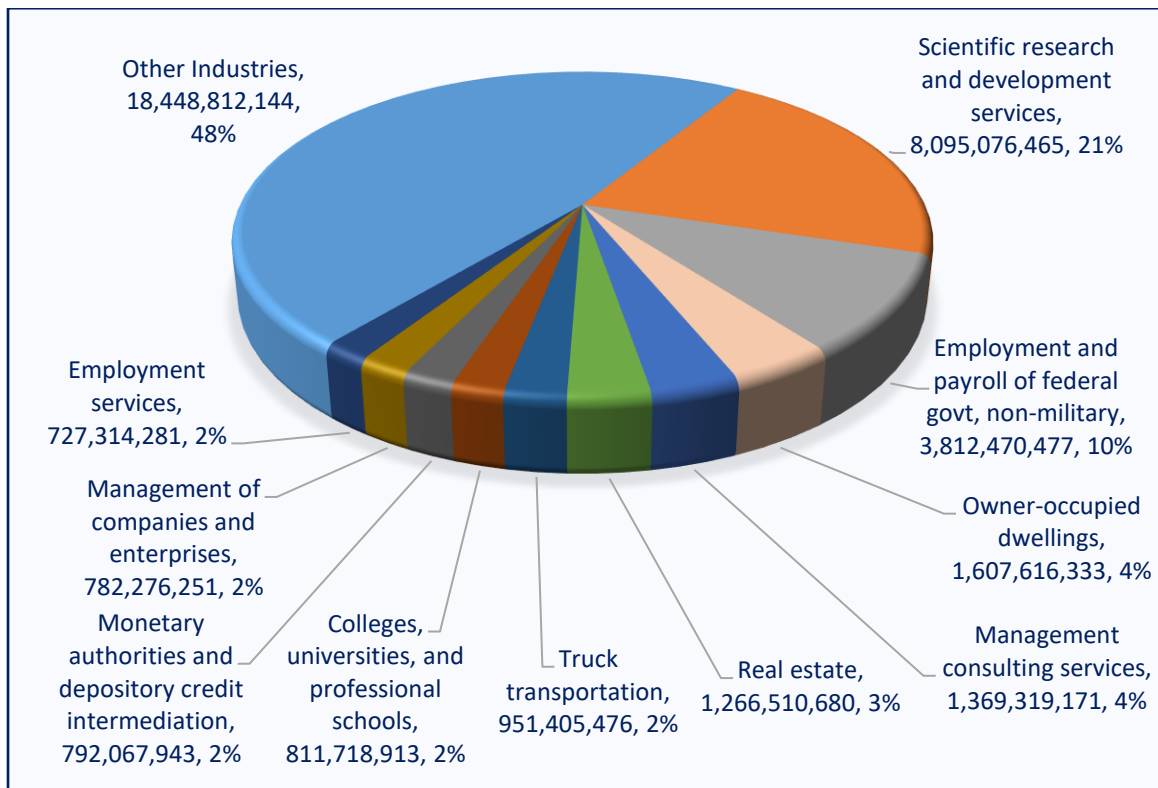

Profits (net of taxes), also referred as other property type income, include corporate profits, capital consumption allowance, payments for rent, dividends, royalties, and interest income.

Intermediate purchases (Business to Business) are purchases of goods and services such as energy and materials that are used for the production of other goods and services rather for final consumption.

The total value added impact of NASA in the U.S. was \$38.6 billion in Fiscal Year 2021. Of this amount, approximately \$3.8 billion (10%) was created by civil service employees and \$20.1 billion (52%) was created indirectly by the \$21.2 billion in procurement spending across all industry sectors in the country. Around \$14.7 billion (38%) was generated by increased consumption spending supported by increased earnings.

Figure 12 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development services is the most impacted industry (along with the federal government sector). The two industries together account for 31 percent of the total value added created. NASA activities accounted for an increase of \$8 billion in value added in scientific research and development services. \$3.8 billion dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

Figure 12: Top Ten Most Impacted Industries by Value Added, the United States (NASA)

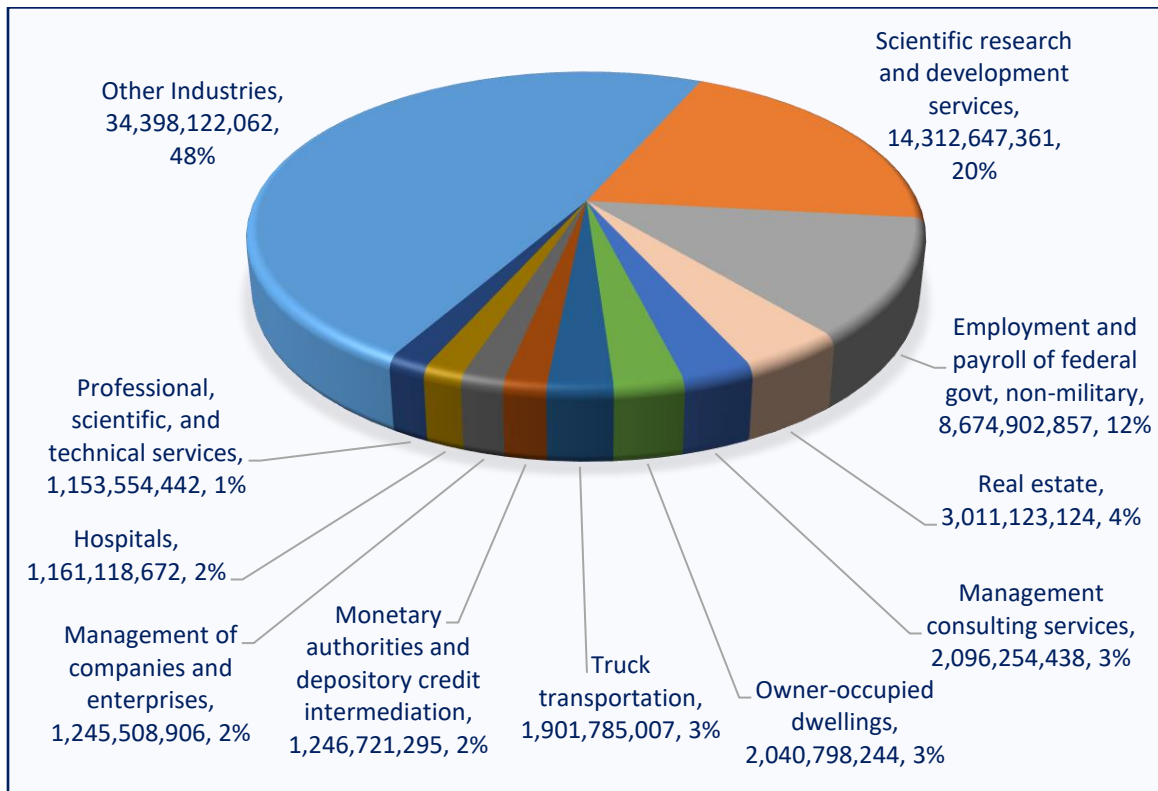

The total output impact of NASA in the U.S. was \$71.2 billion in Fiscal Year 2021. The direct impact of \$8.6 billion constitutes the value of production by NASA employees, accounting for around 12% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditure of \$21.2 billion resulted in an additional increase in output (gross sales) of \$15.1 billion across all industry sectors

(adding up to the indirect total of \$36.3 billion in Table 7). \$26.3 billion (37%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of more than \$14 billion in sales (including direct, indirect, and induced impacts—see Box 1 in Section 1) in scientific research and development services (Figure 13). Similar to employment, impacts in this industry are largely driven by NASA procurement spending; scientific research and development services accounted for approximately 61% of NASA procurement spending in Fiscal Year 2021. Sales in real estate and management consulting services are also impacted significantly. The sizable impact in the real estate industry is a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

Figure 13: Top Ten Most Impacted Industries by Output, the United States (NASA)

M2M Campaign Impacts

At the national level, NASA directly employs 4,644 civil servants (2,474 FTEs) for the M2M campaign, with annual compensation of \$440.2 million in wages and benefits. The M2M-related contracting originating from NASA (nearly \$6.7 billion) is both large in volume and very diverse—involving almost every major category of manufacturing or service activity. There are indirect effects from the purchases of goods and services by NASA Centers as

well as by the firms that supply those centers. Consumption expenditures made by the M2M labor force, by suppliers to the M2M campaign, and by suppliers further upstream within the production chain, create induced effects. Taking the domestic portions of these spending streams into account, the total employment impact of the M2M campaign across the U.S. is 93,731 jobs (including direct, indirect, and induced impacts—see Box 1 in Section 1). The labor income and economic output associated with this total amount of employment are, respectively, \$7.1 billion and \$20.1 billion. M2M contracting activities along with NASA’s direct employment for the M2M campaign generated an estimated \$2.2 billion in federal, state, and local tax revenues in 2021 (Table 10).

The M2M Campaign's Share of NASA Impacts

Approximately 28% of overall NASA agency impacts in the U.S. are attributable to the M2M campaign (Table 13 and Figure 14). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for M2M is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Investments in Climate Change Research and Technology Impacts

At the national level, NASA directly employs 3,668 civil servants (1,844 FTEs)²⁹ for climate change research and technology, with annual compensation of nearly \$330 million in wages and benefits. Investments in climate change research and technology contracts originating from NASA (\$2.2 billion) are both large in volume and very diverse—involving almost every major category of manufacturing or service activity. There are indirect effects from the purchases of goods and services by NASA Centers as well as by the firms that supply those centers. Consumption expenditures made by the climate change research and technology labor force, by suppliers to the investments in climate change research and technology, and by suppliers further upstream within the production chain, create induced effects. Taking the domestic portions of these spending streams into account, the total employment impact of the investments in climate change research and technology across the U.S. is 37,005 jobs (including direct, indirect, and induced impacts—see Box 1 in Section 1). The labor income and economic output associated with this total amount of employment are, respectively, \$2.7 billion, and \$7.4 billion. The investments in climate change research and technology along with NASA’s direct employment for climate change research and technology generated an estimated \$810 million in federal, state, and local tax revenues in 2021 (Table 14).

²⁹ The number of civil servants including those residing in U.S. territories is 3,669 (1,845 FTEs).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Approximately 11% of overall NASA agency impacts in the U.S. are attributable to the investments in climate change research and technology (Table 17 and Figure 15). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of Alabama

NASA Impacts

In 2021, 2,434 NASA civil service employees (2,276 FTEs) residing in Alabama earned \$403 million in labor income. NASA contracts sourced in Alabama in the same year totaled \$2.7 billion. The total economic impact resulting from these activities is 41,084 jobs, \$2.7 billion in labor income, and \$8.0 billion in economic output. These economic activities generate \$233.8 million in tax revenues for the state and local governments in Alabama (Table 18).

The employment multiplier is 18.1, meaning that for every NASA job located in Alabama, an additional 17.1 jobs are supported in the state economy. The output multiplier of 7.2 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$6.2 million worth of output is sustained throughout the state economy.

Note: The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Alabama economy. Table 19 examines the sources of the employment figures in the second column of Table 18. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Eighty-six (86) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 14%.

Table 20 examines the sources of the output figures in the fifth column of Table 18. Procurement spending is responsible for more than 79% of the increase in output in the state economy arising from NASA. NASA labor force’s share of overall NASA output impact is approximately 21%. The reason that NASA employment’s share of the overall output impact is larger than its share of the overall employment impact is that NASA employees produce more output per worker than the average employee in the NASA procurement supply chain. Because NASA’s labor force is more concentrated in the state than its procurement (compared to the nationwide impacts), a slightly larger proportion of NASA impacts in Alabama are attributable to the employment of NASA civil service workers.

41,084 jobs in the Alabama economy were supported by NASA activities in Fiscal Year 2021. Of these, 2,276 (6%) were directly located at NASA centers. As a result of the procurement of goods and services in the Alabama economy, 23,525 additional jobs (57%) were created. The remaining employment—15,283 jobs (37%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 16 depicts the ten most impacted industries by employment. Scientific research and development services and management consulting services are the most impacted industries, respectively. These industries (along with the federal government sector)

account for nearly a third of the jobs created. The employment in these industries is driven largely by NASA procurement spending; these two industries accounted for 70% of NASA procurement spending in Fiscal Year 2021. The impact in the federal government sector represents mainly civil service employees working for NASA.

Figure 16: Top Ten Most Impacted Industries by Employment, Alabama (NASA)

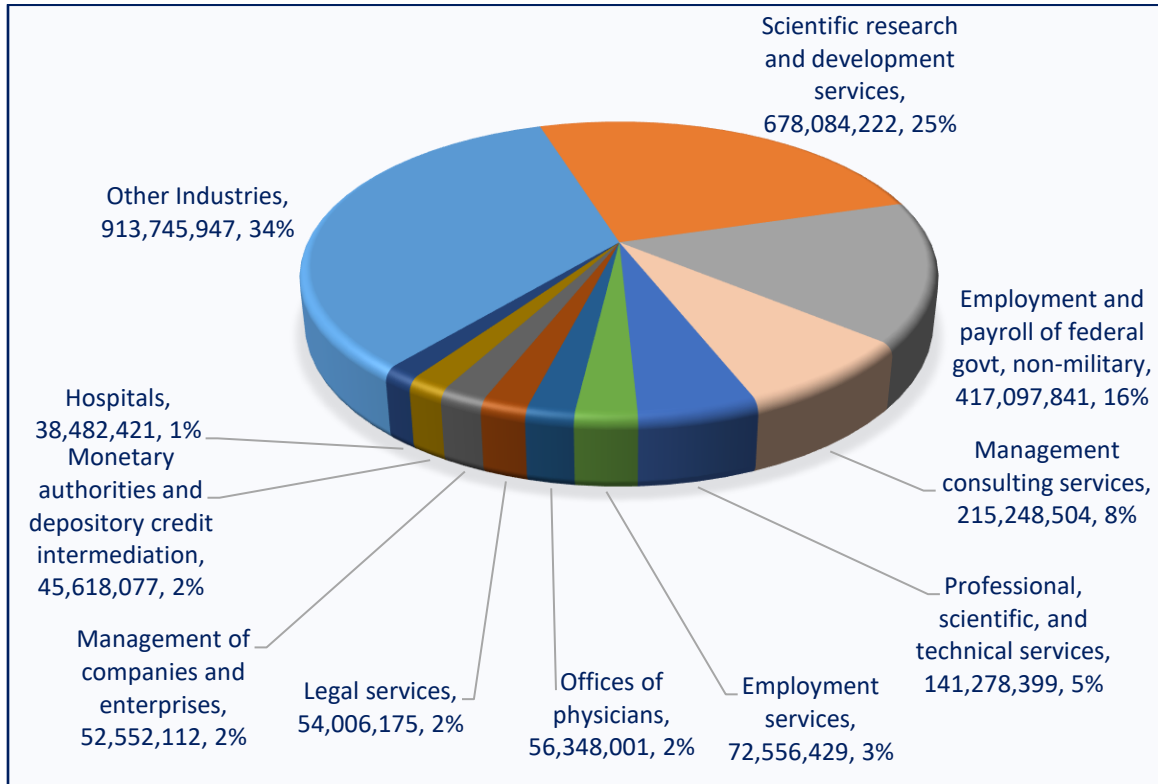

The total income impact of NASA in Alabama was \$2.7 billion in Fiscal Year 2021. Of this amount, \$403.1 million (15%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$1.6 billion (59%). The remaining income (induced impact), estimated to be \$687.8 million (26%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 17 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, scientific research and development, management consulting services, and professional and technical services are the most impacted industries by income (along with the federal government sector). The four industries together account for 54% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the state average. As of 2019,

the average employee compensation in the scientific research and development services industry was \$79,796 (including benefits), compared to an average of \$52,537 across Alabama.

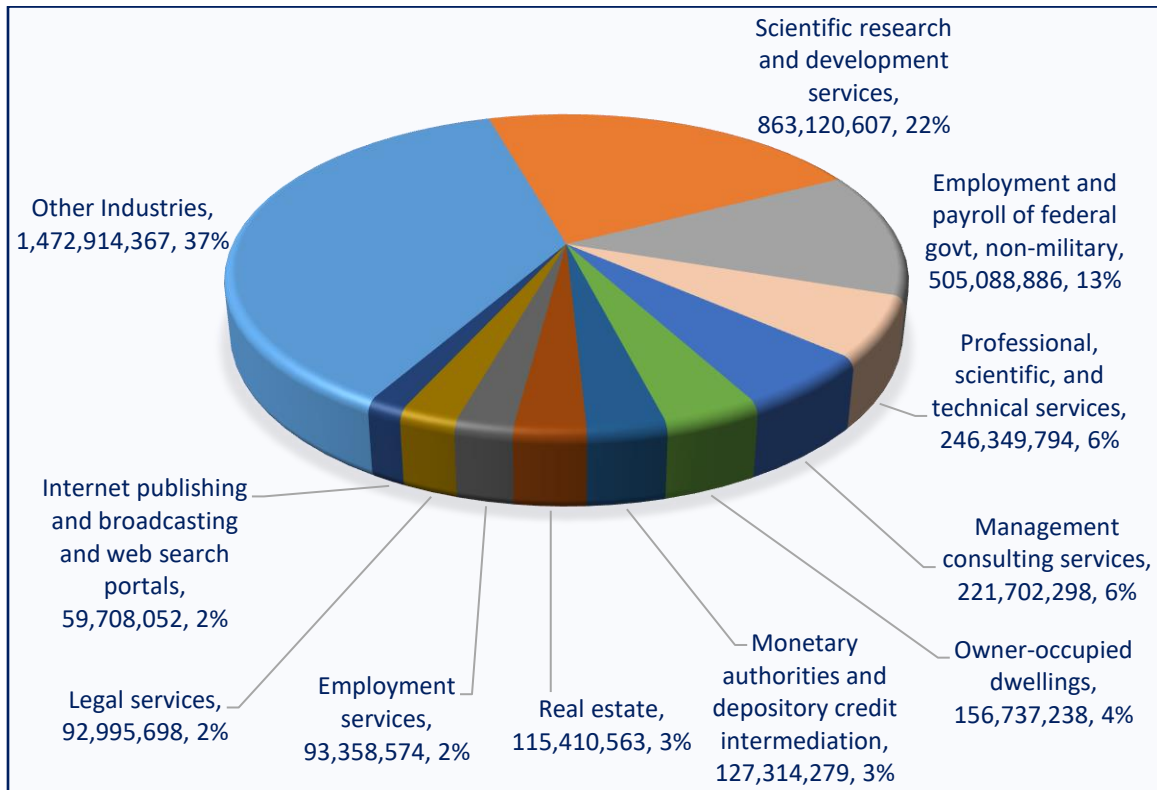

Figure 17: Top Ten Most Impacted Industries by Labor Income, Alabama (NASA)

The total value added impact of NASA in Alabama was \$3.9 billion in Fiscal Year 2021. Of this amount, more than \$484.6 million (12%) was created by civil service employees and \$2.2 billion (56%) was created indirectly by the \$2.7 billion in procurement spending across all industry sectors in Alabama. \$1.2 billion (32%) was generated by increased consumption spending supported by increased earnings.

Figure 18 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development and professional and technical services are the most impacted industries (along with the federal government sector). The three industries together account for 41% of the total value added created. NASA activities accounted for an increase of \$863 million in value added in scientific research and development services, and a \$246 million increase in value added in professional and technical services. Five hundred and five (505) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

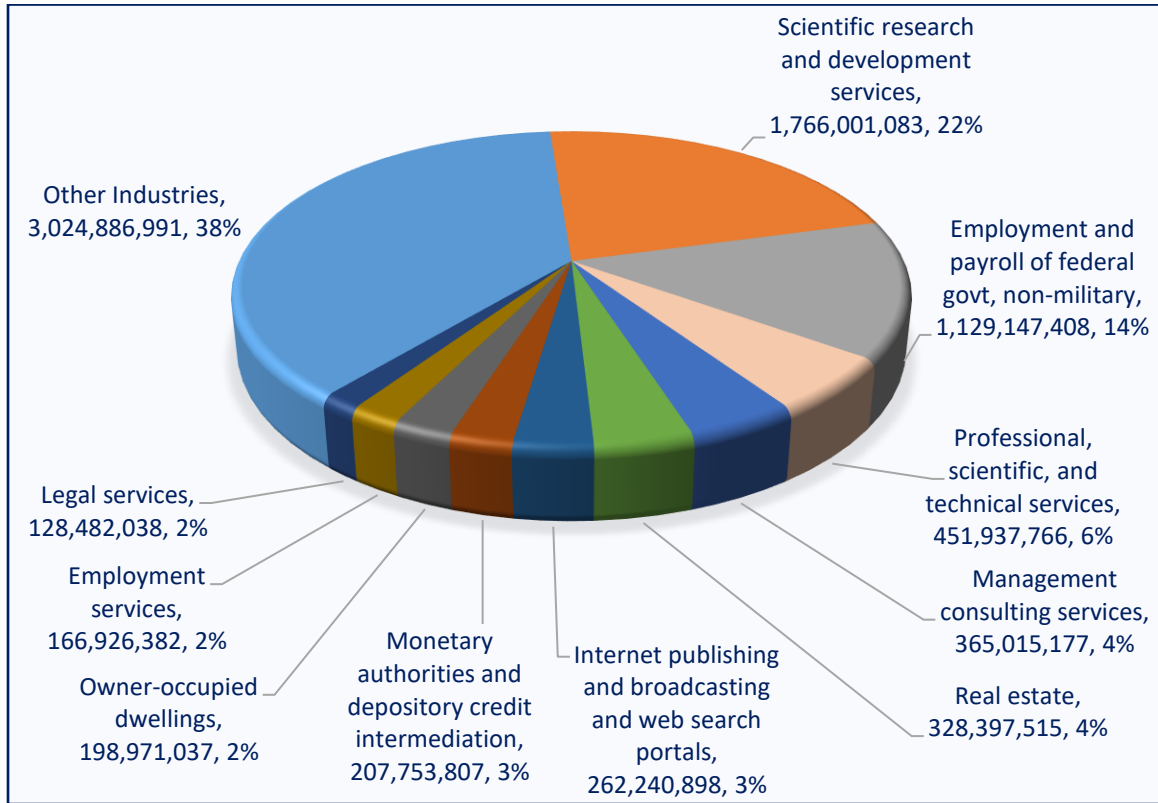

Figure 18: Top Ten Most Impacted Industries by Value Added, Alabama (NASA)

The total output impact of NASA in Alabama was \$8.0 billion in Fiscal Year 2021. The direct impact of \$1.1 billion constitutes the value of production by NASA employees, accounting for around 14% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditure of \$2.7 billion resulted in an additional increase in output (gross sales) of \$1.8 billion across all industry sectors (adding up to the indirect total of \$4.5 billion in Table 18). \$2.4 billion (30%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of more than \$1.7 billion in sales (including direct, indirect, and induced impacts—see Box 1 in Section 1) in scientific research and development services, and a \$452 million increase in sales in professional and technical services (Figure 19). Impacts in these industries are largely driven by NASA procurement spending; these two industries accounted for 74% of NASA procurement spending in Fiscal Year 2021. Aside from management consulting services and internet publishing and broadcasting and web search portals, the output impacts reported in other industries mainly result from increases in consumption spending (induced impacts). The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

M2M Campaign Impacts

In 2021, Alabama had 1,084 M2M-related civil service employees (605 FTEs) jobs with a corresponding labor income of \$105.4 million. M2M campaign contracts sourced in Alabama in the same year totaled \$1.9 billion. The total Alabama employment impact is 24,899 jobs (including direct, indirect, and induced impacts—see Box 1, Section 1), meaning that for every M2M-related job located in the state, an additional 40.2 jobs are created in the state economy. The labor income and economic output impacts are \$1.6 billion and \$4.9 billion, respectively. These economic activities, along with the M2M campaign labor force, generate \$143.8 million in tax revenues for the state and local governments in Alabama (Table 21).

The M2M Campaign’s Share of NASA Impacts

Approximately 62% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 24 and Figure 20). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Investments in Climate Change Research and Technology Impacts

In 2021, Alabama had 174 climate change research and technology-related civil service employees (52 FTEs) jobs with a corresponding labor income of \$8.6 million. Investments in climate change research and technology contracts sourced in Alabama in the same year totaled \$67.5 million. The total Alabama employment impact is 1,083 jobs (including direct, indirect, and induced impacts—see Box 1, Section 1), meaning that for every climate change research and technology-related job located in the state, an additional 19.8 jobs are created in the state economy. The labor income and economic output impacts are \$93.3 million and \$199.0 million, respectively. These economic activities, along with the climate change research and technology labor force, generate \$4.9 million in tax revenues for the state and local governments in Alabama (Table 25).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 2% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 28 and Figure 21). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of Alaska

NASA Impacts

In 2021, three NASA civil service employees (2 FTEs) residing in Alaska earned \$134,000 in labor income. NASA contracts sourced in Alaska in the same year totaled \$41.1 million. The total economic impact resulting from these activities is 550 jobs, \$37.5 million in labor income, and \$91.3 million in economic output. These economic activities generate \$2.1 million in tax revenues for the state and local governments in Alaska (Table 29).

M2M Campaign Impacts

There were no M2M-specific NASA employees in Alaska in FY 2021, but approximately \$1.1 million in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is 17 jobs, \$1.2 million in labor income, and \$2.7 million worth of output. These economic activities generate \$63,000 in tax revenues for the state and local governments in Alaska (Table 32).

Investments in Climate Change Research and Technology Impacts

In 2021, one climate change research and technology-related civil service employee (1 FTE) residing in Alaska earned \$39,000 in labor income. In addition, \$14 million in investments in climate change research and technology contracts were sourced in the state. The total economic impact attributable to this labor force and procurement activity is 171 jobs, \$11.1 million in labor income, and \$30.2 million worth of output. These economic activities generate \$703,000 in tax revenues for the state and local governments in Alaska (Table 34).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Approximately 31% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 37 and Figure 23). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of Arizona

NASA Impacts

In 2021, 22 NASA civil service employees (13 FTEs) residing in Arizona earned more than \$2.2 million in labor income. NASA contracts sourced in Arizona in the same year totaled \$248.2 million. The total economic impact resulting from these activities is 3,876 jobs, \$246.2 million in labor income, and \$711.2 million in economic output. These economic activities generate \$23 million in tax revenues for the state and local governments in Arizona (Table 38).

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Arizona economy. Table 39 examines the sources of the employment figures in the second column of Table 38. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Ninety-nine (99) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 1%.

M2M Campaign Impacts

There were no M2M-specific NASA employees in Arizona in FY 2021, but \$27.9 million in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity 432 jobs, \$28.5 million in labor income and \$78.3 million in economic output. The M2M campaign generates \$2.8 million in tax revenues for the state and local governments in Arizona (Table 41).

