SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for two aqueous and twenty-six soil samples that were collected on February 4, 2003, and received at Mitkem on February 5, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH. The analysis results for pH are presented in the Mitkem format with supporting raw data.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of 1,2-dichloroethane-d4 in samples FTASS111MS and SV1080709 and high recovery of bromofluorobenzene in samples SV1040911, SV1050204 and SV1050911. Sample SV1080911 was re-analyzed with 1,2-dichloroethane-d4 with QC limits and low recovery of bromofluorobenzene. Samples SV1040911, SV1050204 and SV1050911 were re-analyzed at dilution with all surrogate recoveries within QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery of bromomethane inV6XLCS and high recovery of vinyl chloride, bromomethane, chloroethane and trichlorofluoromethane in V6ELCS. Replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on samples FTASS111 and SV1110204. Spike recoveries were within the QC limits with the exception of several compounds in both the matrix spike and matrix spike duplicate for sample FTASS111 and SV1110204. Replicate RPDs were within the QC limits with the exception of methylene chloride for sample FTASS111.

Sample analysis: samples SV1040911, SV1050204 and SV1050911 were initially analyzed at low level, but due to high concentration of target analytes, were re-analyzed at dilution by medium level. Internal standard area counts were within the QC criteria with the exception of sample SV1050204, FTASS110, FTASSDUP1 and SV1080709RE. Sample SV1050204 was re-analyzed at dilution with all internal standard area counts within QC criteria. No other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Please note that the soil samples are reported using the analyte list specified for aqueous samples. There are five compounds on the analyte list for soils not in the aqueous analyte list. These five compounds will be determined and reported through library search TIC if present in the samples.

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits

Lab control sample: spike recoveries were within the QC limits with the exception of low recovery of 2-methylphenol, 4-methylphenol, 3-nitroaniline and 3,3'-dichlorobenzidine in S1CLCS.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1110204. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: due to high concentration of target analytes, sample SV1050911 was re-analyzed at 10x dilution. No other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1110204. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: the method blank and lab control sample for the associated aqueous sample has a low reporting limit. These samples were extracted with samples requiring a lower reporting limit. No other unusual observation was made for the analysis.

5. Metals Analysis (SDG A):

Due to the large number of samples, metals results are arranged into two Sample Delivery Groups, SDG B0199A and B0199B. Each SDG includes a matrix spike/duplicate analysis. Results are qualified where necessary for those samples associated with each spike/duplicate. Raw analysis data for both SDGs follow Form 14 for SDG B0220B.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample FTASS111. Spike recoveries were within the QC limits with the exception of antimony. Antimony is flagged with an "N" flag on Form 1's. A post digest spike was performed for antimonywith spike recovery within QC limits.\.

Matrix duplicate: matrix duplicate was performed on sample FTASS111. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

6. Metals Analysis (SDG B):

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on samples SV1110204 and RB020403. Spike recoveries were within the QC limits. The mercury spike and %Recovery are incorrect on Form 5's due to the software. The mercury spike added and %Recovery were manually corrected.

Matrix duplicate: matrix duplicate was performed on samples SV1110204 and RB020403. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

7. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

8. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

9. TOC Analysis:

The analyses for Total Organic Carbon were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

FTA-SU-DUP3		

OVERVIEW

The sample set for CTO 848; SDG B0215, NASA Wallops Island Flight Facility consists of four (4) aqueous quality control samples and twenty-two (22) environmental soil samples. The trip blank was analyzed for volatile organic compounds (VOCs) only. All other aqueous quality control samples and soil environmental samples were analyzed for volatile, semivolatile (SVOC) and Polychlorinated biphenyl (PCB) organic compounds. One field duplicate pair was included in this SDG: FTA-SU-114-0204 / FTA-SU-DUP3.

The samples were collected by TetraTech NUS on February 5th, 2003 and analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using USEPA SW-846 Methods 8260B, 8270C, and 8082, analytical and reporting protocols.

The findings in this report are based upon a general review of all available data including: data completeness, system performance, holding times, initial / continuing calibrations, laboratory method blank results, surrogate spike/internal standard recoveries, blank spike results, field duplicate results, matrix spike/matrix spike duplicate results, compound identification, compound quantitation, and detection limits. Areas of concern are listed below; documentation supporting these findings is presented in Appendix C. Qualified analytical results are presented in Appendix A. Results as reported by the laboratory are presented in Appendix B.

Major Problems

- No major problems were noted during the data evaluation.

Minor Problems

- The following compound were detected in the soil laboratory method blanks at the maximum concentration indicated below:

Compound	Concentration (µg/kg)	Soil Action Level (µg/kg)
Methylene chloride	5	50

Blank Actions

- Value < Reporting Limit (RL); report value followed by a B.
- Value > RL and < Action Level; report value followed by a B.
- Value > RL and > Action Level; report value unqualified.

An action level of 10X the maximum contaminant concentration was established to evaluate laboratory contamination for methylene chloride. Dilution factors, sample aliquots, and percent moisture were taken into consideration during the application of all blank action levels. The affected positive results were qualified (B) as a result of blank contamination for methylene chloride.

Acetone was detected at low levels in several soil samples. However, acetone was not detected in laboratory method or field quality control blanks. In the professional opinion of the reviewer, the origins of acetone in the soil samples is most likely laboratory related. Therefore, all positive results reported for acetone were qualified as estimated (J) in soil samples.

- A calibration verification percent Difference (%D) exceeded the 25% (and was > 50%) quality control limit for 4-nitroaniline on instrument S2, on 2/28/03, at 16:29. Only nondetected results were reported for 4-nitroaniline, and these were qualified as estimated (UJ) in the affected samples. The direction of bias cannot be determined.

- Calibration verification %Ds exceeded the 25% (but were < 50%) quality control limit for indeno(1,2,3-cd)pyrene and benzo(g,h,i)perylene on instrument S2, on 3/3/03, at 15:09. Positive results were reported for indeno(1,2,3-cd)pyrene and benzo(g,h,i)perylene, and these were qualified as estimated (J) in the affected samples. The direction of bias cannot be determined.

- A calibration verification %D exceeded the 25% (and was > 50%) quality control limit for hexachlorocyclopentadiene on instrument S2, on 3/4/03, at 14:10. Only nondetected results were reported for hexachlorocyclopentadiene, and these were qualified as estimated (UJ) in the affected samples. The direction of bias cannot be determined.

- All base/neutral and acid surrogates were recovered below the lower quality control limit (but were >10%) for the analysis sample FTA-SU-118-070. The laboratory re-extracted and re-analyzed the sample with acceptable surrogate recoveries; however, the technical holding time for extraction was grossly exceeded. Therefore, the original sample results for all positive and nondetected base/neutral and acid compounds are reported and qualified as estimated (L) and (UL), respectively, due to surrogate recovery noncompliance. The results are considered biased low.

- Three base/neutral surrogates (2-fluorobiphenyl, terphenyl-d14, and 1,2-dichlorobenzene-d4) and two acid surrogates (phenol-d5 and 2,4,6-tribromophenol) were recovered below lower quality control limits (but were >10%) for the analysis of sample FTA-SU-118-0204. The laboratory re-extracted and re-analyzed the sample with acceptable surrogate recoveries; however, the technical holding time for extraction was grossly exceeded. Therefore, the original nondetected sample results for all base/neutral and acid compounds are reported and qualified as estimated (UL), due to surrogate recovery noncompliance. The results are considered biased low.

- The base/neutral surrogates 2-fluorobiphenyl, terphenyl-d14 and 1,2-dichlorobenzene-d4 were recovered below lower quality control limits (but were >10%) for the analysis of sample FTA-SU-113-0709. The laboratory re-extracted and re-analyzed the sample with acceptable surrogate recoveries; however, the technical holding time for extraction was grossly exceeded. Therefore, the original nondetected sample results for all base/neutral compounds are reported and qualified as estimated (UL), due to surrogate recovery noncompliance. The results are considered biased low.

- The internal standard 1,4-dichlorobenzene-d4 was recovered below the 50% quality control limit for the analysis of samples FTA-SS-113, FTA-SS-114, FTA-SU-DUP3, and FTA-SS-116. Positive and nondetected results for the associated target compounds are qualified as estimated (J) and (UJ), respectively, in the aforementioned samples. The direction of bias cannot be determined.

- The percent Difference (%D) between positive results reported for Aroclor-1260 exceeded the 25% quality control limit (and was > 100%) for the analysis of the following sample:

Sample	Compound	%D
FTA-SS-117	Aroclor-1260	143.1

  The positive result reported for Aroclor-1260 was qualified as estimated (J) in sample FTA-SS-117 due %D exceedance. Additionally, the Aroclor pattern identified is weathered and the presence of several large unknown peaks distort the chromatogram. The direction of bias cannot be determined.

- Positive results less than sample reporting limits were qualified as estimated (J), due to uncertainty near the detection limit.

Notes

Continuing calibration %Ds exceeded the 25% (but were <50%) quality control limit for chloromethane and acetone on the instrument V1, on 2/14/03, at 09:07. Only nondetected results were reported for chloromethane and acetone and these did not require qualification.

Continuing calibration %Ds exceeded the 25% quality control limit (but were <50%) quality control limit for methylene chloride and 1,1,2-trichlorotrifluoroethane on instrument V1, on 2/10/03, at 09:54. No action was taken for nondetected methylene chloride and 1,1,2-trichlorotrifluoroethane results. No action was taken for positive methlyene chloride results as these were previously qualified due to lab blank contamination.

A continuing calibration %D exceeded the 25% quality control limit (but was <50%) quality control limit for chloroethane on instrument V1, on 2/11/03, at 10:03. Only nondetected results were reported for chloroethane and these did not require qualification.

A continuing calibration %D exceeded the 25% quality control limit (but was <50%) quality control limit for bromomethane on instrument V1, on 2/12/03, at 11:17. Only nondetected results were reported for bromomethane and these did not require qualification.

The VOCs: vinyl chloride, bromomethane, chloroethane, and trichlorofluoromethane were recovered above their respective upper quality control limits for the analysis of the aqueous Laboratory Control Sample (LCS). No action was taken based on these noncompliances.

The VOC: chloroethane was recovered above the 146% quality control limit for the analysis of both soil LCSs (V1QLCS and V1RLCS) extracted with samples reported in this SDG. Only nondetected results were reported for chloroethane, and these did not require qualification.

Recovery of chloroethane exceeded the 146% quality control limit for the Matrix Spike/Matrix Spike Duplicate (MS/MSD) analysis of sample FTA-SU-116-0204. Chloroethane also recovered above quality control limits in the associated LCSs as noted above; however, no action was taken because only nondetected results were reported.

An initial calibration percent Relative Standard Deviation (%RSD) exceeded the 30% (but was <60%) quality control limit for hexachlorocyclopentadiene on instrument S2, on 2/266/03. Only nondetected results were reported for hexachlorocyclopentadiene, and these did not require qualification.

