

# GOES-R Series/ G18 Post Launch Testing Sequence of Events (PLT SOE) A Day-to-day Project Schedule

Denis Pinha Ph.D. (TPM/ NASA GSFC)  
GOES-18 PLT Deputy Director & Planner  
Rodolfo Lavaque (TPM/ NASA)  
TPM President

# *Agenda*

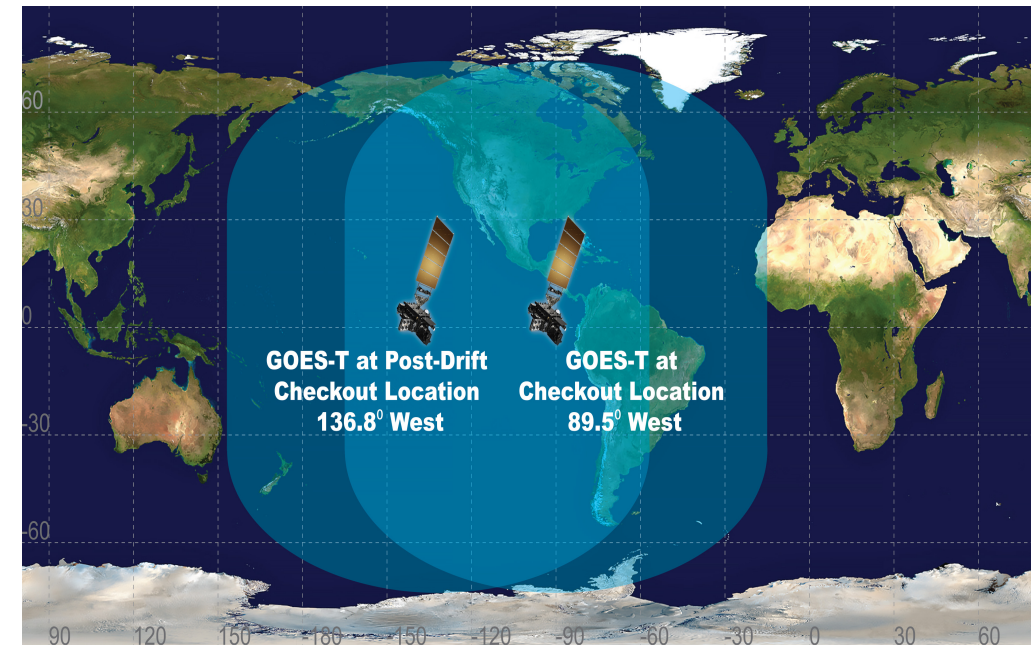

- 1. Post Launch Testing Objectives**
- 2. System Engineering Process Model to deliver the PLT SOE**
- 3. Background: Subsystems and Instruments to be tested**
- 4. Sequence of Events planning phases**
- 5. Day-to-Day Project Schedule**

# Post-launch Testing Objectives

- Geostationary Operational Environmental Satellites (GOES) - The nation's most advanced fleet of geostationary weather satellites
- Objective of the GOES-T PLT campaign - validate capability of the GOES system to perform the mission
- An integrated series of tests and demonstrations performed by the key elements of the system:

- ★ Observatory
- ★ Ground
- ★ Products

- To accommodate G-17 ABI during the fall 'hot season', PLT will be conducted for the first 2 months at 89.5°, then drift to 136.8° and complete the PLT

# ***Subsystems and Instruments to be Tested***

1. ABI (Advanced Baseline Imager)
2. EXIS (Extreme Ultra-Violet X-Ray Irradiance Sensor)
3. GLM (Geostationary Lightning Mapper)
4. GMAG (Goddard Magnetometer)
5. SEISS (Space Environment in-Situ Suite)
6. SUVI (Solar Ultraviolet Imager)
7. GNC (Guidance, Navigation, and Control)
8. COMM (Communications)
9. Ground (Ground Systems)