The M2M Campaign’s Share of NASA Impacts

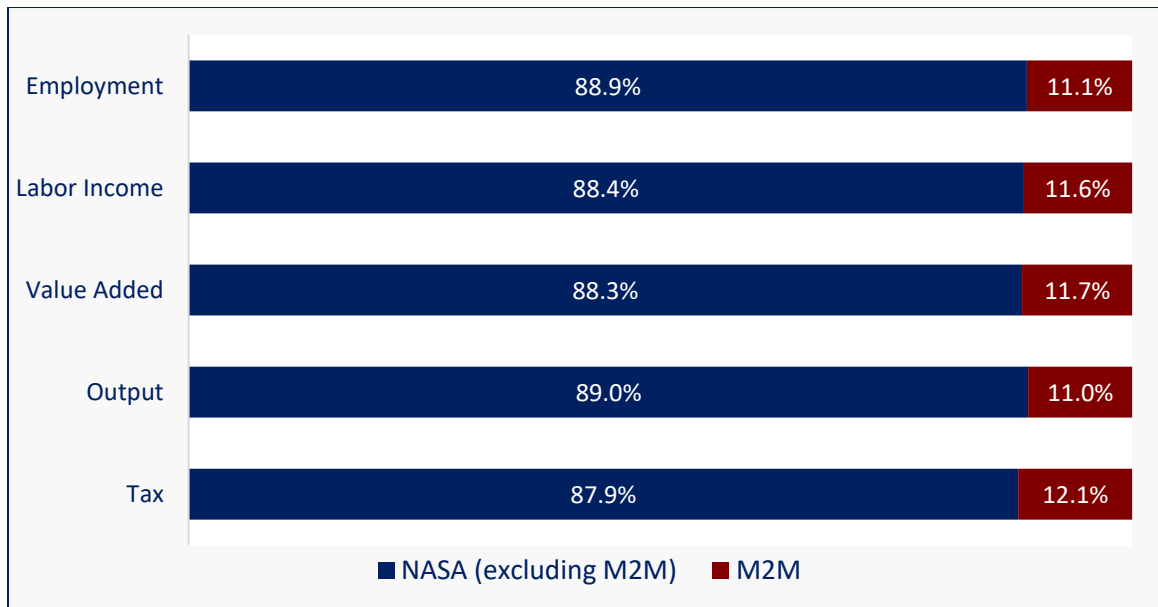

Around 11% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 42 and Figure 24). The primary reason the shares are slightly different is

that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Investments in Climate Change Research and Technology Impacts

In 2021, Arizona had five climate change research and technology-related civil service employees (2 FTEs) with a corresponding labor income of \$409,000. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$15.7 million. The total Arizona employment impact is 246 jobs. The labor income and economic output associated with this employment are \$15.0 million and \$45.3 million, respectively. The investments in climate change research and technology generate \$1.5 million in tax revenues for the state and local governments in Arizona (Table 43).

The Investments in Climate Change Research and Technology's Share of NASA Impacts

Around 6% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 46 and Figure 25). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of California

NASA Impacts

In 2021, 1,983 NASA civil service employees (1,812 FTEs) residing in California earned \$353.6 million in labor income. NASA contracts sourced in California in the same year totaled more than \$4.5 billion. The total economic impact resulting from these activities is 66,236 jobs, \$5.8 billion in labor income, and \$15.2 billion in economic output. These economic activities generate more than \$738.3 million in tax revenues for the state and local governments in California (Table 56).

The employment multiplier is 36.6, meaning that for every NASA job located in California, an additional 35.6 jobs are supported in the state economy. The output multiplier of 17.3 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$16.3 million worth of output is sustained throughout the state economy.

Table 58 examines the sources of the output figures in the fifth column of Table 56. Procurement spending is responsible for nearly 90% of the increase in output in the state economy arising from NASA. NASA labor force’s share of overall NASA output impact is 10%. The reason that NASA labor force’s share of overall output impact is larger than its share in overall employment impact is that NASA employees produce more output per worker than the average employee that is part of the supply chain of NASA procurement.

66,236 jobs in the California economy were supported by NASA activities in Fiscal Year 2021. Of these, 1,812 (3%) were directly located at NASA centers. As a result of the procurement of goods and services in the California economy, 33,700 additional jobs (51%) were created. The remaining employment—30,724 jobs (46%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 28 depicts the ten most impacted industries by employment. Scientific research and development services is the most impacted industry, accounting for 18% of the jobs created. The employment in this industry is driven largely by NASA procurement spending; scientific research and development services accounted for 70% of NASA procurement spending in the state in Fiscal Year 2021.

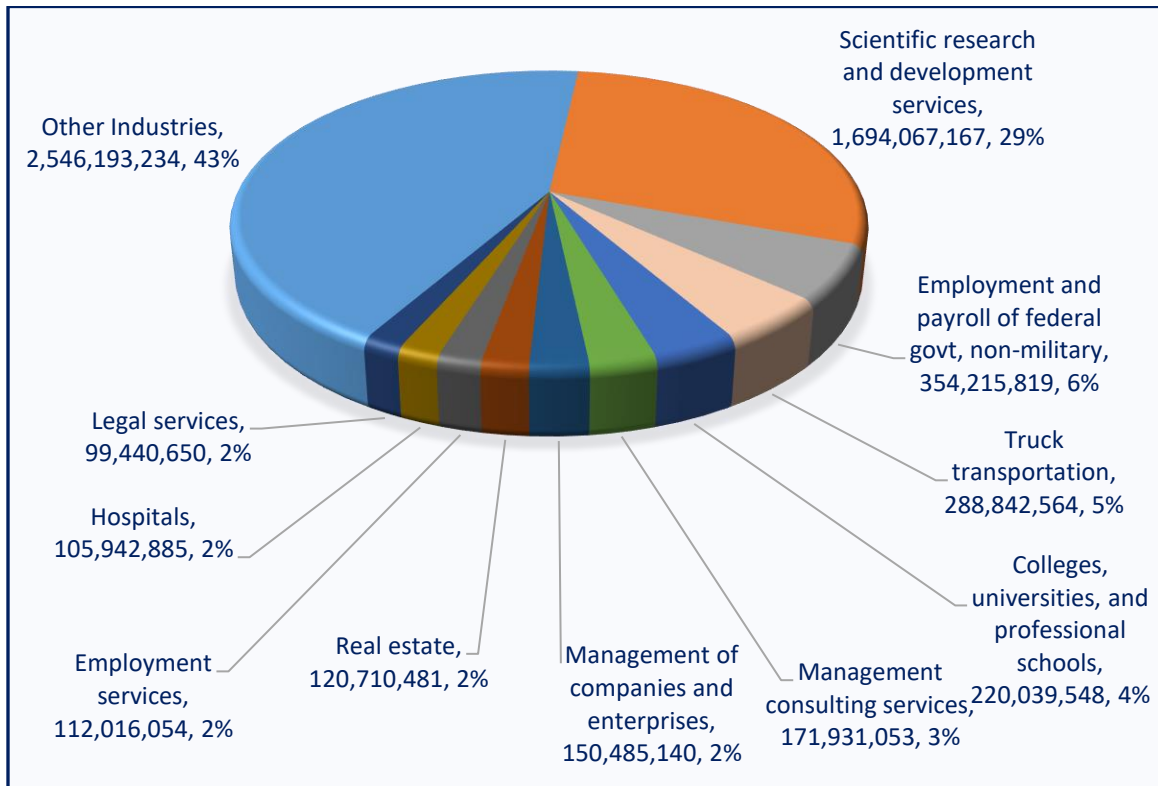

Figure 28: Top Ten Most Impacted Industries by Employment, California (NASA)

The total income impact of NASA in California was \$5.8 billion in Fiscal Year 2021. Of this amount, nearly \$354 million (6%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$3.4 billion (58%). The remaining income (induced impact), estimated to be \$2.1 billion (36%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 29 depicts the ten most impacted industries by labor income. Scientific research and development and the federal government sector are the most impacted sectors. The two industries together account for 35% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the state average. As of 2019, the average employee compensation in the scientific research and development services industry was \$138,622 (including benefits), compared to an average of \$76,116 across California.

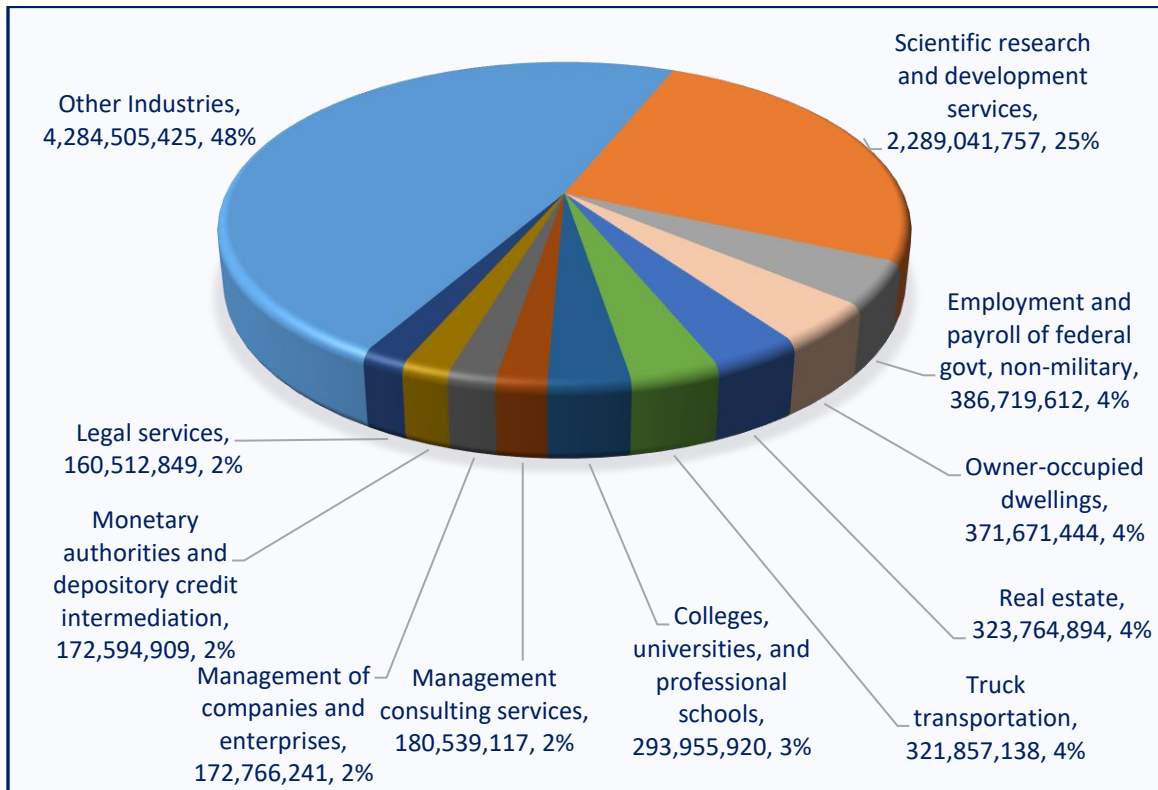

Figure 29: Top Ten Most Impacted Industries by Labor Income, California (NASA)

The total value added impact of NASA in California was \$8.9 billion in Fiscal Year 2021. Of this amount, nearly \$386 million (4%) was created by civil service employees and \$4.8 billion (54%) was created indirectly by the \$4.5 billion in procurement spending across all industry sectors in California. \$3.7 billion (42%) was generated by increased consumption spending supported by increased earnings.

Figure 30 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development is the most impacted industry, accounting for 25% of the total value added created. NASA activities accounted for an increase of \$2.3 billion in value added in scientific research and development services. Three hundred eighty-six (386) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

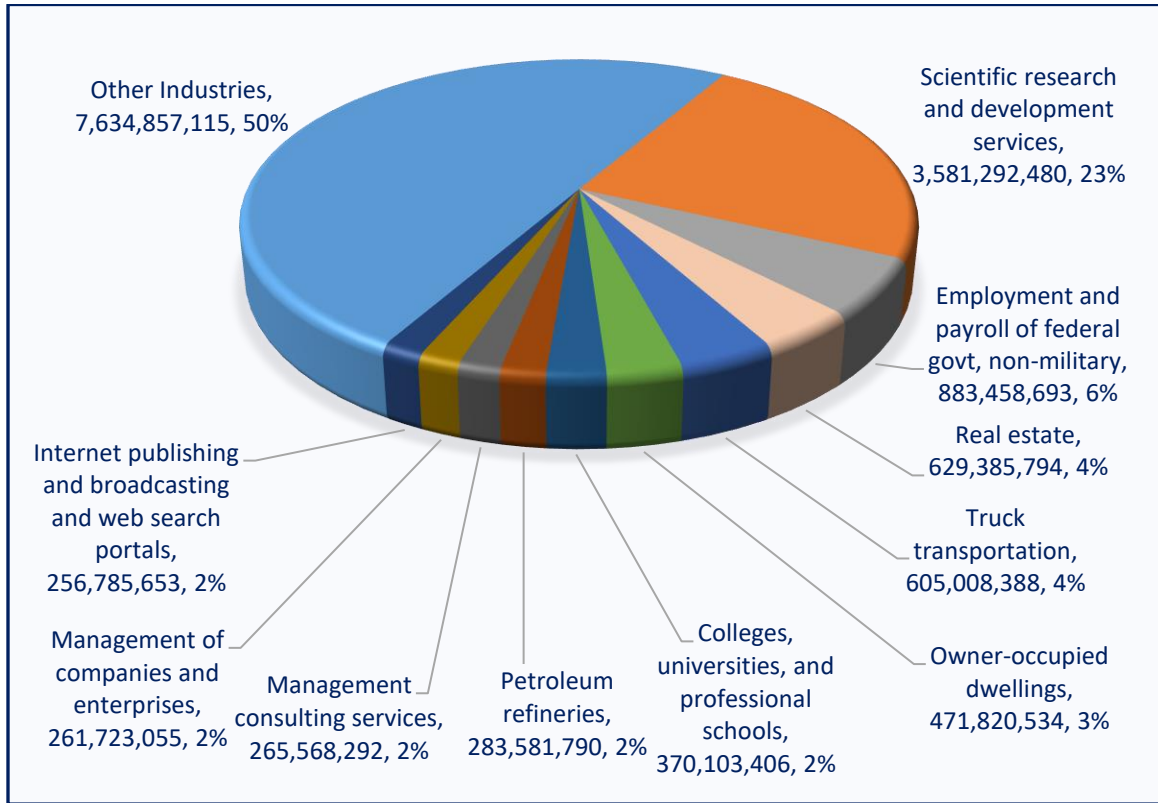

Figure 30: Top Ten Most Impacted Industries by Value Added, California (NASA)

The total output impact of NASA in California was \$15.2 billion in Fiscal Year 2021. The direct impact of \$882 million constitutes the value of production by NASA employees, accounting for around 6% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditure of \$4.5 billion resulted in an additional increase in output (gross sales) of \$3.4 billion across all industry sectors (adding up to the indirect total of \$7.9 billion in Table 56). Around \$6.4 billion (42%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of \$3.5 billion in sales (including direct, indirect, and induced impacts—see Box 1 in Section 1) in scientific research and development services (Figure 31). Similar to employment, impact in this industry is largely driven by NASA procurement spending; scientific research and development services accounted for 70% of NASA procurement spending in the state in Fiscal Year 2021. The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

M2M Campaign Impacts

In 2021, California had 252 M2M-related civil service employees (100 FTEs) with a corresponding labor income of \$20.3 million. M2M campaign contracts sourced in the state in the same year totaled \$912.6 million. The total California employment impact is 11,640 jobs. The labor income and economic output associated with this employment are \$1.1 billion and \$2.8 billion, respectively. The M2M campaign generates \$135 million in tax revenues for the state and local governments in California (Table 59).

Similarly, the direct output figure

represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the California economy. More than ninety-seven (97) percent of the employment impacts and nearly ninety-seven (97) percent of the output impacts are due to NASA procurement sourced within the state.

The M2M Campaign's Share of NASA Impacts

Around 19% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 62 and Figure 32). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Investments in Climate Change Research and Technology Impacts

In 2021, California had 787 climate change research and technology-related civil service employees (465 FTEs) with a corresponding labor income of \$84.8 million. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$641.4 million. The total California employment impact is 9,972 jobs. The labor income and economic output associated with this employment are \$841.1 million and \$2.2 billion, respectively. The investments in climate change research and technology generate \$103.7 million in tax revenues for the state and local governments in California (Table 63).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 15% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 66 and Figure 33). Economic Impacts on the State of Colorado

NASA Impacts

In 2021, 74 NASA civil service employees (50 FTEs) residing in Colorado earned \$8.9 million in labor income. NASA contracts sourced in Colorado in the same year totaled approximately \$1.7 billion. The total economic impact resulting from these activities is 26,255 jobs, \$1.9 billion in labor income, and \$5.0 billion in economic output. These economic activities generate \$172.8 million in tax revenues for the state and local governments in Colorado (Table 67).

The following two tables examine the contribution of different NASA activities to the Colorado economy. Table 68 examines the sources of the employment figures in the second column of Table 67. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than ninety-nine (99) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is less than 1%.

26,255 jobs in the Colorado economy were supported by NASA activities in Fiscal Year 2021. Of these, 50 (<1%) were directly located at NASA centers. As a result of the procurement of goods and services in the Colorado economy, 15,109 additional jobs (58%) were created. The remaining employment—11,096 jobs (42%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 34 depicts the ten most impacted industries by employment. Scientific research and development services is the most impacted industry, accounting for more than a quarter of the jobs created. The employment in this industry is driven largely by NASA procurement spending; scientific research and development services accounted for 85% of NASA procurement spending in the state in Fiscal Year 2021.

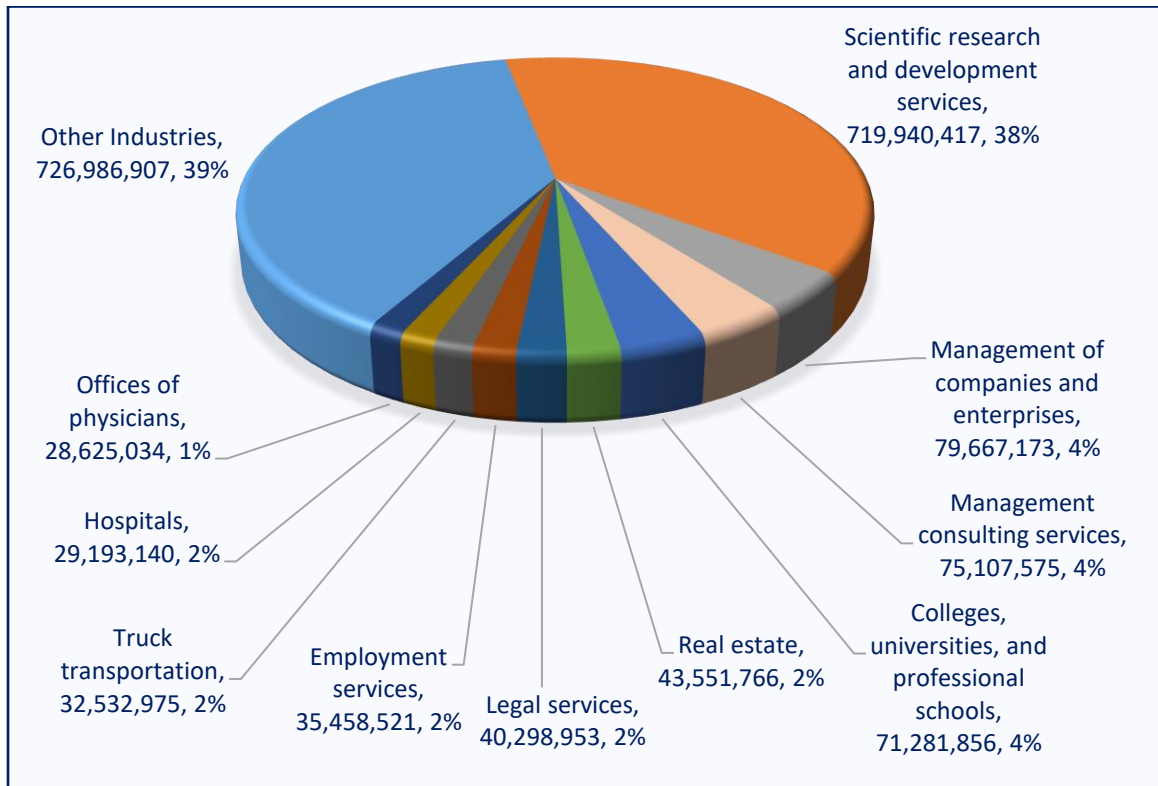

Figure 34: Top Ten Most Impacted Industries by Employment, Colorado (NASA)

The total income impact of NASA in Colorado was \$1.9 billion in Fiscal Year 2021. Of this amount, \$9 million (<1%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$1.2 billion (67%). The remaining income (induced impact), estimated to be \$621 million (33%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 35 depicts the ten most impacted industries by labor income. Scientific research and development services account for 38% of the total labor income earned. The reason that this industry’s share of labor income is larger than their share of employment is that employee compensation in this industry is greater than the state average. As of 2019, the average employee compensation in the scientific research and development services industry was \$103,136 (including benefits), compared to an average of \$64,294 across Colorado.

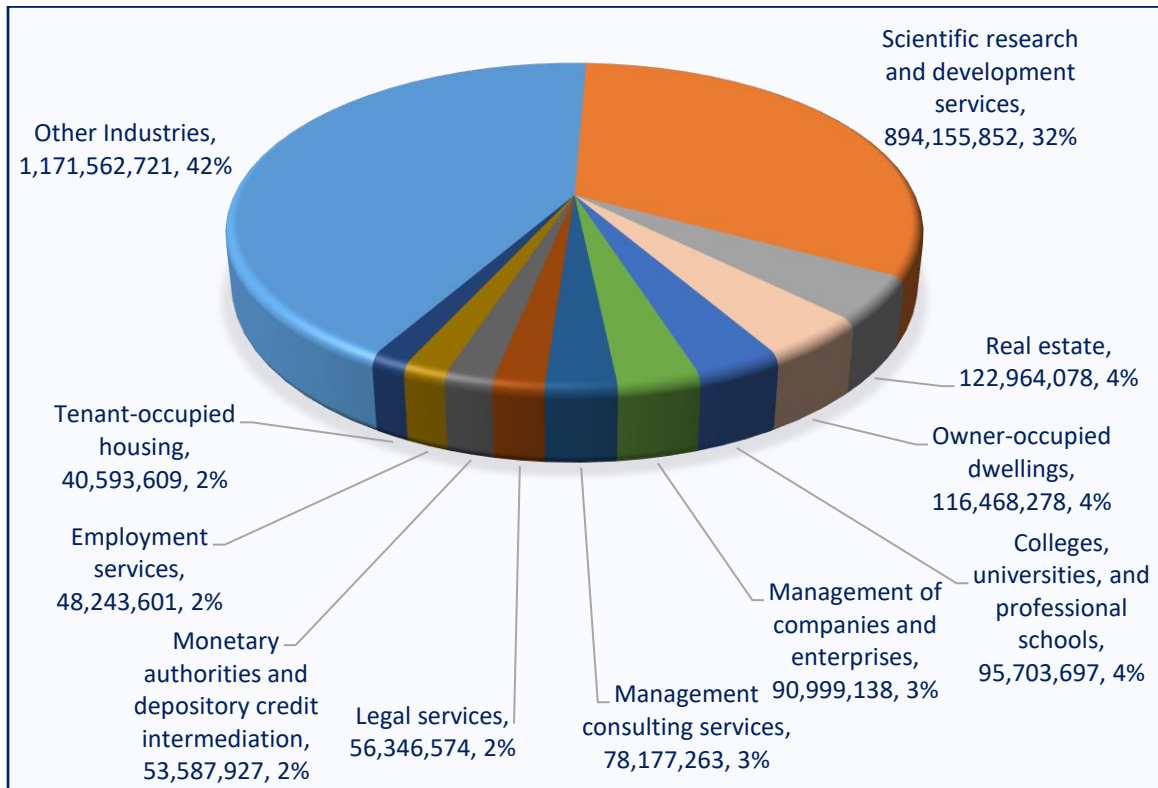

Figure 35: Top Ten Most Impacted Industries by Labor Income, Colorado (NASA)

The total value added impact of NASA in Colorado was \$2.7 billion in Fiscal Year 2021. Of this amount, \$11 million (<1%) was created by civil service employees and approximately \$1.7 billion (61%) was created indirectly by the \$1.7 billion in procurement spending across all industry sectors in Colorado. Around \$1 billion (39%) was generated by increased consumption spending supported by increased earnings.

Figure 36 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development services is the most impacted industry, accounting for 32% of the total value added created. NASA activities accounted for an increase of \$894 million in value added in scientific research and development services.

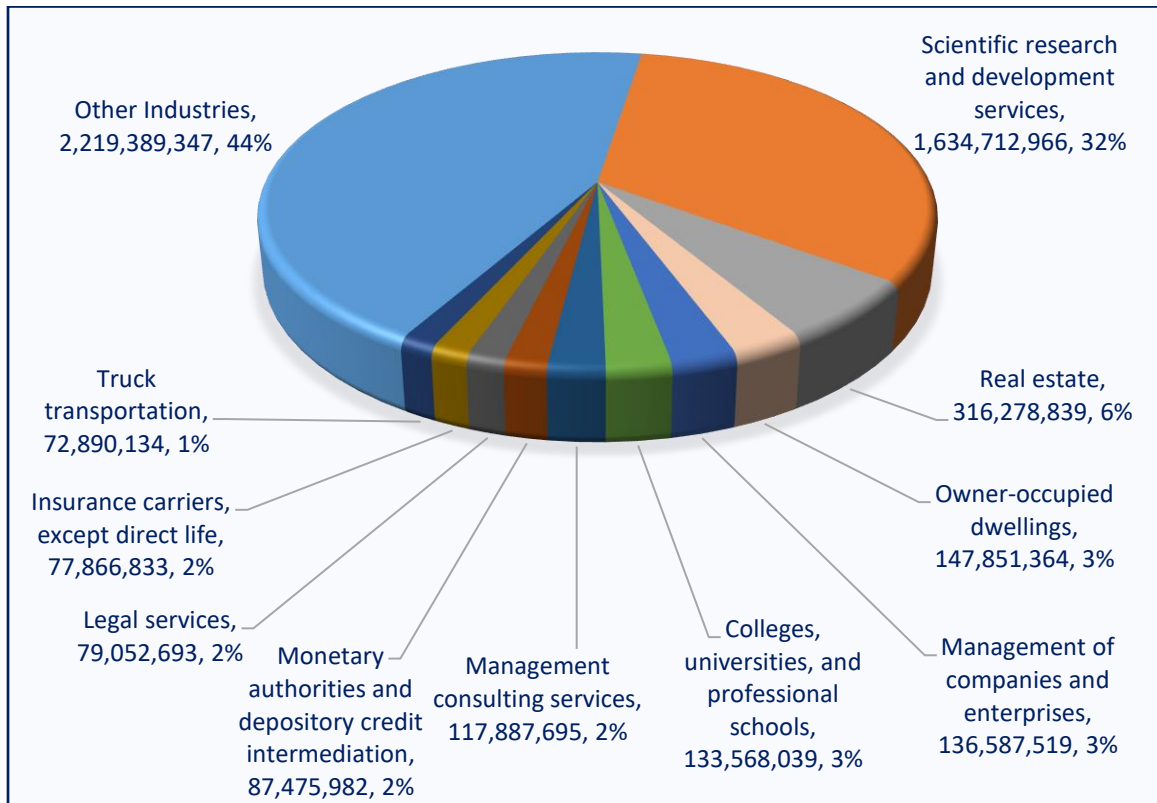

Figure 36: Top Ten Most Impacted Industries by Value Added, Colorado (NASA)

The total output impact of NASA in Colorado was \$5.0 billion in Fiscal Year 2021. The direct impact of \$24 million constitutes the value of production by NASA employees, accounting for around 1% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditure of \$1.7 billion resulted in an additional increase in output (gross sales) of \$1.3 billion across all industry sectors (adding up to the indirect total of \$3.0 billion in Table 67). More than \$1.9 billion (39%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of \$1.6 billion in sales (including direct, indirect, and induced impacts—see Box 1 in Section 1) in scientific research and development services (Figure 37). Similar to employment, impact in this industry is largely driven by NASA procurement spending; scientific research and development services accounted for 85% of NASA procurement spending in the state in Fiscal Year 2021. The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

M2M Campaign Impacts

In 2021, Colorado had 12 M2M-related civil service employees (6 FTEs) with a corresponding labor income of \$1 million. M2M campaign contracts sourced in the state in the same year totaled \$998.7 million. The total Colorado employment impact is 14,639 jobs. The labor income and economic output associated with this employment are approximately \$1.2 billion and \$3 billion, respectively. The M2M campaign generates \$106.6 million in tax revenues for the state and local governments in Colorado (Table 70).