Continuing calibration %Ds exceeded the 25% (but were <50%) quality control limit for hexachlorocyclopentadiene, 2,4-dinitrophenol, 4-nitrophenol, carbazole, indeno(1,2,3-cd)pyrene, dibenzo(a,h)anthracene, and benzo(g,h,i)perylene on instrument S2, on 2/28/03, at 16:29. Only nondetected results were reported for the aforementioned compounds, and these did not require qualification.

Continuing calibration %Ds exceeded the 25% (but were <50%) quality control limit for hexachlorocyclopentadiene, 4-nitroaniline, and carbazole on instrument S2, on 3/2/03, at 13:23. Only nondetected results were reported for the aforementioned compounds, and these did not require qualification.

Continuing calibration %Ds exceeded the 25% (but were <50%) quality control limit for hexachlorocyclopentadiene and dibenzo(a,h)anthracene on instrument S2, on 3/3/03, at 15:09. Only nondetected results were reported for the aforementioned compounds, and these did not require qualification.

Continuing calibration %Ds exceeded the 25% (but were <50%) quality control limit for indeno(1,2,3-cd)pyrene, dibenzo(a,h)anthracene, and benzo(g,h,i)perylene on instrument S2, on 3/4/03, at 14:10. Only nondetected results were reported for the aforementioned compounds, and these did not require qualification.

The SVOCs: 2-methylphenol, 4-methylphenol, 3-nitroaniline and 3,3'-dichlorobenzidine were recovered below their respective quality control limits for the LCS (S1CLCS) associated with the aqueous samples reported in this SDG. No action was taken based on these noncompliances.

The SVOCs: 4-nitroaniline and carbazole were recovered above their respective quality control limit for an LCS (S2FLCS) associated with soil samples reported in this SDG. No action was taken based on these noncompliances.

2,4-dinitrophenol recovery fell below the lower quality control limit for the MS analysis of sample FTA-SU-116-0204. 2,4,5-trichlorophenol, fluorene, 4-bromophenyl-phenyl ether, hexachlorobenzene, phenanthrene, anthracene, di-n-butylphthalate, bis(2-ethylhexyl)phthalate, di-n-octylphthalate, benzo(b)fluoranthene and benzo(a)pyrene recoveries fell below their respective quality control limits for the MSD analysis of sample FTA-SU-116-0204. Di-n-octylphthalate recovery fell below the lower quality control limit for the MS/MSD analysis of FTA-SU-116-0204. No action was taken based on these noncompliances.

The laboratory reported several VOC and SVOC compounds that were not requested target analytes as specified in the technical specification for laboratory services/statement of work (SOW). The laboratory failed to report several VOC and SVOC target analytes as requested in the SOW. Deviations from the SOW were conveyed to the project office (TtNUS- King of Prussia) which subsequently approved variance from the SOW.

Tentatively Identified Compounds (TICS) were identified and reported in the VOC fraction of the following samples:

FTA-SS-113	FTA-SS-114
FTA-SU-113-0204	FTA-SU-113-0709
FTA-SU-114-0204	FTA-SU-115-0810

TICS were identified and reported in the SVOC fraction of the following samples:

FTA-SS-112	FTA-SS-113
FTA-SS-114	FTA-SS-115
FTA-SS-116	FTA-SS-117
FTA-SS-118	FTA-SU-112-0709
FTA-SU-113-0204	FTA-SU-113-0709
FTA-SU-114-0709	FTA-SU-115-0204
FTA-SU-115-0810	FTA-SU-117-0204
FTA-SU-117-0709	FTA-SU-118-0204
FTA-SU-118-070	

EXECUTIVE SUMMARY

Laboratory Performance Issues: Initial calibration of the SVOC: hexachlorocyclopentadiene failed to meet linearity criteria. However, qualification of analytical data was not required. The continuing calibration criteria were not met for several VOC and SVOC compounds resulting in the qualification of analytical data as estimated. Methylene chloride was detected in laboratory method blanks resulting in the qualification of analytical data as lab blank contamination. Poor Instrument performance (low internal standard recovery) was noted for the analysis of several samples in the VOC fraction. SVOC surrogate recovery noncompliances were noted for the analysis of several samples resulting in the qualification of analytical data as biased low.

Other Factors Affecting Data Quality: None

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (9/94) as modified by Region III and the NFESC guidelines "Navy IRCDQM" (September, 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC guidelines and the Quality Assurance Project Plan (QAPP)."

2. Appendix B - Results as Reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

"Environmental Testing For The New Millennium"

March 19, 2003

Tetra Tech NUS, Inc.
600 Clark Avenue
King of Prussia, PA 19406
Attn: Mr. Garth Glenn

RE: Client Project: CTO – 848, NASA Wallops Flight Facility
Mitkem Lab Project # B0215

Dear Mr. Glenn:

Enclosed please find the data report of the required analyses for the samples associated with the above referenced project.

If you have any questions regarding this report, please call me.

We appreciate your business.

Sincerely,

Agnes R. Ng
CLP Project Manager

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for four aqueous and twenty-two soil samples that were collected on February 5, 2003, and received at Mitkem on February 6, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussions with the client. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH. The analysis results for pH are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery of vinyl chloride, bromomethane, chloroethane and trichlorofluoromethane in V6ELCS and high recovery of chloroethane in V1QLCS and V1PLCS. Replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1160204. Spike recoveries were within the QC limits with the exception of high recovery of chloroethane in the matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Please note that the soil samples are reported using the analyte list specified for aqueous samples. There are five compounds on the analyte list for soils not in the aqueous analyte list. These five compounds will be determined and reported through library search TIC if present in the samples.

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits with the exception of low recovery of several surrogates in samples SV1130709, SV1180204 and SV118070. The samples were re-extracted and analyzed with surrogate recoveries within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of low recovery of 2-methylphenol, 4-methylphenol, 3-nitroaniline and 3,3'-dichlorobenzidine in S1CLCS, high recovery of 4-nitroaniline and carbazole in S2FLCS and low recovery of di-n-octylphthalate in S2PLCS.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1160204. Spike recoveries were within the QC limits with the exception of several compounds in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits with the exception of 2,4-dinitrophenol.

RE'S

Sample analysis: samples SV1130709, SV1180204 and SV118070 were re-extracted outside of hold time. The initial extraction was within hold time but had non-compliant surrogate recoveries. No other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1160204. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: the method blank and lab control sample for the associated aqueous sample has a low reporting limit. These samples were extracted with samples requiring a lower reporting limit. No other unusual observation was made for the analysis.

5. Metals Analysis (SDG A):

Due to the large number of samples, metals results are arranged into three Sample Delivery Groups, SDG B0215A, B0215B and B0215C. Matrix spike/duplicate analysis was performed where required. Results are qualified where necessary for those samples associated with each spike/duplicate. Raw analysis data for all SDGs follow Form 14 for SDG B0215C.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

6. Metals Analysis (SDG B):

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample SV1160204. Spike recoveries were within the QC limits with the exception of antimony. Antimony is flagged with an "N" flag on Form 1's. A post digest spike was performed for antimony with spike recovery within QC limits.

Matrix duplicate: matrix duplicate was performed on sample SV1160204. Replicate RPDs were within the QC limits with the exception of manganese. Manganese is flagged with an "*" on Form 1's.

Sample analysis: manganese was outside of QC limits in the serial dilution. Manganese is flagged with an "E" flag on Form 1's. No other unusual observation was made for the analysis.

7. Metals Analysis (SDG C):

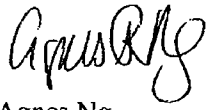
Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

8. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

9. Grain size Analysis:



Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

10. TOC Analysis:

The analyses for Total Organic Carbon were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Overview

The sample set for CTO 848, NASA Wallops Island, SDG B0215, consists of twenty-two (22) soil environmental samples, one (1) field blank, and two (2) rinse blanks. One (1) field duplicate pair (FTA-SU-DUP3 / FTA-SU-114-0204) is included in this SDG.

All samples were analyzed for target analyte list (TAL) metals. Samples FTA-SS-112, FTA-SS-113, FTA-SS-114, FTA-SS-115, FTA-SS-116, FTA-SS-117, and FTA-SS-118 were also analyzed for pH and grain size. The samples were collected by Tetra Tech NUS February 5, 2003 and analyzed by Mitkem Corporation under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Due to the large number of samples, the metals results were arranged by the laboratory into three (3) separate SDGs (B0215A, B0215B, and B0215C). Analyses of grain size were subcontracted to RI Analytical Laboratories and submitted with this SDG. Results for grain size were not entered into the database. Analyses of total organic carbon (TOC) were subcontracted to Severn Trent Laboratories Burlington and will be submitted in a separate SDG. Metals analyses except mercury were conducted using SW846 method 6010B. Soil mercury analyses were conducted using SW846 method 7471A. Aqueous mercury analyses were conducted using SW846 method 7470A. pH analyses were conducted using SW846 method 9045C. Grain size analyses were conducted using method ASTM D422.

Summary

All analytes were successfully analyzed. The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, calibration data, laboratory method/preparation blanks, interference check sample (ICS)

results, matrix spike results, laboratory duplicate results, laboratory control sample (LCS) results, ICP serial dilution results, field duplicate results, detection limits, and analyte quantitation.

All metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) methodologies. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) methodology.

Minor Problems

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Antimony	7.5 ug/L	1.875 mg/kg
Barium[(1)]	1.382 mg/kg	6.910 mg/kg
Barium[(2)]	0.385 mg/kg	1.925 mg/kg
Calcium[(1)]	22.385 mg/kg	111.925 mg/kg
Calcium[(2)]	13.776 mg/kg	68.880 mg/kg
Chromium[(1)]	0.14 mg/kg	0.70 mg/kg
Cobalt[(1)]	0.089 mg/kg	0.445 mg/kg
Cobalt[(2)]	0.058 mg/kg	0.29 mg/kg
Copper[(1)]	1.907 mg/kg	9.535 mg/kg
Copper	11.7 ug/L	2.925 mg/kg
Iron[(1)]	3.047 mg/kg	15.235 mg/kg
Iron[(2)]	1.469 mg/kg	7.345 mg/kg
Manganese[(1)]	0.336 mg/kg	1.680 mg/kg
Manganese[(2)]	0.271 mg/kg	1.355 mg/kg
Nickel[(1)]	0.151 mg/kg	0.755 mg/kg
Nickel[(2)]	0.117 mg/kg	0.585 mg/kg
Potassium	512.9 ug/L	128.2 mg/kg
Sodium	305.1 ug/L	76.28 mg/kg
Zinc[(1)]	0.925 mg/kg	4.625 mg/kg
Zinc	7.1 ug/L	1.8 mg/kg

[(1)] Maximum concentration present in soil preparation blank from SDG B0215B.
[(2)] Maximum concentration present in soil preparation blank from SDG B0215C.