# Background

## Subsystems:

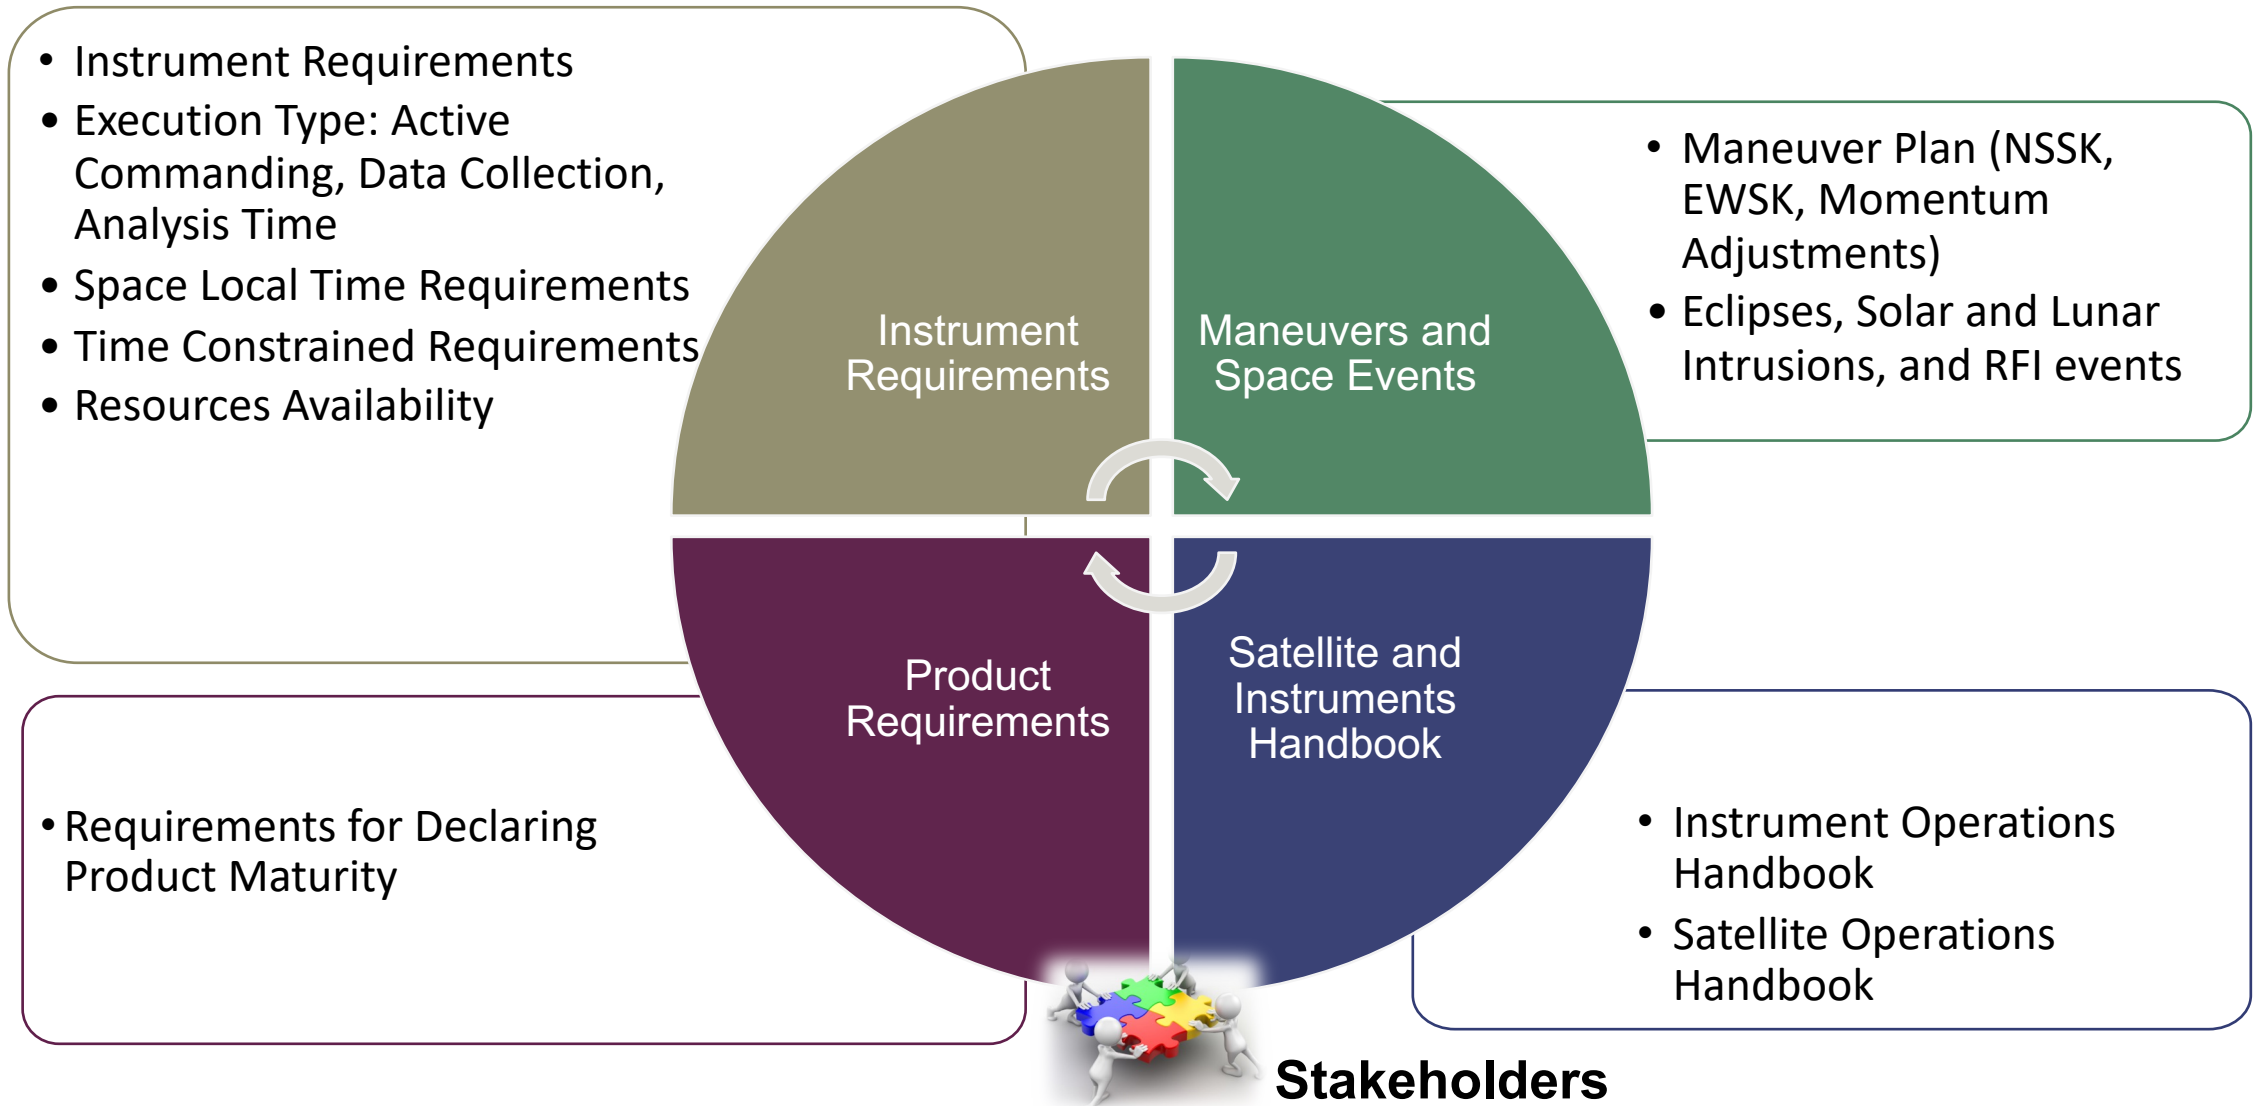

1. ABI 20 tests : 500 events (tasks)
2. EXIS 13 tests: 200 events (tasks)
3. GLM 12 tests : 200 events (tasks)
4. GMAG 5 tests : 60 events (tasks)
5. SEISS 10 tests: 110 events (tasks)
6. SUVI 12 tests: 110 events (tasks)
7. GNC 10 tests: 110 events (tasks)
8. COMM 3 tests: 30 events (tasks)
9. Ground 4 tests: 30 events (tasks)
10. Satellite Events: Maneuvers, RFI, Eclipses: 300 events

## Resources:

- Subsystem/Instrument Team: 4 – 8 Engineers + Team Lead
- Workforce of about 60 highly skilled personnel
- LCR workstations/Ground Antennas
- Spacecraft

A Substantial  
Scheduling Effort :  
~ About 2000 tasks  
in 6 months.