The M2M Campaign’s Share of NASA Impacts

Around 60% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 73 and Figure 38). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

In 2021, Colorado had 14 climate change research and technology-related civil service employees (8 FTEs) with a corresponding labor income of \$1.3 million. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$190.1 million. The total Colorado employment impact is 3,552 jobs. The labor income and economic output associated with this employment are \$209.5 million and \$549 million, respectively. The investments in climate change research and technology generate \$18.3 million in tax revenues for the state and local governments in Colorado (Table 74).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 11% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 77 and Figure 39). The primary reason the shares are different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of Connecticut

NASA Impacts

In 2021, 18 NASA civil service employees (9 FTEs) residing in Connecticut earned \$880,000 in labor income. NASA contracts sourced in Connecticut in the same year totaled \$38.1 million. The total economic impact resulting from these activities is 485 jobs, \$42.9 million in labor income, and \$107.6 million in economic output. These economic activities generate \$4.8 million in tax revenues for the state and local governments in Connecticut (Table 78).

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Connecticut economy. Table 79 examines the sources of the employment figures in the second column of Table 78. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly 97% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 3%.

M2M Campaign Impacts

In 2021, Connecticut had one M2M-related civil service employee (<1 FTE) with a corresponding labor income of less than \$1,000. M2M campaign contracts sourced in the state in the same year totaled \$7.1 million. The total Connecticut employment impact is 86 jobs. The labor income and economic output associated with this employment are approximately \$8.1 million and \$19.2 million, respectively. The M2M campaign generates \$963,000 in tax revenues for the state and local governments in Connecticut (Table 81).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Approximately 15% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 99 and Figure 43). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of Florida

NASA Impacts

In 2021, 2,341 NASA civil service employees (2,172 FTEs) residing in Florida earned \$363.6 million in labor income. NASA contracts sourced in Florida in the same year totaled \$1.9 billion. The total economic impact resulting from these activities is 38,569 jobs, \$2.4 billion in labor income, and \$7.4 billion in economic output. These economic activities generate \$248.2 million in tax revenues for the state and local governments in Florida (Table 100).

The employment multiplier is 17.8, meaning that for every NASA job located in Florida, an additional 16.8 jobs are supported in the state economy. The output multiplier of 7 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$6 million worth of output is sustained throughout the state economy.

Note: The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Florida economy. Table 101 examines the sources of the employment figures in the second column of Table 100. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Around 83% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 17%.

Note: The direct employment impact consists of NASA jobs (FTEs) while indirect employment impact consists of NASA contractor employees and employees in the supply chain of those contractors.

Table 102 examines the sources of the output figures in the fifth column of Table 100. Procurement spending is responsible for more than 76% of the increase in output in the state economy arising from NASA. NASA labor force’s share of overall NASA output impact is approximately 24%.

38,569 jobs in the Florida economy were supported by NASA activities in Fiscal Year 2021. Of these, 2,172 (6%) were directly located at NASA centers. As a result of the procurement of goods and services in the Florida economy, 19,852 additional jobs (51%) were created. The remaining employment—16,545 jobs (43%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 44 depicts the ten most impacted industries by employment. Scientific research and development services, truck transportation and the federal government sector are the most impacted industries. These three industries together account for 27% of the jobs created. The employment in scientific research and development services is driven largely by NASA procurement spending; this industry accounted for 44% of NASA procurement spending in the state in Fiscal Year 2021. The impact in the federal government sector represents mainly civil service employees working for NASA.

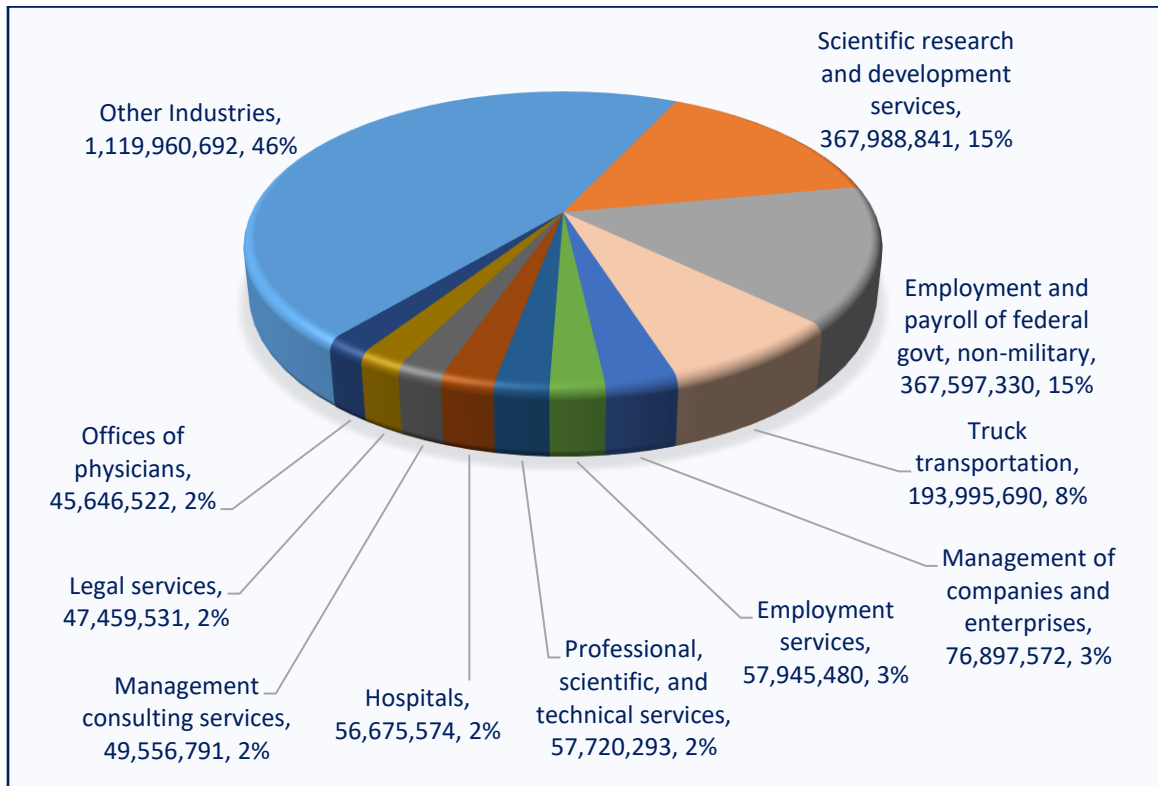

Figure 44: Top Ten Most Impacted Industries by Employment, Florida (NASA)

The total income impact of NASA in Florida was \$2.4 billion in Fiscal Year 2021. Of this amount, more than \$363 million (15%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$1.2 billion (51%). The remaining income (induced impact), estimated to be \$832 million (34%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 45 depicts the ten most impacted industries by labor income. As a consequence of its share of total employment, scientific research and development services (along with the federal government sector) is the most impacted industries. The two industries together account for 30% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the state average. As of 2019, the average employee compensation in the scientific research and development services industry was \$82,081 (including benefits), compared to an average of \$51,944 across Florida.

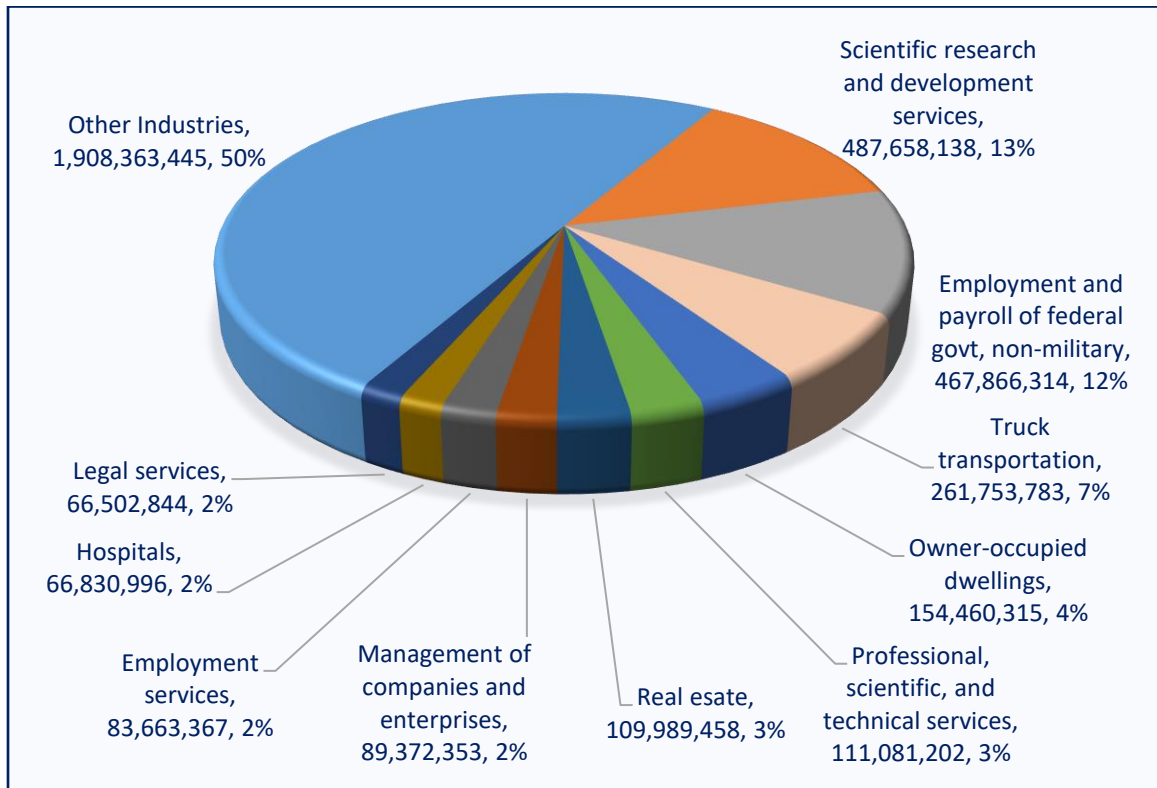

Figure 45: Top Ten Most Impacted Industries by Labor Income, Florida (NASA)

The total value added impact of NASA in Florida was \$3.8 billion in Fiscal Year 2021. Of this amount, more than \$462 million (12%) was created by civil service employees and \$1.8 billion (49%) was created indirectly by the \$1.9 billion in procurement spending across all industry sectors in Florida. \$1.5 billion (39%) was generated by increased consumption spending supported by increased earnings.

Figure 46 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development services and the federal government sector are the most impacted industries. The two industries together account for 25% of the total value added created. NASA activities accounted for an increase of \$487 million in value added in scientific research and development services. Four hundred sixty-seven (467) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

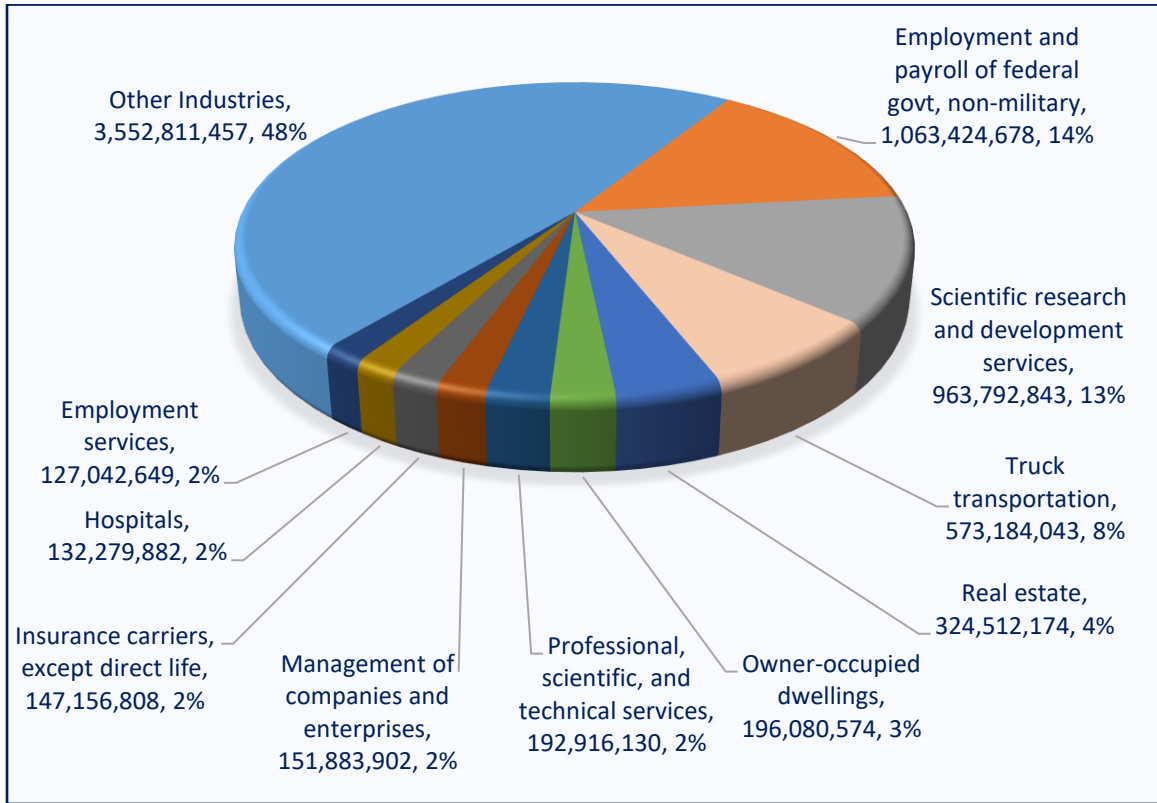

Figure 46: Top Ten Most Impacted Industries by Value Added, Florida (NASA)

The total output impact of NASA in Florida was \$7.4 billion in Fiscal Year 2021. The direct impact of \$1.1 billion constitutes the value of production by NASA employees, accounting for around 14% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditure of \$1.9 billion resulted in an additional increase in output (gross sales) of \$1.7 billion across all industry sectors (adding up to the indirect total of \$3.6 billion in Table 100). More than \$2.7 billion (37%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of \$963 million in sales (including direct, indirect, and induced impacts—see Box 1 in Section 1) in scientific research and development services (Figure 47). Similar to employment, impacts in this industry is largely driven by NASA procurement spending; these two industries accounted for 44% of NASA procurement spending in the state in Fiscal Year 2021. The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

M2M Campaign Impacts

In 2021, Florida had 902 M2M-related civil service employees (600 FTEs) with a corresponding labor income of nearly \$99.9 million. M2M campaign contracts sourced in the state in the same year totaled \$509.4 million. The total Florida employment impact is 10,016 jobs. The labor income and economic output associated with this employment are \$702.3 million and \$2 billion, respectively. The M2M campaign generates \$62.6 million in tax revenues for the state and local governments in Florida (Table 103).

The following two tables examine the contribution of different NASA activities to the Florida economy. Eighty-two (82) percent of the employment impacts and seventy-six (76) percent of the output impacts are due to NASA procurement sourced within the state.

The M2M Campaign's Share of NASA Impacts

Around 27% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 106 and Figure 48). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Investments in Climate Change Research and Technology Impacts

In 2021, Florida had 61 climate change research and technology-related civil service employees (13 FTEs) with a corresponding labor income of \$2.2 million. Investments in climate change research and technology contracts sourced in the state in the same year totaled approximately \$141.4 million. The total Florida employment impact is 2,565 jobs. The labor income and economic output associated with this employment are \$145.4 million and \$431.6 million, respectively. The investments in climate change research and technology generate nearly \$13.9 million in tax revenues for the state and local governments in Florida (Table 107).

Economic Impacts on the State of Georgia

NASA Impacts

In 2021, 34 NASA civil service employees (19 FTEs) residing in Georgia earned \$2.7 million in labor income. NASA contracts sourced in Georgia in the same year totaled \$26.6 million. The total economic impact resulting from these activities is 462 jobs, \$30.3 million in labor income, and \$89.3 million in economic output. These economic activities generate \$2.9 million in tax revenues for the state and local governments in Georgia (Table 111).

M2M Campaign Impacts

In 2021, Georgia had seven M2M-related civil service employees (2 FTEs) with a corresponding labor income of \$360,000. M2M campaign contracts sourced in the state in the same year totaled \$2.3 million. The total Georgia employment impact is 42 jobs. The labor income and economic output associated with this employment are \$3.1 million and \$8.4 million, respectively. The M2M campaign generates \$273,000 in tax revenues for the state and local governments in Georgia (Table 114).

Investments in Climate Change Research and Technology Impacts

In 2021, Georgia had six climate change research and technology-related civil service employees (2 FTEs) with a corresponding labor income of \$255,000. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$8.3 million. The total Georgia employment impact is 140 jobs. The labor income and economic output associated with this employment are \$8.3 million and \$23.9 million, respectively. The investments in climate change research and technology generate \$828,000 in tax revenues for the state and local governments in Georgia (Table 118).

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Georgia economy. Around 96% of the employment impacts and 94% of the output impacts are due to NASA procurement sourced within the state.

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 28% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 121 and Figure 51). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of Hawaii

NASA Impacts

In 2021, three NASA civil service employees (3 FTEs) residing in Hawaii earned \$370,000 in labor income. NASA contracts sourced in Hawaii in the same year totaled \$26.3 million. The total economic impact resulting from these activities is 354 jobs, \$23.8 million in labor income, and \$64.8 million in economic output. These economic activities generate \$2.7 million in tax revenues for the state and local governments in Hawaii (Table 122).

M2M Campaign Impacts

There were no M2M-specific NASA employees in Hawaii in FY 2021, but \$260,000 in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is 4 jobs, \$251,000 in labor income, and \$586,000 worth of output. These economic activities generate \$35,000 in tax revenues for the state and local governments in Hawaii (Table 125).

NASA Impacts

In 2021, 42 NASA civil service employees (20 FTEs) residing in Illinois earned \$2.3 million in labor income. NASA contracts sourced in Illinois in the same year totaled \$38.8 million. The total economic impact resulting from these activities is 621 jobs, \$48.3 million in labor income, and \$133.6 million in economic output. These economic activities generate \$2.9 million in tax revenues for the state and local governments in Illinois (Table 142).

Note: The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Illinois economy. Table 143 examines the sources of the employment figures in the second column of Table 142. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Approximately 93% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 7%.

M2M Campaign Impacts

In 2021, Illinois had seven M2M-related civil service employees (3 FTEs) with a corresponding labor income of \$452,000. M2M campaign contracts sourced in the state in the same year totaled \$2.1 million. The total Illinois employment impact is 38 jobs. The labor income and economic output associated with this employment are \$3.3 million and \$9.3 million, respectively. The M2M campaign generates \$359,000 in tax revenues for the state and local governments in Illinois (Table 145).

The M2M Campaign's Share of NASA Impacts

Around 8% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 148 and Figure 56). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Investments in Climate Change Research and Technology Impacts

In 2021, Illinois had four climate change research and technology-related civil service employees (1 FTE) with a corresponding labor income of \$107,000. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$11.8 million. The total Illinois employment impact is 177 jobs. The labor income and economic output associated with this employment are \$13.1 million and \$35.9 million, respectively. The investments in climate change research and technology generate \$1.2 million in tax revenues for the state and local governments in Illinois (Table 149).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 30% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 152 and Figure 57). Economic Impacts on the State of Indiana

NASA Impacts

In 2021, 31 NASA civil service employees (17 FTEs) residing in Indiana earned more than \$1.9 million in labor income. NASA contracts sourced in Indiana in the same year totaled \$82.2 million. The total economic impact resulting from these activities is 1,131 jobs, \$71.9 million in labor income, and \$216.4 million in economic output. These economic activities generate \$3.3 million in tax revenues for the state and local governments in Indiana (Table 153).

Economic Impacts on the State of Iowa

NASA Impacts

In 2021, four NASA civil service employees (3 FTEs) residing in Iowa earned \$338,000 in labor income. NASA contracts sourced in Iowa in the same year totaled \$25.6 million. The total economic impact resulting from these activities is 333 jobs, \$19.3 million in labor income, and \$60.7 million in economic output. These economic activities generate \$2.1 million in tax revenues for the state and local governments in Iowa (Table 164).

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Iowa economy. Table 165 examines the sources of the employment figures in the second column of Table 164. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 98% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 2%.

M2M Campaign Impacts

There were no M2M-specific NASA employees in Iowa in FY 2021, but \$209,000 in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is 3 jobs, \$170,000 in labor income, and \$512,000 worth of output. These economic activities generate \$21,000 in tax revenues for the state and local governments in Iowa (Table 167).

Investments in Climate Change Research and Technology Impacts

There were no climate change research and technology-specific NASA employees in Iowa in FY 2021, but \$2.3 million in investments in climate change research and technology NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is 35 jobs, \$1.7 million in labor income, and \$5.2 million worth of output. These economic activities generate \$189,000 in tax revenues for the state and local governments in Iowa (Table 169).

The Investments in Climate Change Research and Technology's Share of NASA Impacts

Around 9% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 170 and Figure 61). The primary reason the shares are different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

NASA Impacts

In 2021, nine NASA civil service employees (5 FTEs) residing in Kansas earned \$810,000 in labor income. NASA contracts sourced in Kansas in the same year totaled \$6.4 million. The total economic impact resulting from these activities is 117 jobs, \$7.3 million in labor income, and \$22.2 million in economic output (Table 171).³²

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Kentucky economy. Approximately 86 percent of the employment impacts and 74 percent of the output impacts are due to NASA procurement sourced within the state.

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 15% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 192 and Figure 65). The primary reason the shares are different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of Louisiana

NASA Impacts

In 2021, 204 NASA civil service employees (189 FTEs) residing in Louisiana earned nearly \$32.2 million in labor income. NASA contracts sourced in Louisiana in the same year totaled more than \$147.7 million. The total economic impact resulting from these activities is 2,601 jobs, \$150.1 million in labor income, and \$493.6 million in economic output. These economic activities generate nearly \$16.2 million in tax revenues for the state and local governments in Louisiana (Table 193).

The following two tables examine the contribution of different NASA activities to the Louisiana economy. Table 194 examines the sources of the employment figures in the second column of Table 193. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 81% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 19%.

M2M Campaign Impacts

In 2021, Louisiana had 72 M2M-related civil service employees (46 FTEs) with a corresponding labor income of \$7.6 million. M2M campaign contracts sourced in the state in the same year totaled more than \$75.5 million. The total Louisiana employment impact is 1,234 jobs. The labor income and economic output associated with this employment are \$68.6 million and \$225.1 million, respectively. The M2M campaign generates \$7.8 million in tax revenues for the state and local governments in Louisiana (Table 196).

Investments in Climate Change Research and Technology Impacts

In 2021, Louisiana had five climate change research and technology-related civil service employees (1 FTE) with a corresponding labor income of \$91,000. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$1.7 million. The total Louisiana employment impact is 25 jobs. The labor income and economic output associated with this employment are \$1.4 million and \$4.6 million, respectively. The investments in climate change research and technology generate \$150,000 in tax revenues for the state and local governments in Louisiana (Table 200).

Economic Impacts on the State of Maine

NASA Impacts

In 2021, three NASA civil service employees (1 FTE) residing in Maine earned \$84,000 in labor income. NASA contracts sourced in Maine in the same year totaled \$6.7 million. The total economic impact resulting from these activities is 110 jobs, \$6.3 million in labor income, and \$19.1 million in economic output. These economic activities generate \$751,000 in tax revenues for the state and local governments in Maine (Table 204).

M2M Campaign Impacts

There were no M2M-specific NASA employees in Maine in FY 2021, but \$306,000 in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is 32 jobs, \$3.1 million in labor income, and \$9.9 million worth of output. These economic activities generate \$391,000 in tax revenues for the state and local governments in Maine (Table 207).

Investments in Climate Change Research and Technology Impacts

In 2021, Maine had one climate change research and technology-related civil service employee (<1 FTE) with a corresponding labor income of \$7,000. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$2.5 million. The total Maine employment impact is 39 jobs. The labor income and economic output associated with this employment are \$2.1 million and \$6.5 million, respectively. The investments in climate change research and technology generate \$256,000 in tax revenues for the state and local governments in Maine (Table 209).

Economic Impacts on the State of Maryland

NASA Impacts

In 2021, 3,314 NASA civil service employees (3,128 FTEs) residing in Maryland earned \$611.3 million in labor income. NASA contracts sourced in Maryland in the same year totaled more than \$2.2 billion. The total economic impact resulting from these activities is 36,771 jobs, \$3.1 billion in labor income, and \$7.9 billion in economic output. These economic activities generate \$344.8 million in tax revenues for the state and local governments in Maryland (Table 213).

The employment multiplier is 11.8, meaning that for every NASA job located in Maryland, an additional 10.8 jobs are supported in the state economy. The output multiplier of 5.2 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$4.2 million worth of output is sustained throughout the state economy.

Note: The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Maryland economy. Table 214 examines the sources of the employment figures in the second column of Table 213. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly 78% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 22%.