SDG B0215B includes samples FTA-SS-112, FTA-SS-113, FTA-SS-114, FTA-SS-115, FTA-SS-116, FTA-SU-112-0204, FTA-SU-112-0709, FTA-SU-113-0204, FTA-SU-113-0709, FTA-SU-114-0204, FTA-SU-114-0709, FTA-SU-115-0204, FTA-SU-115-0810, FTA-SU-116-0204, and FTA-SU-DUP3.

SDG B0215C includes samples FTA-SS-117, FTA-SS-118, FTA-SU-116-0709, FTA-SU-117-0204, FTA-SU-117-0709, FTA-SU-118-0204, and FTA-SU-118-0709.

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the action level for antimony, barium, calcium, cobalt, copper, iron, nickel, potassium, sodium, and zinc were qualified (B) as a result of blank contamination. No validation action was required for the remaining analytes because the results were either greater than the action level or were nondetects. The field blank and rinse blanks were not qualified for laboratory blank contamination and were not used to qualify environmental samples.

- The interfering analyte aluminum was present in samples FTA-SS-115, FTA-SU-112-0204, and FTA-SU-113-0709 at concentrations comparable to the concentration of aluminum in the interference check sample (ICS) solution. Several analytes, namely antimony, arsenic, barium, cadmium, cobalt, copper, lead, manganese, potassium, selenium, silver, sodium, thallium, and vanadium were present in the ICS solution at concentrations that exceeded the absolute value of the instrument detection limit (IDL). Interference effects exist for selenium, silver, and thallium in the affected samples. The positive result reported for thallium was qualified as biased high (K). The nondetected results reported for selenium and silver were qualified as biased low (UL).

- The interfering analyte aluminum was present in samples FTA-SU-114-0204, FTA-SU-116-0709, FTA-SU-118-0204, and FTA-SU-DUP3 at concentrations comparable to the concentration of aluminum in the ICS solution. Several analytes, namely antimony, arsenic, barium, cadmium, cobalt, copper, lead, manganese, potassium, selenium, silver, sodium, thallium, and vanadium were present in the ICS solution at concentrations that exceeded the absolute value of the IDL. Interference effects exist for selenium and silver in the affected samples. The nondetected results reported for selenium and silver were qualified as biased low (UL).

- The interfering analyte aluminum was present in sample FTA-SU-114-0709 at a concentration comparable to the concentration of aluminum in the ICS solution. Several analytes, namely antimony, arsenic, barium, cadmium, cobalt, copper, lead, manganese, potassium, selenium, silver, sodium, thallium, and vanadium were present in the ICS solution at concentrations that exceeded the absolute value of the IDL. Interference effects exist for antimony, selenium, silver, and thallium in the affected sample. The positive result reported for thallium was qualified as biased high (K). The nondetected results reported for antimony, selenium, and silver were qualified as biased low (UL).

- The matrix spike percent recovery (%R) was below the 75% control limit for antimony, affecting samples in SDG B0215B. Nondetected results reported for antimony were qualified as biased low (UL).

- The ICP serial dilution percent difference (%D) was below the 10% control limit and the initial sample concentration was >50X the IDL for manganese, affecting samples in SDG B0215B. Positive results reported for manganese were qualified as estimated (J).

Notes

The sample IDs with the prefix "FTA-SU" were reported incorrectly by the laboratory as "FTA-SV". The data reviewer amended the database for these samples.

Sample FTA-SU-118-0709 was reported incorrectly by the laboratory as FTA-SV-118-070. The data reviewer amended the database for this sample.

Barium, chromium, manganese, and nickel were present in field blank FB-020503.

Barium, chromium, copper, manganese, nickel, potassium, and sodium were present in rinse blank RB-020403.

Barium, chromium, manganese, and nickel were present in rinse blank RB-020503.

The laboratory did not report the results for the analytes in the ICSA solution. The data reviewer used the raw data to check the levels of analytes in the solution so interference effects could be determined.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method/preparation blanks.

Other Factors Affecting Data Quality: Several analytes were qualified due to ICS interference. Antimony was qualified due to matrix spike noncompliance. Manganese was qualified due to ICP serial dilution noncompliance.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", April 1993 and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

U	-	Value is a nondetect as reported by the laboratory.
UL	-	Nondetect is considered biased low as a result of technical noncompliance.
B	-	Positive result is considered to be an artifact of blank contamination and should not be considered present.
J	-	Positive result is considered estimated as a result of technical noncompliance.
K	-	Positive result is considered biased high as a result of technical noncompliance.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0215

Mitkem Project ID: B0215

March 19, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for four aqueous and twenty-two soil samples that were collected on February 5, 2003, and received at Mitkem on February 6, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussions with the client. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH. The analysis results for pH are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery of vinyl chloride, bromomethane, chloroethane and trichlorofluoromethane in V6ELCS and high recovery of chloroethane in V1QLCS and V1PLCS. Replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1160204. Spike recoveries were within the QC limits with the exception of high recovery of chloroethane in the matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Please note that the soil samples are reported using the analyte list specified for aqueous samples. There are five compounds on the analyte list for soils not in the aqueous analyte list. These five compounds will be determined and reported through library search TIC if present in the samples.

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits with the exception of low recovery of several surrogates in samples SV1130709, SV1180204 and SV118070. The samples were re-extracted and analyzed with surrogate recoveries within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of low recovery of 2-methylphenol, 4-methylphenol, 3-nitroaniline and 3,3'-dichlorobenzidine in S1CLCS, high recovery of 4-nitroaniline and carbazole in S2FLCS and low recovery of di-n-octylphthalate in S2PLCS.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1160204. Spike recoveries were within the QC limits with the exception of several compounds in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits with the exception of 2,4-dinitrophenol.

Sample analysis: samples SV1130709, SV1180204 and SV118070 were re-extracted outside of hold time. The initial extraction was within hold time but had non-compliant surrogate recoveries. No other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1160204. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: the method blank and lab control sample for the associated aqueous sample has a low reporting limit. These samples were extracted with samples requiring a lower reporting limit. No other unusual observation was made for the analysis.

5. Metals Analysis (SDG A):

Due to the large number of samples, metals results are arranged into three Sample Delivery Groups, SDG B0215A, B0215B and B0215C. Matrix spike/duplicate analysis was performed where required. Results are qualified where necessary for those samples associated with each spike/duplicate. Raw analysis data for all SDGs follow Form 14 for SDG B0215C.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

6. Metals Analysis (SDG B):

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample SV1160204. Spike recoveries were within the QC limits with the exception of antimony. Antimony is flagged with an "N" flag on Form 1's. A post digest spike was performed for antimony with spike recovery within QC limits.

Matrix duplicate: matrix duplicate was performed on sample SV1160204. Replicate RPDs were within the QC limits with the exception of manganese. Manganese is flagged with an "*" on Form 1's.

Sample analysis: manganese was outside of QC limits in the serial dilution. Manganese is flagged with an "E" flag on Form 1's. No other unusual observation was made for the analysis.

7. Metals Analysis (SDG C):

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

8. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

9. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

10. TOC Analysis:

The analyses for Total Organic Carbon were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Agnes Ng
CLP Project Manager

CERTIFICATE OF ANALYSIS

Mitkem Corporation
Attn: Data Reporting
175 Metro Center Blvd.
Warwick, RI 02886-1755

Date Received: 2/10/03
Date Reported: 2/19/03
P.O. #: 283
Work Order #: 0302-01753

DESCRIPTION: PROJECT# B0215 (SEVEN SOIL SAMPLES)

Subject sample(s) has/have been analyzed by our laboratory with the attached results.

Reference: American Society for Testing and Materials

Data qualifiers (if present) are explained in full at the end of a given sample's analytical results.

Certification #: RI-033, MA-RI015, CT-PH-0508, ME-RI015
NH-253700 A & B, USDA S-41844, NY-11726

If you have any questions regarding this work, or if we maybe of further assistance, please contact us.

Overview

The sample set for CTO 848, NASA Wallops Island, SDG B0221, consists of eight (8) soil environmental samples and one (1) rinse blank.

All samples were analyzed for target analyte list (TAL) metals. Samples WOD-SS-101, WOD-SS-102, WOD-SS-103, and WOD-SS-104 were also analyzed for pH and grain size. The samples were collected by Tetra Tech NUS February 6, 2003 and analyzed by Mitkem Corporation under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Analyses of grain size were subcontracted to RI Analytical Laboratories and submitted with this SDG. Results for grain size were not entered into the database. Analyses of total organic carbon (TOC) were subcontracted to Severn Trent Laboratories Burlington and will be submitted in a separate SDG. Metals analyses except mercury were conducted using SW846 method 6010B. Soil mercury analyses were conducted using SW846 method 7471A. Aqueous mercury analyses were conducted using SW846 method 7470A. pH analyses were conducted using SW846 method 9045C. Grain size analyses were conducted using method ASTM D422.

Summary

All analytes were successfully analyzed. The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, calibration data, laboratory method/preparation blanks, interference check sample (ICS) results, matrix spike results, laboratory duplicate results, laboratory control sample (LCS) results, detection limits, and analyte quantitation.

All metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) methodologies. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) methodology.

Minor Problems

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Antimony	5.8 ug/L	1.45 mg/kg
Barium[(1)]	0.385 mg/kg	1.925 mg/kg
Calcium[(1)]	13.776 mg/kg	68.88 mg/kg
Cobalt[(1)]	0.058 mg/kg	0.29 mg/kg
Copper	11.7 ug/L	2.93 mg/kg
Iron[(1)]	1.469 mg/kg	7.345 mg/kg
Manganese[(1)]	0.271 mg/kg	1.355 mg/kg
Nickel[(1)]	0.117 mg/kg	0.585 mg/kg
Potassium	499.9 ug/L	125.0 mg/kg
Sodium	213.0 ug/L	53.25 mg/kg
Zinc	7.1 ug/L	1.78 mg/kg

[(1)] Maximum concentration present in soil preparation blank.

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the action level for antimony, calcium, cobalt, copper, nickel, potassium, sodium, and zinc were qualified (B) as a result of blank contamination. No validation action was required for the remaining analytes because the results were either greater than the action level or were nondetects. The rinse blank was not qualified for laboratory blank contamination and was not used to qualify environmental samples.

- The interfering analyte aluminum was present in sample WOD-SS-102 at a concentration comparable to the concentration of aluminum in the interference check sample (ICS) solution. Several analytes, namely antimony, arsenic, barium, cadmium, cobalt, copper, lead, manganese, potassium, selenium, silver, sodium, thallium, and vanadium were present in the ICS solution at concentrations that exceeded the absolute value of the instrument detection limit (IDL). Interference effects exist for selenium, silver, and sodium in the affected sample. The nondetected results reported for selenium, silver, and sodium were qualified as biased low (UL).

