

This book is dedicated to all those who contributed to the successful launch of Artemis I on November 16, 2022, and to those working toward the future of deep space exploration.

HOORAY FOR SLS

Written by Lane Polak

Illustrated by Heather Rose Legge-Click

Product of the National Aeronautics and Space Administration

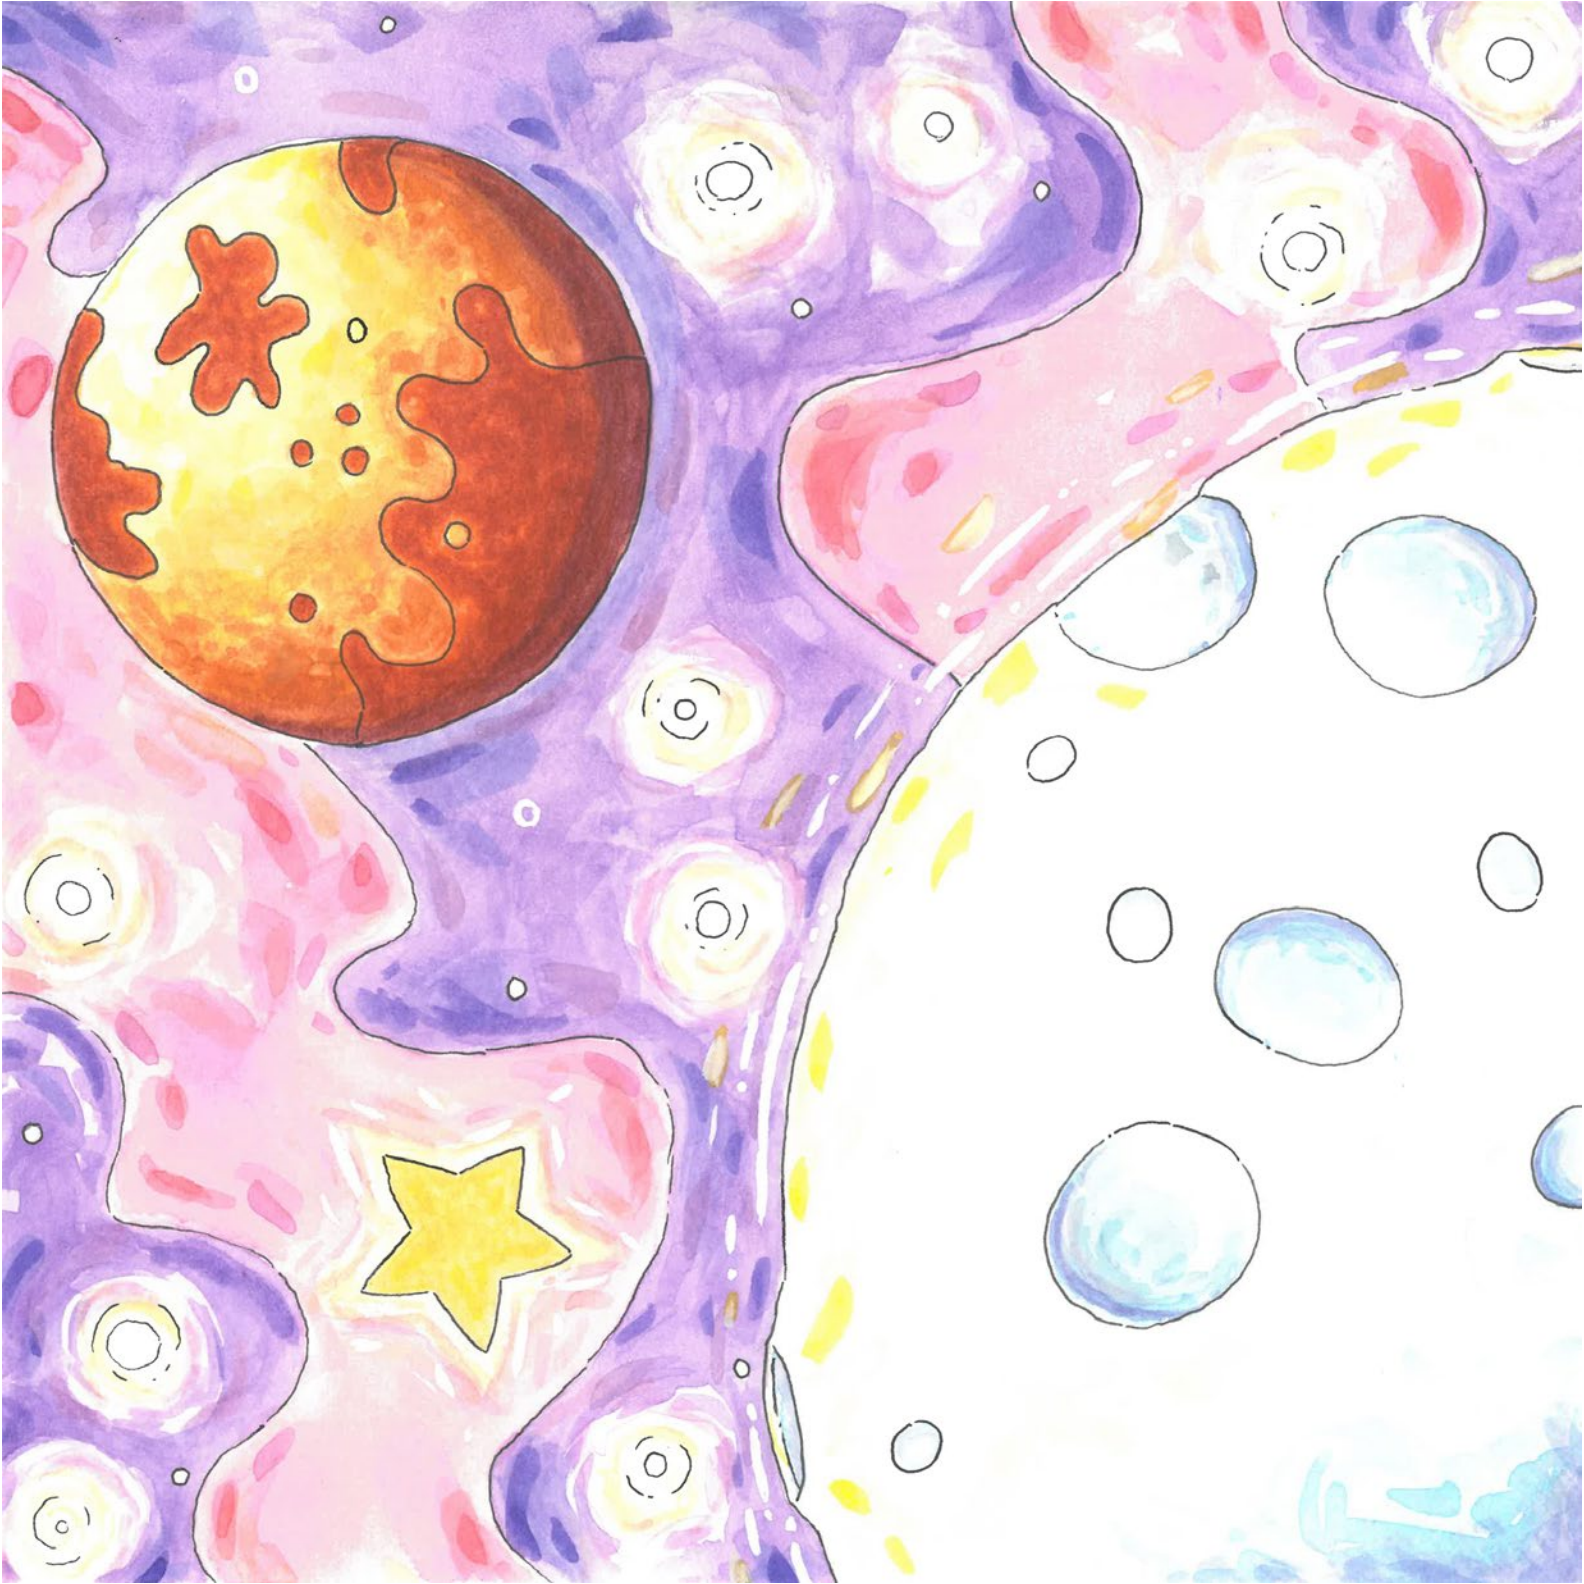

We're going back someday real soon,
and I can hardly wait.

We're going back to outer space
it's gonna be so great!

We've got a way to get us there
and travel to the stars.

Our trip begins back to the Moon,
but then it's off to Mars.

