SUBJECT: **INORGANIC DATA VALIDATION - TAL METALS AND PH**
CTO-848 NASA WALLOPS ISLAND
SAMPLE DELIVERY GROUP (SDG) – B0327

SAMPLES: 3/SOIL/

WOD-SS-134 WOD-SS-135 WOD-SU-126-0203

Overview

The sample set for CTO 848, NASA Wallops Island, SDG B0327, consists of three (3) soil environmental samples.

All samples were analyzed for target analyte list (TAL) metals. Samples WOD-SS-134 and WOD-SS-135 were also analyzed for pH and grain size. The samples were collected by Tetra Tech NUS February 26, 2003 and analyzed by Mitkem Corporation under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Analyses of grain size were subcontracted to RI Analytical Laboratories and submitted with this SDG. Results for grain size were not entered into the database. Analyses of total organic carbon (TOC) were subcontracted to Severn Trent Laboratories Burlington and will be submitted in a separate SDG. Metals analyses except mercury were conducted using SW846 method 6010B. Mercury analyses were conducted using SW846 method 7471A. pH analyses were conducted using SW846 method 9045C. Grain size analyses were conducted using method ASTM D422.

Summary

All analytes were successfully analyzed. The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, calibration data, laboratory method/preparation blanks, interference check sample (ICS) results, matrix spike results, laboratory duplicate results, laboratory control sample (LCS) results, detection limits, and analyte quantitation.

All metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) methodologies. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) methodology.

Minor Problems

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Aluminum	59.1 ug/L	14.78 mg/kg
Antimony	3.0 ug/L	0.75 mg/kg
Magnesium	66.4 ug/L	16.6 mg/kg
Manganese[(1)]	0.066 mg/kg	0.33 mg/kg
Potassium	83.7 ug/L	20.93 mg/kg
Zinc	8.8 ug/L	2.2 mg/kg

[(1)] Maximum concentration present in soil preparation blank.

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. No validation action was required for these analytes because the results were either greater than the action level or they were nondetects.

- The interfering analyte aluminum was present in sample WOD-SU-126-0203 at a concentration comparable to the concentration of aluminum in the interference check sample (ICS) solution. Several analytes, namely antimony, barium, cadmium, cobalt, chromium, lead, manganese, nickel, potassium, sodium, thallium, and vanadium were present in the ICS solution at concentrations that exceeded the absolute value of the instrument detection limit (IDL). Interference effects exist for antimony and cadmium in the affected sample. The nondetected results reported for antimony and cadmium were qualified as biased low (UL).

- The interfering analyte iron was present in sample WOD-SU-126-0203 at a concentration comparable to the concentration of iron in the ICS solution. Several analytes, namely antimony, barium, cadmium, cobalt, chromium, lead, manganese, nickel, potassium, sodium, thallium, and vanadium were present in the ICS solution at concentrations that exceeded the absolute value of the IDL. Interference effects exist for antimony, cadmium, and sodium in the affected sample. The positive result reported for sodium was qualified as biased high (K). The nondetected results reported for antimony and cadmium were qualified as biased low (UL).

- Percent solids in sample WOD-SS-135 was below 30%. Positive and nondetected results reported for all analytes in this sample were qualified as estimated (J) and (UJ), respectively.

Notes

The sample ID with the prefix "WOD-SU" was reported incorrectly by the laboratory as "W0D-SV". The data reviewer amended the database for these samples.

The laboratory did not report the results for the analytes in the ICSA solution. The data reviewer used the raw data to check the levels of analytes in the solution so interference effects could be determined.

Matrix spike, laboratory duplicate, and serial dilution analyses were not performed for this SDG.

Executive Summary

Laboratory Performance: No laboratory quality control issues were noted for this SDG.

Other Factors Affecting Data Quality: Several analytes were qualified due to ICS interference. Several analytes were qualified due to percent solids above 30%.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", April 1993 and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

U	-	Value is a nondetect as reported by the laboratory.
UL	-	Nondetect is considered biased low as a result of technical noncompliance.
B	-	Positive result is considered to be an artifact of blank contamination and should not be considered present.
K	-	Positive result is considered biased high as a result of technical noncompliance.
L	-	Positive result is considered biased low as a result of technical noncompliance.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0327

Mitkem Project ID: B0327

March 25, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for one aqueous and three soil samples that were collected on February 26, 2003, and received at Mitkem on February 27, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH. The analysis results for pH are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: internal standard area counts were within the QC criteria with the exception of sample WOD-SS-134. The sample was not re-analyzed as all surrogate recoveries were within the QC limits. No other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery 2,2'-oxybis (1-chloropropane), N-nitrosodiphenylamine and carbazole in S3SLCS.

Sample analysis: no other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

TETRA TECH NUS

PHIL- 17111

TO: GARTH GLENN **DATE:** MAY 1, 2003

FROM: MEGAN RITCHIE **COPIES:** FILE

SUBJECT: ORGANIC DATA VALIDATION – VOLATILES
ADAS SITE – NASA WALLOPS ISLAND, VIRGINIA
SDG B0342

SAMPLES: 6/Aqueous/

WFF10-GW3	WFF10-GWDUP11
WFF10-GW43	RB-022803
WFF10-RW2	TB-022703

OVERVIEW

The sample set for the CTO 848 ADAS Site, SDG B0342 consists of four aqueous environmental samples (designated WFF10-), one rinsate blank (designated RB-), and one trip blank (designated TB-). All samples were analyzed for Target Compound List (TCL) Volatile Organic Compounds (VOCs). One set of field duplicates (WFF10-RW2/WFF10-GWDup11) was included in this sample set.

The samples were collected by Tetra Tech NUS on February 27 and 28, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Method 8260B.

SUMMARY

All analytes were successfully analyzed. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, GC/MS tuning and calibration data, laboratory and field quality control (QC) blank results, system monitoring compound recoveries, matrix spike/matrix spike duplicate results, laboratory control spike results, internal standards performance, compound identification, and compound quantitation.

MINOR PROBLEMS

- The following table summarizes the analytes detected as contaminants in the aqueous laboratory or field quality control (QC) blanks in at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level (Water)
Acetone*	40 ug/L	400 ug/L
Methylene Chloride*	63 ug/L	630 ug/L

* Indicates that analyte was detected at the maximum concentration in a field QC blank.

Samples affected: The action levels apply to all aqueous environmental samples. Field QC blanks are not appropriate to qualify from laboratory blanks during data validation.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size and dilution factors. Positive results for methylene chloride in samples at concentrations less than their associated blank action levels were qualified as false positives attributable to blank contamination, (B).

- The initial calibration for acetone exhibited a percent relative standard deviation (%RSD) exceeding the QC limit of +30% for all aqueous samples. All positive results for acetone in associated samples were qualified as estimated (J).

NOTES

The matrix spike recovery for bromomethane exceeded the upper QC limit of 122%. No action was taken on this data alone.

The field duplicate pair WFF10-RW2 and WFF10-GWDUP11 exhibited acceptable field duplicate precision.

EXECUTIVE SUMMARY

Laboratory Performance: Acetone and methylene chloride were detected in the field QC blanks. Initial calibration %RSD exceeded the upper QC limit for one compound. The MS recovery exceeded the upper QC limit for one compound.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "National Functional Guidelines for Organic Data Review" (10/99), as amended for use within EPA Region 3 (9/94), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

DATA SUMMARY OF VOLATILE ORGANIC COMPOUND DATA
SDG B0342 - AQUEOUS SAMPLES
ADVANCED DATA ACQUISITION SUPPORT FACILITY (ADAS)
WALLOPS FLIGHT FACILITY, WALLOPS ISLAND, VIRGINIA

Data Qualifiers:

B -- Positive result is considered to be an artifact of blank contamination, and should not be considered present.
J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).
U -- Value is a non-detected result as reported by the laboratory.

Database source file: S:\RITCHIEM\WALLOPS ISLAND\ADAS\OV_B0342.DBF data retrieved on: 05/01/03

Qualifier Codes:

a	=	Lab Blank Contamination
b	=	Field Blank Contamination
c	=	Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d	=	MS/MSD Noncompliance
e	=	LSC/LSCD Noncompliance
f	=	Laboratory Duplicate Imprecision
g	=	Field Duplicate Imprecision
h	=	Holding Time Exceedance
i	=	ICP Serial Dilution Noncompliance
j	=	GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k	=	ICP Interference – include ICSAB %Rs
l	=	Instrument Calibration Range Exceedance
m	=	Sample Preservation
n	=	Internal Standard Noncompliance
o	=	Poor Instrument Performance (i.e. baseline drifting)
p	=	Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q	=	Other Problems (can encompass of number of issues)
r	=	Surrogates Recovery Noncompliance
s	=	Pesticide/PCB Resolution
t	=	% Breakdown Noncompliance for DDT and Endrin
u	=	Pesticide/PCB % Difference Between Columns for Positive Results
v	=	Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for six aqueous samples that were collected on February 27, 2003, and received at Mitkem on March 1, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

3/20/03
000072
CCCOOI

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF10-GW43. Spike recoveries were within the QC limits with the exception of high recovery of bromomethane in the matrix spike. Replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

SDG B0354

SAMPLES: 5/Aqueous

MW-1	MW-53S	MW-54S
MW-59S	TB-030303*	

Overview

The sample set for CTO 848 NASA Wallops Island, SDG B0354 consists of one (1) trip blank, and four (4) environmental aqueous samples. The environmental samples were all analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), and polychlorinated biphenyls (PCB). The trip blank denoted with an asterisk (*) was analyzed for VOC only.

The samples were collected by Tetra Tech NUS on March 3 and 4, 2003 and analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, and 8082 analytical and reporting protocols.

All samples were successfully analyzed. The findings offered in this report are based upon a general review of all available data including: data completeness, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation and detection limits. Areas of concern are listed below.

Major

- None.

Minor

- The volatile initial calibration performed on February 20 exceeded the 30% (but was <50%) difference quality control criteria for acetone. The positive result for acetone in sample TB-030303 was qualified as estimated (J).

- The volatile continuing calibration performed on March 12 at 12:35 exceeded the 25% (but was <50%) difference quality control criteria for dichlorodifluoromethane, acetone, 2-butanone, 4-methyl-2-pentanone, 2-hexanone, 1,2-dibromo-3-chloropropane, and methyl acetate. The positive result for acetone in the trip blank was qualified as estimated (J). No qualifications were assigned to the remainder of the aforementioned compounds because they were all non-detected.

- The semivolatile initial calibration performed on March 12 exceeded the 30% (and was >50%)

relative percent difference (RPD) quality control criteria for 3-nitroaniline. All results for 3-nitroaniline were qualified as estimated (UJ).

- The semivolatile continuing calibration performed on March 21 at 14:41 exceeded the 25% (and was >50%) difference quality control criteria for 4-chloroaniline. All results for 4-chloroaniline were qualified as estimated (UJ).

- The percent recovery of hexachlorocyclopentadiene was below the laboratory's quality control criteria in the blank spike and blank spike duplicate. The results for hexachlorocyclopentadiene were qualified as estimated (UJ).

Notes

There were several inconsistencies between the compound lists in the statement of work (SOW) and the results submitted by the laboratory. No action was taken on this basis because the project office approved the variance from the SOW.

The laboratory omitted the second page of the volatile continuing calibration performed on February 20 at 12:35 from the data package. The laboratory submitted the form upon request.

The recoveries of chloromethane and vinyl chloride exceeded the laboratory's percent recovery quality control criteria in the volatile blank spike. No qualifications were made on this basis because the results for the aforementioned compounds were non-detected.

The recovery of 1,2-dibromo-3-chloropropane was below the laboratory's percent recovery quality control criteria in the volatile blank spike. No qualifications were made on this basis because the results for the aforementioned compounds were non-detected.

The semivolatile initial calibration performed on March 12 exceeded the 30% (but was <50%) relative percent difference (RPD) quality control criteria for 4-chloroaniline. No qualifications were made on this basis because all results for 4-chloroaniline were non-detected.

The semivolatile continuing calibration performed on March 21 at 10:41 exceeded the 25% (but was <50%) percent difference quality control criteria for 2,2'-oxybis(1-chloropropane), hexachlorocyclopentadiene, 3-nitroaniline, 2,4-dinitrophenol, and 4-nitroaniline. No qualifications were made on this basis because all results for the aforementioned compounds were non-detected.

The semivolatile blank spike/blank spike duplicate exceeded the laboratory's percent recovery quality control criteria for isophorone. No qualifications were made on this basis because the results for isophorone were non-detected.

The semivolatile blank spike was below the laboratory's percent recovery quality control criteria for 2,4-dimethylphenol. No qualifications were made on this basis because the blank spike duplicate was compliant.

The semivolatile blank spike/blank spike duplicate exceeded the laboratory's RPD quality control criteria for 3-nitroaniline. No qualifications were made on this basis because the percent recoveries were compliant.

Acetone and methylene chloride were detected in the trip blank. No qualifications were made on this basis.

Executive Summary

Laboratory Performance: Qualifications were made based on calibration non-compliances and blank spike recovery non-compliances.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to U.S. EPA National Functional Guidelines for Data Validation as modified by EPA Region III (9/94) and the NFESC guidelines entitled Navy IRCDQM (Sept. 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Spada, Bernie

From: Samchuck, Joseph
Sent: Thursday, May 08, 2003 1:19 PM
To: Sedlmyer, Ed; Schloer, Doug; Spada, Bernie; Staffen, Seth
Subject: FW: NASA, Wallops Is. organic data validation for CTO 848.

Note from Russ.

In his final paragraph, he stated that they are not concerned over "missing SVOCs". It seems as though a mistake was made when translating the project requirements.

In the second to the last paragraph, he means bromochloromethane.

Bottom line: Review data as received from the laboratory and in a general manner, note the difference between what was reported by the lab and what was requested in the SOW. No need to specifically list compounds. State that the project office was contacted and that they approved the variance from the SOW.

Thanks.

Subject: RE: NASA, Wallops Is. organic data validation for CTO 848.

As we discussed on the phone, I looked up the issues regarding TCL analytes in the work plan and QAP. I did not find any phone notes from 2 months ago when Garth and I had a conference call with MITKEM regarding SVOC TCL analyte lists.

Regarding the overlap between VOCs and SVOCs, proceed as we discussed over the phone and retain all reported Form I analytes in each respective validation report. The dichlorobenzenes and trichlorbenzene will be sorted out for risk assessment here in King of Prussia after we have assimilated the entire database. There are different fraction fields in the database so the results won't be confused. We will evaluate the best data to retain for risk assessment here at that time. While the lower detection limit data in theory should be better, I have seen exceptions in the past where there were detections in the SVOC fraction but not VOC fraction and in such cases it would be presumed that the matrix of the sample affected purge efficiency for the heaviest VOCs.

Regarding bromochlorobenzene, I verified there is no mention of this compound as a historically detected contaminant at Wallops Island sites of interest. Do not ask the lab to provide additional data or make analysis and reporting changes for this compound.

Regarding 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum being requested for soil analysis but instead reported based on a TIC search, it is not necessary to have the laboratory add these compounds to the TCL list at this late date in the project because there are no historical detections of these compounds identified in the work plan or QAPP. The reason that the SVOC TCL list was different for soil and water is a consequence of the template used for this table from another project. Garth indicated that he wants the data to be validated as received and reported by the laboratory because this is not a major issue. However, the laboratory should not be listing any compound on the TCL Form I target compound section if it is not in any standards run so if uncalibrated compounds were reported on Form Is then these compounds should be deleted or rejected.

Joe,

Regarding the subject data validation assignment, I've encountered some disparity between what is being reported by Mitkem and what was actually requested in the statement of work. This may be useful information for making some sort of global request to the lab.

For the aqueous samples:

The lab failed to report the VOC: bromochloromethane (Seth had already alerted me to this).
The lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.
The lab reported a total of 9 compounds (VOC and SVOC) in addition to the requested analytes.

For the soil samples:

The lab failed to report the SVOCs: 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum. Interestingly, the case narrative acknowledges this oversight and explains that the presence of these particular compounds will be determined via TIC library search. Do you know if this approach ok with the PM? BTW- I didn't find these compounds in the SVOC calibration summaries or quan reports.

Again, the lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs in soils and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.

Only xylene isomers were reported but not requested for the soil samples in my SDG.

Seth, Bernie and Ed; I imagine you guys are making the bulk of the requests from the lab, so if there is something else that I have missed that I should be looking out for please let me know.

Doug

Subject: RE: NASA, Wallops Is. organic data validation for CTO 848.

Russ Sloboda is checking the compound lists for us. As for the Chlorobromomethane, it is not needed.

Also, Russ asked that we not remove any compounds that are in both fractions such as the dichlorobenzenes. He can sort out the compounds using the fraction. So don't delete any compounds. If you have already do this, let me know the SDG and fraction so that I can unsubmit the data and you can make the changes and reprint forms.

Subject: NASA, Wallops Is. organic data validation for CTO 848.

Joe,

Regarding the subject data validation assignment, I've encountered some disparity between what is being reported by Mitkem and what was actually requested in the statement of work. This may be useful information for making some sort of global request to the lab.

For the aqueous samples:

The lab failed to report the VOC: bromochloromethane (Seth had already alerted me to this).
The lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.
The lab reported a total of 9 compounds (VOC and SVOC) in addition to the requested analytes.

For the soil samples:

The lab failed to report the SVOCs: 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum. Interestingly, the case narrative acknowledges this oversight and explains that the presence of these particular compounds will be determined via TIC library search. Do you know if this approach ok with the PM? BTW- I didn't find these compounds in the SVOC calibration summaries or quan reports.

Again, the lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs in soils and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.

Only xylene isomers were reported but not requested for the soil samples in my SDG.

Seth, Bernie and Ed; I imagine you guys are making the bulk of the requests from the lab, so if there is something else that I have missed that I should be looking out for please let me know.

Doug

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0354

Mitkem Project ID: B0354

March 25, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for nine aqueous samples that were collected on March 4, 2003, and received at Mitkem on March 5, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery of chloromethane and vinyl chloride and low recovery of 1,2-dibromo-3-chloropropane.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery isophorone and low recovery of 2,4-dimethylphenol and hexachlorocyclopentadiene in the lab control sample and high recovery isophorone and low recovery of hexachlorocyclopentadiene in the lab control sample duplicate. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

FORM III PCB

Tetra Tech NUS **INTERNAL CORRESPONDENCE**

TO : **G. GLENN** **DATE:** **MAY 8, 2003**

FROM: **ERIN M. FAUST** **COPIES:** **DV FILE**

SUBJECT: **INORGANIC DATA VALIDATION –TAL METALS AND MISCELLANEOUS PARAMETERS**
CTO 848 NASA WALLOPS ISLAND
SAMPLE DELIVERY GROUP (SDG) – B0354

SAMPLES: 4/Aqueous/

MW-1 MW-53S MW-54S MW-59S

Overview

The sample set for CTO 848, SDG B0354, NASA Wallops Island, consists of four (4) aqueous environmental samples.

The samples were analyzed for chloride, nitrate, nitrite, sulfate, total organic carbon (TOC) and total and dissolved target analyte list (TAL) metals. Samples analyzed for dissolved metals are designated "-F". The samples were collected by Tetra Tech NUS on March 3 and 4, 2003 and analyzed by Mitkem Corporation. Metals analyses, with the exception of mercury, were conducted using SW-846 method 6010B. Mercury analyses were conducted using SW-846 method 7470A. Analyses for TOC were conducted using EPA method 415.1. Analyses for chloride, nitrate, nitrite and sulfate were conducted using EPA method 300.0.

Summary

All analytes were successfully analyzed. The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, calibration data, laboratory method/preparation blanks, interference check sample (ICS) results, laboratory control sample (LCS) results, detection limits and analyte quantitation.

Metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) instrumentation. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) instrumentation.

Areas of concern with respect to data quality are listed below.

Minor Problems

- The 48-hour holding time for nitrate and nitrite was exceeded by 1 day for sample MW-1. The positive result reported for nitrate was qualified as estimated, "J". The nondetected result reported for nitrite was qualified as estimated, "UJ".

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Samples Affected: All

Analyte	Maximum Concentration	Action Level
Aluminum[(1)]	48.683 µg/L	243.42 µg/L
Antimony[(1)]	4.381 µg/L	21.90 µg/L
Beryllium	0.60 µg/L	3.0 µg/L
Cobalt	1.4 µg/L	7.0 µg/L
Copper[(1)]	8.06 µg/L	40.3 µg/L
Iron[(1)]	30.678 µg/L	153.39 µg/L
Magnesium[(1)]	51.105 µg/L	255.52 µg/L
Manganese[(1)]	1.118 µg/L	5.59 µg/L
Nickel	1.2 µg/L	6.0 µg/L
Potassium	267.9 µg/L	1339.5 µg/L
Sodium	91.4 µg/L	457 µg/L
Sulfate	0.198 mg/L	0.99 mg/L

[(1)] Maximum contamination present in an aqueous preparation blank.

An action level of five times the maximum contaminant level has been established to evaluate sample data for blank contamination. Sample aliquot, percent solids and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results < the action level reported for aluminum, antimony, cobalt, copper, iron, manganese, nickel and potassium were qualified, "B", as a result of blank contamination. No validation action was required for the remaining analytes because the results were either greater than the action level or were nondetected.

- Laboratory Control Sample (LCS) percent recovery for mercury was < 80% quality control limit. The nondetected results reported for mercury were qualified as biased low, "UL".

Notes

Contract Required Detection Limit (CRDL) and matrix spike (MS) percent recoveries and ICP serial dilution and laboratory duplicate percent differences could not be evaluated because the laboratory either did not perform these analyses or did not supply the information for these analyses.

The laboratory did not supply the required information for the Interference Check Standard A (ICSA) on the Form 4; however, these results did not need to be evaluated because the interfering analytes were not present in the environmental samples at significant levels.

The nondetected results for nitrite were reported as "0 U" in the electronic database. The data reviewer corrected the results by replacing the zero with the laboratory's listed reporting limit (RL).

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method/preparation blanks. Nitrate and nitrite results in sample MW-1 were qualified due to holding time noncompliance. Mercury was qualified due to LCS noncompliance.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Validation", April 1993 as amended for use within USEPA Region III.

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

U - Value is a nondetect as reported by the laboratory.

B - Positive result is considered to be an artifact of blank contamination and should not be considered present.

UL - Nondetected result is considered biased low, "UL", as a result of technical noncompliances.

J - Positive result is considered estimated, "J", as a result of technical noncompliances.

UJ - Nondetected result is considered estimated, "UJ", as a result of technical noncompliances.

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for nine aqueous samples that were collected on March 4, 2003, and received at Mitkem on March 5, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery of chloromethane and vinyl chloride and low recovery of 1,2-dibromo-3-chloropropane.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery isophorone and low recovery of 2,4-dimethylphenol and hexachlorocyclopentadiene in the lab control sample and high recovery isophorone and low recovery of hexachlorocyclopentadiene in the lab control sample duplicate. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

STL Report : 203171
MITKEM

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature. Samples received out of hold. Client contacted and authorized STL to analyze out of hold.

Classical Chemistry - Listed below are the wet chemistry analyte methods and references for the samples analyzed in this SDG. No analytical problems were encountered.

Analyte	Method	Reference
Ion Chromatography Analysis – Chloride, Nitrate, Nitrite, Sulfate	300.0	1

References:

1. Methods of Chemical Analysis of Water and Wastes, EPA 600, 1983.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Tetra Tech NUS **INTERNAL CORRESPONDENCE**

TO:	**G. GLENN**	**DATE:**	**MAY 22, 2003**
FROM:	**BERNARD F SPADA III**	**COPIES:**	**DV FILE**
SUBJECT:	**ORGANIC DATA VALIDATION- VOC/SVOC/PCB CTO 848, NASA WALLOPS ISLAND SDG B0365**		
SAMPLES:	3/Aqueous		
	FTAMW-105D	FTAMW-60I	TB030503*

Overview

The sample set for CTO 848 NASA Wallops Island, SDG B0365 consists of one (1) trip blank, and two (2) environmental aqueous samples. The environmental samples were both analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), and polychlorinated biphenyls (PCB). The trip blank denoted with an asterisk (*) was analyzed for VOC only.

The samples were collected by Tetra Tech NUS on March 5, 2003 and analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, and 8082 analytical and reporting protocols.

All samples were successfully analyzed. The findings offered in this report are based upon a general review of all available data including: data completeness, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation and detection limits. Areas of concern are listed below.

Major

- None.

Minor

- Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated (J).
- The semivolatile initial calibration performed on March 12 exceeded the 30% (and was >50%) relative standard deviation (RSD) quality control criteria for 3-nitroaniline. Both results for 3-nitroaniline were qualified as estimated (UJ).
- The semivolatile continuing calibration performed on March 21 at 10:41 exceeded the 30% (and was >50%) percent difference quality control criteria for 4-chloroaniline. Both results for 4-chloroaniline were qualified as estimated (UJ).

- The semivolatile blank spike/blank spike duplicate was below the laboratory's percent recovery quality control criteria for hexachlorocyclopentadiene. The non-detected results for hexachlorocyclopentadiene were qualified as estimated (UJ).

Notes

The volatile blank spike sample exceeded the percent recovery quality control criteria for bromomethane. No qualifications were made on this basis because all results for bromomethane were non-detected.

There were several inconsistencies between the compound lists in the statement of work (SOW) and the results submitted by the laboratory. No action was taken on this basis because the project office approved the variance from the SOW.

The semivolatile initial calibration performed on March 12 exceeded the 30% (but was <50%) RSD quality control criteria for 4-chloroaniline. No qualifications were made on this basis because the associated results were non-detected.

The semivolatile continuing calibration performed on March 21 at 10:41 exceeded the 25% (but was <50%) difference quality control criteria for 2,2'-oxybis(1-chloropropane), hexachlorocyclopentadiene, 2,4-dinitrophenol, 3-nitroaniline, and 4-nitroaniline. No qualifications were made on this basis because the associated results were non-detected.

The semivolatile blank spike/blank spike duplicate exceeded the laboratory's percent recovery quality control criteria for isophorone. No qualifications were made on this basis because the results for isophorone were non-detected.

The semivolatile blank spike was below the laboratory's percent recovery quality control criteria for 2,4-dimethylphenol. The RPD also exceeded the laboratory's quality control criteria. No qualifications were made on this basis because the blank spike duplicate was compliant.

Executive Summary

Laboratory Performance: Qualifications were made based on calibration non-compliances and blank spike/blank spike duplicate non-compliances.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to U.S. EPA National Functional Guidelines for Data Validation as modified by EPA Region III (9/94) and the NFESC guidelines entitled Navy IRCDQM (Sept. 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Appendix A -- Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

To: Sedlmyer, Ed; Schloer, Doug; Spada, Bernie; Staffen, Seth
Subject: FW: NASA, Wallops Is. organic data validation for CTO 848.

Note from Russ.

In his final paragraph, he stated that they are not concerned over "missing SVOCs". It seems as though a mistake was made when translating the project requirements.

In the second to the last paragraph, he means bromochloromethane.

Bottom line: Review data as received from the laboratory and in a general manner, note the difference between what was reported by the lab and what was requested in the SOW. No need to specifically list compounds. State that the project office was contacted and that they approved the variance from the SOW.

Thanks.

Subject: RE: NASA, Wallops Is. organic data validation for CTO 848.

As we discussed on the phone, I looked up the issues regarding TCL analytes in the work plan and QAP. I did not find any phone notes from 2 months ago when Garth and I had a conference call with MITKEM regarding SVOC TCL analyte lists.

Regarding the overlap between VOCs and SVOCs, proceed as we discussed over the phone and retain all reported Form I analytes in each respective validation report. The dichlorobenzenes and trichlorbenzene will be sorted out for risk assessment here in King of Prussia after we have assimilated the entire database. There are different fraction fields in the database so the results won't be confused. We will evaluate the best data to retain for risk assessment here at that time. While the lower detection limit data in theory should be better, I have seen exceptions in the past where there were detections in the SVOC fraction but not VOC fraction and in such cases it would be presumed that the matrix of the sample affected purge efficiency for the heaviest VOCs.

Regarding bromochlorobenzene, I verified there is no mention of this compound as a historically detected contaminant at Wallops Island sites of interest. Do not ask the lab to provide additional data or make analysis and reporting changes for this compound.

Regarding 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum being requested for soil analysis but instead reported based on a TIC search, it is not necessary to have the laboratory add these compounds to the TCL list at this late date in the project because there are no historical detections of these compounds identified in the work plan or QAPP. The reason that the SVOC TCL list was different for soil and water is a consequence of the template used for this table from another project. Garth indicated that he wants the data to be validated as received and reported by the laboratory because this is not a major issue. However, the laboratory should not be listing any compound on the TCL Form I target compound section if it is not in any standards run so if uncalibrated compounds were reported on Form Is then these compounds should be deleted or rejected.

Joe,

Regarding the subject data validation assignment, I've encountered some disparity between what is being reported by Mitkem and what was actually requested in the statement of work. This may be useful information for making some sort of global request to the lab.

For the aqueous samples:

The lab failed to report the VOC: bromochloromethane (Seth had already alerted me to this).
The lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.
The lab reported a total of 9 compounds (VOC and SVOC) in addition to the requested analytes.

For the soil samples:

The lab failed to report the SVOCs: 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum. Interestingly, the case narrative acknowledges this oversight and explains that the presence of these particular compounds will be determined via TIC library search. Do you know if this approach ok with the PM? BTW- I didn't find these compounds in the SVOC calibration summaries or quan reports.

Again, the lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs in soils and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.

Only xylene isomers were reported but not requested for the soil samples in my SDG.

Seth, Bernie and Ed; I imagine you guys are making the bulk of the requests from the lab, so if there is something else that I have missed that I should be looking out for please let me know.

Doug

Russ Sloboda is checking the compound lists for us. As for the Chlorobromomethane, it is not needed.

Also, Russ asked that we not remove any compounds that are in both fractions such as the dichlorobenzenes. He can sort out the compounds using the fraction. So don't delete any compounds. If you have already do this, let me know the SDG and fraction so that I can unsubmit the data and you can make the changes and reprint forms.

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for five aqueous samples that were collected on March 5, 2003, and received at Mitkem on March 6, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery of bromomethane.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery isophorone and low recovery of 2,4-dimethylphenol and hexachlorocyclopentadiene in the lab control sample and high recovery isophorone and low recovery of hexachlorocyclopentadiene in the lab control sample duplicate. Replicate RPDs were within the QC limits with the exception of 2,4-dimethylphenol and 3-nitroaniline.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Tetra Tech NUS **INTERNAL CORRESPONDENCE**

TO: **G. GLENN** **DATE:** **MAY 22, 2003**

FROM: **ETHAN G. LEE** **COPIES:** **DV FILE**

SUBJECT: **INORGANIC DATA VALIDATION - TAL METALS AND MISCELLANEOUS PARAMETERS**
CTO-848 NASA WALLOPS ISLAND
SAMPLE DELIVERY GROUP (SDG) – B0365

SAMPLES: 2/AQUEOUS/

FTAMW-105D FTAMW-60I

Overview

The sample set for CTO 848, NASA Wallops Island, SDG B0365, consists of two (2) aqueous environmental samples.

All samples were analyzed for total and dissolved target analyte list (TAL) metals, chloride, nitrate, nitrite, sulfate, and total organic carbon (TOC). Samples analyzed for dissolved metals are appended with the suffix "-F". The samples were collected by Tetra Tech NUS March 5, 2003 and analyzed by Mitkem Corporation under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Chloride, nitrate, nitrite, and sulfate were analyzed by Severn Trent Laboratories Connecticut. Metals analyses except mercury were conducted using SW846 method 6010B. Mercury analyses were conducted using SW846 method 7470A. Chloride, nitrate, nitrite, and sulfate analyses were conducted using EPA method 300. TOC analyses were conducted using EPA method 415.1.