# Background: Inputs for PLT SOE

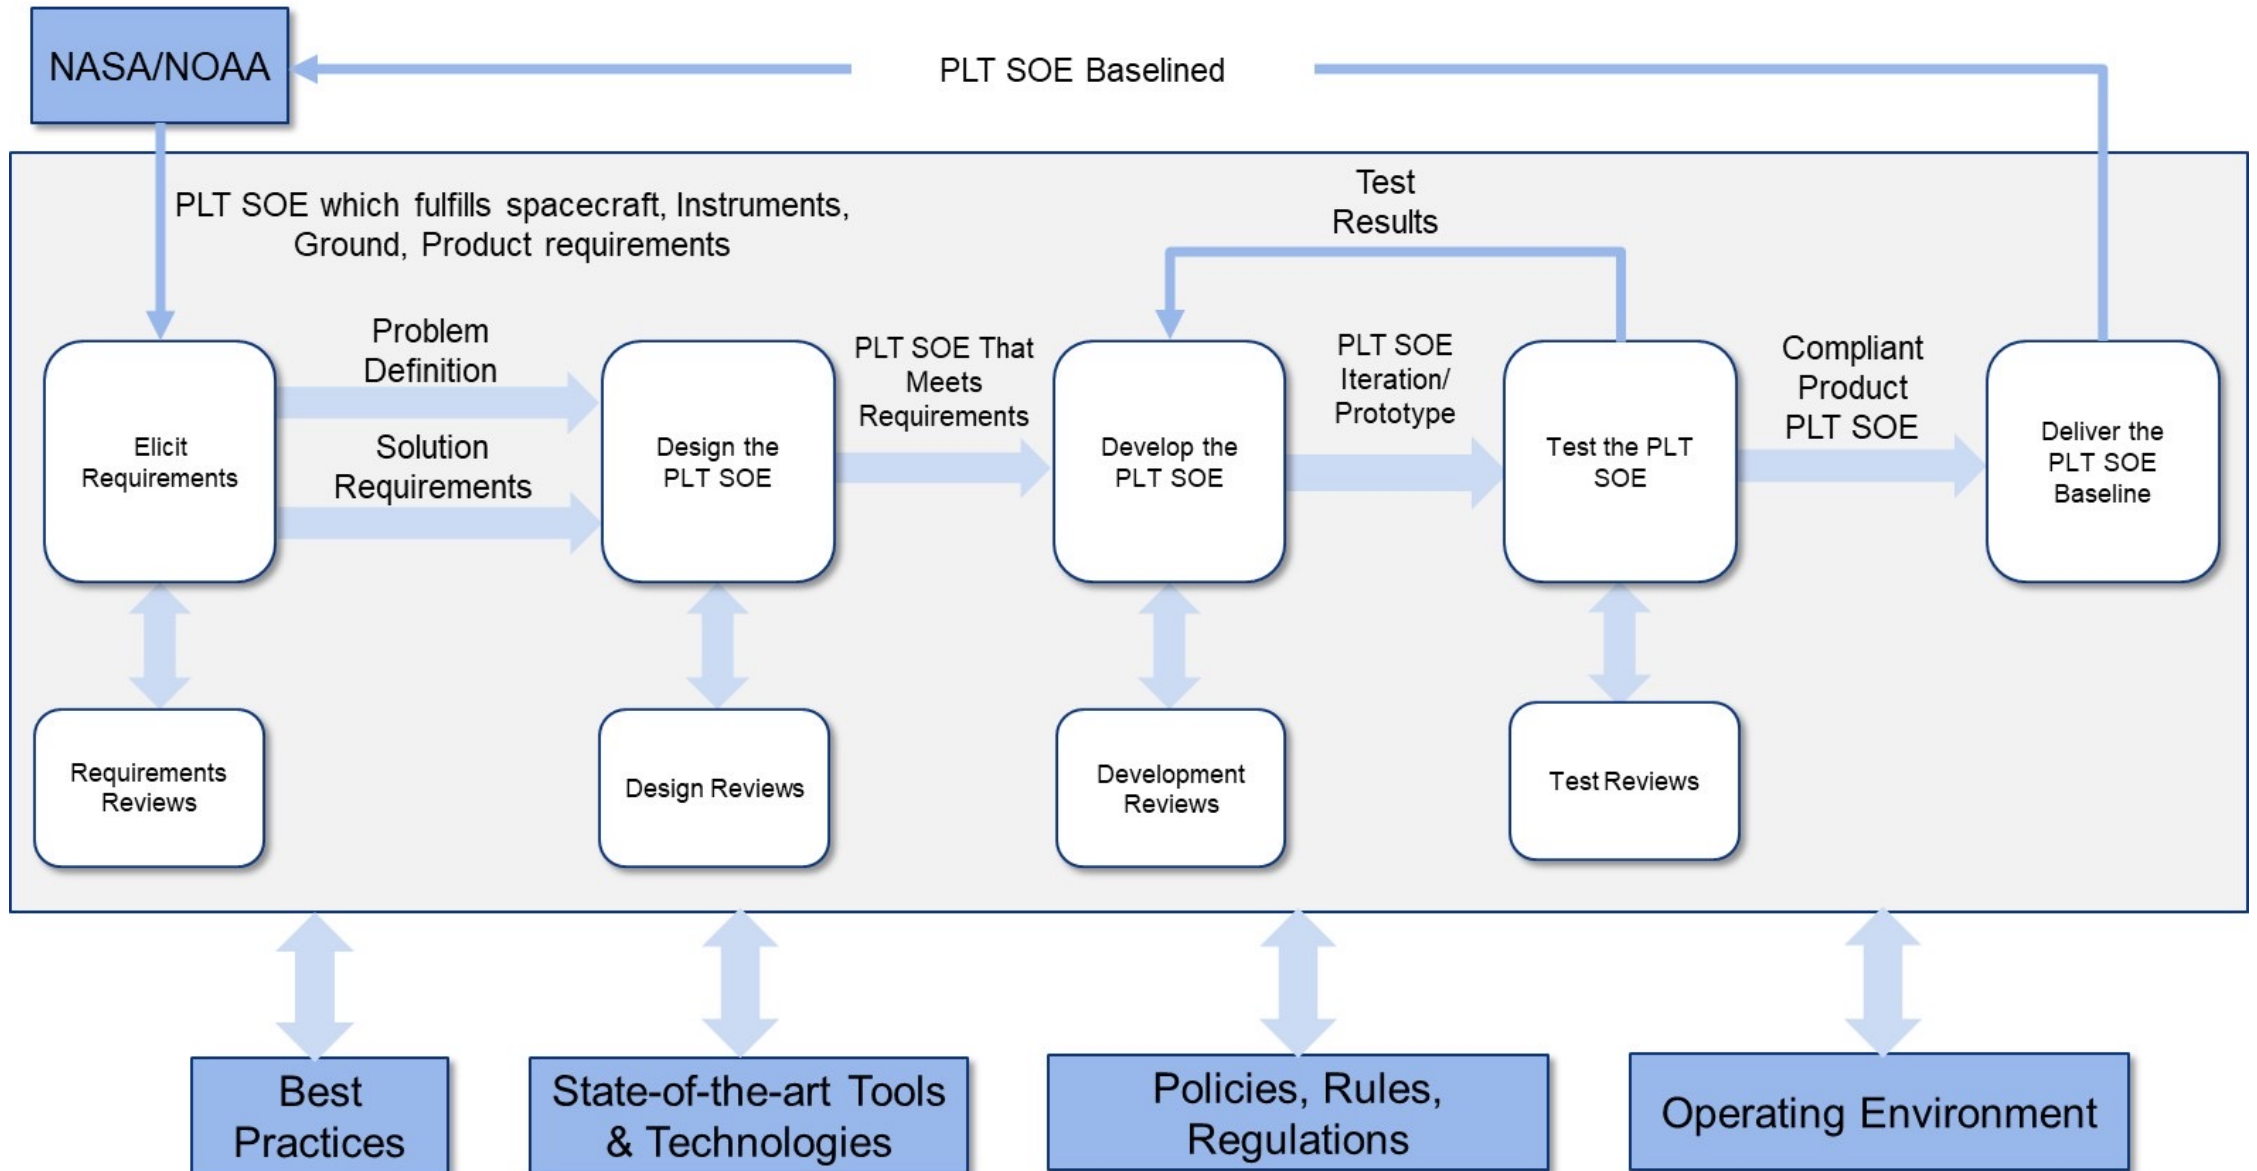

Missions Operations Manager, Systems Operations Manager, Instrument Systems Manager, MOST Subsystem Manager/Instrument Leader/Instrument Team, Flight Project Subject Matter Experts, Product Readiness and Operations Team (PRO), Ground System Leader, Contingency Manager, Configuration Manager, NWS, NASA, NOAA

