TOTAL ORGANIC CARBON BY COMBUSTION					**E415.1_TOC_W**		
Organic Carbon, Total	ND		6.0	mg/L	1	02/28/2003	6168

Qualifiers:

ND - Not Detected at the Reporting Limit
J - Analyte detected below quanititation limits
B - Analyte detected in the associated Method Blank
DF - Dilution Factor
S - Spike Recovery outside accepted recovery limits
R - RPD outside accepted recovery limits
E - Value above quantitation range
RL - Reporting Limit

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for tw0 aqueous and sixteen soil samples that were collected on February 11, 2003, and received at Mitkem on February 12, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussions with the client. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH and TOC. The analysis results for pH and TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

QC criteria with the exception of samples SV1110507 and WOD-SS-105. The samples were not re-analyzed at all surrogate recoveries were within the QC limits.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of decachlorobiphenyl in one column in sample SV1011617.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1130406. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample SV1130406. Spike recoveries were within the QC limits.

Matrix duplicate: matrix duplicate was performed on sample SV1130406. Replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

7. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

8. TOC Analysis:

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

The analyses for Total Organic Carbon for the soil samples were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

WOD-SU-DUP06		

OVERVIEW

The sample set for CTO 848, SDG B0258, NASA Wallops Island consists of thirteen (13) solid environmental samples, one (1) rinsate blank, one (1) field blank, and one (1) trip blank. All samples were analyzed for Target Compound List (TCL) volatile organic compounds, TCL semivolatile organic compounds and TCL PCBs, except the trip blank (*) was only analyzed for TCL volatile organic compounds. One field duplicate pair was included in the SDG: WOD-SU-118-0406 and WOD-SU-DUP06.

The samples were collected by TetraTech NUS on February 12th, 2003 and were analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, and 8082 analytical and reporting protocols.

All samples were successfully analyzed with the exception of those results that were rejected. The findings offered in this report are based upon a general review of all available data including: data completeness, system performance and tuning, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, internal standard recoveries, blank spike results, field duplicate results, matrix spike/matrix spike duplicate results, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- The volatile fraction internal standard area of 1,4-dichlorobenzene-d4 fell below the -50% quality control limit (and < 10%) for sample WOD-SS-117. Nondetected results associated with the internal standard were rejected, UR, in the aforementioned sample.

Minor Problems

- The aqueous volatile initial calibration on 2/20/03 contained a percent relative standard deviation (%RSD) that exceeded the 30% quality control limit for acetone. The positive results for acetone in the aqueous samples were qualified as estimated, J. The direction of bias cannot be determined.

- The aqueous volatile continuing calibration on 2/28/03 at 0951 contained a percent difference (%D) that exceeded the 25% quality control limit for acetone. Positive results were qualified as estimated, J, in the aqueous samples. The direction of bias cannot be determined.

- The volatile surrogate percent recoveries (%R) of dibromofluoromethane, 1,2-dichloroethane-d4, and toluene-d8 exceeded the upper quality control limit for sample WOD-SS-116. The re-analysis yielded an exceedance of 1,2-dichloroethane-d4 only. Therefore, the re-analysis was used for data validation purposes. Positive results were qualified as estimated, J, in sample WOD-SS-116.

- The volatile surrogate percent recoveries (%R) of 1,2-dichloroethane-d4 and toluene-d8 exceeded the upper quality control limit for sample WOD-SS-117. The re-analysis yielded all three surrogate %Rs exceeding upper quality control limits. Therefore, the original analysis was used for data validation purposes. Positive results were qualified as estimated, J, in sample WOD-SS-117.

- The volatile surrogate percent recovery (%R) of 1,2-dichloroethane-d4 exceeded the upper quality control limit for sample WOD-SS-120. The re-analysis yielded similar noncompliant results. Therefore, the original analysis was used for data validation purposes. Positive results were qualified as estimated, J, in sample WOD-SS-120.

- The volatile fraction internal standard recoveries of 1,4-dichlorobenzene-d4 and chlorobenzene-d5 fell below the lower quality control limit in sample WOD-SS-116. The re-analysis yielded similar noncompliant results. Therefore, the re-analysis was used for data validation purposes based on surrogate noncompliances. Only nondetected results were associated with the noncompliant internal standards and these results were qualified as estimated, UJ, in sample WOD-SS-116.

- The volatile fraction internal standard recoveries of fluorobenzene, chlorobenzene-d5, and 1,4-dichlorobenzene-d4 fell below the lower quality control limit for sample WOD-SS-117. The re-analysis yielded similar noncompliant results. The original analysis was used for data validation purposes based on surrogate noncompliant results. The internal standard 1,4-dichlorobenzene-d4 had a recovery less than 10% of the associated continuing calibration. The nondetected results associated with 1,4-dichlorobenzene-d4 have been rejected UR for sample WOD-SS-117. The remaining nondetected results for sample WOD-SS-117 were qualified as estimated, UJ.

- The volatile fraction internal standard recoveries of chlorobenzene-d5 and 1,4-dichlorobenzene-d4 fell below the lower quality control limit for sample WOD-SS-120. The re-analysis yielded similar noncompliant results. The original analysis was used for data validation purposes based on surrogate noncompliant results. Nondetected and positive results associated with the internal standards were qualified as estimated, J, and, UJ, in the aforementioned sample.

- The volatile fraction internal standard recovery 1,4-dichlorobenzene-d4 fell below the lower quality control limit for sample WOD-SU-115-0305. There was no re-analysis. Therefore, the original analysis was used for data validation purposes based on surrogate noncompliant results. Nondetected and positive results associated with the 1,4-dichlorobenzene-d4 were qualified as estimated, J, and, UJ, in the aforementioned sample.

- The following compounds were detected in the laboratory method blanks or field quality control blanks (*):

Compound	Maximum Concentration	Blank Action Level
Acetone	4 µg/L	40 µg/Kg
Methylene chloride*	3 µg/L	30 µg/Kg
2-Hexanone	3 µg/Kg	15 µg/Kg

  Sample aliquot, percent solids, and dilution factor were taken into consideration when applying the blank action limit. Positive results for acetone, methylene chloride, and 2-hexanone below the blank action level were qualified as, B. Field quality control blanks were not qualified based on contamination in other field quality control blanks.

- The semivolatile initial calibration on 3/12/03 contained a %RSD that exceeded the 30% (and > 50%) quality control limit for 3-nitroaniline. Positive and nondetected results for 3-nitroaniline were qualified as estimated, J, and, UJ, respectively, in the associated samples. The direction of bias cannot be determined.

- The semivolatile continuing calibration on 3/14/03 at 0012 contained a %D that exceeded the 25% (and > 50%) quality control limit for benzaldehyde. Positive and nondetected results for benzaldehyde were qualified as estimated, J, and, UJ, respectively, in the associated sample. The direction of bias cannot be determined.

- The semivolatile continuing calibration on 3/15/03 at 0031 contained a %D that exceeded the 25% (and > 50%) quality control limit for benzaldehyde. The nondetected result for benzaldehyde was qualified as estimated, J, in sample WOD-SS-120. The direction of bias cannot be determined.

- The semivolatile continuing calibration on 3/15/03 at 1632 contained %Ds that exceeded the 25% (and > 50%) quality control limit for 4-nitroaniline, 3-nitroaniline, hexachlorocyclopentadiene, and benzaldehyde. The nondetected results for the aforementioned compounds were qualified as estimated, J, and, UJ, respectively, in sample WOD-SU-115-0305. The direction of bias cannot be determined.

- The semivolatile matrix spike and matrix spike duplicate %Rs fell below the lower quality control limit for 2-nitroaniline, 2-nitrophenol, dibenzofuran, phenanthrene, di-n-octyl-phthalate, and benzo(a)pyrene. The positive and nondetected results for the aforementioned compounds were qualified as estimated, J, and, UJ, respectively, in the unspiked sample, WOD-SU-120-0406.

- Positive results below the reporting limit (RL) were qualified as estimated, J, due to uncertainty near the detection limit. The direction of bias cannot be determined.

Notes

The aqueous volatile continuing calibration on 2/28/03 at 0951 contained %Ds that exceeded the 25% quality control limit, but did not exceed 50%, for dichlorodifluoromethane and 1,2-dibromo-3-chloropropane. Therefore, nondetected sample results were not qualified on this basis.

The linear calibration range of the instrument was exceeded for acetone in sample WOD-SS-120. The result from the re-analyses was transposed over and used for data validation purposes.

The semivolatile initial calibration on 3/12/03 contained %RSDs that exceeded the 30% quality control limit, but did not exceed 50%, for 4-chloroaniline, carbazole, and benzaldehyde. Therefore, nondetected sample results were not qualified on this basis.

The semivolatile initial calibration on 3/14/03 contained %RSDs that exceeded the 30% quality control limit, but did not exceed 50%, for 4-chloroaniline, carbazole, and atrazine. Therefore, nondetected sample results were not qualified on this basis.

The semivolatile continuing calibration on 3/13/03 at 0935 contained %Ds that exceeded the 25% quality control limit, but did not exceed 50%, for 4-chloroaniline, carbazole, atrazine, and benzaldehyde. Therefore, nondetected sample results were not qualified on this basis.

The semivolatile continuing calibration on 3/15/03 at 0031 contained %Ds that exceeded the 25% quality control limit, but did not exceed 50%, for 4-chloroaniline, hexachlorocyclopentadiene, and atrazine. Therefore, nondetected sample results were not qualified on this basis.

The semivolatile continuing calibration on 3/15/03 at 1632 contained %Ds that exceeded the 25% quality control limit, but did not exceed 50%, for 2,2-'oxybis(1-chloropropane), 4-chloroaniline, carbazole, 3,3'-dichlorobenzidine, and atrazine. Therefore, nondetected sample results were not qualified on this basis.

The semivolatile fraction matrix spike duplicate %Rs fell below the lower quality control limit for several compounds. No qualification action was warranted.

The semivolatile fraction laboratory control sample %R fell below the lower quality control limit for dibenzofuran and the %R exceeded the upper quality control limit for carbazole. No qualification action was warranted.

The semivolatile fraction laboratory control sample duplicate %R exceeded the upper quality control limit for 4-nitroaniline. No qualification action was warranted.

The PCBs continuing calibration on 2/25/03 at 2006 contained %Ds that exceeded the 15% for Aroclor-1016 on column RTXCLPPEST 2. No qualification action was warranted since the other column was compliant.

The laboratory truncated the beginning parts of the sample IDs.

The laboratory incorrectly identified several sample IDs by labeling sections of the sample ID as "SV" when it should have been "SU". The sample IDs were corrected in the electronic database.

There were differences between what was reported by the laboratory and what was requested in the statement of work (SOW). No action was taken because the project office was contacted and that they approved the variance from the SOW.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Several compounds failed to meet the initial and/or continuing calibration criteria in the volatile, semivolatile, and PCBs fractions. Laboratory method and field blank contamination occurred in the volatile fraction.

Other Factors Affecting Data Quality: Surrogate recoveries quality control limits were not met in the volatile fraction. Internal standard recovery criteria were not met.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Organic Data Validation", (September 1994) as amended for use within USEPA Region III, and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

APPENDIX C

SUPPORT DOCUMENTATION

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for three aqueous and thirteen soil samples that were collected on February 12, 2003, and received at Mitkem on February 13, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussions with the client. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH and TOC. The analysis results for pH and TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of dibromofluoromethane, 1,2-dichloroethane-d4 and toluened8 in sample WOD-SS-116, high recovery of 1,2-dichloroethane-d4 and toluened8 in sample WOD-SS-117 and high recovery of 1,2-dichloroethane-d4 in sample WOD-SS-120. Matrix interference confirmed on surrogate recovery with re-analysis of the samples with similar findings.

Lab control sample/lab control sample: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of low recovery of bibenzofuran and high recovery of carbazole in S3NLCS and high recovery of 4-nitroaniline in S3PLCS. Replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1200406. Spike recoveries were within the QC limits with the exception of several compounds in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1200406. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on samples FB021203 and WOD-SS-115. Spike recoveries were within the QC limits with the exception of antimony for sample WOD-SS-115. Form 1's are flagged with an "N" for antimony. A post digest spike was performed for antimony with spike recovery within QC limits.

Matrix duplicate: matrix duplicate was performed on samples FB021203 and WOD-SS-115. Replicate RPDs were within the QC limits with the exception of aluminum. Form 1's are flagged with an "*" for aluminum.

Sample analysis: no other unusual observation was made for the analysis.

6. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

7. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

8. TOC Analysis:

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

The analyses for Total Organic Carbon for the soil samples were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Agnes Ng
CLP Project Manager

Overview

The sample set for CTO 848, SDG B0258, NASA Wallops Island, consists of six (6) surface soil samples, seven (7) subsurface soil samples and two (2) aqueous field blanks, RB-021203 and FB-021203. One (1) field duplicate pair (WOD-SU-DUP06 / WOD-SU-118-0406) is included within this SDG.

The surface soil samples (WOD-SS-115, WOD-SS-116, WOD-SS-117, WOD-SS-118, WOD-SS-119 and WOD-SS-120) were analyzed for target analyte list (TAL) metals, pH and grain size. The subsurface soil samples (WOD-SU-115-0305, WOD-SU-116-0204, WOD-SU-117-0102, WOD-SU-118-0406, WOD-SU-119-0507, WOD-SU-120-0406 and WOD-SU-DUP06) were analyzed for TAL metals only. Samples RB-021203 and FB-021203 were analyzed for TAL metals and total organic carbon (TOC). The samples were collected by Tetra Tech NUS on February 12, 2003 and analyzed by Mitkem Corporation. Metals analyses, with the exception of mercury, were conducted using SW-846 method 6010B. Mercury analyses were conducted using SW-846 methods 7470A and 7471A. Analyses for pH were conducted using SW-846 method 9045C. Analyses for TOC were conducted using EPA method 415.1. Grain size analyses were conducted using ASTM method D422.

Summary

All analytes were successfully analyzed. The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, calibration data, laboratory method/preparation blanks, interference check sample (ICS) results, matrix spike results, post digestion spike results, laboratory duplicate results, field duplicate results, laboratory control sample (LCS) results, ICP serial dilution results, detection limits and analyte quantitation.

Metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) instrumentation. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) instrumentation.

Areas of concern with respect to data quality are listed below.

Minor Problems

- Analyses for pH should be conducted immediately. The samples were received at the laboratory on 2/13/03 and were analyzed one day later on 2/14/03. All results reported for pH were qualified as estimated, "J".

