## The Mission

Space shuttle Endeavour will deliver the last major NASA module, the Tranquility node, and cupola to the International Space Station. During the 13-day mission, crew members will perform three spacewalks to attach Tranquility to the Unity node on the station. The cupola's seven windows will provide an almost 360-degree view of space and will be used as a control room for robotics and living section for crew members.

This is the 130th space shuttle flight, Endeavour's 24th flight and the 32nd shuttle flight to the space station.

STS-130 is the first space shuttle flight for Virts.