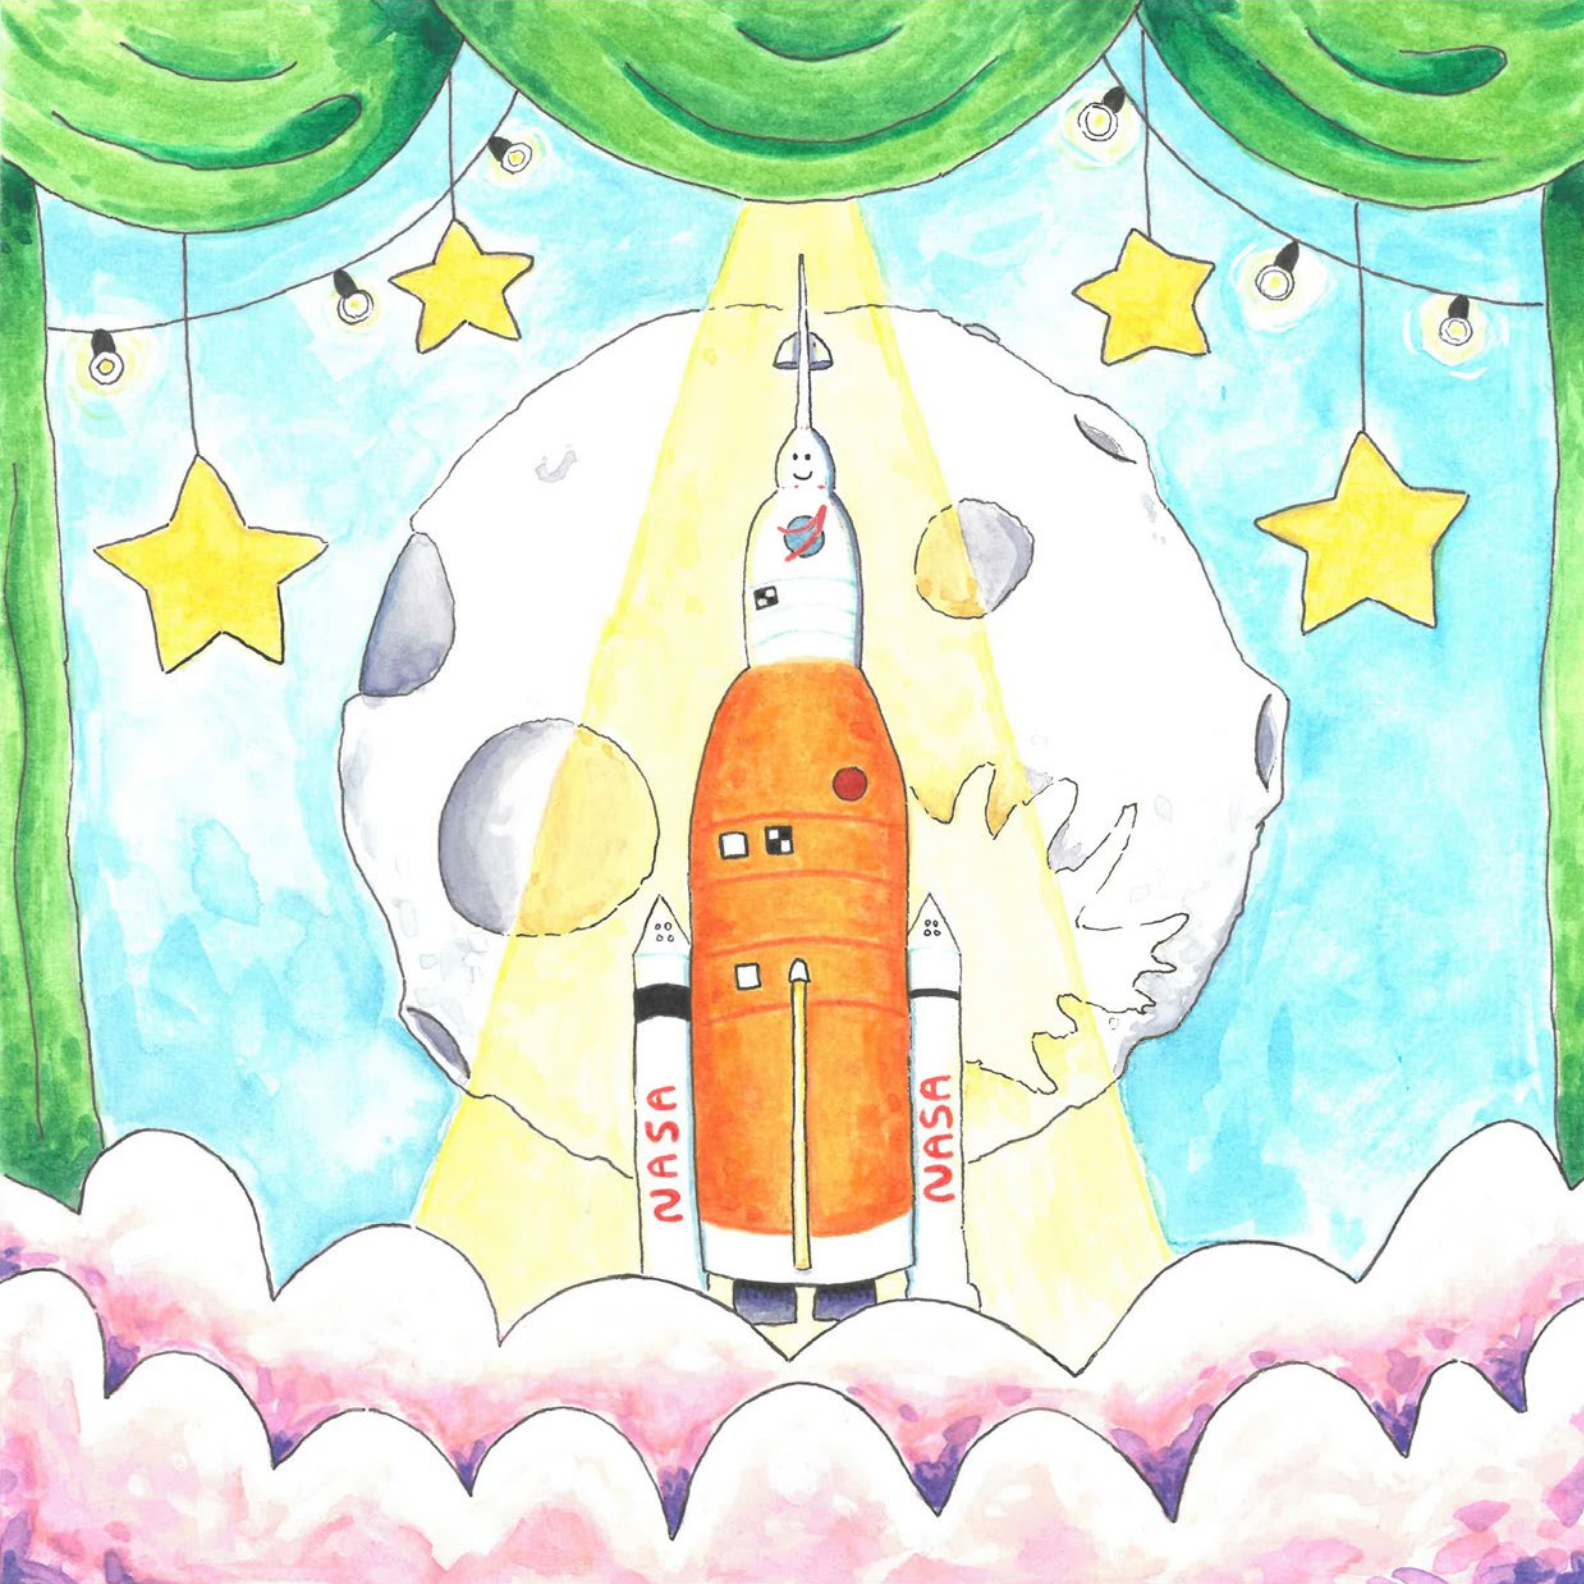

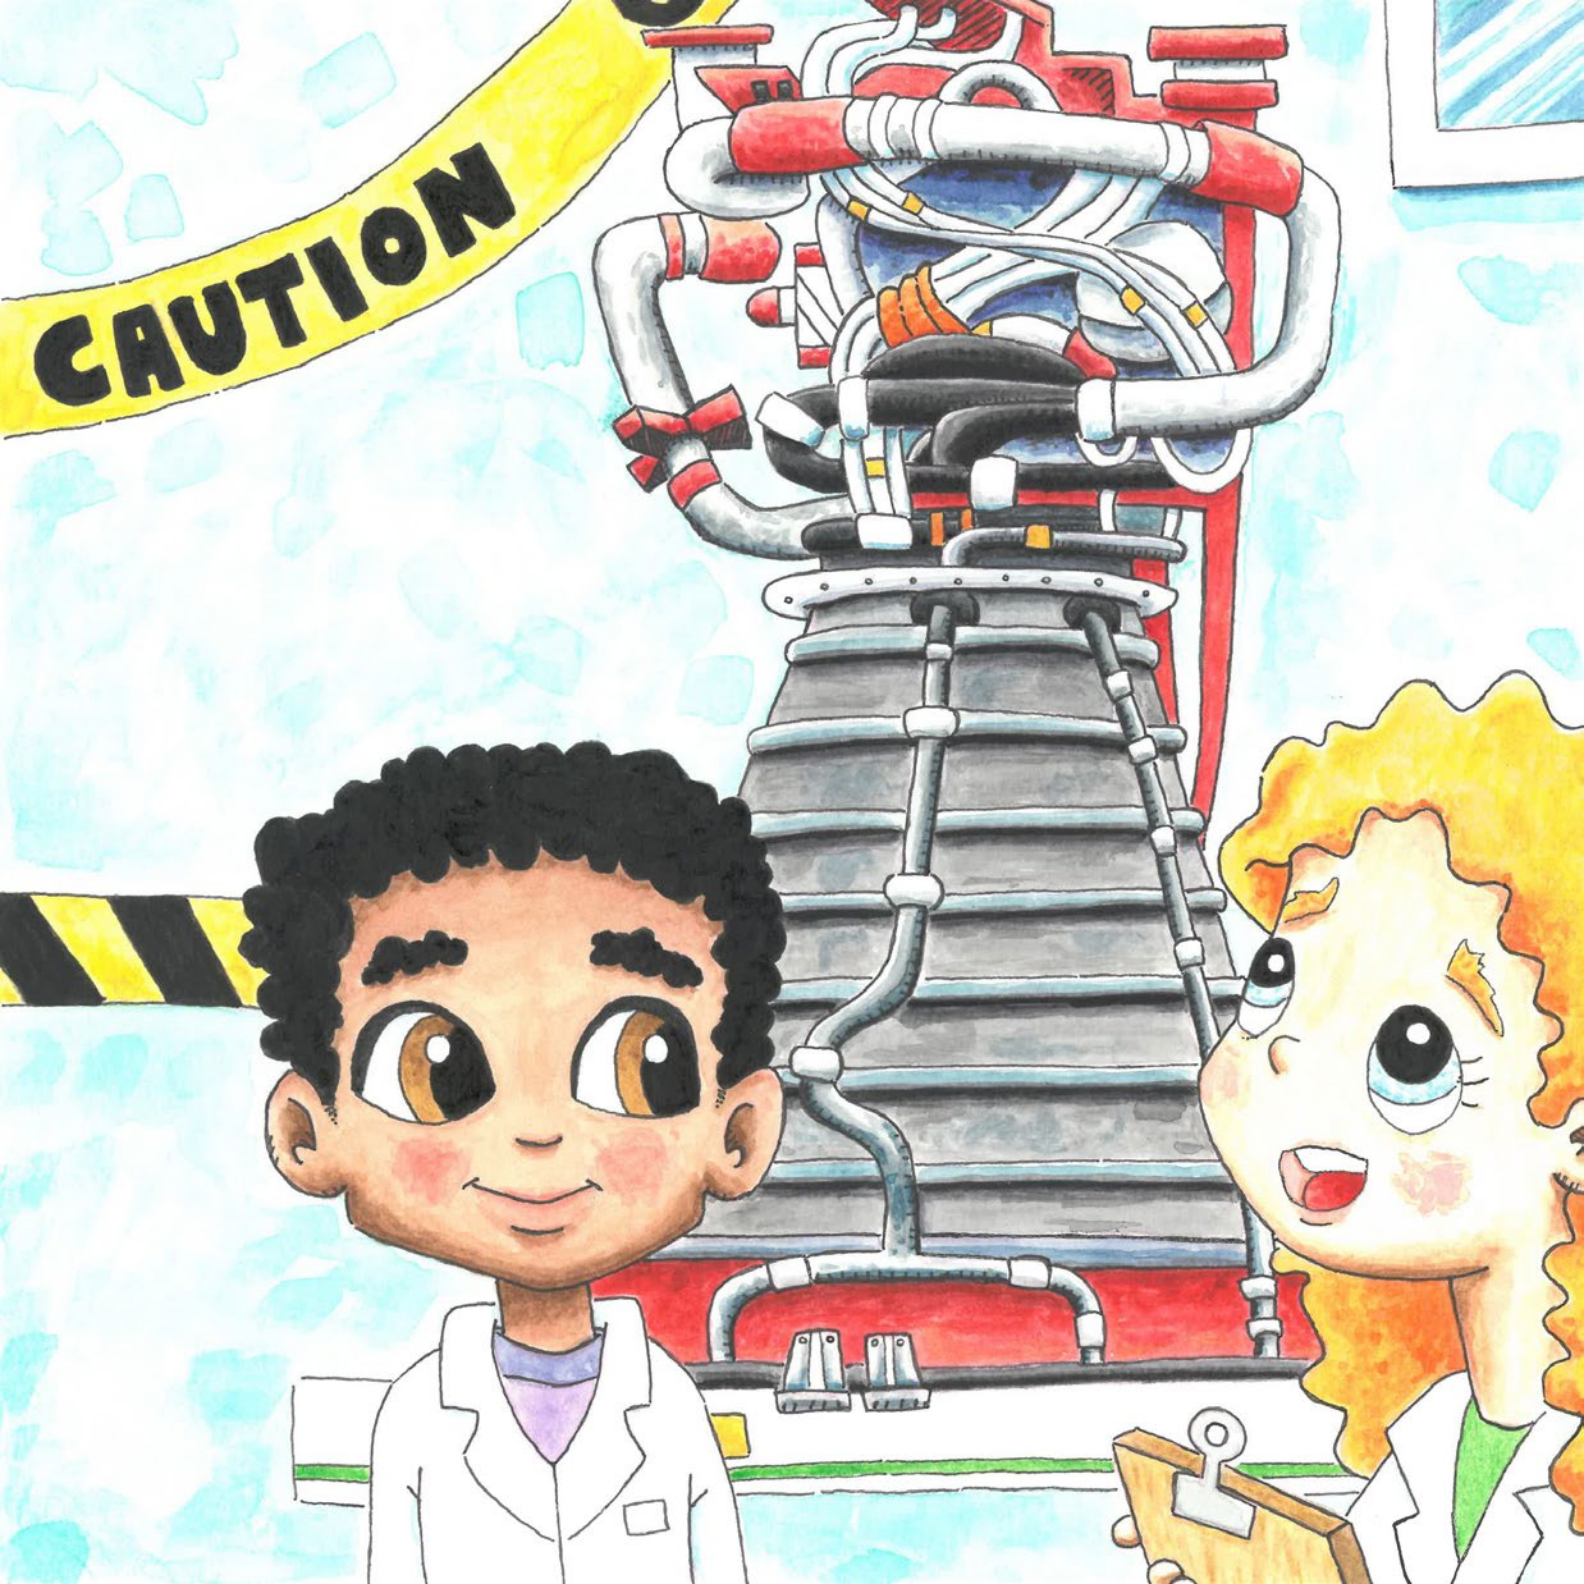

“What gets us there?
What can it be?
Does it fit inside a pocket?”

The only way to go that far
is to use our special rocket ...

Say hello to SLS!
It's our own Space Launch System.