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Samples Affected: All soil samples

Analyte	Maximum Concentration	Action Level
Antimony	5.5 µg/L	1.38 mg/kg
Chromium[(1)]	0.04 mg/kg	0.20 mg/kg
Copper[(1)]	1.428 mg/kg	7.14 mg/kg
Iron[(1)]	2.182 mg/kg	10.91 mg/kg
Magnesium	8.5 µg/L	2.125 mg/kg
Manganese[(1)]	0.291 mg/kg	1.455 mg/kg
Nickel[(1)]	0.078 mg/kg	0.39 mg/kg
Potassium	420.3 µg/L	105.08 mg/kg
Sodium	259 µg/L	64.75 mg/kg
Zinc[(1)]	1.207 mg/kg	6.04 mg/kg

[(1)] Maximum contamination present in a solid preparation blank.

An action level of five times the maximum contaminant level has been established to evaluate sample data for blank contamination. Sample aliquot, percent solids and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results < the action level reported for antimony, copper, potassium, sodium and zinc were qualified, "B", as a result of blank contamination. No validation action was required for the remaining analytes because the results were either greater than the action level or were nondetected.

- The interfering analytes aluminum and iron were present in samples WOD-SS-119 and WOD-SU-119-0507 at concentrations that were comparable to the levels of aluminum and iron in the Interference Check Sample (ICS) solution. Several analytes namely antimony, arsenic, cadmium, chromium, cobalt, copper, lead, manganese, nickel, potassium, selenium, silver, sodium, thallium and vanadium were present in the ICS solution at concentrations which exceeded the absolute value of the Instrument Detection Limit (IDL). Interference affects exist for arsenic, cadmium, selenium and silver in the affected samples. The nondetected results reported for selenium were qualified as biased low, "UL". The positive results reported for arsenic and silver were qualified as biased low, "L". The positive results reported for cadmium were qualified as biased high, "K".

- Matrix Spike (MS) percent recovery for antimony was < 75% quality control limit, affecting the soil matrix. The nondetected result reported for sample WOD-SU-116-0204 was qualified as biased low, "UL". No validation action was required for the remaining samples because all other results were qualified "B" as a result of laboratory blank contamination.

Notes

The field and rinsate blanks were not used to establish blank action levels and were not qualified due to laboratory blank contamination.

Although the COC indicated pH and grain size analyses for sample WOD-SU-119-0507; these analyses were not performed on this sample.

The laboratory incorrectly identified several sample IDs by labeling sections of the sample ID as "SV" when it should have been "SU". The sample IDs were corrected in the electronic database.

The grain size results were not put into the electronic database, however, the sample result forms are included within Appendix B.

Contract Required Detection Limit (CRDL) percent recoveries could not be evaluated because the laboratory either did not perform these analyses or did not supply the information for these analyses.

The laboratory did not supply the required information for the Interference Check Standard A (ICSA) on the Form 4. The data reviewer printed the ICSA raw data pages from the PDF file.

TOC results for the soil samples are included within a separate SDG.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method/preparation blanks. pH results were qualified due to holding time noncompliance.

Other Factors Affecting Data Quality: Antimony was qualified due to MS noncompliance. Several analytes were qualified due to ICP noncompliance.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Data Validation", April 1993 as amended for use within USEPA Region III.

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

U - Value is a nondetect as reported by the laboratory.

B - Positive result is considered to be an artifact of blank contamination and should not be considered present.

K - Positive result is considered biased high, "K", as a result of technical noncompliances.

L - Positive result is considered biased low, "L", as a result of technical noncompliances.

UL - Nondetected result is considered biased low, "UL", as a result of technical noncompliances.

J - Positive result is considered estimated, "J", as a result of technical noncompliances.

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Sample Condition Notification

Mitkem Project#: 02258
Client: TETRA TECH
Client project #/name: NBIA WFF

Date of Receipt: 2-13-07
Received By: (AL) 0900

Unusual Occurance Description:

(1) EXAMPLE Sample's WITH ID's WOD-55- DATA HAVE TESTS SVOC/PCB/TAL METALS+PH/TOC/GRAIN SIZE

(2) EXAMPLE Samples WITH ID'S WOD-SU" HAVE TESTS TAL METALS/SVOC/PCB

Sample # WOD-50-119-05"07 HAS TEST MARK OFF FOR EVERY THING LIKE EXAMPLE (1) ONLY RECEIVED BOTTLES FOR TAL METALS/SVOC/PCB LIKE EXAM.1E (2) (NC) 2-13-05

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for three aqueous and thirteen soil samples that were collected on February 12, 2003, and received at Mitkem on February 13, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussions with the client. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH and TOC. The analysis results for pH and TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

0001

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on samples FB021203 and WOD-SS-115. Spike recoveries were within the QC limits with the exception of antimony for sample WOD-SS-115. Form 1's are flagged with an "N" for antimony. A post digest spike was performed for antimony with spike recovery within QC limits.

Matrix duplicate: matrix duplicate was performed on samples FB021203 and WOD-SS-115. Replicate RPDs were within the QC limits with the exception of aluminum. Form 1's are flagged with an "*" for aluminum.

Sample analysis: no other unusual observation was made for the analysis.

6. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

7. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

8. TOC Analysis:

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

The analyses for Total Organic Carbon for the soil samples were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

WOD-SU-125-0203	WOD-SU-DUP07	

OVERVIEW

The sample set for CTO 848; SDG B0262, NASA Wallops Island consists of one (1) rinse blank, one (1) trip blank, one (1) field duplicate, and ten (10) solid environmental samples. One field duplicate pair was included in this SDG: (WOD-SU-122-1012 / WOD-SU-DUP07. All samples were analyzed for Target Compound List (TCL) volatile organic compounds (VOC), TCL semivolatile organic compounds (SVOA), and TCL polychlorinated biphenyls (PCBs). The sample denoted with an asterisk (*) was analyzed for TCL VOAs only.

The samples were collected by TetraTech NUS on February 13th and analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, and 8082 analysis and reporting protocols.

The findings in this report are based upon a general review of all available data including: data completeness, system performance, holding times, initial / continuing calibrations, laboratory method blank results, surrogate spike/internal standard recoveries, blank spike results, field duplicate results, matrix spike/matrix spike duplicate results, compound identification, compound quantitation, and detection limits. Areas of concern are listed below.

Major Problems

- None.

Minor Problems

- The initial calibration analyzed on 02/20/03 had a percent relative standard deviation (%RSD) greater than the 30% (but was <50%) quality control limit for acetone on instrument "V6". The positive acetone result for sample RB021303 was qualified as estimated (J). The direction of bias cannot be determined.

- An initial calibration contained a %RSD that exceeded the 30% (and was >50%) quality control limit for 3-nitroaniline on instrument "S3", on 03/12/03. The non-detected result for 3-nitroaniline

was qualified as estimated (UJ) in sample RB-021303. The direction of bias cannot be determined.

- An initial calibration contained a %RSD that exceeded the 30% (and was >50%) quality control limit for 4-chloroaniline on instrument "S2", on 3/13/03. The non-detected results for 4-chloroaniline were qualified as estimated (UJ in the associated samples. The direction of bias cannot be detemined.

- The following compounds were detected in the method blanks at the maximum concentrations indicated below:

Compound	Concentration	Action Level
Acetone	4 ug/kg	40 ug/kg
2-Hexanone	2 ug/kg	10 ug/kg
Methylene chloride[1]	6 ug/L	60 ug/L

[1] Concentration taken from the associated trip blank.

Blank Actions

- Value < Reporting Limit (RL); report value followed by a B.
- Value > RL and < Action Level; report value followed by a B.
- Value > RL and > Action Level; report value unqualified.

Dilution factors, percent solids, and sample aliquots were taken into consideration during the application of all action levels. The affected positive results were qualified (B) as a result of blank contamination for acetone. Field quality control samples were not qualified due to method blank contamination.

- Surrogate 1,2-dichloroethane-d4 had a recovery greater than the quality control criteria for samples WOD-SS-124, WOD-SU-124-0203, WOD-SU-123-1012MS, and WOD-SU-123-1012MSD. The positive and non-detected results for samples WOD-SS-124 and WOD-SU-124-0203 have been qualified J and UJ, respectively. No action was taken on samples WOD-SU-123-1012MS and WOD-SU-123-1012MSD because these samples represent quality control analyses.

- Samples WOD-SS-122, WOD-SU-122-1012, WOD-SS-125, and WOD-SS-123 had a low internal standard recovery for 1,4-dichlorobenzene-d4. The positive and non-detected results quantitated using 1,4-dichlorobenzene-d4 have been qualified J and UJ, respectively.

- Sample WOD-SS-124 had low recoveries for all three internal standards. The sample was re-analyzed with a low internal standard recovery for 1,4-dichlorobenzene-d4. The re-analysis was used for validation and the non-detected results quantitiated using 1,4-dichlorobenzene-d4 have been qualified as estimated, UJ.

- Sample WOD-SS-123 had a low internal standard recovery for perylene-d12. The positive and non-detected results quantitated using perylene-d12 have been qualified J and UJ, respectively.

Notes

An initial calibration %RSD exceeded the 30% (but were <50%) quality control limit for hexachlorocyclopentadiene on instrument "S2" on 03/09/03. Only non-detected results were reported for hexachlorocyclopentadiene and these did not require qualification based on this noncompliance.

Initial calibration %RSDs exceeded the 30% (but were <50%) quality control limit for hexachlorocyclopentadiene, 2,4-dinitrophenol, and atrazine on instrument "S2" on 03/13/03. Only non-detected results were reported for the aforementioned compounds and these did not require qualification based on this noncompliance.

Initial calibration %RSDs exceeded the 30% (but were <50%) quality control limit for 4-chloroaniline, carbazole, and benzaldehyde on instrument "S3" on 03/12/03. Only non-detected results were reported for the aforementioned compounds and did not require qualification based on this noncompliance.

A calibration verification percent difference (%D) exceeded the 25% (but was <50%) quality control limit for acetone on instrument "V5", on 02/23/03. The positive result for acetone in sample WOD-SU-125-0203 was already qualified as non-detected, so no action was taken on the calibration non-compliance.

A calibration verification %D exceeded the 25% (but was <50%) quality control limit for 1,2-dibromo-3-chloropropane on instrument "V6", on 02/24/03. Only non-detected results were reported for 1,2-dibromo-3-chloropropane and did not require qualification based on this noncompliance.

Calibration verification %Ds exceeded the 25% (but was <50%) quality control limit for 4-nitroaniline and benzaldehyde on instrument "S2", on 03/10/03 @0101. Only non-detected results were reported for the aforementioned compounds and these did not require qualification based on this noncompliance.

Calibration verification %Ds exceeded the 25% (but was <50%) quality control limit for 4-chloroaniline and benzaldehyde on instrument "S2", on 03/10/03 @1525. Only non-detected results were reported for the aforementioned compounds and these did not require qualification based on this noncompliance.

Calibration verification %D exceeded the 25% (but was <50%) quality control limit for benzaldehyde on instrument "S2", on 03/14/03 @0228. Only non-detected results were reported for benzaldehyde and these did not require qualification based on this noncompliance.

Calibration verification %D exceeded the 25% (but was <50%) quality control limit for 4-chloroaniline, carbazole, atrazine, and benzaldehyde on instrument "S3", on 03/13/03 @0935. Only non-detected results were reported for the aforementioned compounds and these did not require qualification based on this noncompliance.

Recovery of several volatile compounds were outside the quality control limits for the Matrix Spike/Matrix Spike Duplicate (MS/MSD) analysis of sample WOD-SU-123-1012. Additionally, the relative percent difference (%RPD) for styrene was outside the quality control limit. Laboratory Control Sample (LCS) recoveries of all spike compounds were compliant. Therefore, no action was taken.

Surrogates phenol-d5 and 2-fluorophenol had recoveries greater than the quality control criteria for the method blank (SBLK2S) and LCS (S2SLCS) associated with the soil samples. No action was taken on the out of control surrogates because all the associated soil samples had acceptable surrogate recoveries.

Recovery of several semivolatile compounds were outside the quality control limits for the Matrix Spike/Matrix Spike Duplicate (MS/MSD) analysis of sample WOD-SU-123-1012. The laboratory control sample (LCS) recoveries of all spike compounds that were out of control in the MS/MSD were compliant. Therefore, no action was taken.

The laboratory control sample duplicate associated with the aqueous sample had a recovery greater than the quality control criteria for 4-nitroaniline. The LCS recovery of all spike compounds met quality control criteria. Therefore, no action was taken.

Sample WOD-SS-123 required a dilution due to high concentrations of hydrocarbons. All non-detected compounds in sample WOD-SS-123 have elevated reporting limits.

The aqueous reporting limits exceeded the reporting limits stated in the laboratory specification for all PCB compounds.

There were several inconsistencies between the compound lists in the statement of work (SOW) and the results submitted by the laboratory. No action was taken on this basis because the project office approved the variance from the SOW.

EXECUTIVE SUMMARY

Laboratory Performance Issues: The Initial or continuing calibrations of several volatile and semivolatile compounds failed to meet linearity criteria. Several compounds were detected in laboratory method blanks resulting in the qualification of analytical data.

Other Factors Affecting Data Quality: Internal standards for volatiles and semivolatiles failed to meet recovery criteria. A surrogate for the volatile analyses did not meet recovery criteria. The PCB reporting limits for aqueous samples did not meet laboratory specification.

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (9/94) as modified by Region III and the NFESC guidelines "Navy IRCDQM" (September, 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC guidelines and the Quality Assurance Project Plan (QAPP)."

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Lab ID: B0262-09

Analyses	Result	Qual	RL	Units	DF	Date Analyzed	Batch ID
SOIL AND WASTE PH					**SW9045C_S**		
pH	6.5		1.0	pH Units	1	02/19/2003	R1910

Qualifiers:

ND - Not Detected at the Reporting Limit
J - Analyte detected below quanititation limits
B - Analyte detected in the associated Method Blank
DF - Dilution Factor
S - Spike Recovery outside accepted recovery limits
R - RPD outside accepted recovery limits
E - Value above quantitation range
RL - Reporting Limit

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0262

Mitkem Project ID: B0262

March 25, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for two aqueous and eleven soil samples that were collected on February 13, 2003, and received at Mitkem on February 14, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussions with the client. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH and TOC. The analysis results for pH and TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of 1,2-dichloroethane-d4 in samples WOD-SS-124, SV1240203, SV1231012MS and SV1231012MSD. Matrix interference on surrogate confirmed with re-analysis of samples WOD-SS-124 and SV1240203 with similar findings.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1231012. Spike recoveries were within the QC limits with the exception of several surrogates in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits with the exception of stryene.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of phenol-d5 and 2-fluorophenol in method blank, SBLK2S, and lab control sample S2SLCS.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery of phenol, N-nitroso-di-n-propylamine and isophorone in S2SLCS and high recovery of 4-nitroaniline in S3PLCSD. Replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1231012. Spike recoveries were within the QC limits with the exception of several compounds in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: due to sample matrix, sample WOD-SS-123 had a final volume of 5mL rather than the normal 1mL final volume. This is equivalent to 5x dilution. No other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1231012. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample SV1231012. Spike recoveries were within the QC limits with the exception of antimony. Antimony is flagged with an "N" flag on Form 1's. A post digest spike was performed for antimony with spike recovery within QC limits.