Total	8,230	100	28,541	100	36,771	100	22.4	77.6

Note: The direct employment impact consists of NASA jobs (FTEs) while indirect employment impact consists of NASA contractor employees and employees in the supply chain of those contractors.

Table 215 examines the sources of the output figures in the fifth column of Table 213. Procurement spending is responsible for nearly 70% of the increase in output in the state economy arising from NASA. NASA labor force’s share of overall NASA output impact is 30%. The reason that NASA labor force’s share of overall output impact is larger than its share in overall employment impact is that NASA employees produce more output per worker than the average employee that is part of the supply chain of NASA procurement.

36,771 jobs in the Maryland economy were supported by NASA activities in Fiscal Year 2021. Of these, 3,128 (8%) were directly located at NASA centers. As a result of the procurement of goods and services in the Maryland economy, 16,912 additional jobs (46%) were created. The remaining employment—16,731 jobs (46%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 70 depicts the ten most impacted industries by employment. Scientific research and development services and management consulting services are the most impacted industries, respectively (aside from the federal government sector). These three industries together account for a third of the jobs created. The employment in private sector industries is driven largely by NASA procurement spending; these two industries accounted for 82% of NASA procurement spending in the state in Fiscal Year 2021. The

impact in the federal government sector represents mainly civil service employees working for NASA.

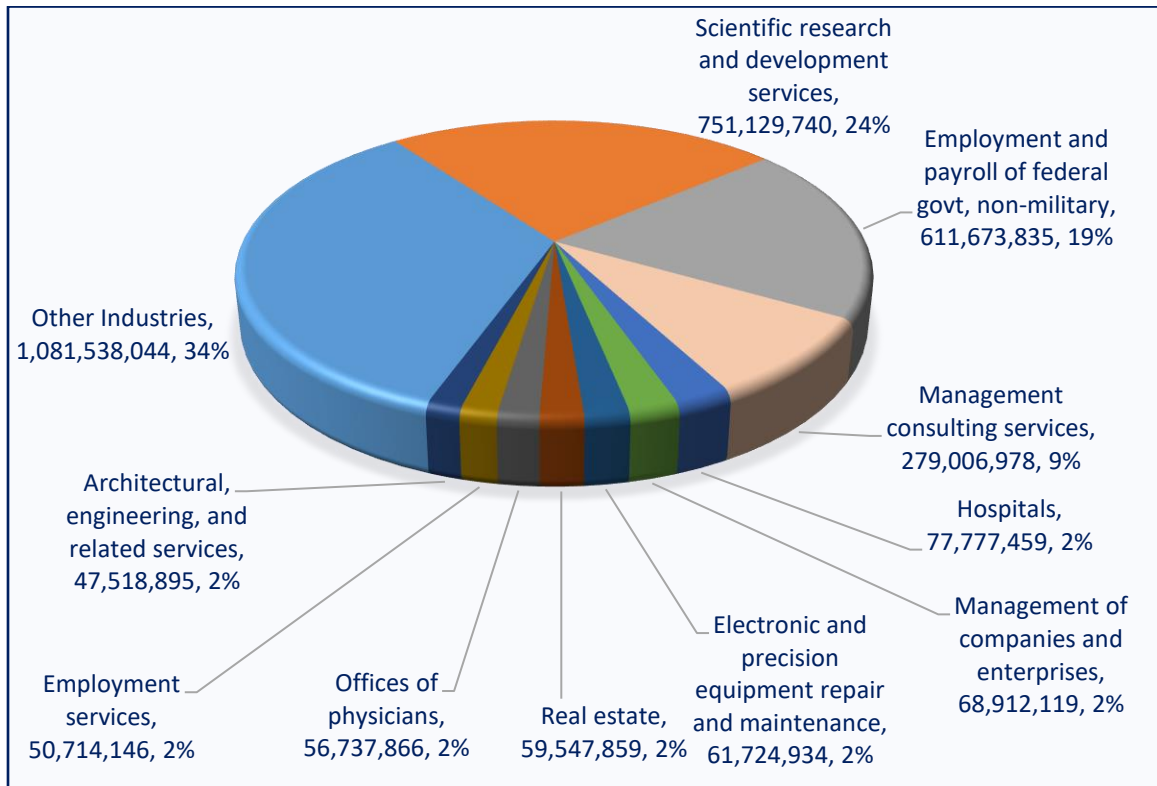

Figure 70: Top Ten Most Impacted Industries by Employment, Maryland (NASA)

The total income impact of NASA in Maryland was \$3.1 billion in Fiscal Year 2021. Of this amount, more than \$611 million (20%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$1.5 billion (49%). The remaining income (induced impact), estimated to be \$979.8 million (31%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 71 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, scientific research and development and management consulting services are the most impacted industries by income (along with the federal government sector). The three industries together account for 52% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the state average. As of 2019, the average employee compensation in the scientific research and development services industry was \$108,507 (including benefits), compared to an average of \$69,975 across Maryland.

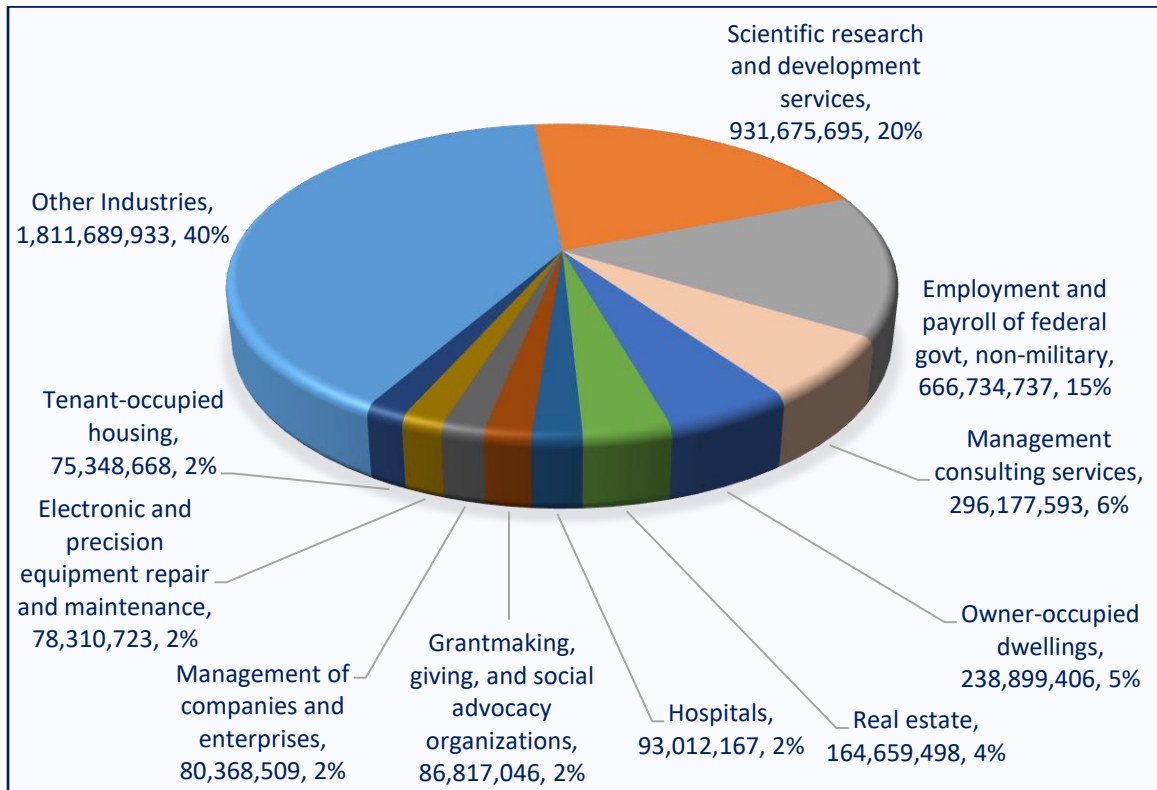

Figure 71: Top Ten Most Impacted Industries by Labor Income, Maryland (NASA)

The total value added impact of NASA in Maryland was \$4.5 billion in Fiscal Year 2021. Of this amount, \$666 million (15%) was created by civil service employees and \$2.1 billion (46%) was created indirectly by the \$2.2 billion in procurement spending across all industry sectors in Maryland. \$1.7 billion (39%) was generated by increased consumption spending supported by increased earnings.

Figure 72 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development services and management consulting services are the most impacted industries (along with the federal government sector). The three industries together account for 41% of the total value added created. NASA activities accounted for an increase of \$931 million in value added in scientific research and development services, and a \$296 million increase in value added in management consulting services. Six hundred sixty-six (666) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

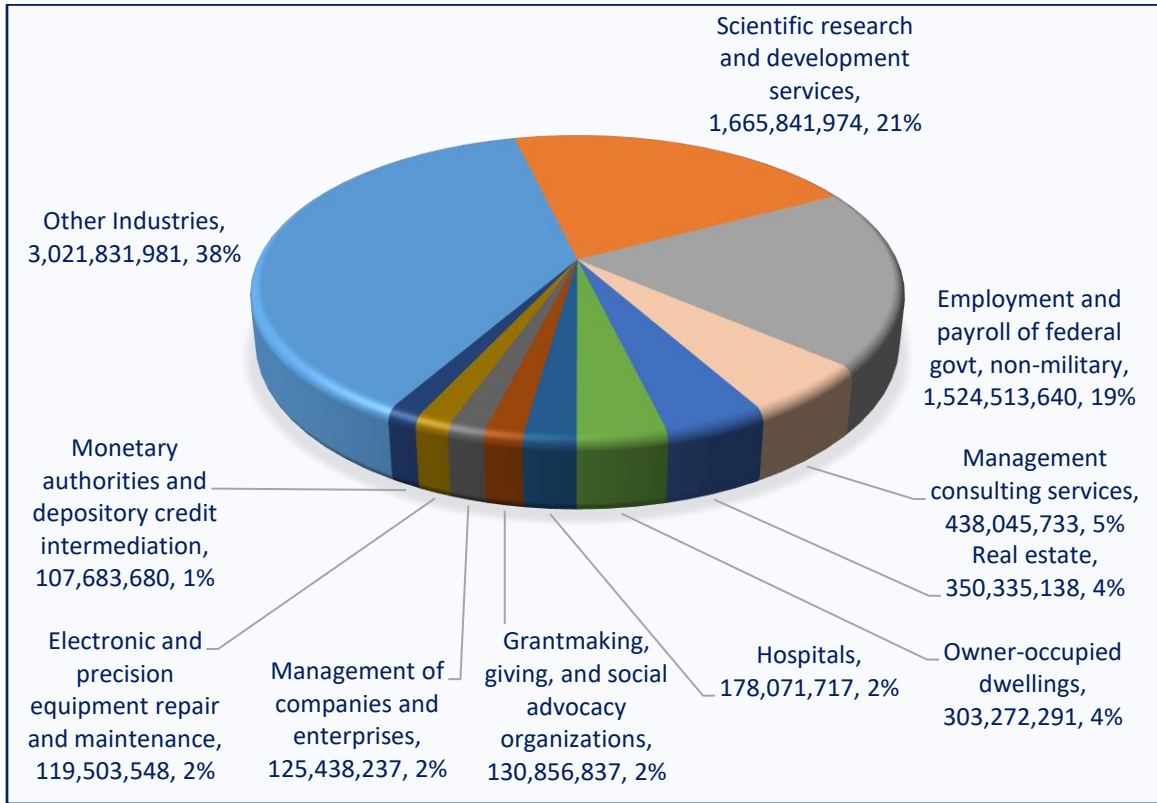

Figure 72: Top Ten Most Impacted Industries by Value Added, Maryland (NASA)

The total output impact of NASA in Maryland was \$7.9 billion in Fiscal Year 2021. The direct impact of \$1.5 billion constitutes the value of production by NASA employees, accounting for around 19% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditure of \$2.2 billion resulted in an additional increase in output (gross sales) of \$1.3 billion across all industry sectors (adding up to the indirect total of \$3.5 billion in Table 213). Nearly \$2.9 billion (36%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of \$1.6 billion in sales (including direct, indirect, and induced impacts—see Box 1 in Section 1) in scientific research and development services, and a \$438 million increase in management consulting services (Figure 73). Similar to employment, impacts in these industries are largely driven by NASA procurement spending; these two industries accounted for 82% of NASA procurement spending in the state in Fiscal Year 2021. The output impacts reported in other industries mainly result from increases in consumption spending (induced impacts). The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

M2M Campaign Impacts

In 2021, Maryland had 106 M2M-related civil service employees (17 FTEs) with a corresponding labor income of \$3.5 million. M2M campaign contracts sourced in the state in the same year totaled more than \$29.6 million. The total Maryland employment impact is 400 jobs. The labor income and economic output associated with this employment are \$34.8 million and \$86.6 million, respectively. The M2M campaign generates \$3.8 million in tax revenues for the state and local governments in Maryland (Table 216).

The following two tables examine the contribution of different NASA activities to the Maryland economy. Eighty-eight (88) percent of the employment impacts and eighty-four (84) percent of the output impacts are due to NASA procurement sourced within the state.

Investments in Climate Change Research and Technology Impacts

In 2021, Maryland had 863 climate change research and technology-related civil service employees (413 FTEs) with a corresponding labor income of \$80.8 million. Investments in climate change research and technology contracts sourced in the state in the same year totaled more than \$417.9 million. The total Maryland employment impact is 6,425 jobs. The labor income and economic output associated with this employment are \$510.1 million and \$1.3 billion, respectively. The investments in climate change research and technology generate \$59.3 million in tax revenues for the state and local governments in Maryland (Table 220).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 17% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 223 and Figure 75). The primary reason the shares are different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of Massachusetts

NASA Impacts

In 2021, 24 NASA civil service employees (15 FTEs) residing in Massachusetts earned \$2.5 million in labor income. NASA contracts sourced in Massachusetts in the same year totaled approximately \$256.7 million. The total economic impact resulting from these activities is 3,260 jobs, \$290.8 million in labor income, and \$691.7 million in economic output. These economic activities generate \$26 million in tax revenues for the state and local governments in Massachusetts (Table 224).

The following two tables examine the contribution of different NASA activities to the Massachusetts economy. Table 225 examines the sources of the employment figures in the second column of Table 224. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly 99 percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 1%.

M2M Campaign Impacts

In 2021, Massachusetts had five M2M-related civil service employees (1 FTE) with a corresponding labor income of 184,000. M2M campaign contracts sourced in the state in the same year totaled \$6.6 million. The total Massachusetts employment impact is 84 jobs. The labor income and economic output associated with this employment are \$8.1 million and \$18.8 million, respectively. The M2M campaign generates \$747,000 in tax revenues for the state and local governments in Massachusetts (Table 227).

The M2M Campaign’s Share of NASA Impacts

Approximately 3% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 230 and Figure 76). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

In 2021, Massachusetts had three climate change research and technology-related civil service employees (1 FTE) with a corresponding labor income of 137,000. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$68.1 million. The total Massachusetts employment impact is 958 jobs. The labor income and economic output associated with this employment are \$76.9 million and \$178.8 million, respectively. The investments in climate change research and technology generate \$7.1 million in tax revenues for the state and local governments in Massachusetts (Table 231).

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Massachusetts economy. Nearly all of the employment and output impacts are due to NASA procurement sourced within the state.

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 27% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 234 and Figure 77). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of Michigan

NASA Impacts

In 2021, 29 NASA civil service employees (13 FTEs) residing in Michigan earned \$1.5 million in labor income. NASA contracts sourced in Michigan in the same year totaled \$45.1 million. The total economic impact resulting from these activities is 785 jobs, \$50.9 million in labor income, and \$142.6 million in economic output. These economic activities generate \$4.8 million in tax revenues for the state and local governments in Michigan (Table 235).

The following two tables examine the contribution of different NASA activities to the Michigan economy. Table 236 examines the sources of the employment figures in the second column of Table 235. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Ninety-six (96) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 4%.

M2M Campaign Impacts

In 2021, Michigan had five M2M-related civil service employees (2 FTEs) with a corresponding labor income of \$223,000. M2M campaign contracts sourced in the state in the same year totaled \$1.4 million. The total Michigan employment impact is 23 jobs. The labor income and economic output associated with this employment are \$1.8 million and \$5.1 million, respectively. The M2M campaign generates \$168,000 in tax revenues for the state and local governments in Michigan (Table 238).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 22% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 256 and Figure 81). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output impacts (due to industry-specific multipliers).

Economic Impacts on the State of Mississippi

NASA Impacts

In 2021, 282 NASA civil service employees (261 FTEs) residing in Mississippi earned \$42.5 million in labor income. NASA contracts sourced in Mississippi in the same year totaled \$296.9 million. The total economic impact resulting from these activities is 5,187 jobs, \$265.7 million in labor income, and \$864.8 million in economic output. These economic activities generate \$29.0 million in tax revenues for the state and local governments in Mississippi (Table 257).

The employment multiplier is 19.9, meaning that for every NASA job located in Mississippi, an additional 18.9 jobs are supported in the state economy. The output multiplier of 6.8 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$5.8 million worth of output is sustained throughout the state economy.

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Mississippi economy. Table 258 examines the sources of the employment figures in the second column of Table 257. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Eighty-eight (88) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 12%.

Table 259 examines the sources of the output figures in the fifth column of Table 257. Procurement spending is responsible for 79% of the increase in output in the state economy arising from NASA. NASA labor force’s share of overall NASA output impact is 21%. The reason that NASA labor force’s share of overall output impact is larger than its share in overall employment impact is that NASA employees produce more output per worker than the average employee that is part of the supply chain of NASA procurement.

M2M Campaign Impacts

In 2021, Mississippi had 70 M2M-related civil service employees (37 FTEs) with a corresponding labor income of nearly \$6.2 million. M2M campaign contracts sourced in the state in the same year totaled more than \$78.3 million. The total Mississippi employment impact is 1,201 jobs. The labor income and economic output associated with this employment are \$62.4 million and \$208.0 million, respectively. The M2M campaign generates \$7.1 million in tax revenues for the state and local governments in Mississippi (Table 260).

The M2M Campaign’s Share of NASA Impacts

Around 24% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 263 and Figure 82). The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 222% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 278 and Figure 85). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of Montana

NASA Impacts

In 2021, three NASA civil service employees (2 FTEs) residing in Montana earned \$185,000 in labor income. NASA contracts sourced in Montana in the same year totaled \$9.7 million. The total economic impact resulting from these activities is 152 jobs, \$7.7 million in labor income, and \$24.3 million in economic output. These economic activities generate \$686,000 in tax revenues for the state and local governments in Montana (Table 279).

Note: The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Montana economy. Table 280 examines the sources of the employment figures in the second column of Table 279. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 97 percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 3%.

M2M Campaign Impacts

There were no M2M-specific NASA employees in Montana in FY 2021, but \$1.1 million in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is 19 jobs, \$834,000 in labor income, and \$2.5 million worth of output. These economic activities generate \$81,000 in tax revenues for the state and local governments in Montana (Table 282).

The M2M Campaign’s Share of NASA Impacts

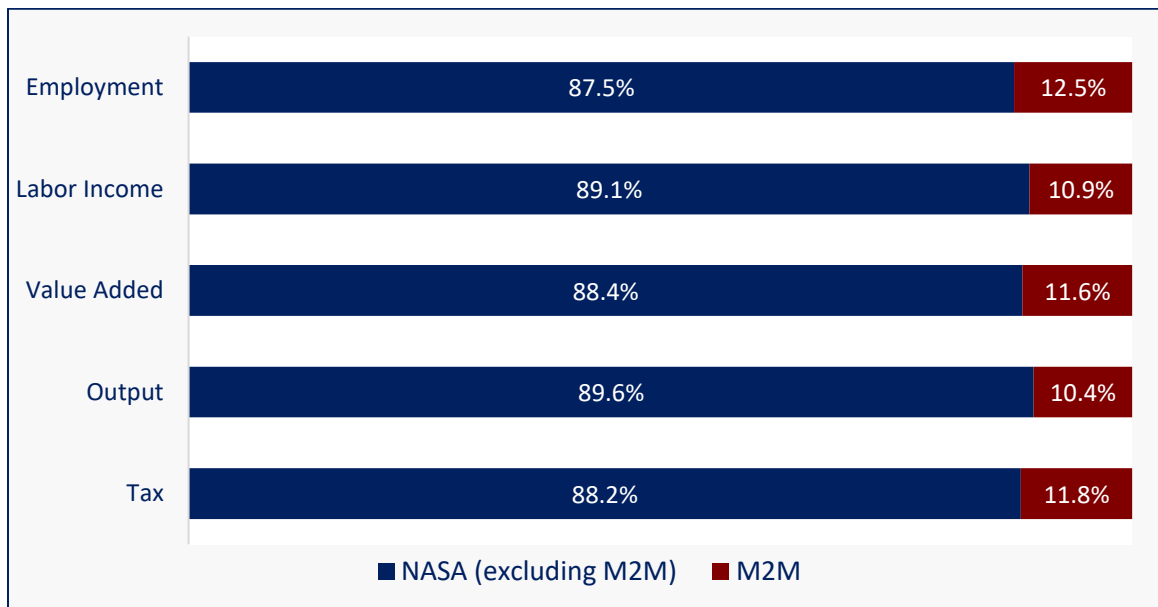

Around 11% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 283 and Figure 86). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending

in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

There were no climate change research and technology-specific NASA employees in Montana in FY 2021, but \$3.7 million in investments in climate change research and technology NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is 57 jobs, \$2.8 million in labor income, and \$9.1 million worth of output. These economic activities generate \$257,000 in tax revenues for the state and local governments in Montana (Table 284).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

M2M Campaign Impacts

In 2021, Nebraska had one M2M-related civil service employee (<1 FTE) with a corresponding labor income of \$16,000. M2M campaign contracts sourced in the state in the same year totaled \$50,000. The total Nebraska employment impact is 1 job. The labor income and economic output associated with this employment are \$59,000 and \$224,000, respectively. ³⁷ Negative labor income of -\$676 is reported for Nevada in FY 2021. We did not calculate multipliers or tax impacts associated with this figure.

is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 8% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 303 and Figure 91). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of New Hampshire

NASA Impacts

In 2021, five NASA civil service employees (3 FTEs) residing in New Hampshire earned \$521,000 in labor income. NASA contracts sourced in New Hampshire in the same year totaled \$33.5 million. The total economic impact resulting from these activities is 454 jobs, \$33.1 million in labor income, and \$88.0 million in economic output. These economic activities generate \$3.4 million in tax revenues for the state and local governments in New Hampshire (Table 304).

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the New Hampshire economy. Table 305 examines the sources of the employment figures in the second column of Table 304. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Ninety-eight (98) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 2%.

M2M Campaign Impacts

In 2021, New Hampshire had one M2M campaign -related civil service employees (<1 FTE) with a corresponding labor income of \$1,000. M2M campaign contracts sourced in the state in the same year totaled \$1.8 million. The total New Hampshire employment impact is 21 jobs. The labor income and economic output associated with this employment are \$1.7 million and \$4.3 million, respectively. The M2M campaign generates \$168,000 in tax revenues for the state and local governments in New Hampshire (Table 307).

In 2021, 83 NASA civil service employees (77 FTEs) residing in New Mexico earned \$13.1 million in labor income. NASA contracts sourced in New Mexico in the same year totaled more than \$59.5 million. The total economic impact resulting from these activities is 855 jobs, \$52.5 million in labor income, and \$177.8 million in economic output. These economic activities generate \$2.2 million in tax revenues for the state and local governments in New Mexico (Table 326).

Note: The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the New Mexico economy. Table 327 examines the sources of the employment figures in the second column of Table 326. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Approximately 78% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 22%.

M2M Campaign Impacts

In 2021, New Mexico had 19 M2M-related civil service employees (5 FTEs) with a corresponding labor income of \$822,000. M2M campaign contracts sourced in the state in the same year totaled more than \$3.7 million. The total New Mexico employment impact is 61 jobs. The labor income and economic output associated with this employment are \$4.3 million and \$12.2 million, respectively. The M2M campaign generates \$391,000 in tax revenues for the state and local governments in New Mexico (Table 329).

The M2M Campaign's Share of NASA Impacts

Around 10% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 332 and Figure 96). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Investments in Climate Change Research and Technology Impacts

In 2021, New Mexico had two climate change research and technology-related civil service employees (<1 FTE) with a corresponding labor income of \$11,000. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$7.4 million. The total New Mexico employment impact is 91 jobs. The labor income and economic output associated with this employment are \$4.6 million and \$15.6 million, respectively. The investments in climate change research and technology generate \$196,000 in tax revenues for the state and local governments in New Mexico (Table 333).

NASA Impacts

In 2021, 63 NASA civil service employees (47 FTEs) residing in New York earned \$7.9 million in labor income. NASA contracts sourced in New York in the same year totaled \$183.1 million. The total economic impact resulting from these activities is 2,321 jobs, \$209.6 million in labor income, and \$530.8 million in economic output. These economic activities generate approximately \$26.5 million in tax revenues for the state and local governments in New York (Table 337).

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the North Carolina economy. Table 349 examines the sources of the employment figures in the second column of Table 348. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Ninety-two (92) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 8%.

M2M Campaign Impacts

In 2021, North Carolina had seven M2M-related civil service employees (4 FTEs) with a corresponding labor income of \$844,000. M2M campaign contracts sourced in the state in the same year totaled \$1.3 million. The total North Carolina employment impact is 31 jobs. The labor income and economic output associated with this employment are \$2.5 million and \$7.0 million, respectively. The M2M campaign generates \$228,000 in tax revenues for the state and local governments in North Carolina (Table 351).

The following two tables examine the contribution of different NASA activities to the North Carolina economy. Sixty-one (61) percent of the employment impacts and nearly 50 percent of the output impacts are due to NASA procurement sourced within the state.

The M2M Campaign’s Share of NASA Impacts

Around 4% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 354 and Figure 100). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Investments in Climate Change Research and Technology Impacts

In 2021, North Carolina had 12 climate change research and technology-related civil service employees (5 FTEs) with a corresponding labor income of \$722,000. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$18.0 million. The total North Carolina employment impact is 320 jobs. The labor income and economic output associated with this employment are \$17.8 million and \$50.7 million, respectively. The investments in climate change research and technology generate \$1.9 million in tax revenues for the state and local governments in North Carolina (Table 355).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 29% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 358 and Figure 101). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of North Dakota

NASA Impacts

In 2021, one NASA civil service employee (1 FTE) residing in North Dakota earned \$168,000 in labor income. NASA contracts sourced in North Dakota in the same year totaled \$2.9 million. The total economic impact resulting from these activities is 35 jobs, \$2.2 million in labor income, and \$6.8 million in economic output. These economic activities generate \$159,000 in tax revenues for the state and local governments in North Dakota (Table 359).

M2M Campaign Impacts³⁸

In 2021, North Dakota had one M2M-related civil service employee (<1 FTE) with a corresponding labor income of less than \$1,000. There were no M2M campaign contracts sourced in the state. The resulting impacts are minimal (Table 362).