- The interfering analyte aluminum was present in sample WOD-SS-103 at a concentration comparable to the concentration of aluminum in the ICS solution. Several analytes, namely antimony, arsenic, barium, cadmium, cobalt, copper, lead, manganese, potassium, selenium, silver, sodium, thallium, and vanadium were present in the ICS solution at concentrations that exceeded the absolute value of the IDL. Interference effects exist for selenium and silver in the affected sample. The nondetected results reported for selenium and silver were qualified as biased low (UL).

- The interfering analyte aluminum was present in sample WOD-SS-104 at a concentration comparable to the concentration of aluminum in the ICS solution. Several analytes, namely antimony, arsenic, barium, cadmium, cobalt, copper, lead, manganese, potassium, selenium, silver, sodium, thallium, and vanadium were present in the ICS solution at concentrations that exceeded the absolute value of the IDL. Interference effects exist for cadmium, selenium, and silver in the affected sample. The positive result reported for cadmium was qualified as biased high (K). The nondetected results reported for selenium and silver were qualified as biased low (UL).

- The interfering analyte iron was present in sample WOD-SS-102 at a concentration comparable to the concentration of iron in the ICS solution. Several analytes, namely antimony, arsenic, barium, cadmium, cobalt, copper, lead, manganese, potassium, selenium, silver, sodium, thallium, and vanadium were present in the ICS solution at concentrations that exceeded the absolute value of the IDL. Interference effects exist for copper, selenium, silver, and sodium in the affected sample. The positive result reported for copper was qualified as estimated (J) due to conflicting directional bias. The nondetected results reported for selenium, silver, and sodium were qualified as biased low (UL).

- The interfering analyte iron was present in sample WOD-SS-103 at a concentration comparable to the concentration of iron in the ICS solution. Several analytes, namely antimony, arsenic, barium, cadmium, cobalt, copper, lead, manganese, potassium, selenium, silver, sodium, thallium, and vanadium were present in the ICS solution at concentrations that exceeded the absolute value of the IDL. Interference effects exist for copper, selenium, and silver in the affected sample. The positive result reported for copper was qualified as estimated (J) due to conflicting directional bias. The nondetected results reported for selenium and silver were qualified as biased low (UL).

- The interfering analyte iron was present in sample WOD-SS-104 at a concentration comparable to the concentration of iron in the ICS solution. Several analytes, namely antimony, arsenic, barium, cadmium, cobalt, copper, lead, manganese, potassium, selenium, silver, sodium, thallium, and vanadium were present in the ICS solution at concentrations that exceeded the absolute value of the IDL. Interference effects exist for cadmium, copper, selenium, and silver in the affected sample. The positive result reported for cadmium was qualified as biased high (K). The positive result reported for copper was qualified as estimated (J) due to conflicting directional bias. The nondetected results reported for selenium and silver were qualified as biased low (UL).

- The matrix spike percent recoveries (%Rs) were below the 75% control limit for antimony, beryllium, cobalt, copper, silver, vanadium, and zinc, affecting all soil samples. Positive results reported for beryllium, cobalt, copper, vanadium, and zinc were qualified as biased low (L). Nondetected results reported for antimony and silver were qualified as biased low (UL).

Notes

The sample IDs with the prefix "WOD" were reported incorrectly by the laboratory as "W0D". The data reviewer amended the database for these samples.

The sample IDs with the prefix "WOD-SU" were reported incorrectly by the laboratory as "W0D-SV". The data reviewer amended the database for these samples.

Barium, chromium, copper, magnesium, manganese, nickel, potassium, and zinc were present in the rinse blank.

The laboratory did not report the results for the analytes in the ICSA solution. The data reviewer used the raw data to check the levels of analytes in the solution so interference effects could be determined.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method/preparation blanks.

Other Factors Affecting Data Quality: Several analytes were qualified due to ICS interference. Several analytes were qualified due to matrix spike noncompliance.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", April 1993 and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

U	-	Value is a nondetect as reported by the laboratory.
UL	-	Nondetect is considered biased low as a result of technical noncompliance.
B	-	Positive result is considered to be an artifact of blank contamination and should not be considered present.
J	-	Positive result is considered estimated as a result of technical noncompliance.
K	-	Positive result is considered biased high as a result of technical noncompliance.
L	-	Positive result is considered biased low as a result of technical noncompliance.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for two aqueous and eight soil samples that were collected on February 6, 2003, and received at Mitkem on February 7, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussions with the client. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH. The analysis results for pH are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of one surrogate in the reanalysis of sample SV1041012.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of low recovery of methyl-t-butyl ether in the aqueous matrix LCS.

Sample analysis: due to sample matrix interference, internal standard areas were unusually low for both the initial and reanalysis of sample SV1041012. Internal standard areas were also low for sample WODSS103, due to matrix interference, as can be determined from the chromatogram. The two remaining aliquots for this sample were analyzed unsuccessfully, with one aliquot clogging the purge needle, such that no recovery of internal or surrogate standards was obtained, and the second aliquot being analyzed beyond the 12 hour time from the instrument tune. No other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Please note that the soil samples are reported using the analyte list specified for aqueous samples. There are five compounds on the analyte list for soils not in the aqueous analyte list. These five compounds will be determined and reported through library search TIC if present in the samples.

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits with the exception of marginally low recovery of several surrogates in samples SV1031113, WODSS103 and WODSS101. The samples were re-extracted and analyzed with surrogate recoveries within the QC limits. Please note that the reextractions occurred beyond the method recommended holding time.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery of 4-nitroaniline and carbazole in S2FLCS and high recovery of di-n-octylphthalate in S2PLCS.

Sample analysis: no other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: the method blank and lab control sample for the associated aqueous sample has a lower reporting limit. Samples in this batch from another analytical program required lower reporting limits. No other unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WODSS101. Spike recoveries were outside of the QC limits for antimony, beryllium, cobalt, copper, silver, vanadium and zinc. A post digest spike was performed for all of these elements, with spike recoveries within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WODSS101. The relative percent difference between duplicate analyses for several elements exceeded the 20% QC limit. This does not affect the data as these concentrations did not exceed 5 times the nominal reporting limit. Please note that the QC limits are not applied where duplicate concentrations are less than 5 times the reporting limit. The "*" data qualifier for these metals have been crossed-off on the data sheets, indicating that these results do not require qualification.

Sample analysis: no other unusual observation was made for the analysis.

6. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

7. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

8. TOC Analysis:

The analyses for Total Organic Carbon were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Overview

The sample set for CTO 848 NASA Wallops Island, SDG B0221 consists of one (1) rinsate blank, one (1) trip blank, and eight (8) soil samples. The soil samples and rinse blank were all analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), and polychlorinated biphenyls (PCB). The trip blank denoted with an asterisk (*) was analyzed for VOC only.

The samples were collected by Tetra Tech NUS on February 6, 2003 and analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, and 8082 analytical and reporting protocols.

All samples were successfully analyzed. The findings offered in this report are based upon a general review of all available data including: data completeness, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation and detection limits. Areas of concern are listed below.

Major

- The percent recovery of internal standard 1,4-dichlorobenzene-d4 was <10% in sample WOD-SU-104-1012. Sample WOD-SU-104-1012 was re-analyzed with similar results. All non-detected results for 1,1,2,2-tetrachloroethane, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichlorobenzene, 1,2-dibromo-3-chloropropane, and 1,2,4-trichlorobenzene were rejected (UR) in sample WOD-SU-104-1012.

Minor

- Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated (J).

- All

- The following compound was detected in the solid method blank:

Compound	Maximum Concentration	Blank Action Level
Methylene chloride	2.0 ug/kg	20 ug/kg
Acetone	5.0 ug/kg	50 ug/kg
2-Hexanone	3.0 ug/kg	15 ug/kg

  Sample aliquot, and dilution factors were taken into consideration when applying the blank action levels. Positive results for methylene chloride and acetone below the blank action level were qualified as non-detected, (B).

- The percent recoveries of all internal standards were below the -50% quality control criteria in the volatile fraction of samples WOD-SS-103 and two out of three in WOD-SU-104-1012. The percent recovery of internal standard 1,4-dichlorobenzene-d4 was <10% in sample WOD-SU-104-1012. Sample WOD-SU-104-1012 was re-analyzed with similar results. The original analysis of sample WOD-SU-104-1012 was used for validation. All non-detected results except for acetone, methylene chloride, 1,1,2,2-tetrachloroethane, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichlorobenzene, 1,2-dibromo-3-chloropropane, and 1,2,4-trichlorobenzene were qualified as estimated (UJ) in sample WOD-SU-104-1012. Sample WOD-SS-103 was not successfully re-analyzed due to sample matrix causing the purge needle to clog. All positive and non-detected results in the volatiles fraction of sample WOD-SS-103 were qualified as estimated (J, UJ).

- The percent recovery of internal standard 1,4-dichlorobenzene-d4 were below the -50% quality control criteria in sample WOD-SS-104. All non-detected results for 1,1,2,2-tetrachloroethane, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichlorobenzene, 1,2-dibromo-3-chloropropane, and 1,2,4-trichlorobenzene were qualified as estimated (UJ) in sample WOD-SS-104.

- The aqueous semivolatile continuing calibration performed on February 19 at 14:31 exceeded the 25% (and was >50%) difference quality control criteria for hexachlorocyclopentadiene. The result for hexachlorocyclopentadiene in sample RB020603 was qualified as estimated (UJ).

- The aqueous semivolatile continuing calibration performed on March 3 at 00:20 exceeded the 25% (and was >50%) difference quality control criteria for hexachlorocyclopentadiene. The non-detected results for hexachlorocyclopentadiene were qualified as estimated (UJ) in samples WOD-SS-101, WOD-SS-103, and WOD-SS-104.

- The aqueous semivolatile continuing calibration performed on March 4 at 14:10 exceeded the 25% (and was >50%) difference quality control criteria for hexachlorocyclopentadiene. The non-detected results for hexachlorocyclopentadiene were qualified as estimated (UJ) in samples WOD-SU-101-1315, WOD-SU-102-1517, and WOD-SU-104-1012.

- The semivolatile internal standard perylene-d12 was below the -50% recovery quality control criteria in sample WOD-SS-104. The non-detected results for di-n-octylphthalate, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3-cd)pyrene, dibenzo(a,h)anthracene, and benzo(g,h,i)perylene in sample WOD-SS-104 were qualified as estimated (UJ).

- The semivolatile surrogates 2-fluorobiphenyl, terphenyl-d14, phenol-d5, and 1,2-dichlorobenzene-d4 were below the percent recovery quality control criteria in samples WOD-SU-103-1113, WOD-SS-101, and WOD-SS-103. The samples were re-extracted outside of holding time and re-analyzed with compliant results. The original analyses of the aforementioned samples were used for validation due to holding time non-compliance. All

results in the base/neutral fraction of the aforementioned samples were qualified as estimated (UJ).

Notes

The volatile blank spike (V1SLCS) was below the laboratory's percent recovery quality control criteria for MTBE. No qualifications were made on this basis.