# Baseline Planning

# System Engineering Process Model

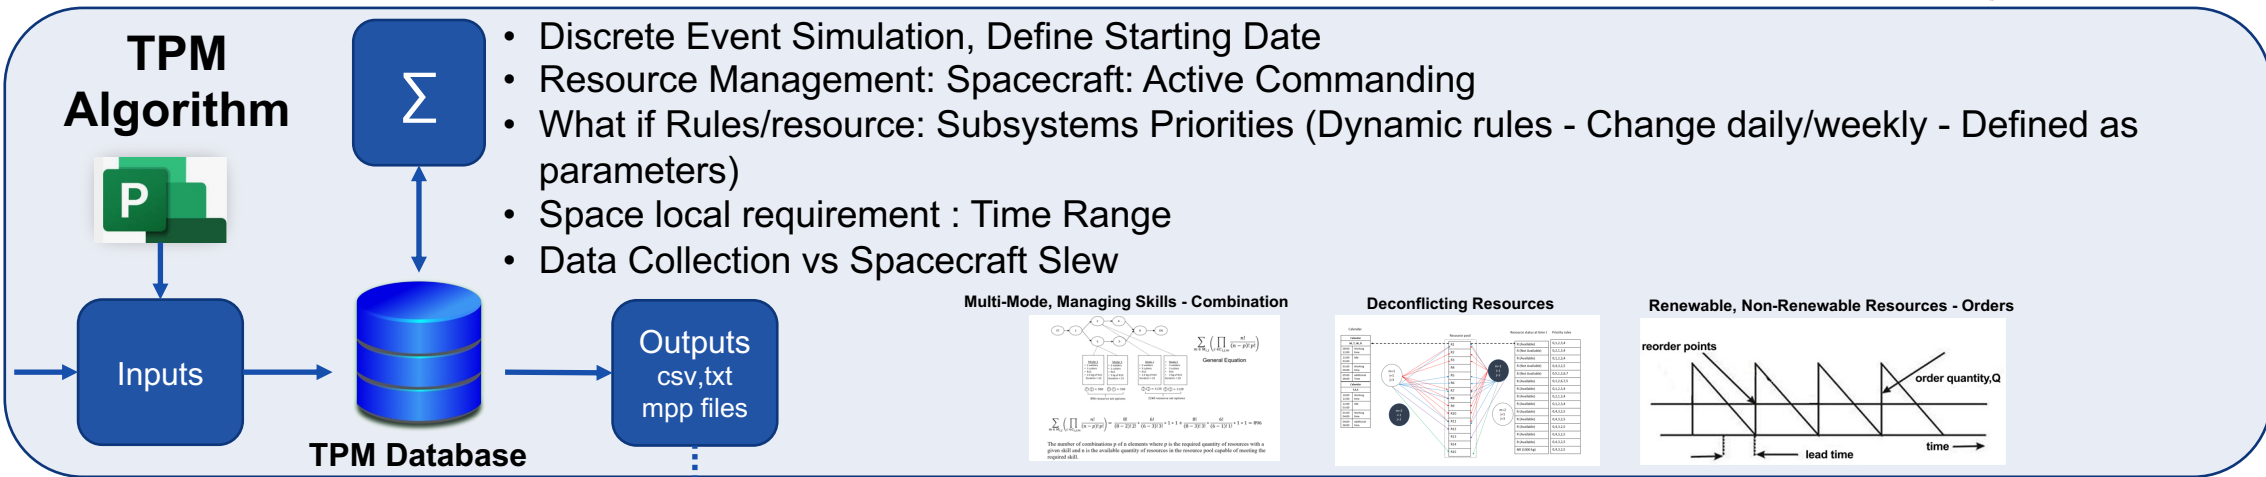

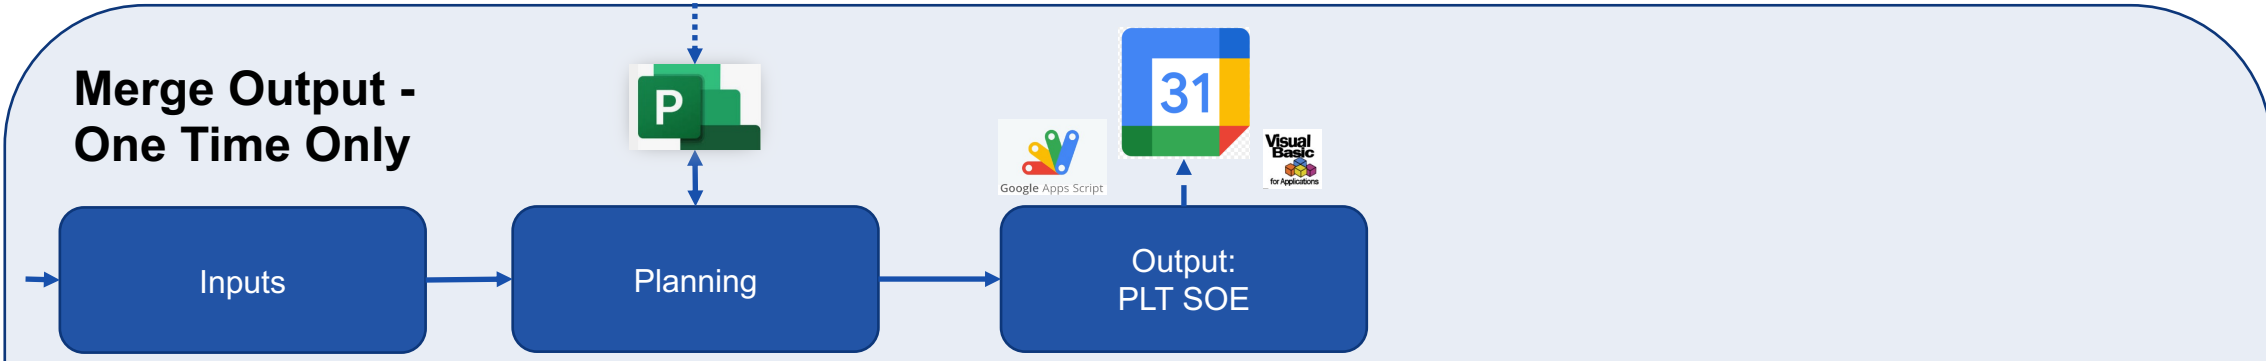

# PLT SOE Baseline

Generate starting point of PLT SOE draft

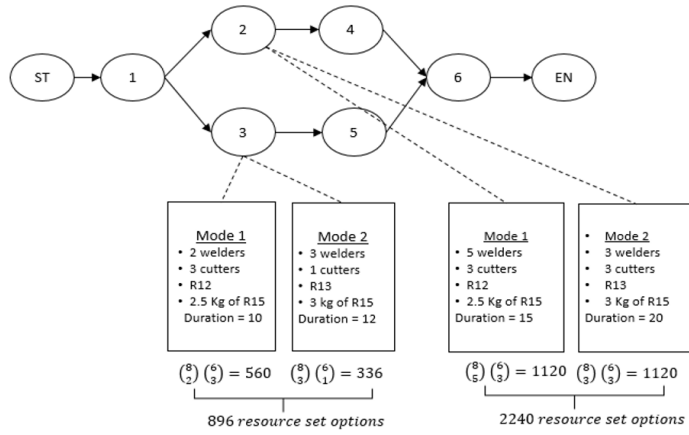

Generate PLT SOE drafts and PLT SOE Baseline

PLT SOE Database Table Design

| Field Name          | Data Type  | Description (Optional)  |
|---------------------|------------|---|
| UniqueID            | Number     | Unique event Id   |
| PLT Day             | Short Text | PLT Day #. It starts with 1 and finishes about 180. 6 months later                                |
| Subsystem           | Short Text | Unique Id for Subsystems  |
| TaskName            | Short Text | Description of the event  |
| Start               | Date/Time  | Start time (UTC)  |
| Finish              | Date/Time  | Finish time (UTC)   |
| Duration            | Short Text | Event duration  |
| Test Technique      | Short Text | Test Technique: Active Commanding, Quiescent test, Data Collection, Data Analysis, CM, Deployment |
| Mission Scripts     | Short Text | Active Commanding Scripts   |
| Scheduling Comments | Short Text | Any comment needed  |
| % Complete          | Number     | Percentage of completion  |