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The M2M Campaign’s Share of NASA Impacts

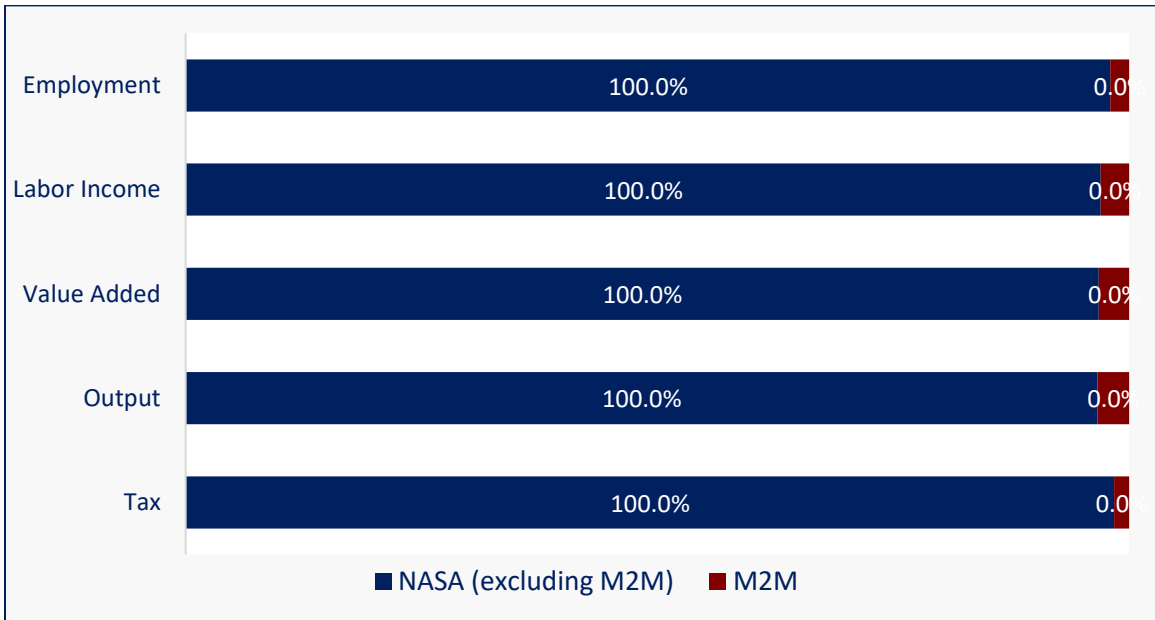

Less than 1% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 363 and Figure 102).

³⁸ North Dakota along with Wyoming are the only states with no M2M-related procurement activity.

Investments in Climate Change Research and Technology Impacts

There were no climate change research and technology-specific NASA employees in North Dakota in FY 2021, but \$524,000 in investments in climate change research and technology NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is six jobs, \$357,000 in labor income, and \$1.1 million worth of output. These economic activities generate \$27,000 in tax revenues for the state and local governments in North Dakota (Table 364).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 17% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 365 and Figure 103). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of Ohio

NASA Impacts

In 2021, 1,631 NASA civil service employees (1,530 FTEs) residing in Ohio earned \$261.3 million in labor income. NASA contracts sourced in Ohio in the same year totaled \$409.8 million. The total economic impact resulting from these activities is 10,907 jobs, \$834.9 million in labor income, and \$2.4 billion in economic output. These economic activities generate \$82.2 million in tax revenues for the state and local governments in Ohio (Table 366).

The employment multiplier is 7.1, meaning that for every NASA job located in Ohio, an additional 6.1 jobs are supported in the state economy. The output multiplier of 3.3 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$2.3 million worth of output is sustained throughout the state economy.

The following two tables examine the contribution of different NASA activities to the Ohio economy. Table 367 examines the sources of the employment figures in the second column of Table 366. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Fifty-nine (59) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 41%.

Table 368 examines the sources of the output figures in the fifth column of Table 366. NASA labor force’s share of overall NASA output impact is approximately 51% while procurement spending is responsible for 49% of the increase in output in the state economy arising from NASA. The reason that NASA labor force’s share of overall output impact is larger than its share in overall employment impact is that NASA employees produce more output per worker than the average employee that is part of the supply chain of NASA procurement.

10,907 jobs in the Ohio economy were supported by NASA activities in Fiscal Year 2021. Of these, 1,530 (14%) were directly located at NASA centers. As a result of the procurement of goods and services in the Ohio economy, 3,733 additional jobs (34%) were created. The remaining employment—5,644 jobs (52%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 104 depicts the ten most impacted industries by employment. Scientific research and development services and management consulting services are the most impacted industries, respectively (along with the federal government sector). These three industries together account for 28% of the jobs created. The employment in these industries is driven largely by NASA procurement spending; the three private industries

accounted for 58% of NASA procurement spending in the state in Fiscal Year 2021. The impact in the federal government sector represents mainly civil service employees working for NASA.

Figure 104: Top Ten Most Impacted Industries by Employment, Ohio (NASA)

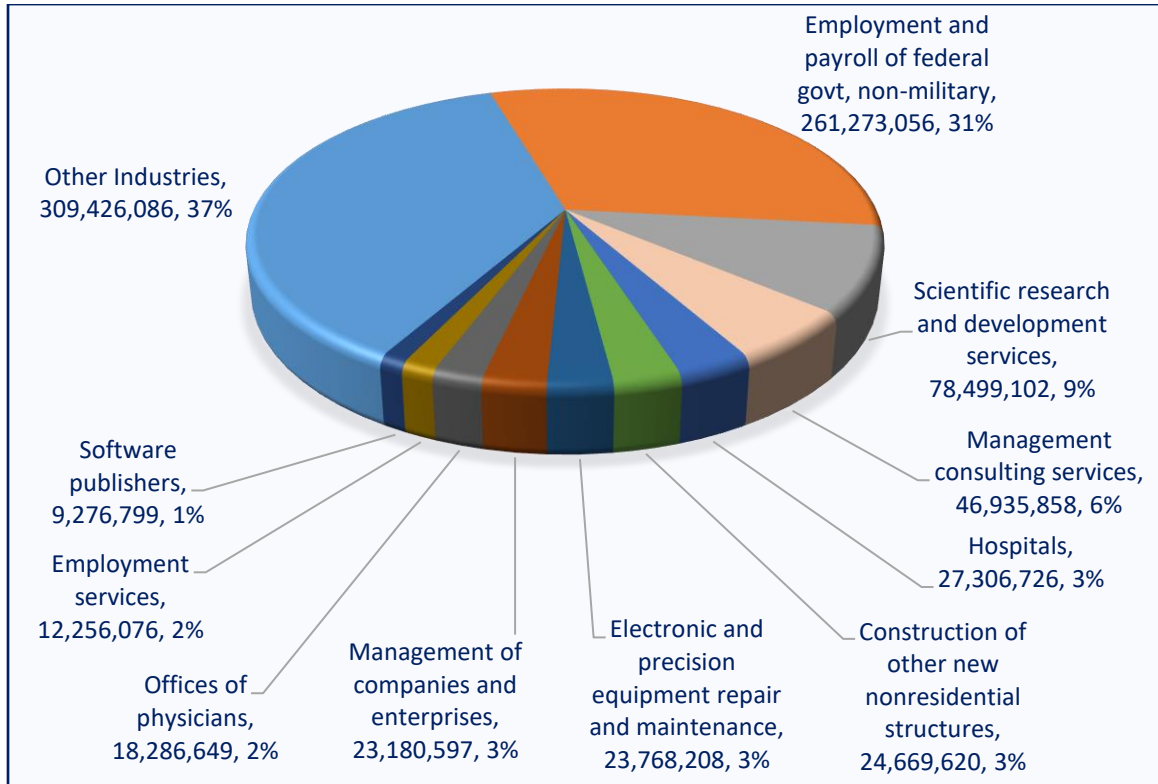

The total income impact of NASA in Ohio was \$834.9 million in Fiscal Year 2021. Of this amount, \$261 million (31%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$276.6 million (33%). The remaining income (induced impact), estimated to be \$296.9 million (36%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 105 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, scientific research and development services and management consulting services are the most impacted industries by income (along with the federal government sector). The three industries together account for 46% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the state average. As of 2019, the average employee compensation in the

scientific research and development services industry was \$79,000 (including benefits), compared to an average of \$58,605 across Ohio.

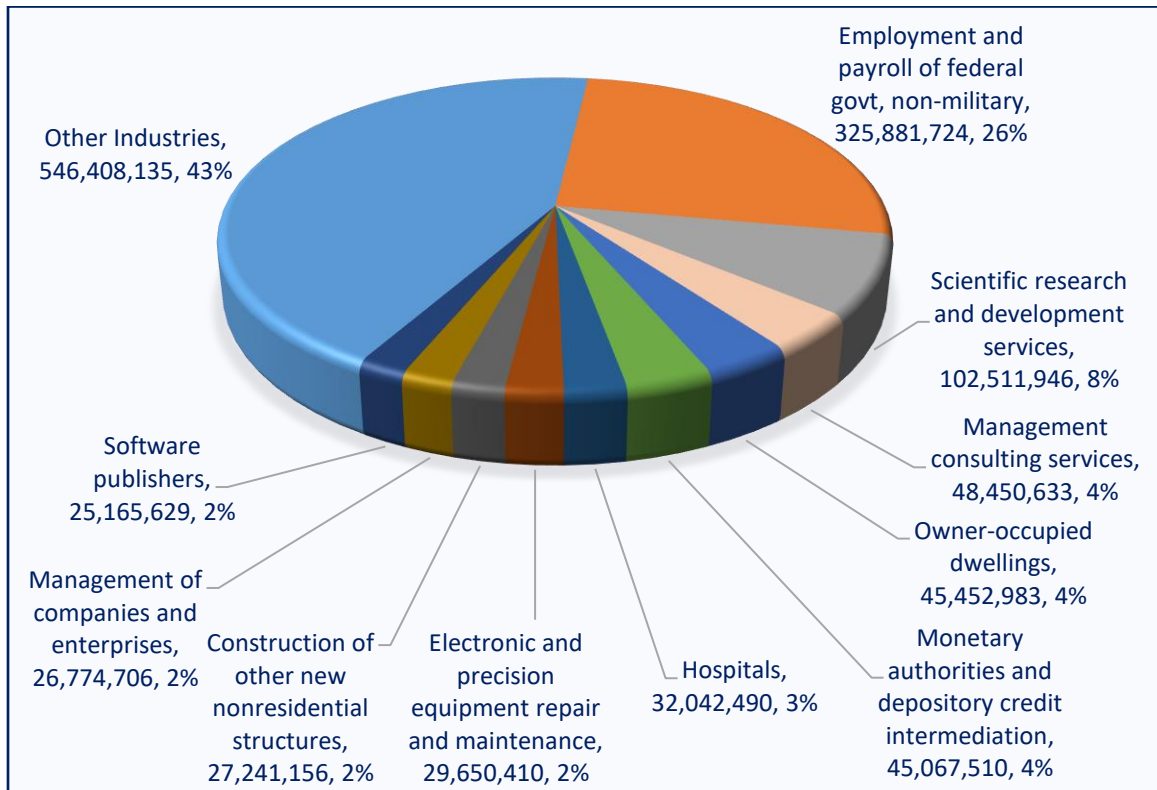

Figure 105: Top Ten Most Impacted Industries by Labor Income, Ohio (NASA)

The total value added impact of NASA in Ohio was \$1.2 billion in Fiscal Year 2021. Of this amount, \$326 million (26%) was created by civil service employees and \$394 million (31%) was created indirectly by the \$409 million in procurement spending across all industry sectors in Ohio. \$535 million (43%) was generated by increased consumption spending supported by increased earnings.

Figure 106 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development services and management consulting services are the most impacted industries (along with the federal government sector). The three industries together account for 38% of the total value added created. NASA activities accounted for an increase of \$102 million in value added in scientific research and development services, and a \$48 million increase in value added in management consulting services. Three hundred twenty-five (325) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

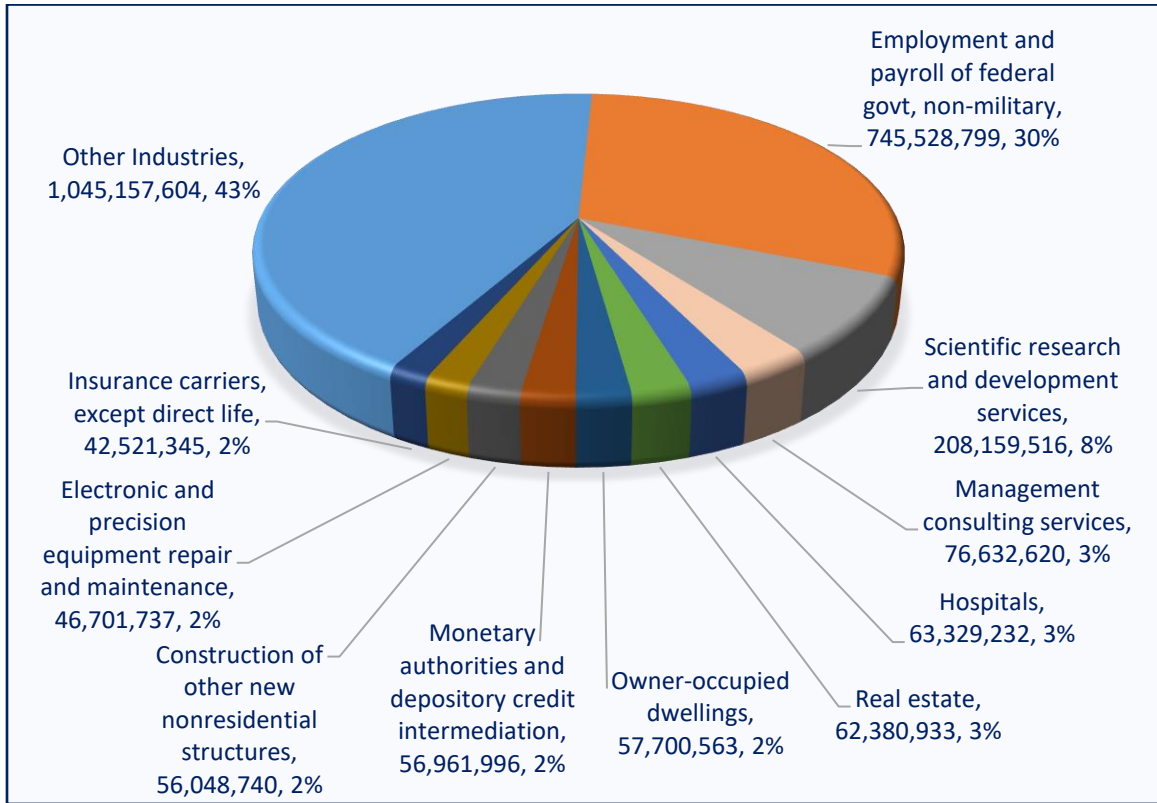

Figure 106: Top Ten Most Impacted Industries by Value Added, Ohio (NASA)

The total output impact of NASA in Ohio was \$2.4 billion in Fiscal Year 2021. The direct impact of nearly \$746 million constitutes the value of production by NASA employees, accounting for around 30% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditure of \$409 million resulted in an additional increase in output (gross sales) of \$325 million across all industry sectors (adding up to the indirect total of \$734 million in Table 366). Approximately \$981 million (40%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of \$208 million in sales (including direct, indirect, and induced impacts—see Box 1 in Section 1) in scientific research and development services and \$76 million increase in sales in management consulting services (Figure 107). Similar to employment, impacts in these industries are largely driven by NASA procurement spending; these two industries accounted for 58% of NASA procurement spending in Fiscal Year 2021. The output impacts hospitals, real estate and other industries mainly result from increases in consumption spending (induced impacts).

M2M Campaign Impacts

In 2021, Ohio had 408 M2M-related civil service employees (198 FTEs) with a corresponding labor income of \$33.1 million. M2M campaign contracts sourced in the state in the same year totaled \$44.7 million. The total Ohio employment impact is 1,280 jobs. The labor income and economic output associated with this employment are \$101.4 million and \$300.9 million, respectively. The M2M campaign generates \$9.7 million in tax revenues for the state and local governments in Ohio (Table 369).

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Ohio economy. More than 54 percent of the employment impacts and 45 percent of the output impacts are due to NASA procurement sourced within the state.

The M2M Campaign’s Share of NASA Impacts

Around 12% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 372 and Figure 108). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

In 2021, Ohio had 508 climate change research and technology-related civil service employees (245 FTEs) with a corresponding labor income of \$40.4 million. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$72.5 million. The total Ohio employment impact is 1,910 jobs. The labor income and economic output associated with this employment are \$138.8 million and \$416.7 million, respectively. The investments in climate change research and technology generate \$12.8 million in tax revenues for the state and local governments in Ohio (Table 373).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 17% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 376 and Figure 109). Economic Impacts on the State of Oklahoma

NASA Impacts

In 2021, 15 NASA civil service employees (9 FTEs) residing in Oklahoma earned \$1.2 million in labor income. NASA contracts sourced in Oklahoma in the same year totaled \$54.1 million. The total economic impact resulting from these activities is 802 jobs, \$48.9 million in labor income, and \$157.7 million in economic output. These economic activities generate nearly \$4.3 million in tax revenues for the state and local governments in Oklahoma (Table 377).

NASA Impacts

In 2021, nine NASA civil service employees (7 FTEs) residing in Oregon earned nearly \$1.2 million in labor income. NASA contracts sourced in Oregon in the same year totaled \$16.6 million. The total economic impact resulting from these activities is 244 jobs, \$11.9 million in labor income, and \$46.5 million in economic output. These economic activities generate \$1.8 million in tax revenues for the state and local governments in Oregon (Table 388).

M2M Campaign Impacts

In 2021, Oregon had two M2M-related civil service employees (<1 FTE) with a corresponding labor income of \$51,000. M2M campaign contracts sourced in the state in the same year totaled \$1.4 million. The total Oregon employment impact is 16 jobs. The labor income and economic output associated with this employment are \$1.3 million and \$3.7 million, respectively. The M2M campaign generates \$149,000 in tax revenues for the state and local governments in Oregon (Table 391).

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Oregon economy. More than 94 percent of the employment impacts and 92 percent of the output impacts are due to NASA procurement sourced within the state.

The M2M Campaign’s Share of NASA Impacts

Around 9% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 394 and Figure 112). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Investments in Climate Change Research and Technology Impacts

In 2021, Oregon had four climate change research and technology-related civil service employees (1 FTE) with a corresponding labor income of \$131,000. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$9.7 million. The total Oregon employment impact is 133 jobs. The labor income and economic output associated with this employment are \$8.4 million and \$24.8 million, respectively. The investments in climate change research and technology generate \$960,000 in tax revenues for the state and local governments in Oregon (Table 395).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 57% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 398 and Figure 113). Economic Impacts on the State of Pennsylvania

NASA Impacts

In 2021, 52 NASA civil service employees (35 FTEs) residing in Pennsylvania earned \$5.6 million in labor income. NASA contracts sourced in Pennsylvania in the same year totaled \$119.3 million. The total economic impact resulting from these activities is 1,870 jobs, \$145.9 million in labor income, and \$377.6 million in economic output. These economic activities generate \$14.6 million in tax revenues for the state and local governments in Pennsylvania (Table 399).

Economic Impacts on the State of Rhode Island

NASA Impacts

In 2021, one NASA civil service employee (1 FTE) residing in Rhode Island earned \$181,000 in labor income. NASA contracts sourced in Rhode Island in the same year totaled \$5.9 million. The total economic impact resulting from these activities is 86 jobs, \$5.6 million in labor income, and \$15.9 million in economic output. These economic activities generate \$668,000 in tax revenues for the state and local governments in Rhode Island (Table 410).

M2M Campaign Impacts

There were no M2M-specific NASA employees in Rhode Island in FY 2021, but \$2.3 million in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is 32 jobs, \$2.2 million in labor income, and \$6.0 million worth of output. These economic activities generate \$259,000 in tax revenues for the state and local governments in Rhode Island (Table 413).

The M2M Campaign’s Share of NASA Impacts

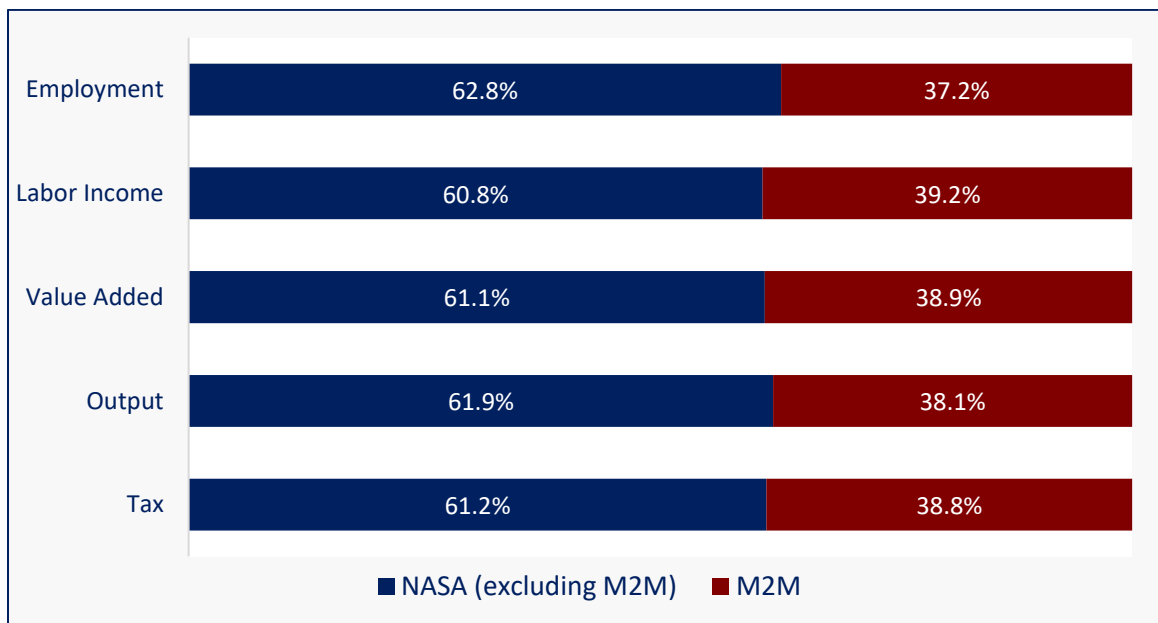

Around 38% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 414 and Figure 116). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and

spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Investments in Climate Change Research and Technology Impacts

There were no climate change research and technology-specific NASA employees in Rhode Island in FY 2021, but \$1.4 million in investments in climate change research and technology NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is 19 jobs, \$1.2 million in labor income, and \$3.5 million worth of output. These economic activities generate \$147,000 in tax revenues for the state and local governments in Rhode Island (Table 415).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 22% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 416 and Figure 117). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of South Carolina

NASA Impacts

In 2021, 15 NASA civil service employees (9 FTEs) residing in South Carolina earned \$1.7 million in labor income. NASA contracts sourced in South Carolina in the same year totaled \$14.1 million. The total economic impact resulting from these activities is 250 jobs, \$15.4 million in labor income, and \$42.3 million in economic output. These economic activities generate \$1.5 million in tax revenues for the state and local governments in South Carolina (Table 417).

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the South Carolina economy. Table 418 examines the sources of the employment figures in the second column of Table 417. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Ninety (90) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 10%.

The Investments in Climate Change Research and Technology's Share of NASA Impacts

Around 68% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 436 and Figure 121). The primary reason the shares are different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Tennessee economy. Table 438 examines the sources of the employment figures in the second column of Table 437. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 87% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 13%.

M2M Campaign Impacts

In 2021, Tennessee had 33 M2M-related civil service employees (14 FTEs) with a corresponding labor income of \$2.6 million. M2M campaign contracts sourced in the state in the same year totaled \$1.1 million. The total Tennessee employment impact is 57 jobs. The labor income and economic output associated with this employment are \$5.3 million and \$14.7 million, respectively. The M2M campaign generates \$367,000 in tax revenues for the state and local governments in Tennessee (Table 440).

The following two tables examine the contribution of different NASA activities to the Tennessee economy. Approximately 30 percent of the employment impacts and 22 percent of the output impacts are due to NASA procurement sourced within the state.

The M2M Campaign's Share of NASA Impacts

Around 4% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 443 and Figure 122). The primary reason the shares are different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Investments in Climate Change Research and Technology Impacts

In 2021, Tennessee had nine climate change research and technology-related civil service employees (2 FTEs) with a corresponding labor income of \$356,000. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$20.9 million. The total Tennessee employment impact is 295 jobs. The labor income and economic output associated with this employment are \$19.1 million and \$58.5 million, respectively. The investments in climate change research and technology generate \$2.1 million in tax revenues for the state and local governments in Tennessee (Table 444).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 18% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 447 and Figure 123). The primary reason the shares are different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of Texas

NASA Impacts

In 2021, 3,162 NASA civil service employees (2,948 FTEs) residing in Texas earned more than \$573 million in labor income. NASA contracts sourced in Texas in the same year totaled nearly \$2.3 billion. The total economic impact resulting from these activities is 41,937 jobs, \$3.2 billion in labor income, and \$9.3 billion in economic output. These economic activities generate \$240.6 million in tax revenues for the state and local governments in Texas (Table 448).

The employment multiplier is 14.2, meaning that for every NASA job located in Texas, an additional 13.2 jobs are supported in the state economy. The output multiplier of 6.5 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$5.5 million worth of output is sustained throughout the state economy.

The following two tables examine the contribution of different NASA activities to the Texas economy. Table 449 examines the sources of the employment figures in the second column of Table 448. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. More than 78% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is approximately 22%.

Table 450 examines the sources of the output figures in the fifth column of Table 448. Procurement spending is responsible for 72% of the increase in output in the state economy arising from NASA. NASA labor force’s share of overall NASA output impact is 28%. The reason that NASA labor force’s share of overall output impact is larger than its share in overall employment impact is that NASA employees produce more output per worker than the average employee that is part of the supply chain of NASA procurement.