The percent recovery of volatile surrogate bromofluorobenzene was below the laboratory's quality control criteria in the re-analysis of sample WOD-SU-104-1012. No qualifications were made on this basis because the initial analysis was used for validation.

There were several inconsistencies between the compound lists in the statement of work (SOW) and the results submitted by the laboratory. No action was taken on this basis because the project office approved the variance from the SOW.

The aqueous semivolatile initial calibration performed on February 14 exceeded the 30% (but was <50%) relative percent difference (RPD) quality control criteria for 2,4-dinitrophenol. No qualifications were made on this basis because the associated results were non-detected.

The aqueous semivolatile continuing calibration performed on February 19 at 14:31 exceeded the 25% (but was <50%) difference quality control criteria for 2,4-dinitrophenol and 4-nitrophenol. No qualifications were made on this basis because the associated results were non-detected.

The soil semivolatile initial calibration performed on February 26 exceeded the 30% (but was <50%) relative percent difference (RPD) quality control criteria for hexachlorocyclopentadiene and 2,4-dinitrophenol. No qualifications were made on this basis because the associated results were non-detected.

The soil semivolatile continuing calibration performed on February 28 at 16:29 exceeded the 25% (but was <50%) difference quality control criteria for hexachlorocyclopentadiene, 2,4-dinitrophenol, carbazole, indeno(1,2,3-cd)pyrene, dibenzo(a,h)anthracene, benzo(g,h,i)perylene, and 4-nitrophenol. No qualifications were made on this basis because the associated results were non-detected.

The soil semivolatile continuing calibration performed on March 2 at 13:23 exceeded the 25% (but was <50%) difference quality control criteria for hexachlorocyclopentadiene, carbazole, and 4-nitroaniline. No qualifications were made on this basis because the associated results were non-detected.

The soil semivolatile continuing calibration performed on March 3 at 00:20 exceeded the 25% (but was <50%) difference quality control criteria for 4-nitrophenol, 4-nitroaniline, and carbazole. No qualifications were made on this basis because the associated results were non-detected.

The soil semivolatile continuing calibration performed on March 4 at 14:10 exceeded the 25% (but was <50%) difference quality control criteria for indeno(1,2,3-cd)pyrene, dibenzo(a,h)anthracene, and benzo(g,h,i)perylene. No qualifications were made on this basis because the associated results were non-detected.

The soil semivolatile initial calibration performed on March 8 exceeded the 30% (but was <50%) relative percent difference (RPD) quality control criteria for hexachlorocyclopentadiene. No qualifications were made on this basis because the associated results were non-detected.

The semivolatile blank spike (S2FLCS) exceeded the laboratory's percent recovery quality control criteria for carbazole and 4-nitroaniline. No qualifications were made on this basis because all results for the aforementioned compounds were non-detected.

The semivolatile blank spike (S2PLCS) was below the laboratory's percent recovery quality control criteria for di-n-octylphthalate. No qualifications were made on this basis because all results for the aforementioned compounds were non-detected.

Executive Summary

Laboratory Performance: Qualifications were made based on calibration non-compliances, method blank contamination, internal standard non-compliances, and surrogate recovery non-compliances.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to U.S. EPA National Functional Guidelines for Data Validation as modified by EPA Region III (9/94) and the NFESC guidelines entitled Navy IRCDQM (Sept. 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:
Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Spada, Bernie

From: Samchuck, Joseph
Sent: Thursday, May 08, 2003 1:19 PM
To: Sedlmyer, Ed; Schloer, Doug; Spada, Bernie; Staffen, Seth
Subject: FW: NASA, Wallops Is. organic data validation for CTO 848.

Note from Russ.

In his final paragraph, he stated that they are not concerned over "missing SVOCs". It seems as though a mistake was made when translating the project requirements.

In the second to the last paragraph, he means bromochloromethane.

Bottom line: Review data as received from the laboratory and in a general manner, note the difference between what was reported by the lab and what was requested in the SOW. No need to specifically list compounds. State that the project office was contacted and that they approved the variance from the SOW.

Thanks.

Subject: RE: NASA, Wallops Is. organic data validation for CTO 848.

As we discussed on the phone, I looked up the issues regarding TCL analytes in the work plan and QAP. I did not find any phone notes from 2 months ago when Garth and I had a conference call with MITKEM regarding SVOC TCL analyte lists.

Regarding the overlap between VOCs and SVOCs, proceed as we discussed over the phone and retain all reported Form I analytes in each respective validation report. The dichlorobenzenes and trichlorbenzene will be sorted out for risk assessment here in King of Prussia after we have assimilated the entire database. There are different fraction fields in the database so the results won't be confused. We will evaluate the best data to retain for risk assessment here at that time. While the lower detection limit data in theory should be better, I have seen exceptions in the past where there were detections in the SVOC fraction but not VOC fraction and in such cases it would be presumed that the matrix of the sample affected purge efficiency for the heaviest VOCs.

Regarding bromochlorobenzene, I verified there is no mention of this compound as a historically detected contaminant at Wallops Island sites of interest. Do not ask the lab to provide additional data or make analysis and reporting changes for this compound.

Regarding 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum being requested for soil analysis but instead reported based on a TIC search, it is not necessary to have the laboratory add these compounds to the TCL list at this late date in the project because there are no historical detections of these compounds identified in the work plan or QAPP. The reason that the SVOC TCL list was different for soil and water is a consequence of the template used for this table from another project. Garth indicated that he wants the data to be validated as received and reported by the laboratory because this is not a major issue. However, the laboratory should not be listing any compound on the TCL Form I target compound section if it is not in any standards run so if uncalibrated compounds were reported on Form Is then these compounds should be deleted or rejected.

Joe,

Regarding the subject data validation assignment, I've encountered some disparity between what is being reported by Mitkem and what was actually requested in the statement of work. This may be useful information for making some sort of global request to the lab.

For the aqueous samples:

The lab failed to report the VOC: bromochloromethane (Seth had already alerted me to this).
The lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.
The lab reported a total of 9 compounds (VOC and SVOC) in addition to the requested analytes.

For the soil samples:

The lab failed to report the SVOCs: 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum. Interestingly, the case narrative acknowledges this oversight and explains that the presence of these particular compounds will be determined via TIC library search. Do you know if this approach ok with the PM? BTW- I didn't find these compounds in the SVOC calibration summaries or quan reports.

Again, the lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs in soils and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.

Only xylene isomers were reported but not requested for the soil samples in my SDG.

Seth, Bernie and Ed; I imagine you guys are making the bulk of the requests from the lab, so if there is something else that I have missed that I should be looking out for please let me know.

Subject: RE: NASA, Wallops Is. organic data validation for CTO 848.

Russ Sloboda is checking the compound lists for us. As for the Chlorobromomethane, it is not needed.

Also, Russ asked that we not remove any compounds that are in both fractions such as the dichlorobenzenes. He can sort out the compounds using the fraction. So don't delete any compounds. If you have already do this, let me know the SDG and fraction so that I can unsubmit the data and you can make the changes and reprint forms.

Subject: Duplicate/field pairs for NTC Orlando and other items

Hi,

Ethan, regarding alkalinity analysis: if the groundwater pH is below 5.0 at the time of sampling, we do not request alkalinity, so it is not marked on the COC.

Bernie, regarding charging to 4207 or 4206: you are correct, there is no gaseous matrix analysis specified in sampling for 4207 (as listed on the bottle order or the work release), but the TOM requested charges for the March '03 quarterly event be applied to 4207.

The duplicate pairs are listed below.

NTC02GD100023 NTC02G13C23

NTC08GD100024 NTC08G00624
NTC08GD200024 NTC08G01124
NTC08GD300024 NTC08G02824

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for two aqueous and eight soil samples that were collected on February 6, 2003, and received at Mitkem on February 7, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussions with the client. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH. The analysis results for pH are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of one surrogate in the reanalysis of sample SV1041012.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of low recovery of methyl-t-butyl ether in the aqueous matrix LCS.

Sample analysis: due to sample matrix interference, internal standard areas were unusually low for both the initial and reanalysis of sample SV1041012. Internal standard areas were also low for sample WODSS103, due to matrix interference, as can be determined from the chromatogram. The two remaining aliquots for this sample were analyzed unsuccessfully, with one aliquot clogging the purge needle, such that no recovery of internal or surrogate standards was obtained, and the second aliquot being analyzed beyond the 12 hour time from the instrument tune. No other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Please note that the soil samples are reported using the analyte list specified for aqueous samples. There are five compounds on the analyte list for soils not in the aqueous analyte list. These five compounds will be determined and reported through library search TIC if present in the samples.

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits with the exception of marginally low recovery of several surrogates in samples SV1031113, WODSS103 and WODSS101. The samples were re-extracted and analyzed with surrogate recoveries within the QC limits. Please note that the reextractions occurred beyond the method recommended holding time.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery of 4-nitroaniline and carbazole in S2FLCS and high recovery of di-n-octylphthalate in S2PLCS.

Sample analysis: no other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: the method blank and lab control sample for the associated aqueous sample has a lower reporting limit. Samples in this batch from another analytical program required lower reporting limits. No other unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WODSS101. Spike recoveries were outside of the QC limits for antimony, beryllium, cobalt, copper, silver, vanadium and zinc. A post digest spike was performed for all of these elements, with spike recoveries within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WODSS101. The relative percent difference between duplicate analyses for several elements exceeded the 20% QC limit. This does not affect the data as these concentrations did not exceed 5 times the nominal reporting limit. Please note that the QC limits are not applied where duplicate concentrations are less than 5 times the reporting limit. The "*" data qualifier for these metals have been crossed-off on the data sheets, indicating that these results do not require qualification.

Sample analysis: no other unusual observation was made for the analysis.

6. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

7. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

8. TOC Analysis:

The analyses for Total Organic Carbon were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Tetra Tech NUS, Inc.
600 Clark Avenue
King of Prussia, PA 19406
Attn: Mr. Garth Glenn

RE: Client Project: CTO – 848, NASA Wallops Flight Facility
Mitkem Lab Project # B0221

Dear Mr. Glenn:

Enclosed please find the data report of the required analyses for the samples associated with the above referenced project.

If you have any questions regarding this report, please call me.

We appreciate your business.

Sincerely,

Agnes R. Ng
CLP Project Manager

Overview

The sample set for CTO 848 NASA Wallops Island, SDG B0239 consists of one (1) trip blank, and six (6) environmental soil samples. The soil samples were all analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), and polychlorinated biphenyls (PCB). The trip blank denoted with an asterisk (*) was analyzed for VOC only.

The sample was collected by Tetra Tech NUS on February 10, 2003 and analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, and 8082 analytical and reporting protocols.

All samples were successfully analyzed with the exception of those qualified as rejected. The findings offered in this report are based upon a general review of all available data including: data completeness, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation and detection limits. Areas of concern are listed below.