Summary

All analytes were successfully analyzed, with the exception of nitrite, which was rejected due to holding time exceedance. The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, calibration data, laboratory method/preparation blanks, interference check sample (ICS) results, matrix spike results, laboratory duplicate results, laboratory control sample (LCS) results, ICP serial dilution results, detection limits, and analyte quantitation.

All metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) methodologies. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) methodology.

Major Problems

- The 48-hour holding time limit for nitrate and nitrite was exceeded by >2X the required limit (3 days). Positive results reported for nitrate were qualified as biased extremely low (L). Nondetected results reported for nitrite were qualified as rejected (UR).

Minor Problems

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Aluminum[(1)]	48.683 ug/L	243.415 ug/L
Antimony[(1)]	4.381 ug/L	21.905 ug/L
Beryllium	0.6 ug/L	3.0 ug/L
Cobalt	1.4 ug/L	7.0 ug/L
Copper[(1)]	8.06 ug/L	40.30 ug/L
Iron[(1)]	30.678 ug/L	153.39 ug/L
Magnesium[(1)]	51.105 ug/L	255.525 ug/L
Manganese	2.4 ug/L	12.0 ug/L
Nickel	1.2 ug/L	6.0 ug/L
Potassium	267.9 ug/L	1339.5 ug/L
Sodium	91.4 ug/L	457.0 ug/L
Vanadium	0.7 ug/L	3.5 ug/L
Chloride	0.22 mg/L	1.1 mg/L

[(1)] Maximum concentration present in aqueous preparation blank.

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the action level for aluminum, antimony, cobalt, iron, manganese, nickel, and potassium were qualified (B) as a result of blank contamination. No validation action was required for the remaining analytes because the results were either greater than the action level or they were nondetects.

- The laboratory control sample (LCS) percent recovery (%R) was below the 80% control limit for mercury. Nondetected results reported for mercury were qualified as biased low (UL).

Notes

The laboratory reported the prefix to the samples in this SDG (FTAMW) incorrectly as "FIAMW". The data reviewer amended the database for these samples.

Matrix spike, laboratory duplicate, and ICP serial dilution analyses were not performed for metals in this SDG.

Executive Summary

Laboratory Performance: Several analytes were qualified due to holding time exceedance. Several analytes were present in the laboratory method/preparation blanks. Mercury was qualified due to LCS noncompliance.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", April 1993 and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

U	-	Value is a nondetect as reported by the laboratory.
UL	-	Nondetect is considered biased low as a result of technical noncompliance.
UR	-	Nondetect is considered rejected as a result of technical noncompliance.
B	-	Positive result is considered to be an artifact of blank contamination and should not be considered present.
L	-	Positive result is considered biased low as a result of technical noncompliance.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for five aqueous samples that were collected on March 5, 2003, and received at Mitkem on March 6, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery of bromomethane.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery isophorone and low recovery of 2,4-dimethylphenol and hexachlorocyclopentadiene in the lab control sample and high recovery isophorone and low recovery of hexachlorocyclopentadiene in the lab control sample duplicate. Replicate RPDs were within the QC limits with the exception of 2,4-dimethylphenol and 3-nitroaniline.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

MITKEM

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature. Samples were received out of hold for nitrate and nitrite analysis. Client was contacted and asked STL to proceed with the analyses.

Classical Chemistry - Listed below are the wet chemistry analyte methods and references for the samples analyzed in this SDG. No analytical problems were encountered.

Analyte	Method	Reference
Ion Chromatography Analysis – Chloride, Nitrate, Nitrite, Sulfate	300.0	1

References:

1. Methods of Chemical Analysis of Water and Wastes, EPA 600, 1983.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

ANALYTICAL QC SUMMARY REPORT

TestCode: E415.1_TOC_W

Sample ID **MB-6204**	SampType: **MBLK**	TestCode: **E415.1_TOC_W**			Prep Date: **3/18/03**		Run ID: **TOC1_030318A**	
Client ID: **MB-6204**	Batch ID: **6204**	Units: **mg/L**			Analysis Date: **3/18/03**		SeqNo: **86851**	

Analyte	Result	PQL	SPK value	SPK Ref Val	%REC	LowLimit	HighLimit	RPD Ref Val	%RPD	RPDLimit	Qual
Organic Carbon, Total	ND	6.0									

Sample ID **LCS-6204**	SampType: **LCS**	TestCode: **E415.1_TOC_W**			Prep Date: **3/18/03**		Run ID: **TOC1_030318A**	
Client ID: **LCS-6204**	Batch ID: **6204**	Units: **mg/L**			Analysis Date: **3/18/03**		SeqNo: **86852**	

Analyte	Result	PQL	SPK value	SPK Ref Val	%REC	LowLimit	HighLimit	RPD Ref Val	%RPD	RPDLimit	Qual
Organic Carbon, Total	53	6.0	54.1	0	98	80	120	0	0		

000434

Qualifiers:
ND - Not Detected at the Reporting Limit
J - Analyte detected below quantitation limits
S - Spike Recovery outside accepted recovery limits
R - RPD outside accepted recovery limits
B - Analyte detected in the associated Method Blank

U.S. EPA - CLP

Tetra Tech NUS **INTERNAL CORRESPONDENCE**

TO:	**G. GLENN**	**DATE:**	**MAY 29, 2003**
FROM:	**BERNARD F SPADA III**	**COPIES:**	**DV FILE**
SUBJECT:	**ORGANIC DATA VALIDATION- VOC/SVOC/PCB CTO 848, NASA WALLOPS ISLAND SDG B0370**		
SAMPLES:	3/Aqueous		
	FTAMW-2D TB030603*	FTAMW-2S	FTAMW-57S

Overview

The sample set for CTO 848 NASA Wallops Island, SDG B0370 consists of one (1) trip blank, and three (3) environmental aqueous samples. The environmental samples were all analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), and polychlorinated biphenyls (PCB). The trip blank denoted with an asterisk (*) was analyzed for VOC only.

The samples were collected by Tetra Tech NUS on March 6, 2003 and analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, and 8082 analytical and reporting protocols.

All samples were successfully analyzed with the exception of those qualified as rejected. The findings offered in this report are based upon a general review of all available data including: data completeness, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation and detection limits. Areas of concern are listed below.

Major

- The recoveries of surrogates phenol-d5 and 2-fluorophenol were <10% in the semivolatile fraction of sample FTAMW-2D. All non-detected results in the acid fraction were rejected (UR) in sample FTAMW-2D. The sample was not re-extracted because of insufficient volume. It should also be noted that the laboratory method blank also yielded poor surrogate recoveries. Inability to recover surrogates in a method blank is indicative of poor extraction procedure.

- The recoveries of surrogates nitrobenzene-d5, phenol-d5, and 2-fluorophenol were <10% in the semivolatile fraction of sample FTAMW-57S. All non-detected results in both fractions were rejected (UR) in sample FTAMW-57S. The sample was not re-extracted because of insufficient volume. It should also be noted that the laboratory method blank also yielded poor surrogate recoveries. Inability to recover surrogates in a method blank is indicative of poor extraction procedure.

Minor

- Positive results reported below the quantitation limit but above the method detection limit were

qualified as estimated (J).

- The following compound was detected in the aqueous method blank:

Compound	Maximum Concentration	Blank Action Level
Methylene chloride	1.0 ug/L	10 ug/L
Acetone[1]	73 ug/L	730 ug/L

[1] Concentration reported in the trip blank.

Sample aliquot, and dilution factors were taken into consideration when applying the blank action levels. No qualifications were made on this basis.

- Sample FTAMW-57S exceeded the analytical holding time for the VOC fraction. All positive and non-detected results in sample FTAMW-57S were qualified as biased low (L, UL).

- The percent recovery of internal standard 1,4-dichlorobenzene-d4 was below the -50% quality control criteria in samples TB-030603, FTAMW-2D, and FTAMW-2S. All non-detected results for 1,1,2,2-tetrachloroethane, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichlorobenzene, 1,2-dibromo-3-chloropropane, and 1,2,4-trichlorobenzene were qualified as estimated (UJ).

- The semivolatile initial calibration performed on March 20 on the "S1" instrument exceeded the 30% (and was >50%) relative percent standard deviation (%RSD) quality control criteria for 4-chloroaniline. Results for 4-chloroaniline in samples FTAMW-2D and FTAMW-2S were qualified as estimated (UJ). No qualifications were made to sample FTAMW-57S on this basis because the results were rejected for surrogate recovery non-compliance.

- The surrogate decachlorobiphenyl was below the laboratory's percent recovery quality control criteria (on both columns) in the PCB fraction of sample FTAMW-2S. All results in sample FTAMW-2S were qualified as estimated (UJ).

Notes

There were several inconsistencies between the compound lists in the statement of work (SOW) and the results submitted by the laboratory. No action was taken on this basis because the project office approved the variance from the SOW.

The laboratory omitted the first page of the volatile initial calibration for the "V2" instrument from the data package. The laboratory submitted the form upon request.

The volatile continuing calibration performed on the "V1" instrument on March 21 at 08:58 exceeded the 25% (but was <50%) difference quality control criteria for MTBE. No qualifications were made on this basis because the results for MTBE were non-detected.

The volatile continuing calibration performed on the "V2" instrument on March 17 at 12:52 exceeded the 25% (but was <50%) difference quality control criteria for 4-methyl-2-pentanone, 2-hexanone, bromoform, and 1,2,4-trichlorobenzene. No qualifications were made on this basis because the results for the aforementioned compounds were non-detected.

The volatile MS/MSD of sample FTAMW-2D exceeded the laboratory's percent recovery quality control criteria for bromomethane, chloroethane, MTBE, 1,2-dichloroethane, and methyl acetate. No qualifications were made on this basis because all results for the aforementioned compounds were non-detected in the un-spiked sample.

The volatile MS of sample FTAMW-2D exceeded the laboratory's percent recovery quality control criteria for

acetone, bromodichloromethane, and 1,1,2-trichloro-1,2,2-trifluoroethane. No qualifications were made on this basis because the results for the aforementioned compounds were non-detected in the un-spiked sample.

The semivolatile initial calibration performed on March 21 on the "S2" instrument exceeded the 30% (and was >50%) RSD quality control criteria for 4-chloroaniline. No qualifications were made on this basis because no results that were used for validation were quantitated using this calibration.

The semivolatile continuing calibration performed on March 31 at 11:57 on the "S2" instrument exceeded the 25% (and was >50%) percent difference quality control criteria for 4-nitrophenol. No qualifications were made on this basis because no results that were used for validation were quantitated using this calibration.

The semivolatile continuing calibration performed on March 21 at 11:57 on the "S2" instrument exceeded the 25% (but was <50%) difference quality control criteria for 2,2'-oxybis(1-chloropropane), 4-chloroaniline, hexachlorocyclopentadiene, 2,4-dinitrophenol, benzo(k)fluoranthene, and 4-nitroaniline. No qualifications were made on this basis because no results that were used for validation were quantitated using this calibration.

The recovery of surrogate nitrobenzene-d5 was below the percent recovery quality control criteria in the semivolatile fraction of sample FTAMW-2D. No qualifications were made on this basis because only one surrogate in the base/neutral fraction was non-compliant. The advisory surrogates were not used for validation purposes.

The semivolatile blank spike and the MS of sample FTAMW-2D exceeded the laboratory's percent recovery quality control criteria for isophorone. No qualifications were made on this basis because the results for isophorone were non-detected.

The semivolatile blank spike and the MS of sample FTAMW-2D were below the laboratory's percent recovery quality control criteria for 3,3'-dichlorobenzidine. No qualifications were made on this basis because the MS was compliant.

The semivolatile MS of sample FTAMW-2D was below the percent recovery quality control criteria for 2,4-dimethylphenol. No qualifications were made on this basis because the blank spike was compliant.

Executive Summary

Laboratory Performance: Qualifications were made based on calibration non-compliances, internal standard non-compliances, holding time non-compliances, and surrogate recovery non-compliances.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to U.S. EPA National Functional Guidelines for Data Validation as modified by EPA Region III (9/94) and the NFESC guidelines entitled Navy IRCDQM (Sept. 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Spada, Bernie

From: Samchuck, Joseph
Sent: Thursday, May 08, 2003 1:19 PM
To: Sedlmyer, Ed; Schloer, Doug; Spada, Bernie; Staffen, Seth
Subject: FW: NASA, Wallops Is. organic data validation for CTO 848.

Note from Russ.

In his final paragraph, he stated that they are not concerned over "missing SVOCs". It seems as though a mistake was made when translating the project requirements.

In the second to the last paragraph, he means bromochloromethane.

Bottom line: Review data as received from the laboratory and in a general manner, note the difference between what was reported by the lab and what was requested in the SOW. No need to specifically list compounds. State that the project office was contacted and that they approved the variance from the SOW.

Thanks.

Subject: RE: NASA, Wallops Is. organic data validation for CTO 848.

As we discussed on the phone, I looked up the issues regarding TCL analytes in the work plan and QAP. I did not find any phone notes from 2 months ago when Garth and I had a conference call with MITKEM regarding SVOC TCL analyte lists.

Regarding the overlap between VOCs and SVOCs, proceed as we discussed over the phone and retain all reported Form I analytes in each respective validation report. The dichlorobenzenes and trichlorbenzene will be sorted out for risk assessment here in King of Prussia after we have assimilated the entire database. There are different fraction fields in the database so the results won't be confused. We will evaluate the best data to retain for risk assessment here at that time. While the lower detection limit data in theory should be better, I have seen exceptions in the past where there were detections in the SVOC fraction but not VOC fraction and in such cases it would be presumed that the matrix of the sample affected purge efficiency for the heaviest VOCs.

Regarding bromochlorobenzene, I verified there is no mention of this compound as a historically detected contaminant at Wallops Island sites of interest. Do not ask the lab to provide additional data or make analysis and reporting changes for this compound.

Regarding 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum being requested for soil analysis but instead reported based on a TIC search, it is not necessary to have the laboratory add these compounds to the TCL list at this late date in the project because there are no historical detections of these compounds identified in the work plan or QAPP. The reason that the SVOC TCL list was different for soil and water is a consequence of the template used for this table from another project. Garth indicated that he wants the data to be validated as received and reported by the laboratory because this is not a major issue. However, the laboratory should not be listing any compound on the TCL Form I target compound section if it is not in any standards run so if uncalibrated compounds were reported on Form Is then these compounds should be deleted or rejected.

Subject: NASA, Wallops Is. organic data validation for CTO 848.

Joe,

Regarding the subject data validation assignment, I've encountered some disparity between what is being reported by Mitkem and what was actually requested in the statement of work. This may be useful information for making some sort of global request to the lab.

For the aqueous samples:

The lab failed to report the VOC: bromochloromethane (Seth had already alerted me to this).
The lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.
The lab reported a total of 9 compounds (VOC and SVOC) in addition to the requested analytes.

For the soil samples:

The lab failed to report the SVOCs: 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum. Interestingly, the case narrative acknowledges this oversight and explains that the presence of these particular compounds will be determined via TIC library search. Do you know if this approach ok with the PM? BTW- I didn't find these compounds in the SVOC calibration summaries or quan reports.

Again, the lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs in soils and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.

Only xylene isomers were reported but not requested for the soil samples in my SDG.

Seth, Bernie and Ed; I imagine you guys are making the bulk of the requests from the lab, so if there is something else that I have missed that I should be looking out for please let me know.

Doug

Russ Sloboda is checking the compound lists for us. As for the Chlorobromomethane, it is not needed.

Also, Russ asked that we not remove any compounds that are in both fractions such as the dichlorobenzenes. He can sort out the compounds using the fraction. So don't delete any compounds. If you have already do this, let me know the SDG and fraction so that I can unsubmit the data and you can make the changes and reprint forms.

MITKEM CORPORATION

"Environmental Testing For The New Millennium"

April 8, 2003

Tetra Tech NUS, Inc.
600 Clark Avenue
King of Prussia, PA 19406
Attn: Mr. Garth Glenn

RE: Client Project: CTO – 848, NASA Wallops Flight Facility
Mitkem Lab Project # B0370

Dear Mr. Glenn:

Enclosed please find the data report of the required analyses for the samples associated with the above referenced project.

If you have any questions regarding this report, please call me.

We appreciate your business.

Sincerely,

Agnes R. Ng
CLP Project Manager

175 Metro Center Boulevard • Warwick, Rhode Island 02886-1755

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for five aqueous samples that were collected on March 5, 2003, and received at Mitkem on March 6, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample FTAMW-2D. Spike recoveries were within the QC limits with the exception of several compounds in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: due to laboratory oversight, sample FTAMW-57S was analyzed outside of hold time. No other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of low or not recovery of several surrogates in method blank SBLK1C and samples FRAMW-2D and FTAMW-57S. The method blank and samples were re-analyzed with similar findings. The samples were not re-extracted due to insufficient sample volume.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery isophorone and low recovery of 3,3'-dichlorobenzidine.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample FTAMW-2D. Spike recoveries and replicate RPDs were within the QC limits with the exception of high recovery of isophorone and N-nitrosodiphenylamine and low recovery of 2,4-dimethylphenol in the matrix spike and high recovery of 4-chloroaniline in the matrix spike duplicate. Replicate RPDs were within the QC limits with the exception of 2,4-dimethylphenol and 3,3'-dichlorobenzidine.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of low recovery of decachlorobiphenyl in both columns for sample FTAMW-2S.

Lab control sample: spike recoveries and were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample FATMW-2D. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample FTAMW-2D. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample FTAMW-2D. Replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this

hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

TETRA TECH NUS, INC. **CALCULATION WORKSHEET** PAGE ____ OF ____

CLIENT	JOB NUMBER		
NASA Wallops Island CTO-848	Job- 4740-SOG-B0370		
SUBJECT: Sample Calculation			
BASED ON	DRAWING NUMBER		
BY: Bernard F Spada	CHECKED BY	APPROVED BY	DATE: 5/7/03

Sample
FTA MW-20

bis(2-ethylhexyl)phthalate = 6 ug/L

$$bis\,2EHP = \frac{(66157)(40\,ng)(1000\,\mu L)}{(480972)(0.999)(1\,\mu L)(1000\,mL)} = 5.51\,ng/mL = ug/L$$

Tetra Tech NUS **INTERNAL CORRESPONDENCE**

TO: **G. GLENN** **DATE:** **MAY 29, 2003**

FROM: **ERIN M. FAUST** **COPIES:** **DV FILE**

SUBJECT: **INORGANIC DATA VALIDATION –TAL METALS AND MISCELLANEOUS PARAMETERS**
CTO 848 NASA WALLOPS ISLAND
SAMPLE DELIVERY GROUP (SDG) – B0370

SAMPLES: 3/Aqueous/

FTAMW-2D FTAMW-2S FTAMW-57S

Overview

The sample set for CTO 848, SDG B0370, NASA Wallops Island, consists of three (3) aqueous environmental samples.

The samples were analyzed for chloride, nitrate, nitrite, sulfate, total organic carbon (TOC) and total and dissolved target analyte list (TAL) metals. Samples analyzed for dissolved metals are designated "-F". The samples were collected by Tetra Tech NUS on March 6, 2003 and analyzed by Mitkem Corporation. Metals analyses, with the exception of mercury, were conducted using SW-846 method 6010B. Mercury analyses were conducted using SW-846 method 7470A. Analyses for TOC were conducted using EPA method 415.1. Analyses for chloride, nitrate, nitrite and sulfate were conducted using EPA method 300.0.

Summary

All analytes were successfully analyzed. The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, calibration data, laboratory method/preparation blanks, interference check sample (ICS) results, matrix spike results, laboratory duplicate results, laboratory control sample (LCS) results, ICP serial dilution results, detection limits and analyte quantitation.

Metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) instrumentation. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) instrumentation.

Areas of concern with respect to data quality are listed below.

Minor Problems

- The 48-hour holding time for nitrate and nitrite was exceeded by 1-2 days for all three samples. Positive results reported for nitrate were qualified as biased low, "L". Nondetected results reported for nitrite were qualified as biased low, "UL".

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Samples Affected: All

Analyte	Maximum Concentration	Action Level
Aluminum[(1)]	48.683 µg/L	243.42 µg/L
Antimony[(1)]	4.381 µg/L	21.90 µg/L
Beryllium	0.60 µg/L	3.0 µg/L
Cobalt	1.4 µg/L	7.0 µg/L
Copper[(1)]	8.06 µg/L	40.3 µg/L
Iron[(1)]	30.678 µg/L	153.39 µg/L
Magnesium	51.5 µg/L	257.5 µg/L
Manganese	2.4 µg/L	12.0 µg/L
Nickel	1.2 µg/L	6.0 µg/L
Potassium	267.9 µg/L	1339.5 µg/L
Sodium	91.4 µg/L	457 µg/L
Vanadium	0.90 µg/L	4.5 µg/L
Chloride	0.22 mg/L	1.1 mg/L

[(1)] Maximum contamination present in an aqueous preparation blank.

An action level of five times the maximum contaminant level has been established to evaluate sample data for blank contamination. Sample aliquot, percent solids and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results < the action level reported for aluminum, antimony, cobalt, copper, iron, manganese, nickel, potassium and vanadium were qualified, "B", as a result of blank contamination. No validation action was required for the remaining analytes because the results were either greater than the action level or were nondetected.

- Laboratory Control Sample (LCS) percent recovery for mercury was < 80% quality control limit. The nondetected results reported for mercury were qualified as biased low, "UL".

Notes

Contract Required Detection Limit (CRDL) percent recoveries could not be evaluated because the laboratory either did not perform these analyses or did not supply the information for these analyses.

The laboratory did not supply the required information for the Interference Check Standard A (ICSA) on the Form 4; however, these results did not need to be evaluated because the interfering analytes were not present in the environmental samples at significant levels.

The nondetected results for nitrite were reported as "0 U" in the electronic database. The data reviewer corrected the results by replacing the zero with the laboratory's listed reporting limit (RL).

All TOC results were reported as positive detections by the lab in the electronic database. The data reviewer corrected the results to reflect the nondetects reported by the laboratory on the sample result forms.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method/preparation blanks. Nitrate and nitrite results were qualified due to holding time noncompliance. Mercury was qualified due to LCS noncompliance.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Validation", April 1993 as amended for use within USEPA Region III.

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

U - Value is a nondetect as reported by the laboratory.

B - Positive result is considered to be an artifact of blank contamination and should not be considered present.

UL - Nondetected result is considered biased low, "UL", as a result of technical noncompliances.

L - Positive result is considered biased low, "L", as a result of technical noncompliances.

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for five aqueous samples that were collected on March 5, 2003, and received at Mitkem on March 6, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample FTAMW-2D. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample FTAMW-2D. Replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this

MITKEM

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature. Samples received at STL on Saturday March 8, 2003 without notification. Analysis was done as soon as possible. One sample arrive out of hold already for nitrate and nitrite.

Classical Chemistry - Listed below are the wet chemistry analyte methods and references for the samples analyzed in this SDG. No analytical problems were encountered.

Analyte	Method	Reference
Ion Chromatography Analysis – Chloride, Nitrate, Nitrite, Sulfate	300.0	1

References:

1. Methods of Chemical Analysis of Water and Wastes, EPA 600, 1983.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

FORM XIV - IN SW846

Mitkem Corporation

Date: *01-Apr-03*

CLIENT: Tetra Tech NUS, Inc.
Work Order: B0370
Project: Wallops Island

ANALYTICAL QC SUMMARY REPORT

TestCode: E415.1_TOC_W

Sample ID	MB-6204	SampType:	MBLK	TestCode:	E415.1_TOC_W	Prep Date:	3/18/03	Run ID:	TOC1_030318A
Client ID:	MB-6204	Batch ID:	6204	Units:	mg/L	Analysis Date:	3/18/03	SeqNo:	86851

Analyte	Result	PQL	SPK value	SPK Ref Val	%REC	LowLimit	HighLimit	RPD Ref Val	%RPD	RPDLimit	Qual
Organic Carbon, Total	ND	6.0									

Sample ID	LCS-6204	SampType:	LCS	TestCode:	E415.1_TOC_W	Prep Date:	3/18/03	Run ID:	TOC1_030318A
Client ID:	LCS-6204	Batch ID:	6204	Units:	mg/L	Analysis Date:	3/18/03	SeqNo:	86852

Analyte	Result	PQL	SPK value	SPK Ref Val	%REC	LowLimit	HighLimit	RPD Ref Val	%RPD	RPDLimit	Qual
Organic Carbon, Total	53	6.0	54.1	0	98	80	120	0	0		

Sample ID	B0370-02BDUP	SampType:	DUP	TestCode:	E415.1_TOC_W	Prep Date:	3/18/03	Run ID:	TOC1_030318A
Client ID:	FTAMW-2D	Batch ID:	6204	Units:	mg/L	Analysis Date:	3/18/03	SeqNo:	86865

Analyte	Result	PQL	SPK value	SPK Ref Val	%REC	LowLimit	HighLimit	RPD Ref Val	%RPD	RPDLimit	Qual
Organic Carbon, Total	ND	6.0	0	0	0	0	0	0	0	20	

Qualifiers:
ND - Not Detected at the Reporting Limit
J - Analyte detected below quantitation limits
S - Spike Recovery outside accepted recovery limits
R - RPD outside accepted recovery limits
B - Analyte detected in the associated Method Blank

QUALITY CONTROL RESULTS

Tetra Tech NUS **INTERNAL CORRESPONDENCE**

TO: **G. GLENN** **DATE:** **JUNE 5, 2003**

FROM: **SETH C. STAFFEN** **COPIES:** **DV FILE**

SUBJECT: **ORGANIC DATA VALIDATION- VOA/SVOA/PCB**
CTO 848, NASA WALLOPS ISLAND
SDG: B0383

SAMPLES: 4/Aqueous

FB-030703 FTAMW-102D RB-030703 TB-030703

OVERVIEW

The sample set for CTO 848, SDG B0383, NASA Wallops Island consists of one (1) aqueous environmental sample, one (1) rinsate blank, one (1) flied blank, and one (1) trip blank. All samples were analyzed for Target Compound List (TCL) volatile organic compounds, TCL semivolatile organic compounds and TCL PCBs except TB-030703 was analyzed for volatile organic compounds only. No field duplicate pairs were included in the SDG.

The samples were collected by TetraTech NUS on March 7th, 2003 and were analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, and 8082 analytical and reporting protocols.

All samples were successfully analyzed. The findings offered in this report are based upon a general review of all available data including: data completeness, system performance and tuning, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, internal standard recoveries, blank spike results, matrix spike/matrix spike duplicate results, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- There were no major problems that would have resulted in the rejection of data.

Minor Problems

- The following compounds were detected in the method blank and/or trip blank(*):

Compound	Maximum Concentration	Blank Action Level
Methylene chloride*	1.0 ug/L	10 ug/L
Bis(2-ethylhexyl)phthalate	7.0 ug/L	70 ug/L

Sample aliquot and dilution factors were taken into consideration when applying the blank action limit. Positive results for bis(2-ethylhexyl)phthalate below the blank action level were qualified as, B, in the environmental sample. Field quality control samples were not qualified based on method blank contamination.

- The semivolatile initial calibration on 3/21/03 contained a %RSD that exceeded the 30% (and > 50%) quality control limit for 4-chloroaniline. Nondetected results for the aforementioned compound were qualified as estimated, UJ, in the associated samples. The direction of bias cannot be determined.

- The semivolatile continuing calibration on 3/25/03 at 1200 contained %Ds that exceeded the 25% (and > 50%) quality control limit for hexachlorocyclopentadiene. Nondetected results for the aforementioned compound were qualified as estimated, UJ, in the associated samples. The direction of bias cannot be determined.

- Positive results below the reporting limit (RL) were qualified as estimated, J, due to uncertainty near the detection limit. The direction of bias cannot be determined.

Notes

The volatile continuing calibration on 3/20/03 at 0918 contained a %D that exceeded the 25% (but < 50%) quality control limit for bromomethane. No qualification action was warranted because the results for bromomethane were non-detected.

The volatile laboratory control sample %R fell below the lower quality control limit for bromomethane and the %RPD exceeded the 30% quality control limit. No qualification action was warranted on this basis.

The volatile laboratory control sample and duplicate %R exceeded the upper quality control limit for MTBE. No qualifications action was warranted on this basis.

2-Butanone, acetone, and methylene chloride were detected in the field blank (FB-030703) and rinsate blank (RB-030703).

The semivolatile initial calibration on 3/21/03 contained a %RSD that exceeded the 30% quality control limit, but did not exceed 50%, for pentachlorophenol. Therefore, sample results were not qualified on this basis.

The semivolatile continuing calibration on 3/25/03 at 1200 contained %Ds that exceeded the 25% quality control limit, but did not exceed 50%, for 4-chloroaniline, 2,4-dinitrophenol, 4-nitrophenol, 4-nitroaniline, indeno(1,2,3-cd)pyrene, and benzo(g,h,i)perylene. Therefore, sample results were not qualified on this basis.

The semivolatile laboratory control sample and duplicate %Rs exceeded the upper quality control limits for isophorone, 4-chloroaniline, N-nitrosodiphenylamine, and bis(2-ethylhexyl phthalate). No qualification was warranted.

In the PCBs fraction, the laboratory did not report results down to the reporting limits specified in the statement of work. Instead, the laboratory reported to a higher reporting limit.

There were differences between what was reported by the laboratory and what was requested in the statement of work (SOW). No action was taken because the project office was contacted and that they approved the variance from the SOW.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Several compounds failed to meet the initial and/or continuing calibration quality control criteria. Blank contamination occurred in both the volatile and semivolatile fractions.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Data Validation", (September 1994) as amended for use within USEPA Region III, and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

APPENDIX C

SUPPORT DOCUMENTATION

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for seven aqueous samples that were collected on March 7, 2003, and received at Mitkem on March 8, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of low recovery of bromomethane and high recovery of methyl tert-butyl ether in the lab control sample and high recovery of methyl tert-butyl ether in the lab control sample duplicate. Replicate RPDs were within the QC limits with the exception of bromomethane.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery isophorone, 4-chloroaniline, N-nitrosodiphenylamine and bis (2-ethylhexyl) phthalate and no recovery of hexachlorocyclopentadiene in both the lab control sample and lab control sample duplicate. Replicate RPDs were within the QC limits

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries and were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

SUBJECT: ORGANIC DATA REVIEW – VOCS, SVOCS, AND PCBS
FIRE TRAINING AREA – NASA WALLOPS ISLAND, VIRGINIA
SDG B0397

SAMPLES: 5/ Aqueous /

FTAMW-55D	FTAMW-61I
FTAMW-56D	TB-031003
FTAMW-58S	

OVERVIEW

The sample set for the Fire Training Area – NASA Wallops Island, Virginia, SDG B0397, consists of four aqueous environmental samples (designated FTAMW-), and one trip blank (designated TB-). The trip blank was analyzed for target compound list (TCL) volatiles and all other samples were analyzed for TCL volatiles, semivolatiles, and polychlorinated biphenyls (PCBs). No field duplicate pairs were included in this SDG.

The samples were collected by Tetra Tech NUS on March 10, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Methods 8260B for volatiles, 8270C for semivolatiles, and 8082 for PCBs.