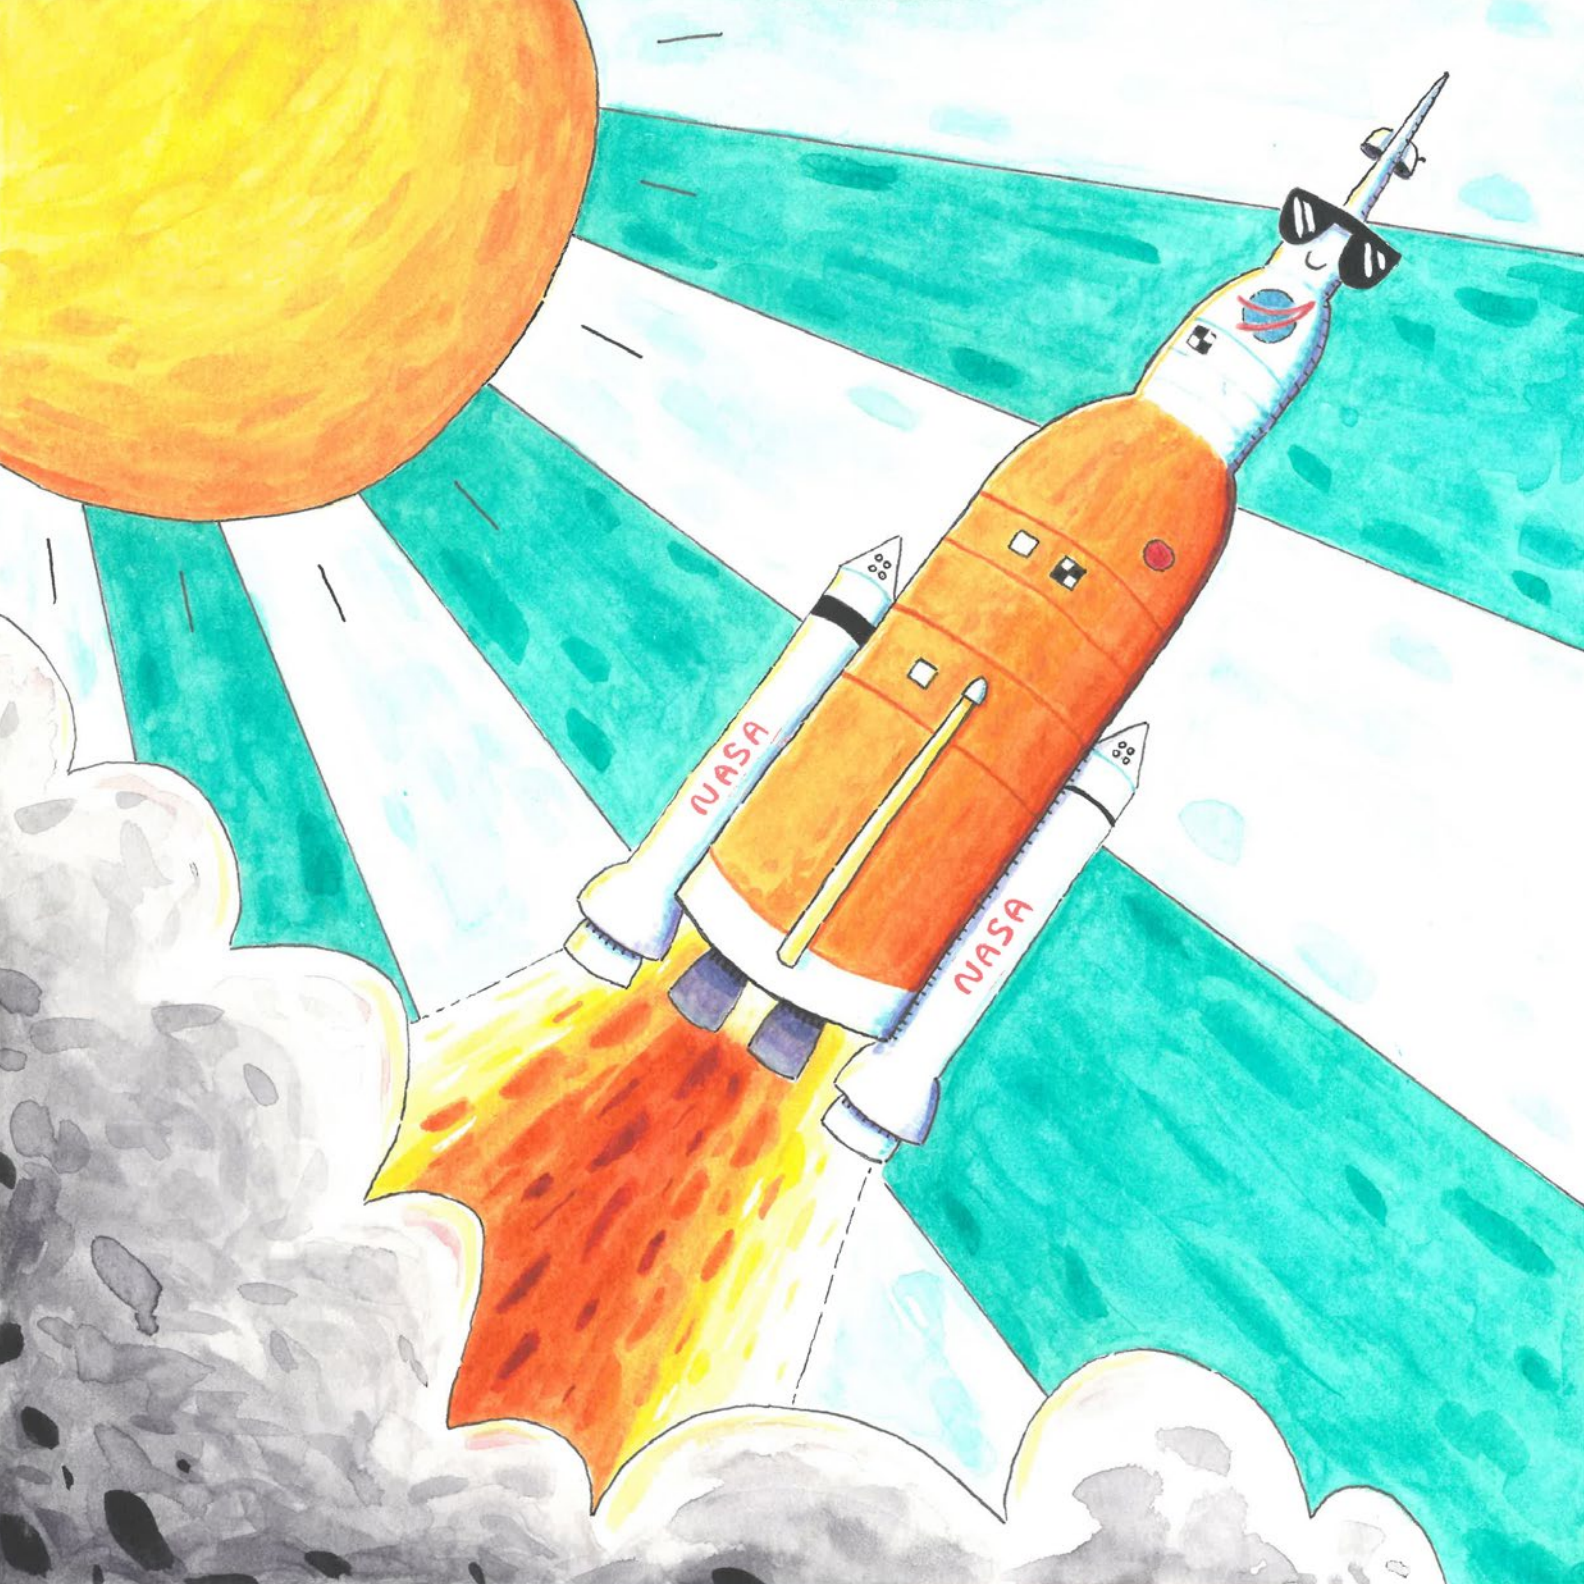

CAUTION

Our team of unique rocket folks
have filled it with their wisdom.

Three hundred twenty-two feet tall,
that's twenty-eight T-rexes!