Major

- Recovery of 3,3'-dichlorobenzidine was <10% in the MS/MSD pair. The result for 3,3'-dichlorobenzidine was qualified as rejected (UR) in the un-spiked sample WOD-SS-108.

Minor

- The following compounds were detected in the solid method blank and field blank:

Compound	Maximum Concentration	Blank Action Level
Methylene chloride	3.0 ug/kg	30 ug/kg
Acetone*	14 ug/kg	140 ug/kg

Sample aliquot, and dilution factors were taken into consideration when applying the blank action levels. Positive results for methylene chloride and acetone below the blank action level were qualified as non-detected, (B).

* Compound was detected in the trip blank.

- Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated (J).

- The aqueous volatile initial calibration performed on February 20 exceeded the 30% (but was <50%) relative standard deviation quality control criteria for acetone. The positive result for acetone in the trip blank was qualified as estimated (J).

- The soil semivolatile continuing calibration performed on March 10 at 01:01 exceeded the 25% (but was <50%) difference quality control criteria for benzaldehyde and 4-nitroaniline. The positive result for benzaldehyde was qualified as estimated (J) in sample WOD-SS-106.

- The percent recovery of internal standard 1,4-dichlorobenzene-d4 was below the -50% quality control criteria in samples WOD-SS-106 and WOD-SS-108. All non-detected results for 1,1,2,2-tetrachloroethane, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichlorobenzene, 1,2-dibromo-3-chloropropane, and 1,2,4-trichlorobenzene were qualified as estimated (UJ) in the aforementioned samples.

Notes

The soil volatile continuing calibration performed on February 12 at 11:17 exceeded the 25% (but was <50%) difference quality control criteria for bromomethane. No qualifications were made on this basis because the aqueous result for bromomethane was non-detected.

The percent recovery of chloroethane exceeded the laboratory's quality control criteria in the blank spike sample V1RLCS. No qualifications were made on this basis because all results for chloroethane were non-detected.

The percent recovery of 1,1,2,2-tetrachloroethane and 1,2,4-trichlorobenzene were outside the laboratory's quality control criteria in the MS/MSD of sample WOD-SS-108. No qualifications were made on this basis because the blank spike was compliant for the aforementioned compounds.

The percent recovery of styrene was outside the laboratory's quality control criteria in the MSD of sample WOD-SS-108. No qualifications were made on this basis because the blank spike was compliant.

The RPD of acetone exceeded the laboratory's quality control criteria in the MS/MSD of sample WOD-SS-108. No qualifications were made on this basis because the percent recoveries were compliant.

There were several inconsistencies between the compound lists in the statement of work (SOW) and the results submitted by the laboratory. No action was taken on this basis because the project office approved the variance from the SOW.

The soil semivolatile initial calibration performed on March 9 exceeded the 30% (but was <50%) relative percent difference (RPD) quality control criteria for hexachlorocyclopentadiene. No qualifications were made on this basis because the associated results were non-detected.

Several compounds fell below the laboratory's percent recovery quality control criteria in the MS/MSD of sample WOD-SS-108. Recovery of 3-nitroaniline was <10% in the MS, AND THE recovery of hexachlorocyclopentadiene was <10% in the MSD. No qualifications were made on this basis because the blank spike was compliant.

6-5-03 JPI

Executive Summary

Laboratory Performance: Qualifications were made based on calibration non-compliances, method blank contamination, internal standard non-compliances, and MS/MSD non-compliances.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to U.S. EPA National Functional Guidelines for Data Validation as modified by EPA Region III (9/94) and the NFESC guidelines entitled Navy IRCDQM (Sept. 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Spada, Bernie

From: Samchuck, Joseph
Sent: Thursday, May 08, 2003 1:19 PM
To: Sedlmyer, Ed; Schloer, Doug; Spada, Bernie; Staffen, Seth
Subject: FW: NASA, Wallops Is. organic data validation for CTO 848.

Note from Russ.

In his final paragraph, he stated that they are not concerned over "missing SVOCs". It seems as though a mistake was made when translating the project requirements.

In the second to the last paragraph, he means bromochloromethane.

Bottom line: Review data as received from the laboratory and in a general manner, note the difference between what was reported by the lab and what was requested in the SOW. No need to specifically list compounds. State that the project office was contacted and that they approved the variance from the SOW.

Thanks.

Subject: RE: NASA, Wallops Is. organic data validation for CTO 848.

As we discussed on the phone, I looked up the issues regarding TCL analytes in the work plan and QAP. I did not find any phone notes from 2 months ago when Garth and I had a conference call with MITKEM regarding SVOC TCL analyte lists.

Regarding the overlap between VOCs and SVOCs, proceed as we discussed over the phone and retain all reported Form I analytes in each respective validation report. The dichlorobenzenes and trichlorbenzene will be sorted out for risk assessment here in King of Prussia after we have assimilated the entire database. There are different fraction fields in the database so the results won't be confused. We will evaluate the best data to retain for risk assessment here at that time. While the lower detection limit data in theory should be better, I have seen exceptions in the past where there were detections in the SVOC fraction but not VOC fraction and in such cases it would be presumed that the matrix of the sample affected purge efficiency for the heaviest VOCs.

Regarding bromochlorobenzene, I verified there is no mention of this compound as a historically detected contaminant at Wallops Island sites of interest. Do not ask the lab to provide additional data or make analysis and reporting changes for this compound.

Regarding 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum being requested for soil analysis but instead reported based on a TIC search, it is not necessary to have the laboratory add these compounds to the TCL list at this late date in the project because there are no historical detections of these compounds identified in the work plan or QAPP. The reason that the SVOC TCL list was different for soil and water is a consequence of the template used for this table from another project. Garth indicated that he wants the data to be validated as received and reported by the laboratory because this is not a major issue. However, the laboratory should not be listing any compound on the TCL Form I target compound section if it is not in any standards run so if uncalibrated compounds were reported on Form Is then these compounds should be deleted or rejected.

Joe,

Regarding the subject data validation assignment, I've encountered some disparity between what is being reported by Mitkem and what was actually requested in the statement of work. This may be useful information for making some sort of global request to the lab.

For the aqueous samples:

The lab failed to report the VOC: bromochloromethane (Seth had already alerted me to this).
The lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.
The lab reported a total of 9 compounds (VOC and SVOC) in addition to the requested analytes.

For the soil samples:

The lab failed to report the SVOCs: 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum. Interestingly, the case narrative acknowledges this oversight and explains that the presence of these particular compounds will be determined via TIC library search. Do you know if this approach ok with the PM? BTW- I didn't find these compounds in the SVOC calibration summaries or quan reports.

Again, the lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs in soils and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.

Only xylene isomers were reported but not requested for the soil samples in my SDG.

Seth, Bernie and Ed; I imagine you guys are making the bulk of the requests from the lab, so if there is something else that I have missed that I should be looking out for please let me know.

Doug

Russ Sloboda is checking the compound lists for us. As for the Chlorobromomethane, it is not needed.

Also, Russ asked that we not remove any compounds that are in both fractions such as the dichlorobenzenes. He can sort out the compounds using the fraction. So don't delete any compounds. If you have already do this, let me know the SDG and fraction so that I can unsubmit the data and you can make the changes and reprint forms.

* Data Summary Pack *

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0239

Mitkem Project ID: B0239

March 21, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for one aqueous and six soil samples that were collected on February 10, 2003, and received at Mitkem on February 11, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussions with the client. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH. The analysis results for pH are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery of chloroethane in V1RLCS.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-108. Spike recoveries were within the QC limits with the exception of several compounds in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits with the exception of acetone.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of marginally low recovery of 2-fluorobiphenyl on samples WOD-SS-108MS and WOD-SS-108MSD and high recovery of 2-fluorophenol in the method blank SBLK2C.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-108. Most spike recoveries in the matrix spike and matrix spike duplicate were not within the QC limits. Replicate RPDs were within the QC limits with the exception of 3-nitroaniline, 4-nitroaniline and 3,3'-dichlorobenzidine. Spike recoveries outside of QC limits is most likely due to matrix effect.

Sample analysis: no other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-108. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WOD-SS-108. Spike recoveries were within the QC limits with the exception of antimony, arsenic, cadmium, lead, selenium and thallium. These elements are flagged with an "N" flag on Form 1's. Post digest spike was performed with spike recoveries within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WOD-SS-108. Replicate RPDs were within the QC limits.

Sample analysis: potassium was outside of QC limits in the serial dilution. Potassium is flagged with an "E" flag on Form 1's. No other unusual observation was made for the analysis.

6. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

7. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

8. TOC Analysis:

The analyses for Total Organic Carbon were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Overview

The sample set for CTO 848, NASA Wallops Island, SDG B0239, consists of six (6) soil environmental samples.

All samples were analyzed for target analyte list (TAL) metals. Samples WOD-SS-106, WOD-SS-107, and WOD-SS-108 were also analyzed for pH. The samples were collected by Tetra Tech NUS February 10, 2003 and analyzed by Mitkem Corporation under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Analyses of grain size were subcontracted to RI Analytical Laboratories and submitted with this SDG. Results for grain size were not entered into the database. Analyses of total organic carbon (TOC) were subcontracted to Severn Trent Laboratories Burlington and will be submitted in a separate SDG. Metals analyses except mercury were conducted using SW846 method 6010B. Mercury analyses were conducted using SW846 method 7471A. pH analyses were conducted using SW846 method 9045C.

Summary

All analytes were successfully analyzed. The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, calibration data, laboratory method/preparation blanks, interference check sample (ICS) results, matrix spike results, post-digest spike results, laboratory duplicate results, laboratory control sample (LCS) results, ICP serial dilution results, detection limits, and analyte quantitation.

All metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) methodologies. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) methodology.

Minor Problems

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Barium[(1)]	0.250 mg/kg	1.25 mg/kg
Copper	8.5 ug/L	2.125 mg/kg
Manganese[(1)]	0.071 mg/kg	0.355 mg/kg
Potassium	549.4 ug/L	137.35 mg/kg
Sodium	267.1 ug/L	66.78 mg/kg

[(1)] Maximum concentration present in soil preparation blank.

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the action level for copper, potassium, and sodium were qualified (B) as a result of blank contamination. No validation action was required for the remaining analytes because the results were either greater than the action level or were nondetects.

- The matrix spike percent recoveries (%Rs) were below the 75% control limit for antimony, arsenic, cadmium, lead, selenium, and thallium. Positive results reported for antimony, arsenic, cadmium, lead, and thallium were qualified as biased low (L). Nondetected results reported for antimony, cadmium, selenium, and thallium were qualified as biased low (UL).

- The ICP serial dilution percent difference (%D) was above the 10% control limit and the initial sample result was >50X the instrument detection limit (IDL) for potassium. Positive results reported for potassium were qualified as estimated (J).

Notes

The sample IDs with the prefix "WOD-SU" were reported incorrectly by the laboratory as "WOD-SV". The data reviewer amended the database for these samples.