SUMMARY

All compounds were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until extraction and analysis, GC/MS instrument tuning, GC chromatographic performance tests, initial/continuing calibrations, laboratory and field quality control (QC) blank results, surrogate spike recoveries, Internal Standard (IS) areas, Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries, Laboratory Control Spike/Laboratory Control Spike Duplicate (LCS/LCSD) recoveries, field duplicate results, compound identification, compound quantitation, and detection limits.

MINOR PROBLEMS

VOLATILE FRACTION

- The following table summarizes the compounds detected as contaminants in the laboratory blanks or field QC blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level (aqeuous)
Acetone*	47 ug/L	470 ug/L
Methylene Chloride*	60 ug/L	600 ug/L
2-Butanone*	2 ug/L	10 ug/L

* - Indicates compound was detected at a maximum level in a field QC blank.

Samples affected: The action levels apply to the aqueous environmental samples. It should be noted that field QC blanks do not receive qualification based on laboratory blank contamination.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size, percent solids, and dilution factors. Positive results for acetone methylene chloride, and 2-butanone in the samples at concentrations less than their associated blank action levels were qualified as false positives attributable to blank contamination, (B).

- The initial calibration relative response factors (RRFs) for acetone were less than the QC limit of 0.05. Positive results are considered biased low (L), however, data qualification for most samples was based upon more significant issues (blank qualification) as noted above.
- Positive results reported at concentrations less than the quantitation limit were qualified estimated, (J).

SEMIVOLATILE FRACTION

- The LCS/LCSD exhibited low recoveries for hexachlorocyclopentadiene. The associated non-detected results were qualified biased low (UL).
- Positive results reported at concentrations less than the quantitation limit were qualified estimated, (J).

PCB FRACTION

- All samples for PCB analysis were extracted 8 days outside the 7 day holding time. The associated non-detected results were qualified as estimated (UJ).

NOTES

Samples FTAMW-56D, FTAMW-58S and FTAMW-61I were reanalyzed at 3X and 4X dilutions for cis-1,2-dichloroethene and 1,1,1-trichloroethane. The original concentrations for these compounds exceeded the calibration range of the instrument. The results for cis-1,2-dichloroethene and 1,1,1-trichloroethane only were reported from the diluted analyses.

Bis(2-ethylhexyl)phthalate was detected in the method blank for the semivolatile fraction. No positive results were detected for bis(2-ethylhexyl)phthalate in the environmental samples, therefore, no qualification was necessary.

The aqueous LCS for the semivolatile fraction exhibited high recoveries for N-nitroso-di-n-propylamine, isophorone, 4-chloroaniline, N-nitrosodiphenylamine, and bis(2-ethylhexyl)phthalate. No action was taken because there were no positive results for these compounds.

No other problems were noted during the review.

EXECUTIVE SUMMARY

Laboratory Performance: The initial calibration RRF was less than the lower QC limit for one compound in the volatile fraction. Bis(2-ethylhexyl)phthalate was detected in the semivolatile method blank. One recovery was less than the lower QC limit for the semivolatile LCS. The PCB samples were extracted outside holding times.

Other Factors Affecting Data Quality: Acetone, methylene chloride, and 2-butanone were detected in the trip blank.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Organic Analyses ", as amended for use within EPA Region 3 (9/94), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

DATA SUMMARY OF VOLATILE ORGANIC COMPOUND DATA
SDG B0397 - AQUEOUS SAMPLES
WALLOPS FLIGHT FACILITY, WALLOPS ISLAND, VIRGINIA

Data Qualifiers:
B -- Positive result is considered to be an artifact of blank contamination, and should not be considered present.
J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).
L -- Positive result is considered biased low due to exceedance of technical quality control criteria.
U -- Value is a non-detected result as reported by the laboratory.

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for thirteen aqueous samples that were collected on March 10, 2003, and received at Mitkem on March 11, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: due to high concentration of target analytes, the following samples were re-analyzed at dilution: FTAMW-56D (3x), FTAMW-58S (3x) and FTAMW-61I (4x). Samples FTAMW-58S and FTAMW-61I were re-analyzed at dilution outside of holding time. No other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of the following: high recovery of n-nitroso-di-n-propylamine, isophorone, 4-chloroaniline, n-nitrosodiphenylamine and bis (2-ethylhexyl) phthalate and low recovery of hexachlorocyclopentadiene in both the matrix spike and matrix spike duplicate.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of no surrogate recovery in method blank BBLK1C and associated samples. Method blank BBLK1C and associated samples were semivolatile sample extracts that were exchanged into hexane and analyzed for PCBs.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: due to login error, samples FTAMW-56D, FTAMW-58S, FTAMW-55D and FTAMW-61I were logged in for aqueous semivolatile analysis and soil PCB analysis. The samples were extracted for semivolatile analysis. The samples were not extracted for PCBs as they were logged in as soil samples, therefore a longer holding time. The semivolatile extracts were exchanged into hexane and analyzed for PCB. The samples were extracted outside of holding time for PCB and designated as "RE" samples. Both sets of data are reported. No other unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample FTAMW-56D. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample FTAMW-56D. Replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

SUBJECT: INORGANIC DATA REVIEW – TAL METALS
FIRE TRAINING AREA – NASA WALLOPS ISLAND, VIRGINIA
SDG B0397

SAMPLES: 8/Aqueous/

FTAMW-55D	FTAMW-61I	FTAMW-58SF
FTAMW-56D	FTAMW-55DF	FTAMW-61IF
FTAMW-58S	FTAMW-56DF	

OVERVIEW

The sample set for the Fire Training Area – NASA Wallops Island, Virginia, SDG B0397 consists of 8 aqueous environmental samples (designated FTAMW-). All samples were analyzed for TAL metals. No field duplicate pairs were included in this SDG.

The samples were collected by Tetra Tech NUS on March 10, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Method 6010B and 7470A.

SUMMARY

All analytes were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, initial/continuing calibrations, laboratory and field quality control (QC) blank results, field duplicate results, matrix spikes (MS), laboratory control spikes (LCS), laboratory duplicates, interference check solutions, and detection limits.

MINOR PROBLEMS

- The following table summarizes the analytes detected as contaminants in the laboratory blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level
Aluminum	276.8 ug/L	1384 ug/L
Antimony	6.7 ug/L	33.5 ug/L
Barium	5.498 ug/L	27.49 ug/L
Beryllium	0.6 ug/L	3 ug/L
Calcium	262 ug/L	1310 ug/L

Analyte	Maximum Concentration	Action Level
Chromium	0.7 ug/L	3.5 ug/L
Cobalt	1.5 ug/L	7.5 ug/L
Copper	17.71 ug/L	88.55 ug/L
Iron	159.4 ug/L	797 ug/L
Magnesium	321.8 ug/L	1609 ug/L
Manganese	1.7 ug/L	8.5 ug/L
Nickel	1.9 ug/L	9.5 ug/L
Potassium	202.3 ug/L	1011.5 ug/L
Silver	6.921 ug/L	34.605 ug/L
Sodium	175.5 ug/L	877.5 ug/L
Thallium	3.6 ug/L	18 ug/L
Vanadium	1.4 ug/L	7 ug/L
Zinc	13.76 ug/L	68.8 ug/L

Samples affected: The action levels apply to all environmental samples.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size and dilution factors. Positive results for aluminum, antimony, barium, chromium, cobalt, copper, iron, nickel, potassium, silver, thallium, vanadium, and zinc in samples at concentrations less than their associated blank action levels were qualified as false positives attributable to blank contamination, (B). No qualifications were required for calcium, magnesium, manganese, and sodium because all concentrations exceeded the associated blank action levels. No qualifications were required for beryllium because there were no positive detections.

- Cobalt, copper, nickel, silver, thallium, and vanadium were detected in ICP analysis of the Interference Check Solution (ICS) A, which is prepared from a certified source and should not contain low level analytes other than the primary mineral interferents, aluminum, calcium, iron, and magnesium. This indicates the potential for false positive spectral interferences if there are elevated sample concentrations of the primary minerals noted above. For copper, nickel, silver, thallium, and vanadium in sample FTAMW-61I, when the observed result was greater than the expected level of interference but the concentration was not more than 10 times the expected interference, such results were qualified as biased high, but qualification was superseded by the qualifier (B) for blank contamination.

- Antimony, arsenic, barium, cadmium, chromium, lead, and manganese exhibited negative concentrations with absolute values greater than the IDL in ICS solution A, which indicates the potential for negative bias to an extent that depends on the sample mineral concentrations. For cadmium and lead in sample FTAMW-61I, when the detection limit was greater than the absolute value of the negative interference, but the detection limit was not more than 10 times the expected interference value affected non-detected results were qualified as biased low (UL). For positive antimony results in sample FTAMW-61I, the sample concentration was greater than the predicted magnitude of negative interference but the concentration was not more than 10 times the

expected interference, such a result was qualified as biased low, however, qualification was superceded by the qualifier (B) for blank contamination.

NOTES

The laboratory was contacted regarding true concentrations for ICS solution A because these values were not reported on Form 4 in the data package. The laboratory stated that no detectable metals are reportedly present in the commercially-purchased ICS solution A except the primary interferent metals.

EXECUTIVE SUMMARY

Laboratory Performance: Several analytes were detected in ICS solution A that should not be detected and negative readings occurred for some metals. Data were qualified as biased low (L/UL). Several contaminants were detected in the laboratory blanks. Associated sample results were qualified (B) to indicate artifacts of blank contamination. ICS Form IV did not indicate whether solution A true values were non-detected versus not analyzed.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

DATA SUMMARY OF INORGANIC RESULTS
SDG B0397 - AQUEOUS SAMPLES
WALLOPS FLIGHT FACILITY, WALLOPS ISLAND, VIRGINIA

Data Qualifiers:
B -- Positive result is considered to be an artifact of blank contamination, and should not be considered present.
U -- Value is a non-detected result as reported by the laboratory.
UL -- Non-detected result is considered biased low due to exceedance of technical quality control criteria.

Database source file: S:\RITCHIEM\WALLOPS ISLAND\FTA\B0397\M_B0397.DBF data retrieved on: 05/07/03

Qualifier Codes:

a	=	Lab Blank Contamination
b	=	Field Blank Contamination
c	=	Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d	=	MS/MSD Noncompliance
e	=	LSC/LSCD Noncompliance
f	=	Laboratory Duplicate Imprecision
g	=	Field Duplicate Imprecision
h	=	Holding Time Exceedance
i	=	ICP Serial Dilution Noncompliance
j	=	GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k	=	ICP Interference – include ICSAB %Rs
l	=	Instrument Calibration Range Exceedance
m	=	Sample Preservation
n	=	Internal Standard Noncompliance
o	=	Poor Instrument Performance (i.e. baseline drifting)
p	=	Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q	=	Other Problems (can encompass of number of issues)
r	=	Surrogates Recovery Noncompliance
s	=	Pesticide/PCB Resolution
t	=	% Breakdown Noncompliance for DDT and Endrin
u	=	Pesticide/PCB % Difference Between Columns for Positive Results
v	=	Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for thirteen aqueous samples that were collected on March 10, 2003, and received at Mitkem on March 11, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: due to high concentration of target analytes, the following samples were re-analyzed at dilution: FTAMW-56D (3x), FTAMW-58S (3x) and FTAMW-61I (4x). Samples FTAMW-58S and FTAMW-61I were re-analyzed at dilution outside of holding time. No other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of the following: high recovery of n-nitroso-di-n-propylamine, isophorone, 4-chloroaniline, n-nitrosodiphenylamine and bis (2-ethylhexyl) phthalate and low recovery of hexachlorocyclopentadiene in both the matrix spike and matrix spike duplicate.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of no surrogate recovery in method blank BBLK1C and associated samples. Method blank BBLK1C and associated samples were semivolatile sample extracts that were exchanged into hexane and analyzed for PCBs.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: due to login error, samples FTAMW-56D, FTAMW-58S, FTAMW-55D and FTAMW-61I were logged in for aqueous semivolatile analysis and soil PCB analysis. The samples were extracted for semivolatile analysis. The samples were not extracted for PCBs as they were logged in as soil samples, therefore a longer holding time. The semivolatile extracts were exchanged into hexane and analyzed for PCB. The samples were extracted outside of holding time for PCB and designated as "RE" samples. Both sets of data are reported. No other unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample FTAMW-56D. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample FTAMW-56D. Replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

TETRA TECH NUS

PHIL- 17120

TO: G. GLENN **DATE:** MAY 8, 2003

FROM: MEGAN RITCHIE **COPIES:** FILE

SUBJECT: WET CHEMISTRY DATA REVIEW – TOC, CHLORIDE, NITRATE, NITRITE, AND SULFATE
FIRE TRAINING AREA – NASA WALLOPS ISLAND, VIRGINIA
SDG B0397

SAMPLES: 4/Aqueous/

FTAMW-55D
FTAMW-56D
FTAMW-58S
FTAMW-61I

OVERVIEW

The sample set for the Fire Training Area – NASA Wallops Island, Virginia, SDG B0397 consists of 4 aqueous environmental samples (designated FTAMW-). All samples were analyzed for Total Organic Carbon (TOC), chloride, nitrate, nitrite, and sulfate. No field duplicate pairs were included in this SDG.

The samples were collected by Tetra Tech NUS on March 10, 2003. TOC samples were analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island. Chloride, nitrate, nitrite, and sulfate were analyzed by STL Connecticut of Shelton, Connecticut.

TOC analyses were conducted using EPA Method 415.1. Chloride, nitrate, nitrite, and sulfate analyses were conducted using EPA Method 300.0.

SUMMARY

All analytes were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, initial/continuing calibrations, laboratory and field quality control (QC) blank results, field duplicate results, matrix spikes (MS), laboratory control spikes (LCS), laboratory duplicates, and detection limits.

MINOR PROBLEMS

- The nitrate and nitrite samples were analyzed one day outside the 48 hour holding time. The results and detection limits for nitrate and nitrite were qualified estimated (J/UJ).

NOTES

The following table summarizes the analytes detected as contaminants in the laboratory blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level
Sulfate	0.276 mg/L	1.38 mg/L

Samples affected: The action levels apply to all environmental samples.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size and dilution factors. No qualifications were required for sulfate because all concentrations exceeded the associated blank action levels.

The TOC data were acceptable as reported by the laboratory.

EXECUTIVE SUMMARY

Laboratory Performance: Sulfate was detected in a laboratory blank. Nitrate and nitrite fractions were analyzed outside holding times.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Data Qualifiers:

J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).

UJ -- Non-detected result is considered estimated due to exceedance of technical quality control criteria.

Database source file: S:\RITCHIEM\WALLOPS ISLAND\FTA\B0397\SUB_B0397.DBF data retrieved on: 05/08/03

Qualifier Codes:

a	=	Lab Blank Contamination
b	=	Field Blank Contamination
c	=	Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d	=	MS/MSD Noncompliance
e	=	LSC/LSCD Noncompliance
f	=	Laboratory Duplicate Imprecision
g	=	Field Duplicate Imprecision
h	=	Holding Time Exceedance
i	=	ICP Serial Dilution Noncompliance
j	=	GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k	=	ICP Interference – include ICSAB %Rs
l	=	Instrument Calibration Range Exceedance
m	=	Sample Preservation
n	=	Internal Standard Noncompliance
o	=	Poor Instrument Performance (i.e. baseline drifting)
p	=	Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q	=	Other Problems (can encompass of number of issues)
r	=	Surrogates Recovery Noncompliance
s	=	Pesticide/PCB Resolution
t	=	% Breakdown Noncompliance for DDT and Endrin
u	=	Pesticide/PCB % Difference Between Columns for Positive Results
v	=	Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for thirteen aqueous samples that were collected on March 10, 2003, and received at Mitkem on March 11, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: due to high concentration of target analytes, the following samples were re-analyzed at dilution: FTAMW-56D (3x), FTAMW-58S (3x) and FTAMW-61I (4x). Samples FTAMW-58S and FTAMW-61I were re-analyzed at dilution outside of holding time. No other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of the following: high recovery of n-nitroso-di-n-propylamine, isophorone, 4-chloroaniline, n-nitrosodiphenylamine and bis (2-ethylhexyl) phthalate and low recovery of hexachlorocyclopentadiene in both the matrix spike and matrix spike duplicate.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of no surrogate recovery in method blank BBLK1C and associated samples. Method blank BBLK1C and associated samples were semivolatile sample extracts that were exchanged into hexane and analyzed for PCBs.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: due to login error, samples FTAMW-56D, FTAMW-58S, FTAMW-55D and FTAMW-61I were logged in for aqueous semivolatile analysis and soil PCB analysis. The samples were extracted for semivolatile analysis. The samples were not extracted for PCBs as they were logged in as soil samples, therefore a longer holding time. The semivolatile extracts were exchanged into hexane and analyzed for PCB. The samples were extracted outside of holding time for PCB and designated as "RE" samples. Both sets of data are reported. No other unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample FTAMW-56D. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample FTAMW-56D. Replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

MITKEM

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature. The samples were received at STL out of holding time for nitrate and nitrite. Client was contacted and authorized STL to continue with the analysis.

Classical Chemistry - Listed below are the wet chemistry analyte methods and references for the samples analyzed in this SDG. No analytical problems were encountered.

Analyte	Method	Reference
Chloride	300.0	1
Nitrate	300.0	1
Nitrite	300.0	1
Sulfate	300.0	1

References:

1. Methods of Chemical Analysis of Water and Wastes, EPA 600, 1983.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

FTAMW-103D	FTAMW-103I	FTAMW-103S	FTAMW-104S
FTAMW-55S	FTAMW-DUP13	TB-031103	

OVERVIEW

The sample set for CTO 848, SDG B0412, NASA Wallops Island consists of six (6) aqueous environmental samples and one (1) trip blank. All samples were analyzed for Target Compound List (TCL) volatile organic compounds, TCL semivolatile organic compounds and TCL PCBs except TB-031103 was analyzed for volatile organic compounds only. One field duplicate pair was included in the SDG: FTAMW-104S / FTAMW-DUP13.

The samples were collected by TetraTech NUS on March 11th, 2003 and were analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, and 8082 analytical and reporting protocols.

All samples were successfully analyzed. The findings offered in this report are based upon a general review of all available data including: data completeness, system performance and tuning, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, internal standard recoveries, blank spike results, field duplicate results, matrix spike/matrix spike duplicate results, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- There were no major problems that would have resulted in the rejection of data.

Minor Problems

- The following compounds were detected in the method blank and/or trip blank(*):

Compound	Maximum Concentration	Blank Action Level
Methylene chloride*	50 ug/L	500 ug/L
Acetone*	53 ug/L	530 ug/L
Bis(2-ethylhexyl)phthalate	7.0 ug/L	70 ug/L

Sample aliquot and dilution factors were taken into consideration when applying the blank action limit. Positive results for acetone, methylene chloride, and bis(2-ethylhexyl)phthalate below the blank action level were qualified as, B, in the environmental samples. Field quality control samples were not qualified based on method blank contamination.

- The semivolatile initial calibration on 3/21/03 contained a %RSD that exceeded the 30% (and > 50%) quality control limit for 4-chloroaniline. The nondetected results for the 4-chloroaniline were qualified as estimated, UJ, in the associated samples. The direction of bias cannot be determined.

- Positive results below the reporting limit (RL) were qualified as estimated, J, due to uncertainty near the detection limit. The direction of bias cannot be determined.

- The LCS/LCSD %Rs fell below the lower quality control limit (but > 10%) for hexachlorocyclopentadiene. The nondetected results for hexachlorocyclopentadiene were qualified as estimated, UJ, in all samples.

Notes

The volatile initial calibration on 3/23/03 contained a %RSD that exceeded the 30% quality control limit for carbon disulfide. No qualification action was warranted because the reported results were non-detects.

The semivolatile continuing calibration on 3/26/03 at 1045 contained %Ds that exceeded the 25% quality control limit, but did not exceed 50%, for 2,2'-oxybis(1-chloropropane), 4-chloroaniline, 2,4-dinitrophenol, 4-nitrophenol, and hexachlorocyclopentadiene. Therefore, sample results were not qualified on this basis.

The semivolatile continuing calibration on 3/28/03 at 1102 contained %Ds that exceeded the 25% quality control limit, but did not exceed 50%, for 2,2'-oxybis(1-chloropropane), 2,4-dinitrophenol, 4-nitrophenol, 4-chloroaniline, hexachlorocyclopentadiene, and benzo(k)fluoranthene. Therefore, sample results were not qualified on this basis.

The semivolatile laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) %Rs exceeded the upper quality control limits for isophorone and N-nitrosodiphenylamine. No qualification was warranted.

The semivolatile LCS %R exceeded the upper quality control limit for 4-chloroaniline, diethylphthalate, and bis(2-ethylhexyl)phthalate. No qualification action was warranted.

The semivolatile LCS %R fell below the lower quality control limit and the LCSD %R exceeded the upper quality control limit for 4,6-dinitro-2-methylphenol. No qualification action was warranted.

The semivolatile LCS/LCSD RPD exceeded the quality control limit for 2,4-dimethylphenol, 4,6-dinitro-2-methylphenol, and 4-nitrophenol. No qualification action was warranted.

The semivolatile surrogate recoveries exceeded the upper quality control limit for terphenyl-d14 and 2,4,6-tribromophenol in samples FTAMW-103I, FTAMW-103S, and FTAMW-55S. The re-analysis for each sample yielded a noncompliant recovery of 2,4,6-tribromophenol. The re-analyses were used for data validation purposes due to internal standard noncompliance. No qualification action was warranted based on surrogate recovery noncompliance.

The semivolatile internal standards of phenanthrene-d10, chrysene-d12,, and perylene-d12 fell below the -50% quality control limit in sample FTAMW-55S. The re-analysis yielded complaint internal standards results; therefore, the re-analysis was used for data validation purposes.

The semivolatile internal standards of chrysene-d12 and perylene-d12 fell below the -50% quality control limit in samples FTAMW-103S and FTAMW-103I. The re-analyses yielded complaint internal standards results; therefore, the re-analyses were used for data validation purposes.

In the PCBs fraction, the laboratory did not report results down to the reporting limits specified in the statement of work. Instead, the laboratory reported to a higher reporting limit.

The PCBs continuing calibrations on 3/25/03 at 2123, 3/26/03 at 0501, and 3/26/03 at 1130 contained %Ds that exceeded the 15% quality control limit for aroclor-1060 and aroclor-1260 on column RTXCLPPEST2. No qualification action was warranted because the other column was complaint.

There were differences between what was reported by the laboratory and what was requested in the statement of work (SOW). No action was taken because the project office was contacted and that they approved the variance from the SOW.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Several compounds failed to meet the initial and/or continuing calibration quality control criteria. Blank contamination occurred in both the volatile and semivolatile fractions. LCS/LCSD recoveries fell outside of quality control criteria.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Data Validation", (September 1994) as amended for use within USEPA Region III, and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

2-Naphthalenecarboxylic acid
Benzaldehyde, 4-methyl
Benzoic acid, 2-methyl

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

APPENDIX C

SUPPORT DOCUMENTATION

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0412

Mitkem Project ID: B0412

April 21, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for thirteen aqueous samples that were collected on March 11, 2003, and received at Mitkem on March 12, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of terphenyl-d14 and 2,4,6-tribromophenol in samples FTAMW-55S, FTAMW103I and FTAMW103S. Sample FTAMW-55S was re-analyzed at dilution with surrogate recoveries within QC limits. Samples FTAMW103I and FTAMW103S were re-analyzed with similar findings. The high recovery is due to the depression of the associated internal standard area count.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of the following: high recovery isophorone, 4-chloroaniline, diethylphthalate, n-nitrosodiphenylamine, and bis (2-ethyhexyl) phthalate, low recovery of hexachlorocyclopentadiene and no recovery of 2,4-dinitrophenol in both the lab control sample and high recovery isophorone and n-nitrosodiphenylamine, low recovery of hexachlorocyclopentadiene and no recovery of 2,4-dinitrophenol in the lab control sample duplicate. Replicate RPDs were within the QC limits with the exception of 4-nitrophenol, 2,4-dimethylphenol and 4,6-dinitro-2-methylphenol.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample FTAMW-55S. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample FTAMW-55S. Replicate RPDs were within the QC limits with the exception of zinc. Form 1's are flagged with an "*" flag for zinc.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

FTAMW-103D	FTAWM-103I	FTAMW-103S
FTAMW-104S	FTAMW-55S	FTAMW-DUP13

Overview

The sample set for CTO 848, SDG B0412, NASA Wallops Island, consists of six (6) aqueous environmental samples. One (1) field duplicate pair (FTAMW-DUP13 / FTAMW-104S) is included within this SDG.

The samples were analyzed for chloride, nitrate, nitrite, sulfate, total organic carbon (TOC) and total and dissolved target analyte list (TAL) metals. Samples analyzed for dissolved metals are designated "-F". The samples were collected by Tetra Tech NUS on March 11, 2003 and analyzed by Mitkem Corporation. Metals analyses, with the exception of mercury, were conducted using SW-846 method 6010B. Mercury analyses were conducted using SW-846 method 7470A. Analyses for TOC were conducted using EPA method 415.1. Analyses for chloride, nitrate, nitrite and sulfate were conducted using EPA method 300.0.

Summary

All analytes were successfully analyzed. The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, calibration data, laboratory method/preparation blanks, laboratory duplicate results, matrix spike (MS) results, ICP serial dilution results, interference check sample (ICS) results, laboratory control sample (LCS) results, field duplicate results, detection limits and analyte quantitation.

Metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) instrumentation. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) instrumentation.

Areas of concern with respect to data quality are listed below.

Minor Problems

- The 48-hour holding time for nitrate and nitrite was exceeded by approximately 1-6 hours for all samples except FTAMW-DUP13. The positive results reported for nitrate in the affected samples were qualified as estimated, "J". The nondetected results reported for nitrite in the affected samples were qualified as estimated, "UJ".

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Sample Affected: All

Analyte	Maximum Concentration	Action Level
Aluminum	216.2 µg/L	1081 µg/L
Antimony	7.6 µg/L	38 µg/L
Barium[(1)]	9.42 µg/L	47.1 µg/L
Beryllium	0.60 µg/L	3.0 µg/L
Chromium[(1)]	0.73 µg/L	3.65 µg/L
Cobalt	1.5 µg/L	7.5 µg/L
Copper	6.7 µg/L	33.5 µg/L
Iron	102.3 µg/L	511.5 µg/L
Magnesium	210.5 µg/L	1052.5 µg/L
Manganese[(1)]	1.866 µg/L	9.3 µg/L
Nickel[(1)]	2.182 µg/L	10.91 µg/L
Potassium	202.3 µg/L	1011.5 µg/L
Silver[(1)]	2.69 µg/L	13.45 µg/L
Sodium	175.5 µg/L	877.5 µg/L
Thallium	3.6 µg/L	18.0 µg/L
Vanadium	1.6 µg/L	8.0 µg/L
Zinc[(1)]	7.26 µg/L	36.3 µg/L
Sulfate	0.306 mg/L	1.53 mg/L

[(1)] Maximum contamination present in an aqueous preparation blank.

An action level of five times the maximum contaminant level has been established to evaluate sample data for blank contamination. Sample aliquot, percent solids and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results < the action level reported for all of the above analytes with the exception of beryllium, magnesium, manganese, sodium and sulfate were qualified, "B", as a result of blank contamination. No validation action was required for beryllium, magnesium, manganese, sodium and sulfate because the results were either greater than the action level or were nondetected.

- Laboratory Control Sample (LCS) percent recovery for mercury was < 80% quality control limit. The nondetected results reported for mercury were qualified as biased low, "UL".

Notes

Contract Required Detection Limit (CRDL) percent recoveries could not be evaluated because the laboratory either did not perform these analyses or did not supply the information for these analyses.

The laboratory did not supply the required information for the Interference Check Standard A (ICSA) on the Form 4; however, these results did not need to be evaluated because the interfering analytes were not present in the environmental samples at significant levels.

The nondetected results for nitrite and sulfate were reported as "0 U" in the electronic database. The data reviewer corrected the results by replacing the zero with the laboratory's listed reporting limit (RL).

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method/preparation blanks. Nitrate and nitrite results were qualified due to holding time noncompliance. Mercury was qualified due to LCS noncompliance.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Validation", April 1993 as amended for use within USEPA Region III.

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

U - Value is a nondetect as reported by the laboratory.

B - Positive result is considered to be an artifact of blank contamination and should not be considered present.

UL - Nondetected result is considered biased low, "UL", as a result of technical noncompliances.

J - Positive result is considered estimated, "J", as a result of technical noncompliances.

UJ - Nondetected result is considered estimated, "UJ", as a result of technical noncompliances.

APPENDIX A
QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Questions ?	(Y/N)	Comments
Chain-of-Custody Present?	Y	
...If "yes", completed properly?	Y	
Custody seal on shipping container?	Y	
...If "yes", custody seal intact?	Y	
Custody seals on sample containers?	N	
...If "yes", custody seal intact?		
Samples iced?	Y	BAGGED ICE, LOOSE ICE
Temperature of cooler acceptable? (4 deg C +/- 2).	Y	0 C
Samples received intact (good condition)?	Y	
Volatile samples acceptable? (no headspace)		
Correct containers used?	Y	
Adequate sample volume provided?	Y	
Samples preserved correctly?		
Samples received within holding-time?	Y	
Agreement between COC and sample labels?	Y	
Radioactivity at or below background levels?	Y	
A Sample Discrepancy Report (SDR) was needed?	N	
Comments	Y	SHORT HOLDS (NITRATE, NITRITE)
If samples were shipped was there an air bill #?	Y	FE 7915 5128 0089
Sample Custodian Signature/Date	Y	Alex C. Yanowski 03/13/03

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for nine aqueous samples that were collected on March 4, 2003, and received at Mitkem on March 5, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery of chloromethane and vinyl chloride and low recovery of 1,2-dibromo-3-chloropropane.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery isophorone and low recovery of 2,4-dimethylphenol and hexachlorocyclopentadiene in the lab control sample and high recovery isophorone and low recovery of hexachlorocyclopentadiene in the lab control sample duplicate. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

STL Report : 203210
MITKEM

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature. Sample B0412-02D and B0412-03D were received out of hold for nitrate and nitrite analysis. The remainder of the samples were close to hold for those analyses. Client was contacted and authorized STL to continue with the analysis.

Classical Chemistry - Listed below are the wet chemistry analyte methods and references for the samples analyzed in this SDG. No analytical problems were encountered.

Analyte	Method	Reference
Chloride	300.0	1
Nitrate	300.0	1
Nitrite	300.0	1
Sulfate	300.0	1

References:

WOD-WFF15-GW2	WOD-WFF16-GW2S
WOD-WFF16-GW2D	TB-031203

OVERVIEW

The sample set for the Fire Training Area and Waste Oil Dump – NASA Wallops Island, Virginia, SDG B0420, consists of one soil environmental sample (designated FTA-), five aqueous environmental samples (designated WOD-), and one trip blank (designated TB-). The trip blank was analyzed for target compound list (TCL) volatiles, the aqueous environmental samples were analyzed for TCL volatiles, semivolatiles, and polychlorinated biphenyls (PCBs). The soil sample was analyzed for TCL volatiles and PCBs. No field duplicate pairs were included in this SDG.

The samples were collected by Tetra Tech NUS on March 12, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Methods 8260B for volatiles, 8270C for semivolatiles, and 8082 for PCBs.

