Space Administration

Webinar: Civil Space Shortfalls Feedback Opportunity

April 17, 2024

Dr. Kurt “Spuds” Vogel

Associate Administrator for Space Technology

Alesyn Lowry

Director for Strategic Planning and Integration, STMD

Michelle Munk

Acting Chief Architect, STMD

Thanks for joining, we'll get started soon.

- This webinar is being recorded and will be available at nasa.gov/spacetechnologies
- Participants will be in a listen-only mode until Q&A
- You can submit questions via the WebEx Q&A function at any time or raise your hand to ask a question after the presentation
- Additional questions can be sent to hq-techport@mail.nasa.gov
- View the shortfall list and descriptions at techport.nasa.gov/strategy
- NASA civil servants and contractors should submit feedback via spark.nasa.gov

| Capability Area | # of Shortfalls |
|--|-----------------|
| Advanced Habitation Systems | 16 |
| Advanced Manufacturing | 12 |
| Advanced Materials & Structures | 4 |
| Autonomous Systems & Robotics | 23 |
| Avionics | 7 |
| Communication & Navigation | 4 |
| Cryogenic Fluid Management | 5 |
| Dust Mitigation | 3 |
| Entry, Descent & Landing | 13 |
| Excavation, Construction & Outfitting | 9 |
| In-Situ Resource Utilization | 10 |
| In-Space Servicing, Assembly & Manufacturing | 9 |
| Orbital Debris | 3 |
| Power | 8 |
| Propulsion | 18 |
| Sensors & Instruments | 12 |
| Small Spacecraft | 8 |
| Surface Systems | 10 |
| Thermal Management Systems | 8 |
| Miscellaneous | 5 |

Civil Space Shortfalls

- NASA compiled an initial list of **187 shortfalls** organized into **20 capability areas**
- The shortfall description document (techport.nasa.gov/strategy) and feedback form are organized accordingly

| ID | Shortfall Title |
|---|---|
| 1514 | Atmospheric Metabolic Constituent Management for Habitation |
| <p>Description All habitat elements need carbon dioxide (CO₂) removal and oxygen (O₂) generation. The current ISS SOA systems provide basic functionality for adsorption of CO₂ and partial oxygen recovery (~47%). Issues with long-term reliability are being addressed but need validation with long-term integrated testing for extended endurance missions. Trace gas contamination can decrease system performance in integrated vehicle. Upgraded and new technologies are needed to reduce mass/power /volume/maintenance and improve oxygen recovery for long duration exploration missions. (Dependency: Launched food water content must be reduced to ~30% for the mass savings of increased oxygen recovery to be beneficial.) Technologies for high-pressure/purity oxygen generation for EVA recharge are needed for high frequency surface EVA missions. Technologies for providing high flow rate oxygen for days to treat potential medical conditions without exceeding cabin material oxygen flammability limits are needed for long duration missions. Monitoring of atmospheric metabolic constituents is addressed in the "Environmental Monitoring for Habitation" shortfall. Improved system performance, improved reliability, and system enhancements to allow lower-level maintenance are beneficial to a reduction of departure mass and improved crew safety on long endurance missions where resupply is not feasible. System improvements and diagnostics assistance that reduces crew time are also beneficial.</p> | |
| <p>Related Shortfalls AHS-353: Recovering & Recycling O₂ from Metabolic CO₂ AHS-760: Oxygen Generation System improved reliability and decreased complexity AHS-787: Oxygen Generation for low pressure cabin environments AHS-878: High Pressure Oxygen for EVA tank resupply AHS-1059: Highly reliable, closed-loop-forward CO₂ removal systems AHS-1222: Medical O₂ Generation & Supply</p> | |
| <p>Metrics</p> <ul style="list-style-type: none"> • CO₂ removal at <2.5 mmHg-enabling, <2.0 mmHg-enhancing demonstrated at 14.7 psia and at future surface habitat pressure • Reduction in mass/kg O₂ produced • >75% oxygen recovery from CO₂ • Capability to recharge EVA O₂ bottle • Enriched medical oxygen (50-90% vol) | |

Shortfall: *Identified technology areas requiring further developments to meet future exploration, science, and other mission needs*

Shape the Future of Space Technology with NASA

Provide your valuable feedback on NASA-identified space technology shortfalls by May 13.