The post-digest spike %R for cadmium was reported incorrectly by the laboratory due to an error in the spike added. The laboratory submitted a corrected form.

The ICP serial dilution results page was accidentally omitted from this data package. The laboratory was contacted and Karen Gavitt submitted the missing page.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method/preparation blanks.

Other Factors Affecting Data Quality: Several analytes were qualified due to matrix spike noncompliance. Potassium was qualified due to ICP serial dilution noncompliance.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", April 1993 and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

U	-	Value is a nondetect as reported by the laboratory.
UL	-	Nondetect is considered biased low as a result of technical noncompliance.
B	-	Positive result is considered to be an artifact of blank contamination and should not be considered present.
J	-	Positive result is considered estimated as a result of technical noncompliance.
L	-	Positive result is considered biased low as a result of technical noncompliance.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0239

Mitkem Project ID: B0239

March 21, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for one aqueous and six soil samples that were collected on February 10, 2003, and received at Mitkem on February 11, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussions with the client. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH. The analysis results for pH are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery of chloroethane in V1RLCS.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-108. Spike recoveries were within the QC limits with the exception of several compounds in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits with the exception of acetone.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of marginally low recovery of 2-fluorobiphenyl on samples WOD-SS-108MS and WOD-SS-108MSD and high recovery of 2-fluorophenol in the method blank SBLK2C.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-108. Most spike recoveries in the matrix spike and matrix spike duplicate were not within the QC limits. Replicate RPDs were within the QC limits with the exception of 3-nitroaniline, 4-nitroaniline and 3,3'-dichlorobenzidine. Spike recoveries outside of QC limits is most likely due to matrix effect.

Sample analysis: no other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-108. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WOD-SS-108. Spike recoveries were within the QC limits with the exception of antimony, arsenic, cadmium, lead, selenium and thallium. These elements are flagged with an "N" flag on Form 1's. Post digest spike was performed with spike recoveries within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WOD-SS-108. Replicate RPDs were within the QC limits.

Sample analysis: potassium was outside of QC limits in the serial dilution. Potassium is flagged with an "E" flag on Form 1's. No other unusual observation was made for the analysis.

6. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

7. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

8. TOC Analysis:

The analyses for Total Organic Carbon were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

WOD-SS-DUP05		

OVERVIEW

The sample set for CTO 848, SDG B0257, NASA Wallops Island consists of sixteen (16) solid environmental samples, one (1) rinsate blank, and one (1) trip blank. All samples were analyzed for Target Compound List (TCL) volatile organic compounds. The environmental samples and the rinsate blank were also analyzed for TCL semivolatile organic compounds and TCL PCBs. One field duplicate pair was included in the SDG: WOD-SS-109 and WOD-SS-DUP05.

The samples were collected by TetraTech NUS on February 11th, 2003 and were analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, and 8082 analytical and reporting protocols.

All samples were successfully analyzed with the exception of those results that were rejected. The findings offered in this report are based upon a general review of all available data including: data completeness, system performance and tuning, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, internal standard recoveries, blank spike results, field duplicate results, matrix spike/matrix spike duplicate results, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The relative percent difference (RPD) between columns exceeded 100% for the following PCB. The positive result was qualified as rejected, R.

Sample	Compound	%D
WOD-SU-111-0507	Aroclor-1245	101.6%

Minor Problems

- The aqueous volatile initial calibration contained a percent relative standard deviation (%RSD) that exceeded the 30% quality control limit for acetone. The positive results for acetone in samples RB-021103 and TB-021103 were qualified as estimated, J. The direction of bias cannot be determined.

- The aqueous volatile continuing calibration percent difference (%D) exceeded the 25% quality control limit for acetone. Positive results were qualified as estimated, J, in samples RB-021103 and TB-021103. The direction of bias cannot be determined.

- The volatile fraction internal standard recovery of 1,4-dichlorobenzene-d4 fell below the lower quality control limit in samples WOD-SS-110, WOD-SS-112, WOD-SS-105, FTA-SU-101-1617, WOD-SU-114-0406, and WOD-SS-114. Sample WOD-SS-110 was re-analyzed due to surrogate noncompliance; however, yielded similar results. The original analyses were used for data validation purposes. Nondetected and positive results associated with the internal standard were qualified as estimated, J, and, UJ, in the aforementioned samples.

- The volatile fraction internal standard recoveries of fluorobenzene, chlorobenzene-d5, and 1,4-dichlorobenzene-d4 fell below the lower quality control limit in sample WOD-SU-111-0507. Sample WOD-SU-11-0507 was re-analyzed due to surrogate noncompliance. The original analysis was used for data validation purposes. Nondetected and positive results associated with the internal standards were qualified as estimated, J, and, UJ, in the sample WOD-SU-111-0507.

- The following compounds were detected in the laboratory method blanks or field quality control blanks (*):

Compound	Maximum Concentration	Blank Action Level
Acetone*	7 µg/L	70 µg/Kg
Methylene chloride*	28 µg/L	280 µg/Kg
2-Hexanone	3 µg/Kg	15 µg/Kg

  Sample aliquot, percent solids, and dilution factor were taken into consideration when applying the blank action limit. Positive results for acetone, methylene chloride, and 2-hexanone below the blank action level were qualified as, B. Field quality control blanks were not qualified based on contamination in other field quality control blanks.

- The volatile surrogate recovery of 1,2-dichloroethane-d4 exceeded the quality control limit in samples WOD-SU-105-0507, WOD-DUP05, WOD-SS-110, and WOD-SS-111. The re-analyses yielded similar results indicating matrix interference. The original analyses were used for data validation purposes. Positive results were qualified as estimated, J, in the aforementioned samples. The direction of bias is high.

- The volatile surrogate recoveries of dibromofluoromethane, 1,2-dichloroethane-d4, and toluene-d8 exceeded the quality control limit in sample WOD-SU-111-0507. The re-analysis yielded four noncompliant recoveries. Therefore, the original analysis was used for data validation. Positive results were qualified as estimated, J, in sample WOD-SU-111-0507. The direction of bias is high.

- The semivolatile initial calibration on 3/13/03 contained a %RSD that exceeded the 35% (and > 50%) quality control limit for 4-chloroaniline. Positive and nondetected results for the aforementioned compound were qualified as estimated, J, and, UJ, respectively, in the associated samples. The direction of bias cannot be determined.

- The semivolatile continuing calibration on 2/19/03 at 1431 contained a %D that exceeded the 25% (and > 50%) quality control limit for hexachlorocyclopentadiene. Positive and nondetected results for the aforementioned compound were qualified as estimated, J, and, UJ, respectively, in the associated samples. The direction of bias cannot be determined.

- The semivolatile continuing calibration on 3/10/03 at 1605 contained %Ds that exceeded the 25% (and > 50%) quality control limit for 4-nitroaniline and benzaldehyde. Positive and nondetected results for the aforementioned compound were qualified as estimated, J, and, UJ, respectively, in the associated samples. The direction of bias cannot be determined.

- The semivolatile continuing calibration on 3/10/03 at 01:01 contained a %D that exceeded the 25% quality control limit for benzaldehyde. Positive result was qualified as estimated, J, in sample WOD-SU-111-0507.

- The semivolatile continuing calibration on 3/14/03 at 0228 contained a %D that exceeded the 25% quality control limit for benzaldehyde. Positive results for the aforementioned compound were qualified as estimated, J, in the associated samples. The direction of bias cannot be determined.

- The semivolatile fraction internal standard recoveries of perylene-d12 fell below the lower quality control limit for samples WOD-SS-105 and WOD-SU-111-0507. The original analyses were used for data validation purposes. Nondetected and positive results associated with the internal standard were qualified as estimated, J, and, UJ, in the aforementioned samples.

- The semivolatile matrix spike and matrix spike duplicate %Rs fell below the lower quality control limit for 2-methylnaphthalene, 2-nitroaniline, acenaphthylene, 4-bromophenyl-phenyl ether, hexachlorobenzene, phenanthrene, anthracene, di-n-butyl phthalate, di-n-octyl phthalate, benzo(b)fluoranthene, and benzo(a)pyrene. The positive and nondetected results for the aforementioned compounds were qualified as estimated, J, and, UJ, respectively, in the unspiked sample, WOD-SU-113-0406.

- Positive results below the reporting limit (RL) were qualified as estimated, J, due to uncertainty near the detection limit. The direction of bias cannot be determined.

Notes

The aqueous volatile continuing calibration contained %Ds that exceeded the 25% quality control limit, but did not exceed 50%, for dichlorodifluoromethane and 1,2-dibromo-3-chloropropane. Therefore, nondetected sample results were not qualified on this basis.

The volatile matrix spike and/or matrix spike duplicate percent recoveries (%Rs) exceeded the upper quality control limit for 2-hexanone and 4-methyl-2-pentanone. No qualification action was taken because the spike recovery was high and the compounds were not detected in the unspiked sample, WOD-SU-113-0406.

The semivolatile initial calibration on 2/14/03 contained a %RSD that exceeded the 30% quality control limit, but did not exceed 50%, for 2,4-dinitrophenol. Therefore, nondetected sample results were not qualified on this basis.

The semivolatile initial calibration on 3/09/03 contained a %RSD that exceeded the 30% quality control limit, but did not exceed 50%, for hexachlorocyclopentadiene. Therefore, nondetected sample results were not qualified on this basis.

The semivolatile initial calibration on 3/13/03 contained %RSDs that exceeded the 30% quality control limit, but did not exceed 50%, for hexachlorocyclopentadiene, 2,4-dinitrophenol, and atrazine. Therefore, nondetected sample results were not qualified on this basis.

The semivolatile continuing calibration on 2/19/03 at 1431 contained %Ds that exceeded the 25% quality control limit, but did not exceed 50%, for 2,4-dinitrophenol and 4-nitrophenol. Therefore, nondetected sample results were not qualified on this basis.

The semivolatile continuing calibration on 3/10/03 at 0101 contained a %D that exceeded the 25% quality control limit, but did not exceed 50%, for 4-nitroaniline. Therefore, nondetected sample results were not qualified on this basis.

The semivolatile continuing calibration on 3/10/03 at 1605 contained %Ds that exceeded the 25% quality control limit, but did not exceed 50%, for benzaldehyde and 4-nitrophenol. Therefore, nondetected sample results were not qualified on this basis.

In the semivolatile fraction, the linear calibration range of the instrument was exceeded by fluoranthene, phenanthrene, and pyrene in sample WOD-SU-101-1617. The results for the aforementioned compounds were transposed over from the 50X-dilution analysis to the 20X-dilution analysis. The remaining compounds were reported from the 20X-dilution analysis. Thus causing elevated reporting limits for the nondetected results.

The PCBs continuing calibration on 2/25/03 at 2006 contained %Ds that exceeded the 15% quality control criteria for Aroclor-1016 on column RTXCLPPEST 2. No qualification action was warranted since the other column was compliant.