41,937 jobs in the Texas economy were supported by NASA activities in Fiscal Year 2021. Of these, 2,948 (7%) were directly located at NASA centers. As a result of the procurement of goods and services in the Texas economy, 18,505 additional jobs (44%) were created. The remaining employment—20,484 jobs (49%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 124 depicts the ten most impacted industries by employment. Scientific research and development services is the most impacted industry (along with the federal government). These industries together account for 26% of the jobs created. The employment in scientific research and development services is driven largely by NASA procurement spending; this industry accounted for 79% of NASA procurement spending in the state in Fiscal Year 2021. The impact in the federal government sector represents

mainly civil service employees working for NASA. The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

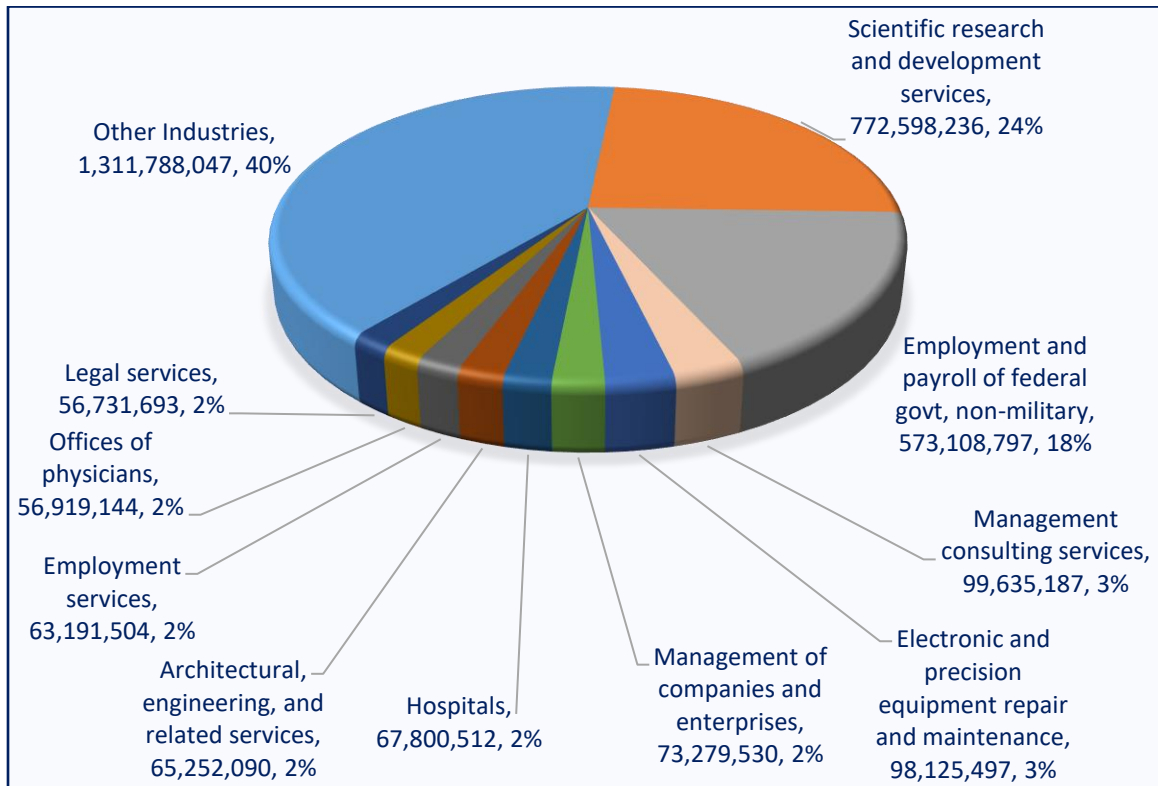

Figure 124: Top Ten Most Impacted Industries by Employment, Texas (NASA)

The total income impact of NASA in Texas was \$3.2 billion in Fiscal Year 2021. Of this amount, \$573 million (18%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$1.5 billion (47%). The remaining income (induced impact), estimated to be \$1.1 billion (35%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 125 depicts the ten most impacted industries by labor income. Scientific research and development services is the most impacted industry by income (along with the federal government sector). The two industries together account for 42% of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these industries is greater than the state average. As of 2019, the average employee compensation in the scientific research and development services industry was \$95,688 (including benefits), compared to an average of \$65,016 across Texas.

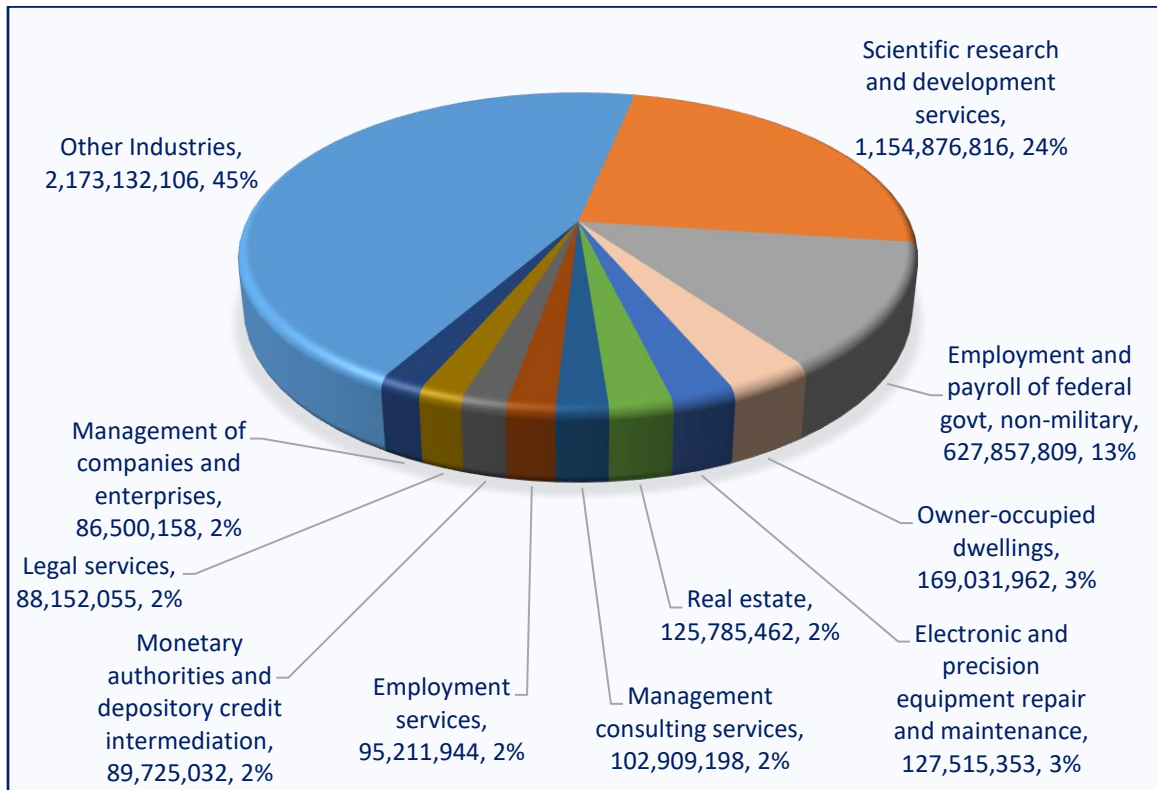

Figure 125: Top Ten Most Impacted Industries by Labor Income, Texas (NASA)

The total value added impact of NASA in Texas was \$4.8 billion in Fiscal Year 2021. Of this amount, \$628 million (13%) was created by civil service employees and \$2.3 billion (47%) was created indirectly by the \$2.3 billion in procurement spending across all industry sectors in Texas. \$1.9 billion (40%) was generated by increased consumption spending supported by increased earnings.

Figure 126 depicts the ten most heavily impacted industries in terms of value added. Scientific research and development is the most impacted industry (along with the federal government sector). The two industries together account for 37% of the total value added created. NASA activities accounted for an increase of more than \$1.1 billion in value added in scientific research and development services. Six hundred twenty-seven (627) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

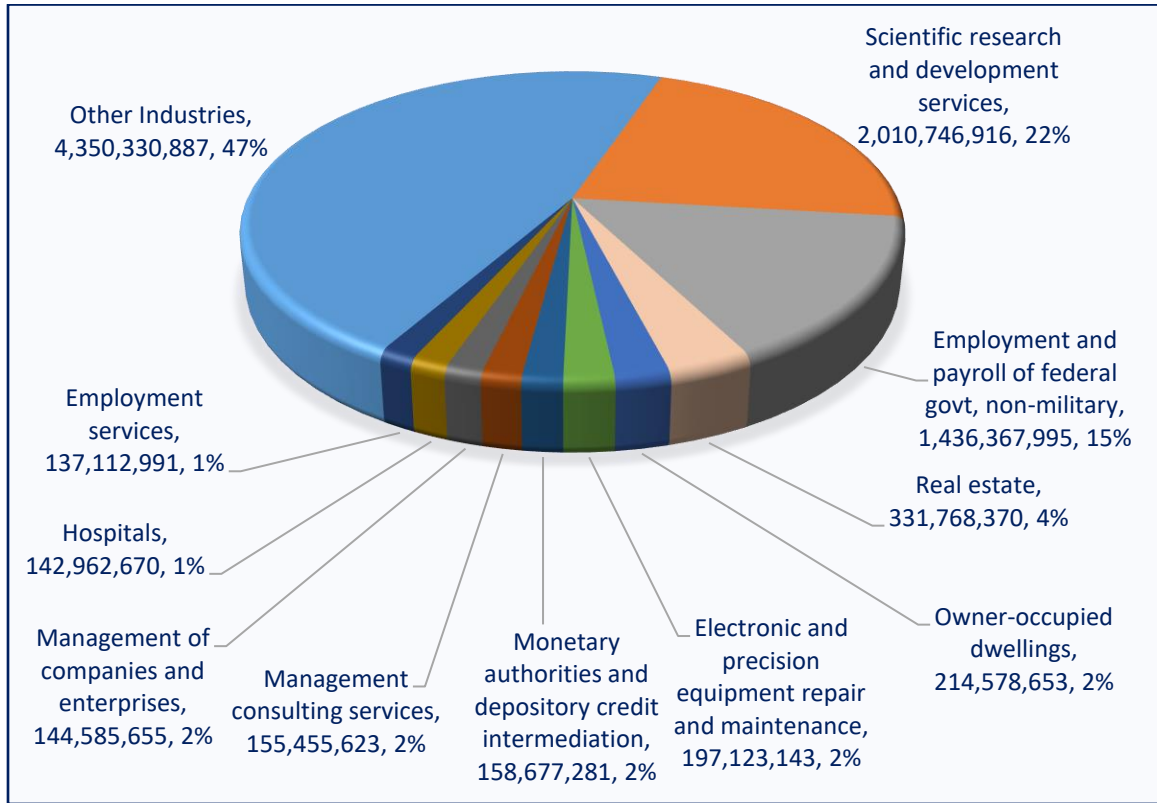

Figure 126: Top Ten Most Impacted Industries by Value Added, Texas (NASA)

The total output impact of NASA in Texas was \$9.3 billion in Fiscal Year 2021. The direct impact of \$1.5 billion constitutes the value of production by NASA employees, accounting for around 15% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditure of \$2.3 billion resulted in an additional increase in output (gross sales) of \$1.8 billion across all industry sectors (adding up to the indirect total of \$4.1 billion in Table 448). Approximately \$3.7 billion (40%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of \$2 billion in sales (including direct, indirect, and induced impacts—see Box 1 in Section 1) in scientific research and development services (Figure 127). Similar to employment, impacts in this industry are largely driven by NASA procurement spending; this industry accounted for 79% of NASA procurement spending in the state in Fiscal Year 2021. The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

M2M Campaign Impacts

In 2021, Texas had 1,277 M2M-related civil service employees (706 FTEs) with a corresponding labor income of \$135.8 million. M2M campaign contracts sourced in the state in the same year totaled \$860.2 million. The total Texas employment impact is 14,144 jobs. The labor income and economic output associated with this employment are \$1.1 billion and \$3.1 billion, respectively. The M2M campaign generates \$82 million in tax revenues for the state and local governments in Texas (Table 451).

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Texas economy. More than 84 percent of the employment impacts and more than 80 percent of the output impacts are due to NASA procurement sourced within the state.

The M2M Campaign’s Share of NASA Impacts

Approximately 34% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 454 and Figure 128). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Investments in Climate Change Research and Technology Impacts

In 2021, Texas had 60 climate change research and technology-related civil service employees (13 FTEs) with a corresponding labor income of \$2.4 million. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$45.4 million. The total Texas employment impact is 757 jobs. The labor income and economic output associated with this employment are \$50.2 million and \$153.5 million, respectively. The investments in climate change research and technology generate \$4.4 million in tax revenues for the state and local governments in Texas (Table 455).

Note: The direct value added figure represents the economic value added by NASA employees to products and services they procure for their production and management. It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Texas economy. Nearly 95 percent of the employment impacts and 93 percent of the output impacts are due to NASA procurement sourced within the state.

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 2% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 458 and Figure 129). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of Utah

NASA Impacts

In 2021, 11 NASA civil service employees (7 FTEs) residing in Utah earned \$1.3 million in labor income. NASA contracts sourced in Utah in the same year totaled \$323.9 million. The total economic impact resulting from these activities is 5,175 jobs, \$309.3 million in labor income, and \$969.7 million in economic output. These economic activities generate \$32.2 million in tax revenues for the state and local governments in Utah (Table 459).

The following two tables examine the contribution of different NASA activities to the Utah economy. Table 460 examines the sources of the employment figures in the second column of Table 459. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Nearly all of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is less than 1%.

M2M Campaign Impacts

In 2021, Utah had seven M2M-related civil service employees (4 FTEs) with a corresponding labor income of \$817,000. M2M campaign contracts sourced in the state in the same year totaled \$296.5 million. The total Utah employment impact is 4,605 jobs. The labor income and economic output associated with this employment are \$292.7 million and \$891.8 million, respectively. The M2M campaign generates \$29.6 million in tax revenues for the state and local governments in Utah (Table 462).

In 2021, Utah had one climate change research and technology-related civil service employee (<1 FTE) with a corresponding labor income of \$55,000. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$9.3 million. The total Utah employment impact is 177 jobs. The labor income and economic output associated with this employment are \$10.1 million and \$27.7 million, respectively. The investments in climate change research and technology generate \$1.2 million in tax revenues for the state and local governments in Utah (Table 466).

M2M Campaign Impacts

There were no M2M-specific NASA employees in Vermont in FY 2021, but \$366,000 in M2M-related NASA contracts were sourced in the state. The total economic impact attributable to this procurement activity is five jobs, \$314,000 in labor income, and \$881,000 worth of output. These economic activities generate \$38,000 in tax revenues for the state and local governments in Vermont (Table 473).

Economic Impacts on the State of Virginia

NASA Impacts

In 2021, 2,676 NASA civil service employees (2,477 FTEs) residing in Virginia earned \$450.9 million in labor income. NASA contracts sourced in Virginia in the same year totaled nearly \$2.1 billion. The total economic impact resulting from these activities is 32,739 jobs, \$2.5 billion in labor income, and \$6.8 billion in economic output. These economic activities generate approximately \$272.7 million in tax revenues for the state and local governments in Virginia (Table 477).

The employment multiplier is 13.2, meaning that for every NASA job located in Virginia, an additional 12.2 jobs are supported in the state economy. The output multiplier of 5.6 indicates that for every million dollars' worth of economic output generated by NASA employees, an additional \$4.6 million worth of output is sustained throughout the state economy.

Table 479 examines the sources of the output figures in the fifth column of Table 477. Procurement spending is responsible for approximately 73% of the increase in output in the state economy arising from NASA. NASA labor force’s share of overall NASA output impact is 27%. The reason that NASA labor force’s share of overall output impact is larger than its share in overall employment impact is that NASA employees produce more output per worker than the average employee that is part of the supply chain of NASA procurement.

32,739 jobs in the Virginia economy were supported by NASA activities in Fiscal Year 2021. Of these, 2,477 (7%) were directly located at NASA centers. As a result of the procurement of goods and services in the Virginia economy, 16,594 additional jobs (51%) were created. The remaining employment—13,668 jobs (42%)—was in the form of induced impacts as labor income and proprietor earnings were spent locally.

Figure 134 depicts the ten most impacted industries by employment. Truck transportation, colleges and universities, electronic and precision equipment repair and maintenance, management consulting services, and scientific research and development services are the most impacted industries, respectively (along with the federal government sector). These industries together account for 39% of the jobs created. The

employment in these industries is driven largely by NASA procurement spending; the four private industries accounted for 67% of NASA procurement spending in the state in Fiscal Year 2021. The impact in the federal government sector represents mainly civil service employees working for NASA.

Figure 134: Top Ten Most Impacted Industries by Employment, Virginia (NASA)

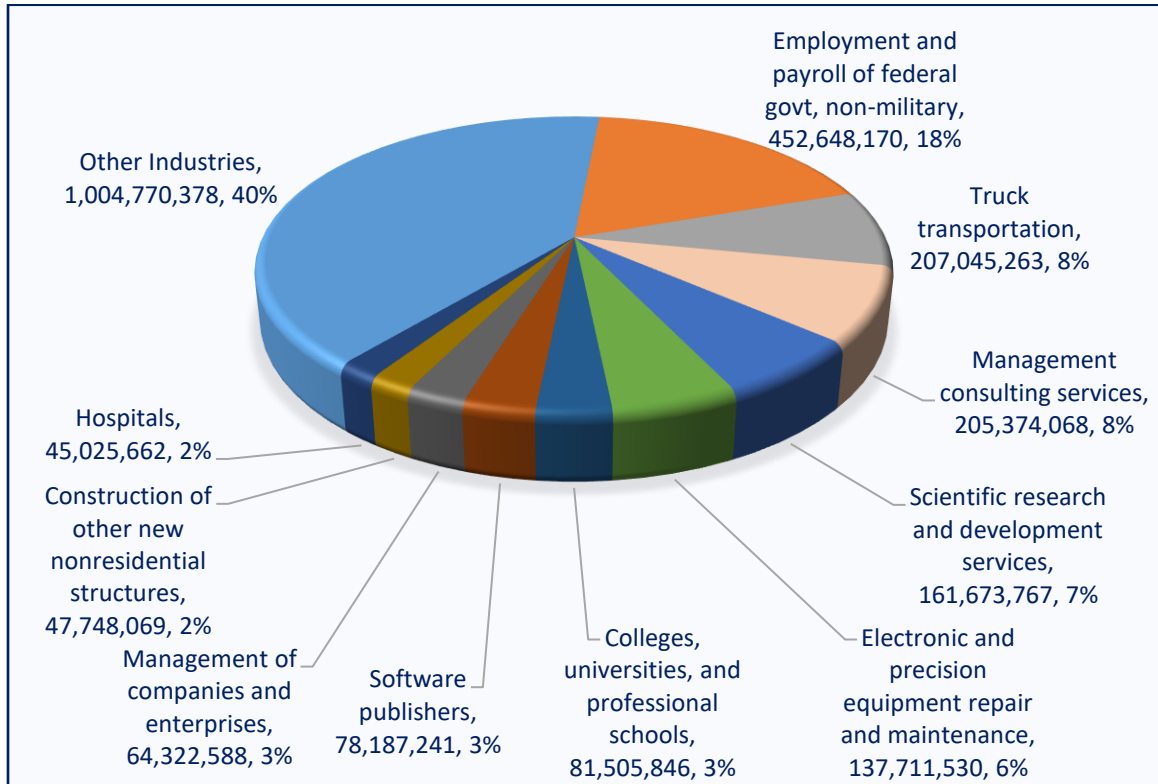

The total income impact of NASA in Virginia was \$2.5 billion in Fiscal Year 2021. Of this amount, \$451 million (18%) represented wages and benefits paid to NASA employees in the state (direct impact). Payments to employees of private firms and organizations across the state that supplied goods and services to NASA (indirect impact) represented \$1.3 billion (53%). The remaining income (induced impact), estimated to be \$723 million (29%), resulted from expenditures by those earning income through the direct and indirect impacts.

Figure 135 depicts the ten most impacted industries by labor income. As a consequence of their share of total employment, truck transportation, management consulting services, scientific research and development, electronic and precision equipment repair and maintenance, and colleges and universities are the most impacted industries by income (along with the federal government sector). These industries together account for half of the total labor income earned. The reason that these industries' share of labor income is larger than their share of employment is that employee compensation in these

industries is greater than the state average. As of 2019, the average employee compensation in the management consulting services industry was \$113,955 (including benefits), compared to an average of \$65,399 across Virginia.

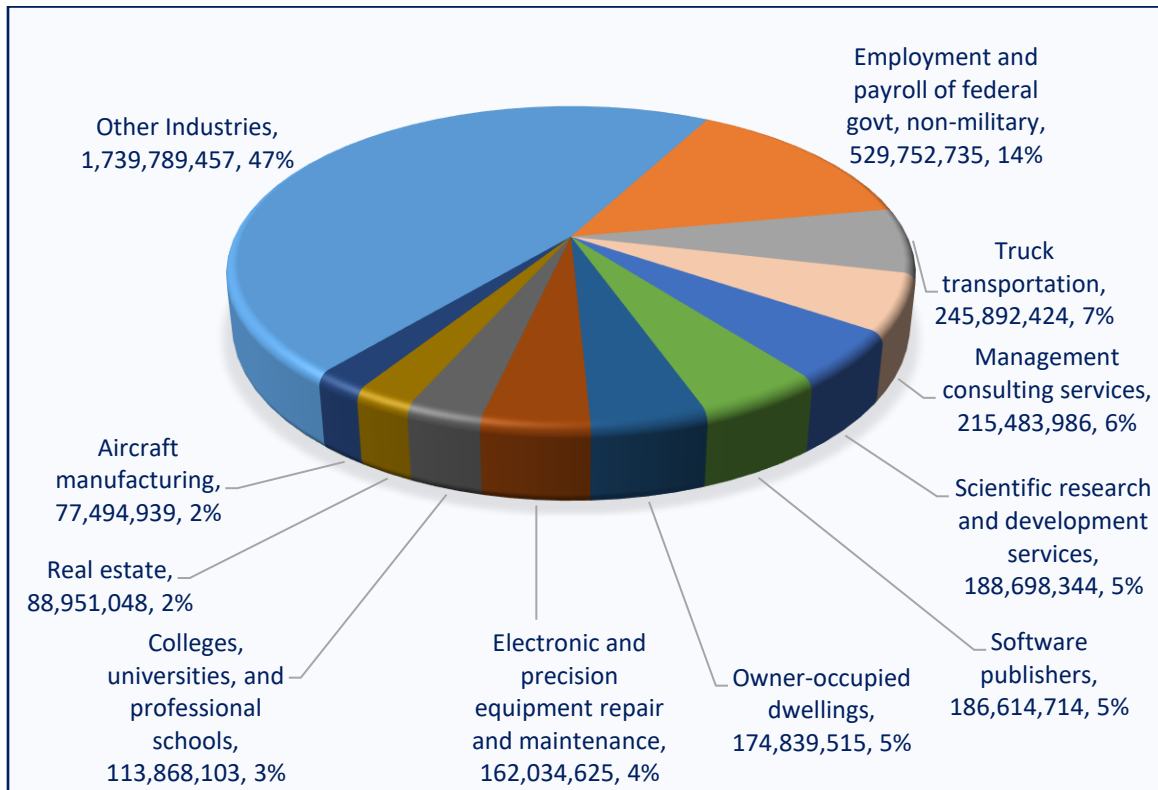

Figure 135: Top Ten Most Impacted Industries by Labor Income, Virginia (NASA)

The total value added impact of NASA in Virginia was \$3.7 billion in Fiscal Year 2021. Of this amount, \$527 million (14%) was created by civil service employees and \$1.8 billion (50%) was created indirectly by the \$2.1 billion in procurement spending across all industry sectors in Virginia. \$1.3 billion (36%) was generated by increased consumption spending supported by increased earnings.

Figure 136 depicts the ten most heavily impacted industries in terms of value added. Truck transportation, management consulting services and scientific research and development are the most impacted industries (along with the federal government sector). These industries together account for 32% of the total value added created. NASA activities accounted for an increase of more than a \$215 million increase in management consulting services, and \$188 million in value added in scientific research and development services. Five hundred twenty-nine (529) million dollars in the federal government non-military sector corresponds mainly to value added by NASA employees.

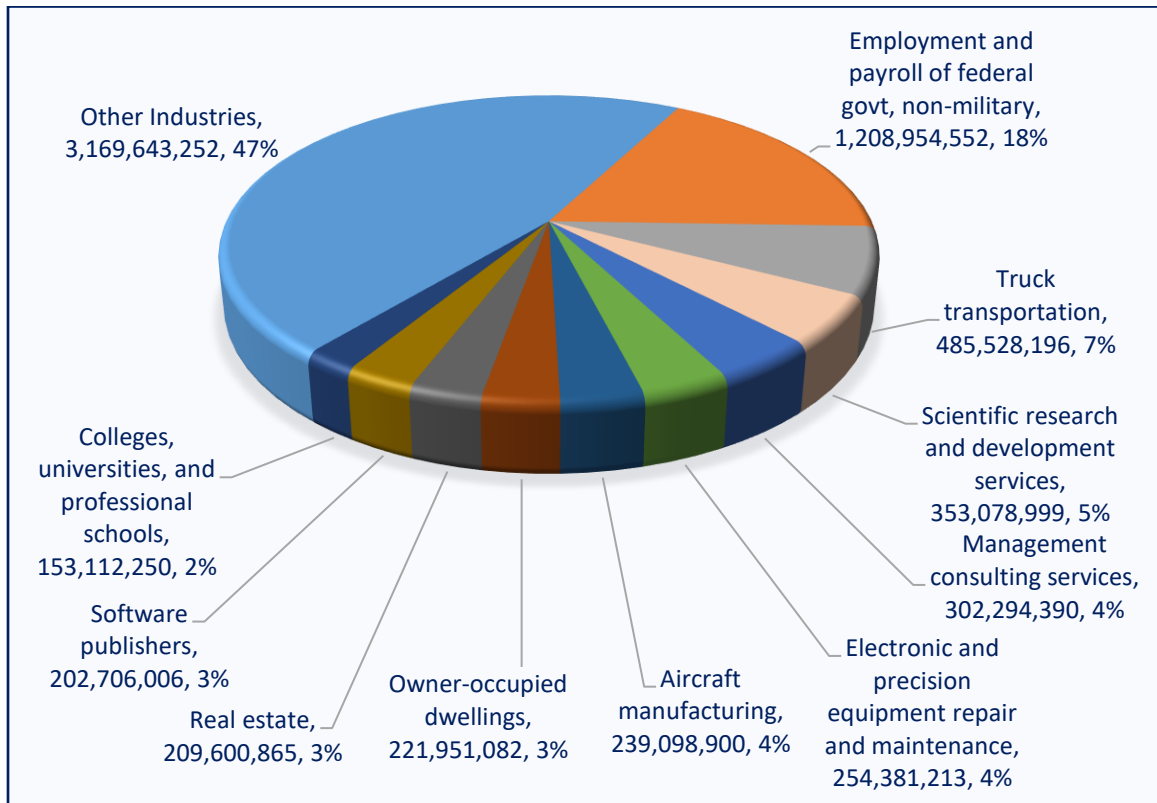

Figure 136: Top Ten Most Impacted Industries by Value Added, Virginia (NASA)

The total output impact of NASA in Virginia was \$6.8 billion in Fiscal Year 2021. The direct impact of \$1.2 billion constitutes the value of production by NASA employees, accounting for around 18% of the total output impact. The indirect impact is the sum of NASA procurement spending and the value of production throughout the supply chain of NASA procurement. NASA procurement expenditure of \$2.1 billion resulted in an additional increase in output (gross sales) of \$1.2 billion across all industry sectors (adding up to the indirect total of \$3.3 billion in Table 477). More than \$2.3 billion (34%) of the total output impact was the result of consumption spending due to increased earnings (induced impacts).

