SECTION B
SUPPLIES OR SERVICES AND PRICES/COSTS

B.1 SUPPLIES AND/OR SERVICES TO BE FURNISHED

- A. The purpose of this contract is to acquire a broad range of Center Operation Support Services (COSS) for the Marshall Space Flight Center (MSFC). This performance-based contract provides two basic methods for the acquisition of these services.
1. The first method is Firm Fixed Price (FFP) Lump Sum. Under this method, the Contractor is required to furnish all the services listed in each part of Attachment J-1, Performance Work Statement (PWS) identified as Lump Sum. The services to be provided on a Lump Sum basis are subject to the "Variation in Quantity" clause which is set forth in Clause F.2.
 2. The second method for acquiring services is through the use of an Indefinite Delivery Indefinite Quantity (IDIQ) provision. Work under the IDIQ portion will either be FFP, Prepriced Work (PPW), or Time and Materials (T&M). The purpose of this provision is to allow the Government to acquire indefinite services as addressed under Attachment J-1. IDIQ requirements cannot be adequately defined for inclusion in the Lump Sum portion of the contract. These IDIQ services are not subject to Clause F.2, "Variation in Quantity."
- B. The Contractor shall provide all resources, including management, supervision, labor, materials, tools, and equipment (except as may be expressly stated in this contract as made available by the Government) necessary to provide COSS in accordance with the Description/Specifications/Work Statement in Attachment J-1.

(End of Clause)

B.2 GENERAL

This contract is a performance-based contract containing FFP Lump Sum and FFP, PPW, or T&M IDIQ work. This contract is for a one-year base period and four 1-year option periods. The contract includes a Schedule of Prices from which deductions shall be taken for work that is not performed or does not meet the requirements specified. All work shall be performed under the terms and conditions of this contract as either FFP Lump Sum or as IDIQ.

A. FFP Lump Sum Work

Work that can be identified in advance, both in sufficient detail and quantities, and for which a fair and reasonable price can be obtained is identified as FFP Lump Sum work, henceforth identified as Lump Sum work. Lump Sum prices include all overhead, G&A, profit, and anything else that applies to delivering the services listed in the "Schedule of Prices for Lump Sum Work," located at the end of this section. Lump Sum work in this contract includes all work identified in each part of Attachment J-1 as Lump Sum work and is subject to the deductions determined by the Performance Requirements Summary (PRS) in conjunction with the Schedule of Prices and the Consequences of Contractor's Failure to Perform Required Services Clause in Section E. All work specified as Lump Sum is not subject to the application of a coefficient factor (addressed in Clause B.5).

B. Indefinite Quantity (IDIQ) Work

Work that is of a recurring nature but cannot be sufficiently identified or quantified in advance is identified as IDIQ work. IDIQ work includes all work identified as IDIQ in Attachment J-1. IDIQ will be issued as either FFP, PPW, or T&M. FFP may be based on Unit Price Book labor hours, fixed bare labor rates, and materials, or a combination of these with Specialty Services and/or PPW. Specialty Services may be stand-alone FFP work. T&M work will be limited to those instances where the Government decides that work cannot be adequately defined at any time during the work process to develop a FFP cost estimate. See Clause B.5, for applicable coefficients. IDIQ shall be ordered in accordance with Federal Acquisition Regulation (FAR) clauses I.4 Ordering, I.5 Order Limitations, I.6 Indefinite Quantity, and B.4 Ordering Procedures.

The guaranteed minimum quantity of work that will be ordered under the IDIQ portion of this contract shall be \$1,000,000 per contract year. The maximum amount, not-to-exceed (NTE), of IDIQ work the Government may order is the IDIQ ceiling dollar value for the contract base period and option periods as listed below:

CEILING VALUE

Base Period	\$18,000,000
Option Period 1	\$25,000,000
Option Period 2	\$25,000,000
Option Period 3	\$25,000,000
Option Period 4	\$25,000,000
TOTAL	\$118,000,000

The Government is not obligated to place any orders under this contract for IDIQ work except for the guaranteed minimum stated above. If the Government orders supplies or services in excess of the minimum but not up to the maximum, this circumstance shall not constitute the basis for an equitable price adjustment.

(End of Clause)

B.3 SCHEDULE OF PRICES

- A. The total firm fixed price of all Lump Sum work contained in Attachment J-1 is delineated in the "Schedule of Prices for Lump Sum Work," located at the end of this section, for the base year and each of the four option years. When there is a difference between a unit price and the extended total amount, the unit price is held to be the intended price and the total amount will be calculated accordingly. The "Schedule of Prices for Lump Sum Work" is in Microsoft Excel spreadsheets (reference Clause B.9).
- B. IDIQ price schedules for the base year and each of the four option years utilizing Microsoft Excel spreadsheets titled "Schedule of Prices for Prepriced Work," "Schedule of Prices for Coefficients," and "Schedule of Prices for Fixed Bare Labor Rates" are located at the end of this section (reference Clause B.9).
- C. The total estimated not-to-exceed amount for performance of all work for the applicable price is as follows and shall not be exceeded without prior written approval of the Contracting Officer.

<u>PERIOD COVERED</u>	<u>LUMP SUM AMOUNT</u>	<u>NTE IDIQ AMOUNT</u>	<u>TOTAL ESTIMATED NOT-TO-EXCEED</u>
Base Period: 7/1/08 - 6/30/09	(b)(4)	\$18,000,000	(b)(4)

Total not-to-exceed price for each option year is set forth below:

<u>PERIOD COVERED</u>	<u>LUMP SUM AMOUNT</u>	<u>NTE IDIQ AMOUNT</u>	<u>TOTAL ESTIMATED NOT-TO-EXCEED</u>
Option Year 1 7/1/09 - 6/30/10	(b)(4)	\$25,000,000	(b)(4)
Option Year 2: 7/1/10 - 6/30/11		\$25,000,000	
Option Year 3: 7/1/11 - 6/30/12		\$25,000,000	
Option Year 4: 7/1/12 - 6/30/13		\$25,000,000	

(End of Clause)

B.4 IDIQ ORDERING PROCEDURES

- A. The Contracting Officer shall issue all IDIQ work under this contract. As required, blanket Delivery Orders (DOs) shall be issued to establish a dollar value ceiling for issuance of Facility Work Requests (FWRs). Technical monitors, appointed by the Contracting Officer, shall direct the issuance of FWRs to request and schedule specific services under \$500,000. All FWRs shall be subject to the review and approval of the Contracting Officer's Technical Representative. Delivery Orders will be issued on OF 347 - Order for Supplies or Services, and FWRs will be issued on Form 199, Facility Work Request.
- B. Emergency requests may be issued by oral communication with established not-to-exceed values, where written confirmation will follow within 72 hours. Upon written confirmation, the Contractor shall follow the IDIQ procedures outlined in Attachment J-1, Paragraph 1.6.

(End of Clause)

B.5 IDIQ WORK**A. PREPRICED - IDIQ WORK**

The Contractor shall perform any and all functions specified in the PWS as Prepriced for the amounts offered in the Clause B.9 Microsoft Excel spreadsheet titled "Schedule of Prices for Prepriced Work," (reference Clause B.9) for the base and each option year, included at the end of this section. The Contractor shall prepare proposals in accordance with the provisions of Attachment J-1, Paragraph 1.6 for Prepriced IDIQ work. Prepriced work includes all costs, direct and indirect, including labor, materials, tools, and special equipment, overhead, G&A, and profit, to provide one unit of work-in-place, as listed on the "Schedule of Prices for Prepriced Work" (reference Clause B.9).

B. COEFFICIENT FACTOR – FFP IDIQ

The Contractor shall perform any and all Unit Price Book, Fixed Labor Rate, and Specialty Services specified in the PWS, on individual FWRs or DOs, against this contract for the bare cost specified, multiplied times an applicable coefficient factor described and explained below. As used herein, bare costs means the amount agreed to or determined in accordance with the provisions of Attachment J-1 before the application of the applicable coefficient factor. The coefficient factor submitted by the Contractor for the base year and each option year, in the "Schedule of Prices for Coefficients" (reference Clause B.9) located at the end of this section, shall be applied to the total of the bare costs to establish the price of each FWR or DO.

1. Labor Coefficient

The following three (3) subfactors are used to develop the Contractor's coefficient factor:

a. Indirect Subfactor

The Indirect Subfactor includes, but is not limited to, all costs that would normally be charged as indirect. Accordingly, the specified price of individual FWRs or DOs will not include costs for any of the following, or any other costs which are normally treated as indirect: General and Administrative; Overheads; Labor Burdens; Subcontract Administration; Quality Control; Office Management and Equipment; Project Management and Supervision; Proposal Preparation; Price Quotations; Employee Payroll Taxes; Insurance; Business Taxes; Memberships; Depreciation of Equipment, Tools, and Office Equipment;

Compliance with Tax and Labor Laws; Accounting; Procurement; Personnel Administration; Training/Certifications; Safety and Compliance with Environmental Laws (for example: Safety Rails, face and clothing protection); As-built Drawings; Submittals; Permits; Licenses; Insurance; Protection of and/or Moving Government Property; Costs for signs, traffic cones, barricades, caution tape, safety tape; Temporary Utilities; All Waste and Excess Material; Costs for confined entry equipment; Asbestos equipment, such as HEPA vacuums, decontamination units, and respirators; Mobilization and Close-out for each FWR/Delivery Order; General Equipment including Ladders, Scaffolding, Wheelbarrows, Small commonly used Tools and other Construction Aids; Security; Costs for cleanup work including vacuums, filters; Dumpster and Loading Charges; Subcontractor mark-ups for overhead and profit; and Bin Materials and supplies listed in Attachment J-1.

The Indirect Subfactor should be entered as a multiplier in the "Schedule of Prices for Coefficients" reference Clause B.9.

b. Work Conditions Subfactor:

Some or all of the following work conditions apply to most FWRs or DOs issued by the Government at MSFC and therefore shall be included in the Contractor coefficient factor and not priced separately in individual FWRs or DOs. The Contractor shall include in this subfactor any adjustments necessitated by operating under these conditions:

- (1) Working in occupied areas
- (2) Working through/above ceiling grids
- (3) Disruptions and allowances for utility and equipment outages
- (4) Working in phases
- (5) Disruptions and allowances for tests
- (6) Disruptions and allowances for excavation and work restrictions during missions

The Work Condition Subfactor should be entered as a multiplier in the "Schedule of Prices for Coefficients" (reference Clause B.9).

c. Profit Subfactor

This subfactor represents the percentage of profit for the IDIQ portion of the contract. The Profit Subfactor should be entered

as a multiplier in the "Schedule of Prices for Coefficients" (reference Clause B.9).

The resulting Contractor FFP coefficient is the product of the applicable subfactors.

2. Material Coefficient

Material handling coefficient shall include only costs clearly excluded from the labor-hour rate. Material handling coefficient may include all appropriate indirect costs allocated to direct materials in accordance with the Contractor's usual accounting procedures.

C. COEFFICIENT FACTOR - T&M IDIQ WORK

1. Labor Coefficient

The following two (2) subfactors are used to develop the Contractor's T&M labor coefficient factor:

a. Indirect Subfactor:

The indirect subfactor shall consist of the Contractor's overhead and general and administrative expense.

The indirect subfactor should be entered as a multiplier in the "Schedule of Prices for Coefficients" (reference Clause B.9).

b. Profit Subfactor:

This subfactor represents the percentage of Profit for T&M IDIQ. The Profit Subfactor should be entered as a multiplier in the "Schedule of Prices Coefficients" (reference Clause B.9).

The resulting Contractor T&M labor coefficient is the product of the applicable subfactors.

2. Material Coefficient

Material handling coefficient shall include only costs clearly excluded from the labor-hour rate. Material handling coefficient may include all appropriate indirect costs allocated to direct materials in accordance with the Contractor's usual accounting procedures.

D. SPECIALTY SERVICES AND EQUIPMENT COEFFICIENT

Some items that are included in IDIQ work shall be priced as specialty services and equipment. This will include major equipment purchases as single self-functioning units, costing \$10,000 or greater or services such as tube cleaning or unexploded ordinance surveys. The Contractor's proposed specialty services and equipment quotes will be adjusted by the "Specialty Services and Equipment Coefficient (CLIN 00X3.007)".

Specialty Services and Equipment will not utilize the coefficient factor and subfactors detailed above, but will have a separate and unique coefficient specifically for subcontracted work. This coefficient, submitted by the Contractor, will be fixed for the base year and each option year and detailed in the Microsoft Excel spreadsheet titled "Schedule of Prices for Coefficients" located at the end of this section (reference Clause B.9).

The subfactors and coefficients for FFP, T&M, and Specialty Services and Equipment work for each contract period are as depicted in the Microsoft Excel spreadsheet titled "Schedule of Prices for Coefficients" (reference Clause B.9).

Fixed Bare Labor Rates are considered non-Prepriced items. These rates are fixed for the base year and each option year, as submitted by the Contractor and detailed in the Microsoft Excel spreadsheet titled "Schedule of Prices for Fixed Bare Labor Rates" (reference Clause B.9).

(End of Clause)

B.6 METHOD OF DEDUCTIONS

This contract is performance-based and utilizes various means to calculate deductions if the Contractor fails to perform required services. The Schedules of Prices, the Contractor's Self-Evaluation of Performance, and the Performance Requirements Summary (PRS) will be used to assess the Contractor's performance and to determine deductions pursuant to the Consequences of Contractor's Failure to Perform Required Services Clause in Section E.

The prices for this effort in the "Schedule of Prices for Lump Sum Work" are located at the end of this section (reference Clause B.9). These prices will be used to calculate the deductions defined by the PRS located in Section E.

(End of Clause)

B.7**CONSIDERATION AND PAYMENT**

- A. Lump Sum (Firm Fixed Price) Work - The Contractor shall be paid for the work called for in Attachment J-1, identified as Lump Sum work, as set forth in the "Schedule of Prices for Lump Sum Work" (reference Clause B.9). Payment for completed Lump Sum work, minus any deductions made pursuant to the Consequences of Contractor's Failure to Perform Required Services Clause in Section E, shall be made monthly upon submission of Contractor's properly certified invoices, after the Performance Evaluation Meeting with the Contractor. The Contractor shall submit a monthly Self-Evaluation of Performance (See Clause E.6). Deductions for nonconforming work shall be taken on a monthly basis from the Contractor's invoice. The Contractor's Self-Evaluation will be considered by the Government in its monthly evaluation of nonconforming work.
- B. IDIQ Work - The Contractor shall be paid for the work called for in Attachment J-1, identified as IDIQ work, as ordered and satisfactorily completed minus any deductions made pursuant to the Consequences of Contractor's Failure to Perform Required Services Clause in Section E. Payment for completed IDIQ work will be itemized on one monthly invoice for completed individual FWR and DOs.

For those FWR's that exceed \$50,000, the contractor can receive partial payments of no more than 85% of unique and identifiable material costs incurred under each maintenance job. Unique and identifiable material shall generally be considered major equipment purchases as single self functioning units costing \$5,000 or more. The Government may allow partial payment for other items purchased for a single job where the quantity purchased, in the opinion of the government, makes the items identifiable to the specific job for which they were purchased. Small items must be in factory sealed case lots to expedite inventory by the Government prior to payment. Material that is submitted for partial payments shall be clearly marked with the FWR number and segregated from other material. It is acceptable to place such material with other material purchased for the same FWR for kitting purposes.

For those FWR's that exceed \$50,000 and have a period of performance of 60 calendar days or longer, the contractor can receive partial payments of no more than 85% of labor costs expended.

Each request for partial payment shall exceed \$10,000 per FWR and be identified to the Contract Monitor within two working days after the close of the invoice period for verification.

Section B**NNM08AA54C**

A deduction for nonconforming work shall be taken monthly from the Contractor's invoice. The Contractor shall submit a Self-Evaluation of Performance each month (See Clause E.6). The Contractor's self-evaluation will be considered by the Government in its monthly evaluation of nonconforming work.

- C. All as-built drawings and other required submittals shall be submitted prior to acceptance of the work and final payment of any FWR or DO.
- B. The data required in DRD 1197MA-003, along with the Contractor's SF 1034 - Public Voucher for Purchases and Services Other Than Personal, shall serve as the complete invoice. The Contractor shall identify capital assets separately on its invoices. Distribution shall be in accordance with the DRD

(End of Clause)

B.8 LIMITATION OF FUNDS (FIXED-PRICE CONTRACTS) (NFS 1852.232-77)
(MAR 1989)

- A. Of the total price of items identified for the Option Year One, the sum of \$7,436,963.46 is presently available for payment and allotted to this contract. It is anticipated that from time to time additional funds will be allocated to the contract in accordance with the following schedule, until the total price of said items is allotted:

SCHEDULE FOR ALLOTMENT OF FUNDS

Date	December 31, 2009	Amount	\$15,920,718

- B. The Contractor agrees to perform or have performed work as specified in paragraph A. above up to the point at which, if this contract is terminated pursuant to the Termination for Convenience of the Government clause of this contract, the total amount payable by the Government (including amounts payable for subcontracts and settlement costs) pursuant to paragraphs F. and G. of this clause would, in the exercise of reasonable judgment by the Contractor, approximate the total amount at the time allotted to the contract. The Contractor is not obligated to continue performance of the work beyond that point. The Government is not obligated in any event to pay or reimburse the Contractor more than the amount from time to time allotted to the contract, anything to the contrary in the Termination for Convenience of the Government clause notwithstanding.
- C. 1. It is contemplated that funds presently allotted to this contract will cover the work to be performed until December 31, 2009.

2. If funds allotted are considered by the Contractor to be inadequate to cover the work to be performed until that date, or an agreed date substituted for it, the Contractor shall notify the Contracting Officer in writing when within the next 60 calendar days the work will reach a point at which, if the contract is terminated pursuant to the Termination for Convenience of the Government clause of this contract, the total amount payable by the Government (including amounts payable for subcontracts and settlement costs) pursuant to paragraphs F. and G. of this clause will approximate 75 percent of the total amount then allotted to the contract.
 3.
 - a. The notice shall state the estimate when the point referred to in subparagraph above will be reached and the estimated amount of additional funds required to continue performance to the date specified in subparagraph 1. above, or an agreed date substituted for it.
 - b. The Contractor shall, 60 calendar days in advance of the date specified in subparagraph 1. above, or an agreed date substituted for it, advise the Contracting Officer in writing as to the estimated amount of additional funds required for the timely performance of the contract for a further period as may be specified in the contract or otherwise agreed to by the parties.
 4. If, after the notification referred to in subdivision 3.a. above, additional funds are not allotted by the date specified in subparagraph 1. above, or an agreed date substituted for it, the Contracting Officer shall, upon the Contractor's written request, terminate this contract on that date or on the date set forth in the request, whichever is later, pursuant to the Termination for Convenience of the Government clause.
- D. When additional funds are allotted from time to time for continued performance of the work under this contract, the parties shall agree on the applicable period of contract performance to be covered by these funds. The provisions of paragraphs B. and C., above shall apply to these additional allotted funds and the substituted date pertaining to them, and the contract shall be modified accordingly.
- E. If, solely by reason of the Government's failure to allot additional funds in amounts sufficient for the timely performance of this contract, the Contractor incurs additional costs or is delayed in the performance of the work under this contract, and if additional funds are allotted, an equitable adjustment shall be made in the price or prices (including appropriate target, billing, and ceiling prices where applicable) of the

items to be delivered, or in the time of delivery, or both.

- F. The Government may at any time before termination, and, with the consent of the Contractor, after notice of termination, allot additional funds for this contract.
- G. The provisions of this clause with respect to termination shall in no way be deemed to limit the rights of the Government under the default clause of this contract. The provisions of this Limitation of Funds clause are limited to the work on and allotment of funds for the items set forth in paragraph A., above. This clause shall become inoperative upon the allotment of funds for the total price of said work except for rights and obligations then existing under this clause.
- H. Nothing in this clause shall affect the right of the Government to terminate this contract pursuant to the Termination for Convenience of the Government clause of this contract.

B.9 CONTRACT LINE ITEM NUMBER (CLIN) EXPLANATION

Contract Line Item Numbers (CLINs) are constructed as follows:

CLIN Start Characters	Contract Year	Method of Pricing	Separator	Paragraph Number	Contract Requirement Number
00	0	0	.	00	00

Contract Year	Number Designation
Base Period	0
Option Period 1	1
Option Period 2	2
Option Period 3	3
Option Period 4	4

Method of Pricing	Number Designation
Lump Sum Work	1
Prepriced Work	2
Contractor Coefficient	3
Fixed Labor Rates Subject to Service Contract Act	4

Paragraph Number	Number Designation
1.0	01
2.0	02
3.0	03
4.0	04
5.0	05
6.0	06
7.0	07
8.0	08
9.0	09
10.0	10
11.0	11
12.0	12
13.0	13
14.0	14

B.9 CONTRACT LINE ITEM NUMBER (CLIN) EXPLANATION

Contract requirement numbers relate to each individual contract requirement in each paragraph of Attachment J –1. (i.e. the first contract requirement in Paragraph 1.0 is 01, the second 02, etc.)

EXAMPLE:
A CLIN for work under the schedule of prices for Lump Sum Work for contract Paragraph 3.0 representing work to be done under contract requirement 5 for the second option year would be:
0021.0305

E.2 HIGHER-LEVEL CONTRACT QUALITY REQUIREMENT (FAR 52.246-11)
(FEB 1999)

The Contractor shall comply with the higher-level quality standards identified below.

Title

Quality Management and Quality Assurance
ANSI/ISO/ASQ Q9001:2000 Standards

(End of Clause)

E.3 GOVERNMENT CONTRACT QUALITY ASSURANCE FUNCTIONS (NFS
1852.246-71) (OCT 1988)

In accordance with the inspection clauses of this contract, the Government intends to perform quality assurance functions at MSFC in accordance with the Performance Requirements Summary located at Clause E.9.

(End of Clause)

E.4 CONSEQUENCES OF CONTRACTOR'S FAILURE TO PERFORM
REQUIRED SERVICES FOR ALL LUMP SUM WORK

A. The Contractor is responsible to totally fulfill the performance requirements of this contract. In addition to Clause E.1, the Government will deduct from the

Contractor's invoice or otherwise withhold payment for any items of nonconforming service as specified below.

1. The Government may apply an inspection technique that covers all or part of the work and may, at its option, use an independent inspector to collect data for the technical monitor to use to either assess the Contractor's performance or determine the amount of payment due or both. The defect rate for the purpose of assessing the Contractor's performance will be the sum of all defects observed during the course of the work, expressed as either a percentage of the total population of work items or a per defect basis for the month. (The defect rate will not be extrapolated to the total population of work items to determine payment due.) The Quality Level is 100% minus the defect rate. If the quality level does not meet or exceed the Acceptable Quality Level (AQL) in the Performance Requirements Summary (PRS), the Contractor's quality control is considered unsatisfactory. Failure to consistently maintain adequate quality control can result in termination for default.
 2. A contract requirement may be composed of several subtasks called work requirements. A contract requirement may be determined to be partially complete if the Contractor satisfactorily completes some, but not all, of the work requirements. In those cases, deductions may still be taken from the Contractor's invoice. In addition to all of the rights the Government may have, the Government shall, for partially completed work, make the deductions, as set forth below.
- B. The Government will give the Contractor written or verbal notice of deficiencies prior to deducting for non-performed or unsatisfactory work. Therefore:
1. In the case of non-performed work, the Government
 - a. Shall deduct from the Contractor's invoice all amounts associated with such non-performed work at the prices established by the Schedule of Prices (reference clause B.9) and the PRS or provided by other provisions of this contract, unless the Contractor is permitted or required to perform pursuant to paragraph b. below and satisfactorily completes the work;
 - b. May, at its option, afford the Contractor an opportunity to perform the non-performed work within a reasonable period subject to the discretion of the COTR, but in no event longer than six (6) hours in the case of

daily services, or 24 hours in the case of all other services, of the notice to the Contractor of such nonperformance, at no additional cost to the Government; or

- c. May, at its option, perform the services by Government personnel or other means.

2. In the case of unsatisfactory work, the Government

- a. Shall deduct from the Contractor's invoice all amounts associated with such unsatisfactory work at the prices established by the Schedule of Prices and the PRS or provided by other provisions of the contract; unless the Government afforded the Contractor an opportunity to re-perform pursuant to paragraph b. below and satisfactorily complete the work;
- b. May, at its option, afford the Contractor an opportunity to perform the unsatisfactory work within a reasonable period subject to the discretion of the COTR, but in no event longer than six (6) hours in the case of daily services, or 24 hours in the case of all other services, of the notice to the Contractor of such unsatisfactory work, at no additional cost to the Government; or
- c. May, at its option, perform the services by Government personnel or other means.

- C. Should the Government elect options B.1.a, B.1.b., B.2.a, or B.2.b above, the Government will not assess additional remedies if: (1) the Contractor is working in good faith with the Government to correct the problem(s) in the future; (2) the Contractor does not have a repetitive trend of non-performed and unsatisfactory work for the same requirements, and (3) the Contractor is willing to re-perform defective services at no additional cost to the Government.
- D. Should the Government elect B.1.c. or B.2.c. above, the Government will reduce the contract payment by the amount paid to any Government personnel (based on wages, retirement and fringe benefits) plus material, or the actual costs of other means that accomplished the services. If the actual costs cannot be readily determined, the prices established by the Schedule of Prices and PRS will be utilized in establishing a deduction amount. In addition to these payment deductions, the Government will assess an additional 20 percent or \$100 per contract requirement, whichever is greater, to compensate the Government for administrative costs and other expenses incurred by the Government to obtain satisfactory completion of the services.

- E. Where the Government exercises its options in B.1.b. or B.2.b., the Contractor's original inspection results shall not be modified upon re-inspection. Instead, any payment reduction shall be offset by a credit for satisfactory re-performance.
- F. The Government's exercise of rights under this clause shall not preclude either (1) single occurrences of such nonperformance or unsatisfactory performance, or (2) multiple occurrences of nonperformance or unsatisfactory performance, regardless of whether deductions were taken, from being grounds for termination in accordance with the clause FAR 52.249-8, "Default (Fixed-Price Supply and Service)", in Section I.
- G. In the event the price of non-performed or unsatisfactory work cannot be determined from the prices set out in the Schedule (reference clause B.9), or on the basis of the actual cost to the Government, estimating methods may be used. Means Facilities Cost Data or other estimating sources may be utilized to estimate the cost of non-performed work or the costs that would be incurred in remedying unsatisfactory work. The Government may estimate the using wage rate and fringe benefits from the wage determinations included in the contract. The Government may use estimates of the Contractor's overhead, profit rates, and material costs if applicable.

(End of Clause)

**E.5 CONSEQUENCES OF CONTRACTOR'S FAILURE TO PERFORM
REQUIRED SERVICES FOR IDIQ WORK**

- A. The Contractor is responsible to totally fulfill the performance requirements of this contract. In addition to Clauses E.1 and E.2, the Government will withhold payment for any FWR or DO that does not conform to the requirements specified. The Government will give the Contractor written notice of deficiencies by copy of the final inspection results or other applicable documentation.
- B. In addition to withholding payment until IDIQ work is accepted by the Government, the Government may deduct from the Contractor's invoice the amount specified below:

<u>DEDUCTIONS FOR IDIQ WORK</u>	
Failure to comply with proposal estimate schedule	Subtract three percent from the total FWR/DO amount
Failure to satisfy FWR/DO requirements by completion date specified on FWR/DO	Subtract five percent from the total FWR/DO amount
Failure to avoid unplanned disruptions to building occupants during performance of work	Subtract five percent from the total FWR/DO amount
Failure to provide FWR/DO submittals per contract requirements	Subtract five percent from the total FWR/DO amount
Failure to provide adequate reporting per requirements listed in contract	Subtract five percent from the total FWR/DO amount

Should the Government be required to perform the deficient services by Government or other personnel, the Government will reduce the contract payment by the amount paid to any Government personnel (based on wages, retirement and fringe benefits) plus material, or the actual costs of other means that accomplished the services. If the actual costs cannot be readily determined, the prices set out in the Contractor's FWR or DO proposal will be utilized in establishing a deduction amount. In addition to these payment deductions, the Government will assess an additional 20 percent or \$500 per contract requirement, whichever is greater, to compensate the Government for administrative costs and other expenses incurred by the Government to obtain satisfactory completion of the services.

- C. The Government's exercise of rights under this clause shall not preclude either (1) single occurrences of such nonperformance or unsatisfactory performance, or (2) multiple occurrences of nonperformance or unsatisfactory performance, regardless of whether deductions were taken, from being grounds for termination in accordance with the clause 52.249-8, "Default (Fixed Price Supply and Service,)" in Section I.

(End of Clause)

E.6 CONTRACTORS SELF- EVALUATION OF PERFORMANCE

Contractor's Self-evaluation of Performance shall be submitted by the 8th working day of each month, complete with backup and analyses for all Lump Sum and IDIQ

work completed in performance of this contract. This includes computing deductions taken from lump sum work Schedule of Prices. The Contractor's Self-Evaluation will be considered by the Government in its evaluation. For each event where the Contractor is found to be inaccurate in the Contractor's monthly self-evaluation, a unilateral deduction of \$1000 will be deducted from the Contractor's total monthly invoice in addition to deductions identified at Performance Evaluation Meetings.

(End of Clause)

E.7 PERFORMANCE EVALUATION MEETINGS

The Contractor shall meet with the Government on a monthly basis to discuss the Contractor's prior month performance. The Contractor's Self Evaluation of Performance will be assessed by the Contracting Officer, the COTR, and the Government Technical Monitors. A mutual effort will be made to resolve all problems identified. The Performance Evaluation Meeting and performance results will be determined before monthly invoices are paid.

(End of Clause)

E.8 ALTERNATE DISPUTES RESOLUTION

No claim shall be submitted for monthly contract adjustments made pursuant to "Consequences of Contractor's Failure to Satisfy Performance Requirements" that in the aggregate for each month exceed \$10,000.

The Government and Contractor will develop, after contract award, a mutually acceptable alternative for resolving disputes that may arise during the performance of this contract.

(End of Clause)

E.9 PERFORMANCE REQUIREMENTS SUMMARY

The Contract Requirements listed in this Performance Requirements Summary (PRS) summarize specific firm fixed price tasks that are to be performed under this contract. The Performance Requirements associated with each Contract Requirement are as shown in the PRS and include:

- A. Work Requirements. A series of subtasks associated with each particular Contract Requirement are listed in column 3 of the PRS.

- B. Weight. The value of each Work Requirement is specified as a percentage of the Contract Requirement with which it is associated in column 4 of the PRS. The percentages are based on judgment, taking into account both the costs incurred by the Contractor in carrying out a particular Work Requirement, and the detriment to the Government if the Work Requirement is not satisfied. The Weight compared with the accepted line item unit prices provided in the Schedule of Prices, Section B, will be the primary basis for deducting for partially performed, unsatisfactorily performed, and non-performed work.
- C. Acceptable Quality Level (AQL). The AQL for each Work Requirement is identified in column 5 of the PRS. The AQL is the quality rate for a monthly population of services which, when not met, indicates that the Contractor's quality control is unsatisfactory. The AQL does not represent a threshold for payment deductions. Deductions will be taken for all defects (with appropriate credit for rework) regardless of whether the AQL was not met. The AQL is expressed as a percentage of the total population per period of time or as a number acceptable products per period of time.
- D. A failure to meet the requirements stipulated in the availability matrix in Attachment J-10 will constitute a total failure in quality for deductive purposes. The Government may choose to assess actual damages up to \$10,000 per event in addition to deductions calculated from the PRS.
- E. CLIN 00X1.1005, Handling and Transportation Program, is unique in that failure of equipment or personnel to perform to pre-established schedules associated with Program Critical Hardware moves will constitute a total failure in quality for deductive purposes.
- F. Notes referenced in "NOTES" column of the PRS:
1. Timeliness AQL for reports or submittals similar to reports. The AQL reflects days per period of time (monthly, quarterly, semi-annually, etc.). For evaluation purposes, a standard month of 30 days will be used. Example: If the AQL is 95%, then a deviation of 5% is allowed. The allowable deviation equates to $30 \text{ days} * .05$ or 1.5 days.
 2. Timeliness AQL for allotted response time. The AQL reflects percent of allotted response time. Example: If a response time of 4 hours is required, a AQL of 95% would allow a deviation from this requirement of $4 \text{ hrs} * 60 \text{ min./hr.} * .05$ or 12 minutes.
 3. Timeliness AQL for physical work and operational maintenance. The AQL reflects units of work per period of time (daily, monthly, quarterly, semi-

annual, etc.). Example: If the AQL requires a 97% quality level for work completion time and 100 units are completed, the AQL would be $100 * .97$ or 97 units. The Government will use a specific number of units of work if less than 100 units of work are performed during the evaluation period.

Example: If the AQL is 98% and only 10 units of work are performed, the AQL would become $10 - 2 = 8$ units of work instead of $10 * .98$.

4. Quality or documentation AQL for all work. The AQL reflects work units that meet specified requirements. Example: If the AQL is 97% and 100 units are completed, the AQL would be $100 * .97$ or 97 units.
5. Maintain operational status AQL. The AQL reflects systems or equipment that meet the established operational parameters with respect to time (usually months). Example: If the AQL requires a 98% quality level for maintaining boiler efficiency at 80% or greater, the AQL would be $30 * .98$ or 29.4 days.

(End of Clause)

--Remainder of Page Intentionally Left Blank--

E.9 PERFORMANCE REQUIREMENTS SUMMARY

EXAMPLES OF CONTRACTOR DEDUCTIONS USING THE SCHEDULE OF PRICES AND THE PRS

FROM THE SCHEDULE OF PRICES:

PARAGRAPH REFERENCE	CLIN	DESCRIPTION OF SERVICE/SUPPLIES	EST. ANNUAL SERVICE/SUPPLIES	UNIT	UNIT PRICE	TOTAL PRICE
3.2	0001.0302	1. Quality Control Plan 2. Quarterly Summary Report	1 4	A Q	\$10,000 \$1,000	\$10,000 \$4,000
4.2	0001.0401	1. Trouble Calls	12	M	\$400,000	\$4,800,000

FROM THE PRS:

CLIN	CONTRACT REQUIREMENTS	WORK REQUIREMENT	WEIGHT	AQL	REQUIREMENT
00X1.0302	1. Quality Control Plan 2. Quarterly Summary Report	1. Quality (content per DRD) 2. Timeliness 1. Quality (content per DRD) 2. Timeliness	80% 20% 80% 20%	100% 98% 100% 98%	DRD 1197QE-001 DRD 1197QE-001
00X1.0402	1. Trouble Calls	1. Quality 2. Timeliness 3. Documentation	50% 30% 20%	98% 97% 98%	Para. 4.2A & 4.2C Para. 4.2D, 4.2F, & 4.2G Para. 4.2D & 4.2E

Note: Paragraphs and requirements column refer to Attachment J-1.

Example 1 – CLIN 0001.0302, Quality Control Plan and Quarterly Summary Report:

Assume the Contractor submits the Quality Control Plan 3 days late but addresses all content requirements. Also, the Quarterly Summary Report is submitted on time but does not address all content requirements. The Contractor will be assessed deductions as follows and receive a quality rating as follows:

	Price per unit *	Weight *	Contractor's Failure Rate	= Total deduction for this CLIN
1. Quality Control Plan:	\$10,000	* .20	* 1	= \$2,000
2. Quarterly Summary report	\$1,000	* .80	* 1	= \$800

Quality Control Plan acceptable timeliness 360 days * (1.00-.98) = 7.2 days. Therefore, the timeliness quality level exceeds the AQL.

Quarterly Summary Report quality level is 1 (report) * .00 = 0. Therefore, the quality level is unsatisfactory.

Example 2 – CLIN 0001.0401, Trouble Calls:

Assume the Contractor performs the 1,000 trouble calls in one month but 50 of these are completed late. The Contractor will be assessed deductions as follows and receive a quality rating as follows:

	Price per unit *	Weight*	Contractor's Failure Rate	= Total deduction for this CLIN
	\$400,000/1000*	30 *	50	= \$6,000

Timeliness quality level is 100- (1,000/50 * 100) = 95%. Therefore, the quality level is unsatisfactory.

[END OF SECTION]

SECTION F
DELIVERIES OR PERFORMANCE

F.1 LISTING OF CLAUSES INCORPORATED BY REFERENCE

NOTICE: The following clauses are hereby incorporated by reference:

<u>Clause Number</u>	<u>Title</u>	<u>Date</u>
52.242-15	Stop-Work Order	Aug 1989
52.242-17	Government Delay of Work	Apr 1984
52.247-34	F.O.B. Destination	Nov 1991

(End of Clause)

F.2 VARIATION IN QUANTITY

- A. If the furnished or delivered quantity of Trouble Calls or Response to Spills and Releases under Lump Sum Work, as identified in Attachment J-1, varies on an annual basis more than ten (10) percent above or below for each of the following number of units: Number of Units for Trouble Calls per year is 13,500; Number of Units for Trouble Call Services per year is 2,400; Number of Units for Response to Spills and Releases per year is 35; an equitable adjustment in the contract price (upward or downward) shall be made upon demand of either party. The equitable adjustment shall be based upon any increase or decrease in costs due solely to the variation above 110 percent or below 90 percent of the number of units. Note: If the Contractor furnishes unit priced items above 110 percent, the Government may require the Contractor to furnish additional quantities of such items under the IDIQ provisions of the contract. Payment will be made in accordance with the IDIQ provisions of the contract, and the Contractor will not be entitled to an equitable adjustment under the Lump Sum portion of the contract.
- B. If the furnished or delivered quantity of MSFC Building gross square footage under Lump Sum Work as identified in Attachment J-1 varies on an annual basis more than three (3) percent above or below the following number of units: Number of Units for Building gross square footage is 4,668,000 square feet, an equitable adjustment in the contract price (upward or downward) shall be made upon demand of either party. The equitable adjustment shall be based upon any increase or decrease in costs due solely to the variation above or below three (3) percent of the number of units.

- C. For purposes of determining the applicability of this clause, there shall not be included in the count of services performed, or item delivered (1) any services or items which the Contractor is required to provide to remedy the consequences of any act or omission on the part of the Contractor, or its agents, employees, or subcontractors, or (2) any items or services which the Contractor performs or delivers in order to support its own operations (rather than satisfy the requirements of this contract). Examples under category (1) include any repair or restorative work which might be required due to the negligence of Contractor employees; examples under category (2) include services expended by the Contractor to move or relocate its personnel on-site, and the acquisition of equipment and supplies to accommodate the needs of the Contractor's employees.

(End of Clause)

F.3 PHASE-IN AND PHASE-OUT

- A. Contractor Phase-In. Phase-In activities shall be accomplished in accordance with FAR 52.237-3, Continuity of Services. The services provided by this contract are vital to the Government's overall effort. Therefore, continuity of these services must be maintained at a consistently high level without disruption. To this end, the Contractor shall conduct an orderly phase-in of other activities prior to assumption of responsibility for the effort described in the PWS. The Contractor shall have up to 30 calendar days immediately prior to the effective date of the contract in which to conduct phase-in. Office space will not be provided by the Government during the phase-in period. During this time, the Contractor shall not be responsible for performance of the effort described in the PWS. It is understood that during phase-in the predecessor contractor(s) will be performing the work described in the PWS.
- B. The Government requires phase-in costs to be priced separately. A separate Purchase order [utilizing Simplified Acquisition Threshold (SAT) procedures] obligating up to 30 calendar days of start up and phase-in effort will be issued.
- C. On July 1, 2008 the Contractor shall assume full responsibility for the effort described in the PWS. During phase-in the Contractor shall:
- (1) Participate in meetings with the predecessor contractor(s) to identify and discuss problems or areas requiring attention during the phase-in period; and

- (2) Perform all activities described in the Contractor's phase-in plan submitted with its proposal, and all activities necessary to ensure effective transfer of all effort from the predecessor contractor(s) and ensure readiness to assume full contract performance. As part of the phase-in activities, the Contractor shall provide the following: 1) Final Safety, Health and Environmental Plan (see DRD 1197SA-001); 2) Badged Employee and Remote IT user Listing (see DRD 1197MA-004); and
 - 3) Position Risk Designation for Non-NASA employees (see DRD 1197MA-006); and 4) qualified staff available, badged (in accordance with the Personal Identity Verification (PIV) Procedures provided in Attachment J-29) and ready to assume performance.
- D. Contractor Phase-Out. Phase-out activities shall be accomplished in accordance with FAR 52.237-3, Continuity of Services. Prior to contract completion, a successor contractor(s) may be selected to perform the work requirements covered by the PWS. The Contractor shall conduct an orderly phase-out of contract activities prior to completion of this contract and assumption of responsibility for the effort described in the PWS by a successor contractor(s). The Contractor shall remain responsible for the effort covered by the PWS during phase-out activities. Upon written notice by the Contracting Officer, the Contractor shall conduct phase-out activities for up to 30 calendar days in accordance with FAR 52.237-3, Continuity of Services. Upon Completion of Phase-Out, at the Government's option, the Contractor will be required to furnish to the Government, at no higher than vendors invoice price, all remaining spare parts that were Contractor procured.
- E. The Contractor shall invoice the Government only at the completion of the purchase order. The Government's obligations under this contract will not commence until after the successful completion of the separate phase-in-purchase order.

F. The total Firm-Fixed-Price of the 15-day phase-in period is

\$0

(End of Clause)

F.4 PERIOD OF PERFORMANCE

- A. The base period of performance of this contract shall be July 1, 2008, through June 30, 2009.

- B. In the event the Government elects to exercise its option(s) pursuant to the terms of this contract, the period of performance for each option shall be as set forth below:

<u>Option Number</u>	<u>Period of Performance</u>
1	July 1, 2009 through June 30, 2010
2	July 1, 2010 through June 30, 2011
3	July 1, 2011 through June 30, 2012
4	July 1, 2012 through June 30, 2013

FWRs/DOs may be issued under this contract during the entire performance period. Expiration of the performance period during which orders may be issued shall not affect any orders placed prior to the expiration of the contract. Terms of the contract shall remain in full force and effect in their application to such orders.

(End of Clause)

F.5 PLACE OF PERFORMANCE (MSFC 52.237-91) (Feb 2001)

The Contractor shall perform the work under this contract at the George C. Marshall Space Flight Center, Alabama, and at such other locations as may be approved in writing by the Contracting Officer.

(End of Clause)

F.6 DELIVERY OF REPORTS

Unless otherwise specified, all reports shall be addressed to NASA/ George C. Marshall Space Flight Center, AL 35812, marked with the contract number, to the attention of recipients to be identified by Contracting Officer's letter (addressed in Item 10 of the individual Data Requirements Descriptions, Attachment J-2). A copy of the transmittal letter for each report shall be forwarded to the Contracting Officer.

(End of Clause)

F.7 DELIVERY/PAYMENT CONDITIONS (APPLICABLE ONLY IF CHECKED) (MSFC 52.211-90) (DEC 1995)

- () 1. No partial payment allowed. Do not submit invoice until completion of order.

() 2. No partial delivery. All items to be shipped at the same time.

(X) 3. Partial delivery acceptable.

(End of Clause)

F.8 DELIVERY OF RAW CHEMICALS

Any raw chemicals ordered under this contract must be received through the Transportation Officer as follows:

*SHIP TO: Receiving Department, Building 4631
Saturn Road
National Aeronautics and Space Administration
George C. Marshall Space Flight Center
Marshall Space Flight Center, AL 35812

All shipments must be clearly marked to indicate:

- A. Contents_____
- B. Contract NNM08-_____
- C. PR#_____

G.2 CONTRACTOR EMPLOYEE BADGING AND EMPLOYMENT TERMINATION CLEARANCE (MSFC 52.204-90) (JUL 2006)

- A. It is anticipated that performance of the requirements of this contract will require employee access to and picture badging by the Marshall Space Flight Center. Contractor requests for badging of employees shall be by MSFC Form 1739, "MSFC Contractor Badge/Decal Application." Requests for badging shall be submitted to the appointed Contracting Officer Technical Representative or the Contracting Officer for completion and approval prior to processing by the MSFC Protective Services Office.
- B. The Contractor shall establish procedures to ensure that each badged employee is properly cleared in accordance with MSFC Form 383-1, "Contractor Employee Clearance Document," when the access is no longer needed.
- C. Requests for copies of MSFC Forms 383-1, and 1739 shall be directed to the MSFC Protective Services Office, Marshall Space Flight Center, Alabama 35812.

(End of Clause)

**G.3 INSTALLATION ACCOUNTABLE GOVERNMENT PROPERTY
AVAILABLE FOR USE UNDER THIS CONTRACT**

A. Available Government Property.

1. In performance of work under this contract, certain Government property identified in the contract shall be made available “as is” to the Contractor on a no-charge-for-use basis by the installation’s Logistics Services Office. That property shall be utilized in the performance of this contract at the installation that provided the property or at such other installations or locations as may be specified elsewhere in this contract. Under this clause, the Government retains accountability for, as well as title to, the property, and the Contractor assumes Installation equipment user responsibilities. All equipment users shall report any missing or untagged (meeting the criteria for control) equipment, transfer, location change, or user change of equipment to the cognizant property custodian; notify the cognizant property custodian, supervisor, and the Manager, Protective Services Office (AS50) immediately if theft, damage, or loss of Government, company, or personal property is suspected; ensure that such equipment is used only in pursuit of approved NASA programs and projects; identify equipment not being actively used in pursuit of approved NASA programs and projects; ensure that equipment is turned into the Property Disposal Officer through the cognizant property custodian when no longer needed. Under no circumstances will the Contractor dispose of Installation Accountable Property. The Contractor will retain all responsibilities including notifying cognizant property custodians of all changes in status associated with said equipment. The official accountable record keeping and financial control and reporting of the property subject to this clause shall be retained by the Government and accomplished by the Logistics Services Department and Office of Chief Financial Officer.
2. The delivery or performance dates for this contract are based upon the expectation that Government property suitable for use (except for general purpose property which is furnished “as is”) will be available to the Contractor in sufficient time to enable the Contractor to meet the contract’s delivery or performance dates.

B. Changes in Available Special Purpose Equipment (SPE)

1. The CO may, by written notice, (i) decrease the available SPE under this contract, or (ii) substitute other SPE made available by the Government, or to be acquired by the Contractor for the Government, under this contract. The Contractor shall promptly take such action as the CO may direct regarding the removal, shipment, or disposal of the property covered by such notice.

2. Upon the Contractor's written request, the CO shall make an equitable adjustment to the contract, if the Government has agreed in the contract to make the property available for performing this contract and there is any (i) decrease or substitution in this property pursuant to subparagraph B.1. of this clause; or (ii) withdrawal of authority to use this property, if provided under any other contract or lease.

C. Title in Government Property

1. The Government shall retain title to all Government property.
2. Title to all material shall pass to and vest in the Government upon commencement of processing of the material or its use in contract performance.

D. Use of Government Property. The Government property shall be used only for performing this contract, unless otherwise provided in this contract or approved by the CO.

E. Access. The Government and all its designees shall have access at all reasonable times to the premises in which any Government property is located for the purpose of inspecting the Government property.

F. Loss, Damage, or Destruction of Government Property. Recommendations concerning the loss, damage, or destruction of property made by the NASA Property Survey Board will be forwarded to the Contracting Officer for appropriate administrative action.

(End of clause)

**G.4 INSTALLATION-ACCOUNTABLE GOVERNMENT PROPERTY
(DEVIATION) (NFS 1852.245-71) (SEPTEMBER 2007)**

(A) The Government property described in paragraph (c) of this clause may be made available to the Contractor on a no-charge basis for use in performance of this contract. This property shall be utilized only within the physical confines of the NASA installation that provided the property unless authorized by the contracting officer under (B)(1)(d). Under this clause, the Government retains accountability for, and title to, the property, and the Contractor shall comply with the following:

NASA Procedural Requirements (NPR) 4100, NASA Materials Inventory Management Manual

NASA Procedural Requirements (NPR) 4200, NASA Equipment Management Procedural Requirements

NASA Procedural Requirement (NPR) 4300, NASA Personal Property
Disposal Procedural Requirements

Property not recorded in NASA property systems must be managed in accordance with the requirements of FAR 52.245-1.

The Contractor shall establish and adhere to a system of written procedures to assure continued, effective management control and compliance with these user responsibilities. Such procedures must include holding employees liable, when appropriate, for loss, damage, or destruction of Government property.

(B)(1) The official accountable recordkeeping, financial control, and reporting of the property subject to this clause shall be retained by the Government and accomplished within NASA management information systems prescribed by the installation Supply and Equipment Management Officer (SEMO) and Financial Management Officer. If this contract provides for the Contractor to acquire property, title to which will vest in the Government, the following additional procedures apply:

- (a) The Contractor's purchase order shall require the vendor to deliver the property to the installation central receiving area.
- (b) The Contractor shall furnish a copy of each purchase order, prior to delivery by the vendor, to the installation central receiving area.
- (c) The Contractor shall establish a record of the property as required by FAR 52.245-1, Government Property, and furnish to the Industrial Property Officer a DD Form 1149, Requisition and Invoice/Shipping Document, (or installation equivalent) to transfer accountability to the Government within 5 working days after receipt of the property by the Contractor. The Contractor is accountable for all contractor-acquired property until the property is transferred to the Government's accountability.
- (d) Contractor use of Government property at an off-site location and off-site subcontractor use require advance approval of the Contracting Officer and notification of the Industrial Property Officer. The property shall be considered Government furnished and the Contractor shall assume accountability and financial reporting responsibility. The Contractor shall establish records and property control procedures and maintain the property in accordance with the requirements of FAR 52.245-1, Government Property, until its return to the installation. NASA Procedural Requirements related to property loans shall not apply to offsite use of property by contractors.

- (2) After transfer of accountability to the Government, the Contractor shall continue to maintain such internal records as are necessary to execute the user responsibilities identified in paragraph (a) of this clause and document the acquisition, billing, and disposition of the property. These records and supporting documentation shall be made available, upon request, to the SEMO and any other authorized representatives of the Contracting Officer.
- (C) The following property and services are provided if checked.
- ☒ (1) Office space, work area space, and utilities. Government telephones are available for official purposes only.
 - ☒ (2) Office furniture "as-is."
 - ☒ (3) Property listed in Attachment J-8.
 - (ii) If the Contractor acquires property, title to which vests in the Government pursuant to other provisions of this contract, this property also shall become accountable to the Government upon its entry into Government records.
 - (iii) The Contractor shall not bring to the installation for use under this contract any property owned or leased by the Contractor, or other property that the Contractor is accountable for under any other Government contract, without the Contracting Officer's prior written approval.
 - ☐ (4) Supplies from stores stock.
 - ☒ (5) Publications and blank forms stocked by the installation.
 - ☒ (6) Safety and fire protection for Contractor personnel and facilities.
 - ☒ (7) Installation service facilities: MSFC & Facilities noted in J-8 & J-27.
 - ☒ (8) Medical treatment of a first-aid nature for Contractor personnel injuries or illnesses sustained during on-site duty.
 - ☒ (9) Cafeteria privileges for Contractor employees during normal operating hours.
 - ☒ (10) Building maintenance for facilities occupied by Contractor personnel.
 - ☒ (11) Moving and hauling for office moves, movement of large equipment, and delivery of supplies. Moving services may be provided on-site, as approved by the Contracting Officer.
 - ☒ (12) Shipping and Receiving services, during normal operating hours, for use under this contract.

(End of clause)

G.5 TECHNICAL DIRECTION (NFS 1852.242-70) (SEP 1993)

- (A) Performance of the work under this contract is subject to the written technical direction of the Contracting Officer Technical Representative (COTR), who shall be specifically appointed by the Contracting Officer in writing in accordance with NASA FAR Supplement 1842.270. "Technical direction" means a directive to the Contractor that approves approaches, solutions, designs, or refinements; fills in details or

otherwise completes the general description of work or documentation items; shifts emphasis among work areas or tasks; or furnishes similar instruction to the Contractor. Technical direction includes requiring studies and pursuit of certain lines of inquiry regarding matters within the general tasks and requirements in Attachment J-1 of this contract.

- (B) The COTR does not have the authority to, and shall not, issue any instruction purporting to be technical direction that--
 - (1) Constitutes an assignment of additional work outside the Performance Work Statement;
 - (2) Constitutes a change as defined in the changes clause;
 - (3) Constitutes a basis for any increase or decrease in the total estimated contract cost, the fixed fee (if any), or the time required for contract performance;
 - (4) Changes any of the expressed terms, conditions, or specifications of the contract; or
 - (5) Interferes with the Contractor's rights to perform the terms and conditions of the contract.
- (C) All technical direction shall be issued in writing by the COTR.
- (D) The Contractor shall proceed promptly with the performance of technical direction duly issued by the COTR in the manner prescribed by this clause and within the COTR's authority. If, in the Contractor's opinion, any instruction or direction by the COTR falls within any of the categories defined in paragraph (b) above, the Contractor shall not proceed but shall notify the Contracting Officer in writing within 5 working days after receiving it and shall request the Contracting Officer to take action as described in this clause. Upon receiving this notification, the Contracting Officer shall either issue an appropriate contract modification within a reasonable time or advise the Contractor in writing within 30 days that the instruction or direction is--
 - (1) Rescinded in its entirety; or
 - (2) Within the requirements of the contract and does not constitute a change under the changes clause of the contract, and that the Contractor should proceed promptly with its performance.
- (E) A failure of the Contractor and Contracting Officer to agree that the instruction or direction is both within the requirements of the contract

and does not constitute a change under the changes clause, or a failure to agree upon the contract action to be taken with respect to the instruction or direction, shall be subject to the Disputes clause of this contract.

- (F) Any action(s) taken by the Contractor in response to any direction given by any person other than the Contracting Officer or the COTR shall be at the Contractor's risk.

(End of Clause)

G. 6 SUBMISSION OF REQUESTS FOR PROGRESS PAYMENTS (NFS 1852.232-82) (MAR 1989)

The Contractor shall request progress payments in accordance with the Progress Payments clause by submitting to the Contracting Officer an original and two copies of Standard Form (SF) 1443, Contractor's Request for Progress Payment, and the contractor's invoice (if applicable). The Contracting Officer's office is the designated billing office for progress payments for purposes of the Prompt Payment clause.

(End of Clause)

G.7 OCCUPANCY MANAGEMENT REQUIREMENTS (DEVIATION) (NFS 1852-245-82) (SEPTEMBER 2007)

- (A) In addition to the requirements of the clause at FAR 52.245-1, Government Property, the Contractor shall comply with the following in performance of work in and around Government real property:

(1) NPD 8800.14, Policy for Real Property Management.

(2) NPR 8831.2, Facility Maintenance Management

- (B) The Contractor shall obtain the written approval of the Contracting Officer before installing or removing Contractor-owned property onto or into any Government real property or when movement of Contractor-owned property may damage or destroy Government-owned property. The Contractor shall restore damaged property to its original condition at the Contractor's expense.

- (C) The Contractor shall not acquire, construct or install any fixed improvement or structural alterations in Government buildings or other real property without the advance, written approval of the Contracting Officer. Fixed improvement or structural alterations, as used herein, means any alteration or improvement in the nature of the building or other real property that, after completion, cannot be removed without substantial loss of value or damage to the premises. Title to such property shall vest in the Government.

- (D) The Contractor shall report any real property or any portion thereof when it is no longer required for performance under the contract, as directed by the Contracting Officer.

(End of Clause)

II. NASA FAR SUPPLEMENT (48 CFR CHAPTER 18) CLAUSES

<u>CLAUSE NUMBER</u>	<u>TITLE</u>	<u>DATE</u>
1852.208-81	Restrictions On Printing And Duplicating	NOV 2004
1852.242-72	Observance Of Legal Holidays (Alternate I)	AUG 1992

(End of Clause)

H.2 ASBESTOS MATERIAL (MSFC 52.223-90) (JUN 2002)

During performance of this contract, Contractor personnel performing work in MSFC buildings may come in contact with materials containing asbestos. MSFC Buildings 4200, 4201, 4202, 4663 and 4666 are of special concern since they are known to contain a sprayed on fire insulation on or above the ceiling, usually located on the metal or concrete structure of the buildings. These buildings and all other MSFC buildings may contain asbestos in floor tile, pipe and lagging insulation, exterior siding, roofing felt, and many other building materials. Prior to disturbing suspected asbestos material in any manner, the Contractor shall notify MSFC's Occupational Medicine and Environmental Health Services, for guidance. Contractor shall be responsible for ensuring that all Contractor personnel working onsite are made aware of and comply with this clause.

(End of Clause)

H.3 HAZARDOUS MATERIAL REPORTING (MSFC 52.223-91) (AUG 2005)

A. If during the performance of this contract, the Contractor transports or accepts delivery of any hazardous materials (hazardous as defined under the latest version of Federal Standard No. 313, including revisions adopted during the term of the contract) on-site to Marshall Space Flight Center, the hazardous material shall be processed through MSFC Central Receiving to be bar-coded for inventory. Chemical containers shall be managed in accordance with the provisions of MWI 8550.5, "Hazardous Material Management." The Contractor shall be responsible for ensuring that all Contractor/subcontractor personnel are made aware of and comply with this clause.

- B. Nothing contained in this clause shall relieve the Contractor from complying with applicable Federal, State, and local laws, codes, ordinances, and regulations (including the obtaining of licenses and permits) in connection with hazardous material; or with clauses regarding hazardous materials, which may be contained in the order.

(End of Clause)

H.4 MAJOR BREACH OF SAFETY OR SECURITY (NFS 1852.223-75) (FEB 2002)

- A. Safety is the freedom from those conditions that can cause death, injury, occupational illness, damage to or loss of equipment or property, or damage to the environment. Safety is essential to NASA and is a material part of this contract. NASA's safety priority is to protect:
- (1) the public;
 - (2) astronauts and pilots;
 - (3) the NASA workforce (including contractor employees working on NASA contracts); and
 - (4) high-value equipment and property. A major breach of safety may constitute a breach of contract that entitles the Government to exercise any of its rights and remedies applicable to material parts of this contract, including termination for default. A major breach of safety must be related directly to the work on the contract. A major breach of safety is an act or omission of the Contractor that consists of an accident, incident, or exposure resulting in a fatality or mission failure; or in damage to equipment or property equal to or greater than \$1 million; or in any "willful" or "repeat" violation cited by the Occupational Safety and Health Administration (OSHA) or by a state agency operating under an OSHA approved plan.
- B. Security is the condition of safeguarding against espionage, sabotage, crime (including computer crime), or attack. A major breach of security may constitute a breach of contract that entitles the Government to exercise any of its rights and remedies applicable to material parts of this contract, including termination for default. A major breach of security may occur on or off Government installations, but must be related directly to the work on the contract. A major breach of security is an act or omission by the Contractor that results in compromise of classified information, illegal technology transfer, workplace violence resulting in criminal conviction, sabotage, compromise or denial of information technology services, equipment or property damage from vandalism greater than \$250,000, or theft greater than \$250,000.
- C. In the event of a major breach of safety or security, the Contractor shall report the breach to the Contracting Officer. If directed by the Contracting Officer, the Contractor shall conduct its own investigation and report the results to the Government. The Contractor shall cooperate with the Government investigation, if conducted.

(End of Clause)

H.5 KEY PERSONNEL AND FACILITIES (NFS 1852.235-71) (MAR 1989)

- A. The personnel and/or facilities listed below are considered essential to the work being performed under this contract. Before removing, replacing, or diverting any of the listed or specified personnel or facilities, the Contractor shall (1) notify the Contracting Officer reasonably in advance and (2) submit justification (including proposed substitutions) in sufficient detail to permit evaluation of the impact on this contract.
- B. The Contractor shall make no diversion without the Contracting Officer's written consent provided, that the Contracting Officer may ratify in writing the proposed change, and such ratification shall constitute the Contracting Officer's consent required by this clause.
- C. The list of personnel and/or facilities shown below may, with the consent of the contracting parties, be amended from time to time during the course of the contract to add or delete personnel and/or facilities.

(b)(4)

**FACILITIES:**

None

(End of Clause)

H.6 EXPORT LICENSES (NFS 1852.225-70) (FEB 2000)

- A. The Contractor shall comply with all U.S. export control laws and regulations, including the International Traffic in Arms Regulations (ITAR), 22 CFR Parts 120 through 130, and the Export Administration Regulations (EAR), 15 CFR Parts 730 through 799, in the performance of this contract. In the absence of available license exemptions/exceptions, the Contractor shall be responsible for obtaining the appropriate licenses or other approvals, if required, for exports of hardware, technical data, and software, or for the provision of technical assistance.
- B. The Contractor shall be responsible for obtaining export licenses, if required, before utilizing foreign persons in the performance of this contract, including instances where the work is to be performed on-site at George C. Marshall Space Flight Center,

AL, where the foreign person will have access to export-controlled technical data or software.

- C. The Contractor shall be responsible for all regulatory record keeping requirements associated with the use of licenses and license exemptions/exceptions.
- D. The Contractor shall be responsible for ensuring that the provisions of this clause apply to its subcontractors.

(End of Clause)

H.7 APPLICABLE MSFC REGULATIONS, OTHER LAWS AND REGULATIONS

The Contractor and all its employees engaged in the performance of work under this contract shall observe and comply with all rules and regulations prescribed by the authorities at Marshall Space Flight Center and shall strictly comply with fire, safety, health, environmental, sanitation, and security regulations. In addition, the

Contractor shall obey and abide by and comply with Social Security, Workmen's Compensation and Unemployment Laws of the State as shall be applicable to the work hereunder and the Contractor shall obey and comply with all other Legislation, State and Federal Laws.

(End of Clause)

H.8 FIRE PREVENTION AND PROTECTION

The Contractor shall comply with all fire prevention measures prescribed in the Installation regulations, NASA Standard 8719.11, NASA Fire Protection; NPR 8715.3, NASA General Safety Program Requirements; and MWI 8715.11, Fire Safety Program, copies of which are on file in the Marshall Integrated Document Library (MIDL). Permission shall be obtained from the Industrial Safety Department for use of open flame devices such as blowtorches, portable furnaces, tar kettles, or gas and electric welding and cutting equipment. The Contractor shall be liable for any fire loss to Government property attributable to negligence on the part of the Contractor, including failure to comply with fire prevention measures prescribed by terms of this contract.

(End of Clause)

H.9 INJURY AND MISHAP REPORTING

- A. In the event of an on-site Type A or B (fatal or serious injury) to any employee, the following procedures shall be followed:
 - 1. Initial notification shall be by telephone immediately to the Protective Services Control Center, Emergency Medical Service, and OMEHS (Telephone 911).

2. Notify the Industrial Safety Department, 544-0046.
 3. Notify the Contracting Officer's Technical Representative (COTR).
 4. Submit a MSFC Form 4370 or notify by telephone (256-544-4357, select "0", and ask the technician to complete the Mishap Flash Report) within 4 hours of knowledge of the mishap.
 5. A follow-up mishap report shall be submitted using NASA Form 1627 within 10 days of the mishap in accordance with MWI 8621.1.
- B. In the event of any on-site incident or close call (the potential for lost-time; damage exceeding \$25,000; impacting critical project/program schedule; or gaining public attention) the following procedures shall be followed:
1. Initial notification shall be by MSFC Form 4370 or by telephone (256-544-4357, select "0", and ask the technician to complete the Mishap Flash Report) within 4 hours of knowledge of the incident or close call.
 2. Notify the Industrial Safety Department, 544-0046.
 3. Notify the COTR.
 4. The Industrial Safety Department will determine if a follow-up mishap report, NASA Form 1627, is required to be submitted within 10 days in accordance with MWI 8621.1.
- C. Mishap Board Report: Report shall be completed after completion of mishap investigation in accordance with MWI 8621.1.

(End of clause)

H.10 SITE LOCATION

The intent of this contract is to procure Center Operation Support Services for the George C. Marshall Space Flight Center. On occasion, however, it may be required that work be performed at other facilities within MSFC's mission responsibilities. Contractors shall submit any cost variations caused by work at locations other than MSFC for that FWR or DO cost proposal.

(End of Clause)

H.11 HOURS OF WORK

Unless otherwise specified, the core working hours are 7:00 a.m. to 4:00 p.m., Monday through Friday. The holidays listed in NFS 1852.242-72 OBSERVANCE OF LEGAL HOLIDAYS (AUG1992) shall be non-core workdays.

The Contractor shall obtain approval for any deviation from the core working hours or days by submitting a written request to be received at least 72 hours in advance, to the assigned technical monitor. No work shall be performed without such approval except for safeguarding life or property, however, the COTR may authorize other emergency deviations.

The Contractor shall participate in various NASA-wide or Center-wide activities that may disrupt the Contractor's planned work schedule. Historically, these disruptions are approximately 16 man hours per year, per individual. An example of this is the NASA-wide Performance Evaluation Profile (PEP) survey. This survey is used to assess employees general knowledge related to safety. In those instances where the Contractor's schedule is disrupted, the Contractor may justify revising the work schedule to the COTR. This adjustment shall not exceed ten working days.

In the event of severe weather conditions, the MSFC may suspend operations. When MSFC is closed due to weather conditions, no work shall be performed without approval of the COTR, and coordinated with the Protective Services Department.

(End of Clause)

H.12 SECURITY REQUIREMENTS

All Contractor personnel, including subcontractors, will comply with MPR 1600.1 MSFC Security Procedures and Guidelines (as amended). Copies may be obtained from the MSFC Documentation Repository, Building 4491.

All Contractor Personnel, including subcontractors, working on the MSFC or its off site facilities must be U.S. citizens or Government approved foreign nationals, approved in accordance with NPR 1371.2. Unauthorized personnel will be removed from the Center.

All Contractor personnel, including subcontractors, are required to have a MSFC identification (ID) badge in their possession at all times while on the Center, or its off-site facilities. The ID badge will be displayed at all times unless otherwise restricted by special safety or security measures. Upon request, all Contractor-provided vehicles on Center will be identified with a service vehicle permit approved and issued by the Protective Services Department. Personnel and vehicles not properly identified will be removed from the Center. All personnel operating motor vehicles on the MSFC will comply with the Army MICOM Regulation 210-2, Alabama State Vehicular and Pedestrian Traffic Laws, and the instructions contained in Chapter 13 of MPR 1600.1. Personnel involved in a motor vehicle accident on the Center will immediately report the accident to the Contractor operated Protective Services Control Center (PSCC), at 4-HELP (4-4357), select appropriate option. Identification badges and vehicle passes must be strictly controlled. Lost, missing, or stolen badges or passes will be reported to the PSCC immediately for investigation. All badges must be returned to the Protective Services Department upon completion of the contract.

All known, obvious, or identifiable security violations, breaches, or suspicious activity will be immediately reported to the Protective Services Department, 4-4534.

(End of Clause)

H.13 ENVIRONMENTAL PROTECTION

The Contractor shall comply with all Federal, state and local laws and regulations pertaining to environmental compliance together with all provisions listed in the Technical Specifications for Renovations, Modifications, and Construction (TSRC).

- A. Hazardous and Controlled Waste Generation (MWI 8550.1 Waste Management): During performance of the contract, various materials may be procured which will result in the generation of hazardous and/or controlled wastes. These hazardous wastes are defined by the Alabama Department of Environmental Management regulations. The Contracting Officer will furnish specific waste collection criteria prior to start of work. The Contractor is responsible for coordinating all waste generation activities with the Environmental Engineering Department Environmental Support Contractor who shall arrange for transport and disposal of all hazardous and controlled waste off MSFC property.
- B. Hazardous Material Reporting (MWI 8550.5, Chemical Management): If during performance of this contract, the Contractor brings any hazardous material (hazardous as defined under the latest version of Federal Standard No. 313, including revisions adopted during the term of the contract) on-site to the MSFC, a completed MSFC Form 4099 (MSFC Chemical Inventory Addition) shall be immediately forwarded to the address on the form. A copy of the Material Safety Data Sheet shall be forwarded to Occupational Medicine and Environmental Health Services (OMEHS).
- C. Pollution Prevention (NPG 8820.1, Pollution Prevention Program): During the performance of this contract, the Contractor shall implement pollution prevention in day-to-day activities. The Contractor shall actively implement the Pollution Prevention Act to reduce hazardous chemicals usage, hazardous waste generation, solid waste generation, conserve energy, and preserve natural resources at MSFC.
- D. Storm Water Pollution Prevention (MWI 8550.2, Storm Water Management): During the performance of this contract, the Contractor shall comply with AS10-OI-001 "Consolidated Environmental Response Plan." Depending on the Contractor operations, documented storm water inspection may be required on a daily/weekly/monthly basis such that MSFC is in compliance with the Alabama Department of Environmental Management National Pollutant Discharge Elimination System permit requirements.
- E. Air Compliance (MWI 8550.4, Air Emission Compliance): During the performance of this contract, the Contractor shall comply with MWI 8550.4 and the requirements of the MSFC Title V Air Permit. Depending on Contractor operations, documented air inspections may be required on a routine basis.
- F. Other Laws and Regulations: Nothing contained in this clause shall relieve the Contractor from complying with applicable Federal, State, and Local Laws, codes, ordinances, and regulations (including the obtaining of licenses and permits) in connection with hazardous material, hazardous waste, pollution prevention and storm water prevention; or with other clauses regarding hazardous

materials, hazardous waste, pollution prevention and storm water pollution prevention which may be contained in the contract.

G. Contractor Liability: The Contractor is not liable for pre-existing environmental conditions under this contract.

(End of Clause)

H.14 ELEVATORS

Any temporary use of an existing elevator, in performance of COSS duties, shall be by arrangement with the COTR. Such use will be of an intermittent nature. The Contractor shall provide and maintain suitable and adequate protection covering as approved by COTR for the elevator machinery, the hatchway entrance, and the interior of the elevator during the period of temporary use. Loads in excess of the rated capacity of the elevator will not be permitted.

(End of Clause)

H.15 RECORDING AND PRESERVING HISTORICAL AND ARCHAEOLOGICAL FINDS

All items having any apparent historical or archaeological interest that are discovered in the course of any COSS activities shall be carefully preserved. The Contractor shall leave the archaeological find undisturbed, and shall immediately report the find to the COTR so that the proper authorities may be notified.

(End of Clause)

H.16 VEHICLES

Use of Contractor and Contractor employee vehicles on MSFC shall be subject to MSFC vehicle regulations. No major maintenance of Contractor vehicles shall be allowed on Center. Parking of Contractor equipment, trucks, etc., shall be as approved and assigned by the COTR. To reduce theft hazards, the Contractor shall not leave vehicle keys inside unattended vehicles.

(End of Clause)

H.17 MEASUREMENT VERIFICATION

All measurements of work under the contract shall be measured to the nearest whole unit (to the nearest square foot, to the nearest linear foot, etc.). The Contractor is responsible for verifying the dimension of all existing work to which work will be connected.

(End of Clause)

H.18 CONTRACTOR ACCESS TO MSFC AND DELIVERIES

Delivery of all materials required and ordered by the Contractor for performance of the effort required under this contract shall be scheduled to arrive at the Marshall Space Flight Center between the hours of 7:30 am and 3:00 p.m. Monday through Friday. After-hours deliveries may be made under special circumstances coordinated in advance. All delivery trucks shall typically enter through Gate 1 (except under special conditions) located on the east end of Martin Road. Under a heightened security posture, a detailed security inspection is conducted. The Contractor shall advise delivery companies in advance of Redstone Arsenal security and inspection requirements to prevent unnecessary delays or problems. The Contractor's superintendent or other authorized official shall be on-site to receive deliveries. The Government will not be responsible for acceptance of delivered material.

(End of Clause)

H.19 ASSOCIATE CONTRACTOR AGREEMENTS

- A. In order to achieve the requirements of this contract, the Contractor shall establish, in conjunction with the Contracting Officer (CO) and Contracting Officer's Technical Representative (COTR), the means for coordination and exchange of information with multiple onsite MSFC contractors. The purpose of this clause is to facilitate cooperation among MSFC professional services contractors in providing support for accomplishing MSFC's mission. The Contractor Agreements contemplated by this clause, established within 180 days after contract award, will be added by contract modification to this paragraph as required.
- B. MSFC requires Associate Contractor Agreements (prime, teammates, and subcontractors), including, but not limited to, the following contracts/contractors:

<u>Contract</u>	<u>Contractor</u>
Building Automation Systems Support	Mainthia Technologies, Inc.
Logistics Services	EG&G
Pressures, Propellants and Calibration (PP&C)	Teledyne Brown Engineering

- C. The Contractor shall document agreements with other Associate Contractors described in (a) above via Associate Contractor agreements. The Government will not be a party in such Associate Contractor agreements. A copy of each such agreement shall be provided to the CO. All costs associated with such agreements are included in the negotiated price of this contract.
- D. The Contractor is not relieved of any contract requirements or entitled to any adjustments to the contract terms because of the failure to resolve a disagreement with an Associate Contractor. Liability for the improper

disclosure of any proprietary data contained in or referenced by any agreement shall rest with the parties to the agreement, and not the Government.

(End of Clause)

H.20 SAFETY AND HEALTH (NFS 1852.223-70) (APR 2002)

- A. Safety is the freedom from those conditions that can cause death, injury, occupational illness, damage to or loss of equipment or property, or damage to the environment. NASA's safety priority is to protect: (1) the public, (2) astronauts and pilots, (3) the NASA workforce (including contractor employees working on NASA contracts), and (4) high-value equipment and property.
- B. The Contractor shall take all reasonable safety and occupational health measures in performing this contract. The Contractor shall comply with all Federal, State, and local laws applicable to safety and occupational health and with the safety and occupational health standards, specifications, reporting requirements, and any other relevant requirements of this contract.
- C. The Contractor shall take, or cause to be taken, any other safety, and occupational health-measures the Contracting Officer may reasonably direct. To the extent that the Contractor may be entitled to an equitable adjustment for those measures under the terms and conditions of this contract, the equitable adjustment shall be determined pursuant to the procedures of the changes clause of this contract; provided, that no adjustment shall be made under this Safety and Health clause for any change for which an equitable adjustment is expressly provided under any other clause of the contract.
- D. The Contractor shall immediately notify and promptly report to the Contracting Officer or a designee any accident, incident, or exposure resulting in fatality, lost-time occupational injury, occupational disease, contamination of property beyond any stated acceptable limits set forth in the contract Schedule; or property loss of \$25,000 or more, or Close Call (a situation or occurrence with no injury, no damage or only minor damage (less than \$1,000) but possesses the potential to cause any type mishap, or any injury, damage, or negative mission impact) that may be of immediate interest to NASA, arising out of work performed under this contract. The Contractor is not required to include in any report an expression of opinion as to the fault or negligence of any employee. In addition, service contractors (excluding construction contracts) shall provide quarterly reports specifying lost-time frequency rate, number of lost-time injuries, exposure, and accident/incident dollar losses as specified in the contract Schedule.
- E. The Contractor shall investigate all work-related incidents, accidents, and Close Calls, to the extent necessary to determine their causes and furnish the Contracting Officer a report, in such form as the Contracting Officer may require, of the investigative findings and proposed or completed corrective actions.
- F. (1) The Contracting Officer may notify the Contractor in writing of any noncompliance with this clause and specify corrective actions to be taken.

When the Contracting Officer becomes aware of noncompliance that may pose a serious or imminent danger to safety and health of the public, astronauts and pilots, the NASA workforce (including contractor employees working on NASA contracts), or high value mission critical equipment or property, the Contracting Officer shall notify the Contractor orally, with written confirmation. The Contractor shall promptly take and report any necessary corrective action.

(2) If the Contractor fails or refuses to institute prompt corrective action in accordance with subparagraph (f)(1) of this clause, the Contracting Officer may invoke the stop-work order clause in this contract or any other remedy available to the Government in the event of such failure or refusal.

G. The Contractor (or subcontractor or supplier) shall insert the substance of this clause, including this paragraph (g) and any applicable Schedule provisions and clauses, with appropriate changes of designations of the parties, in all solicitations and subcontracts of every tier, when one or more of the following conditions exist:

(1) The work will be conducted completely or partly on premises owned or controlled by the Government.

(2) The work includes construction, alteration, or repair of facilities in excess of the simplified acquisition threshold.

(3) The work, regardless of place of performance, involves hazards that could endanger the public, astronauts and pilots, the NASA workforce (including Contractor employees working on NASA contracts), or high value equipment or property, and the hazards are not adequately addressed by Occupational Safety and Health Administration (OSHA) or Department of Transportation (DOT) regulations (if applicable).

(4) When the Contractor (or subcontractor or supplier) determines that the assessed risk and consequences of a failure to properly manage and control the hazard(s) warrants use of the clause.

H. The Contractor (or subcontractor or supplier) may exclude the provisions of paragraph (G) from its solicitation(s) and subcontract(s) of every tier when it determines that the clause is not necessary because the application of the OSHA and DOT (if applicable) regulations constitute adequate safety and occupational health protection. When a determination is made to exclude the provisions of paragraph (G) from a solicitation and subcontract, the Contractor must notify and provide the basis for the determination to the Contracting Officer. In subcontracts of every tier above the micro-purchase threshold for which paragraph (G) does not apply, the Contractor (or subcontractor or supplier) shall insert the substance of paragraphs (A), (B), (C), and (F) of this clause).

I. Authorized Government representatives of the Contracting Officer shall have access to and the right to examine the sites or areas where work under this

contract is being performed in order to determine the adequacy of the Contractor's safety and occupational health measures under this clause.

- J. The contractor shall continually update the safety and health plan when necessary. In particular, the Contractor shall furnish a list of all hazardous operations to be performed, and a list of other major or key operations required or planned in the performance of the contract, even though not deemed hazardous by the Contractor. NASA and the Contractor shall jointly decide which operations are to be considered hazardous, with NASA as the final authority. Before hazardous operations commence, the Contractor shall submit for NASA concurrence –

(1) Written hazardous operating procedures for all hazardous operations; and/or

(2) Qualification standards for personnel involved in hazardous operations.

(End of Clause)

H.21 NATIONAL LABOR RELATIONS ACT

The selected contractor shall be required to comply with the requirements of the National Labor Relations Act. Further, MSFC encourages contractors with collective bargaining agreements to become actively involved in the Area Labor-Management Relations Council sponsored jointly by the Marshall Space Flight Center and the Federal Mediation and Conciliations Service. Most of the incumbent contractor's "service employees" are represented by the following collective bargaining representatives (unions):

- A. North Alabama Building Trades Council (A consortium of 9 unions: (1). International Union of Operating Engineers, Local 320; (2). Bricklayers and Allied Craftworkers, Local 6; (3). United Association Plumbers and Steamfitters, Local 377; (4). Laborers International Union of North America, Local Union 366; (5). Sheet Metal Workers International Association, Local 48; (6). International Brotherhood of Electrical Workers, Local 558; (7). United Brotherhood of Carpenters and Joiners of America, Local 1209; (8) Millwrights Local 1192; and (9). International Brotherhood of Painters and Allied Trades, Local 1293). [Point of Contact: Larry Farmer, Building Trades President, telephone number (256) 383-4661/2279].
- B. International Brotherhood of Electrical Workers, Local 558, Facility Technicians, [Point of Contact: Larry Farmer, Business Manager, telephone number (256) 383-4661/2279].

As a Government Contracting Activity, NASA recognizes the legal right of contractor employees and unions to engage in collective bargaining with our contractors, as afforded them by the National Labor Relations Act. Therefore, the successful contractor agrees to maintain policies and practices that are congruous with these mandatory provisions of law.

(End of Clause)

H.22 RESERVE GATE PROCEDURES - ONE-GATE PLAN

In the event of a labor dispute, the Government can restrict the ingress and egress of the contractor's employees and suppliers to a specific gate. The contractor agrees to have the employees re-badged (if necessary) and to direct them and all suppliers to utilize only the gate designated in the reserve gate/one-gate procedure.

(End of Clause)

H.23 APPLICABILITY OF SECTION CLAUSES TO SUBCONTRACTS

In the event the Contractor enters into subcontract(s) for performance of any of the services required under the Performance Work Statement of this contract, the Contractor hereby agrees that, in addition to all other requirements, the intent and purpose of the following contract clauses will be incorporated in any such subcontract(s).

Title

- G.2 Contractor Employee Badging and Employment Termination Clearance
- G.4 Installation-Accountable Government Property
- H.1 Observance of Legal Holidays
- H.2 Asbestos Material
- H.13 Environmental Protection
- H.22 Reserve Gate Procedures
- I.1 Option to Extend the Term of the Contract

(End of Clause)

H.24 SAFETY PERFORMANCE EVALUATION, EVALUATION CRITERIA, AND PERFORMANCE RECOGNITION (MSFC 52.223-94)(FEB 2008)**SAFETY PERFORMANCE EVALUATION**

1. CONTRACTOR RESPONSIBILITY. The Contractor is responsible for maintaining an effective safety program during the course of the contract with a goal to achieve a world-class program within the term of the contract. The Contractor will ensure that the requirements of the MSFC approved Contractor's Safety and Health Plan and applicable Data Requirement Documents (DRD) are met. Contractor safety performance evaluation will be based on the MSFC safety program elements. The Contractor shall conduct an annual self-evaluation based on these criteria. The Contracting Officer (CO)/ Contracting Officer Technical Representative (COTR), in coordination with the MSFC Industrial Safety Branch, will validate the Contractor's self-evaluation.

Annually, the agreed score will be used to assess performance appropriately—positive or negative.

For the purpose of assessing the annual score, the Contractor and the CO/COTR, in coordination with the MSFC Industrial Safety Branch, will reach a mutually agreeable determination based on the metrics reflected in the attachment. In cases where the Contractor and CO/COTR cannot reach agreement, the MSFC Ombudsman will hear arguments from both sides and make a final decision. This process shall not preclude the CO from taking immediate action for any serious, willful, blatant, or continued violations of MSFC safety policy or procedures.

2. EVALUATION CRITERIA. Contractor self-evaluation and Government validation will be based on the applicable elements and sub-elements of the MSFC safety program shown below. Specific criteria are shown on Attachment 1 entitled “Safety Health Management Implementation Guide and Assessment Matrix.” Deviations from the matrix criteria may be made, for cause, and must be approved by the COTR, CO and Government Safety Representative. It should be noted that Element 1 has a management and an employee component. These are simply averaged to obtain the score for Element 1. The result should be carried to the second decimal point.

MANAGEMENT COMMITMENT AND EMPLOYEE INVOLVEMENT HAZARD PREVENTION AND CONTROL

(ELEMENT 1)	(ELEMENT 3)
Documented Safety Policy and Goals	Hazard Identification Process
Safety Committees	Facility and Equipment Maintenance
Safety Meetings	Emergency Program and Drills
Subcontractor Safety	Emergency Medical Care Program
Resources	Personal Protective Equipment
Access to Professional Safety Staff	Health Program
Accountability (Disciplinary Program)	
Annual Evaluation	

(ELEMENT 2)	(ELEMENT 4)
System And Worksite Hazard Analysis	Safety and Health Training
Complete And Update Baseline Surveys	Employee
Perform Analysis Of New Work	Supervisor
Job Hazard Analysis/ Process Review	Manager
Self-Inspections	
Employee Hazard Reporting	
Mishap/Close Call Investigation	
Injury/Illness Rates	

3. PERFORMANCE RECOGNITION.

Contractor performance will be recognized as follows:

Level I - Annual rating score of ≥ 36 and a Lost Time Case Rate (LTC) $\leq 50\%$ of the LTC for the applicable North American Industry Classification System (NAICS) rate.	<i>Formal award with public recognition. Appropriate past performance referrals provided.</i>

Exception: Contractors with less than 100 employees located onsite MSFC. To be rated in Level I, the contractor shall have no lost time injuries during the past year.

Level II - Annual rating score of ≥ 28 based on the annual assessment score, and a LTC $<$ the applicable NAICS rate and the scores remain the same, or reflect improved performance, from the previous period. If scores reflect a decrease in performance, no letter of commendation will be issued.	<i>Formal letter of commendation.</i> <i>Will impact contract evaluation and past performance referrals.</i>

Exception: Contractors with less than 100 employees located onsite MSFC. To be rated in Level II, the contractor shall have no more than one lost time injury during the past year.

Level III - Annual rating score of ≤ 16 or a LTC NAICS rate.	<i>Formal letter expressing concern.</i> <i>Corrective Action Plan requested.</i> <i>Data placed in Past Performance</i>

Failure to improve could result in contract options not being exercised.

Exception: Contractors with less than 100 employees located onsite MSFC. A Level III rating will be given to a contractor having greater than two lost time injuries during the past year.

If contractor's Safety Performance evaluation does not fall within the above categories.	<i>No recognition</i>

NOTE: The most current Department of Labor NAICS rate, effective at the beginning of the annual evaluation period, will be utilized for LTC evaluation. Lost Time Incidents shall be recorded in accordance with NASA requirements specified in MWI 8621.1, "Close Call and Mishap Reporting and Investigation Program." Final decisions on any disputed lost time injury determinations will be handled by established Government regulatory procedures.

4. CONTRACTOR ACCOUNTABILITY FOR MISHAPS.

The Contractor shall not be held accountable for injuries to their personnel or damage to the property they control that is caused by individuals or situations clearly outside the control of their contract.

5. EVALUATION PROCESS.

The evaluation process will be based on the major elements and their sub-elements cited in Paragraph 2.

The evaluation process will include these steps:

- Contractor to conduct annual self-assessment and assign numerical score to each element.
- Contractor self assessments will address compliance with their approved Safety and Health Plan.
- Contractor to have self-assessment validated by CO/COTR and Industrial Safety Branch.
- On an annual basis, the CO will apply contract incentives/recognition or consequences based on the average quarterly scores. The CO will make a determination annually for items requested in paragraph 6 that are not reported. (*Also, see paragraph 7 below.*)

The evaluation process will use the Safety Health Management Implementation Guide and Assessment Matrix at Attachment 1.

6. SAFETY METRIC REPORTING.

The contractor shall report safety metrics to the extent specified in the contract.

7. FAILURE TO REPORT

The contractor fails to report the items in paragraph 6 above in accordance with this contract, an amount of \$1,000 will be deducted for each occurrence of failure to report the required data.

Safety Performance Evaluation Summary Evaluation Criteria and Performance Recognition

EVALUATION CRITERIA

- o Management Commitment and Employee Involvement
- o System and Worksite Hazard Analysis
- o Hazard Prevention and Control
- o Safety and Health Training

Score	<u>≥ 36 points</u> (Annual Score)	<u>≥ 28 points</u> (Annual Score)	<u>≤ 16 points</u> (Annual Score)
LTC	<u>and</u> ≤ 50% of the LTC for the applicable NAICS rate Exception: Contractors with less than 100 employees located onsite MSFC shall have <u>no</u> lost time injuries during the past year.	<u>and</u> < the applicable NAICS rate Exception: Contractors with less than 100 employees located onsite MSFC shall have <u>no more</u> <u>than one</u> lost time injury during the past year.	<u>or</u> > the applicable NAICS rate Exception: Contractors with less than 100 employees located onsite MSFC. A Level III rating will be given when <u>greater than two</u> lost time injuries are reported during the past year.
Grade Levels	I	II	III
Recognition	Formal award publicly recognized. Appropriate Past Performance referrals provided.	Formal letter of commendation – will impact contract evaluation and past performance. (Score must either be the same score or and higher from the last evaluation.)	Formal letter expressing concern. Corrective Action Plan requested. Data placed in Past Performance Database. Failure to improve could result in Contract Options not being exercised.

NOTE: If the contractor's safety performance evaluation does not fall within one of the above categories, no recognition will be provided.

▪ Deductions

o Failure to report information on all personnel and property mishaps that meet the criteria of a NASA NPR 8621.1B, on a monthly basis, will result in a deduction of \$1,000 for each occurrence of failure to report. Information to be reported includes items listed in paragraph 6 of the clause.

ATTACHMENT 1

Safety Health (S) Management Implementation Guide and Assessment Matrix

Score	Commitment and Involvement (Element 1)		Worksite System and Analysis (Element 2)	Hazard Prevention and Control (Element 3)	Safety and Health Training (Element 4)
	A. Management	B. Employee			
10	Benchmarking indicates "best in Class." In areas of visible management leadership, responsibility/accountability, meaningful metrics, and incentive/recognition systems.	Employees fully involved, safety committees functioning well, is a complete behavior process functioning at least one year, employees involved in process planning and risk assessment.	All sub-elements fully in place and functioning well for at least one year.	All programs and sub-elements fully functioning for one year, strong professional support.	All training processes functioning, all levels of personnel trained to identified needs, management training ongoing.
9	All sub-elements are in place and functioning well, but have as yet to reach full maturity.	All processes functioning but for limited time, employees involved to great extent.	All sub-elements in place, employees actively participating.	All programs and sub-elements in place and functioning.	All training processes established, management initial training complete.
8	One sub-element not fully in place but all are being implemented.	Most processes in place, employee involvement growing.	All sub-elements functioning, employee participation growing.	At least five sub-elements functioning and one in final stage of implementation.	Most personnel trained to identified needs, training recordkeeping and recall system functioning.
7	Two sub-elements not fully implemented. Implementation in process on all elements. Employee participation and commitment widespread.	Process activities expanding through organization. Committees and teams functioning.	At least five sub-elements functioning and remainder established.	At least four sub-elements functioning, remaining two developing.	Management and supervisor training in process specialized training in process.
6	All sub-elements in process or in place. Strong management leadership and commitment have begun, metric systems in place, resourcing appropriate.	Employee representatives functioning, joint committees functioning, participating in risk assessment and accident investigation.	At least four sub-elements functioning and remaining three in process, employee participation beginning to spread through organization.	Medical and safety programs strengthening, emergency preparedness program established and exercised.	Management training in process developed, supervisor training developed, training recordkeeping and recall system developed.
5	Management commitment and leadership accepted by workers, worker participation and commitment begun, metric system.	Employee representatives appointed/elected, committees beginning to perform functions (investigation, analysis, process improvement).	All sub-elements established, employees beginning to participate.	Rules written, medical and safety programs developing Personal Protective Equipment adequate.	Training template completed for all personnel, training needs identified, process development begun, recordkeeping and recall system being developed.
4	Management commitment and leadership flowing down to workers, metric systems being developed, incentive/recognition system in process.	All processes being established, involvement and awareness enhancement growing.	At least five sub-elements initiated including self-assessment, hazard reporting, and mishap close call investigations.	Rules in process, emergency preparedness program being developed.	Training development in process, specialized training established, mandatory training in process
3	Generally good management commitment and leadership, implementation plans approved for all elements.	All process needs identified, awareness and involvement enhancement activities begun.	Job Hazard analysis established, investigations strengthened and include employees.	Medical program initiated safety and health program initiated.	Training needs evaluation complete, training templates in process, recordkeeping and recall system needs to be established
2	Management exhibits some aspects of leadership, accountability systems not well defined, employee	Committees established, little activity, employee involvement	Plans established to implement all sub-elements, at least two sub-elements	Personal protective equipment requirements established and being	Training needs evaluation begun, training template forms developed.

	participation framework defined, limited metrics.	beginning, awareness of process started.	beginning to function.	enforced, plans developed for other elements.	
1	Sub-elements have not been established to any significant extent, management leadership is lacking, little or no employee participation.	No committees, little or no employee involvement, no process, little process planning.	Two or fewer sub-elements established, no self-inspection, shallow accident investigation process.	Few or no programs or sub-elements established, few written rules, limited enforcement.	Training needs not established, no management training, limited or no supervisor training.

(End of Clause)

H.25 SECURITY/BADGING REQUIREMENTS FOR FOREIGN NATIONAL VISITORS AND EMPLOYEES OF FOREIGN CONTRACTORS

- A. An employee of a domestic Marshall Space Flight Center (MSFC) contractor or its subcontractor who is not a U.S. citizen (foreign national) may not be admitted to the MSFC site for purposes of performing work without special arrangements. In addition, all employees or representatives of a foreign MSFC contractor/subcontractor may not be admitted to the MSFC site without special arrangements. For employees as described above, advance notice must be given to the MSFC Protective Services Office at least 3 weeks prior to the scheduled need for access to the site so that instructions on obtaining access may be provided.
- B. All visit/badge requests for persons described in paragraph (a) above must be entered in the NASA Foreign National Management System (NFMMS) for acceptance, review, concurrence and approval purposes. When an authorized company official requests a MSFC badge for site access, he/she is certifying that steps have been taken to ensure that its contractor or subcontractor employees, visitors, or representatives will not be given access to export-controlled or classified information for which they are not authorized. The authorized company officials shall serve as the Contractor's representative(s) in certifying that all visit/badge request forms are processed in accordance with MSFC security and export control procedures. No foreign national, representative, or resident alien contractor/subcontractor employee shall be granted access into MSFC until a completed request has been approved and processed through the NFMMS. Unescorted access will not be granted unless the MSFC Protective Services Office has completed a favorable National Agency Check (NAC).
- C. The Contractor agrees that it will not employ for the performance of work onsite at the MSFC any individuals who are not legally authorized to work in the United States. If the MSFC Industrial Security Specialist or the contracting officer has reason to believe that any employee of the Contractor may not be legally authorized to work in the United States and/or on the contract, the Contractor may be required to furnish copies of Federal Form I-9 (Employment Eligibility Verification), U.S. Department of Labor Application for Alien Employment Certification, and any other type of employment authorization document.

- D. The Contractor agrees to provide the information requested by the MSFC Protective Services Office in order to comply with NASA policy directives and guidelines related to foreign visits to NASA facilities so that (1) the visitor/employee/ representative may be allowed access to MSFC or other NASA Centers for performance of this contract, (2) required investigations can be conducted, and (3) required annual or revalidation reports can be submitted to

NASA Headquarters. All requested information must be submitted in a timely manner in accordance with instructions provided by MSFC or any other Center to be visited.

(End of Clause)

H.26 Task/Delivery Ordering Procedure

A. Only the Contracting Officer may issue task orders to the Contractor, providing specific authorization or direction to perform work within the scope of the contract and as specified in the schedule. The Contractor may incur costs under this contract in performance of task orders and task order modifications issued in accordance with this clause. No other costs are authorized unless otherwise specified in the contract or expressly authorized by the Contracting Officer.

B. See Section 1.6 of the PWS for task/delivery order procedures.

H.27 ENVIRONMENTAL - GENERAL CLAUSE (MSFC 52.223-92) (DEC 2006)

NASA/Marshall has developed and maintains an Environmental Management System, in accordance with Executive Order 13148, to support and implement its environmental policy of:

"Enabling Marshall's mission through environmental compliance and stewardship and by providing a safe and healthful workplace." (MPD 8500.1, "MSFC Environmental Policy").

Contractors performing on-site shall comply with all applicable Environmental policies and procedures including, but not limited to, MPD 8500.1 and MPR 8500.1, "MSFC Environmental Management Program." MSFC contractors requiring on-site activities that could potentially impact the environment shall be responsible for following all established NASA/Marshall environmental procedures. These procedures and other applicable policies and procedures are available by contacting the NASA/Marshall Environmental Engineering & Occupational Health Office.

Failure to comply with environmental policies and procedures, may result in damage to the environment, and could potentially result in regulatory penalties against NASA and/or the Contractor, and Contractor loss of access to NASA/Marshall facilities.

(End of Clause)

H.28 SMALL DISADVANTAGED BUSINESS PARTICIPATION – CONTRACT TARGETS

(b)(4)

H.29 REQUIREMENTS FOR THE PROTECTION OF INFORMATION AND INFORMATION TECHNOLOGY ASSETS

This contract contains NFS 1852.204-76 Security Requirements for Unclassified Information Technology Resources. This clause specifies the contractor's responsibilities for the protection of information and information technology resources. Paragraph (b) of NFS 1852.204-76 clause identifies technical security requirements that NASA requires for the protection of information and information technology.

A determination has been made that the requirements of this contract may not require the delivery of the documentation and technical information specified in paragraph (b) of NFS 1852.204-76. Therefore, in accordance with paragraph (d) of NFS 1852.204-76, the contractor may request that the Contracting Officer waive the requirements of paragraph (b) provided that the contractor provides such request in writing and that such request provide all necessary rationale to substantiate the justification. This request shall be submitted to the Contracting Officer within 30 days of contract award. Upon receipt of this request, the Contracting Officer will forward this request for waiver to the MSFC Information Technology Security Manager for a final decision. The Contracting Officer will inform the requestor within 30 days whether the waiver has been approved or denied and shall maintain all documentation related to this determination in an appropriate location

(End of clause)

H.30 52.223-93 ADVANCED NOTIFICATION OF CONTRACTOR EMPLOYEE DISCIPLINE OR INVOLUNTARY TERMINATION (MSFC 52.223) (FEB 2008)

The Contractor agrees to coordinate with the Investigations Unit Lead Investigator in the MSFC Protective Services Office before taking any action to discipline or involuntarily terminate any of its onsite employees. In addition, the Contractor agrees to immediately notify the Investigations Unit Lead Investigator in the MSFC Protective Services Office if any of its onsite employees exhibit any established indicators of potentially violent behavior.

1852.237-70	Emergency Evacuation Procedures	Dec 1988
1852.243-71	Shared Savings	Mar 1997

(End of Clause)

**I.2 REPRESENTATIONS, CERTIFICATIONS, AND OTHER STATEMENTS
OF OFFERORS OR QUOTERS INCORPORATED BY REFERENCE (MSFC
52.252-90) (FEB 2001))**

The Representations, Certifications, and Other Statements of Offerors or Quoters (Section K of the solicitation document) as completed by the Contractor are hereby

incorporated in their entirety by reference, with the same force and effect as if they were given in full text.

(End of Clause)

I.3 APPROVAL OF CONTRACT (FAR 52.204-1) (DEC 1989)

This contract is subject to the written approval of the Procurement Officer and shall not be binding until so approved.

(End of Clause)

I.4 ORDERING (FAR 52.216-18) (OCT 1995)

- A. Any supplies and services to be furnished under this contract shall be ordered by issuance of delivery orders or task orders by the individuals or activities designated in the Schedule. Such orders may be issued from the date of contract award through the end of contract performance.
- B. All delivery orders or task orders are subject to the terms and conditions of this contract. In the event of conflict between a delivery order or task order and this contract, the contract shall control.
- C. If mailed, a delivery order or task order is considered "issued" when the Government deposits the order in the mail. Orders may be issued orally, by facsimile, or by electronic commerce methods only if authorized in the Schedule.

(End of Clause)

I.5 ORDER LIMITATIONS (FAR 52.216-19) (OCT 1995)

- A. Minimum Order. When the Government requires supplies and services covered by this contract in an amount of less than \$100, the Government is not obligated to purchase, nor is the Contractor obligated to furnish, those supplies or services

under the contract.

- B. Maximum Order. The Contractor is not obligated to honor any order for a single item in excess of \$5,000,000.
- C. If this is a requirements contract (i.e. includes the Requirements clause at subsection 52.216-21 of the Federal Acquisition Regulation (FAR), the Government is not required to order a part of any one requirement from the Contractor if that requirement exceeds the maximum-order limitations in paragraph B., of this section.
- D. Notwithstanding paragraphs B. and C. of this section, the Contractor shall honor any order exceeding the maximum order limitations in paragraph B., unless that order (or orders) is returned to the ordering office within five (5) days after issuance, with written notice stating the Contractor's intent not to perform the requested services and the reasons. Upon receiving this notice, the Government may acquire the supplies or services from another source.

(End of Clause)

I.6 INDEFINITE QUANTITY (FAR 52.216-22) (OCT 1995)

- A. This is an indefinite-quantity contract for the supplies or services specified, and effective for the period stated, in the Schedule. The quantities of supplies and services specified in the Schedule are estimates only and are not purchased by this contract.
- B. Delivery or performance shall be made only as authorized by orders issued in accordance with the Ordering clause. The Contractor shall furnish to the Government, when and if ordered, the supplies or services specified in the Schedule up to and including the quantity designated in the Schedule as the "maximum." The Government shall order at least the quantity of supplies or services designated in the Schedule as the "minimum."
- C. Except for any limitations on quantities in the Order Limitations clause or in the Schedule, there is no limit on the number of orders that may be issued. The Government may issue orders requiring delivery to multiple destinations or performance at multiple locations.
- D. Any order issued during the effective period of this contract and not completed within that period shall be completed by the Contractor within the time specified in the order. The contract shall govern the Contractor's and Government's rights and obligations with respect to that order to the same extent

as if the order were completed during the contract's effective period; provided, that the Contractor shall not be required to make any deliveries under this contract after 30 calendar days after the effective period ends.

(End of Clause)

I.7 NOTICE OF PRICE EVALUATION PREFERENCE FOR HUBZONE SMALL BUSINESS CONCERNS (FAR 52.219-4) (JUL 2005)

- A. Definition. "HUBZone small business concern," as used in this clause, means a small business concern that appears on the List of Qualified HUBZone Small Business Concerns maintained by the Small Business Administration.
- B. Evaluation preference.
 - 1. Offers will be evaluated by adding a factor of 10 percent to the price of all offers, except-
 - (a) Offers from HUBZone small business concerns that have not waived the evaluation preference;
 - (b) Otherwise successful offers from small business concerns;
 - 2. The factor of 10 percent shall be applied on a line item basis or to any group of items on which award may be made. Other evaluation factors described in the solicitation shall be applied before application of the factor.
 - 3. A concern that is both a HUBZone small business concern and a small disadvantaged business concern will receive the benefit of both the HUBZone small business price evaluation preference and the small disadvantaged business price evaluation adjustment (see FAR clause 52.219-23). Each applicable price evaluation preference or adjustment shall be calculated independently against an offeror's base offer. These individual preference amounts shall be added together to arrive at the total evaluated price for that offer.
- C. Waiver of evaluation preference. A HUBZone small business concern may elect to waive the evaluation preference, in which case the factor will be added to its offer for evaluation purposes. The agreements in paragraph (d) of this clause do not apply if the offeror has waived the evaluation preference.

☐ Offeror elects to waive the evaluation preference.

- D. Agreement. A HUBZone small business concern agrees that in the performance of the contract, in the case of a contract for:
1. Services (except construction), at least 50 percent of the cost of personnel for contract performance will be spent for employees of the concern or employees of other HUBZone small business concerns;
 2. Supplies (other than procurement from a nonmanufacturer of such supplies), at least 50 percent of the cost of manufacturing, excluding the cost of materials, will be performed by the concern or other HUBZone small business concerns;
 3. General construction, at least 15 percent of the cost of the contract performance incurred for personnel will be will be spent on the concern's employees or the employees of other HUBZone small business concerns; or
 4. Construction by special trade contractors, at least 25 percent of the cost of the contract performance incurred for personnel will be spent on the concern's employees or the employees of other HUBZone small business concerns.
- E. A HUBZone joint venture agrees that in the performance of the contract, the applicable percentage specified in paragraph D. of this clause will be performed by the HUBZone small business participant or participants.
- F. A HUBZone small business concern nonmanufacturer agrees to furnish in performing this contract only end items manufactured or produced by HUBZone small business manufacturer concerns. This paragraph does not apply in connection with construction or service contracts.

(End of clause)

I.8 NOTICE OF PRICE EVALUATION ADJUSTMENT FOR SMALL DISADVANTAGED BUSINESS CONCERNS (FAR 52.219-23) (SEP 2005)

- A. Definitions. As used in this clause-

"Small disadvantaged business concern" means an offeror that represents, as part of its offer, that it is a small business under the size standard applicable to this acquisition; and either-

1. It has received certification by the Small Business Administration as a small disadvantaged business concern consistent with 13 CFR part 124, subpart B; and
 - (a) No material change in disadvantaged ownership and control has occurred since its certification;
 - (b) Where the concern is owned by one or more disadvantaged individuals, the net worth of each individual upon whom the certification is based does not exceed \$750,000 after taking into account the applicable exclusions set forth at 13 CFR 124.104(c)(2); and
 - (c) It is identified, on the date of its representation, as a certified small disadvantaged business concern in the database maintained by the Small Business Administration (PRO-Net).
2. It has submitted a completed application to the Small Business Administration or a Private Certifier to be certified as a small disadvantaged business concern in accordance with 13 CFR part 124, subpart B, and a decision on that application is pending, and that no material change in disadvantaged ownership and control has occurred since its application was submitted. In this case, in order to receive the benefit of a price evaluation adjustment, an offeror must receive certification as a small disadvantaged business concern by the Small Business Administration prior to contract award; or
3. Is a joint venture as defined in 13 CFR 124.1002(f).

"Historically black college or university" means an institution determined by the Secretary of Education to meet the requirements of 34 CFR 608.2. For the Department of Defense (DoD), the National Aeronautics and Space Administration (NASA), and the Coast Guard, the term also includes any nonprofit research institution that was an integral part of such a college or university before November 14, 1986.

"Minority institution" means an institution of higher education meeting the requirements of Section 1046(3) of the Higher Education Act of 1965 (20 U.S.C. 1067k, including a Hispanic-serving institution of higher education, as defined in Section 316(b)(1) of the Act (20 U.S.C. 1101a)).

"United States" means the United States, its territories and possessions, the Commonwealth of Puerto Rico, the U.S. Trust Territory of the Pacific Islands, and the District of Columbia.

B. Evaluation adjustment.

1. The Contracting Officer will evaluate offers by adding a factor of 10 percent to the price of all offers, except-
 - (a) Offerors from small disadvantaged concerns, that have not waived the adjustment, and
 - (b) An otherwise successful offer from a historically black college or university or minority institution.
 2. The Contracting Officer will apply the factor to a line item or a group of line items on which award may be made. The Contracting Officer will apply other evaluation factors described in the solicitation before application of the factor. The factor may not be applied if using the adjustment would cause the contract award to be made at a price that exceeds the fair market price by more than the factor in paragraph (b)(1) of this clause.
- C. Waiver of evaluation adjustment. A small disadvantaged business concern may elect to waive the adjustment, in which case the factor will be added to its offer for evaluation purposes. The agreements in paragraph (d) of this clause do not apply to offers that waive the adjustment.
- ☐ Offeror elects to waive the adjustment.
- D. Agreements.
1. A small disadvantaged business concern, that did not waive the adjustment, agrees that in performance of the contract, in the case of a contract for-
 - (a) Services, except construction, at least 50 percent of the cost of personnel for contract performance will be spent for employees of the concern;
 - (b) Supplies (other than procurement from a nonmanufacturer of such supplies), at least 50 percent of the cost of manufacturing, excluding the cost of materials, will be performed by the concern;
 - (c) General construction, at least 15 percent of the cost of the contract, excluding the cost of materials, will be performed by employees of the concern; or
 - (d) Construction by special trade contractors, at least 25 percent of the cost of the contract, excluding the cost of materials, will be performed by employees of the concern.
 2. A small disadvantaged business concern submitting an offer in its own name shall furnish in performing this contract only end items manufactured or

produced by small business concerns in the United States or its outlying areas. This paragraph does not apply in connection with construction or service contracts.

(End of clause)

I.9 STATEMENT OF EQUIVALENT RATES FOR FEDERAL HIRES
(FAR 52.222-42) (MAY 1989)

In compliance with the Service Contract Act of 1965, as amended, and the regulations of the Secretary of Labor (29 CFR Part 4), this clause identifies the classes of service employees expected to be employed under the contract and states the wages and fringe benefits payable to each if they were employed by the contracting agency subject to the provisions of 5 U.S.C. 5341 or 5332.

THIS STATEMENT IS FOR INFORMATION ONLY: IT IS NOT A WAGE DETERMINATION

A. Classification, Grades and Rates

<u>Employee Classification</u>	<u>Grade</u>	<u>Rates (dollars)</u> <u>Including</u> <u>Fringe Benefits</u>
Boiler Tender	WG-10	20.51
Accounting Clerk II	GS-04	12.47
General Clerk III	GS-04	11.10
Personnel Assistant III	GS-06	15.55
Service Order Dispatcher	GS-04	12.47
Pest Controller	WG-07	17.86
Stock Clerk	WG-04	12.47
Order Clerk II	GS-03	11.10
Secretary I	GS-04	12.47
Secretary II	GS-05	13.95

Bricklayer (Mason)	WG-10	20.51
Carpenter, Foreman	WS-07	24.07
Non-Exempt Classifications Union Represented (Building Trades Council-continued)		
Carpenter, Maintenance	WG-09	19.61
Operating Engineers (Diesel/Crane Mech.)	WG-09	19.61
Operating Engineer (Diesel/Crane Mech) Foreman	WS-07	24.07
Electrician	WG-11	21.39
Electrician (Apprentice 3 year)	WG-07	17.86
Electrician (Elevator Mechanic)	WG-11	21.39
HVAC Mechanic, Electrical	WG-11	21.39
Operating Engineers (Equipment Operator)	WG-10	20.51
HVAC Mechanic Foreman Electrical	WS-07	24.07
HVAC Mechanic Foreman Pipefitter	WS-07	24.07
Pipefitter (HVAC Mechanic)	WG-10	20.51

Represented
(International Brotherhood of Electrical
Workers, Local 558)**

Valve Specialist	WG-10	20.51
Electrical Facility Technician	WG-09	19.61
Mechanical Facility Technician	WG-09	19.61
De-Ionized Water Treatment Technician	WG-09	19.61
Wastewater Treatment Technician	WG-09	19.61

B. Fringe Benefits (applicable to all classifications)

1. Health and Insurance
Life, accident and health insurance and sick leave program, 25 percent of basic hourly rate.
2. Holidays

a. New Year's Day	f. Labor Day
b. Martin Luther King's Birthday	g. Columbus Day
c. President's Birthday	h. Veterans Day
d. Memorial Day	i. Thanksgiving Day
e. Independence Day	j. Christmas Day
3. Vacation or Paid Leave
 - a. 2 hours of annual leave each week for an employee with less than 3 years of service.
 - b. 3 hours of annual leave each week for an employee with 3 but less than 15 years of service.
 - c. 4 hours of annual leave each week for an employee with 15 or more years of service.
4. Retirement
1-1/2 percent of basic hourly rate plus Thrift Savings Plan plus Social Security.

(End of Clause)

I.10 NOTIFICATION OF EMPLOYEE RIGHTS CONCERNING PAYMENT OF UNION DUES OR FEES (FAR 52.222-39) (DEC 2004)

A. *Definition.* As used in this clause-

"United States" means the 50 States, the District of Columbia, Puerto Rico, the Northern Mariana Islands, American Samoa, Guam, the U.S. Virgin Islands, and Wake Island.

- B. Except as provided in paragraph (e) of this clause, during the term of this contract, the Contractor shall post a notice, in the form of a poster, informing employees of

their rights concerning union membership and payment of union dues and fees, in conspicuous places in and about all its plants and offices, including all places where notices to employees are customarily posted. The notice shall include the following information (except that the information pertaining to National Labor Relations Board shall not be included in notices posted in the plants or offices of carriers subject to the Railway Labor Act, as amended (45 U.S.C. 151-188)).

Notice to Employees

Under Federal law, employees cannot be required to join a union or maintain membership in a union in order to retain their jobs. Under certain conditions, the law permits a union and an employer to enter into a union-security agreement requiring employees to pay uniform periodic dues and initiation fees. However, employees who are not union members can object to the use of their payments for certain purposes and can only be required to pay their share of union costs relating to collective bargaining, contract administration, and grievance adjustment.

If you do not want to pay that portion of dues or fees used to support activities not related to collective bargaining, contract administration, or grievance adjustment, you are entitled to an appropriate reduction in your payment. If you believe that you have been required to pay dues or fees used in part to support activities not related to collective bargaining, contract administration, or grievance adjustment, you may be entitled to a refund and to an appropriate reduction in future payments. For further information concerning your rights, you may wish to contact the National Labor Relations Board (NLRB) either at one of its Regional offices or at the following address or toll free number:

*National Labor Relations Board
Division of Information
1099 14th Street, N.W.
Washington DC, 20570
1-866-667-6572
1-866-316-6572 (TTY)*

To locate the nearest NLRB office, see NLRB's website at <http://www.nlr.gov>.

- C. The Contractor shall comply with all provisions of Executive Order 13201 of February 17, 2001, and related implementing regulations at 29 CFR part 470, and orders of the Secretary of Labor.
- D. In the event that the Contractor does not comply with any of the requirements set forth in paragraphs (b), (c), or (g), the Secretary may direct that this contract be cancelled, terminated, or suspended in whole or in part, and declare the

Contractor ineligible for further Government contracts in accordance with procedures at 29 CFR part 470, Subpart B-Compliance Evaluations, Complaint Investigations and Enforcement Procedures. Such other sanctions or remedies may be imposed as are provided by 29 CFR part 470, which implements Executive Order 13201, or as are otherwise provided by law.

E. The requirement to post the employee notice in paragraph (b) does not apply to-

- (1) Contractors and subcontractors that employ fewer than 15 persons;
- (2) Contractor establishments or construction work sites where no union has been formally recognized by the Contractor or certified as the exclusive bargaining representative of the Contractor's employees;
- (3) Contractor establishments or construction work sites located in a jurisdiction named in the definition of the United States in which the law of that jurisdiction forbids enforcement of union-security agreements;
- (4) Contractor facilities where upon the written request of the Contractor, the Department of Labor Deputy Assistant Secretary for Labor-Management Programs has waived the posting requirements with respect to any of the Contractor's facilities if the Deputy Assistant Secretary finds that the Contractor has demonstrated that-
 - (a) The facility is in all respects separate and distinct from activities of the Contractor related to the performance of a contract; and
 - (b) Such a waiver will not interfere with or impede the effectuation of the Executive order; or
- (5) Work outside the United States that does not involve the recruitment or employment of workers within the United States.

F. The Department of Labor publishes the official employee notice in two variations; one for contractors covered by the Railway Labor Act and a second for all other contractors. The Contractor shall-

- (1) Obtain the required employee notice poster from the Division of Interpretations and Standards, Office of Labor-Management Standards, U.S. Department of Labor, 200 Constitution Avenue, NW, Room N-5605, Washington, DC 20210, or from any field office of the Department's Office of Labor-Management Standards or Office of Federal Contract Compliance Programs;

(2) Download a copy of the poster from the Office of Labor-Management Standards website at <http://www.olms.dol.gov> ; or

(3) Reproduce and use exact duplicate copies of the Department of Labor's official poster.

G. The Contractor shall include the substance of this clause in every subcontract or purchase order that exceeds the simplified acquisition threshold, entered into in connection with this contract, unless exempted by the Department of Labor Deputy Assistant Secretary for Labor-Management Programs on account of special circumstances in the national interest under authority of 29 CFR 470.3(c). For indefinite quantity subcontracts, the Contractor shall include the substance of this clause if the value of orders in any calendar year of the subcontract is expected to exceed the simplified acquisition threshold. Pursuant to 29 CFR part 470, Subpart B-Compliance Evaluations, Complaint Investigations and Enforcement Procedures, the Secretary of Labor may direct the Contractor to take such action in the enforcement of these regulations, including the imposition of sanctions for noncompliance with respect to any such subcontract or purchase order. If the Contractor becomes involved in litigation with a subcontractor or vendor, or is threatened with such involvement, as a result of such direction, the Contractor may request the United States, through the Secretary of Labor, to enter into such litigation to protect the interests of the United States.

(End of Clause)

I.11 SECURITY REQUIREMENTS FOR UNCLASSIFIED INFORMATION TECHNOLOGY RESOURCES (NFS 1852.204-76) (MAY 2008) (DEVIATION)

A. The Contractor shall be responsible for information and information technology (IT) security when –

- (1) The Contractor or its subcontractors must obtain physical or electronic (i.e., authentication level 2 and above as defined in National Institute of Standards and Technology (NIST) Special Publication (SP) 800-63, Electronic Authentication Guideline) access to NASA's computer systems, networks, or IT infrastructure; or
- (2) Information categorized as low, moderate, or high by the Federal Information Processing Standards (FIPS) 199, Standards for Security Categorization of Federal Information and Information Systems is stored, generated, processed, or exchanged by NASA or on behalf of NASA by a contractor or subcontractor,

regardless of whether the information resides on a NASA or a contractor/subcontractor's information system.

B. IT Security Requirements.

- (1) Within 30 days after contract award, a Contractor shall submit to the Contracting Officer for NASA approval an IT Security Plan, Risk Assessment, and FIPS 199, Standards for Security Categorization of Federal Information and Information Systems, Assessment. These plans and assessments, including annual updates shall be incorporated into the contract as compliance documents.
 - (a) The IT system security plan shall be prepared consistent, in form and content, with NIST SP 800-18, Guide for Developing Security Plans for Federal Information Systems, and any additions/augmentations described in NASA Procedural Requirements (NPR) 2810, Security of Information Technology. The security plan shall identify and document appropriate IT security controls consistent with the sensitivity of the information and the requirements of Federal Information Processing Standards (FIPS) 200, Recommended Security Controls for Federal Information Systems. The plan shall be reviewed and updated in accordance with NIST SP 800-26, Security Self-Assessment Guide for Information Technology Systems, and FIPS 200, on a yearly basis.
 - (b) The risk assessment shall be prepared consistent, in form and content, with NIST SP 800-30, Risk Management Guide for Information Technology Systems, and any additions/augmentations described in NPR 2810. The risk assessment shall be updated on a yearly basis.
 - (c) The FIPS 199 assessment shall identify all information types as well as the "high water mark," as defined in FIPS 199, of the processed, stored, or transmitted information necessary to fulfill the contractual requirements.
- (2) The Contractor shall produce contingency plans consistent, in form and content, with NIST SP 800-34, Contingency Planning Guide for Information Technology Systems, and any additions/augmentations described in NPR 2810. The Contractor shall perform yearly "Classroom Exercises." "Functional Exercises," shall be coordinated with the Center CIOs and be conducted once every three years, with the first conducted within the first two years of contract award. These exercises are defined and described in NIST SP 800-34.
- (3) The Contractor shall ensure coordination of its incident response team with the NASA Incident Response Center (NASIRC) and the NASA Security Operations

Center, ensuring that incidents are reported consistent with NIST SP 800-61, Computer Security Incident Reporting Guide, and the United States Computer Emergency Readiness Team's (US-CERT) Concept of Operations for reporting security incidents. Specifically, any confirmed incident of a system containing NASA data or controlling NASA assets shall be reported to NASIRC within one hour that results in unauthorized access, loss or modification of NASA data, or denial of service affecting the availability of NASA data.

- (4) The Contractor shall ensure that its employees, in performance of the contract, receive annual IT security training in NASA IT Security policies, procedures, computer ethics, and best practices in accordance with NPR 2810 requirements. The Contractor may use web-based training available from NASA to meet this requirement.
- (5) The Contractor shall provide NASA, including the NASA Office of Inspector General, access to the Contractor's and subcontractors' facilities, installations, operations, documentation, databases, and personnel used in performance of the contract. Access shall be provided to the extent required to carry out IT security inspection, investigation, and/or audits to safeguard against threats and hazards to the integrity, availability, and confidentiality of NASA information or to the function of computer systems operated on behalf of NASA, and to preserve evidence of computer crime. To facilitate mandatory reviews, the Contractor shall ensure appropriate compartmentalization of NASA information, stored and/or processed, either by information systems in direct support of the contract or that are incidental to the contract.
- (6) The Contractor shall ensure that system administrators who perform tasks that have a material impact on IT security and operations demonstrate knowledge appropriate to those tasks. A system administrator is one who provides IT services (including network services, file storage, and/or web services) to someone other than themselves and takes or assumes the responsibility for the security and administrative controls of that service.
- (7) The Contractor shall ensure that NASA's Sensitive But Unclassified (SBU) information as defined in NPR 1600.1, NASA Security Program Procedural Requirements, which includes privacy information, is encrypted in storage and transmission.
- (8) When the Contractor is located at a NASA Center or installation or is using NASA IP address space, the Contractor shall –

- (a) Submit requests for non-NASA provided external Internet connections to the Contracting Officer for approval by the Network Security Configuration Control Board (NSCCB);
- (b) Comply with the NASA CIO metrics including patch management, operating systems and application configuration guidelines, vulnerability scanning, incident reporting, system administrator certification, and security training; and
- (c) Utilize the NASA Public Key Infrastructure (PKI) for all encrypted communication or non-repudiation requirements within NASA when secure email capability is required.

C. Physical and Logical Access Requirements.

- (1) Contractor personnel requiring access to IT systems operated by the Contractor for NASA or interconnected to a NASA network shall be screened at an appropriate level in accordance with NPR 2810 and Chapter 4, NPR 1600.1, NASA Security Program Procedural Requirements. NASA shall provide screening, appropriate to the highest risk level, of the IT systems and information accessed, using, as a minimum, National Agency Check with Inquiries (NACI). The Contractor shall submit the required forms to the NASA Center Chief of Security (CCS) within fourteen (14) days after contract award or assignment of an individual to a position requiring screening. The forms may be obtained from the CCS. At the option of NASA, interim access may be granted pending completion of the required investigation and final access determination. For Contractors who will reside on a NASA Center or installation, the security screening required for all required access (e.g., installation, facility, IT, information, etc.) is consolidated to ensure only one investigation is conducted based on the highest risk level. Contractors not residing on a NASA installation will be screened based on their IT access risk level determination only. See NPR 1600.1, Chapter 4.
- (2) Guidance for selecting the appropriate level of screening is based on the risk of adverse impact to NASA missions. NASA defines three levels of risk for which screening is required (IT-1 has the highest level of risk).
 - (a) IT-1 -- Individuals having privileged access or limited privileged access to systems whose misuse can cause very serious adverse impact to NASA missions. These systems include, for example, those that can transmit commands directly modifying the behavior of spacecraft, satellites or aircraft.
 - (b) IT-2 -- Individuals having privileged access or limited privileged access to systems whose misuse can cause serious adverse impact to NASA missions.

These systems include, for example, those that can transmit commands directly modifying the behavior of payloads on spacecraft, satellites or aircraft; and those that contain the primary copy of “level 1” information whose cost to replace exceeds one million dollars.

- (c) IT-3 -- Individuals having privileged access or limited privileged access to systems whose misuse can cause significant adverse impact to NASA missions. These systems include, for example, those that interconnect with a NASA network in a way that exceeds access by the general public, such as bypassing firewalls; and systems operated by the Contractor for NASA whose function or information has substantial cost to replace, even if these systems are not interconnected with a NASA network.
- (3) Screening for individuals shall employ forms appropriate for the level of risk as established in Chapter 4, NPR 1600.1.
- (4) The Contractor may conduct its own screening of individuals requiring privileged access or limited privileged access provided the Contractor can demonstrate to the Contracting Officer that the procedures used by the Contractor are equivalent to NASA's personnel screening procedures for the risk level assigned for the IT position.
- (5) Subject to approval of the Contracting Officer, the Contractor may forgo screening of Contractor personnel for those individuals who have proof of a –
 - (a) Current or recent national security clearances (within last three years);
 - (b) Screening conducted by NASA within the last three years that meets or exceeds the screening requirements of the IT position; or
 - (c) Screening conducted by the Contractor, within the last three years, that is equivalent to the NASA personnel screening procedures as approved by the Contracting Officer and concurred on by the CCS.
 - (d) The Contracting Officer may waive the requirements of paragraphs (B) and (C)(1) through (C)(3) upon request of the Contractor. The Contractor shall provide all relevant information requested by the Contracting Officer to support the waiver request.
 - (e) The Contractor shall contact the Contracting Officer for any documents, information, or forms necessary to comply with the requirements of this clause.

- (f) At the completion of the contract, the Contractor shall return all NASA information and IT resources provided to the Contractor during the performance of the contract and certify that all NASA information has been purged from Contractor-owned systems used in the performance of the contract.
- (g) The Contractor shall insert this clause, including this paragraph (g), in all subcontracts
 - (1) Have physical or electronic access to NASA's computer systems, networks, or IT infrastructure; or
 - (2) Use information systems to generate, store, process, or exchange data with NASA or on behalf of NASA, regardless of whether the data resides on a NASA or a contractor's information system.

(End of Clause)

I.12 AUTHORIZED DEVIATIONS IN CLAUSES (FAR 52.252-6) (APR 1984)

- A. The use in this solicitation or contract of any Federal Acquisition Regulation (48 CFR Chapter 1) clause with an authorized deviation is indicated by the addition of "(DEVIATION)" after the date of the clause.
- B. The use in this solicitation or contract of any NASA FAR Supplement clause with an authorized deviation is indicated by the addition of "(DEVIATION)" after the name of the regulation.

(End of Clause)

I.13 OMBUDSMAN (NFS 1852.215-84) (OCT 2003) (ALTERNATE I) (JUNE 2000)

- A. An ombudsman has been appointed to hear and facilitate the resolution of concerns from offerors, potential offerors, and contractors during the pre-award and post-award phases of this acquisition. When requested, the ombudsman will maintain strict confidentiality as to the source of the concern. The existence of the ombudsman is not to diminish the authority of the contracting officer, the Source Evaluation Board, or the selection official. Further, the ombudsman does not participate in the evaluation of proposals, the source selection process, or the adjudication of formal contract disputes. Therefore, before consulting with an ombudsman, interested parties must first address their concerns, issues, disagreements, and/or recommendations to the contracting officer for resolution.

- B. If resolution cannot be made by the contracting officer, interested parties may contact the installation ombudsman, Ms. Robin N. Henderson, George C. Marshall Space Flight Center, DEO1, Building 4200, Marshall Space Flight Center, AL 35812, telephone: 256-544-1919, facsimile: 256-544-7920, and e-mail address: Robin.N.Henderson@nasa.gov.

Concerns, issues, disagreements, and recommendations which cannot be resolved at the installation may be referred to the NASA ombudsman, the Director of the Contract Management Division, at 202-358-0445, facsimile 202-358-3083, e-mail, james.a.balinskas@.nasa.gov. Please do not contact the ombudsman to request copies of the solicitation, verify offer due date, or clarify technical requirements. Such inquiries shall be directed to the contracting officer or as specified elsewhere in this document.

- C. If this is a task or delivery order contract, the ombudsman shall review complaints from contractors and ensure they are afforded a fair opportunity to be considered, consistent with the procedures of the contract.

(End of Clause)

I.14 RELEASE OF SENSITIVE INFORMATION (NFS 1852.237-73)
(JUNE 2005)

- A. As used in this clause, "sensitive information" refers to information, not currently in the public domain, that the Contractor has developed at private expense, that may embody trade secrets or commercial or financial information, and that may be sensitive or privileged.
- B. In accomplishing management activities and administrative functions, NASA relies heavily on the support of various service providers. To support NASA activities and functions, these service providers, as well as their subcontractors and their individual employees, may need access to sensitive information submitted by the Contractor under this contract. By submitting this proposal or performing this contract, the Contractor agrees that NASA may release to its service providers, their subcontractors, and their individual employees, sensitive information submitted during the course of this procurement, subject to the enumerated protections mandated by the clause at 1852.237-72, Access to Sensitive Information.
- C. (1) The Contractor shall identify any sensitive information submitted in support of this proposal or in performing this contract. For purposes of identifying sensitive information, the Contractor may, in addition to any other notice or legend otherwise required, use a notice similar to the following:

Mark the title page with the following legend:

This proposal or document includes sensitive information that NASA shall not disclose outside the Agency and its service providers that support management activities and administrative functions. To gain access to this sensitive information, a service provider's contract must contain the clause at NFS 1852.237-72, Access to Sensitive Information. Consistent with this clause, the service provider shall not duplicate, use, or disclose the information in whole or in part for any purpose other than to perform the services specified in its contract. This restriction does not limit the Government's right to use this information if it is obtained from another source without restriction.

The information subject to this restriction is contained in pages of Volume I, all pages, Volume II, all pages, Volume III, all pages, and Volume IV, all pages.

Mark each page of sensitive information the Contractor wishes to restrict with the following legend:

Use or disclosure of sensitive information contained on this page is subject to the restriction on the title page of this proposal or document.

- (2) The Contracting Officer shall evaluate the facts supporting any claim that particular information is "sensitive." This evaluation shall consider the time and resources necessary to protect the information in accordance with the detailed safeguards mandated by the clause at NFS1852.237-72, Access to Sensitive Information. However, unless the Contracting Officer decides, with the advice of Center counsel, that reasonable grounds exist to challenge the Contractor's claim that particular information is sensitive, NASA and its service providers and their employees shall comply with all of the safeguards contained in paragraph (d) of this clause.
- D. To receive access to sensitive information needed to assist NASA in accomplishing management activities and administrative functions, the service provider must be operating under a contract that contains the clause at NFS 1852.237-72, Access to Sensitive Information. This clause obligates the service provider to do the following:
- (1) Comply with all specified procedures and obligations, including the Organizational Conflicts of Interest Avoidance Plan, which the contract has incorporated as a compliance document.

- (2) Utilize any sensitive information coming into its possession only for the purpose of performing the services specified in its contract.
 - (3) Safeguard sensitive information coming into its possession from unauthorized use and disclosure.
 - (4) Allow access to sensitive information only to those employees that need it to perform services under its contract.
 - (5) Preclude access and disclosure of sensitive information to persons and entities outside of the service provider's organization.
 - (6) Train employees who may require access to sensitive information about their obligations to utilize it only to perform the services specified in its contract and to safeguard it from unauthorized use and disclosure.
 - (7) Obtain a written affirmation from each employee that he/she has received and will comply with training on the authorized uses and mandatory protections of sensitive information needed in performing this contract.
 - (8) Administer a monitoring process to ensure that employees comply with all reasonable security procedures, report any breaches to the Contracting Officer, and implement any necessary corrective actions.
- E. When the service provider will have primary responsibility for operating an information technology system for NASA that contains sensitive information, the service provider's contract shall include the clause at 1852.204-76, Security Requirements for Unclassified Information Technology Resources. The Security Requirements clause requires the service provider to implement an Information Technology Security Plan to protect information processed, stored, or transmitted from unauthorized access, alteration, disclosure, or use. Service provider personnel requiring privileged access or limited privileged access to these information technology systems are subject to screening using the standard National Agency Check (NAC) forms appropriate to the level of risk for adverse impact to NASA missions. The Contracting Officer may allow the service provider to conduct its own screening, provided the service provider employs substantially equivalent screening procedures.
- F. This clause does not affect NASA's responsibilities under the Freedom of Information Act.

- G. The Contractor shall insert this clause, including this paragraph (g), suitably modified to reflect the relationship of the parties, in all subcontracts that may require the furnishing of sensitive information.

(End of Clause)

I.15 MINIMUM INSURANCE COVERAGE (NFS 1852.228-75) (OCT 1988)

The Contractor shall obtain and maintain insurance coverage as follows for the performance of this contract:

- A. Worker's compensation and employer's liability insurance as required by applicable Federal and state workers' compensation and occupational disease statutes. If occupational diseases are not compensable under those statutes, they shall be covered under the employer's liability section of the insurance policy, except when contract operations are so commingled with the Contractor's commercial operations that it would not be practical. The employer's liability coverage shall be at least \$100,000, except in States with exclusive or monopolistic funds that do not permit workers' compensation to be written by private carriers.
- B. Comprehensive general (bodily injury) liability insurance of at least \$500,000 per occurrence.
- C. Motor vehicle liability insurance written on the comprehensive form of policy which provides for bodily injury and property damage liability covering the operation of all motor vehicles used in connection with performing the contract. Policies covering motor vehicles operated in the United States shall provide coverage of at least \$200,000 per person and \$500,000 per occurrence for bodily injury liability and \$20,000 per occurrence for property damage. The amount of liability coverage on other policies shall be commensurate with any legal requirements of the locality and sufficient to meet normal and customary claims.
- D. Comprehensive general and motor vehicle liability policies shall contain a provision worded as follows:
- "The insurance company waives any right of subrogation against the United States of America which may arise by reason of any payment under the policy."
- E. When aircraft are used in connection with performing the contract, aircraft public and passenger liability insurance of at least \$200,000 per person and \$500,000 per occurrence for bodily injury, other than passenger liability, and \$200,000 per occurrence for property damage. Coverage for passenger liability bodily injury shall

be at least \$200,000 multiplied by the number of seats or passengers, whichever is greater.

(End of Clause)

I.16 LIMITATIONS ON SUBCONTRACTING (FAR 52.219-14) (DEC 1996)

- A. This clause does not apply to the unrestricted portion of a partial set-aside.
- B. By submission of an offer and execution of a contract, the Offeror/Contractor agrees that in performance of the contract in the case of a contract for—
- (1) Services (except construction). At least 50 percent of the cost of contract performance incurred for personnel shall be expended for employees of the concern.
 - (2) Supplies (other than procurement from a non-manufacturer of such supplies). The concern shall perform work for at least 50 percent of the cost of manufacturing the supplies, not including the cost of materials.
 - (3) General construction. The concern will perform at least 15 percent of the cost of the contract, not including the cost of materials, with its own employees.
 - (4) Construction by special trade contractors. The concern will perform at least 25 percent of the cost of the contract, not including the cost of materials, with its own employees.

(End of Clause)

**I.17 POST-AWARD SMALL BUSINESS PROGRAM
REREPRESENTATION (FAR 52.219-28) (JUNE 2007)**

- A. Definitions. As used in this clause—
- Long-term contract means a contract of more than five years in duration, including options. However, the term does not include contracts that exceed five years in duration because the period of performance has been extended for a cumulative period not to exceed six months under the clause at 52.217-8, Option to Extend Services, or other appropriate authority.
- Small business concern means a concern, including its affiliates, that is independently owned and operated, not dominant in the field of operation in which it is bidding on Government contracts, and qualified as a small business under the criteria in 13 CFR part 121 and the size standard in paragraph (c) of this clause.

- B. If the Contractor represented that it was a small business concern prior to award of this contract, the contractor shall re-represent its size status according to paragraph (e) of this clause or, if applicable, paragraph (g) of this clause, upon the occurrence of any of the following:
- (1) Within 30 days after execution of a novation agreement or within 30 days after modification of the contract to include this clause, if the novation agreement was executed prior to inclusion of this clause in the contract.
 - (2) Within 30 days after a merger or acquisition that does not require a novation or within 30 days after modification of the contract to include this clause, if the merger or acquisition occurred prior to inclusion of this clause in the contract.
 - (3) For long-term contracts—
 - (i) Within 60 to 120 days prior to the end of the fifth year of the contract; and
 - (ii) Within 60 to 120 days prior to the exercise date specified in the contract for any option thereafter.
- C. The Contractor shall re-represent its size status in accordance with the size standard in effect at the time of this re-representation that corresponds to the North American Industry Classification System (NAICS) code assigned to this contract. The small business size standard corresponding to this NAICS code can be found at <http://www.sba.gov/services/contractingopportunities/sizestandardstopics/>.
- D. The small business size standard for a Contractor providing a product which it does not manufacture itself, for a contract other than a construction or service contract, is 500 employees.
- E. Except as provided in paragraph (g) of this clause, the Contractor shall make the re-representation required by paragraph (b) of this clause by validating or updating all its representations in the Online Representations and Certifications Application and its data in the Central Contractor Registration, as necessary, to ensure they reflect current status. The Contractor shall notify the contracting office by e-mail, or otherwise in writing, that the data have been validated or updated, and provide the date of the validation or update.
- F. If the Contractor represented that it was other than a small business concern prior to award of this contract, the Contractor may, but is not required to, take the actions required by paragraphs (e) or (g) of this clause.
- G. If the Contractor does not have representations and certifications in ORCA, or does not have a representation in ORCA for the NAICS code applicable to this contract, the Contractor is required to complete the following re-representation

and submit it to the contracting office, along with the contract number and the date on which the re-representation was completed:

The Contractor represents that it _____ is, ☒ is not a small business concern under NAICS Code 561210 assigned to contract number NNM08AA54C.

Gary L. Dylewski
Vice President
Mission Support SBU

PART IV – REPRESENTATIONS AND INSTRUCTIONS**SECTION K – REPRESENTATIONS, CERTIFICATIONS, AND OTHER
STATEMENTS OF OFFERORS OR RESPONDENTS****K.1 LISTING OF PROVISIONS INCORPORATED BY REFERENCE****I. Federal Acquisition Regulation (48 CFR Chapter 1)**

<u>Clause Number</u>	<u>Title</u>	<u>Date</u>
52.203-11	Certification and Disclosure Regarding Payments to Influence Certain Federal Transactions	SEP 2005

II. NASA FAR Supplement (48 CFR CHAPTER 18) Clauses

<u>Clause Number</u>	<u>Title</u>	<u>Date</u>
None Included by Reference.		

(End of Provision)

**K.2 ANNUAL REPRESENTATIONS AND CERTIFICATIONS FAR 52.204-8
(JAN 2006)**

(A)(1) The North American Industry Classification System (NAICS) code for this acquisition is **561210.**

(2) The small business size standard is **\$32,500,000.**

(3) The small business size standard for a concern which submits an offer in its own name, other than on a construction or service contract, but which proposes to furnish a product which it did not itself manufacture, is 500 employees.

(B)(1) If the clause at 52.204-7, Central Contractor Registration, is included in this solicitation, paragraph (c) of this provision applies.

(2) If the clause at 52.204-7 is not included in this solicitation, and the offeror is currently registered in CCR, and has completed the ORCA electronically, the offeror may choose to use paragraph (c) of this provision instead of completing the corresponding individual representations and certification in the solicitation. The offeror shall indicate which option applies by checking one of the following boxes.

☐ (a) Paragraph (C) applies.

☐ (b) Paragraph (C) does not apply and the offeror has completed the individual representations and certifications in the solicitation.

(C) The offeror has completed the annual representations and certifications electronically via the Online Representations and Certifications Application (ORCA) website at <http://orca.bpn.gov> . After reviewing the ORCA database information, the offeror verifies by submission of the offer that the representations and certifications currently posted electronically have been entered or updated within the last 12 months, are current, accurate, complete, and applicable to this solicitation (including the business size standard applicable to the NAICS code referenced for this solicitation), as of the date of this offer and are incorporated in this offer by reference (see FAR 4.1201); except for the changes identified below *[offeror to insert changes, identifying change by clause number, title, date]*. These amended representation(s) and/or certification(s) are also incorporated in this offer and are current, accurate, and complete as of the date of this offer.

FAR Clause	Title	Date	Change

Any changes provided by the offeror are applicable to this solicitation only, and do not result in an update to the representations and certifications posted on ORCA.

1.0 GENERAL REQUIREMENTS**1.1 GENERAL**

Attachment J-1 describes the work to be performed under this Center Operations Support Services (COSS) performance based contract for the Marshall Space Flight Center (MSFC). As part of this Performance Work Statement (PWS), the Contractor shall provide operations and maintenance of all MSFC facilities and collateral equipment and other related functions as described herein. These activities shall emphasize supporting the missions of MSFC in a safe, reliable and timely manner, with minimum disruptions to the facility occupants/users. NPR 8831.2 Facilities Maintenance Management shall govern this activity. Functions shall be performed by skilled craftsmen/technicians in accordance with this contract. Some MSFC employees are located at off-Center locations. This contract does not address operations and maintenance of those facilities. However, the Contractor may be requested, from time-to-time, to support a MSFC activity such as relocating equipment to an off-Center location for use, storage, off-Center recognition ceremonies, or other special events.

The U.S. Army, including maintenance of their respective distribution systems, furnishes basic utilities. The interfaces on these utility systems are normally five feet outside the building or at some specific convenient disconnect nearby. The U. S. Army will furnish routine maintenance work on the 4160-Volt system, with the exception of work listed in Paragraph 13.0. However, the Contractor shall have capability to de-energize 4160-Volt systems in emergency situations.

MSFC is committed to safety, quality, and core values. As a result of this a MSFC Safety, Health, and Environmental (SHE) Policy, a Quality Policy, and NASA Core Values have been established. These are provided below.

MSFC SHE Policy:

SAFETY: MSFC strives to prevent human injury and ensure the safety of all operations and products leading to mission success.

HEALTH: MSFC strives to prevent occupational illnesses and promote and maintain the physical and mental well being of its employees to help ensure mission success.

ENVIRONMENTAL: Enabling Marshall's mission through environmental compliance and stewardship.

MSFC Quality Policy:

MSFC policy is to provide quality products and services to our customers through the NASA Values: Safety, Teamwork, Integrity, and Mission Success.

1.2 **SCOPE OF WORK**

- A. General. The Contractor shall provide all resources, including labor, supervision, tools, equipment (except Government Equipment), materials, spare parts, incidental engineering, transportation, and management necessary to fulfill the work required as part of this contract. The Management Plan for accomplishing contract requirements shall be prepared in accordance with DRD 1197MA-002. The scope of this contract covers the following:

<u>Paragraph</u>	<u>Function</u>
1.0	General Requirements
2.0	Definitions and Acronyms
3.0	Documentation, Work Control, and Reliability Centered Maintenance (RCM)
4.0	Trouble Calls (TCs)/Trouble Call Services (TCS)
5.0	Engineering
6.0	Environmental Management Support
7.0	Facility Alarm and Monitoring Systems
8.0	Utilities and Surfaced Areas
9.0	Repair Buildings and Structures
10.0	Mechanical Systems
11.0	Steam Distribution System Operation
12.0	HVAC/R Systems
13.0	Electrical Distribution and Emergency Generating Systems
14.0	Emergency Management Support

B. Contractor Quality Control (QC)

The Contractor shall be responsible for supervising, directing, and otherwise controlling their own personnel. The Contractor shall be responsible for ensuring quality in the work associated with the performance of this contract. As a minimum, the Contractor's quality control program shall be compliant with American National Standards Institute (ANSI) American Society for Quality Control (ASQC) ANSI/ISO/ASQ Q9001: 2000, Quality Management Systems Requirements. The Contractor shall evaluate the entire scope of operations, assign a level of importance, and implement an effective quality control program. The Contractor shall provide the QCP in accordance with DRD 1197QE-001.

Further, the Contractor's established Quality Control Program shall be maintained in accordance with the FAR 52.246-4, "Inspection of Services - Fixed Price" and FAR 52.246-4, "Inspection-Time-and-Material and Labor-Hour" clauses, Section E, to ensure that the work performed under the contract conforms to the contract requirements. The Contractor's QCP shall provide Contractor management with an effective and efficient means of identifying and correcting problems throughout the entire scope of operations.

- C. Government Contract Quality Assurance (QA). In accordance with FAR 52.246-4, "Inspection of Services-Fixed Price" and FAR 52.246-4, "Inspection-Time-and-Material and Labor-Hour" clauses, Section E, each phase of the services rendered under this contract is subject to Government inspection. The Government's QA Surveillance Program is not a substitute for QC by the Contractor. All findings of unsatisfactory or non-performed work shall be administered in accordance with the "Consequences of Contractor's Failure to Perform Required Services" clause of Section E. All costs associated with rework to make the performance satisfactory are the responsibility of the Contractor and are over and above the deduct made pursuant to the "Consequences of Contractor's Failure to Perform Required Services" clause of Section E. The Government reserves the right to choose the inspection methods, define its own Predictive Testing and Inspection (PT&I) program to be used in implementing its QA Program, and vary the inspection methods utilized during the work, without notice to the Contractor. Additionally, the Government intends to use PT&I methods and results during Government surveillance to assist in documenting Contractor performance of the PM program. The Government will inform the Contractor of deficiencies discovered using PT&I methods and will make the PT&I data containing these deficiencies available. PT&I results will be used by the Government as input in determining monthly payments to the Contractor.
- D. System Configuration Control. Many of the systems at MSFC are under configuration control. Therefore, the Contractor shall obtain Government approval prior to making configuration changes to any existing system. Configuration control includes any change that affects form, fit, or function of the existing system or system component. The Contractor shall provide red lined drawings depicting any change in system configuration including identified discrepancies in existing system drawings, physical location changes or system modifications. Ink on paper or computer aided drafting files will be acceptable.
- E. Cooperation with Other Contractors. The Government may undertake or award other contracts for additional work at or near the site of work under this contract. The Contractor shall fully cooperate with other contractors and Government employees and shall carefully adapt scheduling and performance of work under this contract to accommodate the work by others, heeding any direction that may be provided by the COTR.
- F. Interface with the Utility Control System (UCS) Contractor. The COSS Contractor shall work closely with the UCS Contractor in the execution of their contract. The UCS contract is a 24/7 operation that typically provides for the monitoring and control of systems throughout MSFC. There will be frequent interface with the UCS Contractor during core and non-core hours due to alarms received by the UCS Control Room via MSFC's building automation system (BAS). Many of the alarms generated will be classified as urgent or emergency in nature and can occur at any time due to continuous monitoring of MSFC's facilities. Notification and cooperation between the UCS contract and the COSS contract is an essential element in the performance of both contracts. The COSS Contractor shall provide to the UCS Contractor a contact list consisting of names and contact information for use during non-core hours. UCS personnel may

be notified through alarms, telephone, radio or any other method that an urgent or emergency condition may exist in which COSS personnel need to be contacted. The contact list shall be updated by the COSS Contractor to reflect changes in COSS personnel or contact information. The COSS Contractor shall update and distribute a new contact list within 7 days of personnel changes or contact information changes.

The UCS Contractor maintains a daily events log (DEL) which tracks and records many aspects of MSFC's building systems relative to operation and maintenance. The COSS Contractor shall inform the UCS Control Room of significant events and applicable work status updates during core and non-core hours for entry into the DEL. For accurate records to be logged and maintained, it is essential that the COSS Contractor provide work status updates to UCS in a timely manner as well as provide timely feedback on work being performed in the field.

The UCS Contractor shall act as the focal point to receive trouble calls during non-core hours, weekends, and holidays and in accordance with Paragraph 3.2.B. The COSS Contractor shall also be in frequent contact with the UCS Contractor as they jointly address Facility Work Requests (FWR) respective of both contract requirements. The COSS Contractor shall provide adequate notice to the UCS Contractor when UCS support is required for completion of a Facility Work Request. Adequate notice is defined as the proper amount of time that will allow for total FWR completion and system/equipment commissioning prior to the FWR's target completion date.

Specific work boundaries and work assignments between the COSS and UCS Contractors are as follows:

1. The communication aspect of equipment defines the separation point for determining areas of responsibility between the COSS and UCS contracts. The UCS Contractor maintains a variety of Local Area Network (LAN) types relative to MSFC's building automation system (BAS), including wired and wireless, utilizing multiple communication protocols, including proprietary and open systems. The UCS Contractor is responsible for ensuring the integrity and availability of the BAS Local Area Networks in accordance with NASA Procedural Requirements (NPR) 2810, Security of Information Technology. Equipment utilizing a communication interface (LAN devices) connected to a BAS LAN communicate with the UCS central computer servers for remote monitoring and control of equipment throughout MSFC facilities by the UCS Contractor. The UCS Contractor is responsible for the configuration and/or verification of communication parameters and will determine communication faults for all LAN devices.

The COSS Contractor shall be responsible for repair or replacement of LAN devices integrated by manufacturers into their equipment, such as chillers, computer room units, variable frequency drives, lighting control panels. The COSS Contractor shall coordinate the replacement of all equipment communicating via a BAS LAN with the UCS Contractor to ensure

replacement equipment meets UCS compatibility requirements for communication via the BAS LAN.

The UCS Contractor shall be responsible for repair or replacement of application specific and generic LAN devices, including, but not limited to variable air volume (VAV) controllers, air handler unit (AHU) controllers, unitary controllers, direct digital control (DDC) controllers. The UCS Contractor shall be responsible for the equipment utilized to establish the communication link from the LAN devices back to the UCS central computer servers. The communication link includes, but is not limited to communication/network controllers, protocol/data converters, power supplies, uninterruptible power sources (UPS), modems, routers.

2. The UCS Contractor shall terminate communication and instrumentation wiring to application specific and generic LAN devices as described in previous paragraph and which are the responsibility of the UCS Contractor. The COSS Contractor shall be responsible for power wiring.
3. All equipment and instrumentation connected to input/output terminals of controllers, including wiring, interconnects, and conduit shall be the responsibility of the COSS Contractor.
4. Installation of panels, enclosures, and ancillary equipment shall be the responsibility of the COSS Contractor.
5. Instrumentation calibration shall be the responsibility of the COSS Contractor.
6. Validating the functionality of meters (for example, electricity, gas, steam, water, BTU, sewage, air, fuel) supporting the MSFC Energy Program is the responsibility of the UCS Contractor. The programming and database backup of meters is also be the responsibility of the UCS Contractor. Repair or replacement of these meters shall be the responsibility of the COSS Contractor.
7. All stand-alone controllers that do not communicate information back to the UCS central computer servers shall be the responsibility of the COSS Contractor.

G. Customer Notification, Protective Services, and Facility Access

1. Notification. Prior to performing any work in a building, the Contractor shall coordinate and schedule work with the customer(s) of the facility or area being affected. The customer is normally the work requestor that occupies or controls the activities within that facility or the Building Manager. Three working days advance notice shall be provided for all work other than Trouble Calls or Trouble Call Services and as soon as possible for TC or TCS work. Such notification shall include the length of time and type of work to be performed. Should work progress temporarily halt before job completion, the Contractor shall provide the customer with the reason for delay and the

projected date or time they will return to complete the work. If the customer is not able to be notified for emergency TCs, the Contractor shall notify the COTR. The Contractor shall also notify the customer upon completion of work. Notification shall be verbal except for those instances where the customer is not available during core hours or work is completed during non-core hours. In those instances the Contractor shall either leave a telephone message or notify by e-mail that the work has been completed and a point of contact should the customer have a question. A list of Building Managers for each facility will be available to the Contractor.

2. Protective Services. Each Contractor employee requiring extended Center access (longer than 120 days) will be required to undergo a check of their background with favorable adjudication by the Protective Services Department required for continued access (reference Section H.13 and Attachment J-29). The Contractor shall also be required to work in areas at MSFC designated Mission Essential Infrastructure that require an increased level of security. Workers in these buildings are required to submit NASA Form 1760, attend a one hour training course and are subject to additional background checks. Failure to strictly abide by the security requirements (for example, propping open doors or granting entry to unauthorized personnel) may result in future denial of access to these areas. Contractor employees needing regular access to these areas to perform their jobs shall be approved by the COTR and affected area manager and trained by the Government (usually several hours in duration) for access and the Contractor shall obtain proper badges to allow easy access for accomplishing work. Access to secure areas will be an impact for some work that is to be performed. Lack of planning to enter secure area access will not be an acceptable reason for the Contractor to fail to perform timely work.
- H. Existing Conditions. The Government makes no guarantee that all descriptions of areas contained in this contract are maintained commensurate to the current level of services as required by this contract. All data supplied is assumed to be correct at the time this document was released, but some errors may exist. MSFC facilities date back to 1943, and may contain asbestos and lead paint. Some fluorescent light fixture ballasts may contain polychlorinated biphenyl (PCBs). Some areas may have unexploded ordinance buried by the Army that may be uncovered by excavation. The Army will be notified and will dispose of these items. Any areas not presently maintained according to the specified standards of this contract shall be brought to the attention of the COTR for possible Government action in the future.
- I. Facilities. The MSFC has 241 buildings, trailers, and structures on-site, which range in complexity from large rocket engine test stands to major office complexes to warehouses.

The current square footage of MSFC buildings is approximately 4,667,000 gross square feet. The Contractor shall be responsible for the operations and maintenance of all systems, structures, and collateral equipment contained within this square footage. If the Center gross square footage (including Army buildings on loan)

varies more than three percent (3 percent) above or below this amount, an equitable adjustment in the contract price will be made (reference Clause F.2).

J. Contractor Licensing, Certification, and Specific Experience Requirements.

Licenses required of the Contractor to conduct business (for example, local or state business licenses) shall be obtained prior to beginning work on this contract. Personnel licensing and certification shall be complete before that individual performs any work under this contract. The Contractor shall submit verification of all licensing and certifications to the CO and COTR within 30 calendar days after contract award. All licenses and certificates shall be current, and shall be kept current throughout the contract period. The Contractor shall be aware that MSFC is classified as a hazardous waste site as defined in the Comprehensive Environmental Response Compensation and Liability Act (CERCLA). All field workers who work at this site in areas of potential contamination shall have completed a 24-hour hazardous waste site operators training class as defined in Occupational Safety and Health Administration (OSHA) regulations. The Contractor shall provide or make available training courses in environmental compliance, hazardous materials, hazardous waste management, and emergency response in accordance with applicable laws.

Specific training is required to execute some duties at MSFC. The training shall be the responsibility of the Contractor at no expense to the Government. In some cases the Government will provide training to the Contractor at no expense. In either case, training will occasionally remove the Contractor's staff from normal work activities.

MSFC will be commissioning new facilities over the life of this contract that may require maintenance skills beyond those required for this solicitation. Should this occur, the Government will provide limited training for the Contractor to maintain these facilities. Additional training beyond that provided by the Government shall be the Contractor's responsibility.

The Contractor shall provide personnel that have the appropriate skill for that trade. The degree of skill of individuals shall be commensurate with that required for the work. This requirement shall apply to all crafts. Journeyman requirements are defined in Paragraph 2.0, Definitions and Acronyms. The Contractor shall provide a Personnel Certification Plan in accordance with DRD 1197SA-003. Note that DRD 1197SA-003 does not relieve the Contractor of any obligation to evaluate skills required in addition to those specified to insure competent, safe work performance. The Contractor shall propose expansion of the DRD specific skills as necessary to meet the personnel certification plan requirements.

Performance of MSFC critical processes or potentially hazardous operations and accomplishment of these MSFC critical processes or potentially hazardous operations shall be required of personnel when engaged in the buildup, operations, and maintenance of the test facilities and operations, and ancillary equipment and processes listed in the SOW. Personnel performing these MSFC critical processes or potentially hazardous operations shall be certified as having been trained and proficient in their work tasks. Certification shall be accomplished and maintained by

the contractor or in accordance with the requirements of MWI 3410.1, "Personnel Certification Program", Safety certification, and applicable codes for welding, inspection, and NDE of structural and pressure welding. A Personnel Certification Plan shall be prepared and submitted in accordance with DRD 1197MA-003.

1. Apprentices, Helpers, and Limited Mechanics and Technicians. All apprentices, helpers, and limited mechanics and technicians working this contract shall be under the direct supervision and guidance of a journeyman mechanic or technician at all times. All trade apprentices, helpers, and limited mechanics and technicians shall be supervised and have work checked by the applicable lead journeyman in their particular field.
2. Environmental Management Support. It should be noted that a single person is permitted to provide more than one environmental management support function listed in DRD 1197SA-003.
3. Electrical Distribution. A qualified journeyman electrician shall perform all electrical work. If trainees or apprentices are used, a journeyman shall accompany them at all times. The Contractor shall be capable of work associated with 4160-Volt systems in accordance with Paragraphs 1.1 and 13.2.I.

K. Reliability Centered Maintenance. MSFC currently uses a Reliability Centered Maintenance (RCM) strategy. This strategy is a mixture of preventive maintenance (PM), predictive testing and inspection, run-to-failure, and proactive maintenance measures. These four maintenance measures draw upon their respective strengths to maximize facility and equipment operability and efficiency while minimizing required maintenance time, materials, and costs. Note that root cause failure analysis is considered an essential proactive maintenance element. The RCM strategy often includes performing a statistical analysis of historical data related to failures to determine the optimal investment of maintenance resources and risk assessment methods to identify those processes or systems that statistically exhibit the greatest chance of catastrophic failure. Demonstrated RCM improvements resulting in reduced PM requirements can result in savings to the Contractor.

L. System Outages

1. General. The Contractor shall coordinate with affected parties, schedules of system outages that affect MSFC activities and obtain concurrence from the COTR prior to planned disruption of services. For systems the Contractor has responsibility for under this contract, the Contractor shall participate in planning work by others (Contractors or Government) that will require system outages. Even if outages are required because of work by others, the Contractor shall be responsible for coordinating the outage with all affected parties. The Contractor shall provide knowledgeable personnel to attend outage meetings as required. During core working hours, the Contractor shall notify and schedule outages with the affected parties prior to systems being deactivated and reactivated. Affected parties may be other contractors or

occupants of affected buildings. During non-core work hour emergency outages, the Contractor shall notify the Trouble Desk who shall, in turn, notify and schedule outages with the proper personnel as provided by the Government. Support identified in this paragraph shall not be an additional expense to the Government.

2. Planned Service Outages. When any work other than TCs or TCSs require an outage or reduction in mechanical, electrical, HVAC, or utility services, the Contractor shall provide at least three working days notice to the affected parties through the Building Manager and to the COTR in writing. Notification shall include the time the outage shall occur and an estimate of when normal service shall be resumed. The Contractor shall be fully responsible for planning and coordinating all service outages and receiving the proper approvals. This coordination shall be accomplished with the proper Building Managers. Exceptions to the timeframes are below:
 - a. The Contractor shall provide a minimum of ten working days advanced notice for all planned electrical outages unless approved by the COTR.
 - b. The Contractor shall provide a minimum of 30 calendar days advance notice for planned building service outages during annual shutdowns for maintenance of buildings 4207, and 4663. Note: Because of the nature of the work conducted in Buildings 4207 and 4663, planned outages will be very difficult to obtain.
 3. System/Building Availability. MSFC has a number of facilities conducting critical operations for the Agency. The availability of a number of the electrical and HVAC systems in these buildings is critical to the success of their mission. As an example, the Huntsville Operations Support Center (HOSC) controls payloads on orbit and is in direct communication with the International Space Station and Shuttle crews during some missions as well as directly downloading data from the payload. A loss of electrical power or HVAC to this area would present an unacceptable interruption in operations. Building 4663 has dual commercial power feeds with uninterruptible power supplies and backup emergency power generators as well as redundant chillers, chilled water circulating pumps, and cooling towers. System definitions and system availability requirements are shown in Attachments J-9 and J-10. The Contractor shall be responsible for assuring these availability requirements are met at all times.
- M. Excavations. The Contractor shall locate and identify all underground utilities and other buried structures before excavating for any work. The Contractor shall locate underground utilities through the use of Government-provided Underground Utility Maps (UUM) and through the use of a pipe or cable detector or other acceptable methods (for example, probing rod). The Contractor shall mark utilities found at the site with fluorescent paint or wood stakes and "red-line" the utility map as discrepancies are discovered. All drawing changes shall be submitted to the Government for updating within five working days from when the discrepancy was

first noticed. Some direct buried telephone cables not owned by the Government exist. All excavations require an MSFC permit which shall be obtained prior to excavations for all work under this contract. All discrepancies in underground utility systems shall be documented by "red-lining" existing utility maps complete with size, type, dimensions, location, and other pertinent information and submitting them to the Government for updating within five working days from when the discrepancy was first noticed. It should be noted that MSFC is located on the Army's Redstone Arsenal that was used for the manufacture, storage, and transport of chemical munitions during World War II. Prior to performing excavations in some areas, scans for abandoned munitions will be required. The Contractor shall obtain these scans from approved vendors at Government expense. Periodically, during excavations, abandoned munitions are uncovered which requires all work to cease until the Army clears the area for further excavation.

- N. Contractor General Purpose Vehicles. The Contractor shall be responsible for providing all general-purpose vehicles except as noted in Attachment J-8. MSFC policy is for Contractor utility vehicles to transport a fire extinguisher for emergency use. The Government will provide the fire extinguishers for the Contractor vehicles. Refer to Paragraph 1.7.1.E for fuel requirements.

1.3 GENERAL MANAGEMENT REQUIREMENTS

The Contractor shall manage and administer the total work effort associated with COSS to include trouble calls (TCs) and (TCSs), recurring services including PM and predictive testing and inspection (PT&I), operations, spill response, and emergency management support required herein to assure fully adequate and timely completion of these work requirements in a safe manner. The Contractor shall also assure facility/system reliability and availability as defined elsewhere in this contract. Included in this function are a full range of management duties including, but not limited to, planning, scheduling, implementing cost accounting, report preparation, establishing and maintaining records, and quality control. The Contractor shall provide an adequate staff of personnel with the necessary management expertise to assure the performance of the work in accordance with sound and efficient management practices.

The Contractor shall prepare and submit a Contractor Cost Report in accordance with DRD 1197MA-003.

1.4 GENERAL ADMINISTRATIVE REQUIREMENTS

A. Directives, Instructions, Policies, and Regulations

1. Regulatory Requirements. The Contractor and their employees shall become acquainted with and comply with all Government directives, instructions, policies, and regulations, or abide by requirements as required by the COTR. See Attachment J-26 for a listing of applicable NASA and other Federal agencies directives, instructions, policies, and regulations.

2. Water Conservation. The Contractor shall actively conserve water at all times during the performance of work related to this contract. The Contractor shall use reclaimed water whenever possible.
 3. Shared Savings. Shared savings will be in accordance with NASA FAR Supplement 1852.243-71.
 4. Energy - All energy related work, shall be performed in accordance with Executive Order (EO) 13423 "Strengthening Federal Environmental, Energy, and Transportation Management," EAct 2005 "Energy Policy Act of 2005", EO 13221 "Greening the Government through Energy Efficient Standby Power Devices", Marshall Policy Directive – MPD 8570.1 and MSFC Technical Specification for Repairs and Construction (TSRC-7) or the most current TSRC. All water fixture replacements shall be "Low Flow" devices and shall comply with the Department of Energy (DOE) best management practices for water conservation. Maintenance of all operating LEED Certified buildings requires review of the types of materials used in the design specifications. All replacement materials in LEED buildings shall at least be equal in performance ability and produce equal or less contamination within the building. All clean-up, after maintenance is performed, in LEED Certified buildings shall be performed with Green Seal Certified cleaning products to assure no additional contamination will be added to the Indoor Air Quality (IAQ). To assist in meeting the requirements efficiency goals and supporting the NASA MSFC mission, all replacement electronic equipment shall have a total harmonic distortion (THD) of 10 percent or less. These practices shall be incorporated in the maintenance of all energy and water consuming systems to assure optimum success in meeting the Federal energy-efficiency goals.
- B. Emergency Procedures. The Contractor shall ensure that their employees know how to report any accident, fire, toxic chemical, electrical, security, flooding, or police emergency.
- C. Environmental Protection and Policies. The Contractor shall comply with all applicable Federal, state, and local laws, and with the regulations and standards listed in Attachment J-26. All environmental protection matters shall be coordinated with the COTR. Inspection of any of the facilities operated by the Contractor may be accomplished by the Government or individual(s) authorized by the Government, without notice at any time. In the event that a regulatory agency assesses a monetary fine or penalty against the Government for violations which directly result from performance by the Contractor in carrying out their responsibilities under this contract, the Contractor shall reimburse the Government for the amount of that fine or penalty and other related costs incurred by the Government. Any such reimbursement shall be accomplished by a contract credit. The Contractor shall use trained personnel to clean up any hazardous waste spills that result from the Contractor's operations. The costs associated with such cleanup are fully the responsibility of the Contractor. The Contractor shall comply with the instructions of the cognizant MSFC Industrial Safety Department, and Environmental Engineering and Occupational Health Office with respect to

avoidance of conditions which create a nuisance or which may be hazardous to the health and safety of on-site personnel. The Contractor shall observe and adhere to all requirements for handling and storage of combustible supplies, materials, waste, and trash. Any oils and lubricants generated by the Contractor, including those removed from Government-owned equipment, resulting from work of the Contractor shall be disposed of in accordance with approved MSFC procedures.

- D. Documentation Reduction. In accordance with Section 101 of Executive Order 13101 of September 14, 1998, Greening the Government through Waste Prevention, Recycling, and Federal Acquisition, the Contractor is encouraged to submit paper documents, such as offers, letters, or reports that are printed or copied double-sided on recycled paper that meet minimum content standards specified in Section 505 of Executive Order 13101, when not using electronic commerce methods to submit information or data to the Government.
- E. Disposal. Small amounts of non-hazardous debris, rubbish, and non-usable material resulting from the work under this contract shall be placed by the Contractor in refuse bins located throughout the site for Government disposal. Once debris, rubbish, or non-usable material is placed in these bins, it shall become Government property. Bins are available for landfill rubbish and scrap material. The Contractor shall dispose of material in the proper bins. Larger amounts of debris and hazardous debris shall be disposed of in accordance with Section 6.0, Environmental Management.
- F. Safety, Health, and Environmental Requirements and Reports
1. The contractor shall establish and implement an industrial safety, occupational health, and environmental program that (1) prevent employee fatalities, (2) reduce the number of incidents, (3) reduce the severity of employee injuries and illnesses, and (4) protects the environment through the ongoing planning, implementation, integration and management control of these programs in accordance with DRD 1197SA-001. The SHE Plan shall address each of the following MSFC SHE core program requirements in detail that are applicable to the contracted effort:
 - a. Management leadership and employee involvement.
 - b. System and worksite analysis.
 - c. Hazard prevention and control.
 - d. Safety, health and environmental training.
 - e. Environmental compliance.
 2. Safety and Health. The Contractor shall provide all safety equipment, with the exception of respiratory protection services required to perform the work specified in this contract. All work shall be conducted in a safe manner and shall comply with all safety and health directives, instructions, policies, and regulations and any revisions, updates, or successor documents as listed in this contract. The Contractor shall demonstrate proactive and innovative safety and health practices on a continual basis throughout the contract period.

3. Conference. Within ten days after contract award, the Contractor shall meet in conference with the Contracting Officer and the COTR to discuss and develop mutual understandings relative to implementation of the Safety and Health Plan described in 3.2.A.1 and administration of the Safety and Health Program.
4. Inspections/Investigations. The Contractor's workspace may be inspected periodically for OSHA and NASA violations. Abatement of violations will be the responsibility of the Contractor as determined by the Government. The Contractor shall provide assistance to applicable NASA/MSFC organizations, investigative organizations, and the OSHA inspector if a complaint is filed or an investigation or inquiry is initiated on a company employee.
5. Accidents. The Contractor shall report to the COTR and the MSFC Industrial Safety Department, exposure from any substance, possible exposure from any substance, and all accidents resulting in death, trauma, occupational disease, bodily injury, or environmental damage. Mishaps shall be reported in accordance with DRD 1197SA-002.
6. Damage. The Contractor shall submit to the COTR a full report of damage to Government property, equipment, or the on-site environment by Contractor employees. Damage reports for Government property and equipment shall be submitted to the cognizant Property Administrator. All damage reports shall be submitted to the COTR and the MSFC Industrial Safety Department within 24 hours of the occurrence. Suspected incidents of vandalism or purposeful destruction of property shall be reported to the Protective Services Control Center for investigation.
7. The contractor shall report mishaps and safety statistics to the MSFC Industrial Safety Office in accordance with DRD 1197SA-002. The contractor shall submit direct to the NASA Incident Reporting Information System (IRIS) or shall use the forms listed in section 15.4 of DRD 1197SA-002 or electronic equivalent to report mishaps and related information required to produce the safety metrics.
8. The Contractor shall provide a Quarterly Contractor Safety Self-Evaluation Report in accordance with DRD 1197SA-004.

G. Security Requirements

1. Security. The Contractor shall comply with all NASA and local security requirements. The Contractor shall submit the name and address of each employee hired for work on this contract upon request of the CO.
2. Disclosure of Information. Neither the Contractor nor any of their employees shall disclose or cause to be disseminated any information concerning Government operations, including those performed by contractors for the Government, which could result in or increase the likelihood of the possibility

of a breach of security or interrupt the continuity of operations. Disclosure of information relating to the services hereunder to any person not entitled to receive it, or failure to safeguard any classified, unclassified sensitive, or export controlled information that may come to the Contractor or any person under their control in connection with work under this contract, may subject the Contractor, their agents, or employees to criminal liabilities. All inquiries, comments, or complaints arising from any matter observed, experienced, or learned as a result of or in connection with the performance of this contract, shall be directed to the COTR if the resolution requires dissemination of official information.

3. The contractor shall develop and implement a comprehensive information technology security program which addresses the management, operational, and technical aspects of protecting the confidentiality, integrity and availability of information and information technology systems. The IT security program shall ensure the contractor is responsible for information and IT security when physical or electronic access to NASA's computer systems, networks, or IT infrastructure is required or when information systems are used to store, generate, process or exchange information with NASA or on behalf of NASA, regardless of where the information resides. The contractor shall develop and submit a Contractor IT Security Program Plan in accordance with DRD 1197CD-001.

H. Access to Buildings

1. Access. It shall be the Contractor's responsibility to obtain authorized access to buildings and facilities, and arrange for them to be opened and closed to accomplish work under this contract. Note that a higher level of security and limited access to some buildings demands that scheduled work be well coordinated. Typically, access may be coordinated through the Building Manager and/or approved by an employee listed on the posted Label 24, Controlled Security Area. MPR 1600.1 provides guidance for entrance into secure areas or offices.
2. Keys. Keys may be issued to the Contractor on a case-by-case basis when there is an established need approved by the Protective Services Department. MPR 1600.1 provides guidance for ensuring compliance with MSFC lock and key procedures. However, it shall be the Contractor's responsibility to arrange for adequate security of the buildings and facilities at the end of each workday. The Contractor shall be responsible for the cost of replacing any keys that are furnished to and lost by their employees. If the COTR decides that a lock must be replaced because of the loss of a key by the Contractor's employees, the Contractor shall pay the cost of that replacement. Similarly, the Contractor shall pay the cost of changing a combination if the COTR has reasonable cause to believe that the combination has been compromised. The Contractor shall identify a single point key coordinator to interface with the Government for all issues related to key control. In addition to keys assigned to the Contractor, the Contractor may sign individual keys out from a general use key cabinet

maintained in the Utility Control System (UCS) control room in Building 4250. These keys are intended for access to areas for short-term work. The COSS Contractor shall comply with key sign-out and sign-in controls established by the UCS Contractor.

I. Contractor Employees

1. Contractor Representatives. The Contractor shall provide to the Contracting Officer the name or names of the responsible supervisory person or persons authorized to act for the Contractor. The list shall be updated whenever changes occur. The Contractor shall also provide names for points of contact to the COTR that the Utility Control System (UCS) Contractor will enter into UCS standard operating procedures associated with notification of abnormal work conditions.
2. Conduct. The Contractor shall remove from the site any individual whose behavior is deemed by the Contracting Officer, COTR, or Protective Services Department to be contrary to the public interest or inconsistent with the best interests of Government security.
3. Residency. No employee or representative of the Contractor shall be admitted to the site of work unless they furnish satisfactory proof that they are a citizen of the United States, or, if an alien, their residence within the United States is legal.
4. Badged Employee and Remote IT User Listing. The Contractor shall prepare and submit a Badged Employee and Remote IT User Listing in accordance with DRD 1197MA-004.
5. Contractor Employee Clearance Document. The Contractor shall prepare and submit a Contractor Employee Clearance Document in accordance with DRD 1197MA-005.
6. Position Risk Designation for Non-NASA Employee Form. The Contractor shall prepare and submit a Position Risk Designation for Non-NASA Employee Form in accordance with DRD 1197MA-006.

J. Identification of Vehicles. The company name shall be displayed on each of the Contractor's vehicles in a manner and size that is clearly visible. All Contractor vehicles shall display a valid state license plate, shall be maintained in good repair, and adhere to all state and local codes. All drivers shall adhere to all state and federal laws and Redstone Arsenal and NASA regulations.

K. Permits. The Contractor shall, without additional expense to the Government, obtain all appointments, licenses, and permits required for the prosecution of the work. The Contractor shall comply with all applicable Federal, state, and local laws. Evidence of such permits and licenses shall be provided to the COTR before work commences.

- L. Warranties. The Contractor shall establish and implement a warranty program to exercise, administer, and monitor warranties received for the Government. The program shall include all warranties for facilities, structures, utilities, construction, and equipment that have been transferred to the property accounts of the Government regardless of the source of the warranty. The Contractor shall maintain a list of all active warranties in the Technical Reference Library (TRL).
- M. Support to Government Facilities Engineering and Construction. The Contractor shall provide support to the Government's engineering and construction organizations. The Government is providing this information as best information available because specific data is not tracked by the Government. The Offeror shall use this information and their experience for similar work to determine the effort that would be expended for similar support. This work shall not be considered trouble calls. Support identified in this paragraph shall be part of the FFP Lump Sum.

Support to engineering shall include, but not be limited to, troubleshooting, access support (for example, electrical panels and equipment rooms), measuring, collecting data, and participating in design reviews and activities.

The Contractor shall assess the newly installed systems for readiness for operation and make a recommendation on acceptance to the Government based on their findings. The Contractor shall also provide assistance to the Government construction organizations in system startup, commissioning and utility outages.

N. Records and Reports

1. Records. The Contractor shall maintain historical records of all work performed and prepare and submit all reports and operating procedures specified herein. Daily, weekly, monthly, and other recurring operating records, reports, logs, and other documents are either specified as contract element submissions in the technical sections of this specification under documentation and reporting requirements, as summarized in the Performance Requirements Summary (PRS) Table, Section E.9, or specified within the inherent performance requirements under the Lump Sum portion of the contract.
 - a. Hardcopy and Electronic Format. All correspondence, records, reports, logs, and other documents submitted by the Contractor to the Government shall be provided in electronic form where feasible and software compatible, unless otherwise specified. Acceptable formats are Microsoft Word®, Microsoft Excel®, or formats readable by Microsoft Word® or Microsoft Excel®. Delivery shall be made on compact disc in PC format. The Government utilizes Microsoft Windows XP Professional for the PC.

- b. Contract Completion or Termination. All records and copies of reports shall be turned over to the COTR within five calendar days following contract completion or termination.
- c. Media. All information and the media (if applicable) on which it is delivered to the Government will become the property of the Government and will not be returned to the Contractor except for correction of errors. All Backlogged Maintenance and Repair (BMAR) will be maintained in the Government-provided system in a format that can be updated continually with the results of periodic inspections and with additions to and deletions from the facilities and equipment inventory. It is the Government's intent for this system to be linked to the Computerized Maintenance Management System (CMMS) at some future date during this contract. The Government will provide the linking feature.
- 2. Documentation/Data Deliverables. The contractor shall report and document this work and fulfill the requirements of associated Data Requirement Descriptions (DRD's) as outlined in Data Procurement Document (DPD) 1197 (Attachment J-2). The contractor shall determine the data restriction that applies to each data deliverable and mark or transmit the data restriction in accordance with section 2.3.3 of the Data Procurement Document.
- O. Facility Safety Inspection Support. The Contractor shall participate in annual Facility Safety Inspections with the Safety and Mission Assurance Office. Approximately 100 percent of all facilities are inspected and those containing operations classified as hazardous operations are inspected twice a year. All safety findings that are verified to be the Facilities Management Offices's responsibility will be corrected by the Contractor as a Trouble Call (TC) or Indefinite Delivery Indefinite Quantity (IDIQ) work order, depending on the scope of work. Support in this paragraph shall not be an additional expense to the Government.

1.5 LUMP SUM WORK

- A. General. Lump Sum work consists of work that can be identified in advance. This work includes, but is not limited to: (1) responding to trouble calls (TCs) and trouble call services (TCSs); (2) accomplishing recurring services such as preventive maintenance (PM) that involve routine, periodic maintenance, and incidental repair requirements associated with facilities, utility systems, and dynamic equipment for which no specific operators are assigned; (3) operations that require the continuous presence of qualified person(s) during a specified time period; (4) emergency management support; and (5) documentation and reporting requirements in Paragraphs 3.0 through 13.0. The Lump Sum prices submitted by the Contractor shall include all overhead, G&A, profit, and other costs that insure all work identified in the PWS is performed in a complete and satisfactory manner
- B. Workmanship and Materials. All work under this paragraph shall be of professional quality conforming to all applicable codes and standards, and all specified work items such as checkpoints, servicing, repairs, and reporting shall be

performed completely, correctly, and neatly in a safe manner. On new work and where applicable, work shall be performed in compliance with the MSFC Technical Specifications for Repairs and Construction (TSRC). All COSS Contractor repair work shall be fully warranted against defects due to material and workmanship for a period of 180 days following completion of repair. However, any other expressed or implied warranties included within this contract or warranties expressed by the manufacturer or supplier shall take precedence over the 180-day warranty period. Any TC or TCS rework required within this 180-day period shall not be treated as an additional TC or TCS.

- C. Trouble Call (TC) and Trouble Call Service (TCS). The Contractor shall be responsible for all TCs and TCSs regardless of how many are performed under this contract. No price adjustment will be made for TCs and TCSs within the plus or minus 10 percent range based on annual numbers (Reference Clause F.2). If the TC limit is exceeded due to Contractor failure to perform regularly scheduled maintenance or misclassification, the Government will make no equitable adjustment.
- D. Recurring Services. Recurring services are defined as work performed on scheduled frequencies or repetitively throughout the term of the contract. Although routine, recurring services require planning, scheduling, and frequent quality control monitoring by the Contractor and are accomplished without further input from the Government. All recurring services are included in the Lump Sum price portion of the contract. Recurring services in this contract include, but are not limited to, environmental support services, Preventive Maintenance (PM), Predictive Tests and Inspection (PT&I), emergency management support, and scheduled services. PT&I, which involves technically skilled personnel performing recurring services on the part of the Contractor is considered one element of a successful RCM program.

Of all recurring services, PM and PT&I are the largest efforts. (The existing PM and PT&I programs are shown in Attachments J-24 and J-25). Therefore, the following is provided to facilitate the Contractors approach to PM at MSFC.

1. Definition and Repair Limitation. The Contractor shall accomplish all PM work within the Lump Sum portion of this contract. The Contractor shall be responsible for PM on all equipment in any building. PM is defined as routine, periodic maintenance, and incidental repair requirements associated with facility systems and dynamic equipment for which no specific operators are assigned. PM is concerned primarily with items that, if disabled, would interfere with an essential operation (including reliability and availability), endanger life and property, or involve high cost or long lead time for replacement. PM work includes, but is not limited to, visual and operational inspection, cleaning, corrosion removal and related painting, adjustment, alignments, lubrication, and replacement of filters, belts, fasteners, hoses; and other expendable items required to correct or minimize operational wear and deterioration of facility systems and equipment. PM work is continuous and repetitive in nature, is accomplished within the framework of comprehensive

and detailed short and long-term PM schedules, and requires diligent and continuous program management by the Contractor. The Contractor shall accomplish incidental repair of defective equipment or system components detected at the time of PM performance by initiating a work order related to the PM. Repair work that requires adjustment only and no parts shall not be identified by a separate work order and shall be accomplished as part of the PM. When an additional work order is used to account for repairs found and performed as a result of the PM program, it shall be identified as a "PM Find" in the CMMS. The Contractor's repair work liability is limited by the TC limit specified in Paragraph 4.2, Trouble Calls, but shall not be classified as a TC per occurrence, unless specified elsewhere. Repair work exceeding this limit shall, upon notification by the Contractor, be accomplished at the Government's discretion per Paragraph 1.6, IDIQ Work. However, the Contractor is liable for the full cost of any repair or replacement item(s) if the Government determines that the cause of failure, malfunction, or damage to equipment or systems was directly caused due to lack of PM work by the Contractor. The only exception will be for equipment items that are classified as run to failure. The Government will adjust the contract price by the actual cost to the Government for repair or replacement of item(s).

2. Management. Lack of required spare parts, other materials, or staffing which delays PM work shall not be an acceptable cause for non-performance of PM work. Prior to completion of the phase-in period, the Contractor shall assess the spare parts needs of the contract so that upon completion of the phase-in period, the Contractor shall perform the PM program satisfactorily. In addition, current manufacturer's parts ordering information shall be maintained in the TRL to reduce research time needed for spare parts ordering.
3. Standards and PM Work. The Contractor shall perform PM work using the requirements specified in the technical section of this Performance Work Statement under detailed specification, and further referenced in directives, instructions, and manuals listed in Attachment J-26. Terms including "check," "ensure," and "verify" shall mean to visually observe or measure, adjust, clean, maintain, repair, or replace as required. After PM work is complete, the equipment shall be operated over a complete cycle or at regular operating conditions for a minimum of five minutes to observe applicable pressure and temperature readings and identify any unusual mechanical conditions. Any anomaly associated with equipment operation shall be corrected by the Contractor to make the equipment fully functional and operate properly. The Contractor shall perform cleanup following PM, and provide a neat and orderly environment in mechanical rooms and other equipment areas as part of PM work. Dust, debris, dirt, and garbage present in any equipment room that was a direct result of the PM work performed by the Contractor shall be removed during cleanup following PM work and disposed of properly.
4. Reporting of PM, Deficiencies, and Repair. The Contractor shall prepare and submit for approval, a Reliability Centered Maintenance (RCM) Plan within 60-days after contract award in accordance with DRD 1197LS-002 (reference

Paragraph 3.0, CLIN 00X1.0304). The Contractor shall identify and document in the CMMS at time of service all work performed using the accepted RCM Plan and maintenance procedures, including observed operating conditions, deficiencies detected and corrected, and quantities and types of material repaired or replaced on a regular basis for historical records. If the equipment is not listed in Attachments J-24, J-25, or J-6, or is replaced during performance of PM work, the Contractor shall update the CMMS to incorporate the equipment information. The Contractor will assign a new number to the equipment.

5. Timeliness. PM activities have varying frequencies of service. Time intervals associated with the frequency of service are defined in Paragraph 2.0. This is intended to provide the Contractor adequate planning and access time to perform PM. Access restriction shall not be an acceptable cause for failure to perform PM within the time interval unless the Contractor can demonstrate that attempts were made early in the time interval and the Government delayed PM performance. The COTR will unilaterally accept or reject the Contractor's reason for delay. The Contractor should recognize that untimely response to repair requirements and lower levels of PM would result in increased repair frequencies and additional material costs. At the Contractor's option, and at no additional cost to the Government, the PM and/or PT&I schedule can be increased at any time to minimize repair requirements. In addition, with Government approval, the PM and/or PT&I schedule can be reduced or maintenance approach changed by following an Age Exploration process (for example, substituting PT&I for a time-based PM activity). Where PT&I is used to replace a PM task, the Contractor shall demonstrate how the PT&I task addresses the same failure modes as the PM. The Contractor is advised that sufficient PT&I data and/or statistical analysis will be required to support reductions in PM and/or PT&I performance. The Government will accept all reductions in PM and/or PT&I if it supports a proactive RCM program and is beneficial to the Government. The Government accepted reductions will not warrant a Lump Sum price decrease. The Contractor shall provide in the TRL the manufacturer's current recommended PM schedule, as available, and other available manuals and documentation, and shall assess for compliance and supplement as necessary. The current PM checklist is shown in Attachment J-24. For Paragraphs 7.0 through 13.0, all PM performance CLINs shall include both PM and PT&I for Contractor performance evaluation.
6. Predictive Testing and Inspection (PT&I). The Contractor shall perform PT&I on the applicable equipment and systems listed in Attachment J-25, in accordance, as a minimum, with the PT&I technologies outlined in Attachment J-7. If the Contractor determines new "state of the art" or alternate technology is available that is not listed in this paragraph, they may use this technology with COTR approval provided it better predicts equipment and system conditions. PT&I are used to assess the material condition of the inspected equipment and systems. Other than adjustments, the Contractor shall complete all repair requirements identified during the performance of a PT&I as a TC. This TC shall be identified in a manner that associates it as a PT&I find. This

is to allow tracking of all work that was performed as a result of PT&I finds. PT&I adjustments are classified as work incidental to the PT&I. Work exceeding the TC limit shall, upon notification by the Contractor, be accomplished at the Government's discretion per Paragraph 1.6, IDIQ Work. The TC limit applies to each PT&I inspection for each individual piece of equipment or equipment system. All PT&I current results and reports shall be accessible to the Government at all times during the course of this contract.

- E. Operations. Operations are defined as watch standing or attendance type work requiring the presence of one (1) or more qualified persons during a specified time period. TCs will not be issued for operations work. Labor effort to correct equipment malfunctions, breakdowns, and related repair deficiencies that occur shall be considered as part of the watch standing or attendance requirement and is included under the Lump Sum portion of the contract. The Contractor's repair work liability is limited to \$2000 per system, per occurrence. Operational repairs shall comply with the TC timeliness limit for work under \$2,000. Repair work exceeding this limit shall, upon notification by the Contractor, be accomplished at the Government's discretion per Paragraph 1.6, IDIQ Work. The CMMS will be revised as appropriate.

The Contractor shall perform the day-to-day operations, including, but not limited to, operation of the steam boilers and MSFC steam distribution system, operation of the deionized water generation and distribution system, operation of "Heavy Equipment," operation of "Power Systems" in Building 4487, operation of HVAC systems, operation of cranes, operate the Industrial Wastewater Treatment Facility (IWTF) and the. Contract line items that are considered operations are 00X1.0703, 00X1.0704, 00X1.1004, 00X1-1007, 00X1.1011, 00X1.1101, 00X1.1102, 00X1.1218, 00X1.1304, and 00X1.1306. System descriptions and operational requirements are detailed in various paragraphs of this contract. Any alterations to existing operational systems shall be approved by the COTR prior to commencement. An additional operational requirement that is not listed as a specific contract line item due to its infrequent use is the cold watch. The Contractor shall implement a cold watch when weather conditions are such that the temperature drops to or goes below 20°F. The cold watch applies to core, non-core, and holiday hours. This watch shall be continuous visual inspection of MSFC to mitigate potential facilities and equipment freeze damage. The cold watch shall, as a minimum, inspect the perimeter of all facilities to ensure doors, window, etc, are closed. The individual assigned to the cold watch shall physically enter all equipment rooms to assess potential freezing conditions. The cold watch is classified as an operational activity with no additional cost to the Government.

1.6 INDEFINITE DELIVERY INDEFINITE QUANTITY WORK

- A. General. This paragraph further explains the IDIQ portion of the Contract. The services to be provided on an as needed basis include the management, planning, accomplishment, and Quality Control (QC) of a broad variety of IDIQ Facility Work Requests (FWRs) resulting from Delivery Orders (DOs). Pursuant to Section B, the Contracting Officer or an authorized representative may issue

FWRs, but only the Contracting Officer may issue DOs. The Government may acquire the following services under IDIQ:

The Contractor shall furnish IDIQ work in accordance with the requirements set forth in each paragraph that are applicable to the particular service being ordered, and any additional or changed requirements as may be set forth in the FWR or DO issued by the Government to obtain the service.

Either the Contractor or the Government may initiate the requirement for IDIQ work, but work shall not begin without an approved FWR or DO. The FWR or DO "package," which may include design details, sketches, or additional specification sheets, will clearly identify the scope and location of desired work. The Contractor shall include the planning, estimating, and scheduling efforts of IDIQ work as part of the IDIQ coefficients. Approximately ninety percent (90 percent) of all IDIQ work shall be performed during core working hours.

Paragraphs 6.0 through 13.0 show IDIQ work associated with the specific functions covered by the paragraph. This IDIQ work shall not be construed as all-inclusive but is merely a representation of the type of work that will be ordered.

B. IDIQ FWR or DO Ordering And Proposals

1. Upon receipt of an FWR or DO request from the Government, the Contractor shall submit a proposal to the Government. Based on scope of work, work schedule, inability to determine full work scope without partial disassembly or similar actions, or other factors that the Government deems pertinent, work may be ordered and proposal prepared as Firm Fixed Price (FFP), Time and Materials (T&M) or Pre-priced Work (PPW). Pre-Priced Work (PPW) will only require quantity and a schedule with the associated price. The Contractor's FFP proposal shall consist of a detailed cost-estimate prepared in accordance with the instructions included in this paragraph, a proposed period of performance in calendar days, and other information required by the FWR or DO description of work. The proposed period of performance shall include all time required for performance including material procurement and delivery, performance of work, testing, and inspection. The period of performance shall be presented in three parts, material procurement and delivery, performance of work and total. The proposal shall include any submittals that are required by design packages for approval of proposed material and equipment. T&M work will be limited to those instances where the Government decides that work cannot be adequately defined at any time during the work process to develop a FFP cost estimate. T&M will be based upon a work scope, not-to-exceed cost and schedule agreed to between the Government and the Contractor. It is anticipated this will be less than 10% of the total IDIQ work per year. PPW is work that meets the criteria for IDIQ but a unit rate has been established and only quantity is required to determine price. The Contractor's proposal shall reflect pricing instructions specified in Paragraph 1.6.C. Preparation of proposals by the Contractor shall not constitute an obligation by the Government to issue a FWR or DO for performance, nor is the request for proposal to be construed as the Contractor's authority to commence work. If

required by the Government, prior to proposal submission, the Contractor shall respond to the needs of the Government by visiting the proposed work site in the company of the COTR or authorized representative, or establishing verbal contact with the COTR or authorized representative to further define the scope of the requirement. Upon establishment of the scope of the individual requirement, the Contractor shall prepare a proposal for accomplishment of the task.

2. The Contractor shall transmit proposals electronically, by means of a computer disk or local area network, when so directed by the Government. The software used to prepare such proposal submissions shall be Microsoft Windows compatible. The Contractor may also be required to submit three hard copies of all FWR or DO proposals.
3. Proposal estimates shall be submitted within the period specified on each proposal request. Due dates for proposal estimates and work are based on the schedule listed below unless the urgency of the Government's need for the required services specifies an earlier submission. Note that the Government will monitor adherence to meeting proposal estimate schedule as a performance requirement. Working days for the proposal estimate schedule shall begin with the date the FWR status is shown as in the estimating process in the CMMS. This status shall be no later than one working day after the Government returns the FWR to the Contractor to begin the proposal estimating process.

PROPOSAL ESTIMATE SCHEDULE

Estimated Value of FWR/DO	FFP Schedule	T&M Schedule	PPW Schedule
Under \$20,000	10 working days	7 working days	2 working days
\$20,001 to \$100,000	15 working days	7 working days	3 working days
Above \$100,001	20 working days	7 working days	4 working days

If the Contractor cannot meet the proposal schedule, the Contractor shall notify the Government within two working days of receipt of a Government requirement and explain the reason(s) for proposal submission delay. The Contractor shall also propose an alternate schedule, subject to approval by the Government. The Government reserves the right to unilaterally deny any extension.

The Contractor shall use the FWR number or the DO number to identify all proposals, submittals, and other documents submitted to the Government.

Upon receipt of the Contractor's proposal, the Government shall review the proposal for completeness, accuracy, and reasonableness. The Government may accept the proposal as stated or negotiate any aspect of that proposal. The Government will negotiate with the Contractor all non-pre-priced items.

4. FWRs and DOs issued by the Government to commence work will include the following information:
 - a. Date of the FWR or DO.
 - b. FWR or DO number.
 - c. FWR or DO price.
 - d. FWR or DO Commencement and Performance Data.
 - e. Accounting and appropriation data.
 - f. Any other pertinent data.
5. Upon receipt of FWR or DO:
 - a. The Contractor may use the FWR or DO number for internal control, or an alternate mechanism. However, all documents shall have the Government FWR or DO number included, as it is the Government's tracking mechanism.
 - b. The Contractor shall notify the appropriate Maintenance Project Manager(s) and Building Manager(s) where the work is to be performed, 24 hours prior to actually starting work. When work is performed in Buildings 4663 or 4207, the Operating Manager listed in the FWR or DO must be notified giving the nature and the area of the work to be performed.

C. Pricing Information

1. In preparing its price estimates, the Contractor shall use the appropriate pricing classifications set forth below. Note that the single material coefficient proposed in Section B shall be used with Unit Price Book (UPB) or Fixed Labor Rate (FLR) listed below to determine FFP pricing.

- a. Pre-Priced Work

PPW is IDIQ work purchased to provide one unit of work-in place. The unit costs for pre-priced work shall include all costs, direct and indirect, including labor, materials, tools, and special equipment, overhead, G&A, and profit. PPW is specified in applicable parts of Attachment J-1 and is proposed by the Contractor in the "Schedule of Prices for Pre-Priced Work" in Section B. The CO's authorized representative will issue a completed FWR or the CO will issue a completed DO specifying the number of units, expected delivery date (as stated in each applicable line item), and scope of work. Discussion (negotiations) may take place for work performance schedule. Pre-Priced Work is not subject to application of any contractor coefficient factors.

b. Unit Price Book (UPB)

The UPB will be used to establish IDIQ FWR or DO labor hours for Paragraphs 6.0 through 13.0 that are not included in the "Schedule of Prices for Pre-priced Work" for work to be performed as FFP. The Contractor shall use the edition of the selected R. S. Means[®] Cost Data Publication described in Paragraph 1.6.D.1 which is in effect when the proposal request is issued to the Contractor. UPB work is subject to application of the appropriate labor coefficient listed in Section B.

c. Fixed Labor Rates (FLR)

Items that are not pre-priced and are not included in the UPB shall be proposed using fixed labor rates and bare cost of materials and equipment for work performed as FFP or T&M. Contractor price estimates of these items shall be in accordance with 1.6.D.2. The Contractor's proposed cost shall be adjusted by the application of the appropriate coefficient factor listed in Section B.

d. Specialty Services and Equipment

Some items that are included in IDIQ work shall be priced as specialty services and equipment. This will include major equipment purchases as single self-functioning units, costing \$10,000 or greater or services such as tube cleaning or unexploded ordinance surveys. The Contractor's proposed specialty services and equipment quotes will be adjusted by the "Specialty Services and Equipment Coefficient (CLIN00X3.007)."

e. Material Coefficient

All FFP and T&M material shall be adjusted by the application of the appropriate coefficient factor listed in Section B.

2. Pricing Hierarchy

The following hierarchy shall be applied except as specified by the Government.

The Contractor must perform work by the method priced. For example, it is not permissible to price performing work with Contractor craft but actually subcontract the work performance.

a. Prepriced Work

b. Unit Price Book (UPB)

c. Fixed Labor Rates

d. Specialty Services

e. Time and Materials

Application of all pricing methods may be necessary to complete the required pricing. The Contractor shall group and clearly identify by hierarchy within each FWR or DO estimate, and clearly indicate the application of the various names and type of coefficient factors applied.

D. Price Estimates

The Contractor shall prepare price estimates for all IDIQ proposals, using the applicable methods described below. The Contractor shall utilize electronic cost data bases specified below and Microsoft Windows compatible computerized estimating software.

Bin materials and supplies shall not be included in the list of proposed priced materials because they are to be included as part of the Contractor's coefficient (reference Section B.5). If the extended cost (item cost multiplied by the number of items) of a single line item of bin material or supply exceeds \$25, the cost for that line item may be included in pricing. The contractor shall not propose to purchase excess quantities of items in order to meet the thresholds for payment. The Contractor shall not combine quantities to meet thresholds for payment.

1. Price Estimates for Unit Price Book (UPB) Work

The basis for the Contractor's proposal shall be the labor hours published by R. S. Means[®], Inc., hereinafter referred to as Means, material cost, and the labor and material coefficients. For maintenance and repair services described in Paragraphs 4.0 and 6.0 through 13.0, Means publication #60307, entitled "Facilities Maintenance and Repair Cost Data," is utilized. This book is available in printed and electronic format from the following source:

R. S. Means[®], Inc.
100 Construction Plaza
PO Box 800
Kingston, MA 02364-0800
1-800-334-3509

Estimates and proposals shall be based on the edition of the cost data publications current at the time of contract award. Yearly updates of Means will become effective on April 1st of the same year following the release by the R. S. Means[®], Inc., Means Estimating Guides will be used to detail the required trades and labor hours. The proposal submitted by the Contractor shall include a detailed estimate comprised of a breakdown of labor, material, and equipment by unit quantities and costs, including work that may be performed as specialty services.

- a. The “remove and relocate” cost of an existing item shall always be 120 percent of the Means bare labor hours plus material cost of installation for a new item of the same type.
- b. The demolition cost of an existing item shall be 40 percent of the Means bare labor hours cost of installation for a new item of the same type, if the item is not listed in the 020 Section of Means.
- c. Government items to be installed by the Contractor shall utilize the bare labor hours. The appropriate coefficient shall be applied to the bare labor cost.
- d. All items whose bare labor, material, and specialty service costs exceed \$5,000 on a per unit basis will be negotiated as non-UPB items for each FWR or DO.

2. Price Estimates for Fixed Labor Rate Work

Non-pre-priced and non-UPB work shall be priced per the following procedures:

- a. Labor. Labor shall be priced per the Fixed Labor Rates (FLR) included in Section B. The Contractor shall prepare in the estimate a detailed line-item-by-line-item breakdown of each type craft hour required to accomplish the necessary work. The Contractor's craft hour rate established in Section B for each craft shall be utilized for each craft to extend and establish the Contractor's extended value. The Government will use its estimate for the number of craft hours needed to accomplish the work in negotiating the final craft hours for each line item. The appropriate coefficient factor shall then be applied to the total bare cost.
- b. Material & Equipment. In its proposal, the Contractor shall submit line-item detail of the types and quantities of materials or equipment required to complete the proposed task. The number of units, unit cost, and extended bare cost shall be provided for each piece of equipment and/or material. The Contractor shall not propose purchase of excessive materials (example; purchasing 500 ft. roll of wire when 200 ft. is required). If the estimated or proposed bare cost for any individual item of material or equipment exceeds \$3,000 the Contractor shall provide competitive vendor quotes to support the proposed bare cost of that line item unless otherwise directed by the Government. Furthermore, the Contractor shall use competition to the maximum extent practical in the acquisition of material or equipment regardless of its estimated value. The appropriate coefficient factors in Section B shall then be applied to the total bare cost of materials and/or equipment.

3. Price Element for Specialty Services and Equipment

Specialty services and equipment are used for items that are not pre-priced, not UPB, and not priceable by FLRs. For specialty services, if the estimated or proposed subcontract price of a line item exceeds \$3,000, the Contractor shall provide three (3) competitive subcontractor quotes to support the proposed price of that line item unless otherwise directed by the Government. For services priced in this paragraph, the Contractor's coefficient factor under CLIN 00X3.0007 shall apply.

E. Performance of FWR's or DO's

1. In performance of work under this contract, the Contractor shall:

- a. As a minimum, ensure the work status in CMMS is updated as of 3:00 p.m. each workday to accurately reflect the following day's FWR schedule. The Building Manager and Maintenance Project Manager shall be notified immediately if revisions to the schedule are necessary during the workday.
- b. Arrange with the Building Manager and/or Maintenance Project Manager a sequence of procedure, means of access, space for storage of materials and equipment, use of approaches, corridors, and stairways. Since space for storage is limited in work areas, the majority of storage must be outside or at the Contractor's assigned area. Only materials to be used for work under this paragraph of the contract may be stored at the assigned areas.
- c. The building and work areas may be occupied during performance of work under the contract. The Contractor shall take particular care in the execution of the work in all computer, mechanical, electrical, and telephone equipment areas. Uninterrupted operations must be maintained in these areas.

2. Additional Items of Work

Items of work not initially determined and not listed in Means but within this contract scope and general intent, may be negotiated by the Contracting Officer and added to the contract by modification any time during the contract period. Prices negotiated for an item for a specific FWR or DO may be used in that order. The negotiated price for the additional items of work incorporated by modification shall remain in effect for that contract year. Prices for additional items of work shall be negotiated each year of the contract.

The Contractor's proposed price for additional items requested shall be broken out by labor, material and equipment costs. Application of the coefficient factor for these items shall be the same as Non-Means items.

3. Changes to Scope of Work

If, during performance of IDIQ work, the Contractor encounters unforeseen conditions which increase the work scope and could not be evaluated during the initial estimating procedures, the Contractor shall not proceed without obtaining the CO's or COTR's authorization. The CO or COTR will direct the Contractor to estimate the change of scope for the unforeseen condition only, or prepare a new estimate for the total job as revised. The Government will, after review and approval of the estimate, issue a modification to the FWR or DO for the change in scope. Modifications will be priced in the same manner and hierarchy as FWRs or DOs. The Contractor shall notify all Building Managers (or customers being affected) of any schedule delays by the Contractor.

4. Commencement, Prosecution, and Completion of Work

The Contractor shall be required to (a) commence work under FWRs and DOs within the time stated on the FWR or DO, (b) prosecute the work diligently, and (c) complete all work and make ready for use not later than the time specified on the FWR or DO, unless otherwise advised in writing by the Contracting Officer for DO or authorized representative for FWR. The time stated for completion shall include final cleanup of the premises.

All work shall be completed in a workman like manner and in accordance with all applicable design drawings, manufacturer's instructions, codes, standards, and the latest edition of the MSFC Technical Specifications for Repairs and Construction (TSRC). Requests for exceptions to TSRC requirements must be submitted in writing and approved prior to commencement of work.

5. Delivery Schedule

The Contractor shall include with the estimate for each FWR the expected material delivery time and the proposed duration of work. Within 2 working days after the FWR is funded and approved for work, the Contractor shall submit the proposed start and finish dates to the COTR or designee for approval.

The Contractor shall attend FWR scheduling meetings with the COTR and/or Maintenance Project Managers for the purpose of setting priorities and negotiating and establishing a realistic schedule for completion of work. The Contractor shall maintain a graphical schedule for use of the Contractor and the Government. The Government will make available Microsoft Project software for the Contractor's use. The Target Start date and the Target Finish date reflected in the CMMS and schedules shall be the actual required start and finish dates of the work, excluding material procurement and delivery.

Days for which work on an FWR or DO is scheduled and cannot be performed because of Government prohibition shall not be considered working days. Interruptions significantly beyond those described in the Work Conditions Subfactor, Section B shall be at no cost to the Government unless the

Contractor can provide sufficient justification that the delay caused the Contractor to incur additional cost beyond the Contractor's control.

Delivery schedules include the time required for final cleanup, inspection, acceptance, and closeout of the FWR or DO. Lack of labor, materials, and all necessary equipment, tools, and transportation shall not be an acceptable cause for unsatisfactory performance or failure to complete IDIQ work. Noncompliance with scheduled completion dates shall be subject to deductions per Section E, Inspection and Acceptance; Consequences of Contractor's Failure to Perform Required Services.

6. Inspection of FWRs or DOs

Unless otherwise specified in the contract, the Government may accept, as promptly as practicable after completion and inspection, all work required by a FWR or DO or that portion of the work the CO or authorized representative determines can be accepted separately.

a. Inspections – General. See Section E.

b. Inspections - Tests and Concealed Items

- 1) The Contractor shall notify the COTR or authorized representative, at least 2 days prior to any test, concrete placement, and other concealment of critical components. Inspection will be made after notification that all items have been installed for the test or concrete placement. Should the inspection reveal that corrective measures are required or that the work is not complete, an additional 24 hours will be allowed to complete the Government inspection after all work has been corrected.
- 2) The COTR or authorized representative shall be notified at least 24 hours in advance of backfilling or encasing in order that final location and elevations can be verified. Failure to provide such notification may require reopening of a trench to obtain necessary verification and further backfilling, all at the Contractor's expense.

c. Final Inspections

The Contractor shall notify the Maintenance Project Manager and Maintenance Inspector within one (1) working day following completion of each FWR or DO to schedule a joint final inspection. The Contractor shall allow a minimum of three working days after the Contractor's request for the Government to schedule the joint final inspection. The Government, or individual(s) authorized by the Government, will thoroughly inspect the completed work. The Contractor shall submit to the Maintenance Inspector "red line" drawings showing "as-built" conditions for all previously agreed to changes to system configuration at the time of the final inspection.

d. Acceptance of Work For FWRs and DOs

The Government will accept IDIQ work only after all work has been completed and noted discrepancies have been corrected. A complete FWR or DO package, including a statement of corrective action taken and revised sketches or drawings (if other than originally provided in the scope of work), shall be returned to the COTR within three (3) days following the joint final inspection. Following final acceptance by the Government, the Contractor shall invoice for payment as specified in the "Consideration and Payment," Section B.7.

1.7 AVAILABLE GOVERNMENT PROPERTY, MATERIALS, AND SERVICES

1.7.1 General

The Government will make available to the Contractor certain Government-owned facilities, equipment, material, and utilities for use in connection with this contract. The use of Government property and services for other purposes is prohibited. All such facilities, equipment, and materials will be made available in their "as is" condition. However, special purpose shop equipment shall be maintained in accordance with Paragraph 10.2.L. The Contractor shall maintain all shop, worksites, and storage areas in a safe and clean condition at all times. The Government will occasionally elect at their discretion to make available to the Contractor additional Government-owned materials and equipment beyond those listed in this specification.

- A. Government Facilities, (GF). The Government will make available to the Contractor the facilities listed in Attachment J-27. Should the Government elect to mothball, abandon, or otherwise reutilize space provided to the Contractor and the function the Contractor is performing remains a part of the COSS contract, equitable space will be provided elsewhere. Should the Contractor choose to use the GF, adequate precautions shall be taken by the Contractor to prevent fire hazards, odors, and vermin. All GF will receive the normal services provided at MSFC. The Contractor shall obtain written approval from the CO and COTR prior to making any modifications or alterations to the facilities. Any such modifications or alterations approved by the Government will be made at the expense of the Contractor and shall be in compliance with all applicable building codes and standards. At the completion of the contract, all facilities shall be returned to the Government in the same condition as received, except for approved modifications or alterations and reasonable wear and tear. The Contractor shall be held responsible for the cost of any repairs caused by negligence or abuse on their part, or on the part of their employees.
- B. Government Material (GM). The Government does not intend to provide any material for this contract but reserves the right under equitable circumstances as follows:

Spare Parts and Supplies

Spare Parts – There is a small amount of Government owned material available. This material is to be used for IDIQ work only. When these parts are used, the IDIQ proposal shall reflect government furnished material and show no charge. It will be the Contractor's responsibility to procure additional or replacement spare parts. Some of the government owned parts are critical spares for UPS systems and will be replaced at Government expense.

Spill Response – Spill response equipment and materials are listed in AS10-OWI-001, Consolidated Environmental Response Plan.

- C. Government Property Management Plan. The Contractor shall prepare a Government Property Management Plan that defines the Contractor's methods of care, accounting, and control of Government property. The Contractor shall prepare this plan in accordance with DRD 1197LS-001.
- D. Radios. The Government will provide approximately 228 two-way networked radios for the Contractors use in managing work. These radios will be controlled, maintained, and replaced as required by the Government. The Contractor shall not bring onsite any other radio communication devices.
- E. Availability of Utilities. The Government will furnish the following utility services at existing locations, for use in those facilities provided by the Government and as may be required for the work to be performed under the contract: electricity, steam, natural gas, water, sanitary sewer, storm drain, and local communications on-site. Utilities specified above will be furnished at no cost to the Contractor. However, communication services such as long distance telephone service, cellular telephones, high-speed fax/data communications, computers beyond those provided to the Work Control Center, will be the responsibility of the Contractor. The Contractor shall comply with regulatory and energy requirements per Paragraph 1.3, General Management Requirements; Paragraph 1.4, General Administrative Requirements; and Attachment J-26, Directives, Instructions, Policies, and Regulations.
- F. Government Furnished Emergency Services. The Contractor shall post emergency telephone numbers at the job site. Report all emergencies by dialing 911 for ambulance, fire, security, or environmental incidents. The Protective Services Control Center (PSCC), also known as Security, operates 24 hours a day, 7 days a week and may also be reached for assistance at 544-4357, Option 1. The MSFC Medical Center is located on Morris Road, at Building 4249, and phone number is 544-2390. It is open Monday through Friday, between 7:00 a.m. and 3:30 p.m. The MSFC Medical Center may only be used for emergencies and NASA mandated physicals under the general guidelines established by OSHA, EPA, and NRLC.
- G. Respiratory Protection Services. The Government will provide appropriate respiratory protection services. Such services will include quantitative/ qualitative

fit testing, training, maintenance/repair, and issuance of appropriate respiratory protection devices.

- H. The Government will provide approximately 130 ruggedized personal digital assistants (PDA) with software for use with the wireless CMMS system. The Contractor shall utilize the PDA's to scan the barcode on tagged equipment to verify performance of work. Equipment not tagged or with damaged tags shall have a new tag affixed by the Contractor.

1.7.2 **Inventory**

- A. **Joint Inventory.** During the last 15 days of the phase-in period, a joint inventory shall be conducted by the Contractor and the Government of all facilities and equipment to be made available to the Contractor. This inventory will not be the cause of an adjustment in contract price.
 - 1. During the inventory, the Contractor shall determine which items they choose to accept for use under this contract and the exact quantity, condition, and serviceability of those items.
 - 2. Items not desired for use by the Contractor shall be identified by written notification on completion of the phase-in period. Equipment not desired shall be staged by the Contractor at an on-site location indicated by the Contracting Officer for Government pick-up within 30 days after the end of the phase-in period.
 - 3. The Contractor shall prepare an electronic inventory listing (jointly approved by the Government and the Contractor) and maintain the inventory in a current status for the initial contract term and for any option years. The Contractor shall submit to the Contracting Officer an electronic inventory listing whenever changes occur.
- B. **Inventory Discrepancies.** The Contractor shall provide a report electronically or in hardcopy format of inventory discrepancies as they are discovered or suspected. All instances of loss, damage, or destruction (LDD) of Government property shall be reported to the cognizant Property Administrator.

One (1) month prior to expiration of the base contract year and each option year, the Contractor shall conduct a joint inventory with the Government of all Government facilities and equipment made available to the Contractor to ensure no discrepancies exist.

- C. **Inventory at Contract Completion.** At the completion of the contract (including option period, if any), the Contractor shall return the same property equal in type, kind, quality, and quantity of items as originally made available by the Government and accepted by the Contractor, exclusive of those items of equipment turned over to the Government for disposal during the course of performing the contract. At contract termination, the Contractor shall return all Contractor

replaced equipment for which title was vested in the Government. Such property shall be in the same or better condition as when originally made available except for normal wear and tear.

1.8 CONTRACTOR FURNISHED ITEMS

Except for items listed in Paragraph 1.7, Available Government Property, Materials And Services, the Contractor shall provide all facilities, equipment, materials, and services to perform the requirements of this contract. The Contractor shall assure that all required materials and parts are readily available within the timeframes required for all work on this contract unless otherwise noted.

- A. Materials Required for Repair of Government Owned Equipment. The Contractor shall provide new or factory reconditioned parts and components when practicable in providing maintenance and repair services as described herein. All replacement units, parts, components, and materials to be used in the maintenance, repair, and alteration of facilities and equipment shall be compatible with that existing equipment on which it is to be used; shall be of equal or better quality than original equipment specifications; shall comply with applicable Government, commercial, or industrial standards; shall conform to the metric system of measurement when it is most cost effective for the Government; shall conform to the applicable specifications listed in the technical specifications, Attachment J-1; and used in accordance with original design and manufacturer intent. Items not listed in the technical specifications shall be of acceptable industrial grade and quality. If the original manufacturer has updated the quality of parts for current production, parts supplied under this contract shall equal or exceed the updated quality.
- B. Procurement and Maintenance of Government Owned Equipment For equipment procurements, the Contractor shall assure equipment specifications include PT&I acceptance criteria as defined in Reliability Centered Maintenance Guide for Facilities and Collateral Equipment. This same criteria shall apply to maintain existing in-service equipment.
- C. Consumable and Incidental Tools, Supplies, and Materials The Contractor shall be responsible for providing all incidental tools, supplies, and consumable materials for accomplishing all work under this contract unless otherwise noted. Examples would include, but not be limited to, wrenches, work gloves, face shields, welding rod, lumber, office supplies, uniforms, miscellaneous gases (inert and flammable), drums.
- D. Contractor's Site Office The Contractor shall maintain an office with a local telephone number at which its designated representative may be reached during normal business hours during the contract period. A telephone message-recording device is not acceptable. The Contractor shall immediately notify the Contracting Officer of any change in the telephone number or contacting procedures. The contractor shall also provide telephone numbers at which its designated representative can be reached outside normal business hours.

- E. Contractor Furnished Equipment Unless otherwise noted, the Contractor shall furnish all equipment necessary to accomplish all work under this contract.

--Remainder of Page Intentionally Left Blank--

2.0 DEFINITIONS AND ACRONYMS

As used throughout this contract, the following terms shall have the meaning set forth below.

Where "as shown," "as indicated," "as detailed," or words of similar import are used, it shall be understood that reference is made to this specification and the drawings accompanying this specification unless stated otherwise.

Where "as directed," "as required," "as permitted," "approval," "acceptance," or words of similar import are used, it shall be understood that direction, requirement, permission, approval, or acceptance of the Contracting Officer is intended unless stated otherwise.

Age Exploration - The process of determining the most effective intervals for maintenance tasks. It is called age exploration because it is often associated with identifying age related maintenance actions such as overhaul and discard tasks and then extending the interval between tasks.

Alteration - The work required to adjust, make changes, or modify other physical characteristics of an existing real property facility so that it may be more effectively adapted to or utilized for its designated purpose.

Apprentice - Is a semi-skilled worker that is registered in a bona fide apprenticeship program approved by the U.S. Department of Labor, Bureau of Apprenticeship and Training.

Army Garrison - Army organization providing infrastructure support services to the Army's Redstone Arsenal. Marshall Space Flight Center is located in the middle of Redstone Arsenal and receives all of its major utilities, including electrical, steam (80 percent), domestic water, industrial water, and sanitary sewer from Army Garrison.

Associated Fittings - Those fittings (mechanical, soldered, or welded) that are existing or required new, on both or either end of a run of piping, to allow for the removal and/or reinstallation of said piping for repair or replacement.

ASHRAE - An international organization whose sole purpose is advancement of the arts and sciences of heating, ventilation, air conditioning, and refrigeration for the public benefit through research, standards writing, continuing education, and publications.

Authorized Representative - A person designated either in writing or verbally by the Contracting Officer Technical Representative to authorize COSS activities that are not specifically assigned to the Contracting Officer or the Contracting Officer Technical Representative.

Authority to Proceed (ATP) – The executed purchase order authorizing the contractor to begin phase-in activities.

Backlog of Maintenance and Repair (BMAR) - Unfunded facilities maintenance work required to bring facilities and collateral equipment to a condition that meets acceptable facilities maintenance standards.

Backlogged Trouble Calls - A routine trouble call issued during the previous contract which was not completed for any reason, or maintenance, repair, and minor corrective maintenance requirements which may be identified during lapses, if any, in services between this contract and the previous contract.

Bin Materials - Materials that have a unit cost of less than \$5 or in the case of materials bought by length (for example, wire, conduit, pipe) the price of the length required is less than \$5.

Basic Utilities - Electricity, steam (North of Fowler Road), potable water, sanitary sewer, and natural gas. Basic utilities are furnished by the U.S. Army including maintenance of their respective distribution systems. The interfaces on the utility systems are normally five feet outside the building or at some specific convenient disconnect nearby.

Building - The classification "Building" includes the basic structure, capital improvements, and fixed equipment that are normally required for the functional use of the building and becomes permanently attached to a part of the building and cannot be removed without cutting into the walls, ceilings, or floors, such as plumbing, heating, and lighting equipment; elevators; central air-conditioning systems; and built-in safes and vaults.

Building Manager - A person assigned by the Government that serves as a point of contact for the Center related to problems and issues in a designated area or building for which he/she serves as a representative responsible for relaying information and coordination of activities.

Clean - Clean is defined as free of dirt, dust, litter, debris, loose particles, foreign objects, residue, and other impurities.

Cleanup - Cleanup is the process of returning an area to a clean condition after completion of work or during a delay in work. It includes but is not limited to sweeping, mopping, dusting, vacuuming as well as removal of debris (limited to small amounts, generally that which can be removed in less than one hour).

Collateral Equipment - Encompasses building-type equipment, built-in equipment, and large, substantially affixed equipment/property and is normally acquired and installed as part of a facility project as described below:

- Building-Type Equipment - A term used in connection with facility projects to describe equipment, which is normally required to make a facility useful and operable. It is built in or affixed to the facility in such a manner that removal would impair the usefulness, safety, or environment of the facility. Such equipment includes elevators; heating, ventilating, air-conditioning, and refrigeration systems;

transformers; compressors; and other like items generally accepted as being an inherent part of a building or structure and essential to its utility. Such equipment also includes general building systems and subsystems such as electrical, plumbing, pneumatic, fire protection, and control and monitoring systems.

- Built-in or Large, Substantially Affixed Equipment - A term used in connection with facility projects of any type other than building-type equipment that is to be built in, affixed to, or installed in real property in such a manner that the installation cost, including special foundations or unique utilities service, or the facility restoration work required after its removal is substantial.

Condition Assessment - A standardized survey conducted of facilities at each Center by experienced facilities maintenance personnel to observe the condition of each facility in order to determine the overall average condition of each Center. The surveys should encompass the different components of the facilities, such as roofs, pumps, air conditioning condensers, interior finishes, electrical motors and system. PT&I data, as well as observations noted during PMs, should be included in the condition assessment. They should also include the Center's infrastructure, such as roads, storage tanks, grounds, sidewalks, drainage structures, utility systems.

Conditioned Based Actions - A maintenance or repair action performed when the system/machine condition indicates the action is needed to prevent failure or to initiate repair prior to failure. Conditioned based actions are usually the result of condition monitoring.

Condition Monitoring (also known as Predictive Maintenance, PT&I) - The continuous or periodic monitoring and diagnosis of systems and equipment in order to forecast failure.

Construction of Facilities (CoF) - NASA's capital investment program. CoF projects require Congressional approval.

Contracting Officer - The Contracting Officer is a person with the authority to enter into, administer, and/or terminate contracts and make related determinations and findings. The term includes certain authorized representatives of the Contracting Officer acting within the limits of their authority as delegated by the Contracting Officer.

Contracting Officer Technical Representative (COTR) - The person who is an authorized Government representative of the Contracting Officer acting within the limits of their authority as specified by the COTR delegation letter. This term does not include any inspector or other person not named as COTR in the delegation letter or designated representatives.

Contractor Representative - A foreman, superintendent, or manager assigned who is empowered to make day-to-day decisions related to all performance under this contract. The Contractor Representative shall serve as the focal point for all work under this contract and shall be responsible for the coordination of all work activities.

Contractor - The term Contractor as used herein refers to both the prime Contractor and any subcontractors. The prime Contractor has a contract with the Government directly. The prime Contractor shall ensure that subcontractors comply with the provisions of this contract.

Cooling Season - The cooling season is defined as the six (6) month period from 15 April through 15 October.

Core Work Hours - Contractor's work hours are between 7:00 a.m. to 4 p.m., Monday through Friday.

Critical Alarm (CA) - Any fire or gas detection alarm.

Critical Equipment - Collateral equipment that must be available to support key MSFC activities. This equipment is further clarified by its stringent availability factor.

Current Replacement Value (CRV) - Is calculated by escalating facilities and collateral equipment acquisition costs and incremental book value changes to the current year. (See Facilities Maintenance Management Handbook, NPD 8831.2 for more detailed definition).

Debris - Undesirable or discarded material including, but not limited to, cut or trimmed vegetation, paper, cans and bottles, otherwise referred to as "trash," and "litter," fallen tree limbs and branches, and rocks, street sweepings, maintenance, repair, and construction (including roofing) waste, and similar waste material, but not including hazardous waste.

Debris Removal – Is the removal of debris during and after the completion of work. Removal of small amounts of debris (requiring less than one hour) is considered part of cleanup.

Defect - A defect is composed of one (1) or more documented deficiencies of unsatisfactory work performance caused by either poor performance or non-performance.

Delivery Order - An order for supplies placed against an established contract or with Government sources.

Emergency Operations Center - An office that directs, coordinates, and controls all tactical activities and management functions necessary to carry out the objectives of Command and Emergency Response.

Emergency Response – A response effort that requires immediate action by employees or other designated personnel to an occurrence that results or is likely to result in an event that causes imminent danger to life, damage to Government property, or damage to the environment.

Facility Data Book - Is a compilation of individual floor plans of major MSFC facilities and other pertinent information on each facility. Provides an overview of building configuration of select facilities at MSFC.

Facility - A term used to encompass land, buildings, structures, and other real property improvements, including utility systems, collateral equipment, or assembly of units of equipment designated for a specific function. The term does not include operating materials, supplies, special tooling, special test equipment, or non-capitalized equipment.

Failure Mode - The manner of failure. For example, the motor stops is the failure, the reason the motor failed was the motor bearing seized which is the failure mode.

Failure Mode and Effects Analysis (FMEA) - Analysis used to determine what parts fail, why they usually fail, and what effects their failure has on the systems in total. An element of Reliability Centered Maintenance (RCM).

Failure Rate - The number of failures divided by interval such as time or cycles. The failure rate will change over time and can be greater than one (but will never be less than zero).

Fire Alarm Systems - Systems that detect fire or fire-related conditions in buildings, structures, equipment, and activation of fire suppression systems. After detection, the system indicates the alarm condition at both local and remote monitoring displays. System includes detectors, building panels and associated wiring, antennas, host computers, local and remote display units, and printers.

Fixed Labor Rates (FLR) - A FLR is the price proposed by the Contractor which shall include all direct costs and indirect costs plus profit to provide one (1) craft hour of work-in-place. For purposes of this contract, indirect costs and profit are part of the labor coefficient. Therefore, FLR shall only include direct cost.

Frequency of Service

- (1) Triennial (T): Services performed once every three years on a date or during the month specified.
- (2) Biennial (B): Services performed once every two years on a date or during the month specified.
- (3) Annual (A): Services performed once during each 12-month period of the contract at intervals of 335 to 395 calendar days.
- (4) Semi-annual (SA): Services performed twice during each 12-month period of the contract at intervals of 160 to 200 calendar days.
- (5) Quarterly (Q): Services performed four times during each 12 month period of the contract at intervals of 80 to 100 calendar days.
- (6) Bi-monthly (BM): Services performed six times during each 12-month period of the contract at intervals of 57 to 63 calendar days.
- (7) Monthly (M): Services performed 12 times during each 12 month period of the contract at intervals of 27 to 33 calendar days.
- (8) Bi-weekly (BW): Services performed 26 times during each 12-month period of the contract at intervals of 13 to 15 calendar days.
- (9) Weekly (W): Services performed 52 times during each 12 month period of the contract at intervals of six to eight calendar days.
- (10) Semi-weekly (SW): Services performed 104 times during each 12-month period of the contract at intervals of two to three calendar days.

- (11) Daily: (DS) Services performed 261 times during each 12 month period of the contract, once each day, Monday through Friday, including holidays unless otherwise noted; or (D7) services performed every day, seven days a week during each 12-month period of the contract including holidays unless otherwise noted.

Gas Detection Systems - Systems that detect gas conditions in buildings, structures, tanks, and equipment. After detection, the system indicates the alarm condition at local, remote, and portable monitoring displays. Systems may include detectors, building panels and associated wiring, host computers, and local and remote display units.

Government - Federal Government.

Government Property - All property owned by or leased to the Government or acquired by the Government.

Grounds - All areas not occupied by buildings, structures, or pavements

Hazardous Material - Materials which because of its quantity, concentration, or physical, chemical, or infectious characteristics, may pose a hazard to human health or the environment. As defined by 49 CFR 173, 29 CFR 1910, 40 CFR 261 and Federal Standard 313.

Hazardous Waste - As defined by 40 CFR 261.

Heating Boiler, Low Pressure - A boiler operated at pressures not exceeding 15 psig for steam, or at pressures not exceeding 160 psig and temperatures not exceeding 250 degrees F for water.

Heating Season - The heating season is defined as the six (6) month period from 15 October through 15 April.

High Voltage - Any electrical voltage exceeding 600V per the National Electric Code (NEC).

IEEE - The world's largest technical professional society whose technical objective is advancing the theory and practice of electrical, electronics and computer engineering, and computer science.

Incidental Craft or Engineering - Contractor-provided craft or engineering support beyond what the Contractor can relate to a specific contract element. It may include, but not be limited to, limited engineering analysis support for the Contractor's craft, or technical support for NASA on-site meetings, design reviews, utility outage support, opening panels for engineering inspection, or code research for specific issues that are being evaluated.

Indefinite Delivery Indefinite Quantity (IDIQ) - Services which cannot be adequately defined in advance for inclusion with Lump Sum services. IDIQ work will always be associated with a delivery order.

Industrial Sewer System - A system of pipes designed to convey untreated industrial wastewater to MSFC's National Pollutant Discharge Elimination System (NPDES) permitted outfall. MSFC is permitted to discharge laboratory wastewater, shop wash down water, non-contact water and storm water through the industrial sewer system.

Infrared Thermography - A predictive technique that uses infrared imaging to identify defects in electrical and electro-mechanical devices such as fuse boxes, circuit breakers, and switchgear. It also can be used effectively in a non-predictive manner to detect thermal cavities and leaks in walls, ceilings, and rooftops, the correction of which can result in sizeable reductions in heating and air conditioning expenses. Thermal imaging is extremely sensitive, and since it evaluates the heat an object emits, emittance and reflective factors of the object and environment must be considered.

Interferences - An interference is any part of a piece of equipment, obstruction or blockage, whether installed or portable, that must be moved, removed, or disturbed in the accomplishment of work specified.

Journeyman - An experienced reliable person who has served a required apprenticeship or equivalent training period (four years or more) in a designated field, craft, or trade that can be documented by a certificate or diploma from a reputable organization, school, or trade school program.

Life Cycle Cost - The sum of the initial cost, operating cost, maintenance cost, lost opportunity cost, and disposal cost less salvage realized.

Low Voltage - Any voltage below 600V per the National Electric Code (NEC).

Lump Sum - Services that can be defined in advance to insure those services are performed in a complete and satisfactory manner.

Maintenance - The recurring day-to-day, periodic, or scheduled work required to preserve or restore a real property facility to such a condition that it may be effectively utilized for its designated purpose. The term includes work undertaken to prevent damage to a facility that otherwise would be more costly to restore.

Maintenance Alarm (MA) - Any alarm, excluding a critical alarm that indicates equipment or a system is operating outside of established parameters.

Maintenance Project Manager - An individual that interfaces with the Contractor with respect to work priorities, work schedule, and resolution of Government related questions. This normally includes technical monitor duties associated with the contract.

Maintenance Work - Maintenance work includes inspection, servicing, cleaning, repairing, and replacement of the equipment, systems, and their components.

Material Condition - The overall existing physical state of existence of a piece of equipment and its associated components with regards to age, appearance, assembly, assessment, evaluation, and appraisal.

Material - An item that is utilized to produce an end product and is permanently incorporated into or attached to an end item.

Mean Time Between Failures (MTBF) - The reciprocal of the failure rate; the average time to fail. The MTBF is sometimes called the Mean Time To Fail (MTTF).

Motor Circuit Analysis (MCA) - A predictive technique whereby the static characteristics of a motor or generator are measured as indicators of equipment condition.

Motor Current Spectrum Analysis (MCSA) - A predictive technique whereby motor current signatures provide information on the electro-mechanical condition of AC induction motors. It detects faults such as broken rotor bars, high resistance joints, and cracked rotor end rings by collecting motor current spectrums with clamp-on sensors and analyzing the data.

Natural Gas System - A natural gas system is that portion of piping that conveys natural gas from the utility meters to all gas fired fixtures.

Noncollateral Equipment - All equipment other than collateral equipment. Such equipment, when acquired and used in a facility or a test apparatus, can be severed and removed after erection or installation without substantial loss of value or damage thereto or to the premises where installed. Noncollateral equipment imparts to the facility or test apparatus its particular character at the time, for example furniture in an office building, laboratory equipment in a laboratory, test equipment in a test stand, machine tools in a shop facility, computers in a computer facility, and is not required to make the facility useful or operable as a structure or building.

Non-Core Work Hours - Contractors work hours other than 7:00 a. m. to 4:00 p. m. Monday through Friday.

Performance Requirements Summary (PRS) - A tabular summary of contract requirements itemized by work requirements (tasks), weight, standards of performance, and AQLs which is used by the Government to assess monthly Contractor performance and is the primary basis for deducting for partially performed, unsatisfactorily performed, and non-performed work. The PRS is provided as Section E.9.

Performance Standards - Those standards that an item is required to meet in order to maintain its required function. The performance standard defines functional failure for the item.

P-F Interval - The interval between the point at which a potential failure becomes detectable and the point of functional failure.

Pleasing Appearance - An appearance similar to the original finished appearance with only minor, unobjectionable deterioration resulting from normal use.

Plumbing System - The plumbing system includes all potable water supply and distribution pipes including deionized water systems, plumbing fixtures, traps, drainage and vent pipe,

and all building drains including their respective joints and connections, devices, receptacles, and appurtenances within the building and to a point of five (5) feet outside each building which shall include potable water piping, gas piping, water heaters, and vents for the same.

Potential Failure - An identifiable condition that indicates that a high probability of failure is imminent.

Power Boiler - A boiler operated at a pressure of more than 15 psig (but not more than 300 psig) for steam, or pressure of more than 160 psig and a temperature of more than 250 degrees F for hot water.

Predictive Testing and Inspection (PT&I) - The use of advanced technology to assess machinery condition. It replaces maintenance scheduled at arbitrary time and usage intervals with maintenance that is scheduled only when the condition of the equipment requires it. The PT&I data obtained allows for planning and scheduling corrective maintenance or repairs in advance of failure. Results of PT&I information collection and analysis are used to schedule preventive maintenance, repair, replace, or validate other maintenance and repair efforts, verify proper new installations, and determine overall material condition of systems and equipment. Use of PT&I is often substituted for time based maintenance in order to perform more effective maintenance activities. Common PT&I technologies include vibration analysis, infrared thermography, and lubricating oil analysis.

Preventive Maintenance (PM) – The planned, scheduled periodic inspection, adjustment, cleaning, lubrication, parts replacement, and routine repair of equipment and systems for which a specific operator is not assigned. PM consists of many checkpoint activities on items that, if disabled, would interfere with an essential operation, endanger life or property, or involve high cost or long lead time for replacement.

Proactive Maintenance - Also referred to as "root-cause analysis," proactive maintenance is the further application of predictive maintenance technologies toward extending machinery life. It seeks to reduce the need for maintenance through better design, better installation, precision balance and alignment, and root-cause failure analysis.

Programmed Maintenance - Those maintenance tasks whose cycle exceeds 1 year, such as painting a building every 5th year (this category is different from PM in that if a planned cycle is missed the original planned work still remains to be accomplished, whereas in PM only the next planned cycle is accomplished instead of doing the work twice such as two lubrications, two adjustments, or two inspections.). Some examples of Programmed Maintenance include: painting, roof maintenance (flood coat, flashing, patching, some repair by replacement), road and parking lot maintenance (overlays, seal coating, and patching), utility system maintenance (pigging of constructed lines), and similar functions.

Proper Operation - The operation of a piece of equipment or system in accordance with the manufacturer's specifications and its design parameters

Public Sanitary Sewer - A public sanitary sewer system is a common sewer connecting all building drains together and carrying them to a treatment plant.

Quality Assurance (QA) - A method used by the Government to provide some measure of evaluation over the quality of purchased goods and services received.

Quality Assurance Evaluator (QAE) - A person(s) designated by the COTR to measure/monitor Contractor performance under this contract. Also referred to as a Technical Monitor.

Quality Assurance Program - A program implemented by the Government to evaluate the output quality and responsiveness of the Contractor to ensure that the Government receives the services for which public funds are expended. It is emphasized that the Government's quality assurance program is not a substitute for the quality control program implemented and administered by the Contractor.

Quality Control (QC) - A method used by the Contractor to control the quality of goods and services produced.

Quality Control Plan (QCP) - A plan implemented by the Contractor to help identify, correct, and control problems throughout the entire scope of the Contractor's own operations.

Reactive Maintenance - Often called breakdown maintenance or "run to failure (RTF)." Reactive maintenance or equipment repairs are performed only when the deterioration in a machine's condition causes a functional failure. A high percentage of unplanned maintenance work, high replacement part inventories and the inefficient use of maintenance personnel typify this strategy.

Real Property - All Government lands and rights therein; ground improvements, utility distribution systems, buildings, and structures.

Rebuilt Components/Assemblies - Components, assemblies, or subassemblies of equipment that have been disassembled and reconstructed using replacement or re-manufactured parts as necessary and reassembled to produce a serviceable product whose service life expectancy is at least equal to the original component/assembly.

Rehabilitation - The restoration or overhaul to a reasonably efficient operating condition of a part or all of a facility that has deteriorated due to wear, tear, and use. It improves the general condition of buildings, structures, or systems, rather than specific fixtures, equipment, or repair items. Original configuration is not altered.

Reliability Centered Maintenance (RCM) - RCM is a maintenance strategy that logically incorporates the optimum mix of preventive, predictive, reactive, and proactive maintenance practices. These maintenance practices, rather than being applied independently, are integrated to take advantage of their respective strengths in order to maximize facility and equipment operability and efficiency while minimizing life cycle costs.

Repair - Repair is the restoration of a piece of equipment, a system, or a real property facility to such a condition that it may be effectively utilized for its designated purposes. Repair may be overhaul, reprocessing, or replacement of constituent parts or materials that have deteriorated by action of the elements or usage and have not been corrected through maintenance, or replacement of the entire unit or system if beyond economical repair.

Response Time - Response time is defined as the time allowed the Contractor after initial notification of a work requirement to be physically on the premises at the work site with appropriate tools, equipment, and materials, ready to perform the work required.

Root Cause Failure Analysis (RCFA) - The process of exploring, in increasing detail, all possible causes related to a machine failure. Failure causes are grouped into general categories for further analysis. For example, causes can be related to machinery, people, materials, methods, policies, environment, and measurement error.

Run-to-Failure - A maintenance approach where no action is taken (time or cycle based actions), following installation, to prevent failure. Candidate systems or machines for run-to-failure are usually low cost, easily repaired, and non-critical.

Safety Consequences - The consequences of failure results in personal injury and/or impact on personal well being.

Service Contract Act (SCA) Work - The Service Contract Act (40 U.S.C. 351, as amended provides that contracts in excess of \$2,500.00 to which the United States or the District of Columbia is a party hereto, for the furnishing of services through the use of service employees, shall contain a clause (FAR 52.222-41) that no service employee shall receive less than the minimum prevailing wage rates and fringe benefits as determined by the Secretary of Labor.

SI - The International System of Units; SI is the modernized version of the metric system based on the meter, kilogram, and second (MKS) units. It is a decimal system composed of basic, supplementary, and derived units, and is the system that is preferred for all applications for the Government.

Spill Response - Activities associated with a spill of hazardous or controlled substance that enters or threatens to enter the environment. Activities include containment and cleanup.

Steam Distribution System - A system (including distribution lines and installed equipment forming an integral part of the system) which transmits steam between (1) the outside of the building or structure in which the services are used, and (2) the point of origin or disposal, or the connection with some other system. This only applies to steam systems owned and operated by MSFC

Storm Sewer (Drain) System - The storm sewer system consists of building roof leaders, area drains, gutters, catch basins, drop inlets, curb drains, manholes, open culverts, any piping conveying rainwater, and surface water to public tributaries.

Supplies - Items that are utilized to produce an end product and are not permanently incorporated into or attached to an end item. (Examples include: masking tape, sandpaper, solvent, cleaners, lubricants, grease, oil, rags)

Surfaced Areas - Surfaced areas include all concrete, asphalt, and gravel surfaces and their associated features such as curbs, gutters, inlets, drains, and manhole surfaces. Surfaced areas include, but are not limited to, vehicular pavements, sidewalks, patios, pathways, recreational courts, exterior stairways, ramps, pads, and all shoulders of above.

Trouble Call (TC) - Trouble calls are reactive maintenance work that is generally called in by Building Managers, maintenance workers, or occupants of a facility. This category is composed of three types of work classified in Paragraph 4.2.D, Lump Sum Work; Trouble Calls; Classification of Trouble Calls. The scope of a trouble call is limited to \$2000.00 in total labor and material.

Trouble Call Service (TCS) - Trouble call services are minor requests that are not collateral maintenance items and are not addressed in the scope of another organization's responsibility but are performed by maintenance organizations because they possess the skills necessary to perform the work. The scope of a trouble call service is limited to \$2000.00 in total labor and material.

Trouble Call Operations Fire Alarm System (TOF) - Operation and minor maintenance associated with fire alarm systems shall include, but not be limited to, disabling alarms and panels to prevent inadvertent activation while other personnel are working in an area, enabling alarms and panels after personnel have performed work that might inadvertently activate alarms, maintaining prescribed sensitivity limits in accordance with manufacturer recommendations, restoring power and resetting alarms and panels after planned or unplanned outages, resetting breakers, responding to activated alarms, maintaining panels, replacing batteries, supporting fire drills, and reprogramming systems. The work shall also include repair. The Contractor's repair liability for servicing equipment and system components is limited to \$2,000 per system, per occurrence.

Trouble Call Operations Gas Alarm Systems (TOG) - Operation and minor maintenance associated with gas alarm systems shall include, but not be limited to, disabling alarms to prevent inadvertent activation while other personnel are working in an area, enabling alarms systems after personnel have performed work that might inadvertently activate alarms, restoring power and resetting alarms after planned or unplanned outages, resetting breakers, responding to activated alarms, replacing batteries, maintaining prescribed sensitivity limits in accordance with manufacturer recommendations, replacing cells and detectors, replacing and adjusting monitors, and adding cell fluid. The work shall also include repair. The Contractor's repair liability for servicing equipment and system components is limited to \$2,000 per system, per occurrence.

Trouble Call Operations HVAC/R Systems (TOH) - Operations and minor maintenance associated with HVAC/R systems shall include, but not be limited to, performance of seasonal equipment start-ups and shutdowns, calibrations, resetting and restarting tripped equipment, regulator or thermostat adjustments, filter replacements other than HEPA filters, and isolating and returning equipment to service as a result of planned or unplanned outages.

Isolating and returning equipment to service for PM or PT&I shall be considered part of the PM or PT&I and thus not a TOH. The work shall also include repair of HVAC/R related components (for example, Air Compressors, Air Dryers, Fans, Chillers, Cooling Towers, DXAC units, Humidifiers, Pumps) and associated piping isolated to the first connection point upstream and downstream of each component. All piping, fittings, valves, insulation/lagging, aluminum jacketing, expansion loops, traps, strainers, pipe hangers, anchors, structural supports, and touch-up painting are inclusive. The Contractor's repair liability for servicing equipment and system components is limited to \$2,000 per system, per occurrence.

Ultrasonic Analysis - A predictive technique incorporating the use of airborne and pulse-echo, ultra-high frequency sound. Commonly used to pinpoint steam leaks and steam trap failures. Additionally, ultrasonic thickness gauges are used routinely to measure wall thinning in vessels and pipes and in other similar applications.

Unit Cost - The cost of an item per unit. The unit cost may be expressed in units of length, weight, volume or each piece.

Unit Price Book (UPB) - As used in this contract refers to the prices published by the R.S. Means®, entitled "Facilities Maintenance and Repair Cost Data".

Utility Control Systems (UCS) - A computerized equipment monitoring and control system that detects abnormal conditions, controls HVAC equipment, and provides remote readout of electrical consumption meters.

Vibration Analysis - The dominant technique used in predictive maintenance. Uses noise or vibration created by mechanical equipment to determine the equipment actual condition. Uses transducers to translate a vibration amplitude and frequency into electronic signals. When measurements of both amplitude and frequency are available, diagnostic methods can be used to determine both the magnitude of a problem and its probable cause. Vibration techniques most often used include broadband trending (looks at the overall machine condition).

Water Supply System - The water supply system of a building or premises consists of the building supply pipe, water distribution pipes, and the necessary connecting pipes, fittings, control valves, and all appurtenances carrying or supplying water in or adjacent to the building or premises and connected to the water main for supply.

Work Site - The actual site where the work is performed. An example is a building where equipment is being maintained or repaired.

3.0 DOCUMENTATION, WORK CONTROL, AND RELIABILITY CENTERED MAINTENANCE

3.1 GENERAL

The Contractor shall plan, schedule, assess, monitor, and report work described under this contract in a manner that maximizes visibility and efficiency.

3.2 LUMP SUM WORK

A. Administrative

1. Contract Element (CLIN - 00X1.0301) Safety and Health Plan. The Contractor shall submit and update a Safety and Health Plan in accordance with DRD 1197SA-001.
2. Contract Element (CLIN – 00X1.0302) Quality Control Plan (QCP) and Quarterly Summary Report. A QCP that specifies the Contractor's quality program for PWS tasks shall be submitted with the Technical Proposal. The Contractor shall prepare the QCP in accordance with DRD 1197QE-001. The Contractor shall provide a summary report each contract quarter in accordance with DRD 1197QE-001. Quarters are established by using the contract start date as the beginning date of the first quarter.
3. Contract Element (CLIN – 00X1.0303) Technical Reference Library (TRL). After award of contract, the existing TRL shall be maintained by the Contractor. TRL data shall be current and shall include, but not be limited to, all applicable Government publications and regulations, operation and maintenance procedures prepared by the Contractor, plans and drawings, Government and manufacturers' equipment operation and maintenance manuals, historical data, completed FWRs or DOs, completed TCs and TCSs, completed PM, and a hardcopy of all paragraphs of this contract. Drawings are limited to those drawings or sketches that the Contractor prepares for internal use or those prepared for the Government in support of a work assignment. Codes or publications that are purchased by the Contractor shall remain the property of the Contractor at the end of the contract period. However, the Government shall have access to these documents during the contract period. The Contractor shall maintain and update all TRL equipment operation and maintenance manuals relevant to this contract throughout the entire contract period. The Government will own the TRL and Government personnel shall have continuous access. The TRL shall be fully operational 45 days after the contract start date.

B. Work Control

1. Contract Element (CLIN - 00X1.0305) Work Control Center. The Contractor shall operate a Work Control Center (WCC) between the hours of 6:00 a.m. and 4:00 p.m. on core workdays. This includes operating the Trouble Call

Desk described in Paragraph 3.2.B.1.a. The Utility Control System (UCS) Contractor will receive work requests from 4:00 p.m. until 6:00 a.m. for normal workdays, weekends, and holidays and enter work into the web based work submittal system. The Contractor shall only be required to respond to work identified by the UCS Contractor in non-core hours as identified in Paragraph 1.2.F. The WCC shall enter all web based submittals into the work control system on the first core workday after the web based submittal. The WCC will receive a status report from the UCS Contractor between 6:00 a.m. and 6:30 a.m. at the UCS control room each workday that delineates all alarms that have occurred and work orders submitted through the web based system by the UCS Contractor since the last UCS status report. In addition to processing work orders for all of the Contractor's work, the WCC shall process the FMO construction, grounds care and custodial work orders, and will receive hardcopy or electronic facility work requests from throughout MSFC as well as calls or electronic notification of work needs that meet the definition of trouble calls or trouble call services. FMO construction work orders are work assigned to a FMO project manager and performed in accordance with the Davis-Bacon Act through a construction contract. The WCC shall make an initial assessment to determine if the work requested is within the scope of this contract and if so, properly classify and process work. If the WCC or its management cannot determine if the work is within the contract scope, the COTR will assist in work scope determination. Also, the WCC shall compile a WCC status report consisting of information from the UCS status report, HVAC hot/cold call status, elevator operation status, urgent or emergency work that is ongoing or has been identified since the last WCC status report, and other specific work that the Government has identified. An appropriate Contractor manager that has sufficient background to discuss all aspects of the WCC status report shall meet with the COTR and their representatives by 8:00 a.m. each workday at a location designated by the COTR and will provide the work status report in hard copy. Weekend and holiday information will be included in the report for the next regular workday. The Contractor shall implement all necessary work control procedures to ensure fully adequate and timely completion of work requirements, as well as to permit tracking of work in progress. The Contractor shall plan and schedule work to assure material, labor, and equipment are available, and environmental and safety concerns are met to complete work requirements within the specified time limits and in conformance with the quality standards established herein. All work requirements are to be logged daily and entered into the Computerized Maintenance Management System (CMMS) daily. Verbal scheduling and status reports shall be provided when requested by the COTR. The status of any item of work shall be provided within two (2) hours, except as may otherwise be specified in this specification.

- a. Notification Procedures. The Contractor shall operate a Trouble Call Desk that will screen, classify, assign control numbers to, and issue TCs and TCSs. An individual fully familiar with the Contractor's work control procedures and applicable terms and conditions of this contract shall answer all telephone calls within 30 seconds. The requestor shall be given

a TC number and phone number for future statusing if they should desire. The requestor shall also be given the work classification and the maximum number of days allowable to perform the work. The UCS Contractor will not be held to the notification requirements associated with Trouble Call Desk operation. Notification for work orders submitted through the web base system during non-core hours by the UCS Contractor will be accomplished by the WCC on the first core workday after the web based work submittal.

- b. IDIQ Processing. The Contractor shall provide routing and processing of IDIQs including the transport of MSFC Form 199s to the various persons in the approval chain. This central point of contact shall be responsible for the receipt, numbering, processing, routing, receipt of related design drawings, and statusing of all IDIQ's. Processing shall be in accordance with OWI AS20-OI-015.

- 2. Contract Element (CLIN - 00X1.0306) Computerized Maintenance Management System (CMMS) Operations and Management. The Contractor shall maintain and manage data in the CMMS to reflect all work performed (including work performed by other contractors or the Government related to facilities maintenance, if notified). All work records, with the exception of preventive maintenance, for work performed by the COSS Contractor shall be updated as complete or closed, as appropriate, on the next workday after physical completion of the work. Preventive maintenance work orders shall be updated as completed or closed within 3 workdays after physical completion of the work. Work status for work not performed by the COSS Contractor shall be entered within one day of notification of status change. The Government will provide maintenance and support for all Government furnished software and hardware unless otherwise specified. The Government will provide all maintenance and administration of the on-site network infrastructure. No data, except data entered in error by the Contractor, shall be deleted from the database without the written consent of the COTR. The Government may at any time access the database and review any information contained therein. The database, including changes made under this contract, is Government property, for the exclusive use of the Government, and may not be transferred to another location, in any form, or used by the Contractor for any purpose except for work performed under this contract. See Paragraph 1.4.G.2, Disclosure of Information.

The contractor shall utilize all modules and features of the CMMS unless waived by the COTR.

The existing CMMS is MAXIMO Extended Enterprise version 5.2.

C. Work Scheduling and Planning

- 1. The Contractor shall arrange their work so as to not cause interference with the normal occurrence of Government business. Note that a number of facilities

have restricted entry and the Contractor shall develop work schedules around the entry requirements. In those cases where some interference is unavoidable, the Contractor shall make every effort to minimize the impact of the interference and its effects on the occupants or users. The intent of the Government is to allow the Contractor to develop an optimal formal schedule and plan rather than to impose a rigid fixed schedule and plan which in some cases may not be appropriate or cost effective. In developing PM schedules and plan guides, the Contractor should consider and rely on: (1) past Government records; (2) the Contractor's own experience; and (3) industry standards and guides, and then develop a program which produces the most appropriate and effective availability of the equipment and operational efficiency of the building or utility systems to be used for its intended purpose.

2. Contract Element (CLIN - 00X 1.0307) Annual Work Plan. The Contractor shall prepare an Annual Work Plan for all maintenance work per the requirements of NPR 8831.2. NASA will use the work plan to support budget requests for maintenance and to plan other work. The Contractor shall assemble historical information (usually from the CMMS) in order to provide an accounting of work performed and identify emerging trends. The Contractor shall prepare the Annual Work Plan in accordance with DRD 1197LS-003. Data shall be addressed by fiscal year in order to identify trends. Note that utility, construction, and capital investment data will require interfacing with other AS20 groups or contractors.
3. Contract Element (CLIN - 00X 1.0308) Five Year Maintenance Plan. The Contractor shall develop a five-year plan to project maintenance needs beyond the annual work plan. The plan will be used by the Government as a guide for maintenance planning and budgeting. The Contractor shall prepare the plan in accordance with DRD 1197LS-005.
4. Contract Element (CLIN - 00X1.0309) Facility Condition Assessment (FCA). Standardized facility condition assessments shall be conducted on each MSFC facility by experienced facilities maintenance personnel to observe, record, and recommend maintenance activities to maintain reliable facility performance at the least cost. The Contractor shall assess the condition of each facility in order to determine the overall average condition of the Center. The surveys shall encompass the different components of the facilities, such as, but not limited to, roofs, pumps, air conditioning, interior finishes, electrical devices and systems. They also include the Center's infrastructure, such as, but not limited to, roads, storage tanks, grounds, sidewalks, drainage structures, and utility systems. The Contractor shall utilize Government furnished PDA's to gather data and to populate government owned software. The Contractor shall also utilize Government furnished desktop software for data gathering, data manipulation and reporting. The Contractor shall provide FCA reports in accordance with DRD 1197LS-006. The FCA process shall include the use of PM and PT&I data where applicable. The FCA's shall insure 80 percent accuracy of the Center's Backlog of Maintenance and Repair (BMAR) at all times. The Government furnished software is designed to generate reports in

the proper format. The BMAR associated with FCA's shall consist of labor cost, material cost, and contractor overhead.

5. Contract Element (CLIN – 00X1.0310) Facility Condition Assessment (FCA) Schedule. The Contractor shall provide an FCA schedule that provides individual FCA report dates for all MSFC facilities and the Center's infrastructure and associated BMAR data in accordance with DRD 1197LS-006.
6. Contract Element (CLIN - 00X1.0311) Facility Condition Assessment Project Recommendations. The Contractor shall provide to the Government a recommendation of projects, based on their FCA findings, for Government consideration in initiating capital investment projects. The Contractor shall provide FCA project recommendations in accordance with DRD 1197LS-008. After initial submittal the list shall be revised based on continuing FCA analysis combined with any Government direction associated with a specific Government need. Additional project lists may be requested on an as-needed basis throughout, the contract period. The additional lists should not exceed three in number for any contract year and will be in the format identified in DRD 1197LS-008. The specific project values will normally be the variable for developing the additional lists.
7. Contract Element (CLIN 00X1.0314) IDIQ Schedule. The Contractor shall provide a graphical schedule for the use of the Government and the Contractor. This shall be the governing document for IDIQ work schedules. The Contractor shall provide a IDIQ Schedule in accordance with DRD 1197LS-016. The start and finish dates reflected in this schedule shall be the actual start and finish dates of the work and shall not include material delivery times. Regularly scheduled meetings shall be held with the Government to address scheduling problems and set priorities. Work that is in process shall be indicated by an "in progress" status in the CMMS. If work cannot be performed on an IDIQ that is scheduled for work it shall be placed in a hold status with an explanation. The Contractor shall schedule support crafts and equipment as well as the primary craft. Unavailability of support craft or equipment and tools will not be considered by the Government as sufficient justification for delay of work unless it was previously planned for by the Contractor and is unavailable through no fault of the Contractor.

D. Reliability Centered Maintenance (RCM)

1. The overall goal regarding Center operations and maintenance is to attain the building and system availability at the lowest life cycle cost (LLC) while meeting all standards for security, environmental health, safety, and MSFC mission requirements. RCM is the optimum mix of reactive, preventive, condition based, and proactive maintenance practices. Proactive maintenance includes Root Cause Failure Analysis (RCFA) and Failure Modes and Effects Analysis (FMEA) as well as Age Exploration. The maintenance strategies rather than being applied independently are integrated to take advantage of

their respective strengths in order to maximize facility and equipment operability and efficiency while minimizing life cycle cost. The RCM Report format will provide an opportunity for the Contractor to identify trends and to propose changes to the maintenance approach. When proposing changes to the maintenance approach, the Contractor shall use RCM strategy as defined in Paragraph 2.0, Definitions, and in NPR 88.31.2. The Government will consider all proposed changes, even those that reduce the recurring work load (without reducing the lump sum value per Paragraph 1.5, Lump Sum Work) if the result is increased facility availability and reliability. The RCM Report shall provide technical rationale for systems recommendations, and identify risk associated with proposed changes (probability of failure and effect on NASA mission or safety)

2. Contract Element (CLIN 00X1. 0312) RCM Report. The Contractor shall provide a report to the COTR addressing RCM implementation and RCM metrics in accordance with DRD 1197LS-009.
 3. Contract Element (CLIN - 00X1.0304) Reliability Centered Maintenance (RCM) Plan. The Contractor shall prepare a RCM plan and submit it to the Government for approval. The Contractor shall prepare the RCM Plan in accordance with DRD 1197LS-002. This plan shall be developed utilizing the current PM and PT&I program data as shown in Attachments J-24 and J-25, manufacturer's recommendations, the Contractor's knowledge of RCM approaches, and the use of PT&I and best PM practices. All reports and evaluations associated with PM shall include PT&I unless otherwise stated by the Government. After approval, this plan shall become the basis for timeliness and quality evaluations for all PM actions required on this contract. In addition, this plan will become the baseline for any changes to the program as referenced in Paragraph 1.5.D.
 4. Commissioning/Retrocommissioning. The Contractor shall provide support for commissioning and retrocommissioning of systems. This requires tests of systems to verify operation meets design requirements. This work will also include adjustments and repairs as necessary to correct deficiencies. Work shall be accomplished as trouble calls or IDIQ depending on the scope of work required.
- E. Evaluation Period Status Report. The Contractor shall provide summary documentation for the firm fixed price and indefinite delivery indefinite quantity work performed for each evaluation period in accordance with DRD 1197MA-001.
- F. Contract Element (CLIN 00X1.0313) Headquarters (HQ) Metrics. The Contractor shall provide the HQ metrics in accordance with DRD 1197LS-012.

3.3 **IDIQ WORK**

IDIQ work will be ordered in accordance with Paragraph 1.6, IDIQ Work, and may be ordered for any facility or area at MSFC. IDIQ work shall be completed within the number of days specified on the FWR or DO.

The following CLIN shall be pre-priced in Section B.

Contract Element (CLIN - 00X2.0301) Pre-Flight Facilities Checkout. The Contractor shall provide a report to the COTR that documents evaluation of the integrity of electrical and HVAC systems related to Shuttle launch activities. These electrical and HVAC systems are typically located in Buildings 4207 and 4663. The Contractor shall prepare the Pre-Flight Facilities Checkout Report in accordance with DRD 1197LS-010.

--Remainder of Page Intentionally Left Blank--

4.0 TROUBLE CALLS AND TROUBLE CALL SERVICES

4.1 GENERAL REQUIREMENTS

General. The Contractor shall perform all Trouble Calls (TCs) and trouble call services (TCSs) as described herein under the Firm Fixed Price Lump Sum portion of the contract. All Lump Sum work performed under this contract shall comply with Service Contract Act (SCA) labor requirements. Lack of required labor or materials shall not be an acceptable cause for nonperformance of work. Work shall assure safe, reliable, and available facilities and systems. The Contractor shall submit to the COTR or designated representative "red line" drawings showing the "as built" condition for any TC or TCS work that changes a system configuration.

4.2 LUMP SUM WORK

The Contractor shall respond to and correct all trouble calls of which they are notified.

- A. Contract Element (CLIN-00X1.0401) Trouble Calls Definition and Limitations. A TC is defined as an unscheduled request for work of a one-time nature typically issued to correct, repair, or restore a minor structural, mechanical (including plumbing), electrical, or environmental deficiency, requiring little detailed management control, and which is not projected to exceed \$2000 in total labor and material cost (hereafter referred to as the "limit"). The responsibility to perform work under a single TC ends when the Contractor notifies the COTR that the work is estimated to exceed the total limit specified. If the Government decides to proceed with the work, effort expended and costs incurred by the Contractor prior to such notification will be considered part of the IDIQ and will be applied toward any additional IDIQ work, which may result. The IDIQ shall have the same tracking number as the TC in the CMMS. The TC shall not be cancelled or closed but will be redesignated as an IDIQ. The initiator shall be notified in writing (email is acceptable) when a TC is converted to an IDIQ.
- B. Contract Element (CLIN-00X1.0402) Trouble Call Services (TCS) Minor Service Requests. The Contractor shall perform all minor service requests requiring little detailed management control, and which is not projected to exceed \$2,000 in labor and material cost. The responsibility to perform work under a single TCS ends when the Contractor notifies the COTR that the work is estimated to exceed the total limit specified. The Contractor will make an initial estimate of each TCS work scope prior to beginning work to determine if the work may exceed \$2,000. Should the Contractor initially estimate the work to exceed \$2,000, work will not commence and the COTR will be notified that work does not meet TCS limitations. If work is begun as a TCS and work scope changes for any reason that will cause the \$2,000 limit to be exceeded, work will stop until the COTR provides direction to continue work using the IDIQ process identified in contract Paragraph 1.6. In either case the Contractor shall notify the initiator in writing (email is acceptable) that he must submit an IDIQ before work can proceed. If the Government decides to proceed, any effort expended and incurred by the Contractor prior to such notification is considered part of the IDIQ and will be

applied toward any IDIQ work that may result. The IDIQ shall have the same tracking number as the TCS in the CMMS. The TCS shall not be cancelled or closed but will be redesignated as an IDIQ.

- C. Workmanship and Materials. The level of repair provided by the Contractor shall assure that any item included in a TC or TCS is free of missing components or defects which would affect the safety, reliability, availability, pleasing appearance, or habitability of the facilities, or would prevent any structural members, mechanical (including plumbing) systems, or electrical equipment from functioning per the intended design or use. Corrected or repaired work shall be carried to completion, including touch-up painting or operational checks. The quality of work and the repaired areas shall be fully compatible with adjacent surfaces or equipment. All replacement material shall match existing dimensions, capacities, materials, quality of work, finish, color, design, and function, unless otherwise specified. During performance of work, debris shall not be allowed to spread unnecessarily into adjacent areas nor accumulate in the work area itself. All such debris, excess material, and parts shall be removed upon completion of work or at the end of each workday, whichever occurs first. Upon completion of work, unsightly visual appearances such as any visual fingerprints, stains, surface degradations, caused during performance of work shall be removed.
- D. Classification of Trouble Calls and Trouble Call Services. The Contractor shall perform TCs and TCSs to correct deficiencies at various locations of facilities, structures, and utilities that are a part of MSFC. All TCs and TCSs are classified as follows:
1. Emergency Calls. Emergency calls are issued for situations that require immediate action to eliminate hazards to personnel, equipment, or environment, prevent loss of or damage to Government property, or to restore essential services that have been interrupted by an unplanned event. The Contractor response time shall be within fifteen (15) minutes following notification. The Contractor shall stabilize the situation assuring the emergency will not recur. If further labor and material are required to complete the repair once the emergency is arrested, completion shall be within five working days following notification of the emergency call unless stated otherwise within the technical portion of this specification. If the TC limit is reached during corrective operations, the Contractor shall immediately notify the COTR and continue work up to the point at which the emergency is arrested by stabilizing the situation to eliminate personnel hazards and further damage to Government property. Costs incurred to stabilize the emergency condition which exceed the TC limit will be reimbursed at the T&M coefficient. The Contractor shall provide a detailed breakdown of such costs for Government approval and payment. Remaining emergency work if required to complete the TC or additional work exceeding the TC limit shall be accomplished at the Government's discretion per Paragraph 1.6, IDIQ Work.
 2. Urgent Calls. Urgent calls are issued for situations which do not immediately endanger personnel or threaten to damage property or the environment, but

would soon inconvenience and affect the health or well being of personnel or disrupt operational missions or projects. The Contractor response time to urgent TCs shall be within two (2) hours following notification of the call for both core and non-core working hours. All urgent calls must be completed within five working days following notification of the call. If the TC limit is reached during corrective operations, the Contractor shall immediately notify the COTR and continue work up to the point at which the urgency is arrested. Costs incurred to stabilize the urgent condition that exceed the TC limit will be reimbursed at the T&M coefficient. The Contractor shall provide a detailed breakdown of such costs for Government approval and payment. Remaining urgent work if required to complete the TC or additional work exceeding the TC limit shall be accomplished at the Government's discretion per Paragraph 1.6, IDIQ Work.

3. Routine Calls. Routine calls are for all other calls that do not qualify as emergency or urgent call. The Contractor shall complete routine calls within fifteen working days following notification, unless specified otherwise when issued. Occasionally, the COTR will state specific dates or times for routine TC accomplishment, such as locating utility lines, pavement cutting, providing special maintenance support for other contractors, and other atypical items of work. Should the Contractor determine that work initiated as a routine TC will exceed the TC limit the Contractor shall return the documentation to the COTR along with a preliminary estimate for the remaining work per Paragraph 1.6, IDIQ Work, within one (1) working day of stopping work. However, the Contractor shall not leave the work in an unusable condition, any unsafe condition, any condition that creates a security violation, or any condition that may cause further damage or destruction. Remaining routine work exceeding the TC limit shall be accomplished at the Government's discretion by execution of a FWR or DO.

E. Processing Trouble Calls

1. Notification Procedures. Notification of new work shall be in accordance with Paragraph 3.2.B, Work Control.
2. Trouble Call and Trouble Call Service Documentation. TC and TCS documentation is electronic. The Contractor shall enter all documentation into the CMMS using the MAXIMO and @Hand software and wireless PDA's. For work outside the TC or TCS scope, the call shall be logged and documented in accordance with 3.2.B, Work Control. Calls shall be combined for items that are duplicated, received the same day for the same problem or worked the same day for the same problem, or items that are related to the same system located in the same general area and shall only be conducted as one (1) TC or TCS. Examples of combining work include, but are not limited to, relamping a number of rooms of the same floor of a building on the same day, unstopping a sink and a commode in the same restroom on the same day, and installing locks on a number of doors on the same floor on the same day. The Contractor shall maintain all records in a computer database on a daily basis for easy

accessibility by the Government. The Contractor shall ensure that all information has been entered in the CMMS.

- F. Work Status and Performance. The Contractor shall respond to questions within one (1) hour of receipt from the COTR as to the status of any TC or TCS work. The Contractor shall notify the TC requester by telephone, electronic mail, or fax of the work status within two working days from initial receipt for all emergency and urgent calls, and then shall notify the TC requester upon completion of TCs. The Contractor shall manage and update the CMMS in a manner that current TC or TCS work status shall be provided on demand. The Contractor shall be required to maintain sufficient quantities of materials on hand or have available an immediate source of supply to support TC work. Lack of such materials shall not be considered an acceptable cause for non-performance. Lack of planning shall not be considered acceptable for late performance. The Contractor shall repair any incidental and related damage as a result of the initial service being performed. For example, if the TC is to repair a roof leak, the Contractor shall replace any ceiling tiles or repair other related items damaged as a result of the leaking roof within the scope and limit of the particular TC. All work exceeding the TC limit shall be accomplished at the Government's discretion by execution of a FWR or DO.
- G. Timeliness Deduction. Timeliness for a TC or TCS is based on the work classification of emergency, urgent, or routine. However, the timeliness deduction will be increased in direct relation to completion time exceeding the original completion date unless the Contractor provides sufficient justification for this increase. The increased deduction shall be based on multiples of the original performance time beginning with double. The maximum deduction cannot exceed the total value of the trouble call. For example, should routine work not be completed for thirty-five working days, the timeliness deduction would be double the value determined in DRD 1197MA-001 for that TC or TCS. Deductions are not to be confused with not meeting the Acceptable Quality Level (AQL). If the contractor fails to meet the AQL, it indicates the Contractor's quality control is unsatisfactory.

--Remainder of Page Intentionally Left Blank--

5.0 **SYSTEMS ENGINEERING**

Contract Element (CLIN-00X1.0501) Systems Engineering. The Contractor shall provide a well staffed and skilled engineering group to oversee and guide the work to be performed under this contract. The Government will do all design engineering. The Contractor shall not perform design engineering. System Engineers shall be provided for electrical, mechanical HVAC and civil/structural systems. Engineers shall possess a Bachelor of Science degree from an accredited engineering school in mechanical, electrical or civil/structural engineering and have a minimum of three years experience in the area of the systems assigned. Systems Engineers shall be able to communicate effectively across a broad range of organizational levels, including managerial, supervisory, technical, and crafts personnel. Systems Engineers shall be capable of making effective technical and managerial decisions in regard to the operation and maintenance of their assigned system(s), and shall be knowledgeable regarding industry practices, tools, shops and training. They will perform all the responsibilities of System Engineers including but not limited to:

- Act as technical expert and manager over system(s) including maintaining a broad knowledge of related work issues, such as environmental and safety requirements, systems integration, monitoring and metering concepts.
- Maintain state-of-the-art technical expertise in assigned systems; maintain knowledge of current trends in industry through review of technical publications, attendance of trade shows, manufacturer product briefings and literature, and other continuing education methods.
- Review and correct CMMS equipment information.
- Ensure that all Maintenance work complies with configuration control requirements and provide documentation of configuration changes.
- Brief and keep NASA Technical Monitor(s) updated on system(s) status and key events
- Assist in the troubleshooting and resolution of system problems.
- Develop scope, work statements, specifications and packages for procurement of outsource technical consulting, operation/repair, or other services.
- Monitor equipment and system performance and initiate actions to resolve operational deficiencies, improve performance, increase reliability and improve energy efficiency.
- Monitor the effectiveness of the PM and PT&I programs and recommend improvements
- Review all facility Design Criteria Statements and design drawings, provide comments, and participate in related design review meetings
- Determine and recommend to the Government the disposition of failed equipment, for example, repair or replace.
- Perform Facility Condition Assessments and prepare the Facility Condition Assessment Schedule and Reports (DRD 1197LS-006) and Facility Condition Assessment Project Recommendation Report (DRD 1197LS-008)
- Provide guidance to the craft personnel to ensure sound engineering practices are followed in all work

- Ensure that all applicable codes, standards, and other requirements are met in the performance of work
- Review all data collected for the Pre Flight Facilities Checkout Report (DRD 1197LS-010) and disposition all exceptions that are outside recommended operating limits.
- Provide specifications for replacement equipment when not specified by design
- Provide assistance to the RCM Engineer in the area of their expertise.
- Attend construction inspections and submit findings to the Construction Inspector.
- Provide field engineering support to technicians.

The contractor shall provide a Lifting Devices Engineer, whose primary responsibility will be to monitor and direct all maintenance, repair, modification, installation, and certification of lifting equipment, including but not limited to cranes, hoists, derricks, and elevators. The Lifting Devices Engineer shall be highly qualified in control systems used on lifting equipment. The contractor shall also have on staff engineers of other disciplines required to support the Lifting Devices Engineer in areas outside his major discipline. The LDE shall review all lifting procedures required for work under this contract. The LDE shall review the Annual Crane and Hoist Inspection Report (DRD 1197LS-013), the Annual Elevator Inspection Report (DRD 1197LS-014), and the Five Year Elevator Inspection Report (DRD 1197LS-015) prior to submission to the Government and shall ensure all discrepancies are corrected.

The contractor shall provide a full time RCM Engineer whose primary responsibility will be to lead and direct the implementation of the RCM program. Specific duties of the RCM Engineer shall include but not be limited to:

- Review PT&I data to identify impending equipment failures
- Investigate all equipment failures and determine the actions necessary to prevent or mitigate similar future failures
- Investigate multiple failures on individual pieces of equipment and perform root cause failure analyses.
- Review the PM Plan and make recommendations for continuous improvement based upon equipment history, PT&I data and industry practice
- Monitor current industry state of the art in PT&I and PM practices and recommend changes to the current PM Plan based on emerging technologies
- Prepare the Reliability Centered Maintenance Report (DRD 1197LS-009)
- Monitor equipment and system performance and initiate actions to resolve operational deficiencies, improve performance and increase reliability.
- Monitor the effectiveness of the PM and PT&I programs and recommend improvements
- Review CMMS and PT&I data to identify key areas for improvement in maintenance programs to optimize quality and timeliness of service and system reliability.

6.0 ENVIRONMENTAL MANAGEMENT SUPPORT

6.1 GENERAL REQUIREMENTS

- A. Spill Response. The Contractor shall provide labor, supervision, tools, materials, equipment, and transportation necessary to provide spill response capabilities for petroleum products, toxic, and hazardous and controlled chemical spills at MSFC, including providing containment, cleanup, and treatment of all types of spill emergencies. The Contractor shall be the secondary responder to Redstone Arsenal Fire Department (primary responder). After the Redstone Arsenal Fire Department leaves the scene, the Contractor shall assume the primary responder role.
- B. Asbestos and Lead Management. The Contractor shall provide labor, supervision, tools, materials, equipment, and transportation necessary to provide asbestos and lead management and compliance. The Contractor's asbestos and lead abatement is limited to maintenance within the Service Contract Act.

6.2 LUMP SUM WORK

The following contract elements shall be performed per the Performance Requirements Summary (PRS), Section E.9, and the Performance criteria listed within the contract requirements.

- A. Spill Response
 - 1. Contract Element (CLIN - 00X1.0601) Establish Spill Response Team. The Contractor shall continuously provide sufficient, adequately trained personnel to support and accomplish spill response 24 hours a day, 7 days a week. Initial training is the responsibility of the Contractor. Annual refresher training is provided by the Government onsite at no cost.
 - 2. Contract Element (CLIN - 00X1.0602) Response to Spills and Releases. The Contractor shall respond upon notification to all spills and release of regulated wastes and materials in accordance with the AS10-OWI-001, "MSFC Consolidated Environmental Response Plan, MSFC Emergency Plan (MPR 1040.3), and all Federal, state, and local environmental laws and regulations (latest edition). The Contractor shall respond to all spills after notification within fifteen (15) minutes for core work hours and one hour for non-core work hours and shall work continuously to contain and clean up the spill and package the material. The Contractor shall not leave the site until all work is completed or the Contractor is released by the Environmental Engineering and Occupational Health Office or lead NASA person. This includes, but is not limited to, the following: dispatching personnel and equipment; securing and containing spilled materials under the direction of the Redstone Fire Department and/or Environmental personnel; cleanup and removal of spilled material and contamination; disposal of material generated during cleanup (wastes generated shall be managed in accordance with MWI 8550.1, Waste Management); and decontamination of personnel, equipment, and all property

affected by the spilled material. The Contractor shall handle all spill response activities as an Emergency Trouble Call (TC) as defined in Paragraph 4.2 up to the TC limit. (Note: Because of reporting requirements, environmental TC's shall be priced and accounted for separately from the rest of the TC's in this contract.) Additional spill response activities beyond the TC limit shall be accomplished at the Government's discretion per Paragraph 1.6, IDIQ Work, Spill Response and Cleanup. (Any spills created by the Contractor due to poor or improper operations shall not be included in this total and will be paid for by the Contractor.)

3. Contract Element (CLIN - 00X1.0603) Spill Equipment and Supplies. The Contractor shall continuously provide and maintain an adequate supply of materials necessary for spill response activities. An itemized inventory of all spills response equipment and materials kept in stock shall be maintained at all times. Required reference materials shall be maintained as part of the inventory (for example, guidebooks, blank forms, chemical reference manuals.) After a spill response, the Contractor shall restock equipment and supplies within three (3) days.
- B. Asbestos and Lead Management Contract Element (CLIN - 00X1.0604) Asbestos and Lead Abatement Records. The Contractor shall maintain asbestos and lead abatement records in an electronic database on a continuous basis. Abatement records shall be added within seven (7) days of abatement completion.

6.3 **DOCUMENTATION AND REPORTING REQUIREMENTS**

A. Spill Response Reports

1. Contract Element (CLIN - 00X1.0605) Spill Response Team, Equipment and Supplies Listing. The Contractor shall provide the spill response team, equipment and supplies listing in accordance with DRD 1197EE-003.

B. Asbestos and Lead Management

1. Contract Element (CLIN - 00X1.0606) Asbestos Management Program. The Contractor shall establish and implement an Asbestos Program in accordance with all applicable Federal, state, and local laws and regulations, NASA policies and management directives. The Contractor shall prepare an Asbestos Control Manual in accordance with DRD 1197EE-001 and ensure that subcontractors follow this plan. The Contractor shall ensure that employees have the appropriate credential/certifications to perform asbestos abatement.
2. Contract Element (CLIN - 00X1.0607) Lead Program. The Contractor shall establish and implement a Lead Program to minimize worker and employee exposure and minimize releases to the environment during the abatement, removal, or disturbance of paints and materials containing lead or other regulated heavy metals. The Contractor shall ensure that employees have the

appropriate credential/certifications to perform lead abatement. The Contractor shall prepare a Lead Program Plan in accordance with DRD 1197EE-002.

3. Contract Element (CLIN - 00X1.0608) Asbestos and Lead Monthly Report. The Contractor shall prepare a monthly asbestos and lead report in accordance with DRD 1197EE-005.

- C. Hazardous Waste Disposal. The Contractor Shall dispose of hazardous waste in accordance with MWI 8550.1.

6.4 **IDIQ WORK**

IDIQ work shall be ordered in accordance with Paragraph 1.6, IDIQ work, and completed within the number of calendar or work days specified in the IDIQ FWR or DO. For subcontracted services, if the estimated or proposed subcontract price exceeds \$2,500, the Contractor shall provide competitive subcontractor quotes to support the proposed price unless otherwise directed by the Environmental Engineering and Management Office.

- A. Spill Response and Cleanup. Includes all spill response and cleanup actions that exceed the Lump Sum per spill event identified in Paragraph 6.2, Lump Sum. Initial spill response is included in the Lump Sum portion of the contract. The Contractor shall handle spill response activities as defined in Paragraph 1.6, IDIQ Work.
- B. Technical Support. The Contractor shall provide technical support as required in the FWR or DO.

6.5 **DETAILED SPECIFICATIONS**

- A. Environmental Protection. The Contractor shall comply with all environmental directives, instructions, policies, and regulations and any revisions, updates, or successor documents as listed in Attachment J-26.
- B. Debris Disposal. Any debris the Contractor needs to dispose of, except for hazardous and controlled waste, shall be disposed of at the Redstone Arsenal Solid Waste Management Area (SWMA), the City of Huntsville Incinerator, or City of Huntsville Landfill. Disposal of debris or special waste at the SWMA will be in accordance with the MWI 8550.1.
 1. SWMA Guidelines. The following are guidelines for hauling and dumping of INERT material at the Redstone Arsenal SWMA.
 - a. All trees and tree debris, stumps, and yard waste shall be separated from other inert materials
 - b. Separate all construction debris from dirt and rock. Dirt (spoil material) from construction and maintenance activities is acceptable for disposal.

- c. Separate all salable/reusable scrap lumber from construction debris.
 - d. Separate all salable/reusable metal from construction debris. Scrap metal including aluminum, copper, and metal shavings are not acceptable item for disposal at the SWMA.
 - e. Materials containing asbestos will be accepted only if it is in compliance with (OSHA/NESHAPS/ADEM) regulatory requirements.
 - f. Garbage will not be accepted including food and food containers, drink cans and bottles, milk cartons, food wrappers, paper plates, napkins, lunch bags, and scrap. Mixed loads containing garbage will require separation by the generator and the proper disposal method used.
 - g. Liquids of any type are unacceptable.
 - h. Ammunitions and explosive type materials are unacceptable.
 - i. Hazardous material and waste are unacceptable.
 - j. Containers of one gallon or larger that contains material such as, paint solvents, or similar material are unacceptable.
 - k. Empty drums of 5 gallons or larger in good condition are unacceptable.
 - l. Empty drums of 5 gallons or larger in poor condition shall be flattened prior to disposal.
 - m. A Manifest of Material Delivered to the Redstone Arsenal Solid Waste Management Area, Form ASMI-RA 2435 shall be required for each load received at the SWMA.
 - n. Special Waste other than asbestos will not be accepted.
 - o. The SWMA operator shall randomly inspect loads with refuse material that does not comply with regulations and procedures.
2. Other Debris. Debris that is unacceptable at the SWMA will be collected in trash bins located at MSFC for incineration at the City of Huntsville Incinerator other than hazardous and controlled waste and recyclable items such as metal, aluminum cans and white paper.

--Remainder of Page Intentionally Left Blank--

7.0 FACILITY ALARM AND MONITORING SYSTEMS

7.1 GENERAL REQUIREMENTS

The Contractor shall provide all labor, supervision, tools, material, equipment, incidental engineering, and transportation to operate, maintain, and repair the alarm systems and monitoring equipment identified in this paragraph. Emergency conditions require immediate action to (1) prevent loss of or damage to MSFC property, (2) to restore essential services that have been disrupted, or (3) to eliminate hazards to personnel or equipment.

7.2 LUMP SUM WORK

The following contract elements shall be performed per the Performance Requirements Summary (PRS), Section E.9, and the performance criteria listed within the contract requirement:

- A. Contract Element (Include in CLIN - 00X1.0401) Trouble Calls (TC). The Contractor shall perform all TCs related to this paragraph per 4.0. Trouble Calls. The maintenance criteria for equipment and systems in this paragraph shall comply with availability requirements stated in Attachment J-10. The Contractor shall respond to fire and gas alarms as critical alarms and shall respond to maintenance alarms as urgent work. Maintenance alarms may be reclassified as routine work after it has been determined there is no immediate danger to personnel, equipment, or the environment.
- B. Contract Element (CLIN - 00X1.0701) Fire Alarm System PM. The Contractor shall perform PM in order to maintain system integrity on all fire alarm systems that include, but are not limited to, fire transmitters and various fire panels as listed in Attachment J-13.
- C. Contract Element (CLIN - 00X1.0702) Gas Detection System PM. The Contractor shall perform PM in order to maintain system integrity on all gas detection systems listed in Attachment J-14.
- D. Contract Element (CLIN 00X1.0703) Fire Alarm System Operations. The Contractor shall operate, maintain, and repair all MSFC fire alarm systems, including, but not be limited to, those listed in Attachment J-13 continuously, 365 days per year, 24 hours a day, 7 days a week. Operation and maintenance shall include, but not be limited to, disabling alarms and panels to prevent inadvertent activation while other personnel are working in an area, enabling alarms and panels after personnel have performed work that might inadvertently activate alarms, maintaining prescribed sensitivity limits in accordance with manufacturer recommendations, restoring power and resetting alarms and panels after planned or unplanned outages, resetting breakers, responding to activated alarms, maintaining panels, replacing batteries, supporting fire drills, and reprogramming systems. The work shall also include repair. Maintenance timeliness shall be the same as for trouble calls. The Contractor's repair liability for servicing equipment and system

components is limited to \$2000 per system, per occurrence. The Contractor shall not classify response to fire alarms as trouble calls. The Contractor shall respond to emergency situations with correct repair so that system integrity is maintained and personnel safety is not compromised. Work shall conform to Federal and State Codes, EPA standards, NFPA and OSHA regulations. All alarms, detectors, batteries, panels, conduit, fittings, wiring, hangers, structural supports and touch-up painting are included.

- E. Contract Element (CLIN OOX 1.0704) Gas Detection System Operations. The Contractor shall operate, maintain, and repair all MSFC gas detection systems, including but not be limited to those listed in Attachment J-14, continuously, 365 days per year, 24 hours a day, 7 days a week. Operation and maintenance shall include, but not be limited to, disabling alarms to prevent inadvertent activation while other personnel are working in an area, enabling alarms systems after personnel have performed work that might inadvertently activate alarms, restoring power and resetting alarms after planned or unplanned outages, resetting breakers, responding to activated alarms, replacing batteries, maintaining prescribed sensitivity limits in accordance with manufacturer recommendations, replacing cells and detectors, replacing and adjusting monitors, and adding cell fluid. The work shall also include repair. Maintenance timeliness shall be the same as for trouble calls. The Contractor's repair liability for servicing equipment and system components is limited to \$2000 per system, per occurrence. The Contractor shall not classify response to gas detection as trouble calls. The Contractor shall respond to emergency situations and follow the appropriate procedures to notify the proper NASA organizations of the potential safety hazard and provide support to these organizations when required so personnel safety is not compromised for personnel required to work in the affected work areas. Work shall be performed to Federal and State Codes, EPA standards, and OSHA regulations. All alarms, cells, monitors, detectors, batteries, panels, conduit, fittings, wiring, hangers, structural supports and touch-up painting are included. These systems are typically found in controlled areas operated by other Contractors, but that does not negate the Contractor's responsibility to arrest the situation and inform the appropriate area custodian. Regardless extreme caution and safety must be adhered to when dealing with these life safety systems and working in these hazardous environments. The Contractor is not expected to take unreasonable risks that would otherwise put any personnel in harms way, to secure any situation.

7.3 DOCUMENTATION AND REPORTING REQUIREMENTS

- A. Contract Element (Include in CLIN - 00X1.0306) Computerized Maintenance Management System (CMMS) Operations and Management. The Contractor shall continuously update the CMMS to reflect any and all equipment failures and corrective actions taken. All data shall be accurate and current.
- B. Contract Element (CLIN - 00X1.1014) Maintenance Procedures. The Contractor shall provide maintenance procedures in accordance with DRD 1197LS-011. The Contractor shall update and revise all maintenance procedures on a continuing basis as required by physical changes at no additional cost to the Government (See

Paragraph 10.5.E, Maintenance Requirements and Procedures). Maintenance procedures shall be maintained in the TRL.

7.4 **IDIQ WORK**

IDIQ work will be ordered in accordance with Paragraph 1.6, IDIQ, and completed within the number of calendar or work days specified in the FWR or DO. Each of the following CLINs shall be pre-priced in Section B. All components specified below by part number shall be supplied unless substituted by an approved equal. All components/assemblies described below shall be priced based on an average wire and conduit length of 100 feet. Wire and conduit for components shall be routed in an efficient manner to the nearest UCS Control Panel or as directed by the Government. The Contractor is responsible for the termination of wire at the device end. Termination of wire at the UCS Control Panel is by others. The Contractor is responsible for termination of conduit at the device end and at the UCS Control Panel. The Contractor shall work jointly with the UCS Contractor to conduct a complete operational checkout of installed components/assemblies before installation of components/assemblies is considered complete.

- A. Contract Element (CLIN 0002.0701) Provide and Install New Duct Temperature. The Contractor shall provide and install new duct temperature sensor based on 48 inch (length may vary) Minco Probe, Rigid, Averaging -50 to 275 Deg.F. Part # S456PEY48/TT111PE1AI.
- B. Contract Element (CLIN 0002.0702) Provide and Install New Liquid Temperature Sensor. The Contractor shall provide and install (including thermowell installation) new Liquid Temperature Sensor Minco Immersion Assembly -50 to 275 Deg.F. Part # AS5140PD(U)Y1AIN211A1 ("U" specifies length of probe).
- C. Contract Element (CLIN 0002.0703) Provide and install new Room Temperature Sensor. The Contractor shall provide and install new room temperature sensor Minco Wall-Mount Temp Assembly -32 to 122 Deg. F. Part # S473PDY4K1/TT115PD1N.
- D. Contract Element (CLIN 0002.0704) Provide and install new Room Temperature/Relative Humidity Sensor. The Contractor shall provide and install new room temperature/relative humidity sensor GE Wall-Mount Temp/RH Assembly 32 to 122 Deg.F/0 to 100 %RH. Part # P40250111.
- E. Contract Element (CLIN 0002.0705) Provide and Install Control and Status to Constant Volume AHU. The Contractor shall provide and install control and status to constant volume AHU. Control shall be based on API SPDT, Multivoltage Relay with Enclosure Part # MR-101/C. Status shall be based on Dwyer Low Differential Air Pressure Switch Part # 1910-0.
- F. Contract Element (CLIN 0002.0706) Provide and Install New Liquid Pressure Sensor. The Contractor shall provide and install (including all necessary mechanical

components) new liquid pressure sensor Setra Differential Pressure Transmitter. Part #M230-xxxx-C (“xxxx” indicates specified range to be specified in IDIQ).

- G. Contract Element (CLIN 0002.0707) Provide and Install Control and Status to Constant Volume Pump. The Contractor shall provide and install control and status (including all necessary mechanical components) to constant volume pump. Control shall be based on API SPDT, Multivoltage Relay with Enclosure Part # MR-101/C. Status shall be based on JCI Liquid Differential Pressure Switch Part #P74FA-5.

7.5 **DETAILED SPECIFICATIONS**

- A. Equipment Failure. The Contractor shall maintain all equipment in optimum operating condition. All equipment shall be operational, functional, and ready to respond to any alarm situation according to its’ design purpose and intent 100 percent of the time except for scheduled or planned outages.

--Remainder of Page Intentionally Left Blank--

8.0 UTILITIES AND SURFACED AREAS

8.1 GENERAL REQUIREMENTS

- A. General. The Contractor shall provide all labor, supervision, materials, tools, equipment, transportation, and management necessary to provide maintenance and repair to the utility systems, associated mechanical equipment, and surfaced areas at MSFC. New fire suppression systems that are different from those identified may be installed at MSFC. The Contractor shall include those systems into the work scope so as to meet all code related requirements related to maintenance and testing. The work includes, but is not limited to, removing debris from earth drainage ditches and drainage structures such as culverts, manholes, drop inlets, catch basins, gutters, piping, and open ditches and swales; minor repair of underground utility systems; grading of earth, replacement of disturbed landscaping and lawn sprinkler systems; soil-aggregate roadways and shoulders; crack sealing; cutout of pavement for utility repairs; temporary and permanent patching of sections of bituminous (flexible) and concrete (rigid) pavements; and pavement marking and snow and ice removal. The Contractor shall initiate contact with the COTR if the weather forecast projects a 60 percent or greater possibility of snow or ice accumulation. The Contractor shall prepare for and perform snow and ice removal from bridges, roads, parking lots, walks, ramps, steps, and other surfaced areas at MSFC when issued a FWR. Work shall be performed and comply with the appropriate directives, manuals, and instructions listed in Attachment J-26.
- B. Drawings. All drawings and utility maps applicable to this paragraph are available from the Government and identify locations of all known underground utility systems, ditches, roadways, and drainage structures. The Contractor shall check all drawings furnished to them immediately upon receipt and shall promptly notify the COTR of any discrepancies. The Contractor shall compare all drawings and field verify the maintenance areas and contract quantities before laying out the work and shall be responsible for any errors which may have been avoided otherwise.
- C. Code Requirements. The Contractor shall follow all Federal, state, and local codes and standards while maintaining, repairing, or replacing any utility system at MSFC.

8.2 LUMP SUM WORK

The Contractor shall perform the following contract elements per the Performance Requirements Summary (PRS), Section E.9, at frequencies or performance criteria specified within the contract requirement:

- A. Contract Element (Include in CLIN - 00X1.0401) Trouble Calls (TC)
1. Pavement Cutting and Patching. When issued, sections of bituminous and concrete pavements at specified locations shall be cut out to permit utility repairs. Within one (1) working day following the utility repair, the cut out

area shall be backfilled with material similar to the adjacent undisturbed material, compacted to a similar density, and temporarily patched as specified in Paragraph 8.4.B, Temporary Pavement Patching. The Government will grant extension times for completion if the Contractor chooses to apply a more permanent patch as specified in Paragraph 8.4.C, Bituminous Pavement Patching or Paragraph 8.4.D, Concrete Pavement Patching. Any landscaped areas or pavement markings damaged as a result of this work shall be restored to their original condition.

2. Water Main and Natural Gas Leak. When issuing a TC for a water main or natural gas leak, the TC shall be classified as an emergency TC according to Paragraph 4.2, Trouble Calls.
 3. Sanitary and Storm Sewer Stoppages. TCs for this work shall be considered urgent. When issued a TC for a sanitary or storm sewer stoppage, in addition to requirements defined in 4.2, the Contractor shall clean the stoppage as follows. During core working hours, the line shall be cleared within a four (4) hour period from initial notification including clean-up of any spillage. During non-core working hours, response, blockage removed, and line restored to normal shall occur within eight (8) hours. The Contractor shall use an approved disinfectant when applicable.
 4. Fire Sprinkler System Mechanical Malfunctions. TCs for this work shall be considered urgent. When issued a TC for this work, in addition to requirements defined in 4.2, the Contractor shall repair fire sprinkler systems as follows. During core working hours, repairs shall be accomplished within an eight (8) hour period and system restored to normal operating condition per proper automatic fire sprinkler system procedures. During non-core working hours, repairs shall be accomplished within the next core working day in compliance with the directive for repairs during core working hours.
 5. Water Meters. The Contractor shall maintain all water meters in a proper working order. Any meter that is inoperable or indicating false readings shall be repaired or replaced within five working days when first noticed upon inspection or notification by the Government.
- B. Contract Element (CLIN - 00X1.0801) Fire Suppression Wet Pipe System PM. The Contractor shall perform PM on all fire suppression wet pipe systems included in Attachment J-15 per NFPA 13 and NFPA 25. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
 - C. Contract Element (CLIN - 00X1.0802) Fire Suppression Pre-action System PM. The Contractor shall perform PM on all fire suppression pre-action systems listed in Attachment J-15 per NFPA 13 and NFPA 25. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
 - D. Contract Element. (CLIN - 00X1.0803) Fire Suppression Dry System PM. The Contractor shall perform PM on all fire suppression dry systems included in

Attachment J-15 per NFPA 13 and NFPA, 25. All PM activities shall be accomplished in compliance with the Contractor's PM plan.

- E. Contract Element (CLIN - 00X1.0804) Fire Suppression Foam System PM. The Contractor shall perform PM on all fire suppression foam systems included in Attachment J-15 per NFPA 11. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- F. Contract Element (CLIN - 00X1.0805) Fire Suppression Dry Chemical PM. The Contractor shall perform PM on all fire suppression dry chemical systems included in Attachment J-15 per NFPA 17. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- G. Contract Element (CLIN - 00X1.0806) Emergency Shower/Eyewash Station Monthly PM. The Contractor shall perform PM on all fixed emergency shower/eyewash stations listed in Attachment J-16 per the ANSI Z358.1 for eyewash and safety showers.
- H. Contract Element (CLIN - 00X1.0807) Sump and Sewer Pump PM. The Contractor shall perform PM on all sump pumps included in Attachment J-24. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- I. Contract Element (CLIN - 00X1.0808) Storm Drainage System PM. The Contractor shall keep all culverts, pipes, catch basins and drop inlets free of debris and sediments from the surface of and up to 15 feet beyond openings of such drainage structures. All ditches and swales bordering and traversing MSFC shall be kept free of all debris and sediments restricting the flow of water. All debris and sediment shall be disposed of in accordance with Paragraph 6.0. Environmental Management Support. Some of these areas are classified as wetlands and shall be managed per applicable Federal, state, and local laws and regulations. These efforts shall be coordinated with NASA, Environmental Engineering and Management Office. All PM activities listed in Attachment J-24 shall be accomplished in compliance with the Contractor's PM plan.
- J. Contract Element (CLIN - 00X1.0809) Surfaced Areas Sweeping: Streets and Parking Lots. The Contractor shall maintain all streets at MSFC free of all debris to the curb or shoulder of the roadway. Debris shall be removed as required to provide a clean sweep. All street sweeping shall be performed during non-core work hours to minimize any disruption to the resident working population, and barricades shall be used to restrict traffic as needed. The Contractor shall sweep all parking lots and other areas as identified, to eliminate standing dirt and obstacles, so as to maintain all painted markings and designations visible and legible, and to remove all hazards to foot traffic, particularly at steps and curbs. All lots shall be swept during non-core work hours, and shall be barricaded to restrict parking and traffic during the sweeping operation. Debris shall not be swept into storm drains, nor left in piles. The Contractor shall submit a schedule for routine street and parking lot sweeping within fifteen days of the contract start date. That schedule shall be the basis for timeliness associated with this contract element.

- K. Contract Element (CLIN - 00X1.0810) Fire Pump PM. The Contractor shall perform PM on all fire pumps included in Attachment J-15 per NFPA 25. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- L. Contract Element (CLIN – 00X1.0811) Standpipe PM. The Contractor shall perform PM on all standpipe included in Attachment J-15 per NFPA 25. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- M. Contract Element (CLIN – 00X1.0812) CO2 PM. The Contractor shall perform PM on all CO2 systems included in Attachment J-15 per NFPA 12. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- N. Contract Element (CLIN – 00X1.0813) Wet Chemical PM. The Contractor shall perform PM on all wet chemical systems included in Attachment J-15 per NFPA 17A. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- O. Contract Element (CLIN - 00X1.0814) Miscellaneous Pump PM. The Contractor shall perform PM on all miscellaneous pumps not included in other contract elements but are included in Attachment J-6. Pumps in this classification include, but are not limited to, potable water, hydraulic, lawn sprinkler. All PM activities shall be accomplished in compliance with the Contractor's PM plan.

8.3 **DOCUMENTATION AND REPORTING REQUIREMENTS**

- A. Contract Element (Include in CLIN - 00X1.0306) Computerized Maintenance Management System (CMMS) Operations and Management. The Contractor shall continuously update the CMMS to reflect any and all equipment failures and corrective actions taken. All data shall be accurate and current.
- B. Contract Element (CLIN - 00X1.1014) Maintenance Procedures. The Contractor shall provide maintenance procedures in accordance with DRD 1197LS-011. The Contractor shall update and revise all maintenance procedures on a continuing basis as required by physical changes at no additional cost to the Government (See Paragraph 10.5.E, Maintenance Requirements and Procedures). Maintenance procedures shall be maintained in the TRL.
- C. Contract Element (CLIN - 00X 1.0815) Automatic Fire Sprinkler System Quarterly Inspection Report. The Contractor shall submit a quarterly automatic fire sprinkler system inspection report to the COTR to demonstrate acceptable operational status of the automatic fire sprinkler systems in accordance with DRD 1197LS-007.

8.4 **IDIQ WORK**

IDIQ work will be ordered in accordance with Paragraph 1.6, IDIQ Work and completed within the number of calendar or workdays specified in the FWR or DO.

- A. Pavement Crack Sealing. The Contractor shall seal cracks and joints 1/8-inch or wider in surfaced areas by cleaning out at ordered locations with mechanical routing and compressed air to remove debris and loose particles, and seal with sealant under dry conditions.
- B. Temporary Pavement Patching. Potholes and depressions in bituminous and concrete pavements at ordered locations shall be temporarily patched by the Contractor with bituminous cold mix or hot mix. The area to be patched shall be cleaned of any loose material or soil, leveled, filled under dry conditions with bituminous material, and compacted using a hand tamp, weighted roller, or loaded truck wheels. The final compacted surface of the patched area shall be approximately level with the adjacent pavement surface.
- C. Bituminous Pavement Patching. The Contractor shall perform bituminous pavement repairs. All work shall be in compliance with the Asphalt Institute MS. 16 and the MSFC Technical Specifications for Repair and Construction (TSRC).
- D. Concrete Pavement Patching. The Contractor shall provide concrete pavement repair. All work shall be in compliance with the American Concrete Institute Manual of Concrete Practice (Latest Edition) and TSRC.
- E. Pavement Stripping Marking. The Contractor shall place pavement striping and markings. All material shall conform to TSRC and the State of Alabama Highway Department, Standard Specification for Highway Construction (latest edition). Color and configuration shall be as follows:
 - 1. Roadway Striping. Furnish and apply white or yellow reflectory roadway traffic striping at ordered locations, four (4) inches in width.
 - 2. Parking Lot Striping. Furnish and apply white non-reflectory parking lot striping at ordered locations, four (4) inches in width.
 - 3. Pavement Crosswalks. Crosswalks shall have signs designating their location.
 - 4. Pavement Stop Bars. Furnish and apply white reflectory pavement stop bars at ordered locations, 12 inches in width extending the full width of, and perpendicular to, the traffic lane. When used in conjunction with a stop sign, the stop bar shall be applied in line with the stop sign unless otherwise requested by the COTR.
 - 5. Traffic Letters and Numbers. Furnish and apply white non-reflectory pavement traffic numbers and letters at ordered locations, 18 inches in height.
 - 6. Handicap Symbols. Furnish and apply blue non-reflectory pavement handicap symbols at ordered locations in compliance with the Americans with Disabilities Act (ADA).

7. Parking Stall Letters. Furnish and apply white non-reflectory parking stall letters at ordered locations, 1/2-inch in width.
- F. Underground Fire Sprinkler Piping System. Underground fire sprinkler mains at ordered locations shall be replaced with new pipe of the same size. All piping shall be designed for fire sprinkler mains with 150 pounds working pressure.
- G. Underground Industrial Sewer Piping System. Underground industrial sewer piping at ordered locations shall be replaced with new pipe of the same size.
- H. Underground Industrial Storm Drain Piping System. Underground industrial storm drain piping at ordered locations shall be replaced with new pipe of the same size.
- I. Underground Storm Drain Manholes. Underground sanitary storm sewer manholes at ordered locations shall be replaced with a new manhole of the same size and style as existing manhole to be replaced.
- J. Snow and Ice Removal. Remove snow and ice from areas as prioritized in Attachment J-17. Snow and ice removal shall commence within three (3) hours of initial accumulation but not before COTR approval. Removal shall be completed for all Priority 1 locations within four (4) hours of commencing at any single Priority 1 location. Likewise, removal shall be completed at Priority 2 and 3 locations within four (4) hours of commencing at any single Priority 2 or 3 locations respectively. Priorities may be changed at any time by the COTR.

8.5 **DETAILED SPECIFICATIONS**

A. Pavement Marking

1. Materials and Equipment. Paints for roads and streets shall conform to TSRC and the State of Alabama Highway Department, Standard Specification for Highway Construction (latest edition). All paints shall meet the requirements of the MSFC Pollution Prevention Plan for low VOC paint.
2. Application
 - a. Surface Preparation. In compliance with the TSRC and the State of Alabama Highway Department, Standard Specification for Highway Construction (latest edition).
 - b. Painting. In compliance with TSRC and the State of Alabama Highway Department, Standard Specification for Highway Construction (latest edition).
 - (1) Reflective Marking Rates. In compliance with the TSRC and the State of Alabama Highway Department, Standard Specification for Highway Construction (latest edition).

- (2) Non-reflective Marking Rates. In compliance with the TSRC and the State of Alabama Highway Department, Standard Specification for Highway Construction (latest edition).
- B. Debris Disposal. The Contractor shall be in compliance with MSFC Environmental Engineering and Occupational Health Office requirements for disposal of debris resulting from drainage system cleaning, pavement cutting, and patching.

--Remainder of Page Intentionally Left Blank--

9.0 REPAIR BUILDINGS & STRUCTURES**9.1 GENERAL REQUIREMENTS**

The Contractor shall provide all labor, management, supervision, tools, materials, equipment, incidental engineering, and transportation to perform maintenance, repair, alterations, and inspections on buildings, structures, and equipment at MSFC. This shall also include pest control both inside and outside of buildings and structures. The work shall be performed as Lump Sum and IDIQ work items.

9.2 LUMP SUM WORK

The following Contract Requirements shall be performed per the Performance Requirements Summary (PRS) Section E.9, at the frequencies or performance criteria specified within the contract requirement:

A. Contract Element (Include in CLIN - 00X1.0401) Trouble Calls (TC)

1. The Contractor shall respond to all building and structure related TCs per Paragraph 4.2, Trouble Calls. The Contractor shall provide all maintenance, repairs, and alterations as identified in Paragraph 9.5, A through I, Detailed Specifications, in accordance with Federal, state, and local regulations and codes including historic preservation requirements. Services not identified in the detailed specifications paragraph shall be in accordance with normal industry standards.
2. All roof and interior water leaks shall be considered emergency TCs and the Contractor shall respond, repair, and document roof related TCs in the following manner.
 - a. The Contractor shall protect building interior, furnishings, equipment, and personnel by safely containing incoming water within 1 hour of detection or notification.
 - b. The Contractor shall perform the appropriate temporary repair or alteration within the time allotted. Refer to Paragraph 9.5.H, Roofing, for repair methods.
 - c. The Contractor shall evaluate all temporary repairs when conditions allow for the installation of a permanent repair. Refer to Paragraph 9.5.H, Roofing.
 - d. The Contractor shall document the cause and exact location of roof leaks on the TC form.
3. The Contractor shall do all pest control related TCs per Paragraph 4.0, Trouble Calls/Trouble Call Services.

- B. Contract Element (CLIN - 00X1.901) Semi-Annual Roof Inspections. The Contractor shall perform semi-annual roof inspections on all building roofs. The inspection criteria shall include all elements of maintenance to protect the facilities from leaks, and to preserve the condition of the roof and prevent it from further degradation. The inspection shall include all elements of roofing, flashing, coping, gravel stops, pitch pockets, penetrations, drains, perimeter edging, fascia, scuppers, and caulking. Builtup flat roofs shall be inspected yearly with infrared thermography. The information obtained from the roof inspections shall be used to update the CMMS. The Contractor shall complete all data fields required by the software for each roof inspection. The Contractor shall continuously document in the CMMS all changes which affect the condition of the roofs. Changes to the database shall be made within five working days following completion of the roof work.
- C. Contract Element (CLIN - 00X1.902) Pest Control. The Contractor shall perform periodic inspections of all MSFC facilities and grounds for evidence of rodents, .pest and/or insect infestation; identification of problem areas; preparation and application of insecticides, rodenticides, poisons, chemicals, oils, dust sprays, and mixtures; disposal of reptiles; trapping of rodents and fur bearing animals; application of bird repellents to buildings and structures; and other control measures. All chemical handling and disposal shall comply with Paragraph 6.0, Environmental Management Support. All pest control shall be performed in accordance with Federal, state, and local environmental laws and regulations. The Contractor shall maintain on-site all application records and these records shall be available for inspection by Government and other environmental inspectors at all times. The Contractor shall submit the periodic inspection schedule by the 9th calendar day after the contract award. This schedule will be used as the basis for timeliness in work performance.
- D. Contract Element (CLIN 00X1.903) Equipment Room PM. The Contractor shall develop a schedule to inspect and clean all equipment rooms monthly. Cleanup shall include removing loose debris and furniture. The inspection shall be through and identify and initiate work orders for other work such as leak repair, equipment repair, insulation repair, or painting. The cleaning associated with this contract element does not relieve the Contractor from performing clean up associated with specific work in an equipment room. The schedule shall be submitted to the COTR within 15 calendar days of award of contract and will be used as the basis for timeliness in work performance.

9.3 **DOCUMENTATION AND REPORTING REQUIREMENTS**

- A. Contract Element (Include in CLIN – 00X1.0306) Status Report. The Contractor shall continuously update the CMMS to reflect any and all equipment failures and corrective actions taken. The Contractor shall also update any roof database or software provided by the Government. All data shall be accurate and current.
- B. Contract Element (CLIN - 00X1.1014) Maintenance Procedures. The Contractor shall provide maintenance procedures in accordance with DRD 1197LS-011. The

Contractor shall update and revise all maintenance procedures on a continuing basis as required by physical changes at no additional cost to the Government (See Paragraph 10.5.E, Maintenance Requirements and Procedures). Maintenance procedures shall be maintained in the TRL.

9.4 IDIQ WORK

IDIQ work will be ordered in accordance with Paragraph 1.6, IDIQ, and may be ordered for any facility or area at MSFC (including buildings on loan from the Army). Maintenance and repair IDIQ work shall be completed within the number of days specified on the FWR or DO.

- A. Roof Repairs. Repair roofs per Paragraph 9.5.H, Roofing. The 'Means® Facilities Maintenance and Repair Cost Data Handbook will be used to determine cost of maintenance and repair items.
- B. Pest Control. Perform abnormal pest control per Paragraph 9.5.I. Paragraph 1.6, IDIQ Work, will be used to determine cost of abnormal pest control.
- C. Sign Making. The Contractor shall provide signs to the Government as requested. Special sign making equipment is included with the Special Purpose Equipment shown in Attachment J-8.

9.5 DETAILED REQUIREMENTS

- A. Carpentry and Masonry. The Contractor shall repair and replace carpentry and masonry portions of buildings, structures, and facilities, including all floor, wall, ceiling and roof construction, building finishes, door hardware, foundations, waterproofing seals, and flashing not included in other paragraphs of this contract. Interior and exterior finishes, trim, and decor shall be maintained to match existing finishes. Loose items shall be re-secured by tightening or replacing screws, or by using a suitable adhesive. Damaged or missing items shall be replaced with items matching the original. Replacement hardware shall conform to original material or MSFC Technical Specifications for Repair and Construction (TSRC). Hardware items requiring lubrication shall be lubricated and restored to an operable condition. Repairable rusted metal components shall be cleaned of all rust, coated with a rust inhibitor, and restored to an operational condition. The Contractor shall also be responsible for structural alterations and equipment installations which include, but not limited to:
 - 1. Floors and Floor Covering. Damaged or deteriorated flooring, subflooring, and structural members shall be repaired or replaced to provide a structurally sound, uniform, and aesthetic surface which is free of cracks, breaks, chips, tears, gouges, stains, and buckling. The Contractor shall inspect exposed portions of subfloor during repair or replacement activity. Any evidence of structural damage or deterioration shall be immediately reported to the COTR or designee before proceeding. Some flooring material, baseboard, or adhesive

may contain asbestos, which will require special handling and disposal in accordance with Paragraph 6.0, Environmental Management Support.

- a. Resilient Tiles. Damaged or deteriorated tiles shall be replaced with matching tiles of the same thickness as original. Damaged tiles or tiles to be replaced shall be removed without affecting adjacent tiles. The affected area shall be cleared of all debris and moisture to provide a clean, uniform, dry surface for the installation of new tile. Installation shall be in accordance with manufacturer's instructions. Upon completion, the entire floor shall be thoroughly cleaned and waxed to provide a uniform surface. Note: Many of the buildings at MSFC have floor tile which contains asbestos. In addition, the mastic attaching these tiles to the subfloor also contain asbestos.
- b. Linoleum and Vinyl Sheet Flooring. Areas of flooring having deep gashes or other defects shall be replaced with matching sheet flooring of the same thickness as the original. A replacement section matching existing flooring which is cut larger than the damaged area shall be taped over the defect such that the decorative flooring pattern is continuous. To ensure a properly fitting patch, the Contractor shall cut through both layers of vinyl around the damaged area. The patch and the section of damaged flooring shall be removed and the underlying surface shall be cleaned of all moisture, adhesive, and debris. The patch shall be installed as recommended by the flooring manufacturer. Loose flooring shall be re-secured using an adhesive recommended by the flooring manufacturer. Upon completion, the entire floor shall be thoroughly cleaned and waxed to provide a uniform surface.
- c. Carpeted Flooring. Repair damaged carpet, replace or install transition strips, tighten loose carpeting, repair seams and other related items as required to match or fix existing carpeting. Complete room carpet replacement is not a part of this paragraph.
- d. Concrete Floors. Cracked, broken or spalled areas shall be patched with a nonshrinking cement mortar. Areas shall be cleaned and all loose concrete removed. Underlying surfaces shall be chipped to ensure bonding with the patch. Shallow spalled areas shall be chipped to provide space for an adequate patch thickness. The patch shall be finished even with the adjacent surfaces and finished to match existing texture.
- e. Vinyl Baseboards. Deteriorated or damaged sections of vinyl baseboard shall be removed. Wall and floor surfaces shall be cleaned of all dirt, oil, grease, mildew, moisture, adhesive and debris. Loose baseboards shall be re-secured to the wall. Damaged, deteriorated, or missing baseboard sections shall be replaced with an adhesive that conforms to the manufacturer's recommendations.

- f. Ceramic Tile. Ceramic tile floors that are broken, missing, cracked or discolored shall be replaced as required. Floor tiles shall be re-grouted to provide a waterproof seal. When replacement tiles of an exact match cannot be found, the Contractor shall remove and replace non-defective tiles to create a pattern and minimize the visual effect of the mismatch.
2. Interior Walls, Ceilings, and Trim. Damaged and deteriorated walls, ceilings, and related trim shall be repaired or replaced to provide a surface which is free of noticeable cracks, spalls, raised areas, holes, dents, marks, and stains to match the surrounding surfaces. Wood trim items and ceiling fixtures shall be removed as necessary to provide access to the damaged area. Upon completion of the repair activity, fixtures and trim shall be reinstalled, nails set, filled, and items repainted or, refinished to restore them to their original condition. When removing wall or ceiling coverings, the Contractor shall inspect the supporting structural system and notify the COTR immediately of any need for repair before proceeding. Wall materials may contain asbestos, and painted surfaces may contain lead, both which shall require special handling and disposal in accordance with Paragraph 6.0, Environmental Management Support. Any paint shall meet the requirements of the MSFC Pollution Prevention Plan for low VOC paint.
 - a. Drywall Construction. Cracks, small dents, and holes shall be repaired with spackle over a backing plate when necessary. Spackle shall be feathered on the adjacent surfaces. Patches shall consist of at least three (3) coats with each completely dry before applying subsequent coatings. The final coat shall be lightly sanded and wiped with a damp cloth or sponge to remove all dust and cement deposits from surrounding surfaces. Loose nails or screws shall be pulled and replaced with a new nail or screw approximately one (1) inch away from the existing hole and driven in to form a slight dimple in the surface. The dimple and the existing nail or screw hole shall be filled and finished with spackle. Holes and other defects in wallboard between two (2) studs or beams shall be repaired by removing a rectangle of gypsum board to the center of the adjoining studs or beams and two (2) parallel lines across the board. Cuts shall be neat and shall not tear the paper covering. Edges of abutting sheets shall be sanded to allow for cement build-up in the joint. Replacement of gypsum board shall be of the same thickness and texture as the adjacent sheets and shall be nailed or screwed into place onto the exposed studs or beams. Joints shall be taped and spackled using the procedure outlined above; reinforcing tape shall be embedded, wrinkle-free, and the first layer centered over each joint.
 - b. Vinyl Wall Covering. Wall covering which has been ripped, scarred, stained, or otherwise damaged shall be repaired or replaced as necessary. Wall covering shall be repaired if the damaged area can be patched and not be noticeable. The patch shall overlay the damaged area 1/2-inch on all sides and be continuous with the pattern of the wall covering. The patch shall be glued in place with an adhesive conforming to the wall covering manufacturer's recommendations. Wall covering which is extensively

damaged or for which a matching wall covering is not available shall be repaired by replacing the wall covering on the entire wall. If matching wall covering is not available, the Contractor shall find a comparable substitute. The COTR shall approve all replacement wall coverings which do not match the existing wall coverings. Replacement wall covering shall be hung according to the manufacturer's recommendations.

- c. Ceramic Tile. Ceramic tile walls, window stools, and marble saddles that are broken, missing, cracked, or discolored shall be replaced as required to match existing. Tiles shall be re-grouted to provide a waterproof seal. In those cases where replacement tiles of an exact match cannot be found, the Contractor shall remove and replace non-defective tiles to create a pattern and minimize the visual effect of the mismatch.
 - d. Hardboard Siding. Damaged hardboard siding shall be removed without damaging adjacent siding or underlayment. All replacement siding joints shall be located on studs and nailed at each stud. Replacement siding shall match the existing siding in color, texture, and material. Siding face and edges shall be factory primed. Nails shall be of the type and size specified by the manufacturer and shall be driven flush. A 1/16 inch space shall be left between the siding and wood or metal trim. All joints shall be caulked.
 - e. Wood Trim. Wood trim items shall be prime painted on all sides and edges prior to installation. Surfaces to receive trim shall be thoroughly cleaned of sealant and paint build-up prior to installation of trim. Damaged or deteriorated insulation board or underlayment shall be replaced with material of the same type, thickness, and quality.
 - f. Suspended Ceilings. Broken and stained ceiling tiles shall be replaced with tiles of the same material, style, size, and color. Damaged and broken suspended grid system shall be repaired and/or replaced as necessary to provide a suspended ceiling system as designed.
3. General Exterior Work
- a. Exterior Walls. Damaged or deteriorated wall areas shall be restored to a serviceable, structurally sound, watertight, and weathertight condition. This includes, but is not limited to, replacing damaged masonry units, tuck-pointing loose or eroded mortar joints, sealing penetrations in wall openings, replacing damaged or deteriorated siding and exterior trim, replacing miscellaneous hardware items, and removal of vegetation, discoloration, graffiti, or other defects which would render an unsightly appearance to exterior walls.
 - b. Seams. Seams between window or door frames and exterior walls shall be caulked. Old joints shall be scraped and cleaned with a solvent recommended by the caulking manufacturer. Caulking shall be applied according to the manufacturer's directions.

- c. Exterior Trim. Exterior trim, including all exterior moldings, millwork, shutters, and cornice shall be repaired or replaced as required. Surfaces to receive trim shall be thoroughly cleaned of sealant and paint build up prior to installation of trim. Damaged or deteriorated insulation board underlayment shall be replaced with new material of the same type, thickness, and quality. Bird screens and soffit vents shall be intact and free of corrosion and missing pieces. All wood trim items shall be primed prior to installation and painted to match surrounding surfaces. Any paint shall meet the requirements of the MSFC Pollution Prevention Plan for low VOC paint.
- 4. Doors, Windows, and Screens. Doors (including storm doors), windows (including storm windows), and screens shall operate smoothly without binding or sticking in accordance with the manufacturer's design. Damaged, deteriorated, or missing doors, windows, screens, and associated components shall be repaired or replaced as required. Caulking, glazing, and weather stripping shall be fully intact to maintain a fully weathertight seal.
 - a. Wood Doors. All exterior wood doors shall have solid cores. Wood exterior doors shall be water-repellent treated. Interior wood doors shall be of the same species and have the same finish as the original door. Replacement exterior doors shall be installed during the same workday as removal of original door. Scarred areas of door shall be sanded, wiped clean with a low toxicity solvent, sealed, and finished to match surrounding door surface. All replacement doors shall be installed with the hardware from the damaged door unless the hardware is unrepairable. Small holes in door faces shall be filled and finished to match surrounding door surface. Doors shall be planed (to include appropriate bevel) to provide a minimum 1/16-inch clearance after painting between door and adjoining head and jambs. The bottom of the door shall be trimmed to provide adequate clearance above the floor.
 - b. Screens and Screen Doors. Oxidation deposits shall be removed from metal parts. The affected area shall be cleaned and a protective coating of paste wax shall be applied. Replacement screening shall be of the same material as existing screening. Exposed screening ends shall be cemented with a colorless plastic cement. No exposed screening ends shall protrude from the screen. Warped screen doors and frames shall be straightened if possible to fit squarely in opening. If beyond repair, warped items shall be replaced.
 - c. Windows. Damaged, deteriorated, missing, or inoperative window components shall be repaired or replaced to provide a sound, serviceable, weathertight installation.

- d. Weather Stripping. Damaged or deteriorated weather stripping shall be replaced according to manufacturer's recommendations. Flattened spring type weather stripping shall be lifted or replaced to provide a better seal
 - e. Glass. The Contractor shall replace cracked or broken glass in doors or windows. Replacement glass shall be of the same size, type, and quality as the existing glass.
 - f. Door Accessories. The Contractor shall install, maintain, repair, and adjust locks, latches, panic devices, and strikes of different makes, sizes, and shapes installed in buildings and building components. The Contractor shall also install, repair, clean, repack, and adjust all makes and types of door closures.
 - g. Hardware. Damaged, inoperable, or missing hardware such as hinges, locks, striker plates, latches, keepers, window operating mechanisms, door closers, springs, shall be adjusted, repaired, or replaced as required. Replacement hardware shall match existing hardware in type, size, quality, finish, and meet the BHMA Product Standards. Hardware shall be installed in accordance with the manufacturer's recommendations.
5. Countertops. Countertops with loose protective covering shall be repaired in place. Loose joints shall be secured and filled. Countertops and backsplash shall be the fully formed type comprised of a single unit with the shaped edges using wood nose molding at counter edge and covered wood molding or shaped wood block at juncture of the countertop and backsplash. Size and shape of countertop shall be indicated; backsplash shall not be less than 3-1/2 inches high.
- a. Plywood Countertop Material. Plywood core material and particle board core material shall be per the TSRC.
 - b. Countertop Adhesive. The adhesive for bonding plastic laminates, edging, and trim to the core material shall be a rubber-base contact cement.
 - c. Countertop Laminates. Laminates shall be applied in the longest length practicable. Joints in surface sheeting shall be tight and flush and kept to a practicable minimum. Design, color, and finish shall be selected per the delivery order or by the COTR when none is specified.
 - d. Metal Trim. Damaged metal trim shall be removed and replaced with trim of the same configuration and finish. Joints shall be mitered and smooth. All such trim shall match for an acceptable appearance.
 - e. Sink Rims. Sink rims shall be of the clamping type and a standard product of a manufacturer regularly producing this type of equipment, and shall be fabricated from corrosion-resistant steel of the size necessary to receive a sink.

- f. Cabinet Bases. Wood or plastic laminate cabinets which are damaged shall be repaired or replaced. All exposed items shall match for an acceptable visual appearance. Hardware items shall conform to the original or TSRC for institutional applications. Exposed hardware shall be corrosion resistant.
- g. Kitchen Cabinets. Replacement cabinets shall conform to the original or TSRC.
- 6. Bathroom Accessories. This item shall include, but not be limited to, paper holders, soap trays and dispensers, towel bars, and shower curtain rods. Damaged or deteriorated, or missing accessories shall be repaired, or replaced if beyond repair.
- 7. Caulking. Damaged caulking around sinks, shower stalls, tiles, and accessories shall be chiseled out and replaced with a mildew resistant, silicone base sealant. The sealant shall be applied according to manufacturer's recommendations.
- 8. Temporary Structures. Anchor and level temporary structures, primarily modular buildings or trailers.
- 9. Metal Door Frames and Windows. Remove and install metal door frames and windows in concrete masonry units and concrete walls.
- 10. Nameplate Holders. Missing or damaged nameplate holders shall be replaced with holders of the same type and quality as the existing ones. Loose screws shall be tightened and reseated as necessary.
- 11. Laying Block. Mixing mortar, determining correct type of material and mixture; running lines and levels as required; and cutting, shaping and laying bricks, stone, or block.
- 12. Masonry Units. Damaged masonry units (brick or concrete blocks) shall be replaced with a unit of the same size, color, and texture. The mortar shall be completely removed and the cavity cleaned and all debris removed. The masonry unit shall then be reseated in mortar and the remaining cavity packed with mortar. The masonry unit shall be painted to match existing units. Any paint shall meet the requirements of the MSFC Pollution Prevention Plan for low VOC paint.
- 13. Foundations and Walls. Constructing, maintaining, and repairing foundations and walls, brick, concrete masonry unit, and wood.
- 14. Mortar Joints. Damaged mortar joints shall be chipped out, cleaned, and dampened before being repointed. Repointed joints shall match existing undamaged joints.

15. Interior Concrete. Cracked, broken, or spalled areas shall be patched with a nonshrinking cement mortar. Areas shall be cleaned and all loose concrete removed. Underlying surfaces shall be chipped to ensure bond with the patch. Shallow spalled areas shall be chipped to provide space for an adequate patch thickness. The patch shall be finished even with the adjacent surfaces and finished to match existing texture.
16. Placing Concrete. Mixing, placing, and finishing of concrete, including placing reinforcements, and other embedded items.

B. Metalworking. The Contractor shall maintain, repair, and replace metal components of buildings and structures; install building equipment, such as exhaust fans; and shall construct and install metal components in support of other repair activities. Metalworking shall include heating and bending to form metal shapes, drilling, torch cutting, grinding, sawing, and fitting of metal parts. Metalworking responsibilities shall also include the full range of metalworking and sheet metal activities that include, but are not limited to:

1. Welding. Welding provides the necessary support to the other trades in accomplishment of their work and shall include, but not be limited to, pipes, structural forms, plates, railings, sheetmetal, bar stock, and machinery in the maintenance of building structures, public utilities, transportation, and construction equipment. All welders shall be journeyman level and shall be certified to the proper American Welding Society standard. Work may include the build up metal surfaces of equipment for machining, braze and silver solder various metals, pre-heat items to be welded by torch, stress relieving, and annealing. Use various electric arc or gas welding methods. The following safety precautions are to be followed for all welding work accomplished by the Contractor.

Fire Watch. Welding, burning, and open flame work will be permitted, but only subject to the following conditions:

- (1) The Contractor shall provide an adequate firewatch and the required fire extinguishing equipment. The fire alarm system shall be deactivated or re-routed during welding, and immediately restored afterwards.
 - (2) The Contractor shall obtain the proper permits required.
2. General Sheetmetal. The Contractor shall interpret blueprints, drawings, sketches, and work orders; use templates or patterns as guides in laying out and cutting materials from a variety of sheetmetal stocks including aluminum, copper, galvanized and stainless steel; form single-hem and double-hem edges, seams, and flanges; layout and cut materials for any combination of shapes, allowing for seams, joints, laps, and shrinkage; shear, bend, and form metal parts into desired shapes with hand and power tools and equipment; determine dimensions by application of basic shop mathematics and use of scribing tools, dividers, rules, and other measuring devices; use such equipment as shears,

brakes, bending machines, and associated hand tools; repair, position, and clamp work; preheat metal and maintain heat to prevent distortion; use templates, jigs, blueprints, and other guides to repair, modify, or fabricate metal items for all types of equipment. Join parts by riveting, soldering, and spot welding. Semi-concealed hinges shall be of Type I through V materials, per BHMA Standards. Fasteners for hardware or particleboard core elements shall be of the through-bolt type.

- C. Pipefitting. The Contractor shall layout, cut, bend, assemble, and install pipe, fittings, and fixtures to construct or maintain piping systems such as steam heating, hot water heating, hydraulic, shop air, chilled water systems, oil line systems, domestic water, deionized water, fire water, natural gas, storm drains, and sanitary sewer systems at MSFC. Lay out piping systems or sections from blueprints, work orders, sketches, or drawings and plan assembly in relation to walls, passageways, obstructions, existing underground utilities, underground trenches, location of machinery, and determine appropriate places for holes, clamps, struts, hangers, and similar considerations. Cut, bend, thread, weld, solder, and assemble pipe fittings, using various types of shop machinery and equipment. Pack pipe as necessary to avoid flattening during bending operations. Makeup various kinds of pressure tight joints, such as threaded, flame-bolted, flange-welded, soldered, silver soldered, caulked lead, and cemented. Bore holes in partitions, walls, floors, ceilings, and other obstructions to permit passage of pipe, exercising care to avoid impairing structures to be passed through. Install piping and any necessary hangers, brackets, and other supporting fixtures, position and align pieces for welding where required. Position, secure, and connect to piping systems various fixtures such as radiators, toilets, urinals, sinks, laundry equipment, food preparation equipment, pumps, and tanks. Install various types of hand controlled and automatic valves, traps, thermostats, and similar devices. Pack, adjust, and repair valves of various types. Repair leaks, clear obstructions in piping, and make changes and adjustments to obtain proper circulation and flow.
- D. Painting. The Contractor shall prepare surfaces, mix paints, and apply prime, intermediate, and finish coats. Paint includes all enamels, paints, varnishes, stains, and other coatings whether primer, intermediate, or finish coat. Paint used in touchup painting shall blend with the color and texture of surrounding areas. Touchup painting shall be accomplished as a related item to a maintenance activity. Painting shall be limited to the \$2,000 limit associated with the Service Contract Act.
- E. Painting Responsibilities. Painting responsibilities shall include, but are not limited to, determining type of paint best suited for the job, mixing colors for consistency needed to accomplish the work, performing stenciling of signs, preparing and working on a variety of surfaces such as metals, wood, and masonite; repainting and touching up building numbers and signs in place on buildings, structures, and appurtenances, painting all repairs (paint used for areas); moving, resetting, and protecting furniture, equipment, and all Government-owned property during the work performance period. The Contractor shall comply with the requirements of the MSFC Pollution Prevention Plan for low VOC paint and all

other environmental directives, instructions, policies, and regulations as listed in Attachment J-26.

1. Material. Paints shall be in sealed containers that plainly show the designated name, formula, or specification number, batch number, and name of manufacturer, all of which shall be plainly legible at the time of use. Pigmented paints shall be furnished in containers not larger than five (5) gallons. The use of paint containing lead is strictly prohibited for painting any surface. Upon request from the COTR, the Contractor shall furnish a suppliers' record of batch production data and test results for each batch, except that batch production data may be limited to weight per gallon, viscosity, fineness of grind, drying time, color, and gloss. When the required quantity of material of a particular color is five (5) gallons or less, a proprietary brand of material similar to that specified above may be used.
2. Plaster or Wallboard Surfaces. Damaged surfaces shall be repaired. Surfaces which chalk severely shall be prepared with conditioner.
3. Wood Surfaces. Woodwork, including cabinets and doors, shall be repaired. Surfaces painted with a gloss or semi-gloss paint must be dulled with a surface conditioner. Knots and resinous wood should be treated with a knot sealer.
4. Wood Windows and Doors. Window screens and door screens shall be removed before painting. All screen frames shall be painted on faces and edges and allowed to dry; then replaced and fitted. Window runners shall not be painted, but cleaned and coated with boiled linseed oil.
5. Ferrous Metal Surfaces. All ferrous metal surfaces shall be spot primed. These surfaces shall be scraped, wire brushed, and washed clean before painting. Exposed nails and other ferrous metal on or in contact with surfaces to be painted with water-thinned paint shall be spot-primed first.
6. Galvanized and Zinc Copper Alloy Surfaces. All galvanized surfaces shall be cleaned with a phosphoric acid wash and spot primed with galvanized surface primer.
7. Masonry and Concrete Surfaces. All masonry and concrete surfaces shall be roughened where necessary to provide adhesion. Previously painted areas shall be dulled with a surface conditioner. Surfaces which chalk severely shall be prepared with a conditioner, such as a five (5) to ten (10) percent muriatic (hydrochloric) acid. Surfaces which experience water leakage shall be coated with epoxy paint.
8. Pipe Coverings. Pipe coverings shall be brushed with a stiff fiber brush and sizing applied to bare surfaces of covering for adhesion.

9. Electrical Fixtures. Electrical outlet covers, switch covers, and fixtures shall be masked or removed before painting and uncovered or reinstalled prior to work completion.
 10. Application of Paint. Interior paint shall be applied in dust free conditions in accordance with the manufacturer's recommendations. Exterior paint shall not be applied on rainy, foggy, or windy days. The outdoor or indoor temperature shall be within the manufacturer's recommendations before the next coat is applied. Each coat shall be prepared in accordance with the paint manufacturer's recommendations. Each coat of paint shall be of sufficient thickness to completely cover the previous coat or surface. Each coat shall be sanded and dusted as prescribed by the paint manufacturer to produce a finish smooth and free from runs, sags, or other surface preparation defects. Paint surfaces adjoining other materials or colors shall be sharp and clean without overlapping. Stuck windows shall be freed to assure ease of operation within five (5) days following completion of work.
- F. Plumbing. The Contractor shall repair or replace water lines, drain lines, and fixtures. Pipes containing lead shall not be used. Additional work includes, but is not limited to, cleaning out sluggish sinks and sink traps; replacing parts such as valves and traps; recaulking various plumbing fixtures; resetting toilets, urinals, sinks, fixture stops, supply lines; repairing or replacing flush valve assemblies, continuous waste arm assemblies, auxiliary valves, escutcheons, pistons, diaphragms, and handles to flush valves; replacing spuds and spud washers, vacuum breakers, tail pipes, and flush valves; replacing shower heads and necks; replacing plumbing brass, gas connections, stops, toilet seats, and water tank covers; taking general visual inspection of all plumbing fixtures and pipes; making minor repairs, including tightening bolts, nuts, and pipe connections; repairing drinking fountains; and repairing or replacing hot water heaters.
1. Clogged Toilet, Urinal, or Sink Drains. Work may include disassembly of fixture, exterior or interior piping and traps, and cleaning out pipes. Removal of any fixture requires the replacement of all bolts, nuts, washers, wax seals, and caulking. All slip joint washers are to be replaced with new after each removal.
 2. Loss of Water Pressure. If loss of water pressure occurs within the piping, the Contractor shall determine the source of the problem and repair it as quickly as possible. Work may include disassembly and removal of interior piping, cleaning out of piping, or replacing of existing piping with new piping of like materials.
 3. Overflowing Plumbing Fixtures. The water supply shall be turned off in the event of an overflowing plumbing fixture. Faulty valves/faucets and blockages shall be repaired and the service restored within 48 hours. The Contractor shall remove water from floors and repair any damage.

4. Backflowing Floor Drains and Disposal Units. Backflowing floor drains and disposal units shall be treated as clogged drains discussed above.
 5. Loss of Hot Water. The water supply shall be turned off in the event of leaking hot water pipes or water heaters. Leaking piping or water heaters shall be repaired or replaced and service restored as quickly as possible. While performing the needed repair or replacement, the Contractor shall also repair any damage caused by the defective item to restore the building or facility to its original condition. For example, replacement of a leaky pipe shall also include repair of water damage to the surrounding walls, floor, and/or ceiling.
 6. Sump and Ejector Pumps. If the pumps are not operational, the systems involved are to be shutdown and affected restrooms tagged "out of order". The Contractor shall determine the source of the problem and make repairs. System shall be restored to normal operations within one (1) working day. If pump failure requires leadtime for delivery of parts or components, a temporary pump of adequate size shall be installed in its place until the proper components become available.
- G. Electrical. The Contractor shall be responsible for electrical work which includes but is not limited to: installation, maintenance, repair or removal of low voltage electrical circuits, panelboards, motor control centers, building loadcenters, power distribution systems, and equipment. Electrical work shall be limited to interior and exterior distribution systems up to 600 Volts. This includes appliance equipment, power tools, and industrial and office building distribution needs.

Relamping. For non-office areas, the Contractor shall remove and replace all interior incandescent light bulbs and fluorescent tubes that have burned out or been broken, and other defective parts such as, but not limited to, ballasts, starters. Leaking or smoking ballasts may contain PCB's and shall be managed in accordance with Paragraph 6.0, Environmental Management Support. Burned out bulbs, lamps, and troubling bulbs or lamps reported by customers will be considered a TC and shall include cleaning of lenses, reflectors, and luminaries, to obtain maximum lighting output. Energy saving lamps shall be used for relamping when applicable. Fluorescent bulbs shall be placed back in original packing and provided to the Environmental Engineering and Occupational Health Office contractor for disposal if required.

- H. Roofing. The Contractor shall repair or replace damaged, deteriorated, or missing roofing, sheathing, flashing, gravel stops, miscellaneous roof structures and components, and structural supports as required to provide a watertight seal and to retain the original condition of the roof system. The Contractor shall accomplish temporary repairs under wet conditions to protect Government property and personnel. Durable permanent repairs shall be completed as soon as conditions allow. All roofing work shall be in accordance with the original installation or TSRC. All roofing materials applied shall be per the manufacturer's recommendations. Some roofing may contain asbestos that shall require special

handling and disposal by the Contractor in accordance with Paragraph 6.0, Environmental Management Support.

- I. Pest control for cafeteria or snack bar areas shall be such that no insects are found in food preparation, serving, or eating areas except at bait traps. Insects found in any other MSFC facilities between treatment periods shall result in immediate re-treatment at no cost to the Government. The cafeteria located in Building 4708 is not part of this contract.

--Remainder of Page Intentionally Left Blank--

10.0 MECHANICAL SYSTEMS**10.1 GENERAL REQUIREMENTS**

The Contractor shall provide all labor, supervision, materials, lubricants, oils, tools, equipment, transportation, and management necessary to accomplish the operation, predictive maintenance, preventive maintenance (PM), trouble calls (TC), and repair of mechanical equipment and systems that includes, but not limited to: air compressors, roll doors, air dryers, elevators, cranes, and associated equipment identified in Attachments J-24, J-25, and J-6.

10.2 LUMP SUM WORK

The following contract elements shall be performed per the Performance Requirements Summary (PRS), Section E.9, at the frequencies or performance criteria specified within the contract requirement:

- A. Contract Element (Include in CLIN - 00X1.0401) Trouble Calls (TC). The Contractor shall respond to all TCs related to this paragraph and accomplish any necessary repairs per Paragraph 4.0, Trouble Calls/Trouble Call Services.
- B. Contract Element (CLIN - 00X1.1001) Horizontal and Vertical Sliding Roll Door PM. The Contractor shall perform PM for the roll doors listed in Attachment J-24 and in accordance with Paragraph 10.5.F. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- C. Contract Element (CLIN - 00X1.1002) Hoist, Crane, and Derrick PM. The Contractor shall perform load tests, PM and PT&I for hoists, cranes, and derricks listed in Attachment J-18 and in accordance with crane manufacturers operations and maintenance manuals and recommendations. The Government has determined that certain preventive maintenance and predictive testing and inspection shall be performed for this contract line item as enhancements to the existing PM program. These enhancements are as follows: Perform annual inspection of all wiring terminations and wiring harnesses. Perform annual infrared analysis on all electrical components. Perform annual vibration analysis on all electric motors. Documentation for the infrared analysis shall be the completed work order controlling the work. Documentation for the vibration analysis shall be the base documentation and the following annual inspections maintained in the predictive testing program by the Contractor.
- D. Contract Element (CLIN - 00X1.1003) Elevator PM. The Contractor shall perform PM for elevators listed in Attachment J-24 and in accordance with Paragraph 10.5.E, Maintenance Requirements and Procedures.
- E. Contract Element (CLIN - 00X1.1004) Heavy Equipment Operation. The Contractor shall provide operation and operator maintenance of heavy equipment including fixed equipment such as bridge and derrick cranes, hoists, and air bearings and mobile equipment such as truck-mounted cranes, bull dozers, and lift

trucks. This shall include loading, securing, off loading, hauling of heavy and oversized cargo. As a part of heavy equipment operations, the Contractor shall insure all non-mobile equipment is in compliance with appropriate ANSI and OSHA proof load testing requirements. Heavy equipment shall be available 100 percent of the time. The Contractor shall not provide maintenance (for example, oil changes, minor repairs, major overhauls) of mobile equipment but will be required to provide operator support. The Contractor shall rig cranes and loads, fabricate wire rope slings, chokers, and rigging, load test lifting devices, and secure cargo on common and special conveyances. Fabrication of rigging equipment and load testing lifting devices to meet requirements shall be completed within fifteen working days. Maintenance timeliness shall be the same as for trouble calls.

Personnel performing lifting devices and equipment nondestructive testing (NDT), including visual inspections, shall be qualified and certified in accordance with written practices meeting the requirements contained in American Society for Nondestructive Testing (ASNT) Recommended Practice No. SNT-TC-1A, Personnel Qualification and Certification in Nondestructive Testing. This includes NDT on all lifting devices as defined in NASA-STD-8719.9.

In addition to the equipment identified in Attachment J-8, MSFC owns a special purpose transport truck that has the capability to raise, lower, and level its bed. The truck can transport up to 795,000 pounds at a speed of 6 miles per hour and shall be operated by the Contractor with certified operators.

- F. Contract Element (CLIN - 00X1.1005) Handling and Transporting Program Critical Hardware (PCH). The Contractor shall provide the necessary special support services to handle and transport PCH at MSFC in accordance with MWI 6410.1. The Contractor shall insure that all fixed cranes and related lifting equipment and tools are available and capable to meet the PCH move schedule 100 percent of the time.
- G. Contract Element (CLIN - 00X1.1006) Deionized (DI) Water Operations and PM. The Contractor shall operate and maintain the DI water systems in Buildings 4700 and 4487. Building 4705 houses a DI water system that may be used as a backup to the primary system in Building 4700. The system in Building 4487 supplies only. The Contractor shall operate all DI Water Systems to produce the quality and quantities necessary to meet customers needs at the following purity specifications: Bldg 4487 B-Wing 10-18 megohm/cm; 4487 C-Wing 10-18 megohm/cm; and Bldg 4700 minimum specific resistance of 1 megohm/cm with pH between 6.0 and 9.0. Water quality at Building 4700 should also meet the following particulate requirement per 500 ml: Five or less particles ranging in size between 100 to 175 microns and no particles ranging in size greater than 175 microns. Since the system at Building 4700 was not designed to meet the particulate requirements, the Contractor is to monitor particulate so the Government may consider an alternate means to ensure particular requirements are met. The primary storage vessel for DI water has a capacity of 50,000 gallons and should be maintained at a level necessary to meet customers needs. Maintenance timeliness shall be the same as trouble calls. The Contractor shall have written

operating procedures for this facility. These procedures shall be available for Government inspection at all times. The Contractor shall perform PM on all DI water equipment as listed in Attachment J-24 in compliance with the Contractor's PM plan.

- H. Contract Element (CLIN - 00X1.1007) Industrial Wastewater Treatment Facility (IWTF) Operations and PM. The Contractor shall operate and maintain the IWTF in accordance with MSFC State Indirect Discharge (SID) permit (IU084500027). The IWTF has the capacity to treat 50,000 gallons per day of metal finishing wastewater, and 5,000 gallons per day of paint booth and water blast wastewater. Maintenance timeliness shall be the same as for trouble calls. Sample collection and reporting shall be in accordance with the SID Permit (see DRD 1197EE-004). The Contractor shall have a written operating procedure for this facility. These procedures shall be available for Government inspection at all times. The Contractor shall perform PM on all IWTF equipment as listed in Attachments J-24 and J-25 in compliance with the Contractor's PM plan.
- I. Contract Element (CLIN - 00X1.1008) Air Compressor PM. The Contractor shall perform PM for all air compressors listed in Attachment J-24.
- J. Contract Element (CLIN - 00X1.1009) Air Dryer PM. The Contractor shall perform PM for all air dryers listed in Attachment J-24.
- K. Contract Element (CLIN - 00X1.1010) Ice Machine PM. The Contractor shall perform PM for all ice machines listed in Attachment J-24.
- L. Contract Element (CLIN - 00X1.1011) Special Purpose Shop Equipment PM The Contractor shall perform PM for special purpose shop equipment listed in Attachments J-8 and J-24 .
- M. Contract Element (CLIN - 00X1.1012) Annual Crane and Hoist Inspection. The Contractor shall procure the services of an independent crane inspector to perform annual crane and hoist inspections in accordance with DRD 1197LS-013.
- N. Contract Element (CLIN - 00X1.1013) Elevator Inspection. The Contractor shall procure the services of an independent elevator inspector to perform annual inspections in accordance with DRD 1197LS-014 and a five-year inspection in accordance with DRD 1197LS-015.
- O. Contract Element (CLIN - 00X1.1015) Storage Tank Monitor PM. The Contractor shall perform PM for all storage tank monitors listed in Attachment J-24.

10.3 DOCUMENTATION AND REPORTING REQUIREMENTS

- A. Contract Element (Include in CLIN - 00X1.0306) Computerized Maintenance Management System (CMMS) Operations and Management. The Contractor shall continuously update the CMMS to reflect any and all equipment failures and corrective actions taken. All data shall be accurate and current.
- B. Contract Element (CLIN - 00X1.1014) Maintenance Procedures. The Contractor shall provide maintenance procedures in accordance with DRD 1197LS-011. The Contractor shall update and revise all maintenance procedures on a continuing basis as required by physical changes at no additional cost to the Government (See Paragraph 10.5.E, Maintenance Requirements and Procedures). Maintenance procedures shall be maintained in the TRL.

10.4 IDIQ WORK

IDIQ work will be ordered in accordance with Paragraph 1.6, IDIQ Work, and may be ordered for any facility or area at MSFC involving Mechanical Systems Maintenance and Repair. IDIQ work shall be completed within the number of days specified on the FWR or DO.

10.5 DETAILED SPECIFICATIONS

- A. Interferences. The Contractor shall remove and reinstall interferences necessary to accomplish PM and repair as required by this work paragraph.
- B. Pressure Testing. The Contractor shall accomplish pressure testing for leaks when repairs or alterations are made involving the integrity of gas, vacuum, lubricating oil, and hydraulic systems while conducting maintenance or repair. If the repair requires a mechanical joint be disconnected and reconnected or a weld repair is required, the pressure test shall be visually inspected at operating pressure after ten (10) minutes of operation. If the system is altered or a replacement component is installed, excluding gaskets, the pressure test shall meet the same requirements as the original installation specification. If the repair is made to a buried section of the system, the pressure test shall be accomplished prior to covering the repair area. Allowable leakage: NONE.
- C. Forms. The Contractor shall obtain, fill-out and adhere to all NASA MSFC required permit forms: including, but not limited to burn permit, confined space entry permit, dig permits, and all tag-out, lock-out procedures.
- D. Painting. The Contractor shall prepare, prime and paint all new and disturbed surfaces to match the surrounding area as a result of the requirements of this contract paragraph and Paragraph 6.0, Environmental Management Support for disposal.
- E. Maintenance Requirements and Procedures. The Contractor shall maintain all equipment in optimum operating condition and control. All mechanical systems

under this paragraph shall be operational, functional, and ready to respond to demand according to its design purpose and intent. Any unscheduled or unplanned outage of these systems listed in Attachment J-10 shall not exceed those occurrences and times specified in Attachment J-10. Times listed in Attachment J-10 are referred to as the "outage limit," with the exception for scheduled or planned outages. For work that exceeds the TC limit, the time expended by the Contractor prior to the Contractor notifying the COTR of such condition shall be applied towards the outage limit. All other time will not be counted towards the outage limit for work exceeding the TC limit (reference note G. on the Systems Availability Requirements Table in Attachment J-10). Planned outages for maintenance and repair shall follow standard labor hours and practices per the Means® Facilities Maintenance and Repair Cost Data Handbook. Any time exceeding published labor hours may count towards the outage limit.

The Contractor shall prepare maintenance procedures per the following guidelines: (1) manufacturer's instructions; (2) industry standards and codes, (3) Federal, state, and local regulations, and (4) procedures outlined in NASA publications. The Contractor shall prepare maintenance procedures in accordance with DRD 1197LS-011.

- F. Horizontal and Vertical Sliding Roll Doors. Horizontal and vertical sliding roll doors shall operate smoothly without resistance. Railings shall be checked for alignments. Rusted or corroded areas shall be repaired or replaced. All bearings, rollers, gears, and pulleys shall be properly lubricated. All hangers, bolts, springs, and pins shall be free of rust, corrosion, and shall be tightly mounted and secured. Motors shall operate properly and be properly lubricated. Cables and fusible links shall be properly installed and free from rust and corrosion. The Contractor shall perform PM per Attachment J-24, Horizontal and Vertical Sliding Roll Doors PM.

--Remainder of Page Intentionally Left Blank--

11.0 STEAM DISTRIBUTION SYSTEM OPERATION**11.1 GENERAL REQUIREMENTS**

The Contractor shall provide all labor, supervision, incidental engineering, materials, treatment chemicals, tools, equipment, transportation, and management necessary for the yearly operation, preventive maintenance (PM), predictive maintenance, trouble calls (TC), and repair of the boiler plants, and associated steam distribution and condensate return systems, facilities, and equipment described in Attachments J-24, J-25, and J-6. Work shall conform to Federal and State Codes, Environmental standards, OSHA regulations, and ASME power boilers, pressure vessel codes. The work shall include, but not be limited to, operating boilers, testing, analysis, and treatment; boiler start-up and shut-down; PM to include daily site visits for inspections, checks, and adjustments; TC and minor repair of the boilers, entire steam distribution system at MSFC, condensate return system, and associated facilities; annual boiler overhaul; annual boiler inspection, tuning, and certification; and maintaining records and preparing reports in order to provide high pressure steam (up to 200 psig) 24 hours per day, 7 days a week throughout the term of the contract period, compliant with the directives, manuals, and instructions listed in Attachment J-26. PM work shall be accomplished per Attachment J-24. Note: The MSFC steam generation and cross-country distribution system is primarily South of Fowler Road. Most facilities North of Fowler Road are serviced by Army-provided steam.

11.2 LUMP SUM WORK

The following contract requirements shall be performed per the Performance Requirements Summary (PRS), Section E.9, at the frequencies or parameters specified within the contract requirement:

A. Contract Element (CLIN - 00X1.1101) Steam Boiler Operation. The Contractor shall operate, maintain, have inspected and repaired all MSFC steam boiler plants and systems. Boilers shall operate at a minimum of 80 percent efficiency. Maintenance timeliness shall be the same as for trouble calls. The Contractor SHALL respond to emergency situations with correct repair so scheduled test programs will not be delayed. Boiler operation includes all equipment associated with normal boiler operation such as fuel supply, condensate pump, and feed water pump. The steam boiler equipment the Contractor shall operate includes, but is not limited to, boilers listed in Attachment J-19. Failure of the Government to supply water, fuel, or electricity for plant operations will relieve the Contractor of responsibility of operations during the time period the Government is remiss in these supply functions. If interrupted by the Government, the Contractor shall return the boiler on-line within two (2) hours of re-establishment of Government service. The Government will provide the Contractor all operational procedures that are presently available for MSFC steam boilers systems.

1. The Contractor shall operate equipment 24 hours a day, 7 days a week in accordance with Attachment J-19. Summer schedule will begin April 15th and

- the winter schedule will begin October 15th. The COTR will confirm actual schedule dates.
2. The Contractor shall perform fuel storage and transfer operations associated with boiler plant storage tanks (fuel oil to be furnished by the Government). The Contractor shall notify the Government of fuel needs allowing enough time for the Government to place an order and have the fuel delivered. This lead-time is typically one (1) week (seven (7) days)
 3. The Contractor shall prevent accumulation of boiler deposits and corrosion by carrying out a prescribed program of boiler water chemical treatment. This includes analyzing boiler and feed water, selecting chemicals and components according to formula and injecting carefully measured solutions into boiler and feed water.
- B. Contract Element (CLIN - 00X1.1102) Steam Distribution. The Contractor shall maintain and repair the entire steam distribution and condensate return systems continuously, 365 days per year minimizing steam and condensate losses due to leakage. Maintenance timeliness shall be the same as for trouble calls. Steam distribution includes all steam and condensate piping both north and south of Fowler Road that falls under the responsibility of MSFC. This shall include, but is not limited to, elevated and underground steel steam supply piping and condensate return piping, fittings, valves, insulation/lagging, aluminum jacketing, expansion loops, pipe hangers, anchors, structural supports, and touch-up painting. Steam distribution includes, but is not limited to, regulator adjustment, relief adjustment, strainer or trap cleaning, and isolation and return to service. Work shall be done in accordance with Paragraph 11.5.R, Maintenance Requirements and Procedures.
- C. Contract Element (CLIN - 00X1.1103) Primary Steam Boiler PM. The Contractor shall perform all primary steam generation boilers PM, listed in Attachment J-20 and in accordance with Paragraph 12.5.U, Maintenance Requirements and Procedures. All PM activities shall be accompanied in compliance with the Contractor's PM plan.
- D. Contract Element (CLIN - 00X1.1104) Boiler Feed Water Pump PM. The Contractor shall perform PM on feed water pumps listed in Attachment J-24 and in accordance with Paragraph 11.5.R, Maintenance Requirements and Procedures. All PM activities shall be accompanied in compliance with the Contractor's PM plan.
- E. Contract Element (CLIN - 00X1.1105) Condensate Pump PM. The Contractor shall perform PM on steam condensate return pumps as listed in Attachment J-24 and in accordance with Paragraph 11.5.R, Maintenance Requirements and Procedures. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- F. Contract Element (CLIN - 00X1.1106) Power Boiler Annual Certification. The Contractor shall procure the services of an independent inspector to perform annual boiler inspections in accordance with DRD 1197LS-004. The annual

certification consists of (1) Type A - internal and external, (2) Type B - internal and external with hydrostatic test, and (3) Type C - external under steam. This includes all Contractor support to the certifying agency.

- G. Contract Element (CLIN - 00X1.1107) Portable Boiler PM. The Contractor shall perform all portable steam generation boilers PM in accordance with Paragraph 11.5.R, Maintenance Requirements and Procedures. All PM activities shall be accompanied in compliance with the Contractor's PM plan.
- H. Contract Element (CLIN – 00X1.1108) Steam Trap Inspection. The Contractor shall perform a yearly inspection of all steam traps prior to April 15th using the Government provided Trapman system. Trouble Calls or IDIQ's, as appropriate, shall be initiated for defective traps. Defective traps shall be repaired or replaced prior to October 15th. The Contractor shall enter all currently unidentified traps into the Trapman system and the CMMS. There are approximately 1000 steam traps. The currently identified traps are shown in Attachment J-12. If the number of traps varies more than 3% there will be an equitable adjustment made.

11.3 DOCUMENTATION AND REPORTING REQUIREMENTS

- A. Contract Element (Include in CLIN - 00X1.0306) Computerized Maintenance Management System (CMMS) Operations and Management The Contractor shall continuously update the CMMS to reflect any and all equipment failures and corrective actions taken. All data shall be accurate and current.
- B. Contract Element (CLIN - 00X1.1014) Maintenance Procedures. The Contractor shall provide maintenance procedures in accordance with DRD 1197LS-011. The Contractor shall update and revise all maintenance procedures on a continuing basis as required by physical changes at no additional cost to the Government (See Paragraph 10.5.E, Maintenance Requirements and Procedures). Maintenance procedures shall be maintained in the TRL.

11.4 IDIQ WORK

IDIQ work will be ordered in accordance with Paragraph 1.6, IDIQ Work, and may be ordered for any facility involving Steam Distribution Maintenance and Repair. IDIQ work shall be completed within the number of days specified on the FWR or DO.

11.5 DETAILED SPECIFICATIONS

The Contractor shall accomplish the following detailed specifications and requirements in accomplishing work required by this work paragraph:

- A. Interferences. The Contractor shall remove and reinstall interferences necessary to accomplish work required by this work paragraph.

- B. Forms. The Contractor shall obtain, fill-out, and adhere to all NASA, MSFC required permit forms such as: burn permit, confined space entry permit, dig permit, and all lock-out, tag-out procedures in accordance with Safety and Health Requirements and Reports in Paragraph 1.0.
- C. Operation of Certified Boilers. The Contractor shall not operate any power boiler that does not have a valid annual inspection certificate. The COTR shall be notified if unsafe conditions are found, following repair of a power boiler, or after any authorized modification to boilers, control equipment, or associated components.
- D. Environmental Management Support. The Contractor shall handle all hazardous waste and environmental work associated with, or arising from, this work paragraph, in accordance with the requirements of Paragraph 6.0, Environmental Management Support.
- E. Replacement of Expansion Joints. Replacement of joints shall consist of removing insulation, fasteners, expansion joint, and installing the new expansion joint, fasteners, and insulation.
- F. Structural Support System. The Contractor shall repair or replace all deteriorated pipe hangers and supports, expansion loops, guy wires, anchor rods, screw anchors, turnbuckles, fasteners, and anchors.
- G. Valves. The Contractor shall repair or replace deteriorated, damaged, and leaky valves, stems, disks, seals, packing, and gaskets. If a valve requires disassembly for repair, the Contractor shall, while the valve is disassembled, clean the bonnet, lubricate the stem, and inspect the valve for signs of deteriorated or damaged packing and broken, bent, corroded, or missing parts. After the valve is restored, the Contractor shall apply system pressure to ensure all joints are sealed, and check for seat, body, and packing leaks, and check for proper operation, correcting any defects discovered. Valves under two (2) inch shall be replaced with new valves if found defective.
- H. Traps and Y-Type Strainers. The Contractor shall repair or replace all defective parts of traps and Y-type strainers such as baskets, plugs, gaskets, bellows, floats, valves, valve seats, hooks, buckets, linkages, and strainer orifices. If repair requires disassembly, the Contractor shall clean, inspect, and test the trap or strainer in the same manner as valves. The Contractor shall test traps and strainers to determine correct operation without breaking insulation.
- I. Gauge and Thermometer. The Contractor shall insure all system gauges and thermometers are in good working order. The Government's Calibration Laboratory will be available should the Contractor elect to calibrate this equipment. Each gauge and thermometer shall be functional to allow safe operation of the system.

- J. Fasteners. When required by deterioration, missing or damaged threads, the Contractor shall remove the existing and install new fasteners that conform to original requirement or TSRC. Apply high temperature anti-seize compound to all boiler and associated fasteners.
- K. Gaskets. When required, the Contractor shall install new gaskets conforming to the manufacturer's specifications and or the latest code and industry standards for boiler watersides and boiler firesides. Removal of existing gaskets may require special requirements per Paragraph 6.0, Environmental Management Support.
- L. Testing of Systems. When repairs and alterations are made involving the integrity of the steam distribution system, the Contractor shall, after all repairs are complete, pressurize the system and check for leaks. If the repair is made to a buried section of the system, the pressure test shall be accomplished prior to covering the repair area. System shall be tested in compliance with ANSI B31.1.
- M. Insulation. The Contractor shall repair or replace damaged pipe insulation as part of PM or repair. When repairing or replacing insulation, the Contractor shall inform their personnel of the possible hazards of asbestos and shall comply with the requirements set forth in accordance with MPR 8500.1 and MSFC instructions. All replacement pipe insulation shall match existing insulation or be installed per Technical Specification for Construction and Repair (TSRC).
- N. Conduit. The Contractor shall repair and replace damaged electrical conduits and tighten or repair defective or loose connections to all conduits.
- O. Valve Houses and Pits. The Contractor shall, while performing work in steam line valve houses and manhole pits, repair or replace defective covers, supports, guides, and ladders, and shall be alert to defects in other systems and the surrounding manhole and conduit.
- P. Water Treatment. The Contractor shall provide chemical or mechanical water treatment to control corrosion to the steam boiler(s) and the steam supply and return system. Water treatment disposal shall be in compliance with the MSFC NPDES permit. Water treatment chemicals containing chromium or tributyltin shall not be used.
- Q. Painting. The Contractor shall prepare, prime, and paint new and disturbed surfaces to match the surrounding surfaces, as a result of the requirements of this work paragraph in accordance with Paragraph 10.5.D, Painting, and Paragraph 6.0, Environmental Management Support for disposal.
- R. Maintenance Requirements and Procedures. The Contractor shall maintain all equipment in optimum operating condition and control. All equipment shall be operational, functional, and ready to respond to demand according to its design purpose and intent except for scheduled or planned outages. Note: Scheduled and planned outages for buildings 4663 and 4207 will be very difficult to obtain and most likely will only be available during a holiday period such as Christmas. For

unscheduled and unplanned outages, the steam distribution system under this paragraph shall be down no greater than those occurrences and times specified in Attachment J-10, herein referred to as the "outage limit." For work that exceeds the TC limit, the time expended by the Contractor prior to the Contractor notifying the COTR of such condition shall be applied towards the outage limit. All other time will not be counted towards the outage limit for work exceeding the TC limit (reference note G on the Systems Availability Requirements Table in Attachment J-10). Planned outages for maintenance and repair shall follow standard labor hours and practices per the Means® Facilities Maintenance and Repair Cost Data Handbook. Any time exceeding published labor hours may count towards the outage limit.

The Contractor shall prepare maintenance procedures per the following guidelines (1) manufacturer's instructions, (2) industry standards and codes, (3) Federal, state, and local regulations; and (4) procedures outlined in NASA publications. The Contractor shall prepare maintenance procedures in accordance with DRD 1197LS-011.

- S. Operating Records and Logs. The Contractor shall maintain operating records, laboratory records, maintenance records, and emergency condition records. The Contractor shall keep all operation, maintenance, and repair records orderly, readily accessible, and simply referenced in such a manner to be quickly accessed by all authorized Government authorities at any time. The Contractor will continuously update the CMMS to reflect any and all equipment failures and corrective actions taken.
1. The Contractor shall provide, maintain, and post current signs and instructions including, but not limited to, no smoking, electrical and chemical hazard warning signs, routine daily instructions, and routine laboratory analyses procedures required by the COTR and Federal, state, and local regulations.
 2. The Contractor shall maintain a bound logbook for each boiler in operation identifying the operator's name, date, time, observations made, checks of flame failure and low water cut-off devices, meter readings, operational changes, and all other maintenance performed during each visit.
 3. The Contractor shall maintain a daily record of all treatment chemicals used and of all laboratory analyses performed.

--Remainder of Page Intentionally Left Blank--

12.0 HVAC/R SYSTEMS**12.1 GENERAL REQUIREMENTS**

The Contractor shall provide all labor, supervision, materials, oils, lubricants, tools, equipment, transportation, and management necessary for the operation, predictive maintenance, preventive maintenance (PM), corrective maintenance, and repair of heating, ventilating, air conditioning, and refrigeration (HVAC/R) equipment, identified in Attachments J-24, J-25, and J-6. The work shall include PM and repair of equipment and system components consisting of, but not limited to, gas, oil, and electric heating boilers, centrifugal, reciprocating, screw, liquid and air-cooled air conditioning systems, direct expansion package air conditioning units, self-contained computer cooling units, electric heat pumps, through-the-wall heating and air conditioning units, cooling towers, air handling units, unit heaters, refrigerant compressors, humidifiers, ventilation blowers/fans, service valves, dampers, condensers, coils, chillers, pumps, purge units, electrical and mechanical controls, duct work, piping, motors, evaporators, air filters and dryers, thermostats, humidifiers, fan coil units, water coolers, ice machines, refrigerators, reach-in freezers, and performance of seasonal equipment start-ups and shut-downs; annual heating boiler overhaul, associated inspection and certification assistance; maintaining records and preparing reports to ensure safe and efficient equipment operation and to maximize the life of each piece of equipment for optimum operational efficiency. All additional costs associated with performance of refrigerant leak detection, reclamation, cleaning, reporting, and recycling shall be provided at no additional cost to the Government. PM and repair work shall comply with the applicable directives, manuals, and instructions listed in Attachment J-26.

12.2 LUMP SUM WORK

The following contract requirements shall be performed per the Performance Requirements Summary (PRS), Section E.9, at the frequencies or parameters specified within the contract requirement:

- A. Contract Element (CLIN - 00X1.1201) Hot Water Boiler PM. The Contractor shall perform PM on the boilers listed in Attachment J-19 and in accordance with Paragraph 12.5.U, Maintenance Requirements and Procedures. Annual certifications are required and shall be obtained by the Contractor. The annual certification consists of (1) Type A - Internal and External, (2) Type B - Internal and External with hydrostatic test, and Type C - External under steam. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- B. Contract Element (CLIN - 00X1.1202) Boiler Hot Water Pump PM. The Contractor shall perform PM on the boiler hot water pumps included in Attachment J-24 and in accordance with Paragraph 12.5, Detailed Requirements. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- C. Contract Element (CLIN - 00X1.1203) Boiler Feed water Pump PM. The Contractor shall perform PM on the boiler feed water pumps included in Attachment J-24 and in accordance with Paragraph 12.5, Detailed Requirements.

All PM activities shall be accomplished in compliance with the Contractor's PM plan.

- D. Contract Element (CLIN - 00X1.1204) Chilled Water Pump PM. The Contractor shall perform PM on the chilled water pumps included in Attachment J-24. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- E. Contract Element (CLIN - 00X1.1205) Chiller PM. The Contractor shall perform PM on the reciprocating A/C plants included in Attachment J-24. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- F. Contract Element (CLIN - 00X1.1206) Air Handler Unit PM. The Contractor shall perform PM on the air handler units included in Attachment J-24. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- G. Contract Element (CLIN - 00X1.1207) Exhaust Fan PM. The Contractor shall perform PM on the exhaust fans included in Attachment J-24. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- H. Contract Element (CLIN - 00X1.1208) Cooling Tower PM. The Contractor shall perform PM on the cooling towers listed in Attachment J-24. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- I. Contract Element (CLIN - 00X1.1209) Cooling Tower Circulating Pump PM. The Contractor shall perform PM on the cooling tower circulating pumps included in Attachment J-24. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- J. Contract Element (CLIN - 00X1.1210) Cooling Tower Water Treatment. The Contractor shall perform water treatment for the cooling towers. Water treatment equipment is shown in Attachment J-23. All treatment activities shall be accomplished in compliance with the Contractor's PM plan.
- K. Contract Element (CLIN - 00X1.1211) Humidifier and Dehumidifier PM. The Contractor shall perform PM on the humidifiers and dehumidifiers listed in Attachment J-24. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- L. Contract Element (CLIN - 00X1.1212) Trailer Mounted Mobile Chiller (Emergency Chiller) PM. The Contractor shall perform a monthly PM on the trailer mounted mobile chillers included in Attachment J-24. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- M. Contract Element (CLIN - 00X1.1213) Water Treatment for Chilled Water Systems. The Contractor shall perform water treatment for the chilled water systems. All water treatment activities shall be accomplished in compliance with the Contractor's PM plan.

- N. Contract Element (CLIN - 00X1.1214) Water Treatment for Hot Water and Steam Boilers. The Contractor shall perform water treatment for the hot water and steam boilers. Water treatment equipment is listed in Attachment J-23. All activities shall be accomplished in compliance with the Contractor's PM plan.
- O. Contract Element (CLIN – 00X1.1215) Refrigerant Reclamation. The Contractor shall reclaim all CFC and HCFC refrigerants for reuse.
- P. Contract Element (CLIN – 00X1.1216) Supply and Return Air Fan PM. The Contractor shall perform PM for all supply and return air fans included in Attachment J-24.
- Q. Contract Element (CLIN – 00X1.1217) Heating Vent Unit PM. The Contractor shall perform PM for all heating vent units included in Attachment J-24.
- R. Contract Element (CLIN – 00X1.1218) Heating, Ventilating, Air Conditioning and Refrigeration (HVAC/R) Operations and Maintenance. The Contractor shall operate, maintain, and repair all MSFC HVAC/R systems continuously, 365 days per year, 24 hours per day, 7 days a week maintaining special environments that are currently in force in accordance with Attachment J-21. The special environment areas may be subject to change as Center objectives and programs are defined. The Contractor will not be responsible for operating and maintaining a new special environment with criteria that exceeds the HVAC/R design for that area without compensation from the Government. The Contractor shall minimize personnel discomfort in administrative areas when HVAC/R conditions are impacted by events outside of the Contractor's control. Operations shall include, but not be limited to, performance of seasonal equipment start-ups and shutdowns, calibrations, resetting and restarting tripped equipment, regulator or thermostat adjustments, filter replacements other than HEPA filters, and isolating and returning equipment to service as a result of planned or unplanned outages. The work shall also include repair of HVAC/R related components (for example, air compressors, air dryers, fans, chillers, cooling towers, DXAC units, humidifiers, pumps) and associated piping isolated to the first connection point upstream and downstream of each component. All piping, fittings, valves, insulation/ lagging, aluminum jacketing, expansion loops, traps, strainers, pipe hangers, anchors, structural supports, and touch-up painting are included. Work shall be done in accordance with Paragraph 12.5.U, Maintenance Requirements and Procedures. Maintenance timeliness shall be the same as for trouble calls. The Contractor's repair liability for servicing equipment and system components is limited to \$2000 per system, per occurrence. The Contractor shall not classify response to alarms associated with HVAC/R as trouble calls, exclusive of Utility Control System monitoring hardware. The Contractor shall respond to emergency situations with correct repair so scheduled test programs will not be delayed. Work shall conform to Federal and state Codes, EPA standards, OSHA regulations, and ASHRAE requirements. The HVAC systems and equipment the Contractor shall operate includes, but is not limited to, those identified in Attachments J-24, J-25, and J-6. Failure of the Government to supply water, fuel, or electricity for plant operations will relieve the Contractor of responsibility of operations during the time period the

Government is remiss in these supply functions. If interrupted by the Government, the Contractor shall return the HVAC/R system on-line within two (2) hours of re-establishment of Government service. The Government will provide the Contractor all operational procedures that are presently available for MSFC HVAC/R systems. It is understood that all critical and comfort environments shall be maintained within assigned set points and related dead bands. Furthermore, no routine visits by operators will be necessary if the zone environmental parameters are within assigned guidelines. Comfort zones shall be maintained in accordance with Paragraph 12.5.F.

- S. Contract Element (CLIN – 00X1.1219) DXAC/Heat Pump Unit PM. The Contractor shall perform PM on the DXAC/heat pump units included in Attachments J-24 and J-6. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- T. Contract Element (CLIN – 00X1.1220) Computer Room Unit PM. The Contractor shall perform PM on the computer room units included in Attachments J-24 and J-6. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- U. Contract Element (CLIN – 00X1.1221) Backflow Preventer PM. The Contractor shall perform PM on the back-flow preventers included in Attachments J-24 and J-6. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- V. Contract Element (CLIN – 00X1.1222) Air Filter PM. The Contractor shall perform PM on the filters included in Attachments J-24 and J-6. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- W. Contract Element (CLIN – 00X1.1223) Hot Water Pump PM. The Contractor shall perform PM on the hot water pumps included in Attachments J-24 and J-6. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- X. Contract Element (CLIN – 00X1.1225) Coil Cleaning. The contractor shall establish a program to clean all heating and cooling coils. The program shall clean the interior and exterior of all coils every five years (approximately 20% of the coils each year). The Contractor shall enter all coils into the CMMS equipment database. A list of air handlers is shown in Attachment J-22. There are approximately 1264 reheat coils that are not listed. If the number of reheat coils varies more than 3% there will be an equitable adjustment made.

12.3 **DOCUMENTATION AND REPORTING REQUIREMENTS**

- A. Contract Element (Include in CLIN - 00X1.0306) Computerized Maintenance Management System (CMMS) Operations and Management. The Contractor shall continuously update the CMMS to reflect any and all equipment failures and corrective actions taken. All data shall be accurate and current.
- B. Contract Element (CLIN - 00X1.1014) Maintenance Procedures. The Contractor shall provide maintenance procedures in accordance with DRD 1197LS-011. The Contractor shall update and revise all maintenance procedures on a continuing basis as required by physical changes at no additional cost to the Government (See Paragraph 10.5.E, Maintenance Requirements and Procedures). Maintenance procedures shall be maintained in the TRL.
- C. Contract Element (CLIN – 00X1.1224) Refrigerant Recovery Management Plan. The Contractor shall have a Refrigerant Management Plan in which all CFC and HCFC refrigerants are tracked, inventoried, preserved, and recovered for reuse. A status shall be maintained and continuously updated on the CMMS. The plan shall also include servicing records for all equipment containing 50 pounds or more of CFC refrigerant which detail the amount of refrigerant added to equipment as well as the service date. The Contractor shall establish the baseline full charge amount for this equipment and calculate an annualized leak rate. Leaks shall be repaired if the annualized leak rate exceeds ten percent of the baseline full charge amount.

12.4 **IDIQ WORK**

IDIQ work will be ordered in accordance with Paragraph 1.6 IDIQ Work, and may be ordered for any facility involving HVAC/R and Boiler Maintenance and Repair. Maintenance and repair IDIQ work shall be completed within the number of days specified on the FWR or DO.

12.5 **DETAILED REQUIREMENTS**

The Contractor shall accomplish the following detailed specifications and requirements in accomplishing work required by this work paragraph:

- A. Safety. The Contractor shall abide by all local, state and Federal regulations in the respect to personnel safety and in accordance with the Contractors approved Safety and Health plan.
- B. Interferences. The Contractor shall remove and reinstall interferences necessary to accomplish work required by this work paragraph.
- C. Forms. The Contractor shall obtain, fill-out, and adhere to all NASA MSFC required permit forms including , but not limited to, burn permit, confined space entry permit, dig permit, and all lock-out, tag-out procedures in accordance with the Contractors approved Safety and Health plan.

- D. Shut-down of Heating and Air Conditioning Equipment. Prior approval shall be obtained from an authorized representative for unscheduled work requiring shutdown of any equipment for over 60 minutes during core work hours, except for an emergency. Whenever possible, maintenance requiring shutdown of equipment for more than 60 minutes shall be performed when winter heating or summer air conditioning is not required.
- E. Operation of Certified Boilers. The Contractor shall not operate any power or heating boiler that does not have a valid annual State Inspection Certificate for which the Contractor shall be responsible. The COTR shall be notified if unsafe conditions are found following repair of a pressure part, after any major modification to boilers, control equipment, or associated components. The affected equipment shall not be placed back in operation until written authorization is received from the Government.
- F. Temperature Settings for HVAC/R Equipment and Systems. The Contractor shall maintain temperature settings for HVAC/R equipment and systems during performance of work as specified herein. The majority of buildings shall be maintained at a comfortable heating temperature range of between 68 degrees F to 72 degrees F and a comfort cooling range of between 72 degrees F and 74 degrees F as desired by the occupants and their requirements. However, the heating and cooling ranges are subject to change based on MSFC energy conservation goals. Attachment J-21 lists special temperature control requirements currently in force.
- G. Environmental Management Support. The Contractor shall handle all hazardous waste and environmental work associated with, or arising from, this work paragraph, in accordance with the requirements of Paragraph 6.0, Environmental Management Support.
- H. Pressure Testing. The Contractor shall accomplish pressure testing for leaks when repairs or alterations are made involving the integrity of refrigerant, steam, hot water, feed water, chilled water, condenser water, or make-up water systems while conducting maintenance or repair. If the repair is made to a buried section of the system, the pressure test shall be accomplished prior to covering the repair area.
- I. Structural Support Systems. The Contractor shall accomplish the repair or replacement of pipe hangers, supports, expansion loops, guy wires, anchor rods, screw anchors, turnbuckles, motor mounts, fasteners, and anchors while conducting maintenance and repair.
- J. Valves. The Contractor shall repair or replace deteriorated, damaged, and leaky valves, stems, disks, seals, packing, bonnets, and gaskets. If a valve requires disassembly for repair, the Contractor shall, while the valve is disassembled, clean the bonnet, lubricate the stem, and inspect the valve for signs of deteriorated or damaged packing and broken, bent, corroded, or missing parts. After the valve is restored, the Contractor shall apply system pressure to ensure all joints are sealed, and check for seat, body, and packing leaks, and check for proper operation, correcting any defects found. The Contractor shall apply anti-seize compound

conforming to gasket surfaces and moving parts. All valves under two (2) inches shall be replaced with new valves if found defective by the Contractor, not repaired.