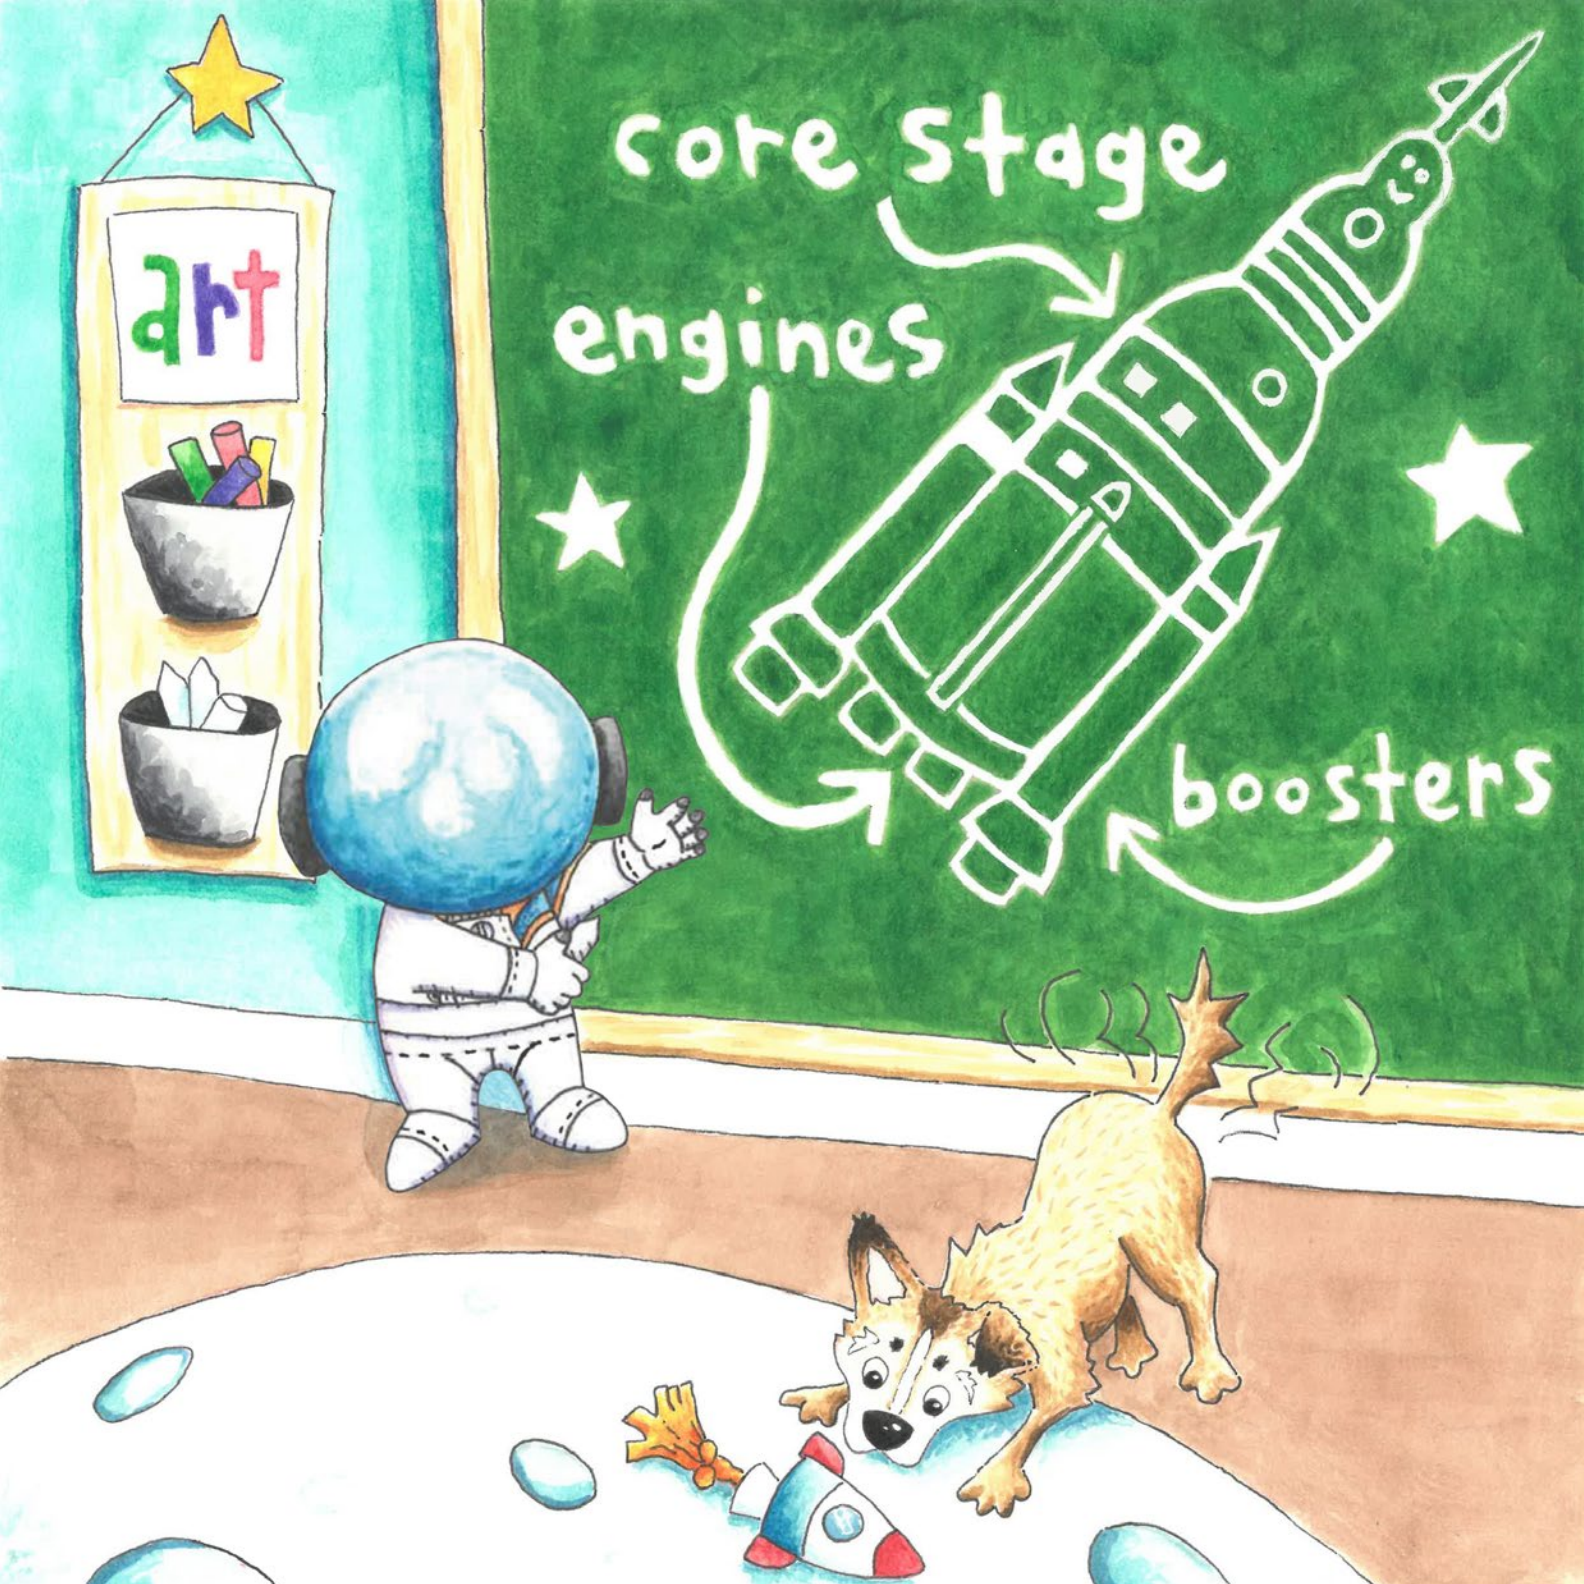

This rocket tans a shade of orange,
and with its power – flexes.

Our rocket has so many parts,
each one with its own task.

“What are those parts?
What do they do?”
I thought you’d never ask...