SUMMARY

All compounds were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until extraction and analysis, GC/MS instrument tuning, GC chromatographic performance tests, initial/continuing calibrations, laboratory and field quality control (QC) blank results, surrogate spike recoveries, Internal Standard (IS) areas, Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries, Laboratory Control Spike/Laboratory Control Spike Duplicate (LCS/LCSD) recoveries, field duplicate results, compound identification, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below as follows:

MAJOR PROBLEMS

- Due to limited sample volume for sample WOD-WFF16-GW2D, the PCB extract was analyzed to evaluate the semivolatile compounds. The sample was extracted at a neutral pH, therefore, the

non-detected results for acidic phenolic target analytes and basic anilines and amine-substituted analytes were rejected (UR). The neutral analytes were qualified as estimated (UJ). No semivolatile surrogate standards were present in the extract, but the GC analysis that was also performed on the same extract revealed PCB fraction surrogate recoveries within control limits. Internal standards recoveries were within QC limits.

- The semivolatile LCS exhibited recoveries less than 10% for 2,4-dimethylphenol. Non-detected reuslts were qualified rejected (UR).

MINOR PROBLEMS

VOLATILE FRACTION

- The following table summarizes the compounds detected as contaminants in the laboratory blanks or field QC blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level (aqueous)	Action Level (soil)
Acetone*	2 ug/L	20 ug/L	NA
Acetone	7 ug/kg	NA	70 ug/kg
Methylene Chloride*	8 ug/L	80 ug/L	80 ug/kg

* - Indicates compound was detected at a maximum level in a field QC blank.

Samples affected: The action levels apply to the aqueous and soil environmental samples. It should be noted that field QC blanks do not receive qualification based on laboratory blank contamination.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size, percent solids, and dilution factors. Positive results for acetone and methylene chloride in the soil and aqueous samples at concentrations less than their associated blank action levels were qualified as false positives attributable to blank contamination, (B).

- The soil LCS/LCSD recoveries were less than the lower QC limit for dichlorodifluoromethane. The non-detected result for this compound in soil sample FTA-SS-111 was qualified as biased low (UL).
- Positive results reported at concentrations less than the quantitation limit were qualified estimated, (J).

SEMIVOLATILE FRACTION

- The LCS exhibited recoveries less than the lower QC limits but greater than 10% for hexachlorocyclopentadiene and 3,3'-dichlorobenzidine. The associated non-detected results for these compounds were qualified biased low (UL).
- The internal standard compound perylene-d12 exhibited a recovery less than the QC limit of 50% for sample WOD-MW3. The non-detected results for the compounds quantified from this internal standard compound were qualified as estimated (UJ).
- Positive results reported at concentrations less than the quantitation limit were qualified estimated, (J).

NOTES

Bromomethane, chloroethane, trichlorofluoromethane, and MTBE, exhibited recoveries outside the QC limits for the aqueous MS/MSD sample in the volatile fraction. No action was taken on this data alone.

The aqueous LCS recoveries for 4-chloroaniline and N-nitrosodiphenylamine exceeded the upper QC limits for the semivolatile fraction. No action was taken because there were no positive results for these compounds.

Isophorone, 2,4-dimethylphenol, 4-chloroaniline, 4-nitroaniline, N-nitrosodiphenylamine, and 3,3-dichlorobenzidine, were outside the QC limits for the aqueous MS/MSD sample in the semivolatile fraction. No action was taken on this data alone. However, the 2,4-dimethylphenol and 3,3'-dichlorobenzidine recoveries were also low in the LCS which was used as the basis for qualifications.

No contaminants were detected in the laboratory blanks for the semivolatile or PCB fractions.

EXECUTIVE SUMMARY

Laboratory Performance: Two compounds were detected in the volatile method blank. Three compound recoveries were less than the QC limits for the semivolatile LCS. The laboratory used the PCB extract to analyze for semivolatile compounds for one sample. The acidic and basic target analytes were rejected and the neutral analytes were qualified as estimated.

Other Factors Affecting Data Quality: Two compounds were detected in the trip blank. One sample exhibited a low internal standard recovery.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Organic Analyses ", as amended for use within EPA Region 3 (9/94), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

DATA SUMMARY OF VOLATILE ORGANIC COMPOUND RESULTS
SDG B0420 - AQUEOUS AND SOIL SAMPLES
WALLOPS FLIGHT FACILITY, WALLOPS ISLAND, VIRGINIA

Data Qualifiers:
B -- Positive result is considered to be an artifact of blank contamination, and should not be considered present.
J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).
U -- Value is a non-detected result as reported by the laboratory.
UL -- Non-detected result is considered biased low due to exceedance of technical quality control criteria.
NA -- Not applicable.

Database source file: S:\RITCHIEM\WALLOPS ISLAND\FTA\B0420\PCB_B0420.DBF data retrieved on: 05/14/03

Qualifier Codes:

a = Lab Blank Contamination
b = Field Blank Contamination
c = Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d = MS/MSD Noncompliance
e = LSC/LSCD Noncompliance
f = Laboratory Duplicate Imprecision
g = Field Duplicate Imprecision
h = Holding Time Exceedance
i = ICP Serial Dilution Noncompliance
j = GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k = ICP Interference – include ICSAB %Rs
l = Instrument Calibration Range Exceedance
m = Sample Preservation
n = Internal Standard Noncompliance
o = Poor Instrument Performance (i.e. baseline drifting)
p = Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q = Other Problems (can encompass of number of issues)
r = Surrogates Recovery Noncompliance
s = Pesticide/PCB Resolution
t = % Breakdown Noncompliance for DDT and Endrin
u = Pesticide/PCB % Difference Between Columns for Positive Results
v = Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for twelve aqueous samples that were collected on March 12, 2003, and received at Mitkem on March 13, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of marginally high recovery of bromofluorobenzene in WFF15GW1MS and WFF15GW1MSD.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of low recovery of dichlorodifluoromethane in both V5KLCS and V5KLCSDE. Replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF15GW1. Spike recoveries were within the QC limits with the exception of high recovery of bromomethane, choroethane and trichlorofluoromethaneand and low recovery of methyl tert-butyl ether in the matrix spike and high recovery of vinyl chloride, bromomethane, choroethane and trichlorofluoromethaneand and low recovery of methyl tert-butyl ether in the matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of the following: low recovery of 2,4-dimethylphenol, hexachlorcylcopentadiene and 3,3'-dichlorobenzidine and high recovery of4-chloroaniline and 4,6-dinitro-2-methylphenol.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF15GW1. Spike recoveries were within the QC limits with the exception of high recovery of isophorone, 4-chloroaniline and N-nitrosodiphenylamine, low recovery of 2,4-dimethylphenol and 4-nitroaniline and no recovery of 3,3'-dichlorobenzidine in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: sample FF16GW2D was lost during sample prep. Due to insufficient sample volume, the sample could not be re-extracted. The PCB extract was analyzed to evaluate semivolatile compounds. Only raw data is submitted for sample FF16GW2D for the semivolatile analysis. Form Is, chromatogram and quant report for this sample is included following the SDG Narrative. The PCB sample was extracted at neutral pH and night not be amenable to acidic phenolic target analytes. No other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF15GW1. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WFF15GW1. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF15GW1. Replicate RPDs were within the QC limits with the exception of aluminum. Form 1's are flagged with an "*" for aluminum.

Sample analysis: manganese was outside of QC limits for the serial dilution. Form 1's are flagged with an "E" for manganese. No other unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Matrix spike: matrix spike was performed on sample FF16GW2 instead of sample WFF15GW1 due to insufficient sample volume. Spike recovery was within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF15GW1. Replicate RPD was within QC limits.

Sample analysis: no other unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

WOD-WFF15-GW2	WOD-WFF16-GW2S
WOD-WFF16-GW2D	TB-031203

OVERVIEW

The sample set for the Fire Training Area and Waste Oil Dump – NASA Wallops Island, Virginia, SDG B0420, consists of one soil environmental sample (designated FTA-), five aqueous environmental samples (designated WOD-), and one trip blank (designated TB-). The trip blank was analyzed for target compound list (TCL) volatiles, the aqueous environmental samples were analyzed for TCL volatiles, semivolatiles, and polychlorinated biphenyls (PCBs). The soil sample was analyzed for TCL volatiles and PCBs. No field duplicate pairs were included in this SDG.

The samples were collected by Tetra Tech NUS on March 12, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Methods 8260B for volatiles, 8270C for semivolatiles, and 8082 for PCBs.

SUMMARY

All compounds were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until extraction and analysis, GC/MS instrument tuning, GC chromatographic performance tests, initial/continuing calibrations, laboratory and field quality control (QC) blank results, surrogate spike recoveries, Internal Standard (IS) areas, Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries, Laboratory Control Spike/Laboratory Control Spike Duplicate (LCS/LCSD) recoveries, field duplicate results, compound identification, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below as follows:

MAJOR PROBLEMS

- Due to limited sample volume for sample WOD-WFF16-GW2D, the PCB extract was analyzed to evaluate the semivolatile compounds. The sample was extracted at a neutral pH, therefore, the

non-detected results for acidic phenolic target analytes and basic anilines and amine-substituted analytes were rejected (UR). The neutral analytes were qualified as estimated (UJ). No semivolatile surrogate standards were present in the extract, but the GC analysis that was also performed on the same extract revealed PCB fraction surrogate recoveries within control limits. Internal standards recoveries were within QC limits.

- The semivolatile LCS exhibited recoveries less than 10% for 2,4-dimethylphenol. Non-detected reuslts were qualified rejected (UR).

MINOR PROBLEMS

VOLATILE FRACTION

- The following table summarizes the compounds detected as contaminants in the laboratory blanks or field QC blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level (aqueous)	Action Level (soil)
Acetone*	2 ug/L	20 ug/L	NA
Acetone	7 ug/kg	NA	70 ug/kg
Methylene Chloride*	8 ug/L	80 ug/L	80 ug/kg

* - Indicates compound was detected at a maximum level in a field QC blank.

Samples affected: The action levels apply to the aqueous and soil environmental samples. It should be noted that field QC blanks do not receive qualification based on laboratory blank contamination.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size, percent solids, and dilution factors. Positive results for acetone and methylene chloride in the soil and aqueous samples at concentrations less than their associated blank action levels were qualified as false positives attributable to blank contamination, (B).

- The soil LCS/LCSD recoveries were less than the lower QC limit for dichlorodifluoromethane. The non-detected result for this compound in soil sample FTA-SS-111 was qualified as biased low (UL).
- Positive results reported at concentrations less than the quantitation limit were qualified estimated, (J).

SEMIVOLATILE FRACTION

- The LCS exhibited recoveries less than the lower QC limits but greater than 10% for hexachlorocyclopentadiene and 3,3'-dichlorobenzidine. The associated non-detected results for these compounds were qualified biased low (UL).
- The internal standard compound perylene-d12 exhibited a recovery less than the QC limit of 50% for sample WOD-MW3. The non-detected results for the compounds quantified from this internal standard compound were qualified as estimated (UJ).
- Positive results reported at concentrations less than the quantitation limit were qualified estimated, (J).

NOTES

Bromomethane, chloroethane, trichlorofluoromethane, and MTBE, exhibited recoveries outside the QC limits for the aqueous MS/MSD sample in the volatile fraction. No action was taken on this data alone.

The aqueous LCS recoveries for 4-chloroaniline and N-nitrosodiphenylamine exceeded the upper QC limits for the semivolatile fraction. No action was taken because there were no positive results for these compounds.

Isophorone, 2,4-dimethylphenol, 4-chloroaniline, 4-nitroaniline, N-nitrosodiphenylamine, and 3,3-dichlorobenzidine, were outside the QC limits for the aqueous MS/MSD sample in the semivolatile fraction. No action was taken on this data alone. However, the 2,4-dimethylphenol and 3,3'-dichlorobenzidine recoveries were also low in the LCS which was used as the basis for qualifications.

No contaminants were detected in the laboratory blanks for the semivolatile or PCB fractions.

EXECUTIVE SUMMARY

Laboratory Performance: Two compounds were detected in the volatile method blank. Three compound recoveries were less than the QC limits for the semivolatile LCS. The laboratory used the PCB extract to analyze for semivolatile compounds for one sample. The acidic and basic target analytes were rejected and the neutral analytes were qualified as estimated.

Other Factors Affecting Data Quality: Two compounds were detected in the trip blank. One sample exhibited a low internal standard recovery.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Organic Analyses ", as amended for use within EPA Region 3 (9/94), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

DATA SUMMARY OF VOLATILE ORGANIC COMPOUND RESULTS
SDG B0420 - AQUEOUS AND SOIL SAMPLES
WALLOPS FLIGHT FACILITY, WALLOPS ISLAND, VIRGINIA

Data Qualifiers:
B -- Positive result is considered to be an artifact of blank contamination, and should not be considered present.
J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).
U -- Value is a non-detected result as reported by the laboratory.
UL -- Non-detected result is considered biased low due to exceedance of technical quality control criteria.
NA -- Not applicable.

Qualifier Codes:

a = Lab Blank Contamination
b = Field Blank Contamination
c = Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d = MS/MSD Noncompliance
e = LSC/LSCD Noncompliance
f = Laboratory Duplicate Imprecision
g = Field Duplicate Imprecision
h = Holding Time Exceedance
i = ICP Serial Dilution Noncompliance
j = GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k = ICP Interference – include ICSAB %Rs
l = Instrument Calibration Range Exceedance
m = Sample Preservation
n = Internal Standard Noncompliance
o = Poor Instrument Performance (i.e. baseline drifting)
p = Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q = Other Problems (can encompass of number of issues)
r = Surrogates Recovery Noncompliance
s = Pesticide/PCB Resolution
t = % Breakdown Noncompliance for DDT and Endrin
u = Pesticide/PCB % Difference Between Columns for Positive Results
v = Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for twelve aqueous samples that were collected on March 12, 2003, and received at Mitkem on March 13, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of marginally high recovery of bromofluorobenzene in WFF15GW1MS and WFF15GW1MSD.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of low recovery of dichlorodifluoromethane in both V5KLCS and V5KLCSDE. Replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF15GW1. Spike recoveries were within the QC limits with the exception of high recovery of bromomethane, choroethane and trichlorofluoromethaneand and low recovery of methyl tert-butyl ether in the matrix spike and high recovery of vinyl chloride, bromomethane, choroethane and trichlorofluoromethaneand and low recovery of methyl tert-butyl ether in the matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of the following: low recovery of 2,4-dimethylphenol, hexachlorcylcopentadiene and 3,3'-dichlorobenzidine and high recovery of4-chloroaniline and 4,6-dinitro-2-methylphenol.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF15GW1. Spike recoveries were within the QC limits with the exception of high recovery of isophorone, 4-chloroaniline and N-nitrosodiphenylamine, low recovery of 2,4-dimethylphenol and 4-nitroaniline and no recovery of 3,3'-dichlorobenzidine in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: sample FF16GW2D was lost during sample prep. Due to insufficient sample volume, the sample could not be re-extracted. The PCB extract was analyzed to evaluate semivolatile compounds. Only raw data is submitted for sample FF16GW2D for the semivolatile analysis. Form Is, chromatogram and quant report for this sample is included following the SDG Narrative. The PCB sample was extracted at neutral pH and night not be amenable to acidic phenolic target analytes. No other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF15GW1. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WFF15GW1. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF15GW1. Replicate RPDs were within the QC limits with the exception of aluminum. Form 1's are flagged with an "*" for aluminum.

Sample analysis: manganese was outside of QC limits for the serial dilution. Form 1's are flagged with an "E" for manganese. No other unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Matrix spike: matrix spike was performed on sample FF16GW2 instead of sample WFF15GW1 due to insufficient sample volume. Spike recovery was within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF15GW1. Replicate RPD was within QC limits.

Sample analysis: no other unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

SUBJECT: INORGANIC DATA REVIEW – TAL METALS
WASTE OIL DUMP – NASA WALLOPS ISLAND, VIRGINIA
SDG B0420

SAMPLES: 10/Aqueous/

WOD-MW3	WOD-WFF16-GW2D	WOD-WFF16-GW2S
WOD-MW3F	WOD-WFF16-GW2DF	WOD-WFF16-GW2SF
WOD-WFF15-GW2	WOD-WFF15-GW1	
WOD-WFF15-GW2F	WOD-WFF15-GW1F	

OVERVIEW

The sample set for the Waste Oil Dump – NASA Wallops Island, Virginia, SDG B0420 consists of 10 aqueous environmental samples (designated WOD-). All samples were analyzed for TAL metals. No field duplicate pairs were included in this SDG. No field quality control (QC) blanks were included in this SDG.

The samples were collected by Tetra Tech NUS on March 12, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Method 6010B and 7470A.

SUMMARY

All analytes were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, initial/continuing calibrations, laboratory and field quality control (QC) blank results, field duplicate results, matrix spikes (MS), laboratory control spikes (LCS), laboratory duplicates, interference check solutions, and detection limits.

MINOR PROBLEMS

- The following table summarizes the analytes detected as contaminants in the laboratory blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level
Aluminum	70 ug/L	350 ug/L
Antimony	6.2 ug/L	31 ug/L
Barium	5.9 ug/L	29.5 ug/L

Analyte	Maximum Concentration	Action Level
Beryllium	0.6 ug/L	3 ug/L
Chromium	1 ug/L	5 ug/L
Cobalt	1.9 ug/L	9.5 ug/L
Copper	6.2 ug/L	31 ug/L
Iron	28.7 ug/L	143.5 ug/L
Magnesium	115.9 ug/L	579.5 ug/L
Manganese	1.6 ug/L	8 ug/L
Nickel	2.3 ug/L	11.5 ug/L
Potassium	79.9 ug/L	400 ug/L
Thallium	3 ug/L	15 ug/L
Vanadium	1.3 ug/L	6.5 ug/L
Zinc	17.4 ug/L	86.8 ug/L

Samples affected: The action levels apply to all environmental samples.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size and dilution factors. Positive results for aluminum, antimony, barium, chromium, cobalt, copper, iron, manganese, nickel, vanadium, and zinc in samples at concentrations less than their associated blank action levels were qualified as false positives attributable to blank contamination, (B). No qualifications were required for beryllium, magnesium, and potassium because all concentrations exceeded the associated blank action levels or were non-detected.

- Arsenic, barium, cadmium, chromium, copper, lead, silver, thallium, and zinc were detected in ICP analysis of the Interference Check Solution (ICS) A, which is prepared from a certified source and should not contain low level analytes other than the primary mineral interferents, aluminum, calcium, iron, and magnesium. This indicates the potential for false positive spectral interferences if there are elevated sample concentrations of the primary minerals noted above. For cadmium and silver in samples WOD-WFF16-GW2D and WOD-WFF16-GW2DF, when the observed result was greater than the expected level of interference but the concentration was not more than 10 times the expected interference, such results were qualified as biased high (K). Qualification was superseded by the qualifier (B) for blank contamination for chromium and copper in these samples.

- Antimony, manganese, selenium, and vanadium exhibited negative concentrations with absolute values greater than the IDL in ICS solution A, which indicates the potential for negative bias to an extent that depends on the sample mineral concentrations. For selenium and vanadium in samples WOD-WFF16-GW2D and WOD-WFF16-GW2DF, when the detection limit was greater than the absolute value of the negative interference, but the detection limit was not more than 10 times the expected interference value affected non-detected results were qualified as biased low (UL). For positive antimony results in samples WOD-WFF16-GW2D and WOD-WFF16-GW2DF, the sample concentrations were greater than the predicted magnitude of negative interference but the concentration was not more than 10 times the expected interference, such a result was qualified as biased low, however, qualification was superceded by the qualifier (B) for blank contamination.

- For aluminum the difference in laboratory duplicate concentrations in sample WOD-WFF15-GW1D exceeded the control limits for results less than 5X the CRDL. The absolute difference of the duplicate results exceeded 2X the CRDL. The positive aluminum results for all associated samples were qualified estimated (J), unless superceded by (B) for blank contamination.
- For manganese the percent difference (%D) in ICP serial dilution concentrations in sample WOD-WFF15-GW1D exceeded the QC limit of 10%. The positive manganese results for all associated samples were qualified estimated (J), unless superceded by (B) for blank contamination.

NOTES

The laboratory was contacted regarding true concentrations for ICS solution A because these values were not reported on Form 4 in the data package. The laboratory stated that no detectable metals are reportedly present in the commercially-purchased ICS solution A except the primary interferent metals.

EXECUTIVE SUMMARY

Laboratory Performance: Several contaminants were detected in the laboratory blanks. Associated sample results were qualified (B) to indicate artifacts of blank contamination. Several analytes were detected in ICS solution A that should not be detected and negative readings occurred for some metals. Data were qualified as biased high (K) and biased low (UL). ICS Form IV did not indicate whether solution A true values were non-detected versus not analyzed.

Other Factors Affecting Data Quality: Laboratory duplicate concentrations exceeded QC limits for one analyte. The percent difference for the ICP serial dilution exceeded QC limits for one analyte.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

DATA SUMMARY OF INORGANIC RESULTS
SDG B0420 - AQUEOUS SAMPLES
WALLOPS FLIGHT FACILITY, WALLOPS ISLAND, VIRGINIA

Data Qualifiers:
B -- Positive result is considered to be an artifact of blank contamination, and should not be considered present.
J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).
K -- Positive result is considered biased high due to exceedance of technical quality control criteria.
U -- Value is a non-detected result as reported by the laboratory.
UL -- Non-detected result is considered biased low due to exceedance of technical quality control criteria.

Database source file: S:\RITCHIEM\WALLOPS ISLAND\FTA\B0420\M_B0420.DBF data retrieved on: 05/14/03

Qualifier Codes:

a	=	Lab Blank Contamination
b	=	Field Blank Contamination
c	=	Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d	=	MS/MSD Noncompliance
e	=	LSC/LSCD Noncompliance
f	=	Laboratory Duplicate Imprecision
g	=	Field Duplicate Imprecision
h	=	Holding Time Exceedance
i	=	ICP Serial Dilution Noncompliance
j	=	GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k	=	ICP Interference – include ICSAB %Rs
l	=	Instrument Calibration Range Exceedance
m	=	Sample Preservation
n	=	Internal Standard Noncompliance
o	=	Poor Instrument Performance (i.e. baseline drifting)
p	=	Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q	=	Other Problems (can encompass of number of issues)
r	=	Surrogates Recovery Noncompliance
s	=	Pesticide/PCB Resolution
t	=	% Breakdown Noncompliance for DDT and Endrin
u	=	Pesticide/PCB % Difference Between Columns for Positive Results
v	=	Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for twelve aqueous samples that were collected on March 12, 2003, and received at Mitkem on March 13, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of marginally high recovery of bromofluorobenzene in WFF15GW1MS and WFF15GW1MSD.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of low recovery of dichlorodifluoromethane in both V5KLCS and V5KLCSDE. Replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF15GW1. Spike recoveries were within the QC limits with the exception of high recovery of bromomethane, choroethane and trichlorofluoromethaneand and low recovery of methyl tert-butyl ether in the matrix spike and high recovery of vinyl chloride, bromomethane, choroethane and trichlorofluoromethaneand and low recovery of methyl tert-butyl ether in the matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of the following: low recovery of 2,4-dimethylphenol, hexachlorcylcopentadiene and 3,3'-dichlorobenzidine and high recovery of4-chloroaniline and 4,6-dinitro-2-methylphenol.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF15GW1. Spike recoveries were within the QC limits with the exception of high recovery of isophorone, 4-chloroaniline and N-nitrosodiphenylamine, low recovery of 2,4-dimethylphenol and 4-nitroaniline and no recovery of 3,3"-dichlorobenzidine in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: sample FF16GW2D was lost during sample prep. Due to insufficient sample volume, the sample could not be re-extracted. The PCB extract was analyzed to evaluate semivolatile compounds. Only raw data is submitted for sample FF16GW2D for the semivolatile analysis. Form Is, chromatogram and quant report for this sample is included following the SDG Narrative. The PCB sample was extracted at neutral pH and night not be amenable to acidic phenolic target analytes. No other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF15GW1. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WFF15GW1. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF15GW1. Replicate RPDs were within the QC limits with the exception of aluminum. Form 1's are flagged with an "*" for aluminum.

Sample analysis: manganese was outside of QC limits for the serial dilution. Form 1's are flagged with an "E" for manganese. No other unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Matrix spike: matrix spike was performed on sample FF16GW2 instead of sample WFF15GW1 due to insufficient sample volume. Spike recovery was within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF15GW1. Replicate RPD was within QC limits.

Sample analysis: no other unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

SUBJECT: WET CHEMISTRY DATA REVIEW – TOC, CHLORIDE, NITRATE, NITRITE, AND SULFATE
WASTE OIL DUMP – NASA WALLOPS ISLAND, VIRGINIA
SDG B0420

SAMPLES: 5/Aqueous/

WOD-MW3	WOD-WFF15-GW1
WOD-WFF15-GW2	WOD-WFF16-GW2S
WOD-WFF16-GW2D	

OVERVIEW

The sample set for the Waste Oil Dump – NASA Wallops Island, Virginia, SDG B0420 consists of 5 aqueous environmental samples (designated WOD-). All samples were analyzed for Total Organic Carbon (TOC), chloride, nitrate, nitrite, and sulfate. No field duplicate pairs were included in this SDG.

The samples were collected by Tetra Tech NUS on March 12, 2003. TOC samples were analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island. Chloride, nitrate, nitrite, and sulfate were analyzed by STL Connecticut of Shelton, Connecticut.

TOC analyses were conducted using EPA Method 415.1. Chloride, nitrate, nitrite, and sulfate analyses were conducted using EPA Method 300.0.

SUMMARY

All analytes were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, initial/continuing calibrations, laboratory and field quality control (QC) blank results, field duplicate results, matrix spikes (MS), laboratory control spikes (LCS), laboratory duplicates, and detection limits.

Areas of concern with respect to data quality are listed below as follows:

MINOR PROBLEMS

- The nitrate and nitrite samples were analyzed one day outside the 48 hour holding time. The results and detection limits for nitrate and nitrite were qualified estimated (J/UJ).

NOTES

The following table summarizes the analytes detected as contaminants in the laboratory blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level
Sulfate	0.031 mg/L	0.155 mg/L

Samples affected: The action levels apply to all environmental samples.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size and dilution factors. No qualifications were required for sulfate because all concentrations exceeded the associated blank action levels.

The TOC data were acceptable as reported by the laboratory.

EXECUTIVE SUMMARY

Laboratory Performance: Sulfate was detected in a laboratory blank. Nitrate and nitrite fractions were analyzed outside holding times.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for twelve aqueous samples that were collected on March 12, 2003, and received at Mitkem on March 13, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of marginally high recovery of bromofluorobenzene in WFF15GW1MS and WFF15GW1MSD.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of low recovery of dichlorodifluoromethane in both V5KLCS and V5KLCSDE. Replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF15GW1. Spike recoveries were within the QC limits with the exception of high recovery of bromomethane, choroethane and trichlorofluoromethaneand and low recovery of methyl tert-butyl ether in the matrix spike and high recovery of vinyl chloride, bromomethane, choroethane and trichlorofluoromethaneand and low recovery of methyl tert-butyl ether in the matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of the following: low recovery of 2,4-dimethylphenol, hexachlorcylcopentadiene and 3,3'-dichlorobenzidine and high recovery of4-chloroaniline and 4,6-dinitro-2-methylphenol.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF15GW1. Spike recoveries were within the QC limits with the exception of high recovery of isophorone, 4-chloroaniline and N-nitrosodiphenylamine, low recovery of 2,4-dimethylphenol and 4-nitroaniline and no recovery of 3,3'-dichlorobenzidine in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: sample FF16GW2D was lost during sample prep. Due to insufficient sample volume, the sample could not be re-extracted. The PCB extract was analyzed to evaluate semivolatile compounds. Only raw data is submitted for sample FF16GW2D for the semivolatile analysis. Form Is, chromatogram and quant report for this sample is included following the SDG Narrative. The PCB sample was extracted at neutral pH and night not be amenable to acidic phenolic target analytes. No other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF15GW1. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WFF15GW1. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF15GW1. Replicate RPDs were within the QC limits with the exception of aluminum. Form 1's are flagged with an "*" for aluminum.

Sample analysis: manganese was outside of QC limits for the serial dilution. Form 1's are flagged with an "E" for manganese. No other unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Matrix spike: matrix spike was performed on sample FF16GW2 instead of sample WFF15GW1 due to insufficient sample volume. Spike recovery was within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF15GW1. Replicate RPD was within QC limits.

Sample analysis: no other unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature. All samples were received at STL out of hold for nitrate and nitrite analysis. Client was contacted and authorized the analyses to be done out of hold.

Classical Chemistry - Listed below are the wet chemistry analyte methods and references for the samples analyzed in this SDG. No analytical problems were encountered.

Analyte	Method	Reference
Chloride	300.0	1
Nitrate	300.0	1
Nitrite	300.0	1
Sulfate	300.0	1

Tetra Tech NUS **INTERNAL CORRESPONDENCE**

TO: **G. GLENN** **DATE:** **MAY 19, 2003**

FROM: **BERNARD F SPADA III** **COPIES:** **DV FILE**

SUBJECT: **ORGANIC DATA VALIDATION- VOC/SVOC/PCB**
CTO 848, NASA WALLOPS ISLAND
SDG B0423

SAMPLES: 7/Aqueous

FTA-MW-101S	FTA-MW-111S	FTA-WFF14-GW3
FTA-WFF14-GW4	FTA-WFF14-GW5	TB-031303*
WOD-WFF16-GW5		

Overview

The sample set for CTO 848 NASA Wallops Island, SDG B0439 consists of one (1) trip blank, one (1) field duplicate, and five (5) environmental aqueous samples. The environmental samples and field duplicate were all analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), and polychlorinated biphenyls (PCB). The trip blank denoted with an asterisk (*) was analyzed for VOC only. The field duplicate pair included in this SDG is FTA-MW-101S and FTA-MW-111S.

The samples were collected by Tetra Tech NUS on March 13, 2003 and analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, and 8082 analytical and reporting protocols.

All samples were successfully analyzed. The findings offered in this report are based upon a general review of all available data including: data completeness, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation and detection limits. Areas of concern are listed below.

Major

- The semivolatile blank spike was below the percent recovery (and was <10%) quality control criteria for 2,4-dimethylphenol. All results for 2,4-dimethylphenol were rejected (UR).

- The semivolatile matrix spike/matrix spike duplicate (MS/MSD) of sample FTA-WFF14-GW3 had 0% recovery of 3,3'-dichlorobenzidine. The result for 3,3'-dichlorobenzidine was rejected in the un-spiked sample.

Minor

- The following compound was detected in the method blank:

Compound	Maximum Concentration	Blank Action Level
Methylene chloride	1.0 ug/L	10 ug/L

Sample aliquot and dilution factors were taken into consideration when applying the blank action levels. No qualifications were made on this basis. The trip blank was not qualified for method blank contamination.

- The semivolatile blank spike was below the percent recovery quality control criteria for hexachlorocyclopentadiene, 3,3'-dichlorobenzidine, and 3-nitroaniline. All results for the aforementioned compounds were qualified as estimated (UJ). The result for 3,3'-dichlorobenzidine in sample FTA-WFF14-GW3 was not qualified on this basis because it was rejected (UR) for MS recovery non-compliance.

- The semivolatile internal standard 1,4-dichlorobenzene-d4 was below the -50% recovery quality control criteria in sample FTA-MW101S. The results for phenol, bis(2-chloroethyl)ether, 2-chlorophenol, 2-methylphenol, 2,2'-oxybis(1-chloropropane), 4-methylphenol, hexachloroethane, and N-nitroso-di-n-propylamine were qualified as estimated in sample FTA-MW101S.

- The laboratory mistakenly logged in all PCB samples for SVOC analysis. Because of this error the PCB samples were extracted as semivolatiles. The laboratory attempted to exchange the sample extracts into hexane and analyze for PCBs. The recovery of all surrogates analyzed in this fashion was 0% in all samples. The laboratory then extracted the samples outside the analytical holding time and analyzed for PCBs. The second extraction and analyses were designated "RE". The "RE" samples were used for validation and qualified as estimated (UJ) due to holding time non-compliance.