[Register to Provide Feedback](#)

- Consider aggregating input from your company/organization into one response
- Score shortfalls related to your expertise
- You don't have to rate all 187 shortfalls
 - If you don't score a shortfall it will default to "N/A: No opinion"
 - Only use "0" if you believe the shortfall is not important or that a solution exists
- Respond to the open-ended questions

Register to view the form, score shortfalls, save progress, and submit feedback

You do not have to complete the form in one sitting; You can revisit the form by logging in with the email address and password provided at registration

Read the instructions closely before proceeding to the shortfalls

"NASA" is an option here, which will redirect employees to the NASA Spark feedback form

QUESTION 1 OF 23 - RESPONDENT BACKGROUND QUESTIONS

Technology Shortfalls Public Engagement Prioritization

Welcome to the NASA STMD Public Engagement Prioritization Form! Your input is invaluable as we prioritize technology shortfalls critical to the future of space exploration. The feedback form is structured into 20 space technology capability areas and the associated technology shortfalls within each capability. We welcome you to navigate to the technology capabilities where you have expertise or to complete the full feedback form which is approximately 200 technology shortfall prioritization questions.

Please select no opinion if the technology is not applicable to your mission needs.

0-Not important should be reserved for technology areas you believe are not important to NASA or the nation's exploration, science, and other mission needs

Please save your results or if you have completed all question items, please submit your feedback.

The technology categories within the feedback form include:

1. Advanced Habitation Systems
2. Advanced Manufacturing
3. Advanced Materials and Structures
4. Autonomous Systems & Robotics
5. Avionics
6. Communication & Navigation
7. Cryogenic Fluid Management
8. Dust Mitigation
9. Entry, Descent, & Landing
10. Excavation, Construction & Outfitting
11. In-Space Servicing, Assembly, and Manufacturing (ISAM & RPOC)
12. In-Situ Resource Utilization (ISRU)
13. Orbital Debris
14. Power
15. Propulsion (non-nuclear)
16. Propulsion (nuclear)
17. Sensors & Instruments
18. Small Spacecraft
19. Surface Systems
20. Thermal
21. Miscellaneous

These categories encompass the broad range of technology areas NASA's Space Technology Mission Directorate (STMD) is focused on to address the identified technology gaps for future space exploration and habitation. Thank you for helping to shape the future of aerospace technology and ensuring American leadership in space.

How did you hear about this opportunity?

I was contacted directly by a NASA affiliated employee to share my input

In-Space and On-Surface Manufacturing of Parts/Products from Surface and Terrestrial Feedstocks

How would you prioritize the importance of the following technology shortfall: In-Space and On-Surface Manufacturing of Parts/Products from Surface and Terrestrial Feedstocks

Save your progress at any time
Submit your feedback when complete

Option to navigate to shortfalls by capability area

Default selection; you are not required to score every shortfall

For shortfalls related to your expertise, choose the rating you agree with most

If you need more information about the shortfall, expand the full description and related shortfall list

*Click on the title or ▼ icon

After reviewing all of the STMD technology shortfall that we have identified, are there any that you believe are missing?

If yes, please provide a short description of the missing technology shortfall, the capability area, and potential stakeholders.

Enter your feedback

Answer any or all the open-ended questions

After reviewing all of the STMD technology shortfall, do you know of any existing technologies that satisfy one or more of these shortfall?

If yes, please provide a short description of the existing technology and links to any additional information about the technology.

Enter your feedback

Is there any other feedback you'd like to provide relevant to the shortfalls?

If yes, please provide details.

Enter your feedback