# General Methods

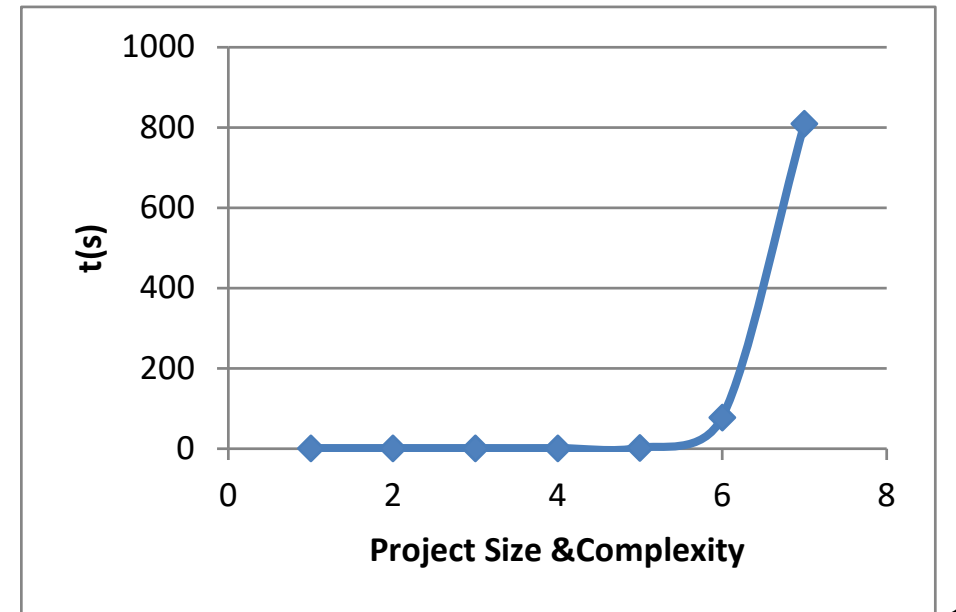

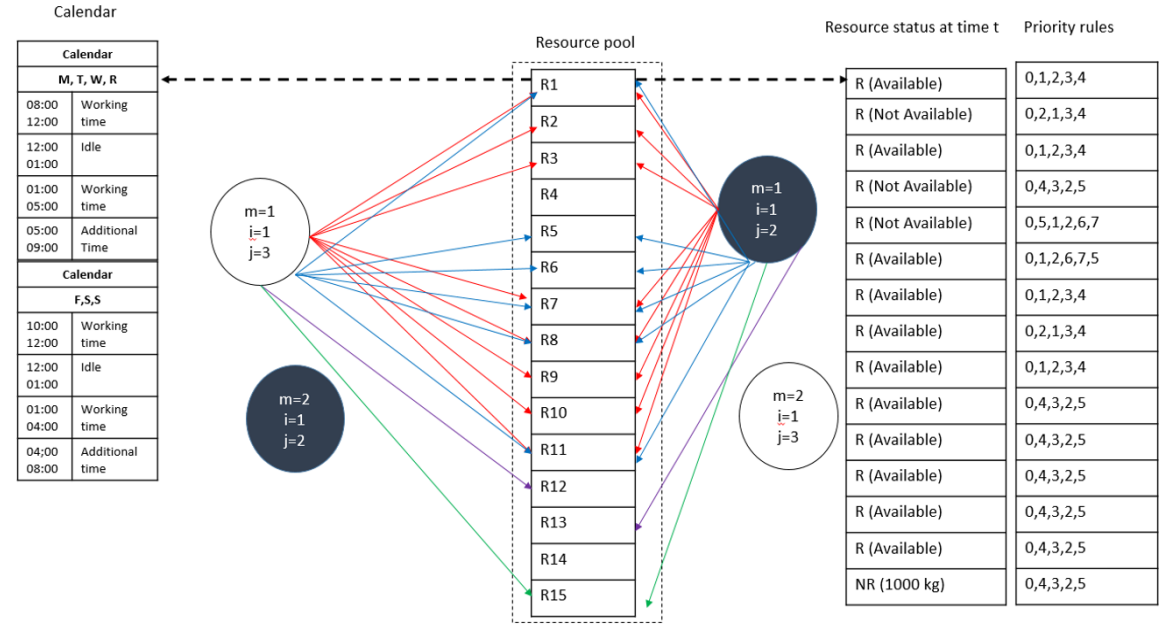

$$\sum_{m \in M_{i,j}} \left( \prod_{c \in C_{i,j,m}} \frac{n!}{(n-p)! p!} \right)$$

General Equation

$$\sum_{m \in M_{i,j}} \left( \prod_{c \in C_{i,j,m}} \frac{n!}{(n-p)! p!} \right) = \frac{8!}{(8-2)! 2!} * \frac{6!}{(6-3)! 3!} * 1 * 1 + \frac{8!}{(8-3)! 3!} * \frac{6!}{(6-1)! 1!} * 1 * 1 = 896$$

The number of combinations p of n elements where p is the required quantity of resources with a given skill and n is the available quantity of resources in the resource pool capable of meeting the required skill.

|   | Number of Tasks | Number of resources | Multiple skills | Multi-mode | Multiple calendars with interr. | Multiple priority rules | Multiple Projects | Number of Projects | Time (s) |
|---|-----------------|---------------------|-----------------|------------|---------------------------------|-------------------------|-------------------|--------------------|----------|
| 1 | 33              | 31                  | X               | X          | X                               | X                       |                   | 1                  | 1        |
| 2 | 100             | 65                  |                 |            |                                 | X                       |                   | 1                  | 1        |
| 3 | 111             | 475                 | X               | X          | X                               | X                       |                   | 1                  | 1        |
| 4 | 222             | 475                 | X               | X          | X                               | X                       | X                 | 2                  | 1        |
| 5 | 333             | 475                 | X               | X          | X                               | X                       | X                 | 3                  | 2        |
| 6 | 3330            | 475                 | X               | X          | X                               | X                       | X                 | 30                 | 78       |