core stage

engines

boosters

art

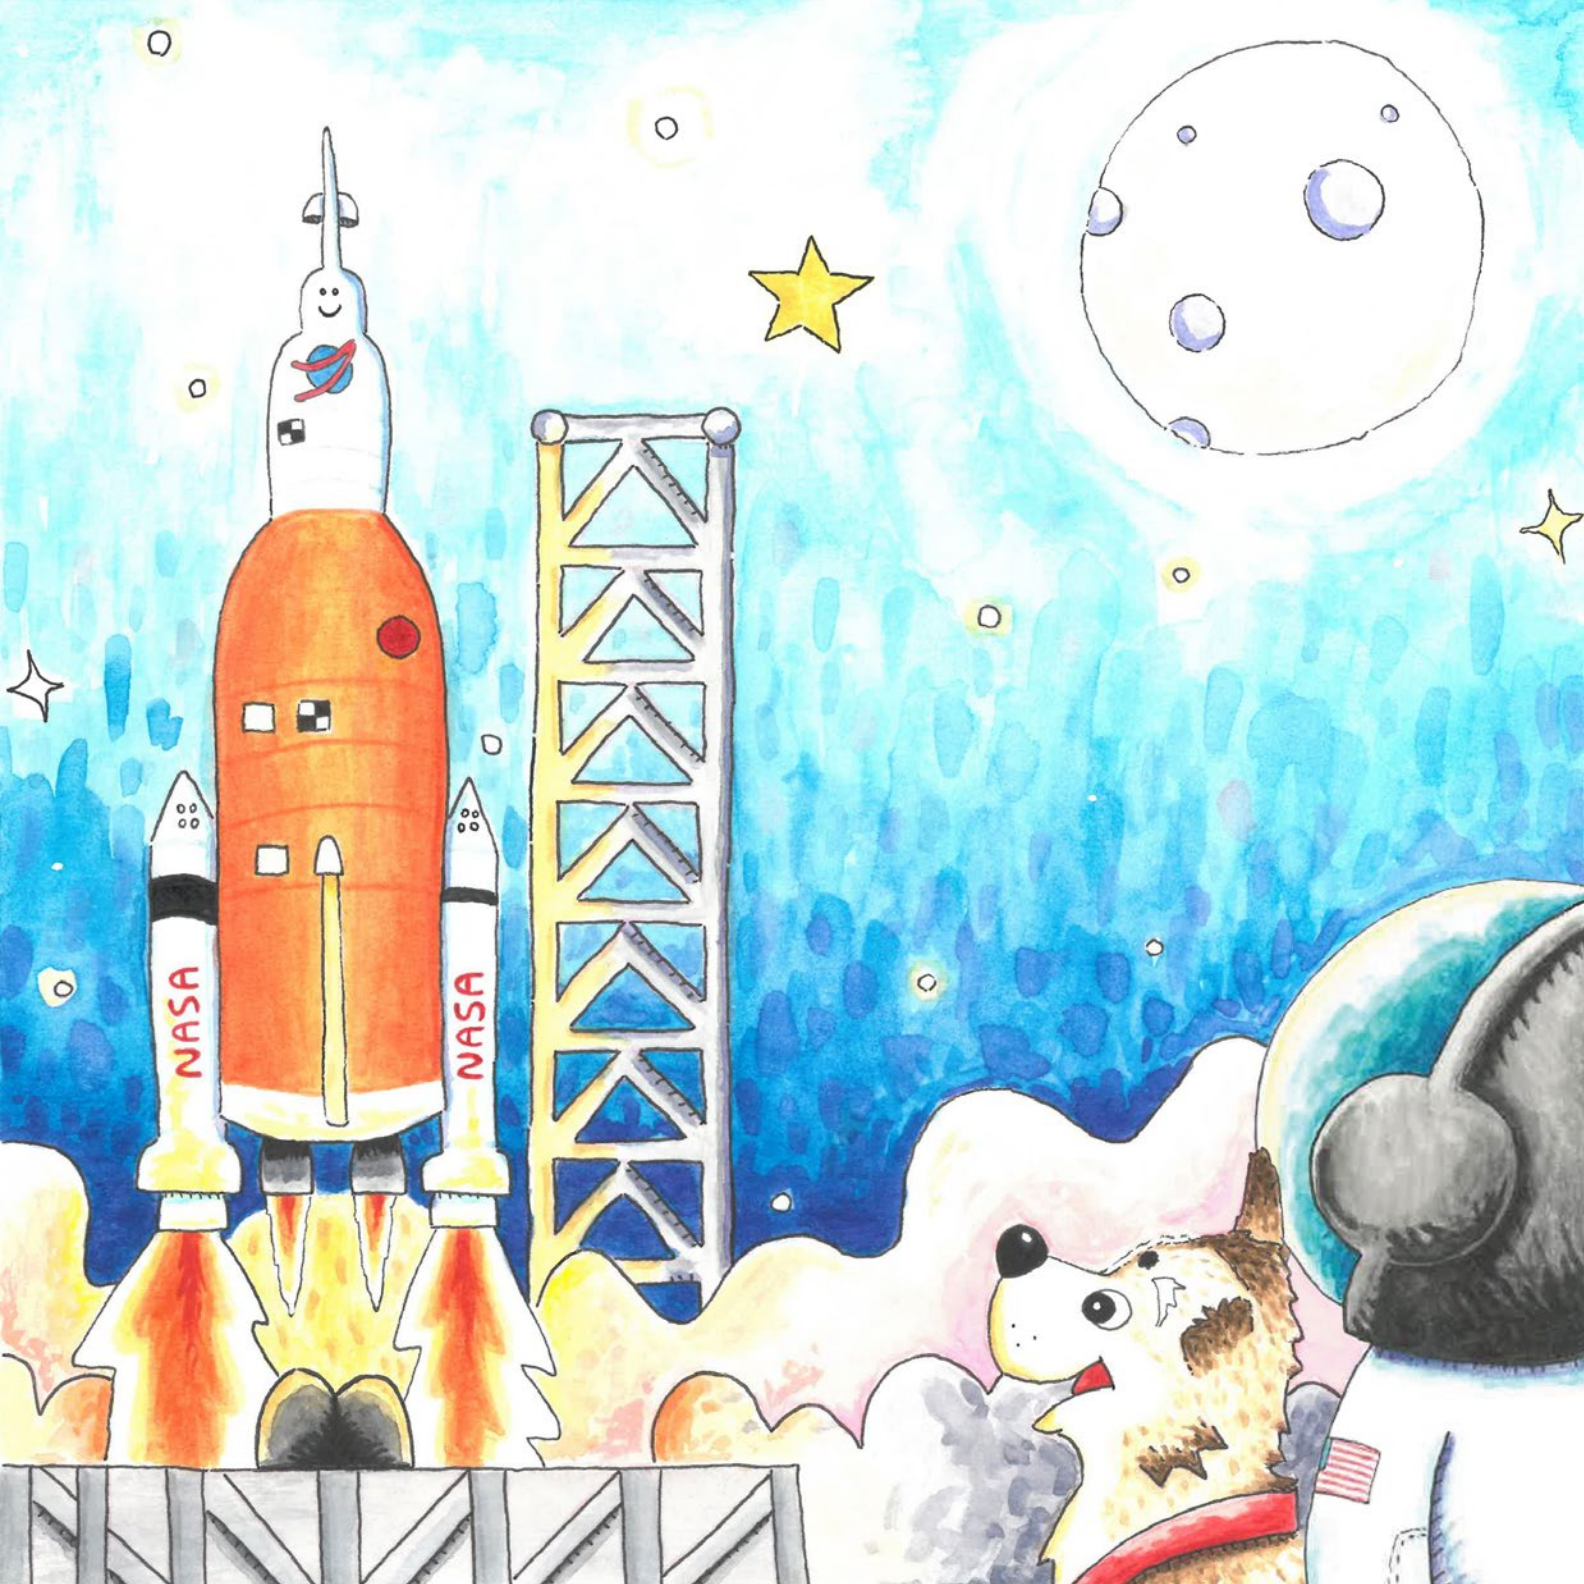

NASA

It has a core that's filled with fuel,
that's gas like in your car.

Computer brains to navigate,
that help us travel far.

Four engines made to give it lift
will help this baby soar.

Two boosters give a lot of oomph,
and like a lion, roar!!!

We're going deeper into space.
It's gonna be the best.

We're going to the Moon then Mars,
and it's thanks to SLS!

We are the Artemis Generation!
