NASA Vision

“To discover and expand knowledge
for the benefit of humanity.”

It's an exciting time to be part of NASA!

To the Moon: Take the Next Giant Leap with Us

Through the Artemis program, NASA will land the first woman and first person of color on the Moon, using innovative technologies to explore more of the lunar surface than ever before. Then, we will use what we learn on and around the Moon for the next giant leap: sending the first astronauts to Mars.

NASA's **Space Launch System (SLS)** rocket is part of NASA's backbone for deep space exploration and Artemis. With its unprecedented capabilities, SLS is the only rocket that can send Orion, astronauts, and cargo directly to the Moon in a single launch.

And we're making an impact, right here on Earth!

- ❖ **Monitoring Sea Level Rise:** Operation IceBridge is yielding an unprecedented view of Arctic and Antarctic ice. IceBridge collects critical data used to predict the response of Earth's polar ice to climate change and resulting sea-level rise.
- ❖ **Detecting Famine Conditions:** NASA is part of an interagency effort funded by USAID that provides early warning on instances of global acute food insecurity.
- ❖ **Image-Analysis Software Sees Cancer in 3D:** Using filters created to study the shape of astronauts eyes in space, researchers found they could also identify the 3D shape of a tumor within an image series.