Matrix duplicate: matrix duplicate was performed on sample SV1231013. Replicate RPDs were within the QC limits with the exception of manganese. Manganese is flagged with an "*" on Form 1's.

Sample analysis: no other unusual observation was made for the analysis.

6. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

7. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

8. TOC Analysis:

The TOC results for aqueous samples are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

The analyses for Total Organic Carbon for the soil samples were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Overview

The sample set for CTO 848, NASA Wallops Island, SDG B0262, consists of eleven (11) soil environmental samples and one (1) aqueous rinse blank. One (1) field duplicate pair (WOD-SU-DUP07 / WOD-SU-122-1012) is included in this SDG.

All samples were analyzed for target analyte list (TAL) metals. Samples WOD-SS-121, WOD-SS-122, WOD-SS-123, WOD-SS-124, and WOD-SS-125 were also analyzed for pH and grain size. Sample RB-021303 was also analyzed for total organic carbon (TOC). The samples were collected by Tetra Tech NUS February 13, 2003 and analyzed by Mitkem Corporation under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Analyses of grain size were subcontracted to RI Analytical Laboratories and submitted with this SDG. Results for grain size were not entered into the database. Analyses of TOC in soil were subcontracted to Severn Trent Laboratories Burlington and will be submitted in a separate SDG. Metals analyses except mercury were conducted using SW846 method 6010B. Soil mercury analyses were conducted using SW846 method 7471A. Aqueous mercury analyses were conducted using SW846 method 7470A. pH analyses were conducted using SW846 method 9045C. Grain size analyses were conducted using method ASTM D422. TOC analyses were conducted using EPA method 415.1.

Summary

All analytes were successfully analyzed. The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, calibration data, laboratory method/preparation blanks, interference check sample (ICS) results, matrix spike results, laboratory duplicate results, laboratory control sample (LCS) results, detection limits, and analyte quantitation.

All metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) methodologies. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) methodology.

Minor Problems

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Aluminum	19.5 ug/L	4.88 mg/kg
Calcium[(1)]	12.785 mg/kg	63.925 mg/kg
Copper[(1)]	0.273 mg/kg	1.365 mg/kg
Magnesium	26.2 ug/L	6.55 mg/kg
Manganese[(1)]	0.168 mg/kg	0.84 mg/kg
Nickel[(1)]	0.048 mg/kg	0.24 mg/kg
Potassium	320.8 ug/L	80.2 mg/kg
Silver[(1)]	0.276 mg/kg	1.38 mg/kg
Sodium	261.1 ug/L	65.28 mg/kg

[(1)] Maximum concentration present in soil preparation blank.

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. Positive results less than the action level for calcium, copper, silver, and sodium were qualified (B) as a result of blank contamination. No validation action was required for the remaining analytes because the results were either greater than the action level or they were nondetects. The rinse blank was not qualified for blank contamination and was not used to qualify environmental samples.

- The interfering analyte aluminum was present in samples WOD-SS-121, WOD-SS-122, WOD-SS-123, WOD-SS-125, WOD-SU-121-1012, WOD-SU-125-0203, and WOD-SU-DUP07 at concentrations comparable to the concentrations of aluminum in the interference check sample (ICS) solution. Several analytes, namely antimony, arsenic, barium, cadmium, chromium, cobalt, lead, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium, and zinc were present in the ICS solution at concentrations that exceeded the absolute value of the instrument detection limit (IDL). Interference effects exist for antimony, cadmium, and selenium in the affected samples. The nondetected results reported for antimony, cadmium, and selenium were qualified as biased low (UL).

- The interfering analytes aluminum and iron were present in sample WOD-SU-122-1012 at concentrations comparable to the concentrations of aluminum and iron, respectively, in the ICS solution. Several analytes, namely antimony, arsenic, barium, cadmium, chromium, cobalt, lead, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium, and zinc were present in the ICS solution at concentrations that exceeded the absolute value of the IDL. Interference effects exist for antimony, cadmium, lead, and selenium in the affected sample. The positive result reported for lead was qualified as biased high (K). The nondetected results reported for antimony, cadmium, and selenium were qualified as biased low (UL).

- The interfering analyte iron was present in samples WOD-SS-122, WOD-SS-125 and WOD-SU-125-0203 at concentrations comparable to the concentrations of iron in the ICS solution. Several analytes, namely antimony, arsenic, barium, cadmium, chromium, cobalt, lead,

manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium, and zinc were present in the ICS solution at concentrations that exceeded the absolute value of the IDL. Interference effects exist for antimony, cadmium, and selenium in the affected samples. The nondetected results reported for antimony, cadmium, and selenium were qualified as biased low (UL).

- The interfering analyte iron was present in samples WOD-SS-121 and WOD-SS-123 at concentrations comparable to the concentrations of iron in the ICS solution. Several analytes, namely antimony, arsenic, barium, cadmium, chromium, cobalt, lead, manganese, nickel, potassium, selenium, silver, sodium, thallium, vanadium, and zinc were present in the ICS solution at concentrations that exceeded the absolute value of the IDL. Interference effects exist for antimony, arsenic, cadmium, and selenium in the affected samples. The positive result reported for arsenic was qualified as biased low (L). The nondetected results reported for antimony, cadmium, and selenium were qualified as biased low (UL).

- The soil matrix spike percent recovery (%R) was below the 75% control limit for antimony. Nondetected results reported for antimony in the soil samples were qualified as biased low (UL).

- Field duplicate imprecision (RPD >50%) was noted for iron and manganese in field duplicate pair WOD-SU-DUP07 / WOD-SU-122-1012. Positive results reported for iron and manganese in the soil samples were qualified as estimated (J).

Notes

The sample IDs with the prefix "WOD-SU" were reported incorrectly by the laboratory as "WOD-SV". The data reviewer amended the database for these samples.

Chromium, magnesium, manganese, nickel, potassium, silver, and sodium were present in the rinse blank.

The laboratory did not report the results for the analytes in the ICSA solution. The data reviewer used the raw data to check the levels of analytes in the solution so interference effects could be determined.

Executive Summary

Laboratory Performance: Several analytes were present in the laboratory method/preparation blanks.

Other Factors Affecting Data Quality: Several analytes were qualified due to ICS interference. Several analytes were qualified due to matrix spike noncompliance. Several analytes were qualified due to field duplicate imprecision.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", April 1993 and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

U	-	Value is a nondetect as reported by the laboratory.
UL	-	Nondetect is considered biased low as a result of technical noncompliance.
B	-	Positive result is considered to be an artifact of blank contamination and should not be considered present.
J	-	Positive result is considered estimated as a result of technical noncompliance.
K	-	Positive result is considered biased high as a result of technical noncompliance.
L	-	Positive result is considered biased low as a result of technical noncompliance.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for two aqueous and eleven soil samples that were collected on February 13, 2003, and received at Mitkem on February 14, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussions with the client. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH and TOC. The analysis results for pH and TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of 1,2-dichloroethane-d4 in samples WOD-SS-124, SV1240203, SV1231012MS and SV1231012MSD. Matrix interference on surrogate confirmed with re-analysis of samples WOD-SS-124 and SV1240203 with similar findings.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1231012. Spike recoveries were within the QC limits with the exception of several surrogates in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits with the exception of stryene.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of phenol-d5 and 2-fluorophenol in method blank, SBLK2S, and lab control sample S2SLCS.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery of phenol, N-nitroso-di-n-propylamine and isophorone in S2SLCS and high recovery of 4-nitroaniline in S3PLCSD. Replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1231012. Spike recoveries were within the QC limits with the exception of several compounds in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits.

Sample analysis: due to sample matrix, sample WOD-SS-123 had a final volume of 5mL rather than the normal 1mL final volume. This is equivalent to 5x dilution. No other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample SV1231012. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample SV1231012. Spike recoveries were within the QC limits with the exception of antimony. Antimony is flagged with an "N" flag on Form 1's. A post digest spike was performed for antimony with spike recovery within QC limits.

Matrix duplicate: matrix duplicate was performed on sample SV1231013. Replicate RPDs were within the QC limits with the exception of manganese. Manganese is flagged with an "*" on Form 1's.

Sample analysis: no other unusual observation was made for the analysis.

6. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

7. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

8. TOC Analysis:

The TOC results for aqueous samples are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

The analyses for Total Organic Carbon for the soil samples were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Were ICP interelement corrections applied ?	Yes/No	YES
Were ICP background corrections applied ?	Yes/No	YES
If yes - were raw data generated before application of background corrections ?	Yes/No	NO

Comments:

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Signature: Name: REINER A. COURMY

CERTIFICATE OF ANALYSIS

Mitkem Corporation
Attn: Data Reporting
175 Metro Center Blvd.
Warwick, RI 02886-1755

Date Received: 2/14/03
Date Reported: 2/21/03
P.O. #: 292
Work Order #: 0302-01985

DESCRIPTION: PROJECT# B0262 (FIVE SOIL SAMPLES)

Subject sample(s) has/have been analyzed by our laboratory with the attached results.

Reference: American Society for Testing and Materials

Data qualifiers (if present) are explained in full at the end of a given sample's analytical results.

Certification #: RI-033, MA-RI015, CT-PH-0508, ME-RI015
NH-253700 A & B, USDA S-41844, NY-11726

If you have any questions regarding this work, or if we maybe of further assistance, please contact us.

SUBJECT: ORGANIC DATA REVIEW – VOLATILES, SEMIVOLATILES, AND PESTICIDES/PCBS
CTO 847, BACKGROUND STUDY – NASA WALLOPS ISLAND, VIRGINIA
SDG B0279

SAMPLES: 6/Aqueous

14-GW1	GW-DUP08	WFF10-GW1
14-GW2	MW53S	TB-021803

OVERVIEW

The sample set for CTO 847 – Background Study, NASA Wallops Island, Virginia, SDG B0279, consists of five groundwater samples (designation incorporating "GW" or "MW") and one trip blank (designated TB). The trip blank was analyzed for TCL volatiles and all other samples were analyzed for TCL volatiles and semivolatiles. Groundwater samples 14-GW1, MW53S, and WFF10-GW1 were also analyzed for pesticides. PCB analysis was performed on groundwater samples 14-GW2 and GW-DUP08. One field duplicate pair (samples 14-GW1/ GW-DUP08) were included in this SDG.

The samples were collected by Tetra Tech NUS on February 19, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Methods 8260B for volatiles, 8270C for semivolatiles, 8081A for pesticides, and 8082 for PCBs.

SUMMARY

All compounds were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until extraction and analysis, GC/MS instrument tuning, GC chromatographic performance tests, initial/continuing calibrations, laboratory and field quality control blank results, surrogate spike recoveries, Internal Standard (IS) areas, Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries, Laboratory Control Spike/Laboratory Control Spike Duplicate (LCS/LCSD) recoveries, field duplicate results, compound identification, compound quantitation, and detection limits.

MINOR PROBLEMS

Volatiles

The volatile fraction aqueous LCS percent recovery was less than the lower QC limit for 1,2-dibromo-3-chloropropane. Associated aqueous sample results were nondetected and were qualified estimated, (UJ).

Positive results reported at concentrations less than the Contract Required Quantitation Limit (CRQL) were qualified estimated, (J).

Semivolatiles

The initial calibration % RSD in the response factor for 3-nitroaniline exceeded the 50 percent upper control limit on instrument S3. The associated results consisted of non-detected aqueous samples, which were qualified estimated, (UJ).

Positive results reported at concentrations less than the Contract Required Quantitation Limit (CRQL) were qualified estimated, (J).

NOTES

Methylene chloride was detected in a trip blank. This compound was not detected in aqueous environmental samples.

The percent recoveries for volatile compounds were less than the lower QC limits for 4 compounds in the MS and 4 compounds in the MSD performed on sample WFF10-GW1. In accordance with Region 3 data validation guidance, no data qualifications were made solely on the basis of matrix spike recoveries.

The volatile fraction aqueous LCS percent recoveries were above the upper QC limit for chloromethane, vinyl chloride, and chloroethane. No positive results occurred for these compounds and no data validation actions were required.

The percent recoveries for semivolatile compounds were less than the lower QC limits for 2 compounds in the MS and 3 compounds in the MSD performed on sample WFF10-GW1. In accordance with Region 3 data validation guidance, no data qualifications were made solely on the basis of matrix spike recoveries.

The percent recovery for the pesticide surrogate tetrachloro-meta-xylene (TCX) was less than the lower QC limit in sample MW53S. Associated results were non-detected and no action was required.

EXECUTIVE SUMMARY

Laboratory Performance: One semivolatile compound exceeded initial calibration percent RSD criteria. One volatile compound exhibited a low LCS recovery and three volatile compounds displayed high LCS recoveries.

Other Factors Affecting Data Quality: Methylene chloride was detected in a trip blank. One pesticide surrogate compound exceeded QC limits. Several compounds exceeded QC limits for percent recovery in the volatile and semivolatile MS/MSD analyses.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Organic Analyses ", as amended for use within EPA Region 3 (9/94), and the NFESC document entitled “Navy IRCDQM” (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

2. Appendix B - Results as Reported by the Laboratory
3. Appendix C - Support Documentation

APPENDIX A

Qualified Analytical Results

Qualifier Codes:

a	=	Lab Blank Contamination
b	=	Field Blank Contamination
c	=	Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d	=	MS/MSD Noncompliance
e	=	LSC/LSCD Noncompliance
f	=	Laboratory Duplicate Imprecision
g	=	Field Duplicate Imprecision
h	=	Holding Time Exceedance
i	=	ICP Serial Dilution Noncompliance
j	=	GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k	=	ICP Interference – include ICSAB %Rs
l	=	Instrument Calibration Range Exceedance
m	=	Sample Preservation
n	=	Internal Standard Noncompliance
o	=	Poor Instrument Performance (i.e. baseline drifting)
p	=	Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q	=	Other Problems (can encompass of number of issues)
r	=	Surrogates Recovery Noncompliance
s	=	Pesticide/PCB Resolution
t	=	% Breakdown Noncompliance for DDT and Endrin
u	=	Pesticide/PCB % Difference Between Columns for Positive Results
v	=	Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

Volatile Organic Analysis Results
SDG B0279
CTO 847
NASA Wallops Island

Data Qualifiers:
B -- Positive result is considered to be an artifact of blank contamination, and should not be considered present.
J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).
U -- Value is a non-detected result as reported by the laboratory.
UJ -- Non-detected result is considered estimated due to exceedance of technical quality control criteria.

APPENDIX C

Support Documentation

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0279

Mitkem Project ID: B0279

March 25, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for twelve aqueous and nine soil samples that were collected on February 19, 2003, and received at Mitkem on February 20, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH and TOC. The analysis results for pH and TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of 1,2-dichloroethane-d4 in samples WOD-SS-131RE, WOD-SS-132, WOD-SS-129MS and WOD-SS-129MSD. Matrix interference on surrogate confirmed with re-analysis of sample WOD-SS-132 with similar findings. Surrogate recoveries were within the QC limits in the initial analysis for sample WOD-SS-131

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery of chloromethane, vinyl chloride and chloroethane in V6KLCSD and low recovery of 1,2-dibromo-3-chloropropane in V6LLCS. Replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF10-GW1 for aqueous samples and on sample WOD-SS-129 for soil samples. Spike recoveries were within the QC limits with the exception of several surrogates in both the matrix spike and matrix spike duplicate for samples WFF10-GW1 and WOD-SS-129. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of phenol-d5 and 2-fluorophenol in method blanks, SBLK2S and SBLK3T, and lab control sample S2SLCS.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery of phenol, N-nitroso-di-n-propylamine and isophorone in S2SLCS.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF10-GW1 for aqueous samples and on sample WOD-SS-129 for soil samples. Spike recoveries were within the QC limits with the exception of several compounds in both the matrix spike and matrix spike duplicate for sample WFF10-GW1 and WOD-SS-129. Replicate RPDs were within the QC limits with the exception of 2-methylphenol and 3,3'-dichlorobenzidine for sample WFF10-GW1 and 4-nitroaniline and 3,3'-dichlorobenzidine in sample EOD-SS-129.

Sample analysis: no other unusual observation was made for the analysis.

4. Pesticides Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of low recovery of decachlorobiphenyl in one column for sample MW-53S.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF10-GW1. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

5. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WOD-SS-129 for soil samples and on sample WFF10-GW1 for aqueous samples for both total and dissolved. Spike recoveries were within the QC limits with the exception of antimony. Antimony is flagged with an "N" flag on Form 1's. A post digest spike was performed for antimony with spike recovery within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WOD-SS-129 for soil samples and on sample WFF10-GW1 for aqueous samples for both total and dissolved. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

7. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

8. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

9. TOC Analysis:

The TOC results for aqueous samples are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

The analyses for Total Organic Carbon for the soil samples were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

SUBJECT: ORGANIC DATA REVIEW – VOLATILES, SEMIVOLATILES, AND PCBS
CTO 848, WASTE OIL DUMP SITE – NASA WALLOPS ISLAND, VIRGINIA
SDG B0279

SAMPLES:

9/Solid/

WOD-SS-129	WOD-SS-132	WOD-SS-137
WOD-SS-130	WOD-SS-133	WOD-SS-138
WOD-SS-131	WOD-SS-136	WOD-SS-DUP09

2/Aqueous

RB-021903	TB-021803

OVERVIEW

The sample set for CTO 848 – Waste Oil Dump Site, NASA Wallops Island, Virginia, SDG B0279, consists of 9 solid environmental samples (designated WOD-SS-), one trip blank (designated TB-), and one rinsate blank (designated RB-). The trip blank was analyzed for TCL volatiles and all other samples were analyzed for TCL volatiles, semivolatiles, and PCBs. One field duplicate pair (samples WOD-SS-133/ WOD-SS-DUP09) were included in this SDG.

The samples were collected by Tetra Tech NUS on February 19, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Methods 8260B for volatiles, 8270C for semivolatiles, and 8082 for PCBs.

SUMMARY

All compounds were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until extraction and analysis, GC/MS instrument tuning, GC chromatographic performance tests, initial/continuing calibrations, laboratory and field quality control blank results, surrogate spike recoveries, Internal Standard (IS) areas, Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries, Laboratory Control Spike/Laboratory Control Spike Duplicate (LCS/LCSD) recoveries, field duplicate results, compound identification, compound quantitation, and detection limits.

MINOR PROBLEMS

Volatiles

- The following table summarizes the compounds detected as contaminants in the laboratory blanks or field quality control blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level (Soil)
Acetone*	6 ug/L	60 ug/kg
Methylene Chloride*	26 ug/L	260 ug/kg

* - Indicates compound was detected at a maximum level in a field QC blank.

Samples affected: The soil action levels apply to all soil environmental samples. No aqueous action level applies because there were no aqueous environmental samples.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size, percent solids, and dilution factors. Positive results for acetone and methylene chloride in soil samples at concentrations less than their associated blank action levels were qualified as false positives attributable to blank contamination, (B).

Three volatile fraction IS areas were below the 50% lower QC limit in sample WOD-SS-131. This sample was reanalyzed and performance was improved, so all results were reported from the rerun. In the reanalysis the first two IS recoveries were acceptable and the third IS exhibited improved performance but still below the lower QC limit. Detection limits for compounds associated with the third IS were qualified estimated, (UJ), in this sample.

The volatile fraction reanalysis of sample WOD-SS-131 displayed a percent recovery for one surrogate compound that slightly exceeded the upper QC limit. Positive results for volatile fraction compounds in sample WOD-SS-131 were qualified estimated, (J).

Two volatile fraction IS areas were below the 50% lower QC limit in samples WOD-SS-132 and WOD-SS-133. In the reanalysis of each sample, two IS recoveries were acceptable and the third IS exhibited improved performance but still below the lower QC limit. Detection limits for compounds associated with the third IS were qualified estimated, (UJ), in the two samples.

The volatile fraction initial analysis and reanalysis of sample WOD-SS-132 displayed a percent recovery for one surrogate compound that slightly exceeded the upper QC limit. Positive results for volatile fraction compounds in sample WOD-SS-132 were qualified estimated, (J).

The volatile fraction third IS area was below the 50% lower QC limit in samples WOD-SS-129, WOD-SS-130, WOD-SS-136, WOD-SS-137, WOD-SS-138, and WOD-SS-DUP09. No reanalyses of these samples were performed. Detection limits for compounds associated with the third IS were qualified estimated, (UJ), in these samples.

The volatile fraction aqueous LCS percent recovery was less than the lower QC limit for 1,2-dibromo-3-chloropropane. Associated aqueous sample results were nondetected and were qualified estimated, (UJ).

The initial calibration percent relative standard deviation (% RSD) in the response factor for acetone exceeded the 30 percent upper control limit on instrument V6. The associated positive result for acetone in sample RB-021903 was qualified estimated, (J).

Positive results reported at concentrations less than the Contract Required Quantitation Limit (CRQL) were qualified estimated, (J).

Semivolatiles

The semivolatile fraction sixth IS area was below the 50% lower QC limit in samples WOD-SS-132, WOD-SS-133, WOD-SS-137, and WOD-SS-DUP09. No reanalyses of these samples were performed. Detection limits for compounds associated with the sixth IS were qualified estimated, (UJ), in these samples.

The semivolatile fraction soil LCS percent recoveries were less than the lower QC limits for isophorone and N-nitroso-di-n-propylamine. Associated soil sample results were nondetected and were qualified biased low, (UL).

The initial calibration % RSD in the response factor for 4-chloroaniline exceeded the 50 percent upper control limit on instrument S2. The associated results consisted of non-detected soil samples, which were qualified estimated, (UJ).

The initial calibration % RSD in the response factor for 3-nitroaniline exceeded the 50 percent upper control limit on instrument S3. The associated result consisted of a non-detected aqueous sample, which was qualified estimated, (UJ).

The continuing calibration percent difference (%D) in the response factors for hexachlorocyclopentadiene, 3-nitroaniline, and 4-nitroaniline exceeded the 50 percent upper control limit. Associated results were non-detected in soil sample WOD-SS-136 and were qualified estimated, (UJ).

Positive results reported at concentrations less than the Contract Required Quantitation Limit (CRQL) were qualified estimated, (J).

PCBs

The %D in the continuing calibration response of one peak for Aroclor-1260 exceeded the 15 percent upper control limit on both GC columns. The associated positive result in sample WOD-SS-136 and the nondetected Aroclor-1260 results in other soil samples were qualified estimated, (J/UJ), respectively.

NOTES

The volatile fraction percent recoveries were greater than the upper QC limits for 12 compounds in the MS and 9 compounds in the MSD performed on sample WOD-SS-129. In accordance with Region 3 data validation guidance, no data qualifications were made solely on the basis of matrix spike recoveries.

The volatile fraction aqueous LCS percent recoveries were above the upper QC limit for chloromethane, vinyl chloride, and chloroethane. No positive results occurred for these compounds and no data validation actions were required.

The semivolatile fraction percent recoveries were less than the lower QC limits for 2 compounds in the MS and 1 compound in the MSD performed on sample WOD-SS-129. In accordance with Region 3 data validation guidance, no data qualifications were made solely on the basis of matrix spike recoveries.

Field duplicate results exhibited acceptable precision among all positive results detected.

A potential major analytical problem was eliminated by reanalyzing the volatile fraction of sample WOD-SS-131. The initial analysis of this sample was plagued with low surrogate recoveries and was also affected by a more serious problem – false positives from instrument carryover effects illustrated by the detection of low instrument levels of heavy VOCs which were part of the matrix spike analysis performed in the previous two runs. The initial analysis results for WOD-SS-131 were discarded by the data validator and the reanalysis was reported on the data summary. Detection of carryover compounds did not occur in the reanalysis, confirming the initial judgement and preventing the need for qualification for this problem. In the first analysis, carryover effects were observed with quantitation ion areas of about one percent of the preceding run's areas for the compounds 1,2,4-trimethylbenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichlorobenzene, 1,3,5-trimethylbenzene, chlorobenzene, toluene, ethylbenzene, xylenes, styrene, isopropylbenzene, and areas in the 3 percent range for 2-hexanone (the latter compound displaying enhanced carryover potential due to water solubility).

EXECUTIVE SUMMARY

Laboratory Performance: Instrument carryover was observed for late-eluting compounds in one sample analyzed after a volatile matrix spike duplicate. Acetone was detected in a laboratory blank. One volatile compound and two semivolatile compounds exceeded initial calibration percent RSD criteria. One volatile compound and two semivolatile compounds exhibited low LCS recoveries. Three semivolatile compounds displayed continuing calibration %Ds exceeding QC limits.

Other Factors Affecting Data Quality: Methylene chloride and acetone were detected in field QC blanks. Two soil samples displayed volatile surrogate recoveries outside control limits. Nine soil samples displayed volatile fraction IS areas less than the lower QC limit and four soil samples displayed semivolatile fraction IS areas less than the lower QC limit. The %D in the continuing calibration response for Aroclor-1260 exceeded the upper QC limit. Several compounds exceeded QC limits for percent recovery in the volatile and semivolatile MS/MSD analyses.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Organic Analyses ", as amended for use within EPA Region 3 (9/94), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

NASA Wallops Island

Data Qualifiers:
B -- Positive result is considered to be an artifact of blank contamination, and should not be considered present.
J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).
U -- Value is a non-detected result as reported by the laboratory.
UJ -- Non-detected result is considered estimated due to exceedance of technical quality control criteria.

Semivolatile Organic Analysis Results
SDG B0279
CTO 848
NASA Wallops Island

Data Qualifiers:
J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).
U -- Value is a non-detected result as reported by the laboratory.
UJ -- Non-detected result is considered estimated due to exceedance of technical quality control criteria.
UL -- Non-detected result is considered biased low due to exceedance of technical quality control criteria.
NA -- No result is available/applicable for this parameter in this sample.

Support Documentation

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0279

Mitkem Project ID: B0279

March 25, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for twelve aqueous and nine soil samples that were collected on February 19, 2003, and received at Mitkem on February 20, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH and TOC. The analysis results for pH and TOC are presented in the Mitkem format with supporting raw data.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of 1,2-dichloroethane-d4 in samples WOD-SS-131RE, WOD-SS-132, WOD-SS-129MS and WOD-SS-129MSD. Matrix interference on surrogate confirmed with re-analysis of sample WOD-SS-132 with similar findings. Surrogate recoveries were within the QC limits in the initial analysis for sample WOD-SS-131

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery of chloromethane, vinyl chloride and chloroethane in V6KLCSD and low recovery of 1,2-dibromo-3-chloropropane in V6LLCS. Replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF10-GW1 for aqueous samples and on sample WOD-SS-129 for soil samples. Spike recoveries were within the QC limits with the exception of several surrogates in both the matrix spike and matrix spike duplicate for samples WFF10-GW1 and WOD-SS-129. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits with the exception of high recovery of phenol-d5 and 2-fluorophenol in method blanks, SBLK2S and SBLK3T, and lab control sample S2SLCS.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery of phenol, N-nitroso-di-n-propylamine and isophorone in S2SLCS.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF10-GW1 for aqueous samples and on sample WOD-SS-129 for soil samples. Spike recoveries were within the QC limits with the exception of several compounds in both the matrix spike and matrix spike duplicate for sample WFF10-GW1 and WOD-SS-129. Replicate RPDs were within the QC limits with the exception of 2-methylphenol and 3,3'-dichlorobenzidine for sample WFF10-GW1 and 4-nitroaniline and 3,3'-dichlorobenzidine in sample EOD-SS-129.

Sample analysis: no other unusual observation was made for the analysis.

4. Pesticides Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of low recovery of decachlorobiphenyl in one column for sample MW-53S.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF10-GW1. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

5. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WOD-SS-129 for soil samples and on sample WFF10-GW1 for aqueous samples for both total and dissolved. Spike recoveries were within the QC limits with the exception of antimony. Antimony is flagged with an "N" flag on Form 1's. A post digest spike was performed for antimony with spike recovery within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WOD-SS-129 for soil samples and on sample WFF10-GW1 for aqueous samples for both total and dissolved. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

7. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

8. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

9. TOC Analysis:

The TOC results for aqueous samples are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

The analyses for Total Organic Carbon for the soil samples were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

OVERVIEW

The sample set for the Waste Oil Dump Remedial Investigation – NASA Wallops Island, Virginia, SDG B0279 consists of nine soil environmental samples (designated WOD-SS-) and one rinsate blank (designated RB-). All samples were analyzed for TAL metals. One field duplicate pair (samples WOD-SS-133/WOD-SS-DUP09) was included in this SDG.

The samples were collected by Tetra Tech NUS on February 19, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Method 6010B, 7470A, and 7471A.

SUMMARY

All analytes with the exception of antimony, cadmium, and sodium were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, initial/continuing calibrations, laboratory and field quality control blank results, field duplicate results, matrix spikes (MS/MSD), laboratory control samples (LCS/LCSD), laboratory duplicates, interference check samples, and detection limits.

MAJOR PROBLEMS

- Cobalt, potassium, silver, sodium, thallium, vanadium, and zinc were detected in ICP analysis of the Interference Check Solution (ICS) A, which is prepared from a certified source and should not contain low level analytes other than the primary mineral interferents, aluminum, calcium, iron, and magnesium. This indicates the potential for false positive spectral interferences if there are elevated sample concentrations of the primary minerals noted above. Positive results for sodium

at concentrations less than or approximately equal to the predicted interference value relative to the sample iron concentration (based on comparing the ratio of analyte concentration to iron concentration in samples versus ICS solution A) are considered false positives and were considered rejected, but qualification was superceded by the qualifier (B) for blank contamination. For cobalt, silver, and sodium, when the observed result was greater than the expected level of interference but the concentration was not more than 10 times the expected interference, such results were qualified as biased high (K).

- Antimony, arsenic, cadmium, chromium, lead, manganese, nickel, and selenium exhibited negative concentrations with absolute value greater than the IDL in ICS solution A, which indicates the potential for negative bias to an extent that depends on the sample mineral concentrations. For antimony and cadmium, when the instrument detection limit (IDL) was less than the estimated interference magnitude for a sample, the detection limit was qualified rejected, (UR). A lesser effect of interference occurred for non-detected antimony and selenium results in cases where the detection limit was greater than the absolute value of the negative interference, but the detection limit was not more than 10 times the expected interference value. Affected non-detected results were qualified as biased low (UL) in the latter case. For positive selenium results, when the sample concentration was greater than the predicted magnitude of negative interference but the concentration was not more than 10 times the expected interference, such results were qualified as biased low (L).

MINOR PROBLEMS

- The following table summarizes the analytes detected as contaminants in the soil laboratory blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level (Soil)
Aluminum	0.94 mg/kg	4.7 mg/kg
Antimony	0.285 mg/kg	1.42 mg/kg
Barium	0.343 mg/kg	1.72 mg/kg
Iron	2.91 mg/kg	14.55 mg/kg
Magnesium	4.22 mg/kg	21.1 mg/kg
Manganese	0.07 mg/kg	0.35 mg/kg
Nickel	0.08 mg/kg	0.4 mg/kg
Potassium	27.8 mg/kg	139 mg/kg
Sodium	39.4 mg/kg	197 mg/kg
Thallium	0.175 mg/kg	0.875 mg/kg

Samples affected: The soil action levels apply to all soil environmental samples. No aqueous action levels were calculated because there were no associated aqueous environmental samples, only an aqueous rinsate blank. Field QC blanks are not appropriate to qualify from laboratory blanks during data validation. However, for quality assurance monitoring, it should be noted that concentrations of all detected analytes in the rinsate blank (magnesium and manganese) were very similar to levels found in the associated aqueous laboratory blanks.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size, percent solids, and dilution factors. Positive results for antimony, potassium, and sodium in soil samples at concentrations less than their associated blank action levels were qualified as false positives attributable to blank contamination, (B). No qualifications were required for aluminum, barium, iron, magnesium, manganese, nickel, and thallium because all soil concentrations exceeded the associated blank action levels.

- The solid sample matrix spike (MS) recoveries for antimony was less than the lower quality control (QC) limit of 75 percent. Non-detected antimony results for some samples were qualified biased low (UL) due to low matrix spike recoveries. However, data qualification for most samples was based upon more significant issues (blank qualification or rejection due to ICS interference) as noted above.
- The Relative Percent Difference (RPD) for calcium, copper, and sodium exceeded the 50 percent control limit in field duplicate samples WOD-SS-133 and WOD-SS-DUP09. Associated results were qualified estimated (J) for this reason.

NOTES

The laboratory was contacted regarding true concentrations for ICS solution A because these values were not reported on Form 4 in the data package. The laboratory stated that no detectable metals are reportedly present in the commercially-purchased ICS solution A except the primary interferent metals.

EXECUTIVE SUMMARY

Laboratory Performance: Several analytes were detected in ICS solution A that should not be detected and negative readings occurred for some metals. Data were qualified as rejected (UR/R), biased high (K), or biased low (UL/L). Several contaminants were detected in the laboratory blanks. Associated soil sample results were qualified (B) to indicate artifacts of blank contamination.

Other Factors Affecting Data Quality: Antimony exhibited a low MS recovery. Calcium, copper, and sodium exhibited field duplicate imprecision. Magnesium and manganese were detected in the field QC blank.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

APPENDIX A

Qualified Analytical Results

Qualifier Codes:

a	=	Lab Blank Contamination
b	=	Field Blank Contamination
c	=	Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d	=	MS/MSD Noncompliance
e	=	LSC/LSCD Noncompliance
f	=	Laboratory Duplicate Imprecision
g	=	Field Duplicate Imprecision
h	=	Holding Time Exceedance
i	=	ICP Serial Dilution Noncompliance
j	=	GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k	=	ICP Interference – include ICSAB %Rs
l	=	Instrument Calibration Range Exceedance
m	=	Sample Preservation
n	=	Internal Standard Noncompliance
o	=	Poor Instrument Performance (i.e. baseline drifting)
p	=	Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q	=	Other Problems (can encompass of number of issues)
r	=	Surrogates Recovery Noncompliance
s	=	Pesticide/PCB Resolution
t	=	% Breakdown Noncompliance for DDT and Endrin
u	=	Pesticide/PCB % Difference Between Columns for Positive Results
v	=	Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

DATA SUMMARY OF INORGANIC RESULTS
SDG B0279 - WOD SOIL SAMPLES
WALLOPS FLIGHT FACILITY, WALLOPS ISLAND, VIRGINIA

Data Qualifiers:
B -- Positive result is considered to be an artifact of blank contamination, and should not be considered present.
J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).
K -- Positive result is considered biased high due to exceedance of technical quality control criteria.
L -- Positive result is considered biased low due to exceedance of technical quality control criteria.
U -- Value is a non-detected result as reported by the laboratory.
UL -- Non-detected result is considered biased low due to exceedance of technical quality control criteria.
UR -- Non-detected result is considered unusable due to exceedance of technical quality control criteria.

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for twelve aqueous and nine soil samples that were collected on February 19, 2003, and received at Mitkem on February 20, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH and TOC. The analysis results for pH and TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

4. Pesticides Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of low recovery of decachlorobiphenyl in one column for sample MW-53S.

Lab control sample: spike recoveries were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WFF10-GW1. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

5. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WOD-SS-129 for soil samples and on sample WFF10-GW1 for aqueous samples for both total and dissolved. Spike recoveries were within the QC limits with the exception of antimony. Antimony is flagged with an "N" flag on Form 1's. A post digest spike was performed for antimony with spike recovery within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WOD-SS-129 for soil samples and on sample WFF10-GW1 for aqueous samples for both total and dissolved. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

7. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

8. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

9. TOC Analysis:

The TOC results for aqueous samples are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

The analyses for Total Organic Carbon for the soil samples were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Agnes Ng

NOTES

1 - When both results are > or = 5xCRQL/MDL, the acceptance limit is the relative percent difference must be < or = 30% for aqueous and air samples and must be < 50% for solid samples.

2 - When at least one of the results is < 5x CRQL/MDL, the acceptance limit is the difference between the results must be < or = 2xCRQL/MDL for aqueous and air samples and < or = 4xCRQL/MDL for solid samples.

Q - The qualifier is entered to indicate if the anlayte was not detected or qualitatively questionable in the sample.

U - the compound was not detected in the sample at or above the associated numerical value.

NC - The RPD was not calculated because one of the results was not detected; the acceptance limit used is the difference between the results must be < or = 2xCRQL/MDL for aqueous and air samples and < or = 4xCRQL/MDL for solid samples.

J - The positive results should be considered estimated.

B - The result should be considered non-detected or qualitatively questionable due to blank contamination.

IN - The results are acceptable.

COMMENTS

Qualify Ca, Cu, and Na results as estimated (J).

OVERVIEW

The sample set for the Waste Oil Dump Remedial Investigation – NASA Wallops Island, Virginia, SDG B0279 consists of nine soil environmental samples (designated WOD-SS-) and one rinsate blank (designated RB-). All soil samples were analyzed for pH and Grain Size. The rinsate blank was analyzed for Total Organic Carbon (TOC). One field duplicate pair (samples WOD-SS-133/WOD-SS-DUP09) was included in this SDG.

The samples were collected by Tetra Tech NUS on February 19, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Method 9045C for pH, EPA Method 415.1 for TOC, and ASTM Method D422 for Grain Size.

SUMMARY

All parameters were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, laboratory duplicate precision, field duplicate precision, logbook documentation, and calculations.

NOTES

The Relative Percent Difference (RPD) for all field duplicate results were within the quality control limit of 50%.

EXECUTIVE SUMMARY

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

SUBJECT: ORGANIC DATA REVIEW – VOCS, SVOCS, AND PCBS
WASTE OIL DUMP – NASA WALLOPS ISLAND, VIRGINIA
SDG B0301

SAMPLES:

5/Solid/

WOD-SS-126	WOD-SS-DUP10
WOD-SS-127	WOD-SS-139
WOD-SS-128	

3/Aqueous

FB-022103	TB-022003
RB-022103	

OVERVIEW

The sample set for the Waste Oil Dump – NASA Wallops Island, Virginia, SDG B0301, consists of 5 solid environmental samples (designated WOD-SS-), one field blank (designated FB-), one rinsate blank (designated RB-), and one trip blank (designated TB-). The trip blank was analyzed for target compound list (TCL) volatiles and all other samples were analyzed for TCL volatiles, semivolatiles, and polychlorinated biphenyls (PCBs). One field duplicate pair (samples WOD-SS-128/WOD-SS-DUP10) was included in this SDG.

The samples were collected by Tetra Tech NUS on February 20 and 21, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Methods 8260B for volatiles, 8270C for semivolatiles, and 8082 for PCBs.

SUMMARY

All compounds were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until extraction and analysis, GC/MS instrument tuning, GC chromatographic performance tests, initial/continuing calibrations, laboratory and field quality control (QC) blank results, surrogate spike recoveries, Internal Standard (IS) areas, Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries, Laboratory Control Spike/Laboratory Control Spike Duplicate (LCS/LCSD) recoveries, field duplicate results, compound identification, compound quantitation, and detection limits.

MINOR PROBLEMS

VOLATILE FRACTION

- The following table summarizes the compounds detected as contaminants in the laboratory blanks or field QC blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level (Soil)
Acetone*	10 ug/L	100 ug/kg
Methylene Chloride*	14 ug/L	140 ug/kg

* - Indicates compound was detected at a maximum level in a field QC blank.

Samples affected: The soil action levels apply to all soil environmental samples.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size, percent solids, and dilution factors. Positive results for acetone and methylene chloride in soil samples at concentrations less than their associated blank action levels were qualified as false positives attributable to blank contamination, (B).

- The initial calibration percent relative standard deviation (%RSD) for acetone exceeded the QC limit of 30%. The associated aqueous positive results for acetone were qualified as estimated (J).
- The continuing calibration percent difference (%D) for methylene chloride exceeded the QC limit of 25%. The associated aqueous positive results for methylene chloride were qualified as estimated (J).

SEMIVOLATILE FRACTION

- The initial calibration percent relative standard deviation (%RSD) for benzaldehyde exceeded the QC limit of 30%. The associated detected results for benzaldehyde were qualified as estimated (J).
- The initial calibration percent relative standard deviation (%RSD) for 3-nitroaniline exceeded the QC limit of 50%. The associated non-detected results for 3-nitroaniline were qualified as estimated (UJ).
- The continuing calibration percent difference (%D) for 3,3-dichlorobenzidine exceeded the QC limit of 50%. The associated non-detected aqueous results for 3,3-dichlorobenzidine were qualified as estimated (UJ).
- The continuing calibration percent difference (%D) for hexachlorocyclopentadiene, 4-nitroaniline, and benzaldehyde exceeded the QC limit of 50%. The associated detected and non-detected results for samples WOD-SS-127 and WOD-SS-DUP10 were qualified as estimated (J/UJ).
- Positive results reported at concentrations less than the Contract Required Quantitation Limit (CRQL) were qualified estimated, (J).

NOTES

The percent recoveries for volatile compounds were less than the lower QC limits for 3 compounds in the MS and 3 compounds in the MSD performed on sample WOD-SS-126. The percent recoveries for volatile compounds exceeded the upper QC limits for 4 compounds in the MS and 5 compounds in the

MSD performed on sample WOD-SS-126. In accordance with Region 3 data validation guidance, no data qualifications were made solely on the basis of matrix spike recoveries.

Samples WOD-SS-126 and WOD-SS-127 were reported from the low level analyses with target compound acetone reported from the medium level analysis. Acetone was outside the calibration range of the instrument in the original analyses. Acetone was was qualified (B) due to blank contamination.

Two analyses were run for sample WOD-SS-128. The original analysis was reported on the data summary. The reanalysis results for WOD-SS-128 were discarded by the data validator. In the reanalysis, carryover effects were observed with quantitation ion areas of about one percent of the preceding run's areas for several compounds. The original analysis results were comparable with the field duplicate sample (WOD-SS-DUP10) results.

The aqueous semivolatile fraction LCSD percent recoveries exceeded the upper QC limits for isophorone, 3-nitroaniline, 4-nitroaniline, N-nitrosodiphenylamine, and 3,3'-dichlorobenzidine. No action was taken because there were no positive results for these compounds.

The soil semivolatile fraction LCS percent recoveries exceeded the upper QC limits for 2,2'-oxybis(1-chloropropane), N-nitrosodiphenylamine, and carbazole. No action was taken because there were no positive results for these compounds.

The percent recoveries for semivolatile compounds were less than the lower QC limits for 38 compounds in the MS and 24 compounds in the MSD performed on sample WOD-SS-126. The relative percent difference (RPD) exceeded the QC limit of 40% for two compounds. In accordance with Region 3 data validation guidance, no data qualifications were made solely on the basis of matrix spike recoveries.

Field duplicate results exhibited acceptable precision among all positive results detected in the field duplicate pair.

No other problems were noted during data review.

EXECUTIVE SUMMARY

Laboratory Performance: Methylene chloride was detected in the laboratory blanks. One compound exceeded the initial calibration QC criteria in the volatile fraction. Two compounds exceeded the continuing calibration QC criteria in the volatile fraction. Two compounds exceeded the initial calibration QC criteria in the semivolatile fraction. Four compounds exceeded the continuing calibration QC criteria in the semivolatile fraction. Three compounds exceeded QC limits in the LCS for the semivolatile fraction.

Other Factors Affecting Data Quality: Acetone and methylene chloride were detected at maximum concentrations in the field QC blanks. Percent recoveries for several compounds were outside the QC limits in the MS/MSD samples for the volatile fraction. Percent recoveries for several compounds were outside QC limits in the MS/MSD samples for the semivolatile fraction.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

DATA SUMMARY OF VOLATILE ORGANIC COMPOUND RESULTS
SDG B0301 - SOIL AND AQUEOUS SAMPLES
WALLOPS FLIGHT FACILITY, WALLOPS ISLAND, VIRGINIA

Data Qualifiers:
B -- Positive result is considered to be an artifact of blank contamination, and should not be considered present.
J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).
U -- Value is a non-detected result as reported by the laboratory.

DATA SUMMARY OF SEMIVOLATILE ORGANIC COMPOUND RESULTS
SDG B0301 - SOIL SAMPLES
WALLOPS FLIGHT FACILITY, WALLOPS ISLAND, VIRGINIA

Data Qualifiers:
J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).
U -- Value is a non-detected result as reported by the laboratory.
UJ -- Non-detected result is considered estimated due to exceedance of technical quality control criteria.
NA -- No result is available/applicable for this parameter in this sample.

Qualifier Codes:

a	=	Lab Blank Contamination
b	=	Field Blank Contamination
c	=	Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d	=	MS/MSD Noncompliance
e	=	LSC/LSCD Noncompliance
f	=	Laboratory Duplicate Imprecision
g	=	Field Duplicate Imprecision
h	=	Holding Time Exceedance
i	=	ICP Serial Dilution Noncompliance
j	=	GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k	=	ICP Interference – include ICSAB %Rs
l	=	Instrument Calibration Range Exceedance
m	=	Sample Preservation
n	=	Internal Standard Noncompliance
o	=	Poor Instrument Performance (i.e. baseline drifting)
p	=	Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q	=	Other Problems (can encompass of number of issues)
r	=	Surrogates Recovery Noncompliance
s	=	Pesticide/PCB Resolution
t	=	% Breakdown Noncompliance for DDT and Endrin
u	=	Pesticide/PCB % Difference Between Columns for Positive Results
v	=	Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for thirteen aqueous and five soil samples that were collected on February 20, 2003, and received at Mitkem on February 21, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH and TOC. The analysis results for pH and TOC are presented in the Mitkem format with supporting raw data.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-126. Spike recoveries were within the QC limits with the exception of several surrogates in both the matrix spike and matrix spike. Replicate RPDs were within the QC limits with the exception of methylene chloride.

Sample analysis: due to high concentration of target analytes, samples WOD-SS-126 and WOD-SS-127 were analyzed using medium level analysis. The matrix spike and matrix spike duplicate for WOD-SS-126 was analyzed using low-level analysis. No other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery isophorone, 3-nitroaniline, 4-nitroaniline, N-nitrosodiphenylamine and 3,3'-dichlorobenzidine in S3RLCSD and high recovery of 2,2'-oxybis (1-chloroproane), N-nitrosdiphenylamine and carbazole in S3SLCS. Replicate RPDs were within the QC limits with the exception of 2,4-dinitrophenol.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-126. Spike recoveries were within the QC limits with the exception of low recovery of several compounds in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits with the exception 4-nitroaniline and fluoranthene.

Sample analysis: no other unusual observation was made for the analysis.

4. Pesticides Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of low recovery of decachlorobiphenyl in both columns for samples MW3R and WFF9-GW1.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

5. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-126. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WOD-SS-126. Spike recoveries were within the QC limits with the exception of antimony. Antimony is flagged with an "N" flag on Form 1's of associated samples. A post digest spike was performed for antimony with spike recovery within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WOD-SS-126. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

7. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

8. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

9. TOC Analysis:

The TOC results for aqueous samples are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

The analyses for Total Organic Carbon for the soil samples were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

RB-022103

OVERVIEW

The sample set for the Waste Oil Dump Remedial Investigation – NASA Wallops Island, Virginia, SDG B0301 consists of five soil environmental samples (designated WOD-SS-), field blank (designated FB-), and one rinsate blank (designated RB-). All samples were analyzed for TAL metals. One field duplicate pair (samples WOD-SS-128/WOD-SS-DUP10) was included in this SDG.

The samples were collected by Tetra Tech NUS on February 21, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Method 6010B, 7470A, and 7471A.

SUMMARY

All analytes, with the exception of antimony, cadmium, and silver, were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, holding times until analysis, initial/continuing calibrations, laboratory and field quality control blank results, field duplicate results, compound identification, compound quantitation, and detection limits.

MAJOR PROBLEMS

- Cobalt, lead, nickel, potassium, silver, sodium, and thallium were detected in ICP analysis of the Interference Check Solution (ICS) A, which is prepared from a certified source and should not contain low level analytes other than the primary mineral interferents, aluminum, calcium, iron, and magnesium. This indicates the potential for false positive spectral interferences if there are

elevated sample concentrations of the primary minerals noted above. Positive results for silver at concentrations less than or approximately equal to the predicted interference value relative to the sample iron concentration (based on comparing the ratio of analyte concentration to iron concentration in samples versus ICS solution A) are considered false positives and were qualified rejected, (R). For sodium, when the observed result was greater than the expected level of interference but the concentration was not more than 10 times the expected interference, such results were qualified as biased high (K).

- Antimony, barium, cadmium, chromium, manganese, and vanadium exhibited negative concentrations with absolute value greater than the IDL in ICS solution A, which indicates the potential for negative bias to an extent that depends on the sample mineral concentrations. For antimony and cadmium, when the instrument detection limit (IDL) was less than the estimated interference magnitude for a sample, the detection limit was qualified rejected, (UR). A lesser effect of interference occurred for non-detected cadmium results in cases where the detection limit was greater than the absolute value of the negative interference, but the detection limit was not more than 10 times the expected interference value. Affected non-detected results were qualified as biased low (UL) in the latter case. For positive cadmium results, when the sample concentration was greater than the predicted magnitude of negative interference but the concentration was not more than 10 times the expected interference, such results were qualified as biased low (L).

MINOR PROBLEMS

- The Relative Percent Difference (RPD) for manganese exceeded the 50 percent control limit in field duplicate samples WOD-SS-128 and WOD-SS-DUP10. Associated results were qualified estimated (J) for this reason.
- The field duplicate absolute value of the difference for mercury exceeded the 4X CRDL control limit in field duplicate samples WOD-SS-128 and WOD-SS-DUP10. Associated results were qualified estimated (J) for this reason.

NOTES

The following table summarizes the analytes detected as contaminants in the soil laboratory blanks at the maximum concentrations indicated:

Analyte	Maximum Concentration	Action Level (Soil)
Aluminum	2.96 mg/kg	14.8 mg/kg
Iron	1.51 mg/kg	7.55 mg/kg
Magnesium	4.15 mg/kg	20.75 mg/kg
Manganese	0.066 mg/kg	0.33 mg/kg
Potassium	4.18 mg/kg	20.9 mg/kg
Zinc	0.44 mg/kg	2.2 mg/kg

Samples affected: The soil action levels apply to all soil environmental samples. No aqueous action levels were calculated because there were no associated aqueous environmental samples, only an

aqueous field and rinsate blank. Field QC blanks are not appropriate to qualify from laboratory blanks during data validation.

In applying the blank action levels to individual samples, adjustments were made for the sample's aliquot size, percent solids, and dilution factors. No qualifications were required because all soil concentrations exceeded the associated blank action levels.

The solid sample matrix spike (MS) recoveries for antimony was less than the lower quality control (QC) limit of 75 percent. No action was taken because data qualification for all soil samples was based upon a more significant issue (ICP Interference) as noted above.

No contaminants were detected in the field QC blanks.

The laboratory was contacted regarding true concentrations for ICS solution A because these values were not reported on Form 4 in the data package. The laboratory stated that no detectable metals are reportedly present in the commercially-purchased ICS solution A except the primary interferent metals.

EXECUTIVE SUMMARY

Laboratory Performance: Several analytes were detected in ICS solution A that should not be detected and negative readings occurred for some metals. Data were qualified as rejected (UR/R), biased high (K), or biased low (UL/L). Several contaminants were detected in the laboratory blanks. ICS Form IV did not indicate whether solution A true values were non-detected versus not analyzed.

Other Factors Affecting Data Quality: Antimony exhibited a low MS recovery. Manganese and mercury exhibited field duplicate imprecision.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

DATA SUMMARY OF INORGANIC RESULTS
SDG B0301 - SOIL SAMPLES
WALLOPS FLIGHT FACILITY, WALLOPS ISLAND, VIRGINIA

Data Qualifiers:
J -- Value is considered estimated due to exceedance of technical quality control criteria or because result is less than the Contract Required Quantitation Limit (CRQL).
K -- Positive result is considered biased high due to exceedance of technical quality control criteria.
L -- Positive result is considered biased low due to exceedance of technical quality control criteria.
R -- Positive result is considered unusable due to exceedance of technical quality control criteria.
U -- Value is a non-detected result as reported by the laboratory.
UL -- Non-detected result is considered biased low due to exceedance of technical quality control criteria.
UR -- Non-detected result is considered unusable due to exceedance of technical quality control criteria.

Database source file: S:\RITCHIEM\WALLOPS ISLAND\BACKGROUND STUDY\WATER VALIDATION\B0301\M_B0301.DBF data retrieved on: 04/02/03

Qualifier Codes:

a	=	Lab Blank Contamination
b	=	Field Blank Contamination
c	=	Calibration (i.e., %RSDs, %Ds, ICVs, CCVs, RPDs, RRFs, etc.) Noncompliance
d	=	MS/MSD Noncompliance
e	=	LSC/LSCD Noncompliance
f	=	Laboratory Duplicate Imprecision
g	=	Field Duplicate Imprecision
h	=	Holding Time Exceedance
i	=	ICP Serial Dilution Noncompliance
j	=	GFAA PDS – GFAA MSA's r<0.995 (correlation coefficient)
k	=	ICP Interference – include ICSAB %Rs
l	=	Instrument Calibration Range Exceedance
m	=	Sample Preservation
n	=	Internal Standard Noncompliance
o	=	Poor Instrument Performance (i.e. baseline drifting)
p	=	Uncertainty Near Detection Limit (<2 x IDL for inorganics and < CRQL for organics)
q	=	Other Problems (can encompass of number of issues)
r	=	Surrogates Recovery Noncompliance
s	=	Pesticide/PCB Resolution
t	=	% Breakdown Noncompliance for DDT and Endrin
u	=	Pesticide/PCB % Difference Between Columns for Positive Results
v	=	Non-linear Calibrations, Tuning r <0.995 (correlation coefficient)

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for thirteen aqueous and five soil samples that were collected on February 20, 2003, and received at Mitkem on February 21, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH and TOC. The analysis results for pH and TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-126. Spike recoveries were within the QC limits with the exception of several surrogates in both the matrix spike and matrix spike. Replicate RPDs were within the QC limits with the exception of methylene chloride.

Sample analysis: due to high concentration of target analytes, samples WOD-SS-126 and WOD-SS-127 were analyzed using medium level analysis. The matrix spike and matrix spike duplicate for WOD-SS-126 was analyzed using low-level analysis. No other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery isophorone, 3-nitroaniline, 4-nitroaniline, N-nitrosodiphenylamine and 3,3'-dichlorobenzidine in S3RLCSD and high recovery of 2,2'-oxybis (1-chloroproane), N-nitrosdiphenylamine and carbazole in S3SLCS. Replicate RPDs were within the QC limits with the exception of 2,4-dinitrophenol.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-126. Spike recoveries were within the QC limits with the exception of low recovery of several compounds in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits with the exception 4-nitroaniline and fluoranthene.

Sample analysis: no other unusual observation was made for the analysis.

4. Pesticides Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of low recovery of decachlorobiphenyl in both columns for samples MW3R and WFF9-GW1.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

5. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-126. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WOD-SS-126. Spike recoveries were within the QC limits with the exception of antimony. Antimony is flagged with an "N" flag on Form 1's of associated samples. A post digest spike was performed for antimony with spike recovery within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WOD-SS-126. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

7. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

8. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

9. TOC Analysis:

The TOC results for aqueous samples are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

The analyses for Total Organic Carbon for the soil samples were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Zinc	16.6		15.6		6.2	0.67	1, IN

NOTES

1 - When both results are > or = 5xCRQL/MDL, the acceptance limit is the relative percent difference must be < or = 30% for aqueous and air samples and must be < 50% for solid samples.

2 - When at least one of the results is < 5x CRQL/MDL, the acceptance limit is the difference between the results must be < or = 2xCRQL/MDL for aqueous and air samples and < or = 4xCRQL/MDL for solid samples.

Q - The qualifier is entered to indicate if the anlayte was not detected or qualitatively questionable in the sample.

U - the compound was not detected in the sample at or above the associated numerical value.

NC - The RPD was not calculated because one of the results was not detected; the acceptance limit used is the difference between the results must be < or = 2xCRQL/MDL for aqueous and air samples and < or = 4xCRQL/MDL for solid samples.

J - The positive results should be considered estimated.

B - The result should be considered non-detected or qualitatively questionable due to blank contamination.

IN - The results are acceptable.

COMMENTS

Mn and Hg results qualified as estimated (J).

SUBJECT: WET CHEMISTRY DATA REVIEW – PH, TOC, and GRAIN SIZE
WASTE OIL DUMP – NASA WALLOPS ISLAND, VIRGINIA
SDG B0301

SAMPLES: **5/Solid/**

WOD-SS-126
WOD-SS-127
WOD-SS-128
WOD-SS-DUP10
WOD-SS-139

1/Aqueous/

FB-022103
RB-022103

OVERVIEW

The sample set for the Waste Oil Dump Remedial Investigation – NASA Wallops Island, Virginia, SDG B0301 consists of five soil environmental samples (designated WOD-SS-), one field blank (designated FB-), and one rinsate blank (designated RB-). All soil samples were analyzed for pH and Grain Size. The rinsate blank was analyzed for Total Organic Carbon (TOC). One field duplicate pair (samples WOD-SS-128/WOD-SS-DUP10) was included in this SDG.

The samples were collected by Tetra Tech NUS on February 21, 2003 and analyzed by Mitkem Corporation laboratory of Warwick, Rhode Island.

All analyses were conducted using EPA SW-846 Method 9045C for pH, EPA Method 415.1 for TOC, and ASTM Method D422 for Grain Size.

SUMMARY

All parameters were successfully analyzed in all samples. The findings offered in this report are based upon a general review of all available data including data completeness, laboratory duplicate precision, field duplicate precision, logbook documentation, and calculations.

NOTES

The Relative Percent Difference (RPD) for all field duplicate results were within the quality control limit of 50%.

EXECUTIVE SUMMARY

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed to evaluate usability with reference to the EPA "Functional Guidelines for Evaluating Inorganic Analyses ", as amended for use within EPA Region 3 (4/93), and the NFESC document entitled "Navy IRCDQM" (9/99).

The text of this report has been formatted to address only those problem areas affecting data quality.

"I attest that the data referenced herein were reviewed according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for thirteen aqueous and five soil samples that were collected on February 20, 2003, and received at Mitkem on February 21, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH and TOC. The analysis results for pH and TOC are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-126. Spike recoveries were within the QC limits with the exception of several surrogates in both the matrix spike and matrix spike. Replicate RPDs were within the QC limits with the exception of methylene chloride.

Sample analysis: due to high concentration of target analytes, samples WOD-SS-126 and WOD-SS-127 were analyzed using medium level analysis. The matrix spike and matrix spike duplicate for WOD-SS-126 was analyzed using low-level analysis. No other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries were within the QC limits with the exception of high recovery isophorone, 3-nitroaniline, 4-nitroaniline, N-nitrosodiphenylamine and 3,3'-dichlorobenzidine in S3RLCSD and high recovery of 2,2'-oxybis (1-chloroproane), N-nitrosdiphenylamine and carbazole in S3SLCS. Replicate RPDs were within the QC limits with the exception of 2,4-dinitrophenol.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-126. Spike recoveries were within the QC limits with the exception of low recovery of several compounds in both the matrix spike and matrix spike duplicate. Replicate RPDs were within the QC limits with the exception 4-nitroaniline and fluoranthene.

Sample analysis: no other unusual observation was made for the analysis.

4. Pesticides Analysis:

Surrogate recovery: recoveries were within the QC limits with the exception of low recovery of decachlorobiphenyl in both columns for samples MW3R and WFF9-GW1.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

5. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Matrix spike/matrix spike duplicate: duplicate matrix spikes were performed on sample WOD-SS-126. Spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

6. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Matrix spike: matrix spike was performed on sample WOD-SS-126. Spike recoveries were within the QC limits with the exception of antimony. Antimony is flagged with an "N" flag on Form 1's of associated samples. A post digest spike was performed for antimony with spike recovery within QC limits.

Matrix duplicate: matrix duplicate was performed on sample WOD-SS-126. Replicate RPDs were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

7. pH Analysis:

Sample analysis: no unusual observation was made for the analysis.

8. Grain size Analysis:

Grain size analysis was performed by sub-contract laboratory RI Analytical Laboratories of Warwick, RI. The RIAL report is included following the blue section divider after the metals section of the data report.

9. TOC Analysis:

The TOC results for aqueous samples are included following the blue section divider after the metals section of the data report.

Lab control sample: spike recovery was within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

The analyses for Total Organic Carbon for the soil samples were subcontracted to STL Burlington of Colchester, VT. The TOC results are not available at this time, but will be submitted as a separate addendum to this report when received from STL Burlington.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Tetra Tech NUS **INTERNAL CORRESPONDENCE**

TO:	**G. GLENN**	**DATE:**	**MAY 21, 2003**
FROM:	**BERNARD F SPADA III**	**COPIES:**	**DV FILE**
SUBJECT:	**ORGANIC DATA VALIDATION- VOC/SVOC/PCB CTO 848, NASA WALLOPS ISLAND SDG B0320**		
SAMPLES:	1/Aqueous TB-022503* 1/Soil WOD-SU-127-0203		

Overview

The sample set for CTO 848 NASA Wallops Island, SDG B0320 consists of one (1) trip blank, and one (1) environmental soil sample. The environmental sample was analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), and polychlorinated biphenyls (PCB). The trip blank denoted with an asterisk (*) was analyzed for VOC only.

The samples were collected by Tetra Tech NUS on February 25, 2003 and analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, and 8082 analytical and reporting protocols.

All samples were successfully analyzed. The findings offered in this report are based upon a general review of all available data including: data completeness, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation and detection limits. Areas of concern are listed below.

Major

- None.

Minor

- Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated (J).
- The aqueous volatile continuing calibration performed on the "V2" instrument on March 4 at 09:44 exceeded the 25% (but was <50%) difference quality control criteria for 4-methyl-2-pentanone, 2-hexanone, and methylene chloride. The positive result for methylene chloride in the trip blank was qualified as estimated (J). No qualifications were made to the remaining aforementioned compounds because they were non-detected.

- The semivolatile initial calibration performed on March 12 exceeded the 30% (and was >50%) relative percent difference (RPD) quality control criteria for 3-nitroaniline. The result for 3-nitroaniline in sample WOD-SU-127-0203 was qualified as estimated (UJ).

- The semivolatile continuing calibration performed on March 15 at 00:31 exceeded the 25% (and was >50%) percent difference quality control criteria for benzaldehyde. The result for benzaldehyde in sample WOD-SU-127-0203 was qualified as estimated (UJ).

- The following compound was detected in the trip blank:

Compound	Maximum Concentration	Blank Action Level
Methylene chloride	2.0 ug/kg	20 ug/kg

Sample aliquot, percent solids, and dilution factors were taken into consideration when applying the blank action levels. Positive results for methylene chloride below the blank action level were qualified as non-detected (B). The trip blank was not qualified for method blank contamination.

Notes

There were several inconsistencies between the compound lists in the statement of work (SOW) and the results submitted by the laboratory. No action was taken on this basis because the project office approved the variance from the SOW.

The aqueous volatile initial calibration performed on the "V2" instrument on February 26 exceeded the 30% (but was <50%) RPD quality control criteria for acetone. No qualifications were made on this basis because the result for acetone was non-detected in the aqueous sample.

The soil volatile continuing calibration performed on the "V5" instrument on March 4 at 13:48 exceeded the 30% (but was <50%) percent difference quality control criteria for 1,2,4-trichlorobenzene. No qualifications were made on this basis because the result for 1,2,4-trichlorobenzene was non-detected in the soil sample.

The semivolatile initial calibration performed on March 12 exceeded the 30% (but was <50%) RPD quality control criteria for 4-chloroaniline, carbazole, and benzaldehyde. No qualifications were made on this basis because all results for the aforementioned compounds were non-detected.

The semivolatile continuing calibration performed on March 15 at 00:31 exceeded the 25% (but was <50%) percent difference quality control criteria for 4-chloroaniline, hexachlorocyclopentadiene, and atrazine. No qualifications were made on this basis because all results for the aforementioned compounds were non-detected.

The semivolatile continuing calibration performed on March 15 at 16:32 exceeded the 25% (but was <50%) difference quality control criteria for 2,2'-oxybis(1-chloropropane), 4-chloroaniline, carbazole, 3,3'-dichlorobenzidine, and atrazine (and was >50%) for hexachlorocyclopentadiene, benzaldehyde, 3-nitroaniline, and 4-nitroaniline. No qualifications were made on this basis because no environmental samples were quantitated using this calibration.

The recoveries of 2,2'-oxybis(1-chloropropane), N-nitrosodiphenylamine, and carbazole exceeded the percent recovery quality control criteria in the semivolatile blank spike. No qualifications were made on this basis because all results for the aforementioned compounds were non-detected.

Executive Summary

Laboratory Performance: Qualifications were made based on calibration non-compliances.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to U.S. EPA National Functional Guidelines for Data Validation as modified by EPA Region III (9/94) and the NFESC guidelines entitled Navy IRCDQM (Sept. 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Attachments:

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Spada, Bernie

From: Samchuck, Joseph
Sent: Thursday, May 08, 2003 1:19 PM
To: Sedlmyer, Ed; Schloer, Doug; Spada, Bernie; Staffen, Seth
Subject: FW: NASA, Wallops Is. organic data validation for CTO 848.

Note from Russ.

In his final paragraph, he stated that they are not concerned over "missing SVOCs". It seems as though a mistake was made when translating the project requirements.

In the second to the last paragraph, he means bromochloromethane.

Bottom line: Review data as received from the laboratory and in a general manner, note the difference between what was reported by the lab and what was requested in the SOW. No need to specifically list compounds. State that the project office was contacted and that they approved the variance from the SOW.

Thanks.

Subject: RE: NASA, Wallops Is. organic data validation for CTO 848.

As we discussed on the phone, I looked up the issues regarding TCL analytes in the work plan and QAP. I did not find any phone notes from 2 months ago when Garth and I had a conference call with MITKEM regarding SVOC TCL analyte lists.

Regarding the overlap between VOCs and SVOCs, proceed as we discussed over the phone and retain all reported Form I analytes in each respective validation report. The dichlorobenzenes and trichlorbenzene will be sorted out for risk assessment here in King of Prussia after we have assimilated the entire database. There are different fraction fields in the database so the results won't be confused. We will evaluate the best data to retain for risk assessment here at that time. While the lower detection limit data in theory should be better, I have seen exceptions in the past where there were detections in the SVOC fraction but not VOC fraction and in such cases it would be presumed that the matrix of the sample affected purge efficiency for the heaviest VOCs.

Regarding bromochlorobenzene, I verified there is no mention of this compound as a historically detected contaminant at Wallops Island sites of interest. Do not ask the lab to provide additional data or make analysis and reporting changes for this compound.

Regarding 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum being requested for soil analysis but instead reported based on a TIC search, it is not necessary to have the laboratory add these compounds to the TCL list at this late date in the project because there are no historical detections of these compounds identified in the work plan or QAPP. The reason that the SVOC TCL list was different for soil and water is a consequence of the template used for this table from another project. Garth indicated that he wants the data to be validated as received and reported by the laboratory because this is not a major issue. However, the laboratory should not be listing any compound on the TCL Form I target compound section if it is not in any standards run so if uncalibrated compounds were reported on Form Is then these compounds should be deleted or rejected.

Joe,

Regarding the subject data validation assignment, I've encountered some disparity between what is being reported by Mitkem and what was actually requested in the statement of work. This may be useful information for making some sort of global request to the lab.

For the aqueous samples:

The lab failed to report the VOC: bromochloromethane (Seth had already alerted me to this).
The lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.
The lab reported a total of 9 compounds (VOC and SVOC) in addition to the requested analytes.

For the soil samples:

The lab failed to report the SVOCs: 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum. Interestingly, the case narrative acknowledges this oversight and explains that the presence of these particular compounds will be determined via TIC library search. Do you know if this approach ok with the PM? BTW- I didn't find these compounds in the SVOC calibration summaries or quan reports.

Again, the lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs in soils and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.

Only xylene isomers were reported but not requested for the soil samples in my SDG.

Seth, Bernie and Ed; I imagine you guys are making the bulk of the requests from the lab, so if there is something else that I have missed that I should be looking out for please let me know.

Subject: RE: NASA, Wallops Is. organic data validation for CTO 848.

Russ Sloboda is checking the compound lists for us. As for the Chlorobromomethane, it is not needed.

Also, Russ asked that we not remove any compounds that are in both fractions such as the dichlorobenzenes. He can sort out the compounds using the fraction. So don't delete any compounds. If you have already do this, let me know the SDG and fraction so that I can unsubmit the data and you can make the changes and reprint forms.

Subject: NASA, Wallops Is. organic data validation for CTO 848.

Joe,

Regarding the subject data validation assignment, I've encountered some disparity between what is being reported by Mitkem and what was actually requested in the statement of work. This may be useful information for making some sort of global request to the lab.

For the aqueous samples:

The lab failed to report the VOC: bromochloromethane (Seth had already alerted me to this).
The lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.
The lab reported a total of 9 compounds (VOC and SVOC) in addition to the requested analytes.

For the soil samples:

The lab failed to report the SVOCs: 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum. Interestingly, the case narrative acknowledges this oversight and explains that the presence of these particular compounds will be determined via TIC library search. Do you know if this approach ok with the PM? BTW- I didn't find these compounds in the SVOC calibration summaries or quan reports.

Again, the lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs in soils and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.

Only xylene isomers were reported but not requested for the soil samples in my SDG.

Seth, Bernie and Ed; I imagine you guys are making the bulk of the requests from the lab, so if there is something else that I have missed that I should be looking out for please let me know.

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0320

Mitkem Project ID: B0320

March 24, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for one aqueous and one soil samples that were collected on February 25, 2003, and received at Mitkem on February 26, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussions with the client. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable.

.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery of 2,2'-oxybis (1-chloropropane), N-nitrosodiphenylamine and carbazole.

Sample analysis: no other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Agnes Ng

Tetra Tech NUS **INTERNAL CORRESPONDENCE**

TO: **G. GLENN** **DATE:** **MAY 7, 2003**

FROM: **ETHAN G. LEE** **COPIES:** **DV FILE**

SUBJECT: **INORGANIC DATA VALIDATION - TAL METALS**
CTO-848 NASA WALLOPS ISLAND
SAMPLE DELIVERY GROUP (SDG) – B0320

SAMPLES: 1/SOIL/

WOD-SU-127-0203

Overview

The sample set for CTO 848, NASA Wallops Island, SDG B0320, consists of one (1) soil environmental sample.

The sample was analyzed for target analyte list (TAL) metals. The sample was collected by Tetra Tech NUS February 25, 2003 and analyzed by Mitkem Corporation under Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria. Metals analyses except mercury were conducted using SW846 method 6010B. Mercury analyses were conducted using SW846 method 7471A.

Summary

All analytes were successfully analyzed. The findings offered in this report are based upon a general review of all available data. The data review was based on data completeness, holding times, calibration data, laboratory method/preparation blanks, interference check sample (ICS) results, laboratory control sample (LCS) results, detection limits, and analyte quantitation.

All metals analyses, with the exception of mercury, were conducted using Inductively Coupled Plasma (ICP) methodologies. Mercury analyses were conducted using Cold Vapor Atomic Absorption (CVAA) methodology.

Minor Problems

- The following contaminants were detected in the laboratory method/preparation blanks at the following maximum concentrations:

Analyte	Maximum Concentration	Action Level
Aluminum	59.1 ug/L	14.78 mg/kg
Antimony	3.0 ug/L	0.75 mg/kg
Magnesium	66.4 ug/L	16.6 mg/kg
Manganese[(1)]	0.066 mg/kg	0.33 mg/kg
Potassium	83.7 ug/L	20.93 mg/kg
Zinc	8.8 ug/L	2.2 mg/kg

[(1)] Maximum concentration present in soil preparation blank.

An action level of 5X the maximum concentration was used to evaluate the sample data for blank contamination. Sample aliquot, percent solids, and dilution factors, if applicable, were taken into consideration when evaluating for blank contamination. No validation action was required for these analytes because the results were either greater than the action level or they were nondetects.

Notes

Sample WOD-SU-127-0203 was reported incorrectly by the laboratory as WOD-SV-127-0203. The data reviewer amended the database.

Matrix spike, laboratory duplicate, and serial dilution analyses were not performed for this SDG.

Executive Summary

Laboratory Performance: No quality control issues were noted for this SDG.

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the "National Functional Guidelines for Inorganic Review", April 1993 and the NFESC document entitled "Navy IRCDQM" (September 1999).

The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

2. Appendix B - Results as reported by the Laboratory
3. Appendix C - Support Documentation

Data Qualifier Key:

U - Value is a nondetect as reported by the laboratory.

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0320

Mitkem Project ID: B0320

March 24, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for one aqueous and one soil samples that were collected on February 25, 2003, and received at Mitkem on February 26, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms, following discussions with the client. Sample identifications were shortened where necessary due to limitations in the data reporting software. A table of sample identifications showing full client ID and laboratory ID follows this narrative, along with the Mitkem Work Order.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery of 2,2'-oxybis (1-chloropropane), N-nitrosodiphenylamine and carbazole.

Sample analysis: no other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no other unusual observation was made for the analysis.

The pages in this report have been numbered consecutively, starting from this narrative and ending with a page saying only "Last Page of Data Report".

I certify that this data package is in compliance, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the laboratory manager or his designee, as verified by the following signature.

Agnes Ng

Tetra Tech NUS **INTERNAL CORRESPONDENCE**

TO:	**G. GLENN**	**DATE:**	**MAY 30, 2003**
FROM:	**BERNARD F SPADA III**	**COPIES:**	**DV FILE**
SUBJECT:	**ORGANIC DATA VALIDATION- VOC/SVOC/PCB CTO 848, NASA WALLOPS ISLAND SDG B0327**		
SAMPLES:	1/Aqueous		
	TB-022603*		
	3/Soil		
	WOD-SS-134	WOD-SS-135	WOD-SU-126-0203

Overview

The sample set for CTO 848 NASA Wallops Island, SDG B0327 consists of one (1) trip blank, and three (3) environmental soil samples. The environmental samples were all analyzed for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), and polychlorinated biphenyls (PCB). The trip blank denoted with an asterisk (*) was analyzed for VOC only.

The samples were collected by Tetra Tech NUS on February 26, 2003 and analyzed by Mitkem Corporation. All analyses were conducted in accordance with Naval Facilities Engineering Service Center (NFESC) Quality Assurance/Quality Control (QA/QC) criteria using SW-846 Methods 8260B, 8270C, and 8082 analytical and reporting protocols.

All samples were successfully analyzed. The findings offered in this report are based upon a general review of all available data including: data completeness, holding times, initial/continuing calibrations, laboratory method blank results, surrogate spike recoveries, blank spike/blank spike duplicate results, internal standard recoveries, chromatographic resolution, compound identification, compound quantitation and detection limits. Areas of concern are listed below.

Major

- None.

Minor

- The following compounds were detected in the trip blank:

Compound	Maximum Concentration	Blank Action Level
Methylene chloride	65 ug/L	650 ug/L
Acetone	40 ug/L	400 ug/L

Sample aliquot and dilution factors were taken into consideration when applying the blank action levels. Positive results below the blank action level for the aforementioned compounds have

been qualified (B) due to blank contamination.

- Positive results reported below the quantitation limit but above the method detection limit were qualified as estimated (J).

- Sample WOD-SS-135 was <30% solids. All positive and non-detected results were qualified as estimated (J, UJ) in all fractions of sample WOD-SS-135.

- The aqueous volatile initial calibration performed on February 26 on the "V2" instrument exceeded the 30% (but was <50%) difference quality control criteria for acetone. The positive result for acetone in sample TB-022603 was qualified as estimated (J).

- The percent recovery of internal standards chlorobenzene-d5 and 1,4-dichlorobenzene-d4 were below the -50% quality control criteria in sample WOD-SS-134. All non-detected results for 1,1,2,2-tetrachloroethane, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichlorobenzene, 1,2-dibromo-3-chloropropane, 2-hexanone, dichlorobromomethane, bromoform, chlorobenzene, ethylbenzene, isopropylbenzene, m+p-xylene, o-xylene, styrene, tetrachloroethene, total xylenes, and 1,2,4-trichlorobenzene were qualified as estimated (UJ) in sample WOD-SS-134.

- The semivolatile initial calibration performed on March 12 exceeded the 30% (and was >50%) relative percent standard deviation (%RSD) quality control criteria for 3-nitroaniline. All results for 3-nitroaniline were qualified as estimated (UJ).

- The semivolatile initial calibration performed on March 12 exceeded the 30% (but was <50%) RPD quality control criteria for benzaldehyde. Positive and non-detected results for benzaldehyde were qualified as estimated (J, UJ).

- The semivolatile continuing calibration performed on March 15 at 00:31 exceeded the 25% (and was >50%) difference quality control criteria for benzaldehyde. Positive and non-detected results for benzaldehyde were qualified as estimated (J, UJ).

- The positive result for Aroclor 1260 in sample WOD-SS-135 exceeded the 25% difference between analytical columns quality control criteria. The result was qualified as estimated (J).

Notes

There were several inconsistencies between the compound lists in the statement of work (SOW) and the results submitted by the laboratory. No action was taken on this basis because the project office approved the variance from the SOW.

The soil volatile continuing calibration performed on March 4 at 13:48 exceeded the 25% (but was <50%) difference quality control criteria for 1,2,4-trichlorobenzene. No qualifications were made on this basis because all results for 1,2,4-trichlorobenzene were non-detected.

The semivolatile initial calibration performed on March 12 exceeded the 30% (but was <50%) RSD quality control criteria for 4-chloroaniline and carbazole. No qualifications were made on this basis because all results for the aforementioned compounds were non-detected.

The semivolatile continuing calibration performed on March 15 at 00:31 exceeded the 25% (but was <50%) percent difference quality control criteria for 4-chloroaniline, hexachlorocyclopentadiene, and atrazine. No qualifications were made on this basis because all results for the aforementioned compounds were non-detected.

The semivolatile continuing calibration performed on March 15 at 16:32 exceeded the 25% (but was <50%) percent difference quality control criteria for 2,2'-oxybis(1-chloropropane), 4-chloroaniline, carbazole, 3,3'-dichlorobenzidine, and atrazine, (and was >50%) for hexachlorocyclopentadiene, 3-nitroaniline, 4-nitroaniline,

and benzaldehyde. No qualifications were made on this basis because no environmental samples were analyzed using this calibration.

The semivolatile blank spike exceeded the laboratory's percent recovery quality control criteria for carbazole, 2,2'-oxybis(1-chloropropane), and N-nitrosodiphenylamine. No qualifications were made on this basis because all results for the aforementioned compounds were non-detected.

Executive Summary

Laboratory Performance: Qualifications were made based on calibration non-compliances, internal standard non-compliances, method blank contamination, and percent difference between analytical columns non-compliance.

Other Factors Affecting Data Quality: Sample WOD-SS-135 was <30% solids.

The data for these analyses were reviewed with reference to U.S. EPA National Functional Guidelines for Data Validation as modified by EPA Region III (9/94) and the NFESC guidelines entitled Navy IRCDQM (Sept. 1999). The text of this report has been formulated to address only those problem areas affecting data quality.

"I attest that the data referenced herein were validated according to the agreed upon validation criteria as specified in the NFESC Guidelines and the Quality Assurance Project Plan (QAPP)."

Appendix A – Qualified Analytical Results
Appendix B – Results as Reported by the Laboratory
Appendix C – Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
G = Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
J = GFAA PDS - GFAA MSA's $r < 0.995$
K = ICP Interference - includes ICS % R Noncompliance
L = Instrument Calibration Range Exceedance
M = Sample Preservation Noncompliance
N = Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
P = Uncertainty near detection limit (< 2 x IDL for inorganics and <CRQL for organics)
Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
S = Pesticide/PCB Resolution
T = % Breakdown Noncompliance for DDT and Endrin
U = % Difference between columns/detectors >25% for positive results determined via GC/HPLC
V = Non-linear calibrations; correlation coefficient $r < 0.995$
W = EMPC result
X = Signal to noise response drop
Y = Percent solids <30%
Z = Uncertainty at 2 sigma deviation is less than sample activity

Spada, Bernie

From: Samchuck, Joseph
Sent: Thursday, May 08, 2003 1:19 PM
To: Sedlmyer, Ed; Schloer, Doug; Spada, Bernie; Staffen, Seth
Subject: FW: NASA, Wallops Is. organic data validation for CTO 848.

Note from Russ.

In his final paragraph, he stated that they are not concerned over "missing SVOCs". It seems as though a mistake was made when translating the project requirements.

In the second to the last paragraph, he means bromochloromethane.

Bottom line: Review data as received from the laboratory and in a general manner, note the difference between what was reported by the lab and what was requested in the SOW. No need to specifically list compounds. State that the project office was contacted and that they approved the variance from the SOW.

Thanks.

Subject: RE: NASA, Wallops Is. organic data validation for CTO 848.

As we discussed on the phone, I looked up the issues regarding TCL analytes in the work plan and QAP. I did not find any phone notes from 2 months ago when Garth and I had a conference call with MITKEM regarding SVOC TCL analyte lists.

Regarding the overlap between VOCs and SVOCs, proceed as we discussed over the phone and retain all reported Form I analytes in each respective validation report. The dichlorobenzenes and trichlorbenzene will be sorted out for risk assessment here in King of Prussia after we have assimilated the entire database. There are different fraction fields in the database so the results won't be confused. We will evaluate the best data to retain for risk assessment here at that time. While the lower detection limit data in theory should be better, I have seen exceptions in the past where there were detections in the SVOC fraction but not VOC fraction and in such cases it would be presumed that the matrix of the sample affected purge efficiency for the heaviest VOCs.

Regarding bromochlorobenzene, I verified there is no mention of this compound as a historically detected contaminant at Wallops Island sites of interest. Do not ask the lab to provide additional data or make analysis and reporting changes for this compound.

Regarding 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum being requested for soil analysis but instead reported based on a TIC search, it is not necessary to have the laboratory add these compounds to the TCL list at this late date in the project because there are no historical detections of these compounds identified in the work plan or QAPP. The reason that the SVOC TCL list was different for soil and water is a consequence of the template used for this table from another project. Garth indicated that he wants the data to be validated as received and reported by the laboratory because this is not a major issue. However, the laboratory should not be listing any compound on the TCL Form I target compound section if it is not in any standards run so if uncalibrated compounds were reported on Form Is then these compounds should be deleted or rejected.

Joe,

Regarding the subject data validation assignment, I've encountered some disparity between what is being reported by Mitkem and what was actually requested in the statement of work. This may be useful information for making some sort of global request to the lab.

For the aqueous samples:

The lab failed to report the VOC: bromochloromethane (Seth had already alerted me to this).
The lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.
The lab reported a total of 9 compounds (VOC and SVOC) in addition to the requested analytes.

For the soil samples:

The lab failed to report the SVOCs: 1,1-biphenyl, acetophenone, atrazine, benzaldehyde, and caprolactum. Interestingly, the case narrative acknowledges this oversight and explains that the presence of these particular compounds will be determined via TIC library search. Do you know if this approach ok with the PM? BTW- I didn't find these compounds in the SVOC calibration summaries or quan reports.

Again, the lab reported 1,2,4-trichlorobenzene, 1,2-dichlorobenzene, 1,3-dichlorobenzene and 1,4-dichlorobenzene in both the VOC and SVOC analytical fractions. These compounds were not requested SVOCs in soils and the DL is much lower via 8260; therefore, they will be deleted from the SVOC database.

Only xylene isomers were reported but not requested for the soil samples in my SDG.

Seth, Bernie and Ed; I imagine you guys are making the bulk of the requests from the lab, so if there is something else that I have missed that I should be looking out for please let me know.

Subject: RE: NASA, Wallops Is. organic data validation for CTO 848.

Russ Sloboda is checking the compound lists for us. As for the Chlorobromomethane, it is not needed.

Also, Russ asked that we not remove any compounds that are in both fractions such as the dichlorobenzenes. He can sort out the compounds using the fraction. So don't delete any compounds. If you have already do this, let me know the SDG and fraction so that I can unsubmit the data and you can make the changes and reprint forms.

* Data Summary Pack *

Analytical Data Package for Tetra Tech NUS, Inc.

Client Project: CTO – 848, NASA Wallops Flight Facility

SDG# B0327

Mitkem Project ID: B0327

March 25, 2003

SDG Narrative

Mitkem Corporation submits the enclosed data package in response to Tetra Tech NUS' CTO – 848, NASA Wallops Flight Facility project. Under this deliverable, analysis results are presented for one aqueous and three soil samples that were collected on February 26, 2003, and received at Mitkem on February 27, 2003. Analyses were performed per specifications in the project's contract and the chain of custody forms. Following the narrative is the Mitkem Work Order for cross-referencing client sample ID with laboratory sample ID.

The analyses were performed according to EPA SW-846 protocols and reported in a CLP-format for Level 4 deliverable with the exception of pH. The analysis results for pH are presented in the Mitkem format with supporting raw data.

The following observation and/or deviations are observed for the following analyses:

1. Overall Observation:

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting.
- M2 peak co-elution.
- M3 rising or falling baseline.
- M4 retention time shift.
- M5 miscellaneous – under this category, the justification is explained.

The enclosed report includes the originals of all data with the exception of logbook pages and certain initial calibrations. Photocopies of logbook pages are included, with the originals maintained on file at the laboratory. The originals of initial calibrations that are shared among several cases are maintained on file at the laboratory, with photocopies included in the data package.

2. Volatile Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample/lab control sample duplicate: spike recoveries and replicate RPDs were within the QC limits.

Sample analysis: internal standard area counts were within the QC criteria with the exception of sample WOD-SS-134. The sample was not re-analyzed as all surrogate recoveries were within the QC limits. No other unusual observation was made for the analysis.

3. Semivolatile Analysis:

Alkanes were determined as part of TICs. Alkanes are reported in the Alkane Narrative Report following the SDG narrative.

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits with the exception of high recovery 2,2'-oxybis (1-chloropropane), N-nitrosodiphenylamine and carbazole in S3SLCS.

Sample analysis: no other unusual observation was made for the analysis.

4. PCBs Analysis:

Surrogate recovery: recoveries were within the QC limits.

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.

5. Metals Analysis:

Lab control sample: spike recoveries were within the QC limits.

Sample analysis: no unusual observation was made for the analysis.