The PCBs solid analysis surrogate recovery of decachlorobiphenyl exceeded the upper control limit for sample WOD-SU-101-1617 on column RTXCLPPEST 2. No qualification action was warranted because the other column was compliant.

The laboratory truncated the beginning parts of the sample IDs.

Sample WOD-SS-DUP05 was recorded incorrectly on the chain of custody (COC) as WOD-SU-DUP05. The sample ID was corrected in the electronic database.

The laboratory incorrectly identified several sample IDs by labeling sections of the sample ID as "SV" when it should have been "SU". The sample IDs were corrected in the electronic database.

There were differences between what was reported by the laboratory and what was requested in the statement of work (SOW). No action was taken because the project office was contacted and they approved the variance from the SOW.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Several compounds failed to meet the initial and/or continuing calibration criteria in the volatile, semivolatile, and PCBs fractions. Laboratory method and field blank contamination occurred in the volatile fraction. Surrogate recoveries quality control limits were not met in the volatile fraction. Internal standard recovery criteria were not met. One PCB compound exceeded the 100% RPD between columns criteria in the PCB fraction.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Data Validation", (September 1994) as amended for use within USEPA Region III, and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for tw0 aqueous and sixteen soil samples that were collected on February 11, 2003, and received at Mitkem on February 12, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussions with the client. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH and TOC. The analysis results for pH and TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of 1,2-dichloroethane-d4 in samples SV1050507, SVDUP05, WOD-SS-110 and WOD-SS-111 and high recovery of dibromofluoromethane, 1,2-dichloroethane-d4 and toluene-d8 in sample SV1110507. Sample SV1050507 was re-analyzed with all surrogate recoveries within QC limits. Matrix interference confirmed with re-analysis of samples SVDUP05, WOD-SS-110, WOD-SS-111 and SV1110507 with similar findings.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1130406. Spike recoveries were within the QC limits with the exception of high recovery of 2-hexanone in the matrix spike and high recovery of 2-hexanone and 4-methyl-2-pentanone in the matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of 2-fluorophenol in lab control sample S2MLCS and surrogates diluted out in the initial analysis and re-analysis at dilution for sample SV1011617.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1130406. Spike recoveries were within the QC limits with the exception of several compounds in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: due to sample matrix, sample SV1011617 had 5mL final volume rather than the normal 1mL final volume. This is equivalent to 5x dilution. Sample SV1011617 was initially analyzed at 20x dilution, an overall dilution of 100x. To ensure that all target analtyes were determined within the instrument calibration range, sample SV1011617 was re-analyzed at 50x dilution, an overall dilution of 250x. Internal standard area counts were within QC criteria with the exception of samples SV1110507

and WOD-SS-105. The samples were not re-analyzed at all surrogate recoveries were within the QC limits. No other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of decachlorobiphenyl in one column in sample SV1011617.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1130406. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample SV1130406. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample SV1130406. Replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

7. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

8. TOC Analysis:

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

The analyses for Total Organic Carbon for the soil samples were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Agnes Ng
CLP Project Manager

Coolers / Bottles
Intact / Broken

Custody Seal Numbers

3)Chain -of- Custody Present / Absent

4)Airbill(s) Present / Absent

Airbill Number(s) FED-EX

5)Cooler Temperature 4c

Coolant Condition ICE

6)Sample Bottles Intact/Broken/Leaking

7)Date Received 2-12-03

8)Time Received 0900

VOA Matrix Key:
US = Unpreserved Soil
UA = Unpreserved Aqueous
M/N = MeOH& NaHSO4
N = NaHSO4 M = MeOH
A = Air
H = HCl
E=Encore

RB-021103

Overview

The sample set for CTO 848, SDG B0257, NASA Wallops Island, consists of eight (8) surface soil samples, eight (8) subsurface soil samples and one (1) aqueous rinsate blank, RB-021103. One (1) field duplicate pair (WOD-SS-DUP05 / WOD-SS-109) is included within this SDG.

The surface soil samples (WOD-SS-105, WOD-SS-109, WOD-SS-110, WOD-SS-111, WOD-SS-112, WOD-SS-113, WOD-SS-114 and WOD-SS-DUP05) were analyzed for target analyte list (TAL) metals, pH and grain size, with the exception of sample WOD-SS-DUP05, which was not analyzed for grain size. The subsurface soil samples (WOD-SU-105-0507, WOD-SU-109-0608, WOD-SU-110-0204, WOD-SU-111-0507, WOD-SU-112-0204, WOD-SU-113-0406, WOD-SU-114-0406 and FTA-SU-101-1617) were analyzed for TAL metals only. Sample RB-021103 was analyzed for TAL metals and total organic carbon (TOC). The samples were collected by Tetra Tech NUS on February 11, 2003 and analyzed by Mitkem Corporation. Metals analyses, with the exception of mercury, were conducted using SW-846 method 6010B. Mercury analyses were conducted using SW-846 methods 7470A and 7471A. Analyses for pH were conducted using SW-846 method 9045C. Analyses for TOC were conducted using EPA method 415.1. Grain size analyses were conducted using ASTM method D422.

Summary

All analytes were successfully analyzed. The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, calibration data, laboratory method/preparation blanks, interference check sample (ICS) results, matrix spike results, laboratory duplicate results, field duplicate results, laboratory control sample (LCS) results, detection limits and analyte quantitation.

Metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) instrumentation. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) instrumentation.

Areas of concern with respect to data quality are listed below.

Minor Problems

- Analyses for pH should be conducted immediately. The samples were received at the laboratory on 2/12/03 and were analyzed two days later on 2/14/03. All results reported for pH were qualified as estimated, "J".

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Samples Affected: All soil samples

Analyte	Maximum Concentration	Action Level
Aluminum	42.8 µg/L	10.7 mg/kg
Antimony	6.2 µg/L	1.55 mg/kg
Iron	45.5 µg/L	11.38 mg/kg
Magnesium	40.7 µg/L	10.18 mg/kg
Manganese[(1)]	0.12 mg/kg	0.60 mg/kg
Nickel	1.5 µg/L	0.38 mg/kg
Potassium	698.2 µg/L	174.55 mg/kg
Sodium	887 µg/L	221.75 mg/kg

[(1)] Maximum contamination present in a solid preparation blank.

An action level of five times the maximum contaminant level has been established to evaluate sample data for blank contamination. Sample aliquot, percent solids and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results < the action level reported for nickel, potassium and sodium were qualified, "B", as a result of blank contamination. No validation action was required for the remaining analytes because the results were either greater than the action level or were nondetected.

- The interfering analyte aluminum was present in sample FTA-SU-101-1617 at a concentration that was comparable to the level of aluminum in the Interference Check Sample (ICS) solution. Several analytes namely antimony, arsenic, barium, cadmium, chromium, cobalt, copper, lead, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the absolute value of the Instrument Detection Limit (IDL). Interference affects exist for cadmium, selenium and silver in the affected sample. The nondetected result reported for selenium was qualified as biased low, "UL". The positive result reported for cadmium was qualified as biased low, "L". The positive result reported for silver was qualified as biased high, "K".

- The interfering analytes aluminum and iron were present in sample WOD-SS-105 at concentrations that were comparable to the levels of aluminum and iron in the Interference Check Sample (ICS) solution. Several analytes namely antimony, arsenic, barium, cadmium, chromium, cobalt, copper, lead, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the absolute value of the Instrument Detection Limit (IDL). Interference affects exist for antimony, cadmium, selenium and silver in the affected sample. The nondetected results reported for antimony and selenium were qualified as biased low, "UL". The positive

result reported for cadmium was qualified as biased low, "L". The positive result reported for silver was qualified as biased high, "K".

- The interfering analytes aluminum and iron were present in sample WOD-SU-105-0507 at concentrations that were comparable to the levels of aluminum and iron in the Interference Check Sample (ICS) solution. Several analytes namely antimony, arsenic, barium, cadmium, chromium, cobalt, copper, lead, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the absolute value of the Instrument Detection Limit (IDL). Interference affects exist for antimony, arsenic, cadmium, cobalt, selenium, silver and zinc in the affected sample. The nondetected results reported for antimony, cadmium and selenium were qualified as biased low, "UL". The positive results reported for arsenic and zinc were qualified as biased low, "L". The positive results reported for cobalt and silver were qualified as biased high, "K".

- The interfering analytes aluminum, calcium and iron were present in sample WOD-SU-111-0507 at concentrations that were comparable to the levels of aluminum, calcium and iron in the Interference Check Sample (ICS) solution. Several analytes namely antimony, arsenic, barium, cadmium, chromium, cobalt, copper, lead, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium and zinc were present in the ICS solution at concentrations which exceeded the absolute value of the Instrument Detection Limit (IDL). Interference affects exist for antimony, arsenic, cadmium, cobalt, potassium, selenium, sodium and thallium in the affected sample. The nondetected result reported for selenium was qualified as biased low, "UL". The positive results reported for antimony, arsenic and cadmium were qualified as biased low, "L". The positive results reported for cobalt, potassium, sodium and thallium were qualified as biased high, "K".

Notes

The rinsate blank was not used to establish blank action levels and was not qualified due to laboratory blank contamination.

Sample WOD-SS-DUP05 was recorded incorrectly on the chain of custody (COC) as WOD-SU-DUP05. The sample ID was corrected in the electronic database.

Although the COC did not indicate metals analyses for sample FTA-SU-101-1617; metals analyses were performed on this sample. These results are included within this SDG.

The laboratory incorrectly identified several sample IDs by labeling sections of the sample ID as "SV" when it should have been "SU". The sample IDs were corrected in the electronic database.

The grain size results were not put into the electronic database, however, the sample result forms are included within Appendix B.

The grain size results were reported incorrectly for sample WOD-SS-110. The laboratory was contacted and faxed corrected results for this sample on May 21, 2003.

Contract Required Detection Limit (CRDL) and ICP serial dilution percent recoveries could not be evaluated because the laboratory either did not perform these analyses or did not supply the information for these analyses.

The laboratory did not supply the required information for the Interference Check Standard A (ICSA) on the Form 4.

TOC results for the soil samples are included within a separate SDG.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method/preparation blanks. pH results were qualified due to holding time noncompliance.

Other Factors Affecting Data Quality: Several analytes were qualified due to ICS noncompliance in samples FTA-SU-101-1617, WOD-SS-105, WOD-SU-105-0507 and WOD-SU-111-0507.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Validation", April 1993 as amended for use within USEPA Region III.

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

U - Value is a nondetect as reported by the laboratory.

B - Positive result is considered to be an artifact of blank contamination and should not be considered present.

K - Positive result is considered biased high, "K", as a result of technical noncompliances.

L - Positive result is considered biased low, "L", as a result of technical noncompliances.

UL - Nondetected result is considered biased low, "UL", as a result of technical noncompliances.

J - Positive result is considered estimated, "J", as a result of technical noncompliances.

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity
