

THE COSMIC CROSSWORD

DOWN

1. The _____ module provides the crew with power, water, and air to breath. This type of assistance to the crew, is a real act of the same thing.
3. This red planet is where we want to visit after we explore the Moon.
5. The astronaut's spacecraft, and god of the hunt.
6. Twin sister to Apollo and the name of our missions.
9. SLS is the only rocket in the world that can send us to _____ space in a single launch. This type of fishing is also best at sea.

ACROSS

2. A heat _____ keeps our astronauts safe from really hot temperatures when they return to Earth. Captain America uses one.
4. The last time we were here was over 50 years ago, and this time we're going back to stay!
7. Standing at 212 feet, this part of the rocket tans in the sun, and stores all of our fuel. (two words)
8. SLS uses two of these to give it that extra "boost" it needs for the first 2 minutes of launch.
10. SLS uses four of these to generate 2 million lbs. of thrust at launch. It's also what you call the front of a train.