- Positive results reported below the RL and above the MDL were qualified as estimated (J) due to uncertainty near the detection limit.

Notes

The laboratory misnamed several samples in the EDD compared to the COC for the organics fractions. The laboratory re-submitted the EDD with the correct sample names upon request.

There were several inconsistencies between the compound lists in the statement of work (SOW) and the results submitted by the laboratory. No action was taken on this basis because the project office approved the variance from the SOW.

The volatile initial calibration performed on March 23 exceeded the 30% (but was <50%) relative percent difference (RPD) quality control criteria for carbon disulfide. No qualifications were made on this basis because the results for carbon disulfide were non-detected.

The volatile continuing calibration performed on March 25 at 08:27 exceeded the 25% (but was <50%) difference quality control criteria for dichlorodifluoromethane. No qualifications were made on this basis because the results for dichlorodifluoromethane were non-detected.

The semivolatile continuing calibration performed on April 12 at 14:32 exceeded the 25% (but was <50%) percent difference quality control criteria for 4-chloroaniline and 3-nitroaniline. No qualifications were made on this basis because the results for the aforementioned compounds were non-detected.

The semivolatile blank spike exceeded the laboratory's percent recovery quality control criteria for 4-chloroaniline and N-nitrosodiphenylamine. No qualifications were made on this basis because the results for the aforementioned compounds were non-detected.

The semivolatile MS/MSD exceeded the percent recovery quality control criteria for several compounds. No qualifications were made on this basis because all results in the un-spiked sample were non-detected.

The semivolatile MS/MSD was below the percent recovery quality control criteria for 2,4-dimethylphenol, hexachlorocyclopentadiene, and 3-nitroaniline. No qualifications were made on this basis because all the

aforementioned compounds were previously qualified for blank spike recovery non-compliance.

The PCB continuing calibration performed on March 31 at 12:30 exceeded the 15% difference quality control criteria for aroclor 1260 on the RTXCLPPEST 2 column. No qualifications were made on this basis because the RTXCLPPEST column was compliant.

Acetone and methylene chloride were reported in the trip blank. No qualifications were made on this basis.

Executive Summary

Laboratory Performance: Qualifications were made based on blank spike recovery non-compliances, internal standard non-compliances, holding time non-compliances, and MS/MSD recovery non-compliances.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to U.S. EPA National Functional Guidelines for Data Validation as modified by EPA Region III (9/94) and the NFESC guidelines entitled Navy IRCDQM (Sept. 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

MITKEM CORPORATION

"Environmental Testing For The New Millennium"

April 22, 2003

Tetra Tech NUS, Inc.
600 Clark Avenue
King of Prussia, PA 19406
Attn: Mr. Garth Glenn

RE: Client Project: CTO – 848, NASA Wallops Flight Facility
Mitkem Lab Project # B0423

Dear Mr. Glenn:

Enclosed please find the data report of the required analyses for the samples associated with the above referenced project.

If you have any questions regarding this report, please call me.

We appreciate your business.

Sincerely,

Agnes R. Ng
CLP Project Manager

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0423

Mitkem Project ID: B0423

April 22, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for thirteen aqueous samples that were collected on March 13, 2003, and received at Mitkem on March 14, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF14GW3. Spike recoveries and replicate RPDs were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of the following: low recovery of 2,4-dimethylphenol, hexachlorcylcopentadiene and 3,3'-dichlorobenzidine and high recovery of4-chloroaniline and 4,6-dinitro-2-methylphenol.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF14GW3. Spike recoveries were within the QC limits with the exception of several compounds in both the matrix spike and matrix spike duplicate and no recovery of 3,3'-dichlorobenzidine in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits with the exception of 2,4-dimethylphenol.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of no surrogate recovery in method blank BBLK1A and associated samples. Method blank BBLK1A and associated samples were semivolatile sample extracts that were exchanged into hexane and analyzed for PCBs.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: due to login error, samples WFF16GW5, WFF14GW3, WFF14GW5, WFF14GW4, MW101S and MW111S were logged in for aqueous semivolatile analysis and soil PCB analysis. The samples were extracted for semivolatile analysis. The samples were not extracted for PCBs as they were logged in as soil samples, therefore a longer holding time. The semivolatile extracts were exchanged into hexane and analyzed for PCB. The samples were extracted outside of holding time for PCB and designated as "RE" samples. Both sets of data are reported. No other unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WFF14GW3. Spike recoveries were within the QC limits with the exception of antimony. Form 1's are flagged with an "N" flag for antimony. A post digest spike was performed with spike recovery within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF14GW3. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Matrix spike: matrix spike was performed on sample WFF14GW4. Spike recovery was within the QC limits. Matrix spike was performed on WFF14GW4 instead of WFF14GW3 due to limited sample volume.

Matrix duplicate: matrix duplicate was performed on sample WFF14GW3. Replicate RPD was within QC limits.

Sample analysis: no other unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

SUBJECT: **INORGANIC DATA VALIDATION - TAL METALS AND MISCELLANEOUS PARAMETERS**
CTO-848 NASA WALLOPS ISLAND
SAMPLE DELIVERY GROUP (SDG) – B0423

SAMPLES: 6/AQUEOUS/

FTA-MW-101S	FTA-MW-111S	FTA-WFF14-GW3
FTA-WFF14-GW4	FTA-WFF14-GW5	WOD-WFF16-GW5

Overview

The sample set for CTO 848, NASA Wallops Island, SDG B0423, consists of six (6) aqueous environmental samples. One (1) field duplicate pair (FTA-MW-111S / FTA-MW-110S) is included in this SDG.

All samples were analyzed for total and dissolved target analyte list (TAL) metals, chloride, nitrate, nitrite, sulfate, and total organic carbon (TOC). Samples analyzed for filtered metals were appended with the suffix "-F". The samples were collected by Tetra Tech NUS March 13, 2003 and analyzed by Mitkem Corporation under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Chloride, nitrate, nitrite, and sulfate were analyzed by Severn Trent Laboratories Connecticut. Metals analyses except mercury were conducted using SW846 method 6010B. Mercury analyses were conducted using SW846 method 7470A. Chloride, nitrate, nitrite, and sulfate analyses were conducted using EPA method 300. TOC analyses were conducted using EPA method 415.1.

Summary

All analytes were successfully analyzed. The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, calibration data, laboratory method/preparation blanks, interference check sample (ICS) results, matrix spike results, laboratory duplicate results, laboratory control sample (LCS) results, detection limits, and analyte quantitation.

All metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) methodologies. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) methodology.

Minor Problems

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Aluminum	70.0 ug/L	350.0 ug/L
Antimony	6.2 ug/L	31.0 ug/L
Arsenic	3.4 ug/L	17.0 ug/L
Barium	5.9 ug/L	29.5 ug/L
Beryllium	0.6 ug/L	3.0 ug/L
Chromium	1.0 ug/L	5.0 ug/L
Cobalt	1.9 ug/L	9.5 ug/L
Copper	6.2 ug/L	31.0 ug/L
Iron[(1)]	31.467 ug/L	157.335 ug/L
Magnesium[(1)]	130.375 ug/L	651.875 ug/L
Manganese[(1)]	2.02 ug/L	10.1 ug/L
Nickel	2.3 ug/L	11.5 ug/L
Potassium	79.9 ug/L	399.5 ug/L
Thallium	3.0 ug/L	15.0 ug/L
Vanadium	1.3 ug/L	6.5 ug/L
Zinc[(1)]	18.548 ug/L	92.74 ug/L
Sulfate	0.031 mg/L	0.155 mg/L

[(1)] Maximum concentration present in aqueous preparation blank.

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the action level for aluminum, antimony, barium, chromium, cobalt, copper, iron, nickel, vanadium, and zinc were qualified (B) as a result of blank contamination. No validation action was required for the remaining analytes because the results were either greater than the action level or they were nondetects.

Notes

The matrix spike percent recovery (%R) was above the 125% control limit for antimony. However, no qualification action was required because all results were either previously qualified for blank contamination or they were nondetects.

Samples FTA-WFF14-GW3 and FTA-WFF14-GW4 were placed in the database in the filtered metal fraction, but they should have been placed in the unfiltered metal fraction. The data reviewer amended the database.

For metals and TOC, sample FTA-WFF14-GW3 was labeled incorrectly in the database as FTA-WFF14-G4. For TOC, sample FTA-WFF14-GW4 was labeled incorrectly in the database as FTA-MW-111SF. For metals, samples FTA-WFF14-GW5F and WOD-WFF16-GW5F were labeled incorrectly on the Form 1s as FTA-WFF14-GWSF and WOD-WFF16-GWSF, respectively. The data reviewer amended the database for all of these samples.

The data reviewer changed the sample IDs in the filtered fraction with the suffix "F" to "-F".

Contract required detection limit (CRDL) and ICP serial dilution could not be evaluated because the laboratory either did not perform these analyses or did not supply the information for these analyses.

The laboratory did not supply the required information for the interference check standard A (ICSA) on the Form 4; however, these results did not need to be evaluated because the interfering analytes were not present in the environmental samples at significant levels.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method/preparation blanks.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", April 1993 and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

U - Value is a nondetect as reported by the laboratory.

B - Positive result is considered to be an artifact of blank contamination and should not be considered present.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

LABORATORY TEST RESULTS

Job Number: 203237

Date:03/21/2003

CUSTOMER: MITKEM PROJECT: NITRATE SULFATE ATTN: Paul Senecal

Customer Sample ID: B0423-06D
Date Sampled.....: 03/13/2003
Time Sampled.....: 15:50
Sample Matrix.....: Water

Laboratory Sample ID: 203237-5
Date Received.....: 03/15/2003
Time Received.....: 10:45

TEST METHOD	PARAMETER/TEST DESCRIPTION	SAMPLE RESULT	Q	FLAGS	MDL	RL	DILUTION	UNITS	BATCH	DT	DATE/TIME	TECH
300.0	Ion Chromatography Analysis											
	Chloride	3.9			0.15	1.0	1	mg/L	15182		03/15/03 2013	ddm
	Nitrate as N (NO3-N)	1.7			0.002	0.10	1	mg/L	15182		03/15/03 2013	ddm
	Nitrite as N (NO2-N)	ND	U		0.003	0.10	1	mg/L	15182		03/15/03 2013	ddm
	Sulfate	11			0.012	1.0	1	mg/L	15182		03/15/03 2013	ddm

* In Description = Dry Wgt.

Mitkem Corporation

Date: *10-Apr-03*

Client: Tetra Tech NUS, Inc.
Client Sample ID: MW101S
Lab ID: B0423-06
Project: Wallops Island
Collection Date: 03/13/03 15:50

Analyses	Result	Qual	RL	Units	DF	Date Analyzed	Batch ID
TOTAL ORGANIC CARBON BY COMBUSTION			**E415.1 TOC W**				
Organic Carbon, Total	ND		6.0	mg/L	1	03/20/2003 10:10	6239

Qualifiers:
ND - Not Detected at the Reporting Limit
J - Analyte detected below quanititation limits
B - Analyte detected in the associated Method Blank
DF - Dilution Factor
S - Spike Recovery outside accepted recovery limits
R - RPD outside accepted recovery limits
E - Value above quantitation range
RL - Reporting Limit

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0423

Mitkem Project ID: B0423

April 22, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for thirteen aqueous samples that were collected on March 13, 2003, and received at Mitkem on March 14, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF14GW3. Spike recoveries and replicate RPDs were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of the following: low recovery of 2,4-dimethylphenol, hexachlorcylcopentadiene and 3,3'-dichlorobenzidine and high recovery of4-chloroaniline and 4,6-dinitro-2-methylphenol.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF14GW3. Spike recoveries were within the QC limits with the exception of several compounds in both the matrix spike and matrix spike duplicate and no recovery of 3,3'-dichlorobenzidine in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits with the exception of 2,4-dimethylphenol.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of no surrogate recovery in method blank BBLK1A and associated samples. Method blank BBLK1A and associated samples were semivolatile sample extracts that were exchanged into hexane and analyzed for PCBs.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: due to login error, samples WFF16GW5, WFF14GW3, WFF14GW5, WFF14GW4, MW101S and MW111S were logged in for aqueous semivolatile analysis and soil PCB analysis. The samples were extracted for semivolatile analysis. The samples were not extracted for PCBs as they were logged in as soil samples, therefore a longer holding time. The semivolatile extracts were exchanged into hexane and analyzed for PCB. The samples were extracted outside of holding time for PCB and designated as "RE" samples. Both sets of data are reported. No other unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WFF14GW3. Spike recoveries were within the QC limits with the exception of antimony. Form 1's are flagged with an "N" flag for antimony. A post digest spike was performed with spike recovery within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF14GW3. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Matrix spike: matrix spike was performed on sample WFF14GW4. Spike recovery was within the QC limits. Matrix spike was performed on WFF14GW4 instead of WFF14GW3 due to limited sample volume.

Matrix duplicate: matrix duplicate was performed on sample WFF14GW3. Replicate RPD was within QC limits.

Sample analysis: no other unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature. Several samples were received beyond the 48 hour holding time for nitrate and nitrite. STL analyzed them as soon as possible on the day of receipt.

Classical Chemistry - Listed below are the wet chemistry analyte methods and references for the samples analyzed in this SDG. No analytical problems were encountered.

Analyte	Method	Reference
Chloride	300.0	1
Nitrate	300.0	1
Nitrite	300.0	1
Sulfate	300.0	1

References:

1. Methods of Chemical Analysis of Water and Wastes, EPA 600, 1983.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

SUBJECT: ORGANIC DATA REVIEW – VOCS, SVOCS, AND PCBS
WASTE OIL DUMP – NASA WALLOPS ISLAND, VIRGINIA
SDG B0432

SAMPLES: 4/Aqueous/

WOD-WFF15-GW7	RB-031403
WOD-WFF16-GW3	TB-031403

OVERVIEW

The sample set for the Waste Oil Dump – NASA Wallops Island, Virginia, SDG B0432, consists of two aqueous environmental samples (designated WOD-), one rinsate blank (designated RB-), and one trip blank (designated TB-). The trip blank was analyzed for target compound list (TCL) volatiles and all other samples were analyzed for TCL volatiles, semivolatiles, and polychlorinated biphenyls (PCBs). No field duplicate pairs were included in this SDG.

The samples were collected by Tetra Tech NUS on March 14, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Methods 8260B for volatiles, 8270C for semivolatiles, and 8082 for PCBs.

SUMMARY

All compounds, with the exception of acetone, were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until extraction and analysis, GC/MS instrument tuning, GC chromatographic performance tests, initial/continuing calibrations, laboratory and field quality control (QC) blank results, surrogate spike recoveries, Internal Standard (IS) areas, Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries, Laboratory Control Spike/Laboratory Control Spike Duplicate (LCS/LCSD) recoveries, field duplicate results, compound identification, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below as follows:

MAJOR PROBLEMS

VOLATILE FRACTION

- Initial calibration relative response factors (RRFs) for acetone were less than the QC limit of 0.05. The non-detected result for sample WOD-WFF16-GW3 was qualified as rejected (UR). The positive results for samples WOD-WFF15-GW7, RB-031403, and TB-031403 were considered biased low (L), however, data qualification for sample WOD-WFF15-GW7 was based upon a more significant issue (blank qualification).

MINOR PROBLEMS

VOLATILE FRACTION

- The following table summarizes the compounds detected as contaminants in the laboratory blanks or field QC blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level (aqueous)
Acetone*	49 ug/L	490 ug/L
Methylene Chloride*	43 ug/L	430 ug/L

* - Indicates compound was detected at a maximum level in a field QC blank.

Samples affected: The action levels apply to the aqueous environmental samples. It should be noted that field QC blanks do not receive qualification based on laboratory blank contamination.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size, percent solids, and dilution factors. Positive results for acetone in the samples at concentrations less than their associated blank action levels were qualified as false positives attributable to blank contamination, (B). No qualification was required for methylene chloride because there were no positive results in the aqueous environmental samples.

SEMIVOLATILE FRACTION

- The LCS exhibited a recovery less than 10% for 2,4-dimethyphenol. The associated non-detected results were qualified as rejected (UR).
- The LCS exhibited recoveries less than the lower QC limit for hexachlorocyclopentadiene and 3,3'-dichlorobenzidine. The associated non-detected results for these compounds are qualified as biased low (UL).
- Positive results reported at concentrations less than the quantitation limit were qualified estimated, (J).

NOTES

The aqueous LCS for the semivolatile fraction exhibited high recoveries for N-nitrosodiphenylamine and 4-chloroaniline. No action was taken because there were no positive results for these compounds.

No other problems were noted during the review.

EXECUTIVE SUMMARY

Laboratory Performance: Methylene chloride was detected in the method blank. The initial calibration RRF was less than the lower QC limit for one compound in the volatile fraction. Three compound recoveries were less than the lower QC limits for the semivolatile LCS.

Other Factors Affecting Data Quality: Acetone and methylene chloride were detected in the field QC blanks.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Organic Analyses ", as amended for use within EPA Region 3 (9/94), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

SDG B0432 - AQUEOUS SAMPLES
WALLOPS FLIGHT FACILITY, WALLOPS ISLAND, VIRGINIA

Data Qualifiers:
B -- Positive result is considered to be an artifact of blank contamination, and should not be considered present.
L -- Positive result is considered biased low due to exceedance of technical quality control criteria.
U -- Value is a non-detected result as reported by the laboratory.
UR -- Non-detected result is considered unusable due to exceedance of technical quality control criteria.

Database source file: S:\RITCHIEM\WALLOPS ISLAND\WOD\B0432\PCB_B0432.DBF data retrieved on: 05/28/03

Qualifier Codes:

a	=	Lab Blank Contamination
b	=	Field Blank Contamination
c	=	Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d	=	MS/MSD Noncompliance
e	=	LSC/LSCD Noncompliance
f	=	Laboratory Duplicate Imprecision
g	=	Field Duplicate Imprecision
h	=	Holding Time Exceedance
i	=	ICP Serial Dilution Noncompliance
j	=	GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k	=	ICP Interference – include ICSAB %Rs
l	=	Instrument Calibration Range Exceedance
m	=	Sample Preservation
n	=	Internal Standard Noncompliance
o	=	Poor Instrument Performance (i.e. baseline drifting)
p	=	Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q	=	Other Problems (can encompass of number of issues)
r	=	Surrogates Recovery Noncompliance
s	=	Pesticide/PCB Resolution
t	=	% Breakdown Noncompliance for DDT and Endrin
u	=	Pesticide/PCB % Difference Between Columns for Positive Results
v	=	Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for seven aqueous samples that were collected on March 14, 2003, and received at Mitkem on March 15, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussion with the client. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

000001

Lab control sample: spike recoveries were within the QC limits r.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of low recovery of 2,4-dimethylphenol, hexachlorocyclopentadiene and 3,3'-dichlorobenzidine and high recovery of 4-chloroaniline and n-nitrosodiphenylamine, .

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WFF15GW7 for metals except mercury and on sample WFF15GW3 for mercury. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF15GW7 for metals except mercury and on sample WFF15GW3 for mercury. Replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Agnes Ng
CLP Project Manager

TO: G. GLENN **DATE:** MAY 28, 2003

FROM: MEGAN RITCHIE **COPIES:** FILE

SUBJECT: INORGANIC DATA REVIEW – TAL METALS
WASTE OIL DUMP – NASA WALLOPS ISLAND, VIRGINIA
SDG B0432

SAMPLES: 6/Aqueous/

WOD-WFF15-GW7
WOD-WFF15-GW7F
WOD-WFF16-GW3
WOD-WFF16-GW3F
RB-031403
RB-031403F

OVERVIEW

The sample set for the Waste Oil Dump Remedial Investigation – NASA Wallops Island, Virginia, SDG B0432 consists of four aqueous environmental samples (designated WOD-) and two rinsate blanks (designated RB-). All samples were analyzed for TAL metals. No field duplicate pairs was included in this SDG.

The samples were collected by Tetra Tech NUS on March 14, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Method 6010B and 7470A.

SUMMARY

All analytes were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, initial/continuing calibrations, laboratory and field quality control blank results, field duplicate results, compound identification, compound quantitation, and detection limits.

MINOR PROBLEMS

- The following table summarizes the analytes detected as contaminants in the laboratory blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level (Aqueous)
Aluminum	43.8	219
Antimony	4.2	21
Arsenic	3.9	19.5
Barium	4.98	24.9

Analyte	Maximum Concentration	Action Level (Aqueous)
Beryllium	1.4	7
Cadmium	1.94	9.7
Chromium	1.1	5.5
Cobalt	2	10
Copper	21	105
Magnesium	158	790
Manganese	2.66	13.3
Nickel	2.82	14.1
Potassium	89.5	448
Vanadium	1.6	8
Zinc	39.3	196

Samples affected: The action levels apply to all aqueous environmental samples. Field QC blanks are not appropriate to qualify from laboratory blanks during data validation.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size and dilution factors. Positive results for aluminum, arsenic, barium, beryllium, chromium, cobalt, copper, nickel, vanadium, and zinc in samples at concentrations less than their associated blank action levels were qualified as false positives attributable to blank contamination, (B). No qualifications were required for antimony, cadmium, magnesium, manganese, and potassium because all concentrations exceeded the associated blank action levels or were non-detected.

- The LCS percent recovery (%R) for mercury was less than the lower QC limit of 80%. The associated non-detected results were qualified as biased low (UL).

NOTES

The laboratory was contacted regarding true concentrations for ICS solution A because these values were not reported on Form 4 in the data package. The laboratory stated that no detectable metals are reportedly present in the commercially-purchased ICS solution A except the primary interferent metals.

EXECUTIVE SUMMARY

Laboratory Performance: Several contaminants were detected in the laboratory blanks. One analyte recovery was less than the lower QC limit in the LCS. ICS Form IV did not indicate whether solution A true values were non-detected versus not analyzed.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Remove "B" Qualifiers from field QC Blanks

DATA SUMMARY OF INORGANIC RESULTS
SDG B0432 - AQUEOUS SAMPLES
WALLOPS FLIGHT FACILITY, WALLOPS ISLAND, VIRGINIA

Data Qualifiers:

B -- Positive result is considered to be an artifact of blank contamination, and should not be considered present.

U -- Value is a non-detected result as reported by the laboratory.

UL -- Non-detected result is considered biased low due to exceedance of technical quality control criteria.

Database source file: S:\RITCHIEM\WALLOPS ISLAND\WOD\B0432\M_B0432.DBF data retrieved on: 05/28/03

Qualifier Codes:

a	=	Lab Blank Contamination
b	=	Field Blank Contamination
c	=	Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d	=	MS/MSD Noncompliance
e	=	LSC/LSCD Noncompliance
f	=	Laboratory Duplicate Imprecision
g	=	Field Duplicate Imprecision
h	=	Holding Time Exceedance
i	=	ICP Serial Dilution Noncompliance
j	=	GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k	=	ICP Interference – include ICSAB %Rs
l	=	Instrument Calibration Range Exceedance
m	=	Sample Preservation
n	=	Internal Standard Noncompliance
o	=	Poor Instrument Performance (i.e. baseline drifting)
p	=	Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q	=	Other Problems (can encompass of number of issues)
r	=	Surrogates Recovery Noncompliance
s	=	Pesticide/PCB Resolution
t	=	% Breakdown Noncompliance for DDT and Endrin
u	=	Pesticide/PCB % Difference Between Columns for Positive Results
v	=	Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for seven aqueous samples that were collected on March 14, 2003, and received at Mitkem on March 15, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussion with the client. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

000001

Lab control sample: spike recoveries were within the QC limits r.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of low recovery of 2,4-dimethylphenol, hexachlorocyclopentadiene and 3,3'-dichlorobenzidine and high recovery of 4-chloroaniline and n-nitrosodiphenylamine, .

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WFF15GW7 for metals except mercury and on sample WFF15GW3 for mercury. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF15GW7 for metals except mercury and on sample WFF15GW3 for mercury. Replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

TO: G. GLENN **DATE:** MAY 28, 2003

FROM: MEGAN RITCHIE **COPIES:** FILE

SUBJECT: WET CHEMISTRY DATA REVIEW – TOC, CHLORIDE, NITRATE, NITRITE, AND SULFATE
WASTE OIL DUMP – NASA WALLOPS ISLAND, VIRGINIA
SDG B0432

SAMPLES: 3/Aqueous/

WOD-WFF15-GW7
WOD-WFF16-GW3
RB-031403

OVERVIEW

The sample set for the Waste Oil Dump – NASA Wallops Island, Virginia, SDG B0432 consists of 2 aqueous environmental samples (designated WOD-) and one rinsate blank (designated RB-). All samples were analyzed for Total Organic Carbon (TOC), chloride, nitrate, nitrite, and sulfate. No field duplicate pairs were included in this SDG.

The samples were collected by Tetra Tech NUS on March 14, 2003. TOC samples were analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island. Chloride, nitrate, nitrite, and sulfate were analyzed by STL Connecticut of Shelton, Connecticut.

TOC analyses were conducted using EPA Method 415.1. Chloride, nitrate, nitrite, and sulfate analyses were conducted using EPA Method 300.0.

SUMMARY

All analytes were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, initial/continuing calibrations, laboratory and field quality control (QC) blank results, field duplicate results, matrix spikes (MS), laboratory control spikes (LCS), laboratory duplicates, and detection limits.

Areas of concern with respect to data quality are listed below as follows:

MINOR PROBLEMS

- The nitrate and nitrite samples were analyzed two days outside the 48 hour holding time. The results and detection limits for nitrate and nitrite were qualified estimated (J/UJ).

NOTES

The following table summarizes the analytes detected as contaminants in the laboratory blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level
Sulfate	0.34 mg/L	1.7 mg/L

Samples affected: The action levels apply to all environmental samples.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size and dilution factors. No qualifications were required for sulfate because all concentrations exceeded the associated blank action levels.

EXECUTIVE SUMMARY

Laboratory Performance: Sulfate was detected in a laboratory blank. Nitrate and nitrite fractions were analyzed outside holding times.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for seven aqueous samples that were collected on March 14, 2003, and received at Mitkem on March 15, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussion with the client. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits r.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of low recovery of 2,4-dimethylphenol, hexachlorocyclopentadiene and 3,3'-dichlorobenzidine and high recovery of 4-chloroaniline and n-nitrosodiphenylamine, .

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WFF15GW7 for metals except mercury and on sample WFF15GW3 for mercury. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF15GW7 for metals except mercury and on sample WFF15GW3 for mercury. Replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Tetra Tech NUS **INTERNAL CORRESPONDENCE**

TO: **G. GLENN** **DATE:** **MAY 20, 2003**

FROM: **BERNARD F SPADA III** **COPIES:** **DV FILE**

SUBJECT: **ORGANIC DATA VALIDATION- VOC/SVOC/PCB**
CTO 848, NASA WALLOPS ISLAND
SDG B0439

SAMPLES: 3/Aqueous

TB-031703* WOD-MW4 WOD-WFF16-GW6

Overview

The sample set for CTO 848 NASA Wallops Island, SDG B0439 consists of one (1) trip blank, and two (2) environmental aqueous samples. The environmental samples were all analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), and polychlorinated biphenyls (PCB). The trip blank denoted with an asterisk (*) was analyzed for VOC only.

The samples were collected by Tetra Tech NUS on March 17, 2003 and analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, and 8082 analytical and reporting protocols.

All samples were successfully analyzed. The findings offered in this report are based upon a general review of all available data including: data completeness, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation and detection limits. Areas of concern are listed below.

Major

- None.

Minor

- The following compound was detected in the method blank:

Compound	Maximum Concentration	Blank Action Level
Methylene chloride	1.0 ug/L	10 ug/L

Sample aliquot and dilution factors were taken into consideration when applying the blank action levels. No qualifications were made on this basis.

- The semivolatile continuing calibration performed on April 3 at 12:40 exceeded the 25% (and

was >50%) percent difference quality control criteria for 4-nitroaniline and 3,3'-dichlorobenzidine. All results for the aforementioned compounds were qualified as estimated (UJ).

Notes

There were several inconsistencies between the compound lists in the statement of work (SOW) and the results submitted by the laboratory. No action was taken on this basis because the project office approved the variance from the SOW.

The volatile initial calibration performed on March 23 exceeded the 30% (but was <50%) relative percent difference (RPD) quality control criteria for carbon disulfide. No qualifications were made on this basis because the results for carbon disulfide were non-detected.

The volatile continuing calibration performed on March 26 at 08:00 exceeded the 25% (but was <50%) difference quality control criteria for dichlorodifluoromethane. No qualifications were made on this basis because the results for dichlorodifluoromethane were non-detected.

The volatile blank spike was below the laboratory's percent recovery quality control criteria for MTBE. No qualifications were made on this basis.

The semivolatile continuing calibration performed on April 3 at 12:40 exceeded the 25% (but was <50%) percent difference quality control criteria for 2,4-dinitrophenol. No qualifications were made on this basis because the results for 2,4-dinitrophenol were non-detected.

The semivolatile blank spike was below the percent recovery quality control criteria for 4-methylphenol, 4-chloro-3-methylphenol, 2-nitroaniline, and 3-nitroaniline. No action was taken on this basis.

The semivolatile blank spike exceeded the laboratory's percent recovery quality control criteria for N-nitrosodiphenylamine. No qualifications were made on this basis because the results for N-nitrosodiphenylamine were non-detected.

All of the PCB continuing calibrations exceeded the 15% difference quality control criteria for Aroclor 1016, Aroclor 1260, and the surrogate decachlorobiphenyl on the RTXCLPPEST 2 column. No qualifications were made on this basis because the RTXCLPPEST column was compliant.

Executive Summary

Laboratory Performance: Qualifications were made based on calibration non-compliances, method blank contamination, and blank spike recovery non-compliances.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to U.S. EPA National Functional Guidelines for Data Validation as modified by EPA Region III (9/94) and the NFESC guidelines entitled Navy IRCDQM (Sept. 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Support Documentation

Spada, Bernie

From: Samchuck, Joseph
Sent: Thursday, May 08, 2003 1:19 PM
To: Sedlmyer, Ed; Schloer, Doug; Spada, Bernie; Staffen, Seth
Subject: FW: NASA, Wallops Is. organic data validation for CTO 848.

Note from Russ.

In his final paragraph, he stated that they are not concerned over "missing SVOCs". It seems as though a mistake was made when translating the project requirements.

In the second to the last paragraph, he means bromochloromethane.

Bottom line: Review data as received from the laboratory and in a general manner, note the difference between what was reported by the lab and what was requested in the SOW. No need to specifically list compounds. State that the project office was contacted and that they approved the variance from the SOW.

Thanks.

Subject: RE: NASA, Wallops Is. organic data validation for CTO 848.

As we discussed on the phone, I looked up the issues regarding TCL analytes in the work plan and QAP. I did not find any phone notes from 2 months ago when Garth and I had a conference call with MITKEM regarding SVOC TCL analyte lists.

Regarding the overlap between VOCs and SVOCs, proceed as we discussed over the phone and retain all reported Form I analytes in each respective validation report. The dichlorobenzenes and trichlorbenzene will be sorted out for risk assessment here in King of Prussia after we have assimilated the entire database. There are different fraction fields in the database so the results won't be confused. We will evaluate the best data to retain for risk assessment here at that time. While the lower detection limit data in theory should be better, I have seen exceptions in the past where there were detections in the SVOC fraction but not VOC fraction and in such cases it would be presumed that the matrix of the sample affected purge efficiency for the heaviest VOCs.

Regarding bromochlorobenzene, I verified there is no mention of this compound as a historically detected contaminant at Wallops Island sites of interest. Do not ask the lab to provide additional data or make analysis and reporting changes for this compound.

Regarding 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum being requested for soil analysis but instead reported based on a TIC search, it is not necessary to have the laboratory add these compounds to the TCL list at this late date in the project because there are no historical detections of these compounds identified in the work plan or QAPP. The reason that the SVOC TCL list was different for soil and water is a consequence of the template used for this table from another project. Garth indicated that he wants the data to be validated as received and reported by the laboratory because this is not a major issue. However, the laboratory should not be listing any compound on the TCL Form I target compound section if it is not in any standards run so if uncalibrated compounds were reported on Form Is then these compounds should be deleted or rejected.

Joe,

Regarding the subject data validation assignment, I've encountered some disparity between what is being reported by Mitkem and what was actually requested in the statement of work. This may be useful information for making some sort of global request to the lab.

For the aqueous samples:

The lab failed to report the VOC: bromochloromethane (Seth had already alerted me to this).
The lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.
The lab reported a total of 9 compounds (VOC and SVOC) in addition to the requested analytes.

For the soil samples:

The lab failed to report the SVOCs: 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum. Interestingly, the case narrative acknowledges this oversight and explains that the presence of these particular compounds will be determined via TIC library search. Do you know if this approach ok with the PM? BTW- I didn't find these compounds in the SVOC calibration summaries or quan reports.

Again, the lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs in soils and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.

Only xylene isomers were reported but not requested for the soil samples in my SDG.

Seth, Bernie and Ed; I imagine you guys are making the bulk of the requests from the lab, so if there is something else that I have missed that I should be looking out for please let me know.

Subject: RE: NASA, Wallops Is. organic data validation for CTO 848.

Russ Sloboda is checking the compound lists for us. As for the Chlorobromomethane, it is not needed.

Also, Russ asked that we not remove any compounds that are in both fractions such as the dichlorobenzenes. He can sort out the compounds using the fraction. So don't delete any compounds. If you have already do this, let me know the SDG and fraction so that I can unsubmit the data and you can make the changes and reprint forms.

Subject: NASA, Wallops Is. organic data validation for CTO 848.

Joe,

Regarding the subject data validation assignment, I've encountered some disparity between what is being reported by Mitkem and what was actually requested in the statement of work. This may be useful information for making some sort of global request to the lab.

For the aqueous samples:

The lab failed to report the VOC: bromochloromethane (Seth had already alerted me to this).
The lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.
The lab reported a total of 9 compounds (VOC and SVOC) in addition to the requested analytes.

For the soil samples:

The lab failed to report the SVOCs: 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum. Interestingly, the case narrative acknowledges this oversight and explains that the presence of these particular compounds will be determined via TIC library search. Do you know if this approach ok with the PM? BTW- I didn't find these compounds in the SVOC calibration summaries or quan reports.

Again, the lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs in soils and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.

Only xylene isomers were reported but not requested for the soil samples in my SDG.

Seth, Bernie and Ed; I imagine you guys are making the bulk of the requests from the lab, so if there is something else that I have missed that I should be looking out for please let me know.

Attn: Mr. Garth Glenn

RE: Client Project: CTO – 848, NASA Wallops Flight Facility
Mitkem Lab Project # B0439

Dear Mr. Glenn:

Enclosed please find the data report of the required analyses for the samples associated with the above referenced project.

If you have any questions regarding this report, please call me.

We appreciate your business.

Sincerely,

Agnes R. Ng
CLP Project Manager

* Data Summary Pack *

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0439

Mitkem Project ID: B0439

April 22, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for five aqueous samples that were collected on March 17, 2003, and received at Mitkem on March 18, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of low recovery of methyl tert-butyl ether.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of low recovery of 4-methylphenol, 4-chloro-3-methylphenol, 2-nitroaniline and 3-nitroaniline and high recovery of n-nitrosodiphenylamine.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

SUBJECT: **INORGANIC DATA VALIDATION - TAL METALS AND MISCELLANEOUS PARAMETERS**
CTO-848 NASA WALLOPS ISLAND
SAMPLE DELIVERY GROUP (SDG) – B0439

SAMPLES: 2/AQUEOUS/

WOD-MW4 WOD-WFF16-GW6

Overview

The sample set for CTO 848, NASA Wallops Island, SDG B0439, consists of two (2) aqueous environmental samples.

All samples were analyzed for total and dissolved target analyte list (TAL) metals, chloride, nitrate, nitrite, sulfate, and total organic carbon (TOC). Samples analyzed for dissolved metals are appended with the suffix "-F". The samples were collected by Tetra Tech NUS March 17, 2003 and analyzed by Mitkem Corporation under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Chloride, nitrate, nitrite, and sulfate were analyzed by Severn Trent Laboratories Connecticut. Metals analyses except mercury were conducted using SW846 method 6010B. Mercury analyses were conducted using SW846 method 7470A. Chloride, nitrate, nitrite, and sulfate analyses were conducted using EPA method 300. TOC analyses were conducted using EPA method 415.1.

Summary

All analytes were successfully analyzed. The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, calibration data, laboratory method/preparation blanks, interference check sample (ICS) results, matrix spike results, laboratory duplicate results, laboratory control sample (LCS) results, ICP serial dilution results, detection limits, and analyte quantitation.

All metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) methodologies. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) methodology.

Minor Problems

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Aluminum[(1)]	43.768 ug/L	218.84 ug/L
Antimony	4.2 ug/L	21.0 ug/L
Arsenic	3.9 ug/L	19.5 ug/L
Barium[(1)]	4.984 ug/L	24.92 ug/L
Beryllium	1.4 ug/L	7.0 ug/L
Cadmium[(1)]	1.945 ug/L	9.725 ug/L
Chromium	1.1 ug/L	5.5 ug/L
Cobalt	2.0 ug/L	10.0 ug/L
Copper[(1)]	21.022 ug/L	105.11 ug/L
Magnesium[(1)]	158.505 ug/L	792.525 ug/L
Manganese[(1)]	2.657 ug/L	13.285 ug/L
Nickel[(1)]	2.824 ug/L	14.12 ug/L
Potassium	89.5 ug/L	447.5 ug/L
Vanadium	1.6 ug/L	8.0 ug/L
Zinc[(1)]	39.319 ug/L	196.595 ug/L
Sulfate	0.327 mg/L	1.635 mg/L

[(1)] Maximum concentration present in aqueous preparation blank.

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the action level for aluminum, arsenic, beryllium, chromium, cobalt, copper, manganese, nickel, vanadium, and zinc were qualified (B) as a result of blank contamination. No validation action was required for the remaining analytes because the results were either greater than the action level or they were nondetects.

Notes

The result in the database for aluminum in sample WOD-MW4 did not match the result reported on the Form 1. The data reviewer amended the database for this sample.

Matrix spike, laboratory duplicate, and ICP serial dilution analyses were not performed for metals in this SDG.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method/preparation blanks.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", April 1993 and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

U - Value is a nondetect as reported by the laboratory.

B - Positive result is considered to be an artifact of blank contamination and should not be considered present.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0439

Mitkem Project ID: B0439

April 22, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for five aqueous samples that were collected on March 17, 2003, and received at Mitkem on March 18, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of low recovery of methyl tert-butyl ether.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of low recovery of 4-methylphenol, 4-chloro-3-methylphenol, 2-nitroaniline and 3-nitroaniline and high recovery of n-nitrosodiphenylamine.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature.

Classical Chemistry - Listed below are the wet chemistry analyte methods and references for the samples analyzed in this SDG. No analytical problems were encountered.

Analyte	Method	Reference
Chloride	300.0	1
Nitrate	300.0	1
Nitrite	300.0	1
Sulfate	300.0	1

References:

1. Methods of Chemical Analysis of Water and Wastes, EPA 600, 1983.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

FROM: MEGAN RITCHIE **COPIES:** FILE

SUBJECT: ORGANIC DATA REVIEW – VOCS, SVOCS, AND PCBS
WASTE OIL DUMP – NASA WALLOPS ISLAND, VIRGINIA
SDG B0456

SAMPLES: 7/Aqueous/

WOD-WFF16-GW1	WOD-WFF16-GW17	TB-031803
WOD-WFF16-GW3	FB-031803	
WOD-WFF16-GW7	RB-031803	

OVERVIEW

The sample set for the Waste Oil Dump – NASA Wallops Island, Virginia, SDG B0456, consists of 4 aqueous environmental samples (designated WOD-), one field blank (designated FB-), one rinsate blank (designated RB-), and one trip blank (designated TB-). The trip blank was analyzed for target compound list (TCL) volatiles and all other samples were analyzed for TCL volatiles, semivolatiles, and polychlorinated biphenyls (PCBs). One field duplicate pair (WOD-WFF16-GW7/WOD-WFF16-GW17) was included in this SDG.

The samples were collected by Tetra Tech NUS on March 18, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Methods 8260B for volatiles, 8270C for semivolatiles, and 8082 for PCBs.

SUMMARY

All compounds, with the exception of acetone, were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until extraction and analysis, GC/MS instrument tuning, GC chromatographic performance tests, initial/continuing calibrations, laboratory and field quality control (QC) blank results, surrogate spike recoveries, Internal Standard (IS) areas, Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries, Laboratory Control Spike/Laboratory Control Spike Duplicate (LCS/LCSD) recoveries, field duplicate results, compound identification, compound quantitation, and detection limits.

Areas of concern with respect to data quality are listed below as follows:

MAJOR PROBLEMS

VOLATILE FRACTION

- The initial calibration relative response factors (RRFs) for acetone were less than the quality control (QC) limit of 0.05. Positive results are considered biased low (L) and non-detected results are rejected (UR). Data qualification for sample WOD-WFF16-GW17 was based upon a more significant issue (blank qualification).

MINOR PROBLEMS

VOLATILE FRACTION

- The following table summarizes the compounds detected as contaminants in the laboratory blanks or field QC blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level
Acetone*	49 ug/L	490 ug/L
Methylene Chloride*	50 ug/L	500 ug/L

* - Indicates compound was detected at a maximum level in a field QC blank.

Samples affected: The action levels apply to all aqueous environmental samples.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size, percent solids, and dilution factors. Positive results for acetone and methylene chloride in samples at concentrations less than their associated blank action levels were qualified as false positives attributable to blank contamination, (B).

- The LCS recovery for MTBE was less than the lower QC limit of 72%. The associated non-detected results for MTBE were qualified as biased low (UL).

SEMIVOLATILE FRACTION

- The LCS recovery for 2,4-dimethylphenol was less than the lower QC limit of 14%. The associated non-detected results for 2,4-dimethylphenol were qualified as biased low (UL).

NOTES

The semivolatile fraction LCS/LCSD percent recoveries exceeded the upper QC limits for isophorone, 4-chloroaniline, and N-nitrosodiphenylamine. No action was taken because there were no positive results for these compounds.

No other problems were identified during this review.

EXECUTIVE SUMMARY

Laboratory Performance: One compound had an initial calibration RRF less than 0.05 in the volatile fraction. Methylene chloride was detected in the volatile laboratory blank. One compound recovery was less than the QC limit in the LCS for the volatile fraction. One compound recovery was less than the QC limit in the LCS for the semivolatile fraction. Three compound recoveries exceeded QC limits in the LCS for the semivolatile fraction.

Other Factors Affecting Data Quality: Acetone and methylene chloride were detected at maximum concentrations in the field QC blanks.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

DATA SUMMARY OF VOLATILE ORGANIC COMPOUND RESULTS
SDG B0456 - AQUEOUS SAMPLES
WALLOPS FLIGHT FACILITY, WALLOPS ISLAND, VIRGINIA

Data Qualifiers:
B -- Positive result is considered to be an artifact of blank contamination, and should not be considered present.
J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).
U -- Value is a non-detected result as reported by the laboratory.
UL -- Non-detected result is considered biased low due to exceedance of technical quality control criteria.
UR -- Non-detected result is considered unusable due to exceedance of technical quality control criteria.

Qualifier Codes:

a	=	Lab Blank Contamination
b	=	Field Blank Contamination
c	=	Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d	=	MS/MSD Noncompliance
e	=	LSC/LSCD Noncompliance
f	=	Laboratory Duplicate Imprecision
g	=	Field Duplicate Imprecision
h	=	Holding Time Exceedance
i	=	ICP Serial Dilution Noncompliance
j	=	GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k	=	ICP Interference – include ICSAB %Rs
l	=	Instrument Calibration Range Exceedance
m	=	Sample Preservation
n	=	Internal Standard Noncompliance
o	=	Poor Instrument Performance (i.e. baseline drifting)
p	=	Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q	=	Other Problems (can encompass of number of issues)
r	=	Surrogates Recovery Noncompliance
s	=	Pesticide/PCB Resolution
t	=	% Breakdown Noncompliance for DDT and Endrin
u	=	Pesticide/PCB % Difference Between Columns for Positive Results
v	=	Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for thirteen aqueous samples that were collected on March 18, 2003, and received at Mitkem on March 19, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of low recovery of methyl tert-butyl ether.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery of isophorone, 4-chloroaniline and n-nitrosodiphenylamine and low recovery of 2,4-dimethylphenol in S2CLCS and high recovery of isophorone, 4-chloroaniline and n-nitrosodiphenylamine in S2CLCSD. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WFF16GW7 for mercury only. Spike recovery was within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF16GW7 for mercury only. Replicate RPD was within QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Agnes Ng
CLP Project Manager

WOD-WFF16-GW3F	WOD-WFF16-GW17F	RB-031803F

OVERVIEW

The sample set for the Waste Oil Dump – NASA Wallops Island, Virginia, SDG B0456 consists of 8 aqueous environmental samples (designated WOD-), two field blanks (designated FB-), and two rinsate blanks (designated RB-). All samples were analyzed for TAL metals. Two field duplicate pairs (WOD-WFF16-GW7/WOD-WFF16-GW17 and WOD-WFF16-GW7F/WOD-WFF16-GW17F) were included in this SDG.

The samples were collected by Tetra Tech NUS on March 18, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Method 6010B and 7470A.

SUMMARY

All analytes were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, initial/continuing calibrations, laboratory and field quality control (QC) blank results, field duplicate results, matrix spikes (MS), laboratory control spikes (LCS), laboratory duplicates, interference check solutions, and detection limits.

MINOR PROBLEMS

- The following table summarizes the analytes detected as contaminants in the laboratory and field quality control (QC) blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level
Aluminum	149.3 ug/L	746 ug/L
Barium	9.9 ug/L	49.5 ug/L
Chromium, filtered*	6.7 ug/L	33.5 ug/L

Analyte	Maximum Concentration	Action Level
Chromium, unfiltered*	6.4 ug/L	32 ug/L
Cobalt	2.2 ug/L	11 ug/L
Copper	15.9 ug/L	79.6 ug/L
Iron	71.8 ug/L	359 ug/L
Magnesium	158.5 ug/L	792 ug/L
Manganese	2.2 ug/L	11 ug/L
Nickel	2.5 ug/L	12.5 ug/L
Potassium	96 ug/L	480 ug/L
Selenium	11 ug/L	55 ug/L
Silver	16.5 ug/L	81.5 ug/L
Sodium, filtered*	96.8 ug/L	484 ug/L
Thallium	3.2 ug/L	16 ug/L
Vanadium	2.3 ug/L	11.5 ug/L
Zinc, filtered*	15.9 ug/L	79.5 ug/L
Zinc, unfiltered*	14.3 ug/L	71.5 ug/L

* Indicates that analyte was detected at the maximum concentration in a field QC blank.

Samples affected: The action levels apply to all environmental samples.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size and dilution factors. Positive results for aluminum, barium, chromium, cobalt, copper, iron, manganese, silver, sodium, vanadium, and zinc in samples at concentrations less than their associated blank action levels were qualified as false positives attributable to blank contamination, (B). No qualifications were required for magnesium, nickel, potassium, selenium, and thallium because all concentrations exceeded the associated blank action levels or were non-detected.

- Cadmium, cobalt, lead, nickel, potassium, silver, sodium, and thallium were detected in ICP analysis of the Interference Check Solution (ICS) A, which is prepared from a certified source and should not contain low level analytes other than the primary mineral interferents, aluminum, calcium, iron, and magnesium. This indicates the potential for false positive spectral interferences if there are elevated sample concentrations of the primary minerals noted above. For cobalt and silver, when the observed result was greater than the expected level of interference but the concentration was not more than 10 times the expected interference, such results were considered biased high (K). Qualification was superceded by the qualifier (B) for blank contamination in these samples.
- Antimony, arsenic, barium, manganese, and vanadium exhibited negative concentrations with absolute values greater than the IDL in ICS solution A, which indicates the potential for negative bias to an extent that depends on the sample mineral concentrations. For antimony and arsenic, when the detection limit was greater than the absolute value of the negative interference, but the detection limit was not more than 10 times the expected interference value affected non-detected results were qualified as biased low (UL). For positive vanadium results, the sample

concentrations were greater than the predicted magnitude of negative interference but the concentration was not more than 10 times the expected interference, such results were considered estimated. Qualification was superceded by the qualifier (B) for blank contamination in these samples.

NOTES

The laboratory was contacted regarding true concentrations for ICS solution A because these values were not reported on Form 4 in the data package. The laboratory stated that no detectable metals are reportedly present in the commercially-purchased ICS solution A except the primary interferent metals.

EXECUTIVE SUMMARY

Laboratory Performance: Several contaminants were detected in the laboratory blanks. Associated sample results were qualified (B) to indicate artifacts of blank contamination. Several analytes were detected in ICS solution A that should not be detected and negative readings occurred for some metals. Data were qualified as biased low (UL). ICS Form IV did not indicate whether solution A true values were non-detected versus not analyzed.

Other Factors Affecting Data Quality: Several contaminants were detected in the field QC blanks. Associated sample results were qualified (B) to indicate artifacts of blank contamination.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

DATA SUMMARY OF INORGANIC RESULTS
SDG B0456 - AQUEOUS SAMPLES
WALLOPS FLIGHT FACILITY, WALLOPS ISLAND, VIRGINIA

Data Qualifiers:
B -- Positive result is considered to be an artifact of blank contamination, and should not be considered present.
U -- Value is a non-detected result as reported by the laboratory.
UL -- Non-detected result is considered biased low due to exceedance of technical quality control criteria.

Database source file: S:\RITCHIEM\WALLOPS ISLAND\WOD\B0456\M_B0456.DBF data retrieved on: 05/20/03

Qualifier Codes:

a	=	Lab Blank Contamination
b	=	Field Blank Contamination
c	=	Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d	=	MS/MSD Noncompliance
e	=	LSC/LSCD Noncompliance
f	=	Laboratory Duplicate Imprecision
g	=	Field Duplicate Imprecision
h	=	Holding Time Exceedance
i	=	ICP Serial Dilution Noncompliance
j	=	GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k	=	ICP Interference – include ICSAB %Rs
l	=	Instrument Calibration Range Exceedance
m	=	Sample Preservation
n	=	Internal Standard Noncompliance
o	=	Poor Instrument Performance (i.e. baseline drifting)
p	=	Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q	=	Other Problems (can encompass of number of issues)
r	=	Surrogates Recovery Noncompliance
s	=	Pesticide/PCB Resolution
t	=	% Breakdown Noncompliance for DDT and Endrin
u	=	Pesticide/PCB % Difference Between Columns for Positive Results
v	=	Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

APPENDIX B

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for thirteen aqueous samples that were collected on March 18, 2003, and received at Mitkem on March 19, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of low recovery of methyl tert-butyl ether.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery of isophorone, 4-chloroaniline and n-nitrosodiphenylamine and low recovery of 2,4-dimethylphenol in S2CLCS and high recovery of isophorone, 4-chloroaniline and n-nitrosodiphenylamine in S2CLCSD. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WFF16GW7 for mercury only. Spike recovery was within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF16GW7 for mercury only. Replicate RPD was within QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Agnes Ng
CLP Project Manager

NOTES

1 - When both results are > or = 5xCRQL/MDL, the acceptance limit is the relative percent difference must be < or = 30% for aqueous and air samples and must be < 50% for solid samples.

2 - When at least one of the results is < 5x CRQL/MDL, the acceptance limit is the difference between the results must be < or = 2xCRQL/MDL for aqueous and air samples and < or = 4xCRQL/MDL for solid samples.

Q - The qualifier is entered to indicate if the anlayte was not detected or qualitatively questionable in the sample.

U - the compound was not detected in the sample at or above the associated numerical value.

NC - The RPD was not calculated because one of the results was not detected; the acceptance limit used is the difference between the results must be < or = 2xCRQL/MDL for aqueous and air samples and < or = 4xCRQL/MDL for solid samples.

J - The positive results should be considered estimated.

B - The result should be considered non-detected or qualitatively questionable due to blank contamination.

IN - The results are acceptable.

COMMENTS

Mn and Hg results qualified as estimated (J).

SUBJECT: **WET CHEMISTRY DATA REVIEW – TOC, CHLORIDE, NITRATE, NITRITE, AND SULFATE**
WASTE OIL DUMP – NASA WALLOPS ISLAND, VIRGINIA
SDG B0456

SAMPLES: **6/Aqueous/**

WOD-WFF16-GW1	WOD-WFF16-GW17
WOD-WFF16-GW3	FB-031803
WOD-WFF16-GW7	RB-031803

OVERVIEW

The sample set for the Waste Oil Dump – NASA Wallops Island, Virginia, SDG B0456 consists of 4 aqueous environmental samples (designated WOD-), one field blank (designated FB-), and one rinsate blank (designated RB-). All samples were analyzed for Total Organic Carbon (TOC), chloride, nitrate, nitrite, and sulfate. One field duplicate pair (WOD-WFF16-GW7/WOD-WFF16-GW17) was included in this SDG.

The samples were collected by Tetra Tech NUS on March 18, 2003. TOC samples were analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island. Chloride, nitrate, nitrite, and sulfate were analyzed by STL Connecticut of Shelton, Connecticut.

TOC analyses were conducted using EPA Method 415.1. Chloride, nitrate, nitrite, and sulfate analyses were conducted using EPA Method 300.0.

SUMMARY

All analytes were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, initial/continuing calibrations, laboratory and field quality control (QC) blank results, field duplicate results, matrix spikes (MS), laboratory control spikes (LCS), laboratory duplicates, and detection limits.

Areas of concern with respect to data quality are listed below as follows:

NOTES

The following table summarizes the analytes detected as contaminants in the laboratory blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level
Sulfate	0.315 mg/L	1.58 mg/L

Samples affected: The action levels apply to all environmental samples.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size and dilution factors. No qualifications were required for sulfate because all concentrations exceeded the associated blank action levels.

Field duplicate precision was within QC criteria for duplicate pair WOD-WFF16-GW7 and WOD-WFF16-GW17.

EXECUTIVE SUMMARY

Laboratory Performance: Sulfate was detected in the laboratory blanks.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for thirteen aqueous samples that were collected on March 18, 2003, and received at Mitkem on March 19, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of TOC. The analysis results for TOC are presented in the Mitkem format with supporting raw data.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of low recovery of methyl tert-butyl ether.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery of isophorone, 4-chloroaniline and n-nitrosodiphenylamine and low recovery of 2,4-dimethylphenol in S2CLCS and high recovery of isophorone, 4-chloroaniline and n-nitrosodiphenylamine in S2CLCSD. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

4. PCB Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WFF16GW7 for mercury only. Spike recovery was within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WFF16GW7 for mercury only. Replicate RPD was within QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. TOC Analysis:

The TOC results are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

7. Sulfate, Nitrate and Chloride Analyses:

Sulfate, nitrate and chloride analyses were performed by sub-contract laboratory STL Connecticut of Shelton, CT. The entire STL Connecticut report is enclosed following the Mitkem data package.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

MITKEM

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature. Samples were received very close to hold time for nitrate and nitrite. Client contacted and authorized STL to proceed with analyses.

Classical Chemistry - Listed below are the wet chemistry analyte methods and references for the samples analyzed in this SDG. No analytical problems were encountered.

Analyte	Method	Reference
Chloride	300.0	1
Nitrate	300.0	1
Nitrite	300.0	1
Sulfate	300.0	1

References:

1. Methods of Chemical Analysis of Water and Wastes, EPA 600, 1983.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

SUBJECT: WET CHEMISTRY DATA REVIEW – TOTAL ORGANIC CARBON
WASTE OIL DUMP – NASA WALLOPS ISLAND, VIRGINIA
SDG 92502

SAMPLES: 16/Solid/

WOD-SS-126	WOD-SS-131	WOD-SS-136
WOD-SS-127	WOD-SS-132	WOD-SS-137
WOD-SS-128	WOD-SS-133	WOD-SS-138
WOD-SS-DUP10	WOD-SS-DUP09	WOD-SS-139
WOD-SS-129	WOD-SS-134	
WOD-SS-130	WOD-SS-135	

OVERVIEW

The sample set for the Waste Oil Dump – NASA Wallops Island, Virginia, SDG 92502 consists of 16 solid environmental samples (designated WOD-). All samples were analyzed for Total Organic Carbon (TOC). Two field duplicate pairs (WOD-SS-128/WOD-SS-DUP10 and WOD-SS-133/WOD-SS-DUP09) were included in this SDG.

The samples were collected by Tetra Tech NUS on February 19, 21, and 26, 2003. TOC samples were analyzed by STL Burlington of Colchester, Vermont.

TOC analyses were conducted using the Lloyd Kahn Method.

SUMMARY

All analytes were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, initial/continuing calibrations, laboratory blank results, field duplicate results, matrix spikes (MS), laboratory control spikes (LCS), laboratory duplicates, and detection limits.

Areas of concern with respect to data quality are listed below as follows:

MINOR PROBLEMS

- The TOC samples were analyzed 17 to 24 days outside the 14 day holding time depending on the date the samples were collected. The results for all samples were qualified as estimated (J).

- The field duplicate relative percent difference (RPD) exceeded the QC limit of 50% for one field duplicate pair, WOD-SS-133 and WOD-SS-DUP09. The results for this pair were qualified as estimated (J). The field duplicate precision was within QC the QC limit for field duplicate pair WOD-SS-128 and WOD-SS-DUP10.

NOTES

No other problems were observed during this review.

EXECUTIVE SUMMARY

Laboratory Performance: Holding times were exceeded for all samples.

Other Factors Affecting Data Quality: Field duplicate precision exceeded QC criteria for one field duplicate pair.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Data Qualifiers:
J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).

Database source file: S:\RITCHIEM\WALLOPS ISLAND\WOD\92502\MISC_92502.DBF data retrieved on: 05/22/03

Qualifier Codes:

a = Lab Blank Contamination
b = Field Blank Contamination
c = Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d = MS/MSD Noncompliance
e = LSC/LSCD Noncompliance
f = Laboratory Duplicate Imprecision
g = Field Duplicate Imprecision
h = Holding Time Exceedance
i = ICP Serial Dilution Noncompliance
j = GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k = ICP Interference – include ICSAB %Rs
l = Instrument Calibration Range Exceedance
m = Sample Preservation
n = Internal Standard Noncompliance
o = Poor Instrument Performance (i.e. baseline drifting)
p = Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q = Other Problems (can encompass of number of issues)
r = Surrogates Recovery Noncompliance
s = Pesticide/PCB Resolution
t = % Breakdown Noncompliance for DDT and Endrin
u = Pesticide/PCB % Difference Between Columns for Positive Results
v = Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

0001-A

Documentation that identifies the condition of the samples at the time of sample receipt and the issues arising at the time of sample log-in is included in the Sample Handling section of this submittal.

Please note that all field samples in this delivery group were received by the Laboratory outside the method prescribed holding time. The client directed that the Laboratory proceed with the analyses as normal.

Total Organic Carbon (TOC) by Lloyd Kahn Method:
Please note that the TOC analyses of sample B0301-12C yielded Percent Relative Standard Deviation (%RSD) between replicates that exceeded control limits (0-20%) at 31%. The Laboratory suspects that this anomaly is due to sample non-homogeneity.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 0001 and ending with page 0185.

I certify that this package is in compliance with the NELAC requirements, both technically and for completeness, for other than the conditions detailed above. The release of the data contained in this hardcopy data package has been authorized by the Laboratory Director or his designee, as verified by the following signature.

Sincerely,

Michael F. Wheeler, Ph.D.
Laboratory Director

FTA-SS-114	WOD-SS-102	WOD-SS-121

OVERVIEW

The sample set for the Fire Training Area and Waste Oil Dump – NASA Wallops Island, Virginia, SDG 92508 consists of 18 solid environmental samples (designated FTA-SS- and WOD-SS-). All samples were analyzed for Total Organic Carbon (TOC). No field duplicate pairs were included in this SDG.

The samples were collected by Tetra Tech NUS on February 3, 5, 6, 10, and 13, 2003. TOC samples were analyzed by STL Burlington of Colchester, Vermont.

TOC analyses were conducted using the Lloyd Kahn Method.

SUMMARY

All analytes were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, initial/continuing calibrations, laboratory blank results, matrix spikes (MS), laboratory control spikes (LCS), laboratory duplicates, and detection limits.

Areas of concern with respect to data quality are listed below as follows:

MINOR PROBLEMS

- The TOC samples were analyzed between 28 and 38 days outside the 14 day holding time. The results for all samples were qualified as estimated (J).

NOTES

No other problems were observed during this review.

EXECUTIVE SUMMARY

Laboratory Performance: Holding times were exceeded for all samples.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Data Qualifiers:

J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).

Database source file: S:\RITCHIEM\WALLOPS ISLAND\WOD\92508\MISC_92508.DBF data retrieved on: 05/23/03

Qualifier Codes:

a	=	Lab Blank Contamination
b	=	Field Blank Contamination
c	=	Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d	=	MS/MSD Noncompliance
e	=	LSC/LSCD Noncompliance
f	=	Laboratory Duplicate Imprecision
g	=	Field Duplicate Imprecision
h	=	Holding Time Exceedance
i	=	ICP Serial Dilution Noncompliance
j	=	GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k	=	ICP Interference – include ICSAB %Rs
l	=	Instrument Calibration Range Exceedance
m	=	Sample Preservation
n	=	Internal Standard Noncompliance
o	=	Poor Instrument Performance (i.e. baseline drifting)
p	=	Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q	=	Other Problems (can encompass of number of issues)
r	=	Surrogates Recovery Noncompliance
s	=	Pesticide/PCB Resolution
t	=	% Breakdown Noncompliance for DDT and Endrin
u	=	Pesticide/PCB % Difference Between Columns for Positive Results
v	=	Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

Documentation that identifies the condition of the samples at the time of sample receipt and the issues arising at the time of sample log-in is included in the Sample Handling section of this submittal.

Please note that all field samples in this delivery group were received by the Laboratory outside the method prescribed holding time. The client directed that the Laboratory proceed with the analyses as normal.

Total Organic Carbon (TOC) by Lloyd Kahn Method:
Please note that the TOC analyses of sample B0239-06A yielded Percent Relative Standard Deviation (%RSD) between replicates that exceeded control limits (0-20%) at 29%. The Laboratory suspects that this anomaly is due to sample non-homogeneity.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 0001 and ending with page 0229.

I certify that this package is in compliance with the NELAC requirements, both technically and for completeness, for other than the conditions detailed above. The release of the data contained in this hardcopy data package has been authorized by the Laboratory Director or his designee, as verified by the following signature.

Sincerely,

Michael F. Wheeler, Ph.D.
Laboratory Director

SUBJECT: WET CHEMISTRY DATA REVIEW – TOTAL ORGANIC CARBON
FIRE TRAINING AREA/WASTE OIL DUMP – NASA WALLOPS ISLAND, VIRGINIA
SDG 92509

SAMPLES: 18/Solid/

FTA-SS-104	FTA-SS-110	WOD-SS-120
FTA-SS-105	FTA-SS-DUP1	WOD-SS-121
FTA-SS-106	WOD-SS-116	WOD-SS-122
FTA-SS-107	WOD-SS-117	WOD-SS-123
FTA-SS-108	WOD-SS-118	WOD-SS-124
FTA-SS-109	WOD-SS-119	WOD-SS-125

OVERVIEW

The sample set for the Fire Training Area and Waste Oil Dump – NASA Wallops Island, Virginia, SDG 92509 consists of 18 solid environmental samples (designated FTA-SS- and WOD-SS-). All samples were analyzed for Total Organic Carbon (TOC). One field duplicate pair (FTA-SS-110 and FTA-SS-DUP1) was included in this SDG.

The samples were collected by Tetra Tech NUS on February 4, 12, and 13, 2003. TOC samples were analyzed by STL Burlington of Colchester, Vermont.

TOC analyses were conducted using the Lloyd Kahn Method.

SUMMARY

All analytes were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, initial/continuing calibrations, laboratory blank results, field duplicate results, matrix spikes (MS), laboratory control spikes (LCS), laboratory duplicates, and detection limits.

Areas of concern with respect to data quality are listed below as follows:

MINOR PROBLEMS

- The TOC samples were analyzed 28 to 30 days outside the 14 day holding time. The results for all samples were qualified as estimated (J).

NOTES

No other problems were observed during this review.

EXECUTIVE SUMMARY

Laboratory Performance: Holding times were exceeded for all samples.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Documentation that identifies the condition of the samples at the time of sample receipt and the issues arising at the time of sample log-in is included in the Sample Handling section of this submittal.

Please note that all field samples in this delivery group were received by the Laboratory outside the method prescribed holding time. The client directed that the Laboratory proceed with the analyses as normal.

Severn Trent Laboratories, Inc.
STL Burlington • 208 South Park Drive, Suite 1, Colchester, VT 05446

0001-A

Client specified matrix spike/matrix spike duplicate samples were not analyzed or requested with the above samples. However, routine method quality control analyses were performed.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 0001 and ending with page 0165.

I certify that this package is in compliance with the NELAC requirements, both technically and for completeness, for other than the conditions detailed above. The release of the data contained in this hardcopy data package has been authorized by the Laboratory Director or his designee, as verified by the following signature.

Sincerely,

Michael F. Wheeler, Ph.D.
Laboratory Director

SUBJECT: WET CHEMISTRY DATA REVIEW – TOTAL ORGANIC CARBON
FIRE TRAINING AREA/WASTE OIL DUMP – NASA WALLOPS ISLAND, VIRGINIA
SDG 92511

SAMPLES: 9/Solid/

FTA-SS-111	WOD-SS-DUP05	WOD-SS-112
WOD-SS-109	WOD-SS-110	WOD-SS-113
WOD-SS-105	WOD-SS-111	WOD-SS-114

OVERVIEW

The sample set for the Fire Training Area and Waste Oil Dump – NASA Wallops Island, Virginia, SDG 92511 consists of 9 solid environmental samples (designated FTA-SS- and WOD-SS-). All samples were analyzed for Total Organic Carbon (TOC). One field duplicate pair (WOD-SS-109 and WOD-SS-DUP05) was included in this SDG.

The samples were collected by Tetra Tech NUS on February 4 and 11, 2003. TOC samples were analyzed by STL Burlington of Colchester, Vermont.

TOC analyses were conducted using the Lloyd Kahn Method.

SUMMARY

All analytes were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, initial/continuing calibrations, laboratory blank results, field duplicate results, matrix spikes (MS), laboratory control spikes (LCS), laboratory duplicates, and detection limits.

Areas of concern with respect to data quality are listed below as follows:

MINOR PROBLEMS

- The TOC samples were analyzed 23 to 30 days outside the 14 day holding time. The results for all samples were qualified as estimated (J).

- The field duplicate relative percent difference (RPD) exceeded the QC limit of 50% for field duplicate pair, WOD-SS-109 and WOD-SS-DUP05. The results for this pair were qualified as estimated (J).

NOTES

No other problems were observed during this review.

EXECUTIVE SUMMARY

Laboratory Performance: Holding times were exceeded for all samples.

Other Factors Affecting Data Quality: Field duplicate precision exceeded QC criteria.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

SEVERN TRENT STL

April 2, 2003

Ms. Kristen Barber
Mitkem Corporation
175 Metro Center Blvd.
Warwick, RI 02886

Re: Laboratory Project No. 23000
Case No. 23000; SDG: 92511

Dear Ms. Barber:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on March 18, 2003. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 03/18/03	ETR No: 92511	
519517	B0199-25A	02/04/03	Soil
519517MS	B0199-25AMS	02/04/03	Soil
519517DP	B0199-25AREP	02/04/03	Soil
519518	B0257-02A	02/11/03	Soil
519519	B0257-04A	02/11/03	Soil
519520	B0257-07A	02/11/03	Soil
519521	B0257-09A	02/11/03	Soil
519522	B0257-10A	02/11/03	Soil
519523	B0257-12A	02/11/03	Soil
519524	B0257-14A	02/11/03	Soil
519525	B0257-16A	02/11/03	Soil

Documentation that identifies the condition of the samples at the time of sample receipt and the issues arising at the time of sample log-in is included in the Sample Handling section of this submittal.

Please note that all field samples in this delivery group were received by the Laboratory outside the method prescribed holding time. The client directed that the Laboratory proceed with the analyses as normal.

Total Organic Carbon (TOC) by Lloyd Kahn Method:
Please note that the TOC analyses of sample B0199-25A yielded Percent Relative Standard Deviation (%RSD) between replicates that exceeded control limits (0-20%) at 22%. The Laboratory suspects that this anomaly is due to sample non-homogeneity.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

Xylene (Total)	NA	0/3	2/26	0.8005	N						5	NA	1	1	0.8966	N				NA		5.4			NA							NA

Notes: Units are mg/kg for inorganics, ug/kg for organics.
A statistical significance level (P value) of 0.05 is used for all tests that directly compare site to background. A two-sided significance level of 0.1 is used for Bartlett's test for equal variance.
UTL is the expected value for the upper 95 % quantile of the background population; there is an equal chance of the population's true 95 % quantile being either below or above this estimate.
For each test, a YES or NO decision is presented only if all assumptions are met. The overall decision (is site > background) for each chemical appears at the left and is based on four criteria:
(1) Overall decision is YES if any one of the Mann-Whitney/Gehan, Upper Ranks Test, or T-Test is YES, regardless of other test results.
(2) Overall decision is NO if at least one of Mann-Whitney/Gehan, Upper Ranks Test, or T-Test is NO, and none of the aforementioned tests are YES.
(3) Overall decision is YES/NO if Z/Fisher Test is YES/NO, respectively, and other tests are NA. Z-test is treated as lowest priority since it relies on detection frequency, not magnitude of results.
(4) Overall decision is NA if all tests are NA. (Chemicals assigned NA are still included in human health risk-based screening and/or risk assessment.)

Abbreviations:

# NDs or # Pos.	Number of non-detected (ND) or positive (Pos.) results in data set, not including rejected data or blank-qualified data.
# s or # b	Number of site (s) or background (b) samples, not including rejected data or blank-qualified data.
s = b	Standard deviation of site results must not be different from the standard deviation of background results.
P value	Probability or significance level is defined as the chance of a false positive. If P <= 0.05 then test determines site > background with 95 % confidence.
L, N, or Q	UTL is based on 95 % upper limit (using t-value) when data are lognormal (L) or normal (N). Otherwise, an upper 95 % quantile (Q) is used if there are > 18 back. points.
% ND	Mann-Whitney test used if < 40% of data Non-Detected and detect. limits uniformly below the range of positive values. If not, the Gehan Test is used.
@	Mean and standard deviations are shown of log-transformed data when distributions are of this type; ie., if an (L) code appears for the UTL test or if site and background distributions both match lognormal. (Arithmetic mean and normal standard deviation are shown only for illustration in the event that these tests are NA.)
r,k	The upper ranks test calculates the probability that k or more samples from the top r ranks of the combined site and background data set are comprised of site data if both populations are in fact equal.

Xylene (Total)	60	assumed normal, log std.dev.<0.5	0.4495	0.6309	0.981	Max	1.6711	5.99	7.8	9.1	6	6

Notes:

Units are in mg/kg for inorganics and ug/kg for organics.
Number of sample results excludes rejected data or blank-qualified data. Duplicates are consolidated into one result. Non-detected results are treated as present at one-half the detection limit in all calculations.
Arithmetic mean includes positive detections and non-detected results (detection limits are divided by two).
Statistical distribution of data is determined using Shapiro-Wilk test for n <= 50, Shapiro-Francia test for n > 50. Statistical significance level is 0.05.
A normal distribution is assumed if the test statistic W-norm. is >= than the reference value (W-table).
A lognormal distribution is assumed if the test statistic W-lognorm. is >= the reference value (W-table), and W-norm is < W-table.
A normal distribution is assumed if neither distribution passes the Shapiro test and the standard deviation of log transformed data is < 0.5. Otherwise, if neither distribution passes and the log standard deviation is >= 0.5, a nonparametric is assumed.
-- - Parameter not estimated because distributional shape uncertain for small n.
* Distributional shape based on n<5. Because evaluation may not be accurate, only the arithmetic mean and the maximum are presented.
Parameters listed for EPC calculation are as follows for each type of EPC statistic:
95%UCL-N: Parameters used in EPC Calculation consist of the t-coefficient, the standard deviation, the arithmetic mean, and the t-distribution upper 95% confidence limit.
95%UCL-H: Parameters used in EPC Calculation consist of the H-coefficient, the standard deviation of log-transformed data, the antilog of mean of log-transformed data, and the H-distribution upper 95% confidence limit.
99%UCL-Chebmv: Parameters used in EPC Calculation consist of the coefficient multiplier, the minimum variance unbiased estimate of the standard deviation and mean, and the chebychev 99% confidence limit.
97.5%UCL-Chebmv: Parameters used in EPC Calculation consist of the coefficient multiplier, the minimum variance unbiased estimate of the standard deviation and mean, and the chebychev 97.5% confidence limit.
95%UCL-Chebmv: Parameters used in EPC Calculation consist of the coefficient multiplier, the minimum variance unbiased estimate of the standard deviation and mean, and the chebychev 95% confidence limit.
99%UCL-Cheby: Parameters used in EPC Calculation consist of the coefficient multiplier, the standard deviation and arithmetic mean, and the nonparametric chebychev 99% confidence limit.
97.5%UCL-Cheby: Parameters used in EPC Calculation consist of the coefficient multiplier, the standard deviation and arithmetic mean, and the nonparametric chebychev 97.5% confidence limit.
95%UCL-Cheby: Parameters used in EPC Calculation consist of the coefficient multiplier, the standard deviation and arithmetic mean, and the nonparametric chebychev 95% confidence limit.

APPENDIX G1-2
REPRESENTATIVE CONCENTRATION AND STATISTICAL DISTRIBUTION OF COPCs - WASTE OIL DUMP TOTAL SOIL
WOD RI REPORT
NASA WFF - WALLOPS ISLAND, VIRGINIA

						Parameter Used in EPC Calculation						
	Number of Sample Results	Statistical Distribution of Site Data	Results of Shapiro-Wilk or Shapiro-Francia Distribution Tests			Type of EPC Calc	Coefficient for H0.95 (Lognorm.) or T0.95 (Normal) or Chebychev	Std. Dev. Log Std. Dev. or Min. Var. Estimate	Arithmetic Mean, Antilog Log Mean, or Min. Var. Est	Upper Confidence Limit (UCL) on Mean	Maximum Positive Site Concentration	RME Exposure Point Concentration
Substance			W-norm.	W-lognorm.	W-Table							

Notes:

Units are in mg/kg for inorganics and ug/kg for organics.
Number of sample results excludes rejected data or blank-qualified data. Duplicates are consolidated into one result. Non-detected results are treated as present at one-half the detection limit in all calculations.
Arithmetic mean includes positive detections and non-detected results (detection limits are divided by two).
Statistical distribution of data is determined using Shapiro-Wilk test for n <= 50, Shapiro-Francia test for n > 50. Statistical significance level is 0.05.
A normal distribution is assumed if the test statistic W-norm. is >= than the reference value (W-table).
A lognormal distribution is assumed if the test statistic W-lognorm. is >= the reference value (W-table), and W-norm is < W-table.
A normal distribution is assumed if neither distribution passes the Shapiro test and the standard deviation of log transformed data is < 0.5. Otherwise, if neither distribution passes and the log standard deviation is >= 0.5, a nonparametric is assumed.
-- - Parameter not estimated because distributional shape uncertain for small n.
* Distributional shape based on n<5. Because evaluation may not be accurate, only the arithmetic mean and the maximum are presented.
Parameters listed for EPC calculation are as follows for each type of EPC statistic:
95%UCL-N: Parameters used in EPC Calculation consist of the t-coefficient, the standard deviation, the arithmetic mean, and the t-distribution upper 95% confidence limit.
95%UCL-H: Parameters used in EPC Calculation consist of the H-coefficient, the standard deviation of log-transformed data, the antilog of mean of log-transformed data, and the H-distribution upper 95% confidence limit.
99%UCL-Chebmv: Parameters used in EPC Calculation consist of the coefficient multiplier, the minimum variance unbiased estimate of the standard deviation and mean, and the chebychev 99% confidence limit.
97.5%UCL-Chebmv: Parameters used in EPC Calculation consist of the coefficient multiplier, the minimum variance unbiased estimate of the standard deviation and mean, and the chebychev 97.5% confidence limit.
95%UCL-Chebmv: Parameters used in EPC Calculation consist of the coefficient multiplier, the minimum variance unbiased estimate of the standard deviation and mean, and the chebychev 95% confidence limit.
99%UCL-Cheby: Parameters used in EPC Calculation consist of the coefficient multiplier, the standard deviation and arithmetic mean, and the nonparametric chebychev 99% confidence limit.
97.5%UCL-Cheby: Parameters used in EPC Calculation consist of the coefficient multiplier, the standard deviation and arithmetic mean, and the nonparametric chebychev 97.5% confidence limit.
95%UCL-Cheby: Parameters used in EPC Calculation consist of the coefficient multiplier, the standard deviation and arithmetic mean, and the nonparametric chebychev 95% confidence limit.

Notes:

Units are in ug/L .
Number of sample results excludes rejected data or blank-qualified data. Duplicates are consolidated into one result. Non-detected results are treated as present at one-half the detection limit in all calculations.
Arithmetic mean includes positive detections and non-detected results (detection limits are divided by two).
Statistical distribution of data is determined using Shapiro-Wilk test for n <= 50, Shapiro-Francia test for n > 50. Statistical significance level is 0.05.
A normal distribution is assumed if the test statistic W-norm. is >= than the reference value (W-table).
A lognormal distribution is assumed if the test statistic W-lognorm. is >= the reference value (W-table), and W-norm is < W-table.
A normal distribution is assumed if neither distribution passes the Shapiro test and the standard deviation of log transformed data is < 0.5. Otherwise, if neither distribution passes and the log standard deviation is >= 0.5, a nonparametric is assumed.
-- - Parameter not estimated because distributional shape uncertain for small n.
* Distributional shape based on n<5. Because evaluation may not be accurate, only the arithmetic mean and the maximum are presented.
Parameters listed for EPC calculation are as follows for each type of EPC statistic:
95%UCL-N: Parameters used in EPC Calculation consist of the t-coefficient, the standard deviation, the arithmetic mean, and the t-distribution upper 95% confidence limit.
95%UCL-H: Parameters used in EPC Calculation consist of the H-coefficient, the standard deviation of log-transformed data, the antilog of mean of log-transformed data, and the H-distribution upper 95% confidence limit.
99%UCL-Chebmv: Parameters used in EPC Calculation consist of the coefficient multiplier, the minimum variance unbiased estimate of the standard deviation and mean, and the chebychev 99% confidence limit.
97.5%UCL-Chebmv: Parameters used in EPC Calculation consist of the coefficient multiplier, the minimum variance unbiased estimate of the standard deviation and mean, and the chebychev 97.5% confidence limit.
95%UCL-Chebmv: Parameters used in EPC Calculation consist of the coefficient multiplier, the minimum variance unbiased estimate of the standard deviation and mean, and the chebychev 95% confidence limit.
99%UCL-Cheby: Parameters used in EPC Calculation consist of the coefficient multiplier, the standard deviation and arithmetic mean, and the nonparametric chebychev 99% confidence limit.
97.5%UCL-Cheby: Parameters used in EPC Calculation consist of the coefficient multiplier, the standard deviation and arithmetic mean, and the nonparametric chebychev 97.5% confidence limit.
95%UCL-Cheby: Parameters used in EPC Calculation consist of the coefficient multiplier, the standard deviation and arithmetic mean, and the nonparametric chebychev 95% confidence limit.

5-6	4.000	7.000	32.000	0.100
6-7	4.000	7.000	32.000	0.100

******Diet******

Age	Diet Intake(ug/day)
.5-1	5.530
1-2	5.780
2-3	6.490
3-4	6.240
4-5	6.010
5-6	6.340
6-7	7.000

******Drinking Water******

Water Consumption:

Age	Water (L/day)
.5-1	0.200
1-2	0.500
2-3	0.520
3-4	0.530

4-5	0.550
5-6	0.580
6-7	0.590

Drinking Water Concentration: 7.810 ug Pb/L

******Soil& Dust******

Multiple Source Analysis Used
Average multiple source concentration: 150.000 ug/g

Mass fraction of outdoor soil to indoor dust conversion factor: 0.700
Outdoor airborne lead to indoor household dust lead concentration: 100.000
Use alternate indoor dust Pb sources? No

Age	Soil (ug Pb/g)	House Dust (ug Pb/g)
.5-1	200.000	150.000
1-2	200.000	150.000
2-3	200.000	150.000
3-4	200.000	150.000
4-5	200.000	150.000
5-6	200.000	150.000
6-7	200.000	150.000

******Alternate Intake******

Age	Alternate (ug Pb/day)
.5-1	0.000
1-2	0.000
2-3	0.000
3-4	0.000
4-5	0.000
5-6	0.000
6-7	0.000

******Maternal Contribution: Infant Model******

Maternal Blood Concentration: 2.500 ug Pb/dL

Appendix G7

Example Calculations

APPENDIX G7

RISK ASSESSMENT EXAMPLE CALCULATIONS

The example calculations listed in this appendix are presented in order to verify the approaches taken and calculations used to estimate risks at NASA WFF Waste Oil Dump (WOD) Site. The example calculations for risks are all based on RME exposure. Examples are shown for representative receptors for area groundwater, surface soil, and soil*. CTE risks are not shown here, however, they would be estimated following the same equations using CTE, rather than RME, input parameters from Tables 7.7 to 7.28.

Area Groundwater Exposure

Three potential exposure routes are associated with direct exposure to area groundwater at WOD. These exposure routes are ingestion, dermal absorption, and inhalation of vapors during showering.

Ingestion of Groundwater:

Ingestion of tetrachloroethene (PCE) in area groundwater at WOD for a future adult resident under an RME scenario was evaluated using the following equation (EPA, 1989a):

$$IngestionDose(mg/kg \cdot day) = \frac{CW \times IR_{GW} \times FI \times EF \times ED \times CF1}{BW \times AT}$$

Where:

Carc-Ingestion Dose	= 2.40E-5	= Carcinogenic Ingestion Exposure Dose (mg/kg-day)
Noncarc-Ingestion Dose	= 6.99E-5	= Noncarcinogenic Ingestion Exposure Dose (mg/kg-day)
CW	= 2.55 ug/L	= PCE concentration in area groundwater
IR_{GW}	= 2.0 L/day	= Ingestion Rate
FI	= 1.0	= Fraction Ingested from this contaminated source
EF	= 350 days/yr	= Exposure Frequency
ED	= 24 yrs	= Exposure Duration
CF1	= 0.001 mg/10^3 ug	= Conversion Factor
BW	= 70 kg	= Body Weight
ATC	= 25550 days	= Averaging Time for Carcinogens (365 d/yr x 70 yrs)
ATN	= 8760 days	= Averaging Time for Noncarcinogens (365 d/yr x 25 yrs)

The RME cancer risk for a future adult resident from ingestion of PCE in area groundwater at WOD is estimated as follows:

CA = Ingestion Dose x SF

CA	= 1.29E-5	= Incremental Cancer Risk
SF	= 5.4E-1 (mg/kg-day)$^{-1}$	= Oral Slope Factor
Carc-Ingestion Dose	= 2.40E-5	= Carcinogenic Ingestion Exposure Dose (mg/kg-day)

The RME noncarcinogenic risk for a future adult resident from ingestion of PCE in area groundwater at WOD is estimated as follows:

NC = Ingestion Dose/RfD

NC	= 6.99E-3	= Noncarcinogenic Risk
RfD	= 1.0E-2 (mg/kg-day)	= Oral Reference Dose
Noncarc-Ingestion Dose	= 6.99E-5	= Noncarcinogenic Ingestion Exposure Dose (mg/kg-day)

Dermal Absorption of Area Groundwater :

Dermal absorption of PCE in area groundwater at WOD for a future adult construction worker under an RME scenario was evaluated using the following equation (EPA, 1989a; EPA, 1995):

$$DermalDose(mg/kg \cdot day) = \frac{CW \times KP \times SA \times Func(ET) \times EF \times ED \times CF1 \times CF2}{BW \times AT}$$

Where:

Carc-Dermal Dose	= 5.68E-8	= Carcinogenic Dermal Exposure Dose (mg/kg-day)
Noncarc- Dermal Dose	= 3.98E-6	= Noncarcinogenic Dermal Exposure Dose (mg/kg-day)

CW	= 2.55 ug/L	= PCE concentration in area groundwater
KP	= 0.033 cm/hr	= Permeability coefficient from water
FA	= 1	= Fraction Absorbed (unitless)
SA	= 2077 cm^2	= Skin surface area available for contact
EF	= 156 days/yr	= Exposure Frequency
ED	= 1 yr	= Exposure Duration
ET	= 2 hr/day	= Exposure Time where ET = Func(ET) for inorganics
CF1	= 0.001 mg/10^3 ug	= Conversion Factor
CF2	= 0.001 L/10^3 cm^3	= Conversion Factor
BW	= 70 kg	= Body Weight
ATC	= 25550	= Averaging Time for Carcinogens (365 d/yr x 70 yrs)
ATN	= 365 days	= Averaging Time for Noncarcinogens (365 d/yr x 25 yrs)
Func(ET)	= 3.73 hr/day	= Exposure Time [Func(ET) = ET for inorganics] or

$$Func(ET) = FA \times 2 \times \sqrt{\frac{6 \times \tau \times ET}{\pi}}$$ for organics ET<t*

$$Func(ET) = FA \times \left\{ \frac{ET}{1+B} + \frac{2 \times \tau \times \left(1 + 3B + 3B^2\right)}{(1+B)^2} \right\}$$ for organics ET>t*

Where:

t^*_{PCE}	= 2.18 hr	= Time to reach steady state
τ	= 0.91 hr	= Lag Time
ET	= 2 hr/day	= Exposure Time

The RME cancer risk for a future construction worker from dermal absorption of PCE in area groundwater at WOD is estimated as follows:

CA = Dermal Dose x SF

CA	= 3.07E-8	= Incremental Cancer Risk
SF	= 5.40E-1 $(mg/kg\text{-}day)^{-1}$	= Dermal Slope Factor = (SF_{oral}/GI Factor; [5.40E-2/1.0])
Carc-Dermal Dose	= 5.68E-8	= Carcinogenic Dermal Exposure Dose (mg/kg-day)

The RME noncarcinogenic risk for a future construction worker from dermal absorption of PCE in area groundwater at WOD is estimated as follows:

NC = Dermal Dose/RfD

NC	= 3.98E-4	= Noncarcinogenic Risk
RfD	= 1.0E-2 (mg/kg-day)	= Dermal Reference Dose = (RfD_{oral}*GI Factor; [1.0E-2*1.0])
Noncarc-Dermal Dose	= 3.98E-6	= Noncarcinogenic Dermal Exposure Dose (mg/kg-day)

Inhalation of Vapors (During Construction Activities):

Inhalation of PCE in area groundwater for a future adult construction worker under an RME scenario was evaluated using the following equations (EPA, 1989a; ASTM E/1739-95, 1995):

$$InnhalationDose = \frac{CW * CF * VF * IR * ET * EF * ED}{BW * AT}$$

Where:

Carc-Inhalation Dose	= 7.99E-9	= Carcinogenic Inhalation Exposure Dose (mg/kg-day)
Noncarc-Inhalation Dose	= 5.59E-7	= Noncarcinogenic Inhalation Exposure Dose (mg/kg-day)

CW	= 2.55 ug/L	= Concentration in of PCE in groundwater
CF	= 0.001 $mg/10^3 ug$	= Conversion Factor
VF	= 1.360E-3 L/m^3	= Volatilization Factor for PCE in groundwater
IR_{air}	= 3.3 m^3/hour	= Inhalation rate
ET	= 8 hours/day	= Exposure Time
EF	= 156 days/yr	= Exposure frequency
ED	= 1 yr	= Exposure duration
BW	= 70 kg	= Body weight
ATC	= 25550 days	= Averaging time for carcinogens (365 d/yr x 70 yrs)
ATN	= 365 days	= Averaging Time for Noncarcinogens (365 d/yr x 1 yrs)

$$VF = \frac{H'}{1 + \left[\frac{U_{air} * S_{air} * L_{GW}}{W * D_{EFF-WS}}\right]} * 10^3 \, L/m^3$$

Where:

VF	= 1.360E-3 L/m^3	= Volatilization Factor for PCE in groundwater
H'	= 0.754	= dimensionless Henry's Law constant for PCE
U_{air}	= 470 cm/sec	= avg. wind speed above ground surf. in mixing zone (Norfolk)
S_{air}	= 200 cm	= ambient mixing zone

L_{GW}	= 0.1 cm	= depth to groundwater, h_v+h_{cap}
h_v	= 0 cm	= thickness of the vadose zone
h_{cap}	= 0.1 cm	= thickness of the capillary fringe
D_{EFF-WS}	= 1.13E-5 cm^2/sec	= effective diffusion between GW and Soil for PCE
W	= 1500 cm	= width of the source parallel to groundwater flow direction

$$D_{EFF-WS} = \left(h_{cap} + h_v\right) * \left[\frac{h_{cap}}{D_{EFF-cap}} + \frac{h_v}{D_{EFF-s}}\right]^{-1}$$

Where:

D_{EFF-WS}	= 1.13E-5 cm^2/sec	= effective diffusion between GW and Soil for PCE
h_v	= 0 cm	= thickness of the vadose zone
h_{cap}	= 0.1 cm	= thickness of the capillary fringe
$D_{EFF-cap}$	= 1.13E-5 cm^2/sec	= effective diffusion through capillary fringe for PCE
D_{EFF-s}	= cm2/sec	= effective diffusion in soil based on vapor-phase concentration, chemical specific

Because h_v is equal to zero, this equation reduces to show that the effective diffusion between groundwater and surface soil (D_{EFF-WS}) is equal to the effective diffusion through the capillary fringe ($D_{EFF-cap}$).

$$D_{EFF-cap} = \left[D^{air} * \frac{Oa_{cap}^{3.33}}{Ot^2}\right] + \left[D^{wat} * \frac{1}{H'} * \left(\frac{Ow_{cap}^{3.33}}{Ot^2}\right)\right]$$

Where:

$D_{EFF-cap}$	= 1.13E-5 cm^2/sec	= effective diffusion through capillary fringe for PCE
D^{air}	= 0.072 cm^2/sec	= diffusion coefficient in air for PCE
D^{wat}	= 8.2E-6 cm^2/sec	= diffusion coefficient in water for PCE
H'	= 0.754	= dimensionless Henry's Law constant for PCE
Oa_{cap}	= 0.038 cm^3-air/cm^3-soil	= volumetric air content in capillary fringe soils
Ow_{cap}	= 0.342 cm^3-H2O/cm^3-soil	= volumetric water content in capillary fringe soils
Ot	= 0.38 cm^3/cm^3-soil	= total soil porosity

The RME cancer risk for a construction worker from inhalation of PCE vapors in groundwater during construction activities at area groundwater – WOD is estimated as follows:

CA = Inhalation Dose x SF

CA	= 1.60E-10	= Incremental cancer risk
SF	= 2.00E-2 $(mg/kg/day)^{-1}$	= Inhalation slope factor
Inhalation Dose	= 7.99E-9 mg/kg/day	= Inhalation exposure for a industrial worker

The RME noncarcinogenic risk for a construction worker from inhalation of PCE vapors in groundwater during construction activities at WOD is estimated as follows:

NC = Inhalation Dose/RfD

NC	= 4.00E-6	= Noncarcinogenic Risk
RfD	= 1.40E-1 (mg/kg-day)	= Inhalation Reference Dose
Noncarc-Dermal Dose	= 5.59E-7	= Noncarcinogenic Inhalation Exposure Dose (mg/kg-day)

Inhalation of Vapors (During Showering):

If inhalation of vapors during showering is also estimated for exposure to area groundwater, the concentration of PCE leaving water as a vapor must be estimated and subtracted from the water concentration in order to determine the proper concentration left for dermal contact.

$$Cv = Co - Cwd$$

Where:

Cv	= 1.604 ug/L	= PCE concentration in water after vaporization
Co	= 2.55 ug/L	= Original concentration of PCE in groundwater
Cwd	= 0.946 ug/L	= Concentration of PCE leaving the water droplet in vapors

The concentration leaving the water droplet (Cwd; see derivation below) is 0.946 ug/L, therefore, the available concentration for dermal contact is equal to 2.55 ug/L – 0.946 ug/L = 1.604 ug/L, this value is input into Cv in the dermal equation above for the adult resident.

$$Cwd = Co \times \left(1 - e^{-KaL \times ts \times \left(6/d\right) \times CF2 \times CF3}\right)$$

Cwd	= 0.946 ug/L	= Concentration leaving water droplet after time ts
Co	= 2.55 ug/L	= Concentration in water
KaL	= 13.90 cm/hr	= Adjusted overall mass transfer coefficient
ts	= 2 sec	= Shower droplet time
d	= 1 mm	= Shower droplet diameter
6/d	= (πd^2) / ($4/3\pi r^3$)	= Interfacial droplet area per unit droplet volume
CF2	= 1 hr/3600 sec	= Conversion Factor
CF3	= 10 mm/cm	= Conversion Factor

$$KaL = \frac{KL}{\sqrt{\frac{T_1 \times \mu_s}{T_s \times \mu_1}}}$$

KaL	= 13.90 cm/hr	= Adjusted overall mass transfer coefficient
KL	= 10.29 cm/hr	= Mass transfer coefficient
T_1	= 293 ^{o}K	= Calibration water temperature of KL
T_s	= 318 ^{o}K	= Shower water temperature
μ_1	= 1.002 centipoise	= Water viscosity at T_1
μ_S	= 0.596 centipoise	= Water viscosity at T_s

$$KL = \frac{1}{\left(\frac{1}{kl}\right) + \left(\frac{R \times T}{H \times kg}\right)}$$

KL	= 10.29 cm/hr	= Mass transfer coefficient
R	= 8.21E-5 atm m^3/mol/°K	= Ideal gas law constant
T	= 293 °K	= Absolute temperature
H	= 0.256 atm m^3/mole	= Henry's Law constant
kg	= 988.38 cm/hr	= Gas-film mass transfer coefficient
kl	= 10.30 cm/hr	= Liquid-film mass transfer coefficient

$$kg = kH \times \sqrt{\frac{MWH}{MW}}$$

$$kI = kC \times \sqrt{\frac{MWC}{MW}}$$

kg	= 988.38 cm/hr	= Gas-film mass transfer coefficient
kl	= 10.30 cm/hr	= Liquid-film mass transfer coefficient
kH	= 3000 cm/hr	= kg for water
kC	= 20 cm/hr	= kl for carbon dioxide
MWH	= 18 g/mole	= Molecular Weight of water
MWC	= 44 g/mole	= Molecular Weight of carbon dioxide
MW	= 165.83 g/mole	= Molecular Weight of PCE

Inhalation of PCE (vapor phase during showering) in area groundwater at WOD for a future adult resident under an RME scenario was evaluated using the following equations (EPA, 1989a; Foster and Chrostowski, 1987):

$$InhalationDose(mg/kg \cdot day) = \frac{D \times EF \times ED}{AT}$$

$$D = \left(\frac{IR_{air} \times S}{BW \times Ra \times CF1} \right) \times Q$$

$$Q = Ds + \left[\frac{e^{-Ra \times Dt}}{Ra} \right] - \left[\frac{e^{Ra \times (Ds - Dt)}}{Ra} \right]$$

$$S = \frac{Cwd \times Fr}{Sv}$$

Where:

Carc-Inhalation Dose	= 2.21E-5	= Carcinogenic Inhalation Exposure Dose (mg/kg-day)
Noncarc-Inhalation Dose	= 6.46E-5	= Noncarcinogenic Inhalation Exposure Dose (mg/kg-day)

D	= 6.733E-5 mg/kg/shower	= Dose absorbed per kg body weight per shower
EF	= 350 days/yr	= Exposure Frequency
ED	= 24 yrs	= Exposure Duration
ATC	= 25550 days	= Averaging Time for Carcinogens (365 d/yr x 70 yrs)
ATN	= 8760 days	= Averaging Time for Noncarcinogens (365 d/yr x 24 yrs)
IR_{air}	= 13.88 L/min	= Inhalation Rate (0.833 m^3/hr) x 1000 L/m3 x 1 hr/ 60 min
S	= 2.029 ug/m^3/min	= Indoor VOC generation rate
BW	= 70 kg	= Body Weight
Ra	= 1.667E-2 min^{-1}	= Rate of air exchange
CF1	= 10^6 ug L/mg m^3	= Conversion Factor
Q	= 2.7897 min	= Function of air exchange rate & time in shower/room
Ds	= 15 min	= Duration of shower
Dt	= 20 min	= Total time in shower room
Cwd	= 0.946 ug/L	= Concentration leaving water droplet after time ts
Fr	= 12.87 L/min	= Shower flow rate
Sv	= 6 m^3	= Shower room air volume

The RME cancer risk for a future adult resident from inhalation of PCE vapors in area groundwater during showering at WOD is estimated as follows:

CA = Inhalation Dose x SF

CA	= 4.43E-7	= Incremental Cancer Risk
SF	= 2.00E-2 $(mg/kg\text{-}day)^{-1}$	= Inhalation Slope Factor
Carc-Inhalation Dose	= 2.21E-5	= Carcinogenic Inhalation Exposure Dose (mg/kg-day)

The RME noncarcinogenic risk for a future adult resident from inhalation of PCE vapors in area groundwater during showering at WOD is estimated as follows:

NC = Inhalation Dose/RfD

NC	= 4.61E-4	= Noncarcinogenic Risk
RfD	= 1.40E-1 (mg/kg-day)	= Inhalation Reference Dose
Noncarc-Inhalation Dose	= 6.46E-5	= Noncarcinogenic Inhalation Exposure Dose (mg/kg-day)

The volatile chemical generation rate was estimated using the Foster and Chrostowski mass transfer model, which is based on two-phase film theory. The model employs contaminant-specific mass transfer coefficients, Henry's Law constants, droplet drop time, viscosity, temperature, etc. Specific details regarding the application of the mass transfer model can be found in the source documents (Foster and Chrostowski, 1987).

Ingestion of COPCs in Soil*:

Ingestion of benzo(a)pyrene (cancer) and antimony (non-cancer) in Soil* at WOD for a future adult industrial worker under an RME scenario was evaluated using the following equation (EPA, 1989a):

$$IngestionDose(mg/kg\cdot day) = \frac{CS \times IR_{soil} \times FI \times EF \times ED \times CF1}{BW \times AT}$$

Where:

Carc-Ingestion Dose	= 8.16E-8	= Carcinogenic Ingestion Exposure Dose (mg/kg-day)
Noncarc-Ingestion Dose	= 9.15E-7	= Noncarcinogenic Ingestion Exposure Dose (mg/kg-day)

CS	= 0.467 mg/kg	= Benzo(a)pyrene concentration in Soil*
CS	= 1.87 mg/kg	= Antimony concentration in Soil*
IR_{Soil}	= 50 mg/day	= Ingestion Rate
FI	= 1.0	= Fraction Ingested from this contaminated source
CF1	= 1 kg/10^6 mg	= Conversion Factor
EF	= 250 days/yr	= Exposure Frequency
ED	= 25 yrs	= Exposure Duration
BW	= 70 kg	= Body Weight
ATC	= 25550 days	= Averaging Time for Carcinogens (365 d/yr x 70 yrs)
ATN	= 9125 days	= Averaging Time for Noncarcinogens (365 d/yr x 25 yrs)

The RME cancer risk for a future adult industrial worker from ingestion of benzo(a)pyrene in Soil* at WOD is estimated as follows:

CA = Ingestion Dose x SF

CA	= 5.96E-7	= Incremental Cancer Risk
SF	= 7.3 $(mg/kg\text{-}day)^{-1}$	= Oral Slope Factor
Carc-Ingestion Dose	= 8.16E-8	= Carcinogenic Ingestion Exposure Dose (mg/kg-day)

The RME noncarcinogenic risk for a future adult industrial worker from ingestion of benzo(a)pyrene in Soil* at WOD is estimated as follows:

NC = Ingestion Dose / RfD

NC	= 2.29E-3	= Noncarcinogenic Risk
RfD	= 0.0004 mg/kg-day	= Oral Reference Dose
Noncarc-Ingestion Dose	= 9.15E-7	= Noncarcinogenic Ingestion Exposure Dose (mg/kg-day)

Dermal Absorption of COPCs in Soil*:

Dermal absorption of benzo(a)pyrene (cancer) and antimony (non-cancer) in Soil* at WOD for a future adult industrial worker under an RME scenario was evaluated using the following equations (EPA, 1992e):

$$DermalDose(mg/kg \cdot day) = \frac{CS \times SA \times AF \times DABS \times EV \times EF \times ED \times CF1}{BW \times AT}$$

Where:

Carc-Dermal Dose	= 1.05E-7	= Carcinogenic Dermal Exposure Dose (mg/kg-day)
Noncarc-Dermal Dose	= 9.07E-8	= Noncarcinogenic Dermal Exposure Dose (mg/kg-day)

CS	= 0.467 mg/kg	= Benzo(a)pyrene concentration in Soil*
CS	= 1.87 mg/kg	= Antimony concentration in Soil*
SA	= 2479 cm^2	= Surface Area
AF	= 0.2 mg/cm^2/event	= Summation [Adherence factor per body part exposed]
EV	= 1 event/day	= Event Frequency
EF	= 250 days/yr	= Exposure Frequency
ED	= 25 yrs	= Exposure Duration
BW	= 70 kg	= Body Weight
DABS	= 0.13	= Benzo(a)pyrene Absorption Factor
DABS	= 0.01	= Antimony Absorption Factor

CF1	= 1 kg/10^6 mg	= Conversion Factor
ATC	= 25550 days	= Averaging Time for Carcinogens (365 d/yr x 70 yrs)
ATN	= 9125 days	= Averaging Time for Noncarcinogens (365 d/yr x 25 yrs)

The RME cancer risk for a future adult industrial worker from dermal absorption of benzo(a)pyrene in Soil* at WOD is estimated as follows:

CA = Dermal Dose x SF

CA	= 7.68E-7	= Incremental Cancer Risk
SF	= 7.3 (mg/kg-day)$^{-1}$	= Dermal Slope Factor = (SF_{oral}/GI Factor; [7.3/1])
Carc-Dermal Dose	= 1.05E-7	= Carcinogenic Dermal Exposure Dose (mg/kg-day)

The RME noncarcinogenic risk for a future adult industrial worker from dermal absorption of antimony in Soil* at WOD is estimated as follows:

NC = Dermal Dose / RfD

NC	= 1.51E-3	= Noncarcinogenic Risk
RfD	= 6.00E-5 mg/kg-day	= Dermal Reference Dose = (RfD_{Oral}*GI Factor; [4E-4*0.15])
Noncarc-Dermal Dose	= 9.07E-8	= Noncarcinogenic Dermal Exposure Dose (mg/kg-day)

Inhalation of COPCs in Fugitive Dust:

Inhalation of benzo(a)pyrene in Soil* (via fugitive dust) at WOD for a future adult industrial worker under an RME scenario was evaluated using the following equations (EPA, 1992e):

$$InhalationDose(mg/kg/day) = \frac{\left(CS/PEF\right) \times IN \times ET \times EF \times ED}{BW \times AT}$$

Where:

Carc-Inhalation Dose = 1.15E-10 = Carcinogenic Inhalation Exposure Dose (mg/kg-day)

CS	= 0.467 mg/kg	= Benzo(a)pyrene concentration in Soil*
PEF	= 1.70E8 m^3/kg	= Particulate Emission Factor from Soil*
IN	= 1.5 m^3/hr	= Inhalation Rate
ET	= 8 hr/day	= Exposure Time
EF	= 250 days/yr	= Exposure Frequency
ED	= 25 yrs	= Exposure Duration
BW	= 70 kg	= Body Weight
ATC	= 25550 days	= Averaging Time for Carcinogens (365 d/yr x 70 yrs)

The RME cancer risk for a future adult industrial worker from inhalation of benzo(a)pyrene in Soil* at WOD is estimated as follows:

CA = Inhalation Dose x SF

CA	= 3.57E-10	= Incremental Cancer Risk
SF	= 3.10 (mg/kg-day)$^{-1}$	= Inhalation Slope Factor
Carc- Inhalation Dose	= 1.15E-10	= Carcinogenic Inhalation Exposure Dose (mg/kg-day)

APPENDIX H
SUPPORTING MATERIALS FOR
THE ECOLOGICAL RISK ASSESSMENT

APPENDIX H-1
CHEMICAL TOXICITY INFORMATION

APPENDIX H.1

This appendix presents a discussion of the different chemical classes to be analyzed at the WOD, including toxicity information, potential food chain and trophic transfer, and bioaccumulation potential. Appendix Table H.1-1 presents the bioaccumulation factors (BAFs) that were used in the surrogate species' food-chain models for the individual constituents that are detected the WOD. Note that dry weight BAFs were used for this ERA.

Volatile Organic Compounds

VOCs are usually very mobile in the environment because they are poorly adsorbed to soil and sediment particles. Also, because they are very volatile, they typically are only detected in surface water, surface soil, and sediment at low concentrations.

Most VOCs have very little potential to bioaccumulate in ecological receptors; therefore, biomagnification through the food chain does not appear to be significant. VOCs are not expected to biomagnify in plants and are typically only toxic to ecological receptors at relatively high concentrations.

Semivolatile Organic Compounds

The most common semivolatile organic compounds that are found at naval facilities include polynuclear aromatic hydrocarbons (PAHs) and phthalates. PAHs are a diverse group of compounds consisting of two or more substituted and unsubstituted polynuclear aromatic rings formed by the incomplete combustion of carbonaceous materials. PAHs are ubiquitous in the modern environment and are common constituents of coal tar, soot, vehicle exhaust, cigarette smoke, certain petroleum products, road tar, mineral oils, creosote, and many cooked foods. PAHs also are released to the environment through natural sources such as volcanoes and forest fires.

PAHs are transferred from surface water by volatilization and sorption to settling particles. The compounds are transformed in surface water by photooxidation, chemical oxidation, and microbial metabolism (ATSDR, 1989a). In soil and sediments, microbial metabolism is the major process for degradation of PAHs (ATSDR, 1989a). Although PAHs accumulate in terrestrial and aquatic plants, many organisms are able to metabolize and eliminate these compounds. Vertebrates can readily metabolize PAHs, but lower forms (insects and worms) cannot metabolize PAHs as quickly. However, food chain uptake does not appear to be a major exposure source to PAHs for aquatic animals (ATSDR, 1989a).

PAHs vary substantially in their toxicity to aquatic organisms. In general, toxicity increases as molecular weight increases, with the exception of some high molecular weight PAHs that have low acute toxicity. Most species of aquatic organisms rapidly accumulate PAHs that occur at low concentrations in the ambient medium. However, uptake of PAHs is highly species-specific, it is higher in algae, mollusks, and other species that are incapable of metabolizing PAHs (Eisler, 1987). The ability of fish to metabolize PAHs may explain why benzo(a)pyrene is frequently not detected or is found at only very low levels in fish from environments heavily contaminated with PAHs (ATSDR, 1989a).

Appendix Table H.1-1 presents the soil to earthworm BAFs for PAHs. Two sets of BAF studies were found for PAHs (see Appendix Table H.1-2). One study by Ma et al., (1998) calculated BAFs for PAHs in different soil types. The BAFs were presented as values for total PAHs. The second study, reported in Beyer (1990), presented average soil and earthworm concentrations for individual PAHs. The data were used to calculate the BAFs by dividing the PAH concentrations in the earthworm samples by the PAH concentrations in the soil samples. For the conservative food chain model, 1.606 [the maximum BAF from Ma et al., (1998)] was used while the average BAF of 0.609 was used for the average food chain model. These values were used because they are more conservative than those from Beyer (1990) and were based on more than one study.

Phthalates are semivolatile organic compounds that are used in production of plastics (ATSDR, 1993). Most phthalates are expected to sorb to soil or sediment particles after their release because of their high Log K_{OC} values (Howard, 1989). Some phthalates may bioconcentrate in aquatic organisms [Spectrum Laboratories, 1999; Howard, 1989; ATSDR, 1989a].

PCBs

The term polychlorinated biphenyls (PCBs) commonly refers to a variety of mixtures of individual biphenyl isomers, each consisting of two joined benzene rings and up to 10 chlorine atoms. Mixtures of these isomers are known by their commercial designation of Aroclor. This trade name is followed by a four-digit number; the first two numbers indicate the type of isomer mixture and the last two numbers indicate the approximate weight percent of chlorine in the mixture (USEPA, 1985).

PCBs released into water adsorb to sediments and other organic matter. Typically, PCB concentrations are greater in the sediment and suspended material than in the water column. Substantial quantities of PCBs in aquatic sediments can act as an environmental reservoir from which PCBs may be released slowly over a long period of time (ATSDR, 1989b). For PCBs that

exist in the dissolved state in water, volatilization becomes the primary fate process (USEPA, 1985).

Degradation of PCBs in the environment is dependent upon the degree of chlorination. Generally, the more chlorinated the PCB molecule, the more persistent it will be in the environment. Factors that determine biodegradability include the amount of chlorination, concentration, type of microbial population, available nutrients, and the temperature (ATSDR, 1989b).

Because PCBs are highly lipophilic, they can bioaccumulate in the lipid portions of animals. Bioconcentration factors in the thousands have been reported for various aquatic species (Eisler, 1986). PCBs can also accumulate in upper trophic level animals such as piscivorous birds and mammals that feed on contaminated prey items (Eisler, 1986).

Adverse effects of PCBs on terrestrial wildlife include increased mortality, reproductive effects, and behavioral effects (USEPA, 1985). As a group, birds are more resistant to acutely toxic effects of PCBs than mammals (Eisler, 1986). Among sensitive avian species, PCBs disrupt the normal pattern of growth, reproduction, metabolism, and behavior (Eisler, 1986). Of the mammals, the mink is the most sensitive wildlife species tested for which data are available (Eisler, 1986). Impacts to mink include anorexia, weight loss, lethargy, reproductive effects, and death (Eisler, 1986).

Metals

Many metals occur naturally at various concentrations in the surface water and sediment primarily to chemical weathering of rocks and fallout from volcanoes. Most metals are toxic to aquatic (i.e., fish, invertebrates) and terrestrial (i.e., plants, invertebrates, vertebrates) ecological receptors above certain concentrations, with some metals being more toxic at lower concentrations than others. Also, different chemical forms of the metals may be more toxic than others. For example, hexavalent chromium is typically more toxic than trivalent chromium, and methylmercury is more toxic than inorganic mercury. In addition, the toxicity of several metals (cadmium, chromium, copper, lead, nickel, silver, and zinc) to aquatic receptors in freshwater systems decreases with increasing water hardness.

Many factors (e.g., pH, Eh, clay content, organic matter content, cation exchange capacity) influence the bioavailability of metals to invertebrates in soil. It has been shown that the toxicity and bioavailability of metals is much higher in freshly salt-spiked soils than equivalent metal concentrations in field-collected soils. Some of the effects are metal or species specific. For

some metals, the pH of the soil or the presence of calcium can have an effect on the bioavailability of metals (Allen, 2002).

For plants, the temperature and humidity of the air can affect metal bioavailability. With higher temperature and lower humidity, flow of metals to the roots of plants increases (Allen, 2002).

For several metals, the Eco SSL Guidance referenced a document prepared by Sample et al., (1998), which presented soil to biota BAFs. These BAFs were used to predict the tissue concentrations in the small mammals from the chemical concentrations in the soil. The 90 percentile BAF from Sample et al., (1998) was used for the conservative food chain model and the median BAF was used for the average food chain model.

Notes:
BAF = Bioaccumulation Factor
All BAFs are presented on a dry weight basis
1 - ORNL (2001) for organics; only one value is available for conservative and average exposures
2 - Sample et al., (1997) for inorganics; conservative value is 90th percentile; average value is median value
3 - ORNL (September, 1998) for all chemicals except PAHs; conservative value is 90th percentile; average value is median value
4 - See Appendix Table H.1-2 for source of BAFs for PAHs
5 - Conservative and average refers to the exposure scenarios for which the uptake factors are used

APPENDIX TABLE H.1-2

SOIL TO EARTHWORM BIOACCUMULATION FACTORS FOR PAHS
WOD RI REPORT
NASA WFF, WALLOPS ISLAND, VIRGINIA

Notes:
ND = No data available
1 - Source of data is Table 25 in Beyer (1990)
2 - Wet weight BAF was calculated by multiplying the dry weight BAF by 0.16 (percent solids of an earthworm)

APPENDIX H-2

RECEPTOR PROFILES

APPENDIX H.2

The following sections present the receptor profiles for the short-tailed shrew, American robin, meadow vole, and northern bobwhite quail. The majority of the information for the profiles was obtained from the Wildlife Exposure Factors Handbook (USEPA, 1993). The data for the incidental soil ingestion rates were obtained from the Estimates of Soil Ingestion by Wildlife (Beyer, 1994) or the draft USEPA Ecological Soil Screening Guidance (USEPA, July 2000).

The food and water ingestion rates are typically reported in g/g (of body weight)-day on a wet weight basis, but the values were converted to a dry weight basis for the ERA. The home ranges are presented in hectares in USEPA (1993) but were converted to acres by multiplying the number of hectares by 2.471. The estimated percent of soil in the diets are listed in dry weight. Appendix Table H.2-1 presents the calculation of the exposure parameters and how the calculations were done.

Short-Tailed Shrew (*Blarina brevicauda*)

Shrews inhabit a wide variety of habitats and are common in areas with abundant vegetative cover. They need cool, moist habitats because of their high metabolic and water-loss rates. The short-tailed shrew is primarily carnivorous, eating insects such as earthworms, slugs, and snails.

The adult body weight for the short-tailed shrew in various habitats ranged from 0.015 to 0.01921 kg with an average of 0.0161 kg. The listed food ingestion rates for shrews are 0.49 and 0.62 g/g-day (wet-weight). The water ingestion rate was listed as 0.223 g/g-day. The food and water ingestion rates in kg/day and L/day, respectively, were calculated as shown in Appendix Table H.2-1. The food ingestion rates were then multiplied by 0.16, which is the percent solids of worms (Sample et al., 1997) to convert the ingestion rate from a wet-weight value to a dry-weight value. The incidental soil ingestion rate was calculated by multiplying the food ingestion rate by the percentage of soil that is incidentally ingested (used 3 percent for conservative food chain model and 1.5 percent for the average food chain model) from USEPA (July 2000). 3 percent is the 90^{th} percentile value and 1.5 percent is the 50^{th} percentile value from USEPA (July 2000). The home range for the shrew (0. 9699 acres) was calculated using data from a tamarek bog in Manitoba (only value available).

American Robin (*Turdus migratorius*)

American robins' habitats include parks, lawns, moist forests, swamps, open woodlands, and orchards. Robins forage on the ground in open areas, along habitat edges, or the edges of streams. They also may forage above ground in shrubs and within the lower branches of trees. In the months

preceding and during the breeding season, robins feed primarily on invertebrates and on some fruits. During the rest of the year their diet consists primarily of fruits.

The adult body weight for the American robin in New York woodlands and forests and in Pennsylvania ranged from 0.0773 to 0.0862 kg with an average of 0.0804 kg. The only listed food ingestion rates were for robins in Kansas (1.52 g/g-day) and California (0.89 g/g-day), with an average of 1.205 g/g-day. The water ingestion rate was estimated as 0.14 g/g-day. Studies calculating food ingestion rates for the robin included in the USEPA (December 1993) are based on a diet comprised of berries. The food and water ingestion rates in kg/day and L/day, respectively, were calculated as shown in Appendix Table H.2-1. The food ingestion rates were then multiplied by 0.23, which is the percent solids of fruit (Sample et al., 1997) to convert the ingestion rate from a wet-weight value to a dry-weight value. Because it is assumed that 100 percent of the robin's diet is worms for the food chain models, the ingestion rate for the robin was calculated using field metabolism scaling (Nagy et al., 1999) as presented in Appendix Table H.2-1. These are the values that were used in the food chain model for this site.

The incidental soil ingestion rate was calculated by multiplying the food ingestion rate by the percentage of soil that is incidentally ingested (assumed 3 percent for conservative food chain model and 1.5 percent for the average food chain model) from USEPA (2000). The 3 percent and 1.5 percent values are from the shrew since it is assumed that both the shrew and robin are consuming 100 percent worms, and no incidental soil ingestion rate was available for the robin.

The home range for the robin was calculated using data from Tennessee and a New York dense conifer forest. The values ranged from 0.27 to 1.04 acres with an average home range of 0.6095 acres.

Meadow Vole (*Microtus pennsylvanicus*)

Meadow voles inhabit grassy fields, marshes, and bogs; however, they prefer fields with more grass, more cover, and fewer woody plants. They typically consume green succulent vegetation, sedges, seeds, roots, bark, fungi, insects, and animal matter. However, green succulent vegetation makes up the majority of their diet.

The adult body weight for the vole ranges from 0.017 to 0.0524 kg with an average of 0.0358 kg. The only listed food ingestion rates for voles range from 0.30 to 0.35 g/g-day (wet-weight), with an average of 0.325 g/g-day. The water ingestion rates are 0.14 (estimated) and 0.21 g/g-day, with an average of 0.175 g/g-day. The food and water ingestion rates in kg/day and L/day, respectively, were calculated as shown in Appendix Table H.2-1. The food ingestion rates were then multiplied by 0.30, which is

the percent solids of young grass (Sample et al., 1997) to convert the ingestion rate from a wet-weight value to a dry-weight value. The incidental soil ingestion rate is calculated by multiplying the food ingestion rate by the percentage of soil that is incidentally ingested (2.4 percent) from Beyer (1994). The home range for the meadow vole ranges from 0.000494 to 0.2051 acres with an average home range of 0.0659 acres.

Northern Bobwhite Quail (*Colinus virginianus*)

Quails inhabit grasslands, idle fields, pastures, and large clumps of grasses. Bobwhite quails forage in areas with open vegetation, some bare ground, and light litter. Seeds from weeds, woody plants, and grasses comprise the majority of an adult's diet, although green vegetation has been found to dominate the diet of this species in winter in the southern areas of the United States.

The adult body weight for the bobwhite quail ranges from 0.154 to 0.1939 kg with an average of 0.1751 kg. The listed food ingestion rates for quails range from 0.067 to 0.093 g/g-day (wet-weight), with an average of 0.078 g/g-day. The water ingestion rate is estimated as 0.10 and 0.11 g/g-day, and measured as 0.10 to 0.13 g/g-day, for an average water ingestion rate of 0.11 g/g-day. The food and water ingestion rates in kg/day and L/day, respectively, were calculated as shown in Appendix Table H.2-1. The food ingestion rates were then multiplied by 0.30, which is the percent solids of young grass (Sample et al., 1997) to convert the ingestion rate from a wet-weight value to a dry-weight value. The incidental soil ingestion rate is calculated by multiplying the food ingestion rate by the percentage of soil that is incidentally ingested (8.2 percent). The 8.2 percent is based on the incidental sediment ingestion rate of a Canada goose (Beyer, 1994), which also consumes terrestrial vegetation, because an incidental soil ingestion rate was not available for the quail.

The home range for the quail ranges from 8.9 to 41.3 acres with an average home range of 18.8 acres.

NOTE: Some of the references in this list are not referenced in the proceeding table. This reference list also includes other toxicity values not used in the development of the terrestrial reference values.

APPENDIX TABLE H.3-1

TOXICITY REFERENCE VALUES
WOD RI REPORT
NASA WFF, WALLOPS ISLAND, VIRGINIA

PARAMETER	Mammal		Bird	
	NOAEL	LOAEL	NOAEL	LOAEL
SEMIVOLATILES (mg/kg)				
Benzo(a)anthracene	0.17	1.7	2	20
Benzo(a)pyrene	1	10	2	20
Benzo(b)fluoranthene	4	40	2	20
Benzo(g,h,i)perylene	7.2	72	2	20
Benzo(k)fluoranthene	7.2	72	2	20
Chrysene	0.17	1.7	2	20
Fluoranthene	12.5	25	2	20
Indeno(1,2,3-cd)pyrene	7.2	72	2	20
Phenanthrene	1	10	2	20
Pyrene	7.5	12.5	2	20
PCBs (mg/kg)				
Aroclor-1260	0.068	0.68	0.18	1.8
INORGANICS (mg/kg)				
Arsenic	0.126	1.26	2.46	7.38
Cadmium	1	10	1.45	20
Chromium	3.28	13.14	1	5
Copper	11.71	15.14	46.97	61.72
Lead	8	80	1.13	11.3
Mercury	0.032	0.16	0.0064	0.064
Nickel	40	80	77.4	107
Selenium	0.2	0.33	0.4	0.8
Silver	2.38	23.8	5.44	54.4
Zinc	160	320	14.49	130.9

Notes:

The sources of these NOAELS and LOAELS are presented in the table titled "Sources and Endpoints for NOAELS and LOAELS for Terrestrial Wildlife" in this appendix.

The NOAELS and LOAELS in the source table were divided by 10 if a subchronic study was the basis for the value. Also, if only a NOAEL was available, the value was multiplied by 10 to estimate the LOAEL. If only a LOAEL was available, the value was divided by 10 to estimate the NOAEL.

APPENDIX TABLE H.3-2

SOURCES AND ENDPOINTS FOR NOAELS AND LOAELS FOR TERRESTRIAL WILDLIFE
WOD RI REPORT
NASA WFF, WALLOPS ISLAND, VIRGINIA

	Concentration			Chronic/			
Parameters	**(mg/kg-day)**	**Endpoint**	**Effect**	**Subchronic**	**Species**	**Primary Reference**	**Source of Reference**
Semivolatiles Organics							
Benzo(a)anthracene	17.1	NOAEL	carcinogenic	acute	mouse	Clayson et al., 1968	PRC, 1996
Benzo(a)pyrene	10	LOAEL	reproductive	chronic	mouse	Mackenzie and Angevine, 1981	Sample et.al., 1996
Benzo(b)fluoranthene	40	LOAEL	carcinogenic	chronic	rodent	Lo and Sandi, 1978	PRC, 1996
Benzo(g,h,i)perylene	72	LOAEL	carcinogenic	chronic	rodent	Simms and Overcash, 1983	PRC, 1996
Benzo(k)fluoranthene	72	LOAEL	carcinogenic	chronic	rodent	Lo and Sandi, 1978	PRC, 1996
Chrysene	17.1	NOAEL	carcinogenic	acute	mouse	Clayson et al., 1968	PRC, 1996
Fluoranthene	125	NOAEL	systemic	subchronic	mouse	USEPA, 1988	IRIS, 2002
Fluoranthene	250	LOAEL	systemic	subchronic	mouse	USEPA, 1988	IRIS, 2002
Indeno(1,2,3-cd)pyrene	72	LOAEL	carcinogenic	chronic	rodent	Simms and Overcash, 1983	PRC, 1996
Pyrene	75	NOAEL	systemic	subchronic	mouse	USEPA, 1989c	IRIS, 2002
Pyrene	125	LOAEL	systemic	subchronic	mouse	USEPA, 1989c	IRIS, 2002
Pesticides							
Aroclor-1242	0.685	LOAEL	reproduction	chronic	mink	Bleavins et al., 1980	Sample et.al., 1996
Aroclor-1242	0.41	NOAEL	reproduction	chronic	screech owl	McLane and Hughes, 1980	Sample et.al., 1996
Aroclor-1248	0.1	LOAEL	reproductive	chronic	rhesus monkey	Barsotti et al., 1976	Sample et.al., 1996
Aroclor-1254	1.8	LOAEL	reproductive	chronic	pheasant	Dahlgren et al., 1972	Sample et.al., 1996
Aroclor-1254	0.68	LOAEL	reproduction	chronic	mouse	McCoy et al., 1995	Sample et.al., 1996
Inorganics							
Arsenic	1.261	LOAEL	reproductive	chronic	mouse	Schroeder and Mitchner, 1971	Sample et.al., 1996
Arsenic	2.46	NOAEL	mortality	chronic	brown-headed cowbird	USFWS, 1969	Sample et.al., 1996
Arsenic	7.38	LOAEL	mortality	chronic	brown-headed cowbird	USFWS, 1969	Sample et.al., 1996
Cadmium	1	NOAEL	reproductive	chronic	rat	Sutou et al., 1980	Sample et.al., 1996
Cadmium	10	LOAEL	reproductive	chronic	rat	Sutou et al., 1980	Sample et.al., 1996
Cadmium	1.45	NOAEL	reproductive	chronic	mallard duck	White and Finely, 1978	Sample et.al., 1996
Cadmium	20	LOAEL	reproductive	chronic	mallard duck	White and Finely, 1978	Sample et.al., 1996
Chromium(III)	1	NOAEL	reproductive	chronic	black duck	Haseltine et al., unpubl.	Sample et.al., 1996
Chromium(III)	5	LOAEL	reproductive	chronic	black duck	Haseltine et al., unpubl.	Sample et.al., 1996
Chromium(VI)	3.28	NOAEL	BW/food cons.	chronic	rat	Mackenzie et al., 1958	Sample et.al., 1996
Chromium(VI)	131.4	LOAEL	mortality	subchronic	rat	Steven et al., 1976	Sample et.al., 1996
Copper	11.71	NOAEL	reproductive	chronic	mink	Aulerich et al., 1982	ATSDR, 1989
Copper	15.14	LOAEL	reproductive	chronic	mink	Aulerich et al., 1982	ATSDR, 1989