NASA activities were responsible for an increase of \$353 million in sales (including direct, indirect, and induced impacts—see Box 1 in Section 1) in scientific research and development services and \$302 million in sales management consulting services (Figure 137). Similar to employment, impacts in these industries are largely driven by NASA procurement spending; these two industries accounted for 27% of NASA procurement spending in the state in Fiscal Year 2021. The sizable impacts in the real estate industry are a typical feature of induced impacts, as a substantial proportion of household income goes to purchase or lease real estate.

M2M Campaign Impacts

In 2021, Virginia had 309 M2M-related civil service employees (99 FTEs) with a corresponding labor income of nearly \$17.7 million. M2M campaign contracts sourced in the state in the same year totaled \$392.1 million. The total Virginia employment impact is 3,392 jobs. The labor income and economic output associated with this employment are \$262.7 million and \$899.9 million, respectively. The M2M campaign generates nearly \$32.5 million in tax revenues for the state and local governments in Virginia (Table 480).

Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Virginia economy. More than 92 percent of the employment impacts and 91 percent of the output impacts are due to NASA procurement sourced within the state.

The M2M Campaign’s Share of NASA Impacts

Around 11% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 483 and Figure 138). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Investments in Climate Change Research and Technology Impacts

In 2021, Virginia had 979 climate change research and technology-related civil service employees (540 FTEs) with a corresponding labor income of \$93 million. Investments in climate change research and technology contracts sourced in the state in the same year totaled \$176.8 million. The total Virginia employment impact is 4,017 jobs. The labor income and economic output associated with this employment are \$298.9 million and \$833.4 million, respectively. The investments in climate change research and technology generate \$28.2 million in tax revenues for the state and local governments in Virginia (Table 484).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 12% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 487 and Figure 139). Economic Impacts on the State of Washington

NASA Impacts

In 2021, 31 NASA civil service employees (19 FTEs) residing in Washington earned \$3.4 million in labor income. NASA contracts sourced in Washington in the same year totaled approximately \$426.6 million. The total economic impact resulting from these activities is 4,622 jobs, \$390.3 million in labor income, and approximately \$1.1 billion in economic output. These economic activities generate \$39.6 million in tax revenues for the state and local governments in Washington (Table 488).

NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Ninety-nine (99) percent of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 1%.

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 5% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 498 and Figure 141). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on Washington, D.C. (District of Columbia)

NASA Impacts

In 2021, 341 NASA civil service employees (299 FTEs) residing in D.C. earned \$57.5 million in labor income. NASA contracts sourced in D.C. in the same year totaled \$239.1 million. The total economic impact resulting from these activities is 2,047 jobs, \$239.7 million in labor income, and \$579.7 million in economic output. These economic activities generate more than \$14.5 million in tax revenues for the local governments in D.C. (Table 499).

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the D.C. economy. Table 500 examines the sources of the employment figures in the second column of Table 499. NASA procurement sourced within the region is largely responsible for the overall NASA employment impacts. Approximately 79% of the jobs supported throughout the regional economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 21%.

The M2M Campaign’s Share of NASA Impacts

Around 8% of overall NASA agency impacts in the state are attributable to the M2M campaign (Table 516 and Figure 144). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for the M2M campaign is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

The Investments in Climate Change Research and Technology’s Share of NASA Impacts

Around 7% of overall NASA agency impacts in the state are attributable to the investments in climate change research and technology (Table 520 and Figure 145). The primary reason the shares are slightly different is that the sectoral distribution of procurement spending for investments in climate change research and technology is different from the sectoral distribution of procurement spending for NASA as a whole and spending in different industry sectors produce different value added/output/tax impacts (due to industry-specific multipliers).

Economic Impacts on the State of Wisconsin

NASA Impacts

In 2021, 17 NASA civil service employees (8 FTEs) residing in Wisconsin earned \$880,000 in labor income. NASA contracts sourced in Wisconsin in the same year totaled \$17.7 million. The total economic impact resulting from these activities is 268 jobs, \$17.9 million in labor income, and \$54.9 million in economic output. These economic activities generate \$1.9 million in tax revenues for the state and local governments in Wisconsin (Table 521).

It is calculated using the value-added-to-employee ratio in two industries: (1) guided missile and space vehicle manufacturing, and (2) propulsion units and parts for space vehicle and guided missiles manufacturing. Similarly, the direct output figure represents the value of production and management within the NASA program, including the value of intermediary products and services, and is calculated based on the estimated ratios of output-to-employee in the same two industries.

The following two tables examine the contribution of different NASA activities to the Wisconsin economy. Table 522 examines the sources of the employment figures in the second column of Table 521. NASA procurement sourced within the state is largely responsible for the overall NASA employment impacts. Approximately 94% of the jobs supported throughout the state economy by NASA are due to its procurement spending. The share of NASA direct labor force in the overall employment impact is 6%.

M2M Campaign Impacts

In 2021, Wisconsin had two M2M-related civil service employees (1 FTE) with a corresponding labor income of \$209,000. M2M campaign contracts sourced in the state in the same year totaled \$1.2 million. The total Wisconsin employment impact is 20 jobs. The labor income and economic output associated with this employment are \$1.4 million and \$4.1 million, respectively. The M2M campaign generates \$150,000 in tax revenues for the state and local governments in Wisconsin (Table 524).

CONCLUSION

In this study, we examined the economic impacts of National Aeronautics and Space Administration (NASA) and the Moon to Mars (M2M) campaign and the investments in climate change research and technology on the U.S., the fifty (50) states, and Washington, D.C. for the Fiscal Year 2021. We first presented economic impacts of NASA on each region and then examined M2M campaign and investments in climate change research and technology impacts. We distinguished the portion of NASA impacts attributable to the M2M campaign and the investments in climate change research and technology to highlight the relative contribution of these efforts in every state as well as the nation.

The impact estimates reported in this study are the sum of three channels of economic impact: (1) the direct contribution of NASA's own activities; (2) indirect (contracting) activities within NASA's U.S. supply chain; and (3) the induced effect that results as federal civil servants at NASA facilities, employees of contractors, and employees within the supply chain of those contractors spend their wages in the wider consumer economy. The economic impact was examined through a detailed analysis of the changes in employment, output (gross sales), labor income, value added, and taxes due to NASA's activities.

NASA

At the national level, NASA directly employs 19,319 civil servants (corresponding to 17,736 full-time equivalent (FTE) jobs), paying \$3.2 billion in annual wages and benefits (Fiscal Year 2021).⁴¹ The \$21.2 billion in contracting activity originating from NASA is very diverse, involving almost every major category of manufacturing or service industry. Taking the domestic portions of these spending streams into account, the total employment impact of NASA across the U.S. is 339,645 jobs (direct, indirect, and induced). The labor income and economic output associated with this total amount of employment are, respectively, \$25.7 billion, and \$71.2 billion. Contracting activities along with NASA's direct employment generated an estimated \$7.7 billion in federal, state, and local tax revenues in 2021.

For every civil service FTE job located at NASA, an additional 18 jobs are supported throughout the U.S. economy. The income multiplier is 7.9: for each \$1 million of labor income earned by NASA employees, an additional \$6.9 million in labor income is generated in the U.S. economy. The output multiplier is 8.2. For each \$1 million's worth of output generated at NASA, an additional \$7.2 million of output (intermediary and final goods and services) is generated throughout the U.S. economy. These figures are boosted by the large volume of procurement spending administered through NASA.

⁴¹ The number of civil servants excluding those residing in U.S. territories is 19,312 (17,732 FTEs). These are the figures used in the national economic impact model.

NASA's economic impacts are concentrated both geographically and sectorally. The top ten most impacted states account for 90% of total NASA employment impacts. These states are California, Texas, Alabama, Florida, Maryland, Virginia, Colorado, Ohio, Mississippi, and Utah. Impacts on Washington, Arizona, Massachusetts, Louisiana, and New York are also significant. The top ten most impacted industries account for 47 percent of total NASA impacts. Scientific research and development services is the most affected sector—20 percent of total NASA impacts are concentrated in this sector.

Finally, approximately 28% of overall NASA agency impacts in the U.S. are attributable to the M2M campaign. The M2M campaign-specific employment accounts for 2% of overall NASA employment impacts while M2M campaign-related procurement accounts for 26% of overall NASA employment impacts. Around 11% of overall NASA agency impacts in the U.S. are attributable to the investments in climate change research and technology. Climate change research and technology specific employment accounts for 1% of overall NASA employment impacts while climate change research and technology-related procurement accounts for 10% of overall NASA employment impacts.

Moon to Mars (M2M) Campaign

At the national level, NASA directly employs 4,644 civil servants (2,474 FTEs) to support the M2M campaign, paying more than \$440 million in annual wages and benefits. The M2M contracts originating from NASA are both large in volume (\$6.7 billion) and diverse. There are indirect effects from the purchases of goods and services by NASA Centers as well as by the firms that supply those centers. Consumption expenditures made by the M2M labor force, by suppliers to the M2M campaign, and by suppliers further upstream within the production chain, create induced effects. Taking the domestic portions of these spending streams into account, the total employment impact of the M2M campaign across the U.S., is 93,731 jobs. The labor income and economic output associated with this total amount of employment are, respectively, \$7.1 billion, and \$20.1 billion. M2M contracting activities along with NASA's direct employment for the M2M campaign generated an estimated \$2.2 billion in federal, state, and local tax revenues in 2021.

For every (FTE) civil service job located at NASA centers related to M2M, nearly 37 additional jobs are supported throughout the U.S. economy. For each million dollars of labor income earned by M2M-assigned NASA employees, an additional \$15.2 million of labor income is generated in the U.S. And for each \$1 million worth of output produced by the M2M campaign, an additional \$15.7 million output—consisting of both intermediary inputs and consumption goods and services—is produced throughout the national economy. These figures are exceptionally large because of the extremely high volume of procurement spending relative to civil service employment.

The M2M campaign related labor and procurement activity is concentrated in certain states, as a result the economic impacts resulting from those activities. Alabama, Colorado, Texas, California, Florida, Utah, Washington, Virginia, Ohio, and Louisiana are the most impacted states, respectively. Ten states account for 96 percent of all M2M-related employment impacts. As a share of overall NASA impacts, M2M campaign impacts are heavily concentrated in some states. Among the top-ten most impacted states (by the M2M campaign), more than half of overall NASA impacts in Utah, Washington, Alabama, and Colorado are attributable to the M2M campaign.

Investments in Climate Change Research and Technology

At the national level, NASA directly employs 3,668 civil servants (1,844 FTEs) to support investments in climate change research and technology, paying nearly \$330 million in annual wages and benefits. Investments in climate change research and technology contracts originating from NASA are both large in volume (\$2.2 billion) and diverse. There are indirect effects from the purchases of goods and services by NASA Centers as well as by the firms that supply those centers. Consumption expenditures made by climate change research and technology labor force, by suppliers to climate change research and technology, and by suppliers further upstream within the production chain, create induced effects. Taking the domestic portions of these spending streams into account, the total employment impact of the investments in climate change research and technology across the U.S., is 37,005 jobs. The labor income and economic output associated with this total amount of employment are, respectively, \$2.7 billion, and \$7.4 billion. Investments in climate change research and technology contracting activities along with NASA's direct employment for climate change research and technology generated an estimated \$810 million in federal, state, and local tax revenues in 2021.

For every (FTE) civil service job located at NASA centers related to climate change research and technology, 19 additional jobs are supported throughout the U.S. economy. For each million dollars of labor income earned by climate change research and technology-assigned NASA employees, an additional \$7.2 million of labor income is generated in the U.S. And for each \$1 million worth of output produced by the investments in climate change research and technology, an additional \$7.2 million of output—consisting of both intermediary inputs and consumption goods and services—is produced throughout the national economy.

Climate change research and technology-related labor and procurement activity is concentrated in certain states, as a result the economic impacts resulting from those activities. California, Maryland, Virginia, Colorado, Florida, Ohio, Alabama, Massachusetts, Texas, and New York are the most impacted states, respectively. Ten states account for 86 percent of all climate change research and technology-related employment impacts. As a share of overall NASA impacts, investments in climate change research and technology impacts are heavily concentrated in some states. Among the

top-ten most impacted states (by NASA investments in climate change research and technology), considerable portion of overall NASA impacts in Massachusetts and New York are attributable to the investments in climate change research and technology.

NASA, M2M and investments in climate change research and technology impacts in the state and national economies go beyond the dollars they generate and the jobs they support. In addition to the economic benefits they generate, they help drive an innovation-based economy with the infusion of billions of dollars of spending in research and development in the aerospace sector.

About the Authors

Zafer Sonmez has been a post-doctoral research associate at the University of Illinois at Chicago (UIC). His academic research focuses on innovation mechanisms in knowledge-intensive industrial sectors. He is investigating the role of spatial proximity in the innovation process, the extent to which spatial co-location of firms facilitates collaborative invention efforts at the firm level.

Joshua Drucker is Associate Professor in the Urban Planning and Policy Program at UIC. His expertise is in economic development, in particular in concepts and analysis of regional industrial structure, agglomeration, technology, and practical techniques for economic analysis. Dr. Drucker has worked as a consultant and researcher in the fields of economic and technology-based development in the government, non-profit, and educational sectors, on projects ranging from industry and impact studies to analyses of technology policy and the development of automated tools for economic analysis. He has master's and doctorate degrees in City and Regional Planning from the University of North Carolina at Chapel Hill.

Yittayih Zelalem is Voorhees Center Director and Research Associate Professor. Having been Director of Housing Development and Policy as well as Executive Director with various non-profit developers, he brings significant experience and expertise in development and finance. Professor Zelalem has law degrees from Addis Ababa University and the Yale Law School, as well as a master's degree in Urban Development; he was professor of law and currently teaches development finance courses.

ECONOMIC MODELING WITH IMPLAN

Economic impact analysis using IMPLAN depends on input-output models of the economy. Input-output models are powerful tools for estimating the economy-wide effects of an initial change in economic activity: they trace purchasing relationships among businesses, government, and consumers to provide a full accounting of the way spending flows through a regional economy. By accounting for linkages across industries and other economic sectors, studies that use these models are able to document the multiple ways in which a change in one industry impacts other industries and consumers.

To effectively use these models and interpret the results, readers as well as analysts should be aware of the basics of the model structure as well as the assumptions and limitations of these models. In this section, we briefly discuss the mechanics of the input-output models and the assumptions underlying them.

Input-Output Analysis

Francois Quesnay first described inter-industry relationships in 1758. Wassily Leontief developed the concept of multipliers from input-output tables, receiving a Nobel Prize in 1973 for his work. Input-output analysis is a means of examining relationships within an economy, both between businesses and between businesses and final consumers. It captures all monetary market transactions for consumption in a given time period. The resulting mathematical formulae allow examination of the effects of a change in one or several economic activities on an entire economy (impact analysis).

A primary input-output study is based on data collected directly from industries. An example is the United States Bureau of Economic Analysis' Benchmark Study of Input-Output accounts (the data is based on economic censuses collected directly from firms). Other countries have conducted primary national level input-output studies as well. Primary state or local level input-output studies are not common due to the high cost of data collection.

Secondary input-output studies rely on data collected from other sources to construct the accounts. The inter-industry transaction information usually comes from some other primary study. IMPLAN is an example of a secondary input-output modeling system that relies on the data from the national Benchmark Input-Output accounts along with a variety of sources of regional information.

There are two phases in input/output analysis:

1. Descriptive modeling
2. Predictive modeling

Descriptive Model

A Descriptive Model includes information about local economic interactions known as regional economic accounts. These tables describe a local economy in terms of the flow of dollars from purchasers to producers within the region.

Trade Flows are also part of the descriptive model. They describe the movement of goods and services within a region and the outside world (regional imports and exports). The initial IMPLAN data details all purchases, including imported goods and services. When regional economic accounts are created, imports to the region are isolated from the initial data, allowing examination of local inter-industry transactions and final purchases.

By adding Social Accounting data, an analyst can examine non-industrial transactions, such as payment of taxes by businesses and households. Social accounting data include tax collection by governments and payments to households and businesses. Input-output accounting describes the flow of commodities from producers to intermediate and final consumers. Social Accounting Matrices (SAMs) show the flow of money among institutions. Both are part of the descriptive model.

Predictive Model

The regional economic accounts are used to construct local multipliers. Multipliers describe the response of the economy to a stimulus (a change in demand or production). The multipliers represent the Predictive Model. Purchases for final use (final demand) drive an input-output model.

Industries producing goods and services for consumption purchase goods and services from other producers. These other producers, in turn, purchase goods and services. These indirect purchases (indirect effects) continue until compounding leakages from the regional purchasing cycle (imports, wages, profits, etc.) halt the cycle or shrink it to negligible size. The indirect effects and the effects of increased household spending (induced effects) can be mathematically derived as sets of multipliers. The derivation is called the Leontief inverse. The resulting sets of multipliers describe the change of output for each industry caused by a one dollar change in final demand for any given industry.

Multipliers

Final consumption (or final demand) drives input-output models. Industries respond to meet demands directly or indirectly (by supplying goods and services to industries responding directly). Each industry that produces goods and services generates demands for other goods and services and so on, round by round. Multipliers describe these iterations.

Based on a production function of the industry, which shows where an industry spends and in what proportions to generate each dollar of output, IMPLAN develops the A Matrix. Through

algebraic manipulation of the A Matrix, it then derives the multipliers. The resulting equation is the predictive model:

$$X = (I - A)^{-1} * Y$$

Where;

X = Total industry output

I = Identity matrix

A = A Matrix

Y = Final Demand.

This can also be interpreted as:

$$\Delta X = (I - A)^{-1} * \Delta Y$$

or,

Change in Total Industry Output = (I - A)⁻¹ multiplied by Change in Final Demand.

The predictive model shows how output will change with a given change in final demand. The (I - A) inverse is the matrix of multipliers also known as the *Leontief inverse*.

Multipliers break the effects of stimuli on economic activity down into three components.

1. **Direct effects** are the changes in the industries to which a final demand change was made.
2. **Indirect effects** are the changes in inter-industry purchases as they respond to the new demands of the directly affected industries.
3. **Induced effects** typically reflect changes in spending from households as income increases or decreases due to the changes in production.

The Type I multiplier measures the direct and indirect effects of a change in economic activity. It captures the inter-industry effects only, i.e., industries buying from local industries.

The Type II multiplier captures direct, indirect, and induced effects. In addition to the inter-industry effects, Type II also takes into account the income and expenditures of households.

The household income and the household expenditures are treated as industries. This internalizes the household sector, including the induced or household spending, effects. This report employs Type II multipliers.

Key Assumptions

The accounting conventions that form the basis of an Input-Output (I-O) model and the way IMPLAN makes estimations impose assumptions that readers ought to be aware of when interpreting the results. Since many of these assumptions can lead to an overstatement of the

impacts of a project or program, many users of Impact models consider the estimates as upper bounds (Bess & Ambargis, 2011).

Input-output modeling is based on several assumptions:

- Constant Returns to Scale
- No Supply Constraints
- Fixed Commodity Input Structure
- Homogenous Sector Output
- Industry Technology Assumption

The first assumption is that the production functions (an industry's list of expenditures) are assumed to embody constant returns to scale. This means the production functions are linear; if additional output is required, all inputs increase proportionately. Under this assumption, if \$1 of new business in the impact area triggers \$2 in total economic activity, then \$1,000 will trigger \$2,000, \$1 million will trigger \$2 million, and \$1 billion will trigger \$2 billion. In reality, this might not be the case. A plant operating at full capacity might not be able to increase its capacity without undertaking aggressive capital investment, hiring new workers in a tight labor market, or acquiring expensive new property – realities that will impact the ratio of total economic activity to the direct impact. These common business practices are examples of the “non-linear” reality of business.

Second, no supply constraints means supplies are unlimited. An industry has unlimited access to raw materials and its output is limited only by the demand for its products. In the world of business, rising demand creates scarcity. Just as the housing boom of the mid-2000s drove up prices for construction materials and China's rising industrial output has created scarcities in concrete and energy supply, diverting hundreds of millions in federal contracts to a region might create short-term shortages in labor, materials, services and raw inputs.

Third, a fixed commodity input structure implies that price changes do not cause a firm to buy substitute goods. This structure assumes that changes in the economy will affect the industry's output but not the mix of commodities and services it requires to make its products. Input-output analysis will not be as accurate in cases in which a long-term spike in costs or a shortage in supply induces businesses to locate new suppliers or make their products differently (by substituting advanced machinery for labor, for example). Consequently, our analysis can only establish how spending would flow through the economy at a fixed point in time, not how the structure of the economy would change as a result of that spending.

Fourth, there is homogeneous sector output. That is, the proportions of all the commodities produced by that industry remain the same, regardless of total output. An industry will not increase the output of one product without proportionately increasing the output of all its other products.

Appendix

Finally, the industry technology assumption comes into play when data are collected on an industry-by-commodity basis and then converted to industry-by-industry matrices. The assumption is that an industry uses the same technology to produce all its products. In other words, an industry has a primary or main product, and all other products are byproducts of the primary product.

SUMMARY ECONOMIC IMPACTS BY SOURCES OF IMPACT

This section presents summary impact results by the source of impact (employment and procurement). The examination of summary impacts by NASA employment and procurement components highlights the relative contributions of NASA's employment and procurement activities to the overall NASA impacts. In addition, it allows the reader to assess economic multipliers associated with NASA employment and NASA procurement separately. The analogous tables for the M2M Program are provided following the NASA section.

Notes: 1) While direct employment component refers to full-time equivalent (FTE) positions at NASA centers, induced employment component refers to a combination of full-time and part-time positions. 2) Multipliers are calculated only using induced effects, not indirect effects, because of how government procurement is analyzed independently in this report. Therefore, the multipliers in this table should not be compared to studies of other industries that do have indirect effects attributed to employment levels, but rather only across the geographies in this study.

Notes: 1) While direct employment component refers to full-time equivalent (FTE) positions at NASA centers, induced employment component refers to a combination of full-time and part-time positions. 2) Multipliers are calculated only using induced effects, not indirect effects, because of how government procurement is analyzed independently in this report. Therefore, the multipliers in this table should not be compared to studies of other industries that do have indirect effects attributed to employment levels, but rather only across the geographies in this study.

Therefore, the multipliers in this table should not be compared to studies of other industries that do have indirect effects attributed to employment levels, but rather only across the geographies in this study.

Notes: 1) While direct employment component refers to full-time equivalent (FTE) positions at NASA centers, induced employment component refers to a combination of full-time and part-time positions. 2) Multipliers are calculated only using induced effects, not indirect effects, because of how government procurement is analyzed independently in this report. Therefore, the multipliers in this table should not be compared to studies of other industries that do have indirect effects attributed to employment levels, but rather only across the geographies in this study.

LABOR INCOME AND VALUE-ADDED IMPACTS BY SOURCES OF IMPACT

In this section, for labor income and value added the results are examined by NASA employment and procurement components. The disaggregation of economic impacts by their sources highlights the relative contributions of NASA's employment and procurement activities to the overall NASA impacts (the equivalent tables for employment and output categories are provided in the text).

DETAILED IMPACTS

In this section, we present detailed industry level impacts, organized by four impact categories: employment, labor income, value added, and economic output. For each region, first, detailed NASA impacts are presented, and then detailed impacts for the M2M Campaign and Investments in Climate Change Research and Technology are provided.

Custom compounding of purchased resins	<1	576	659	3,240
Photographic film and chemical manufacturing	<1	51,072	63,346	322,319
Other miscellaneous chemical product manufacturing	<1	8,542	9,519	53,128
Plastics packaging materials and unlaminated film and sheet manufacturing	<1	7,771	16,426	61,933
Unlaminated plastics profile shape manufacturing	<1	7,064	21,572	66,098
Plastics pipe and pipe fitting manufacturing	<1	7,473	29,280	70,005
Laminated plastics plate, sheet (except packaging), and shape manufacturing	<1	5,296	13,086	29,805
Polystyrene foam product manufacturing	<1	18,041	39,114	128,542
Urethane and other foam product (except polystyrene) manufacturing	<1	6,677	13,658	41,998
Plastics bottle manufacturing	<1	9,969	19,976	72,856
Other plastics product manufacturing	2	129,915	231,251	698,083
Tire manufacturing	<1	5,727	10,776	45,659
Rubber and plastics hoses and belting manufacturing	<1	86	158	497
Other rubber product manufacturing	<1	21,672	36,540	107,345
Pottery, ceramics, and plumbing fixture manufacturing	<1	4,046	6,188	12,938
Brick, tile, and other structural clay product manufacturing	<1	2,543	4,786	9,779
Flat glass manufacturing	<1	54	125	281
Other pressed and blown glass and glassware manufacturing	<1	19,209	36,825	95,915
Glass container manufacturing	<1	51	89	218
Glass product manufacturing made of purchased glass	<1	34,384	64,103	155,443
Cement manufacturing	<1	12,390	33,729	91,672
Ready-mix concrete manufacturing	<1	60,139	111,257	339,902
Concrete block and brick manufacturing	<1	16,225	32,366	77,163
Concrete pipe manufacturing	<1	1,324	2,452	6,317
Other concrete product manufacturing	<1	15,564	23,281	57,831
Lime manufacturing	<1	3,289	8,826	22,092
Gypsum product manufacturing	<1	9,070	27,273	64,638

Appendix

Abrasive product manufacturing	<1	5,646	17,426	26,691
Cut stone and stone product manufacturing	<1	17,572	21,703	49,987
Ground or treated mineral and earth manufacturing	<1	4,335	13,252	35,798
Mineral wool manufacturing	<1	2,751	7,277	20,430
Miscellaneous nonmetallic mineral products manufacturing	<1	2,691	8,665	20,137
Iron and steel mills and ferroalloy manufacturing	<1	8,847	14,727	122,492
Iron, steel pipe and tube manufacturing from purchased steel	<1	4,731	7,124	37,137
Rolled steel shape manufacturing	<1	7,281	13,215	81,759
Steel wire drawing	<1	2,061	2,763	16,025
Alumina refining and primary aluminum production	<1	10,815	15,109	120,782
Secondary smelting and alloying of aluminum	0	0	0	0
Aluminum sheet, plate, and foil manufacturing	1	128,814	225,159	1,352,920
Other aluminum rolling, drawing and extruding	<1	61,649	79,998	420,854
Nonferrous metal (exc aluminum) smelting and refining	<1	11,251	38,305	157,838
Copper rolling, drawing, extruding and alloying	<1	2,190	3,035	32,587
Nonferrous metal, except copper and aluminum, shaping	<1	1,241	1,442	5,696
Secondary processing of other nonferrous metals	<1	232	358	2,364
Ferrous metal foundries	<1	8,750	11,725	33,177
Nonferrous metal foundries	<1	15,987	21,282	64,614
Custom roll forming	0	0	0	0
Crown and closure manufacturing and metal stamping	<1	22,258	27,928	86,982
Iron and steel forging	<1	1,051	1,684	7,661
Nonferrous forging	0	0	0	0
Cutlery, utensil, pot, and pan manufacturing	<1	2,513	5,735	19,106
Handtool manufacturing	<1	1,095	1,733	4,900
Prefabricated metal buildings and components manufacturing	<1	10,165	13,665	33,933
Fabricated structural metal manufacturing	<1	34,542	50,093	181,899
Plate work manufacturing	<1	10,134	11,516	35,784
Metal window and door manufacturing	<1	36,457	48,462	136,115
Sheet metal work manufacturing	<1	47,920	62,150	171,717

Appendix

Ornamental and architectural metal work manufacturing	<1	26,916	34,561	106,354
Power boiler and heat exchanger manufacturing	0	0	0	0
Metal tank (heavy gauge) manufacturing	<1	569	725	2,255
Metal cans manufacturing	3	318,228	692,245	2,999,581
Metal barrels, drums and pails manufacturing	<1	15,997	19,874	68,803
Hardware manufacturing	<1	1,752	2,665	8,865
Spring and wire product manufacturing	<1	9,812	13,327	47,135
Machine shops	2	138,530	167,335	361,556
Turned product and screw, nut, and bolt manufacturing	<1	15,881	22,343	62,568
Metal heat treating	<1	5,367	7,560	21,499
Metal coating and nonprecious engraving	<1	16,110	26,658	81,287
Electroplating, anodizing, and coloring metal	<1	11,230	12,940	31,199
Valve and fittings, other than plumbing, manufacturing	<1	33,587	50,195	130,927
Plumbing fixture fitting and trim manufacturing	<1	14,461	34,517	86,136
Ball and roller bearing manufacturing	0	0	0	0
Small arms ammunition manufacturing	<1	7,948	15,631	35,329
Ammunition, except for small arms, manufacturing	<1	163	216	548
Small arms, ordnance, and accessories manufacturing	<1	53,493	90,767	170,999
Fabricated pipe and pipe fitting manufacturing	<1	603	760	2,361
Other fabricated metal manufacturing	<1	48,199	62,317	184,681
Farm machinery and equipment manufacturing	<1	755	1,111	5,394
Lawn and garden equipment manufacturing	<1	5,541	8,250	42,607
Construction machinery manufacturing	<1	4,901	8,535	21,706
Mining machinery and equipment manufacturing	<1	146	196	625
Oil and gas field machinery and equipment manufacturing	<1	62	85	281
Semiconductor machinery manufacturing	<1	7,318	8,100	25,336
Food product machinery manufacturing	<1	18	20	76

Appendix

Sawmill, woodworking, and paper machinery	<1	114	125	465
Printing machinery and equipment manufacturing	<1	201	217	744
All other industrial machinery manufacturing	<1	398	465	1,543
Optical instrument and lens manufacturing	<1	384	484	1,398
Photographic and photocopying equipment manufacturing	<1	334	395	1,057
Other commercial service industry machinery manufacturing	<1	2,036	2,830	10,954
Air purification and ventilation equipment manufacturing	<1	1,922	2,364	7,033
Heating equipment (except warm air furnaces) manufacturing	<1	1,361	1,769	6,508
Air conditioning, refrigeration, and warm air heating equipment manufacturing	<1	13,788	20,701	83,429
Industrial mold manufacturing	<1	1,924	2,105	4,236
Special tool, die, jig, and fixture manufacturing	<1	535	625	1,312
Cutting tool and machine tool accessory manufacturing	<1	2,490	2,696	7,631
Machine tool manufacturing	<1	3,171	3,669	12,781
Rolling mill and other metalworking machinery manufacturing	<1	208	231	552
Turbine and turbine generator set units manufacturing	<1	47	56	270
Speed changer, industrial high-speed drive, and gear manufacturing	<1	282	368	1,338
Mechanical power transmission equipment manufacturing	0	0	0	0
Other engine equipment manufacturing	<1	315	531	3,157
Pump and pumping equipment manufacturing	<1	267	388	1,479
Air and gas compressor manufacturing	<1	33	51	216
Elevator and moving stairway manufacturing	0	0	0	0
Conveyor and conveying equipment manufacturing	<1	100	109	396
Overhead cranes, hoists, and monorail systems manufacturing	<1	22	33	157
Industrial truck, trailer, and stacker manufacturing	<1	214	299	1,410

Appendix

Power-driven handtool manufacturing	<1	737	1,388	2,509
Welding and soldering equipment manufacturing	<1	162	204	862
Packaging machinery manufacturing	<1	70	87	293
Industrial process furnace and oven manufacturing	0	0	0	0
Fluid power cylinder and actuator manufacturing	<1	711	874	1,377
Fluid power pump and motor manufacturing	<1	2,223	2,918	5,445
Scales, balances, and miscellaneous general purpose machinery manufacturing	<1	661	753	2,408
Electronic computer manufacturing	<1	2,367	4,886	20,654
Computer storage device manufacturing	<1	164	402	1,420
Computer terminals and other computer peripheral equipment manufacturing	<1	46,563	80,318	201,529
Telephone apparatus manufacturing	<1	161	251	807
Broadcast and wireless communications equipment manufacturing	<1	678	1,050	3,111
Other communications equipment manufacturing	<1	2,522	4,145	11,238
Audio and video equipment manufacturing	<1	688	1,191	4,912
Printed circuit assembly (electronic assembly) manufacturing	<1	6,520	11,416	36,409
Bare printed circuit board manufacturing	<1	3,795	5,041	14,743
Semiconductor and related device manufacturing	<1	126,880	212,847	534,105
Capacitor, resistor, coil, transformer, and other inductor manufacturing	<1	1,771	2,541	7,309
Electronic connector manufacturing	<1	29,019	44,230	123,529
Other electronic component manufacturing	<1	5,311	7,112	15,963
Electromedical and electrotherapeutic apparatus manufacturing	<1	492	946	2,570
Search, detection, and navigation instruments manufacturing	<1	745	1,279	2,681
Automatic environmental control manufacturing	<1	5,540	7,728	27,033

Appendix

Industrial process variable instruments manufacturing	<1	1,952	3,113	8,765
Totalizing fluid meter and counting device manufacturing	<1	3,313	6,875	10,417
Electricity and signal testing instruments manufacturing	<1	1,758	2,786	8,294
Analytical laboratory instrument manufacturing	2	317,900	538,842	999,397
Irradiation apparatus manufacturing	<1	277	528	775
Watch, clock, and other measuring and controlling device manufacturing	<1	226	421	1,316
Blank magnetic and optical recording media manufacturing	<1	1,882	5,400	15,305
Software and other prerecorded and record reproducing	<1	742	1,102	3,507
Electric lamp bulb and part manufacturing	<1	641	1,444	3,169
Lighting fixture manufacturing	<1	11,296	18,477	49,891
Small electrical appliance manufacturing	<1	861	2,301	7,471
Household cooking appliance manufacturing	<1	298	745	2,442
Household refrigerator and home freezer manufacturing	<1	321	836	2,630
Household laundry equipment manufacturing	<1	731	1,426	6,053
Other major household appliance manufacturing	<1	136	379	1,107
Power, distribution, and specialty transformer manufacturing	<1	363	597	1,483
Motor and generator manufacturing	<1	2,180	4,183	11,414
Switchgear and switchboard apparatus manufacturing	<1	1,505	2,934	7,764
Relay and industrial control manufacturing	<1	2,000	2,958	8,200
Storage battery manufacturing	<1	5,699	8,986	24,567
Primary battery manufacturing	<1	15,993	29,164	67,551
Fiber optic cable manufacturing	0	0	0	0
Other communication and energy wire manufacturing	<1	1,231	2,074	6,744
Wiring device manufacturing	<1	6,079	13,318	31,308
Carbon and graphite product manufacturing	<1	12,297	22,562	56,025
All other miscellaneous electrical equipment and component manufacturing	<1	10,943	13,024	30,980
Automobile manufacturing	<1	1,572	13,083	27,175

Appendix

Light truck and utility vehicle manufacturing	0	0	0	0
Heavy duty truck manufacturing	<1	4,044	21,377	49,056
Motor vehicle body manufacturing	<1	525	1,045	3,443
Truck trailer manufacturing	<1	72	133	478
Motor home manufacturing	<1	52,929	128,583	343,883
Travel trailer and camper manufacturing	<1	8,388	10,659	44,540
Motor vehicle gasoline engine and engine parts manufacturing	<1	6,619	15,923	52,623
Motor vehicle electrical and electronic equipment manufacturing	<1	14,392	26,188	93,402
Motor vehicle transmission and power train parts manufacturing	<1	5,971	14,578	52,885
Motor vehicle seating and interior trim manufacturing	<1	2,470	3,813	15,685
Motor vehicle metal stamping	<1	575	965	4,404
Other motor vehicle parts manufacturing	1	79,648	163,938	591,630
Motor vehicle steering, suspension component (except spring), and brake systems manufacturing	<1	9,316	25,129	71,788
Aircraft manufacturing	<1	30,702	61,694	211,555
Aircraft engine and engine parts manufacturing	<1	87,988	220,117	391,529
Other aircraft parts and auxiliary equipment manufacturing	4	420,276	644,644	1,443,606
Guided missile and space vehicle manufacturing	<1	10,516	18,337	41,694
Propulsion units and parts for space vehicles and guided missiles manufacturing	<1	24,221	43,683	80,558
Railroad rolling stock manufacturing	0	0	0	0
Ship building and repairing	<1	201	257	696
Boat building	<1	1,838	2,606	12,581
Motorcycle, bicycle, and parts manufacturing	<1	1,048	3,684	10,644
Military armored vehicle, tank, and tank component manufacturing	<1	10,018	22,142	70,346
All other transportation equipment manufacturing	<1	1,468	2,935	13,035
Wood kitchen cabinet and countertop manufacturing	<1	39,929	54,827	130,736
Upholstered household furniture manufacturing	<1	4,199	4,773	16,344

Appendix

Nonupholstered wood household furniture manufacturing	<1	23,360	27,766	82,842
Other household nonupholstered furniture manufacturing	<1	2,581	4,072	15,247
Institutional furniture manufacturing	<1	174	192	611
Wood office furniture manufacturing	<1	1,397	1,939	6,042
Custom architectural woodwork and millwork	<1	1,136	1,081	3,525
Office furniture, except wood, manufacturing	<1	42,979	72,661	234,168
Showcase, partition, shelving, and locker manufacturing	<1	1,547	2,229	6,855
Mattress manufacturing	<1	10,740	19,651	71,873
Blind and shade manufacturing	<1	2,727	2,882	10,433
Surgical and medical instrument manufacturing	<1	16,544	28,590	72,059
Surgical appliance and supplies manufacturing	<1	52,378	95,641	221,749
Dental equipment and supplies manufacturing	<1	78	122	334
Ophthalmic goods manufacturing	<1	1,327	2,393	5,490
Dental laboratories	<1	9,153	9,455	17,717
Jewelry and silverware manufacturing	<1	10,606	16,961	47,100
Sporting and athletic goods manufacturing	<1	19,831	26,768	83,891
Doll, toy, and game manufacturing	<1	1,063	1,620	5,261
Office supplies (except paper) manufacturing	<1	3,345	4,692	17,372
Sign manufacturing	<1	24,809	21,661	57,257
Gasket, packing, and sealing device manufacturing	<1	2,783	3,387	9,173
Musical instrument manufacturing	<1	696	747	2,251
Fasteners, buttons, needles, and pins manufacturing	<1	3,880	5,064	18,686
Broom, brush, and mop manufacturing	0	0	0	0
Burial casket manufacturing	<1	3,092	3,827	10,853
All other miscellaneous manufacturing	<1	16,114	21,026	59,525

Glass container manufacturing	<1	6	10	25

Appendix

Glass product manufacturing made of purchased glass	<1	3,461	6,305	15,527
Cement manufacturing	<1	1,272	3,361	9,294
Ready-mix concrete manufacturing	<1	6,106	11,085	34,041
Concrete block and brick manufacturing	<1	1,959	3,742	9,241
Concrete pipe manufacturing	<1	135	245	652
Other concrete product manufacturing	<1	1,521	2,237	5,647
Lime manufacturing	<1	271	736	1,845
Gypsum product manufacturing	<1	1,053	3,063	7,379
Abrasive product manufacturing	<1	719	2,134	3,304
Cut stone and stone product manufacturing	<1	1,795	2,206	5,081
Ground or treated mineral and earth manufacturing	<1	394	1,208	3,251
Mineral wool manufacturing	<1	343	879	2,418
Miscellaneous nonmetallic mineral products manufacturing	<1	342	1,030	2,376
Iron and steel mills and ferroalloy manufacturing	<1	863	1,377	12,177
Iron, steel pipe and tube manufacturing from purchased steel	<1	553	802	4,176
Rolled steel shape manufacturing	<1	602	1,057	7,068
Steel wire drawing	<1	287	376	2,220
Alumina refining and primary aluminum production	<1	198	269	2,132
Secondary smelting and alloying of aluminum	0	0	0	0
Aluminum sheet, plate, and foil manufacturing	<1	1,969	3,283	20,942
Other aluminum rolling, drawing and extruding	<1	1,574	1,999	10,545
Nonferrous metal (exc aluminum) smelting and refining	<1	832	2,624	11,415
Copper rolling, drawing, extruding and alloying	<1	219	301	3,096
Nonferrous metal, except copper and aluminum, shaping	<1	130	146	603
Secondary processing of other nonferrous metals	<1	27	35	255
Ferrous metal foundries	<1	1,002	1,316	3,854
Nonferrous metal foundries	<1	2,146	2,763	8,454
Custom roll forming	0	0	0	0
Crown and closure manufacturing and metal stamping	<1	2,650	3,324	10,178
Iron and steel forging	<1	124	197	890

Appendix

Nonferrous forging	0	0	0	0
Cutlery, utensil, pot, and pan manufacturing	<1	325	758	2,488
Handtool manufacturing	<1	170	269	739
Prefabricated metal buildings and components manufacturing	<1	1,248	1,560	4,097
Fabricated structural metal manufacturing	<1	3,491	4,953	18,121
Plate work manufacturing	<1	1,031	1,175	3,581
Metal window and door manufacturing	<1	4,848	6,369	17,793
Sheet metal work manufacturing	<1	4,682	6,033	16,495
Ornamental and architectural metal work manufacturing	<1	2,940	3,723	11,393
Power boiler and heat exchanger manufacturing	0	0	0	0
Metal tank (heavy gauge) manufacturing	<1	83	105	318
Metal cans manufacturing	<1	688	1,400	6,171
Metal barrels, drums and pails manufacturing	<1	314	391	1,335
Hardware manufacturing	<1	200	300	995
Spring and wire product manufacturing	<1	1,544	2,012	7,180
Machine shops	<1	11,474	13,842	29,634
Turned product and screw, nut, and bolt manufacturing	<1	2,314	3,209	8,839
Metal heat treating	<1	682	952	2,708
Metal coating and nonprecious engraving	<1	1,769	2,897	8,869
Electroplating, anodizing, and coloring metal	<1	1,499	1,723	4,147
Valve and fittings, other than plumbing, manufacturing	<1	3,405	5,104	13,342
Plumbing fixture fitting and trim manufacturing	<1	1,723	4,089	10,056
Ball and roller bearing manufacturing	0	0	0	0
Small arms ammunition manufacturing	<1	1,026	2,032	4,346
Ammunition, except for small arms, manufacturing	<1	18	24	60
Small arms, ordnance, and accessories manufacturing	<1	6,959	11,699	21,126
Fabricated pipe and pipe fitting manufacturing	<1	59	73	233
Other fabricated metal manufacturing	<1	32,627	42,072	123,437
Farm machinery and equipment manufacturing	<1	78	118	553

Appendix

Lawn and garden equipment manufacturing	<1	731	1,139	5,433
Construction machinery manufacturing	<1	392	744	1,755
Mining machinery and equipment manufacturing	<1	11	14	45
Oil and gas field machinery and equipment manufacturing	<1	5	6	21
Semiconductor machinery manufacturing	<1	1,235	1,372	4,208
Food product machinery manufacturing	<1	3	3	11
Sawmill, woodworking, and paper machinery	<1	11	12	45
Printing machinery and equipment manufacturing	<1	28	30	99
All other industrial machinery manufacturing	<1	82	98	321
Optical instrument and lens manufacturing	<1	88	108	325
Photographic and photocopying equipment manufacturing	<1	52	62	163
Other commercial service industry machinery manufacturing	<1	311	443	1,655
Air purification and ventilation equipment manufacturing	<1	234	295	879
Heating equipment (except warm air furnaces) manufacturing	<1	229	314	1,043
Air conditioning, refrigeration, and warm air heating equipment manufacturing	<1	1,800	2,790	10,778
Industrial mold manufacturing	<1	251	278	550
Special tool, die, jig, and fixture manufacturing	<1	70	84	171
Cutting tool and machine tool accessory manufacturing	<1	286	313	877
Machine tool manufacturing	<1	266	315	1,104
Rolling mill and other metalworking machinery manufacturing	<1	17	19	45
Turbine and turbine generator set units manufacturing	<1	6	8	33
Speed changer, industrial high-speed drive, and gear manufacturing	<1	37	50	171
Mechanical power transmission equipment manufacturing	0	0	0	0
Other engine equipment manufacturing	<1	55	97	494

Appendix

Pump and pumping equipment manufacturing	<1	36	53	198
Air and gas compressor manufacturing	<1	4	6	28
Elevator and moving stairway manufacturing	0	0	0	0
Conveyor and conveying equipment manufacturing	<1	9	10	36
Overhead cranes, hoists, and monorail systems manufacturing	<1	4	6	26
Industrial truck, trailer, and stacker manufacturing	<1	23	33	150
Power-driven handtool manufacturing	<1	194	372	617
Welding and soldering equipment manufacturing	<1	24	31	115
Packaging machinery manufacturing	<1	10	13	41
Industrial process furnace and oven manufacturing	0	0	0	0
Fluid power cylinder and actuator manufacturing	<1	74	91	145
Fluid power pump and motor manufacturing	<1	582	779	1,408
Scales, balances, and miscellaneous general purpose machinery manufacturing	<1	89	103	318
Electronic computer manufacturing	<1	7	15	69
Computer storage device manufacturing	<1	22	53	188
Computer terminals and other computer peripheral equipment manufacturing	<1	89	148	454
Telephone apparatus manufacturing	<1	15	24	76
Broadcast and wireless communications equipment manufacturing	<1	92	143	417
Other communications equipment manufacturing	<1	330	534	1,485
Audio and video equipment manufacturing	<1	111	192	772
Printed circuit assembly (electronic assembly) manufacturing	<1	932	1,645	5,181
Bare printed circuit board manufacturing	<1	413	547	1,659
Semiconductor and related device manufacturing	<1	23,207	38,626	92,643

Appendix

Capacitor, resistor, coil, transformer, and other inductor manufacturing	<1	215	310	880
Electronic connector manufacturing	<1	3,799	5,792	16,339
Other electronic component manufacturing	<1	825	1,105	2,428
Electromedical and electrotherapeutic apparatus manufacturing	<1	69	132	352
Search, detection, and navigation instruments manufacturing	<1	175	297	603
Automatic environmental control manufacturing	<1	907	1,260	4,484
Industrial process variable instruments manufacturing	<1	244	388	1,088
Totalizing fluid meter and counting device manufacturing	<1	342	709	1,074
Electricity and signal testing instruments manufacturing	<1	146	231	683
Analytical laboratory instrument manufacturing	<1	21,456	36,334	65,654
Irradiation apparatus manufacturing	<1	40	76	109
Watch, clock, and other measuring and controlling device manufacturing	<1	33	60	186
Blank magnetic and optical recording media manufacturing	<1	479	1,399	3,349
Software and other prerecorded and record reproducing	<1	92	138	396
Electric lamp bulb and part manufacturing	<1	98	230	484
Lighting fixture manufacturing	<1	2,057	3,281	8,724
Small electrical appliance manufacturing	<1	123	342	1,060
Household cooking appliance manufacturing	<1	32	87	275
Household refrigerator and home freezer manufacturing	<1	35	99	299
Household laundry equipment manufacturing	<1	79	164	679
Other major household appliance manufacturing	<1	19	59	164
Power, distribution, and specialty transformer manufacturing	<1	46	76	186
Motor and generator manufacturing	<1	257	485	1,352
Switchgear and switchboard apparatus manufacturing	<1	188	370	957

Appendix

Relay and industrial control manufacturing	<1	261	393	1,055
Storage battery manufacturing	<1	788	1,208	3,238
Primary battery manufacturing	<1	2,020	4,994	8,372
Fiber optic cable manufacturing	0	0	0	0

Plumbing fixture fitting and trim manufacturing	<1	52,285	137,187	429,348
Ball and roller bearing manufacturing	1	89,355	158,615	382,729
Small arms ammunition manufacturing	<1	7,852	15,241	34,194
Ammunition, except for small arms, manufacturing	<1	5,992	7,213	14,948
Small arms, ordnance, and accessories manufacturing	<1	40,084	71,764	153,608
Fabricated pipe and pipe fitting manufacturing	<1	24,638	30,415	80,554
Other fabricated metal manufacturing	2	183,384	238,055	595,631
Farm machinery and equipment manufacturing	<1	9,980	19,220	64,723
Lawn and garden equipment manufacturing	<1	585	1,169	6,666
Construction machinery manufacturing	<1	1,229	3,134	10,140
Mining machinery and equipment manufacturing	<1	418	733	1,743
Oil and gas field machinery and equipment manufacturing	<1	4,267	7,898	21,656
Semiconductor machinery manufacturing	<1	17,739	21,467	48,918
Food product machinery manufacturing	<1	3,431	4,157	12,810
Sawmill, woodworking, and paper machinery	<1	4,872	5,618	16,334
Printing machinery and equipment manufacturing	<1	2,707	3,105	9,070
All other industrial machinery manufacturing	<1	14,656	19,860	49,636
Optical instrument and lens manufacturing	<1	27,091	41,696	92,903
Photographic and photocopying equipment manufacturing	<1	10,521	15,268	45,738
Other commercial service industry machinery manufacturing	<1	47,970	84,058	210,593
Air purification and ventilation equipment manufacturing	<1	28,884	41,281	113,727
Heating equipment (except warm air furnaces) manufacturing	1	76,669	127,813	333,646
Air conditioning, refrigeration, and warm air heating equipment manufacturing	1	76,004	151,518	440,262
Industrial mold manufacturing	<1	10,180	12,406	26,718
Special tool, die, jig, and fixture manufacturing	<1	10,158	14,345	27,736

Appendix

Cutting tool and machine tool accessory manufacturing	<1	13,479	15,794	37,654
Machine tool manufacturing	<1	7,752	10,401	30,302
Rolling mill and other metalworking machinery manufacturing	<1	11,659	14,054	34,915
Turbine and turbine generator set units manufacturing	<1	11,335	15,524	43,868
Speed changer, industrial high-speed drive, and gear manufacturing	<1	30,042	48,134	108,182
Mechanical power transmission equipment manufacturing	<1	19,230	33,373	81,934
Other engine equipment manufacturing	<1	53,687	121,542	497,282
Pump and pumping equipment manufacturing	<1	7,914	15,104	40,494
Air and gas compressor manufacturing	<1	5,102	10,182	32,363
Elevator and moving stairway manufacturing	<1	4,416	6,754	20,911
Conveyor and conveying equipment manufacturing	<1	3,041	3,546	10,529
Overhead cranes, hoists, and monorail systems manufacturing	<1	656	1,403	4,268
Industrial truck, trailer, and stacker manufacturing	<1	2,989	5,252	18,244
Power-driven handtool manufacturing	<1	2,365	7,140	21,386
Welding and soldering equipment manufacturing	<1	8,364	12,966	36,344
Packaging machinery manufacturing	<1	22,603	34,735	90,279
Industrial process furnace and oven manufacturing	<1	2,071	2,581	6,053
Fluid power cylinder and actuator manufacturing	<1	5,903	8,975	24,009
Fluid power pump and motor manufacturing	<1	23,890	41,503	108,561
Scales, balances, and miscellaneous general purpose machinery manufacturing	<1	9,107	11,685	30,479
Electronic computer manufacturing	1	501,827	977,699	2,002,083
Computer storage device manufacturing	<1	60,232	143,767	437,849
Computer terminals and other computer peripheral equipment manufacturing	2	418,679	674,417	1,400,665
Telephone apparatus manufacturing	<1	62,377	102,702	236,003

Appendix

Broadcast and wireless communications equipment manufacturing	<1	51,621	78,731	171,443
Other communications equipment manufacturing	<1	52,782	91,026	237,927
Audio and video equipment manufacturing	<1	110,976	183,069	443,454
Printed circuit assembly (electronic assembly) manufacturing	7	554,793	1,019,786	3,422,479
Bare printed circuit board manufacturing	2	154,572	205,914	508,593
Semiconductor and related device manufacturing	26	5,420,247	9,529,743	19,447,512
Capacitor, resistor, coil, transformer, and other inductor manufacturing	1	81,163	115,845	288,341
Electronic connector manufacturing	10	912,646	1,406,997	3,686,632
Other electronic component manufacturing	8	683,658	940,598	2,259,400
Electromedical and electrotherapeutic apparatus manufacturing	<1	64,395	120,873	237,231
Search, detection, and navigation instruments manufacturing	<1	16,398	26,684	51,578
Automatic environmental control manufacturing	<1	81,683	108,681	207,131
Industrial process variable instruments manufacturing	<1	46,542	73,973	171,029
Totalizing fluid meter and counting device manufacturing	<1	19,380	44,334	93,327
Electricity and signal testing instruments manufacturing	<1	84,388	132,180	319,449
Analytical laboratory instrument manufacturing	2	346,621	595,471	1,094,049
Irradiation apparatus manufacturing	<1	3,070	5,938	14,243
Watch, clock, and other measuring and controlling device manufacturing	<1	67,892	122,848	238,941
Blank magnetic and optical recording media manufacturing	<1	39,490	109,592	300,819
Software and other prerecorded and record reproducing	<1	41,404	59,303	117,375
Electric lamp bulb and part manufacturing	<1	30,735	56,031	150,221
Lighting fixture manufacturing	3	273,022	393,615	1,038,315
Small electrical appliance manufacturing	<1	29,931	61,521	172,971

Appendix

Household cooking appliance manufacturing	<1	16,100	32,651	100,697
Household refrigerator and home freezer manufacturing	<1	17,367	36,440	108,259
Household laundry equipment manufacturing	<1	40,925	67,638	259,581