- K. Expansion Joints. The Contractor shall accomplish the replacement of deteriorated, damaged, and leaky expansion joints, associated fasteners, and insulation. The new expansion joints shall be installed with new fasteners and insulation.
- L. Traps and Y-Type Strainers. The Contractor shall repair or replace all defective parts of traps and Y-type strainers such as baskets, plugs, gaskets, bellows, floats, valves, valve seats, hooks, buckets, linkages, and strainer orifices. If repair requires disassembly, the Contractor shall clean, inspect, and test the trap or strainer in the same manner as valves. The Contractor shall test traps and strainers to determine correct operation, without breaking insulation.
- M. Fasteners: Steam, Condensate, and Hot Water. When required by deterioration, damaged threads, missing fasteners or new installations, the Contractor shall remove the existing and or install new fasteners that conform to original requirements or MSFC Technical Specification for Construction and Repair (TSRC).
- N. Fasteners: Potable Water, Chilled Water, or Condenser Water. When required by deterioration, damaged threads, missing fasteners, or new installations, the Contractor shall remove the existing and or install new fasteners that conform to original requirements or TSRC.
- O. Gaskets. When required, the Contractor shall install new gaskets conforming to the manufacturer's specifications and or the latest code and industry standards for "boiler water sides" and "boiler fire sides". Apply high temperature anti-seize compound to boiler gasket mating surfaces. The Contractor shall install new gaskets conforming to original requirements or TSRC.
- P. Gauge and Thermometer Calibration. The Contractor shall insure all system gauges and thermometers are in good working order. The Government's Calibration Laboratory will be available should the Contractor elect to calibrate this equipment. Each gauge and thermometer shall be functional to allow safe operation of the system.
- Q. Water Treatment. The Contractor shall provide chemical water treatment to control corrosion, the growth of algae, viruses, and all other micro-biological growth to: steam and hot water boilers and their associated systems, chilled water systems, cooling towers and condenser water systems. Water treatment disposal shall be in compliance with the MSFC NPDES permit. Water treatment chemicals containing chromium or tributyltin shall not be used.
- R. Refrigerants. The Contractor shall accomplish the use, handling, holding, cleaning, disposal, modifying, repairing, and testing of all refrigerants and refrigerant

systems in accordance with all applicable Federal, state, local, EPA and ASHRAE regulations.

- S. Pipe Insulation. The Contractor shall repair or replace damaged pipe insulation as found or caused in accomplishing PM or repair. When repairing or replacing insulation, the Contractor shall inform their personnel of the possible hazards of asbestos and shall comply with the requirements in the Contractor's Safety and Health Plan and MSFC instructions. All replacement pipe insulation shall match existing insulation or be installed per TSRC.
- T. Painting. The Contractor shall prepare, prime, and paint all new and disturbed surfaces to match the surrounding surfaces, as a result of the requirements of this work paragraph in accordance with Paragraph 10.5.D, Painting, and Paragraph 6.0, Environmental Management Support, for disposal.
- U. Maintenance Requirements and Procedures. The Contractor shall maintain all equipment in optimum operating condition and control. All HVAC/R systems shall be operational, functional, and ready to respond to demand according to its design purpose and intent. Note - scheduled and planned outages for Buildings 4663 and 4207 will be very difficult to obtain and most likely will only be available during a holiday period such as Christmas. For any unscheduled or unplanned outages, the HVAC/R systems listed in Attachment J-10 shall be non-functional no greater than those occurrences and times specified in Attachment J-10, herein referred to as the "outage limit," except for scheduled or planned outages. For work that exceeds the TC limit, the time expended by the Contractor prior to the Contractor notifying the COTR of such condition shall be applied towards the outage limit. All other time will not be counted towards the outage limit for work exceeding the TC limit (reference note G. on the Systems Availability Requirements Table in Attachment J-10). Planned outages for maintenance and repair shall follow standard labor hours and practices per the Means® Facilities Maintenance and Repair Cost Data Handbook. Anytime exceeding published labor hours may count towards the outage limit.

Chillers shall be operated based on seasonal demand to provide for maximum chiller life and minimal operational costs. The maintenance procedures shall be prepared by the Contractor per the following order as applicable: (1) manufacturer's instructions; (2) industry standards and codes; (3) Federal, state, and local regulations; and (4) procedures outlined in NASA publications. The Contractor shall keep all records and procedures orderly, readily accessible, and simply referenced in such a manner to be quickly accessed by all authorized Government authorities at anytime. The Contractor shall provide the maintenance procedures in accordance with DRD 1197LS-011.

13.0 ELECTRICAL DISTRIBUTION AND EMERGENCY GENERATING SYSTEMS**13.1 GENERAL REQUIREMENTS**

- A. General. The Contractor shall provide all labor, management, supervision, tools, materials, equipment, incidental engineering, and transportation to operate, maintain and repair all low voltage electrical distribution systems, street and perimeter lighting systems, electrical support of the high voltage systems and emergency generation systems. The Contractor shall be directly responsible for: (1) emergency generators; (2) transformers; (3) uninterruptable power supplies (UPS); (4) switchgear; and (5) exterior and interior lighting systems, including but not limited to, office, street, flood, perimeter, emergency egress and security lighting; and (6) all facility internal and external low and medium voltage power distribution systems. Emergency egress lighting within facilities consists of approximately 1,230 lights. High voltage systems (above 600 Volts) will be maintained by the Army except as noted in Section 13.2.I.
- B. Emergency Requirements: Loss of Primary Power. Following a complete loss of primary power, the Contractor shall confirm that existing emergency generating equipment is on-line. The Contractor shall respond to the outage as an emergency trouble call (TC). After the Government has restored primary power the Contractor shall confirm that all emergency generating equipment has returned to normal which is still performed as part of the same TC.

13.2 LUMP SUM WORK

The following Contract Requirements shall be performed per the Performance Requirements Summary (PRS) Section E.9, at the frequencies or performance criteria specified within the contract requirement:

- A. Contract Element (Include in CLIN 00X1.0401) Trouble Calls (TC). The Contractor shall respond to and repair all inoperative electrical systems called in as a trouble call.
- B. Contract Element (CLIN - 00X1.1301) Fixed and Mobile Emergency Generator System PM. The Contractor shall perform PM on the emergency generator systems as shown in Attachments J-11 and J-24. The Contractor shall perform a visual inspection on all emergency generating equipment fuel oil tanks for material condition and adequate fluid levels. The Contractor shall ensure there is suitable fuel to operate all emergency generating equipment. The Contractor shall maintain and repair all monitoring systems on fuel tanks. The Contractor shall also inspect all monitors to determine if there is any inner tank leakage. If leakage is discovered the Contractor shall report their findings to NASA/Environmental Engineering and Occupational Health Office immediately. The Contractor shall maintain all fuel oil handling equipment including storage tanks, monitoring systems, pumps, piping, and heaters. The Contractor shall check proper operation of the generators by starting and running them until normal engine operating temperature is achieved. The frequency shall be measured for proper output (Refer

to Paragraph 13.5.D, Performance) for performance criteria. All PM activities shall be accomplished in compliance with the Contractor's PM plan.

- C. Contract Element (CLIN - 00X1.1302) Electrical Switchgear PM. The Contractor shall perform PM on all electrical switchgear. (Refer to Paragraph 13.5.D), Performance, for performance criteria. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- D. Contract Element (CLIN - 00X1.1303) Street and Perimeter Lighting PM. The Contractor shall inspect on a regular basis all street and perimeter lighting systems. Inspections shall take place after dark to locate inoperative fixtures. The Contractor shall relamp all burned out street and perimeter light fixtures and repair or replace all broken fixtures. Any inoperative fixtures reported to the Contractor by a TC shall be placed back in service within five working days from initial notification. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- E. Contract Element (CLIN - 00X1.1304) Mobile and Fixed Emergency Generator System Operation. The Contractor shall maintain the emergency generators as listed in Attachment J-11 in a ready state for use. The Contractor shall connect and disconnect, and operate portable generators during planned and unplanned power outages at various structures and remote locations when no normal source of power is available. Connection, disconnection and operation will be accomplished by TC, TCS or IDIQ. Government furnished portable generators shall be utilized. The Contractor shall provide emergency generators required by the Government in addition to the Government furnished generators under the indefinite quantity paragraph of this contract. (Refer to Paragraph 13.5.D.) Performance for performance criteria.
- F. Contract Element (CLIN – 00X1.1305) Uninterrupted Power Supply, Rectifiers, and Battery Bank PM. The Contractor shall perform PM on the uninterrupted power supply, rectifiers, and battery bank systems listed in Attachment J-24. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- G. Contract Element (CLIN - 00X1.1306) Special Electrical Power Systems Operation. The Contractor shall operate, repair, maintain, inspect, and modify special electrical and electronic controlled power distribution systems in Building 4487. Special power systems are capable of supplying two to four hundred Volts of DC power from six patch panels. Two hundred lead acid batteries and forty battery chargers are included in the special power systems.
- H. Contract Element (CLIN - 00X1.1307) Interior and Exterior Low and High Voltage Distribution System PM. The Contractor shall accomplish all electrical system PM in compliance with their PM plan. This shall include PT&I activities such as thermography to identify weak or failing system components.
- I. Contract Element (CLIN 00X1.1308) 4160-Volt Power Support. The Contractor shall perform operational support activities to service, maintain, repair and test

4160-Volt systems that are integral to the NASA MSFC systems. Typical systems throughout MSFC that the Contractor shall be responsible for include, but are not limited to, transfer switches, switchgear, and starters for chilled water system compressors, MSFC-owned 4160-Volt generators, transformers, and switchgear. The Contractor shall provide continuous maintenance support for all 4160-Volt outages that affect MSFC facilities. The Contractor shall ensure that affected parties are informed that power restoration is completed properly and that system configuration and integrity is not compromised at the conclusion of the work. The Contractor shall provide PM service and repair activities on MSFC-owned equipment. The Contractor's repair liability for servicing equipment and system components is limited to \$2000 per system, per occurrence. The repairs shall be accomplished on TC's or IDIQ's as required.

Additionally, the Contractor shall assist the Army Garrison High Voltage personnel involved with 4160-Volt Power equipment anomalies and scheduled power outages that affect NASA facilities. The Contractor is liable for support activities only on the Army Garrison-owned 4160-Volt systems.

- J. Contract Element (CLIN - 00X1.1309) Emergency Light PM. The Contractor shall inspect on a regular basis all emergency lighting systems. Emergency lights, as identified in NFPA Life Safety Code 101, shall be maintained in accordance with the Life Safety Code. Emergency lights that do not meet the definition of the Life Safety Code shall be maintained in accordance with Paragraph 4.0, Trouble Calls. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- K. Contract Element (CLIN - 00X1.1310) Variable Speed Drives PM. The Contractor shall perform PM on all variable speed drives listed in Attachment J-24. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- L. Contract Element (CLIN - 00X1.1311) Static Ground and Lightning Protection PM. The Contractor shall perform PM on all static ground and lightning protection systems listed in Attachment J-24. All PM activities shall be accomplished in compliance with the Contractor's PM plan.
- M. Contract Element (CLIN - 00X1.1312) Storage Tank Monitor PM. The Contractor shall perform PM on all storage tank monitors listed in Attachment J-24. All PM activities shall be accomplished in compliance with the Contractor's PM plan.

13.3 DOCUMENTATION AND REPORTING REQUIREMENTS

- A. Contract Element (Include in CLIN - 00X1.0306) Computerized Maintenance Management System (CMMS) Operations and Management. The Contractor shall continuously update the CMMS to reflect any and all equipment failures and corrective actions taken. All data shall be accurate and current.
- B. Contract Element (CLIN - 00X1.1014) Maintenance Procedures. The Contractor shall provide maintenance procedures in accordance with DRD 1197LS-011. The

Contractor shall update and revise all maintenance procedures on a continuing basis as required by physical changes at no additional cost to the Government (See Paragraph 10.5.E, Maintenance Requirements and Procedures). Maintenance procedures shall be maintained in the TRL.

13.4 **IDIQ WORK**

Indefinite quantity work will be ordered in accordance with Paragraph 1.6, IDIQ and completed within the number of calendar or workdays specified in the FWR or DO.

13.5 **DETAILED REQUIREMENTS**

- A. Emergency Generators. The Contractor shall make all necessary repairs to emergency generating equipment and ancillary component equipment, including diesel engines on a priority basis. The Contractor shall work continuously to repair the disabled system and shall provide the COTR with daily reports of progress until all repairs and tests are complete. The Contractor shall turn in used oil in containers to the hazardous waste storage facility.
- B. Batteries and Battery Charters. The Contractor shall maintain, repair, or provide labor to order and replace batteries and battery chargers of 12 and 24 Volts on emergency generators and up to 550 Volts for UPS systems. All batteries in service shall be maintained in a 100 percent working order.
- C. Storage Batteries. The Contractor shall maintain, repair, or replace batteries in storage per the manufacturer's recommendations.
- D. Performance. All equipment shall be operational, functional, and ready to respond to demand according to its design purpose and intent except for scheduled or planned outages. Note: Scheduled and planned outages for Buildings 4663 and 4207 will be very difficult to obtain and most likely will only be available during a holiday period such as Christmas. For unscheduled and unplanned outages, the electrical systems listed in Attachment J-10 shall be non-functional no greater than those occurrences and times specified in Attachment J-10, herein referred to as the "outage limit," except for scheduled or planned outages. For work that exceeds the TC limit, the time expended by the Contractor prior to the Contractor notifying the COTR of such condition shall be applied towards the outage limit. All other time will not be counted towards the outage limit for work exceeding the TC limit (reference note G on the Systems Availability Requirements Table in Attachment J-10). Planned outages for maintenance and repair shall follow standard labor hours and practices per the Means® Facilities Maintenance and Repair Cost Data Handbook. Anytime exceeding published labor hours may count towards the outage limit.
- E. All replacement electronic equipment (for example, electronic ballasts, variable frequency drives) shall have a total harmonic distortion (THD) of ten percent or less.

14.0 EMERGENCY MANAGEMENT SUPPORT**14.1 GENERAL REQUIREMENTS**

The Contractor shall provide personnel to support the MSFC emergency program. It is expected that personnel on staff will be trained to perform this function and no additional personnel will be required.

14.2 LUMP SUM WORK

The following Contract Requirement shall be performed per the Performance Requirements Summary (PRS) Section E.9, at the frequencies or performance criteria specified within the contract requirement:

Contract Element (CLIN - 00X1.1401) Damage and Utility Control (DUC) Team. The Contractor shall respond to all emergencies and disasters at MSFC as part of the emergency response efforts for all facilities and equipment for which the Contractor has maintenance and/or repair responsibilities as directed by the Emergency Management Director (EMD). The Contractor shall provide a core complement of personnel that are trained in emergency response as damage and utility control specialists. This team will be referred to as the Damage and Utility Control Team (DUC Team) and will be responsible for isolating and making safe utilities such as electrical power, steam, natural gas, and water during emergency/disaster situations as well as helping to mitigate any additional damages. The team shall receive its directions from either the Incident Commander, EMD or Deputy EMD, or their designee during emergency situations. The Contractor shall determine the number of personnel that are trained as DUC Team members.

The Contractor shall respond to all major emergency/disaster events on a 24-hour, seven (7) day per week basis. The Contractor shall handle each event as an emergency TC with the corresponding limitations. Remaining work shall be accomplished at the Government's discretion per Paragraph 1.6, IDIQ Work. Historically, less than (5) five emergency/disaster situations occur per year.

DUC Team members shall be trained in Hazardous Waste Operations and Emergency Response (HAZWOPER), Incident Command, how to safely approach an emergency situation/disaster scene, and shall be totally familiar with utility cutoff procedures and locations for each facility/structure at MSFC. See Paragraph 6.0, Environmental Management Support for training.

AUTHORITY (DPD Revision)	PORTION AFFECTED - PAGE NO./ NO.				REMARKS	
	INTRO	SGR	DRL	DRD		

MSFC - Form 3461-1 (Rev. September 2007)

1.0 INTRODUCTION

1.1 Scope: Subject to the Rights in Data clause, this Data Procurement Document (DPD) sets forth the data requirements in each Data Requirements Description (DRD) and shall govern that data required by the DPD for the contract. The contractor shall furnish data defined by the DRD's listed on the Data Requirements List (DRL) by category of data, attached hereto, and made a part of this DPD. Such data shall be prepared, maintained, and delivered to NASA in accordance with the requirements set forth within this DPD. In cases where data requirements are covered by a Federal Acquisition Regulation (FAR) or NASA FAR Supplement (NFS) clause, that clause shall take precedence over the DPD, consistent with clause FAR 52.215-8.

1.2 DPD Description: This DPD consists of a Document Change Log, an Introduction, a Statement of General Requirements, DPD maintenance procedures, a DRL, and the DRD's.

1.2.1 General Requirements: The general requirements, as specified in paragraph 2.0 of this DPD, prescribe those requirements applicable to the preparation, maintenance, and delivery of data that are better defined in aggregate than in the individual DRD's.

1.2.2 Data Requirements List (DRL): Throughout the performance of the contract, the DRL provides a listing by data category of the data requirements of the DPD.

1.2.3 Data Requirements Descriptions (DRD's)

1.2.3.1 Each data requirement listed on the DRL is given complete definition by a DRD. The DRD prescribes content, format, maintenance instructions, and submittal requirements.

1.2.3.2 For the purpose of classification and control, DRD's of this DPD are grouped into the following broad functional data categories:

<u>CATEGORY SYMBOL</u>	<u>DESCRIPTION</u>
CD	Contractual Data
EE	Environmental Engineering
LS	Logistics Support
MA	Management
QE	Quality
SA	Safety

1.2.3.3 The symbols representing these data categories form part of the prefix of the DRD identification number. The first numerical characters reflect the DPD number.

1.2.3.4 To facilitate the usage and maintenance of the DPD, the DRD's have been sectionalized in accordance with the above data categories.

1.2.3.5 The DRD's are filed by data category and are in alpha-numeric sequence as listed on the DRL page (or pages) that precedes the DRD's.

1.2.4 Document Change Log (DCL): The Document Change Log chronologically records all revision actions that pertain to the DPD.

1.2.5 DPD Maintenance Procedures: Maintenance procedures define the detailed methods to be employed in maintaining the DPD. Detailed maintenance procedures are specified in paragraph 3.0 of this DPD.

- 1.3 Data Types for Contractual Efforts: The types of data and their contractually applicable requirements for approval and delivery are:

<u>TYPE</u>	<u>DESCRIPTION</u>
1*	All issues and interim changes to those issues require written approval from the requiring organization before formal release for use or implementation.
2*	NASA reserves a time-limited right to disapprove in writing any issues and interim changes to those issues. The contractor shall submit the required data to NASA for review not less than 45 calendar days** prior to its release for use. The contractor shall clearly identify the release target date in the "submitted for review" transmittal***. If the data is unacceptable, NASA will notify the contractor within 45 calendar days** from the date of submission, regardless of the intended release date***. The contractor shall resubmit the information for reevaluation if disapproved. The submittal is considered approved if the contractor does not receive disapproval or an extension request from NASA within 45 calendar days**.
3	These data shall be delivered by the contractor as required by the contract and do not require NASA approval. However, to be a satisfactory delivery, the data shall satisfy all applicable contractual requirements and be submitted on time.
4	These data are produced or used during performance of the contract and are retained by the contractor. They shall be delivered only when NASA requests in writing and shall be delivered in accordance with the instructions in the request. The contractor shall maintain a list of these data and shall furnish copies of the list to NASA when requested to do so.
5	These data are incidental to contract performance and are retained by the contractor in those cases where contracting parties have agreed that formal delivery is not required. However, the Contracting Officer or the Contracting Officer's Representative shall have access to and can inspect this data at its location in the contractor's or subcontractor's facilities, or in an electronic database accessible to the Government.
*	Note: Type 1 and Type 2 data may be placed under NASA configuration management control when designated by NASA. CM control requires the contractor to submit Type 1 and Type 2 data updates through Engineering Change Proposals (ECPs).
**	Note: This time limit may be tailored for individual DPD's to meet the requirements of the procuring activity.
***	Note: If the contractor does not identify a release target date or if the intended release date is shorter than 45 calendar days from the date of submission, the 45 calendar days review cycle stands (or the tailored Type 2 time limitation for the specific procurement).

2.0 STATEMENT OF GENERAL REQUIREMENTS

- 2.1 Applicable/Reference Documents: Documents included as applicable documents in this DPD are the issue specified in the Statement of Work, and form a part of the DPD to the extent specified herein. Applicable documents listed in Item 15.2 of a DRD are applicable only to the preparation of the deliverable documentation described by that DRD.

References to documents other than applicable documents in the data requirements of this DPD may sometimes be utilized, and shall be indicated in 13. Remarks of the DRD. These do not constitute a contractual obligation on the contractor. They are to be used only as a possible example or to provide related information to assist the contractor in developing a response to that particular data requirement.

2.2 Subcontractor Data Requirements

2.2.1 The contractor shall specify to subcontractors and vendors, if any, the availability source of all data required for the satisfactory accomplishment of their contracts. The contractor shall validate these requirements for documents when appropriate; where the requirement concerns other contractor data, the contractor shall provide his subcontractor or vendor with the necessary documents. All such requests shall be accomplished under the auspices of the contractor.

2.2.2 Reference to subcontractor data in the contractor's responses is permissible, providing the references are adequate and include such identification elements as title, number, revision, etc., and a copy of the referenced data is supplied with the response document at time of delivery to NASA.

2.3 Data Distribution, Format, Data Restriction Marking, and Transmittal

2.3.1 Distribution: Distribution of required documentation shall be in quantities determined by the Contracting Officer. Recipient names and email (if applicable) addresses shall be noted on a separate distribution list to be furnished by the Contracting Officer. The Contracting Officer's letter may include other information pertinent to delivery of data, as required.

2.3.2 Format

2.3.2.1 Electronic Format: Electronic submission of data deliverables is required. Electronic deliverables shall be printable. Data deliverables shall be delivered to NASA in the format specified below unless a specific format is required by a DRD. Data submittals shall consist of a single Adobe Acrobat PDF file and the native format electronic file(s). The preferred native formats include Microsoft Word, Excel, PowerPoint or CAD drawing plot file, as appropriate. Where a single native format file is not possible, multiple files may be integrated into a single ZIP file for submission. The organization of the contents of the integrated ZIP file shall be made readily apparent to the reader, and each file within the integrated product shall be clearly identifiable and traceable within the organization of the integrated product. If files are fragmented, file names shall be labeled logically and contiguously, and the files shall be easily reassembled or merged (e.g. 1 filename, 2 filename, 2a filename, etc.). The software versions shall be confirmed prior to submittals.

2.3.2.2 Hardcopy Format: In addition to the electronic submittal, one hardcopy package of specific data deliverables shall be delivered to the NASA Contracting Officer for the Government contract file. This requirement is indicated in Item 15.4, Format of each DRD. The hardcopy package shall consist of the contractor's Transmittal Memo and one copy of the data deliverable.

2.3.3 Data Restriction Marking

2.3.3.1 Data Restriction Determination and Marking Requirements: The contractor shall determine the data restriction that applies to each data deliverable and mark the data restriction on the data coversheet, or indicate the data restriction in the data transmittal package if the data format precludes identification of data restriction directly in the data. The contractor shall make a determination for each individual data deliverable item, and shall not apply a default or blanket data restriction marking to all data deliverables (e.g., "data may be export restricted"). If NASA does not agree with the contractor applied data restriction, the NASA Contracting Officer shall return the data to the contractor, cancel the markings, or ignore the markings consistent with the procedures set forth in the "data rights" clause(s) contained in the contract.

2.3.3.2 Data Restriction Categories and Marking Statements: The contractor shall consider the following data restriction categories, as a minimum, and utilize specified marking statements.

If data delivered under this contract is subject to the International Traffic in Arms Regulations (ITAR), the data shall contain an “ITAR Notice” as follows:

International Traffic in Arms Regulations (ITAR) Notice

This document contains information which falls under the purview of the U.S. Munitions List (USML), as defined in the International Traffic in Arms Regulations (ITAR), 22 CFR 120-130, and is export controlled. It shall not be transferred to foreign nationals, in the U.S. or abroad, without specific approval of a knowledgeable NASA export control official, and/or unless an export license/license exemption is obtained/available from the United States Department of State. Violations of these regulations are punishable by fine, imprisonment, or both.

If data delivered under this contract is subject to the Export Administration Regulations (EAR), the data shall contain the “EAR Notice” as follows:

Export Administration Regulations (EAR) Notice

This document contains information within the purview of the Export Administration Regulations (EAR), 15 CFR 730-774, and is export controlled. It may not be transferred to foreign nationals in the U.S. or abroad without specific approval of a knowledgeable NASA export control official, and/or unless an export license/license exception is obtained/available from the Bureau of Industry and Security, United States Department of Commerce. Violations of these regulations are punishable by fine, imprisonment, or both.

If the contract contains FAR 52.227-14 *Alternate II*, the “Limited Rights Notice” may be applicable to data (other than computer software) delivered under this contract.

If the contract contains FAR 52.227-14 *Alternate III*, the “Restricted Rights Notice” may be applicable to computer software delivered under this contract.

If the contract contains FAR 52.227-20, the “SBIR Rights Notice” may be applicable to SBIR data delivered under this contract.

If the contract contains NFS 1852.237-73, a sensitive information legend may be applicable to information delivered under this contract

In accordance with the applicable data clause (e.g., FAR 52.227-14(c) or FAR 52.227-20(c)), the contractor may be able to assert a copyright claim in data delivered under this contract. When claim to copyright is made, the Contractor shall affix the applicable copyright notices of 17 U.S.C. 401 or 402 and acknowledgment of Government sponsorship (including contract number) to the data when such data are delivered to the Government.

2.3.4 Transmittal

2.3.4.1 Data shall be transmitted to NASA by email, CD or DVD, hardcopy, or other mechanism agreed to by the Contracting Officer, COTR, and Project representatives who are responsible to receive, index, and store the data deliverables.

2.3.4.2 If email is used to transmit data deliverables, the email size shall be 10 Megabytes or less to ensure receipt by the NASA email servers. Encrypted email format shall be used to transmit data which has been judged sensitive by the contractor (e.g., export controlled, limited rights data, SBIR, restricted computer software, copyrighted, etc.).

2.3.4.3 Data Transmittal Package: Each data transmittal package shall include:

- a. Transmittal memorandum that specifies the meta-data below for each data transmittal:
 1. Contract number.
 2. Data Requirements Description (DRD) number.
 3. DRD data type (specified in Item 3 on the DRD).
 4. Submission date or milestone being satisfied.
 5. Document number and revision.
 6. Document title.

7. File names of all files being delivered; file naming convention shall clearly identify the document being delivered.
 8. Distribution (as defined by the Contracting Officer's letter).
 9. Requested response date.
 10. Contractor assigned data restriction (export controlled, limited rights data, SBIR, restricted computer software, copyrighted, etc.) if not marked on data.
 11. NASA Records Retention Schedule (NRRS) number, if applicable. (See NPR 1441.1, NASA Records Retention Schedules)
- b. Printable electronic files or hardcopy data.
- 2.3.5 Use of the MSFC Documentation Repository: Marshall Policy Directive (MPD) 2210.1 specifies the requirements for utilizing the Documentation Repository. Electronic data deliverables should be transmitted directly to the Repository via a secure web page, available at <https://webpub.nis.nasa.gov/submittal/index.html>. Computer-Aided Design (CAD) drawings shall be submitted in the original native vector, Hewlett-Packard Graphic Language (HPGL) and raster image formats.
- 2.4 Printing: All printing, duplicating, or binding shall be in accordance with NFS 1852.208-81, Restrictions on Printing and Duplicating. Printing of formal reports and Type 1 and 2 data in book format shall be in accordance with the following general specifications:
- a. Method of reproduction – offset/xerography.
 - b. Finished size – 8 1/2" X 11".
 - c. Paper – 20-pound opaque bond.
 - d. Cover – Litho cover stock.
 - e. Pages shall be printed on both sides; blank pages shall be avoided when possible.
 - f. Oversize pages shall be avoided when possible, but if necessary shall be folded to 8 1/2" X 11".
 - g. Binding shall be the most economical method commensurate with the size of the report and its intended use.
- 2.5 Contractor's Internal Documents: The contractor's internal documents shall be used to meet the data requirements of this DPD unless a specific format is required by the applicable DRD.
- 2.6 Document Identification: Type 1 and 2 documents published by the contractor and submitted in response to the data requirements of this DPD shall be identified within an organized identification numbering system prescribed to NASA by the contractor and, if applicable, as approved by NASA. For all data types, the document number, change legend, date, and title constitute the minimum identification of the specific document and shall appear on the cover and title page. The contract number shall also appear on the cover and title page as separate markings. The originator and organization shall be included on the title page. The document number, change legend, and date shall appear on each page of the document. In the front matter of each document, identify the DPD number and applicable DRD number(s) required for document preparation. Successive issues or revisions of documents shall be identified in the same manner as the basic issue and shall have appropriate change identification. Drawings and ECP's are excluded from the marking provisions of this paragraph. All Type 1 documentation, excluding configuration management requirements, shall be marked "PRELIMINARY PENDING NASA APPROVAL," and once approved shall be reissued with "APPROVED BY NASA" and the date and approval authority annotated on the cover.
- 2.7 Reference to Other Documents and Data Deliverables in Data Submittals: All referenced documents shall be made readily available to the cognizant NASA organization upon request. The contractor should make sure that the references are available to NASA in a manner which does not incur delays in the use of the response document. Reference may be made, within one data submittal, to other data submittals delivered in response to this DPD in those cases where the data required by one DRD may have been delivered by the contractor in response to another DRD. The reference to previously-submitted data shall include the applicable DRD number, data submittal version date, and location within the referenced document.

2.8 Maintenance of Type 1 Document Submittals

- 2.8.1 Revisions of Type 1 documentation may be accomplished either by individual page revision or by a complete reissue of the document identified in accordance with requirements of 2.7 above, with the exception of drawings (which shall be revised in accordance with contract configuration management requirements).
- 2.8.2 Individual page revisions shall be made as deemed necessary by the contractor or as directed by the Contracting Officer.
- 2.8.3 A Type 1 document shall be completely reissued when, in the opinion of the contractor and/or NASA, the document has been revised to the extent that it is unusable in its present state, or when directed by the Contracting Officer. When complete reissues are made, the entire contents of the document shall be brought up to date and shall incorporate revised pages. All revisions shall be recorded. A revision log shall identify complete reissues except for periodic reports and documents which are complete within themselves as final.
- 2.8.4 Changes of a minor nature to correct obvious typing errors, misspelled words, etc., shall only be made when a technical change is made, unless the accuracy of the document is affected.
- 2.8.5 All revised pages shall be identified by a revision symbol and a new date. Each document shall contain a log of revised pages that identify the revision status of each page with the revision symbol. This list shall follow the table of contents in each document. The line or lines revised on a given page shall be designated by the use of vertical line in the margin of the page, and the change authority shall be indicated adjacent to the change.
- 2.8.6 Contractor Type 1 documents shall not be submitted containing pen and ink markups which correct, add to, or change the text, unless schedule problems exist and approval is obtained in writing from the Contracting Officer. Such markups, however, shall not exceed 20 percent of the page content and shall be acceptable provided that the reproduced copies are legible. In addition, hand-drawn schematics, block diagrams, data curves, and similar charts may be used in original reports in lieu of formally prepared art work, as long as legibility of copies is not impaired. Acceptability shall be determined by the Contracting Officer.

3.0 DPD MAINTENANCE PROCEDURES

- 3.1 NASA-Initiated Change: New and/or revised data requirements shall be incorporated by contract modification to which the new or revised portion of the DPD shall be appended. The contractor shall notify the Contracting Officer in the event a deliverable data requirement is imposed and is not covered by a DRD, or when a DRD is changed by a contract modification and for which no revision to DPD is appended. In such cases, the contractor shall submit the requested changes to NASA for approval. See paragraph 3.3.1 for change procedures.
- 3.2 Contractor-Initiated Change: Contractor-proposed data requirements or proposed changes to existing requirements shall be submitted to NASA for approval.
- 3.3 DPD Change Procedures
 - 3.3.1 Changes to a contractual issue of this DPD shall be identified by NASA on the Document Change Log.
 - 3.3.2 The date of the DPD shall be entered under the "as of" block of the Document Change Log. The date that was in the "as of" block shall be entered in the "Superseding" block.
 - 3.3.3 The Document Change Log entitled "Incorporated Revisions" shall be changed to indicate the modification number, portions affected, and remarks. All changes to the DPD/DRDs shall be identified in the "Remarks" column.

3.4 DPD Reissues

- 3.4.1 The DPD shall be reissued by NASA for each contract modification that affects the DPD and shall supersede the existing DPD in its entirety. Reissues shall be issued by contractual direction. The issue symbol, which shall commence with "A" and progress through "Z," shall be entered in the DPD identification block of each DRD page of the DPD.

DATA REQUIREMENTS DESCRIPTION (DRD)

1. **DPD NO.:** 1197 **ISSUE:** RFP
2. **DRD NO.:** **1197CD-001**
3. **DATA TYPE:** 2
4. **DATE REVISED:**
5. **PAGE:** 1/2
6. **TITLE:** Contractor Information Technology (IT) Security Program Plan
7. **DESCRIPTION/USE:** To ensure that the contractor fully understands their responsibility for information and information technology (IT) security as required in NFS 1852.204-76. This plan will describe the contractor's information technology security program that addresses the management, operational, and technical aspects of protecting the confidentiality, integrity and availability of information and information technology systems.
8. **OPR:** IS10 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** 30 days after contract award
12. **SUBMISSION FREQUENCY:** Revise after any significant changes. Review and update every three years.
13. **REMARKS:** The Federal Information Processing Standards (FIPS) Publication Series of the National Institute of Standards and Technology (NIST) is the official series of publications relating to standards and guidelines adopted and promulgated under the provisions of the Federal Information Security Management Act (FISMA) of 2002. FIPS Pub 200, Minimum Security Requirements for Federal Information and Information Systems, specifies minimum security requirements for information and information systems supporting the executive agencies of the federal government and a risk-based process for selecting the security controls necessary to satisfy the minimum security requirements.

The seventeen security-related areas to be addressed in the content of the Contractor IT Security Program Plan represent a broad-based, balanced information technology security program that addresses the management, operational, and technical aspects of protecting information and information technology systems. Additional information for these security-related areas can be found in FIPS Pub 200.
14. **INTERRELATIONSHIP:** PWS paragraph 1.4G.3
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The extent of the Contractor IT Security Program Plan can vary and shall be appropriate to comply with the breadth of sensitivity level security requirements for protecting information and information technology (IT) when the Contractor or its subcontractors must obtain physical or electronic access to NASA's computer systems, networks, or IT infrastructure, or where information is stored, generated, processed or exchanged by/with NASA or on behalf of NASA by a contractor or subcontractor, regardless of whether the information resides on a NASA or a contractor/ subcontractor's information system.
- 15.2 **APPLICABLE DOCUMENTS:**
NFS 1852.204-76 *Security Requirements for Unclassified Information Technology Resources (May 2007)*
- 15.3 **CONTENTS:** The Contractor IT Security Program Plan shall contain:
 - a. A brief description of the types of information that will be stored, generated, processed, or exchanged with NASA or on behalf of NASA during the performance of the contract. Provide the security categorization of the information (LOW, MODERATE, or HIGH). A description of the policy or procedure to ensure the return of all NASA information and IT resources provided to the contractor during the performance of the contract and certify that all NASA information has been purged from contractor-owned systems used in the performance of the contract.

DRD Continuation Sheet

TITLE: Contractor Information Technology (IT) Security
Program Plan

DRD NO.: 1197CD-001

DATA TYPE: 2

PAGE: 2/2

15. **DATA PREPARATION INFORMATION (CONTINUED):**

- b. A brief description regarding personnel (location, local or remote connections or access, privileged users, etc.) and the IT resources (NASA provided or contractor-owned) and environments utilized in the support of the work to be performed and their access to information identified.
- c. A brief description of policy or procedure that ensures the contractor inserts NFS 1852.204-76 in all subcontracts as required.
- d. Provide a description of each of the security-related areas (see Remarks) with regard to policies and procedures of the contractor's enterprise-wide information technology security program protecting the confidentiality, integrity, and availability of information and information technology systems.
 - 1. Management.
 - (a) Certification, Accreditation, and Security Assessments.
 - (b) Planning.
 - (c) Risk Assessment.
 - (d) Systems and Services Acquisition.
 - 2. Operational.
 - (a) Awareness and Training.
 - (b) Configuration Management.
 - (c) Contingency Planning.
 - (d) Incident Response.
 - (e) Maintenance.
 - (f) Media Protection.
 - (g) Physical and Environmental Protection.
 - (h) Personnel Security.
 - (i) System and Information Integrity.
 - 3. Technical.
 - (a) Access Control.
 - (b) Audit and Accountability.
 - (c) Identification and Authentication.
 - (d) System and Communications Protection.

NOTE: Any security-related area not currently implemented in the Contractor's IT security program shall be identified and the contractor's plan of action for implementation shall be explained.

15.4 **FORMAT:** Contractor format is acceptable and shall be consistent with contents of paragraph 15.3d of this DRD.

15.5 **MAINTENANCE:** Changes shall be incorporated by change page or complete reissue.

DATA REQUIREMENTS DESCRIPTION (DRD)

1. **DPD NO.:** 1197 **ISSUE:** RFP
2. **DRD NO.:** **1197EE-001**
3. **DATA TYPE:** 2
4. **DATE REVISED:**
5. **PAGE:** 1/1
6. **TITLE:** Asbestos Control Manual
7. **DESCRIPTION/USE:** To provide documentation of the contractor's asbestos control program.
8. **OPR:** AS10 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** 30 calendar days after contract award
12. **SUBMISSION FREQUENCY:** Annually; update on anniversary of Authority to Proceed (ATP)
13. **REMARKS:**
14. **INTERRELATIONSHIP:** PWS paragraph 6.3B.1
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Asbestos Control Manual documents the contractor's asbestos control program and activities.
- 15.2 **APPLICABLE DOCUMENTS:** None
- 15.3 **CONTENTS:** The Asbestos Control Manual shall contain:
 - a. Asbestos containing material log.
 - b. Notification of all work requiring notice broken down by actual abatement, spill cleanups, routine operations, and ceiling tile replacement.
- 15.4 **FORMAT:** Contractor format is acceptable.
- 15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1.	DPD NO.: 1197	ISSUE: RFP	2.	DRD NO.: 1197EE-002
3.	DATA TYPE: 2		4.	DATE REVISED:
			5.	PAGE: 1/1
6. **TITLE:** Lead Program Plan
7. **DESCRIPTION/USE:** To provide documentation of the contractor's lead control program.
8. **OPR:** AS10 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** 30 calendar days after Authority to Proceed (ATP)
12. **SUBMISSION FREQUENCY:** Annually; update on anniversary of ATP
13. **REMARKS:**
14. **INTERRELATIONSHIP:** PWS paragraph 6.3B.2
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Lead Program Plan documents the contractor's control of lead exposure and release.
- 15.2 **APPLICABLE DOCUMENTS:** None
- 15.3 **CONTENTS:** The Lead Program Plan shall address how the contractor plans to minimize worker and employee lead exposure and minimize lead releases to the environment during the abatement, removal or disturbance of paints and materials containing lead or other regulated heavy metals.
- 15.4 **FORMAT:** Contractor format is acceptable.
- 15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. **DPD NO.:** 1197 **ISSUE:** RFP
2. **DRD NO.:** **1197EE-003**
3. **DATA TYPE:** 3
4. **DATE REVISED:**
5. **PAGE:** 1/1
6. **TITLE:** Spill Response Team, Equipment and Supplies Listing
7. **DESCRIPTION/USE:** To provide current information about people, equipment and materials available for spill response.
8. **OPR:** AS10 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** March 1 after Authority to Proceed (ATP)
12. **SUBMISSION FREQUENCY:** Annually; by March 1, or as requested by the Environmental Engineering Department
13. **REMARKS:**
14. **INTERRELATIONSHIP:** PWS paragraph 6.3A.1
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Spill Response Team, Equipment and Supplies Listing provides spill response team and equipment/materials available to respond to spills.
- 15.2 **APPLICABLE DOCUMENTS:** None
- 15.3 **CONTENTS:** The Spill Response Team, Equipment and Supplies Listing shall contain:
 - a. Names of individual spill response team members.
 - b. Training credentials for spill response team members.
 - c. Equipment available for spill response.
 - d. Stock available for spill response.
- 15.4 **FORMAT:** Contractor format is acceptable.
- 15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. **DPD NO.:** 1197 **ISSUE:** RFP
2. **DRD NO.:** **1197EE-004**
3. **DATA TYPE:** 3
4. **DATE REVISED:**
5. **PAGE:** 1/1

6. **TITLE:** State Indirect Discharge and National Pollutant Discharge Elimination System Monthly Report
7. **DESCRIPTION/USE:** To provide data about stormwater treatment and pollutant discharge.
8. **OPR:** AS10 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** Five calendar days following the first full month after Authority to Proceed (ATP)
12. **SUBMISSION FREQUENCY:** Monthly; five calendar days following the month being reported
13. **REMARKS:**
14. **INTERRELATIONSHIP:** SOW paragraph 10.2H
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The State Indirect Discharge and National Pollutant Discharge Elimination System Monthly Report summarizes treatment of stormwater and pollutants discharged.
- 15.2 **APPLICABLE DOCUMENTS:** None
- 15.3 **CONTENTS:** The State Indirect Discharge and National Pollutant Discharge Elimination System Monthly Report shall summarize the pH, flow and gallons treated or discharged by Discharge Serial Number (DSN).
- 15.4 **FORMAT:** Contractor format is acceptable.
- 15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 3 6. TITLE: Asbestos and Lead Monthly Report 7. DESCRIPTION/USE: To provide asbestos and lead abatement information. 8. OPR: AS10 9. DM: AS20 10. DISTRIBUTION: Per Contracting Officer's letter 11. INITIAL SUBMISSION: Fifteen calendar days following the first full month after Authority to Proceed (ATP) 12. SUBMISSION FREQUENCY: Monthly; fifteen calendar days following the month being reported 13. REMARKS: 14. INTERRELATIONSHIP: PWS paragraph 6.3B.3 15. DATA PREPARATION INFORMATION: 15.1 SCOPE: The Asbestos and Lead Monthly Report provides details of asbestos and lead abatement and removal activities. 15.2 <u>APPLICABLE DOCUMENTS:</u> None 15.3 <u>CONTENTS:</u> The report shall include: a. Location where asbestos or lead abatement was performed [including Facility Work Request (FWR) number, building and room number]. b. Dates of abatement. c. Quantity and type of material removed. d. Dates of Alabama Department of Environmental Management (ADEM) or other environmental inspections. e. Copies of hand receipts for disposal of asbestos or hazardous waste drum numbers. f. List of tasks scheduled for the following month (including FWR numbers). g. Copies of ADEM asbestos notifications. 15.4 <u>FORMAT:</u> Contractor format is acceptable. 15.5 <u>MAINTENANCE:</u> None required	2. DRD NO.: 1197EE-005 4. DATE REVISED: 5. PAGE: 1/1

DATA REQUIREMENTS DESCRIPTION (DRD)

1. **DPD NO.:** 1197 **ISSUE:** RFP
2. **DRD NO.:** **1197LS-001**
3. **DATA TYPE:** 2
4. **DATE REVISED:**
5. **PAGE:** 1/1
6. **TITLE:** Government Property Management Plan
7. **DESCRIPTION/USE:** To describe the method of controlling and managing Government property.
8. **OPR:** AS41 9. **DM:** AS20
10. **DISTRIBUTION:** Cognizant property administrator
11. **INITIAL SUBMISSION:** Preliminary three months after Authority to Proceed (ATP)
12. **SUBMISSION FREQUENCY:** Final one year after ATP, revise as required
13. **REMARKS:** This document shall be the official contract requirements document for the control and identification of all Government property.
14. **INTERRELATIONSHIP:** PWS paragraph 1.7.1D
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Government Property Management Plan defines the Contractor's methods of care, accounting, and control of Government property.
- 15.2 **APPLICABLE DOCUMENTS:**

FAR NPR 5100.4B	<i>Federal Acquisition Regulation, Part 45</i> <i>Federal Acquisition Regulation Supplement, (NASA/FAR Supplement) Part 18-45</i> and latest revisions thereto
- 15.3 **CONTENTS:** The Government Property Management Plan shall satisfy the requirements of the documents listed in 15.2, and the contract. This plan shall consist of those procedures which constitute the Contractor's property management system and shall include the following categories:

a. Property management.	i. Reports.
b. Acquisition.	j. Consumption.
c. Receiving.	k. Utilization.
d. Identification.	l. Maintenance.
e. Records.	m. Subcontractor control.
f. Movement.	n. Disposition.
g. Storage.	o. Contract close-out.
h. Physical inventories.	
- 15.4 **FORMAT:** Contractor format is acceptable.
- 15.5 **MAINTENANCE:** Changes shall be incorporated by change page or complete reissue.

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 2*	2. DRD NO.: 1197LS-002 4. DATE REVISED: 5. PAGE: 1/1
6. **TITLE:** Reliability Centered Maintenance Plan
7. **DESCRIPTION/USE:** To provide the Contractor's reliability centered maintenance plan for collateral equipment at MSFC.
8. **OPR:** AS20 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** Within 60 days after Authority to Proceed (ATP), unless otherwise specified by the Contracting Officer
12. **SUBMISSION FREQUENCY:** Annually; update on anniversary of contract ATP
13. **REMARKS:** *Note to Data Type: The Government will review the plan within 10 working days of initial submittal. If there are no comments the Government will approve the plan. If the Government determines the plan to be unacceptable, a meeting will be held with the Contractor within the next 5 working days to resolve issues and make the plan acceptable to both parties.
14. **INTERRELATIONSHIP:** PWS paragraphs 1.5D.4 and 3.2D.3
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Reliability Centered Maintenance Plan represents the optimum mix of preventive maintenance, predictive test and inspection, programmed maintenance, and reactive maintenance the Contractor considers appropriate for minimizing repair requirements while maximizing the life span and performance of Center collateral equipment. The PM and PT&I job plans and intervals contained in the Computerized Maintenance Management System (CMMS) are an integral part of the RCM plan.
- 15.2 **APPLICABLE DOCUMENTS:** None
- 15.3 **CONTENTS:** The contractor's initial Reliability Centered Maintenance Plan shall consider current preventive and predictive testing and inspection data.
The Preventive Maintenance Plan shall:
- a. Contain the Contractor's rationale for the plan based on the current preventive maintenance and predictive and testing inspection program data, manufacturer's recommendations, the Contractor's knowledge of best preventive maintenance practices, appropriate codes, and the use of reliability centered maintenance approaches.
 - b. Address predictive testing and inspection and programmed maintenance tasks as well as traditional preventive maintenance tasks.
 - c. Any PT&I tasks that are recommended shall satisfy the following additional criteria:
 1. There shall exist a clearly defined potential failure. The alarm level selected shall, for the applicable PT&I technology, be set to provide the longest P-F interval possible.
 2. There shall exist an identifiable P-F interval.
 3. The PT&I task interval shall be less than the shortest likely P-F interval.
 4. The shortest time between the discovery of a potential failure and the occurrence of the functional failure (the P-F interval minus task interval) shall be long enough for predetermined action to be taken to avoid, eliminate, or minimize the consequences of the failure mode.
- 15.4 **FORMAT:** Contractor format is acceptable.
- 15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 2*	2. DRD NO.: 1197LS-003 4. DATE REVISED: 5. PAGE: 1/1
6. **TITLE:** Annual Work Plan
7. **DESCRIPTION/USE:** To assemble historical information in order to provide an accounting of work performed and emerging trends
8. **OPR:** AS20 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** October 30 after Authority to Proceed (ATP), unless otherwise specified by the Contracting Officer
12. **SUBMISSION FREQUENCY:** Annually; by October 30 of each contract year, unless otherwise specified by the Contracting Officer
13. **REMARKS:** *Note to Data Type: The Government will review the plan within 10 working days of initial submittal. If there are no comments the Government will approve the plan. If the Government determines the plan to be unacceptable, a meeting will be held with the Contractor within the next 5 working days to resolve issues and make the plan acceptable to both parties. Note that obtaining utility, construction and capital investment data will require interfacing with other AS20 groups or Contractors.
14. **INTERRELATIONSHIP:** PWS paragraph 3.2C.2
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Annual Work Plan assembles and evaluates data for the previous fiscal year and proposes recommendations based on the data and trends.
- 15.2 **APPLICABLE DOCUMENTS:**
 NPR 8831.2 *Facilities Maintenance Management*
- 15.3 **CONTENTS:** The Annual Work Plan – Phase One shall meet the requirements of NPR 8831.2 and contain:
- a. Narrative of the Contractor's approach, analysis, and recommendations as related to the fiscal year data and emerging trends.
 - b. Graphical representation of funding by work type.
 - c. Spreadsheet that spreads cost by facility, structure, area, or other category by the following:
 1. Utilities (breakdown by each type of utility and the sum of all utilities).
 2. Lump sum maintenance cost (breakdown by work type and sum all work types).
 3. COSS maintenance performed by IDIQ (breakdown by work type and sum all types).
 4. Maintenance performed by construction IDIQ.
 5. Capital investment projects.
 6. Operational costs.
- 15.4 **FORMAT:** Contractor format is acceptable. Item 15.3c data shall be in spreadsheet format. Microsoft Excel is the preferred spreadsheet format.
- 15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 3 6. TITLE: Annual Boiler Certification 7. DESCRIPTION/USE: To document annual inspections of all boilers and code related piping. 8. OPR: AS20 9. DM: AS20 10. DISTRIBUTION: Per Contracting Officer's letter 11. INITIAL SUBMISSION: No later than 30 days following completion of the boiler inspections. 12. SUBMISSION FREQUENCY: Annually; following completion of boiler inspection. 13. REMARKS: The Annual Boiler Inspection is required to be performed by a NBIC certified boiler inspector not employed by the contractor. 14. INTERRELATIONSHIP: PWS paragraph 11.2F 15. DATA PREPARATION INFORMATION: 15.1 SCOPE: The Annual Boiler Certification documents annual inspections required to determine that boilers and piping meet or exceed all American National Standards Institute (ANSI/NBIC) standards and American Society of Mechanical Engineers (ASME) codes relating to this type equipment. Each inspection shall encompass the pertinent requirements of applicable most recent and current ANSI/NBIC and ASME standards and regulations. 15.2 APPLICABLE DOCUMENTS: <table border="0" style="width: 100%;"> <tr> <td style="width: 50%;">ANSI/NBIC NB-23</td> <td style="width: 50%;"><i>National Board Inspection Code (Latest Revision)</i></td> </tr> <tr> <td>ASME CSD-1-200X</td> <td>Controls and Safety Devices for Automatically Fired Boilers (Latest Revision)</td> </tr> </table> 15.3 CONTENTS: The Annual Report shall meet the following requirements: a. Document the independent inspector's qualifications. b. Provide a signed verification of certification for each piece of equipment which meets all requirements. c. Provide signed inspection summary reports for all equipment not in compliance with all requirements listing all deficiencies and specify applicable code sections. d. Provide verification of certification for equipment found deficient after deficiencies are corrected. e. Provide index with page number, building and equipment number as part of the inspection report. 15.4 FORMAT: Contractor format is acceptable. 15.5 MAINTENANCE: None required	ANSI/NBIC NB-23	<i>National Board Inspection Code (Latest Revision)</i>	ASME CSD-1-200X	Controls and Safety Devices for Automatically Fired Boilers (Latest Revision)	2. DRD NO.: 1197LS-004 4. DATE REVISED: 5. PAGE: 1/1
ANSI/NBIC NB-23	<i>National Board Inspection Code (Latest Revision)</i>				
ASME CSD-1-200X	Controls and Safety Devices for Automatically Fired Boilers (Latest Revision)				

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 2*	2. DRD NO.: 1197LS-005 4. DATE REVISED: 5. PAGE: 1/1
6. **TITLE:** Five-Year Maintenance Plan
7. **DESCRIPTION/USE:** To document the Contractor's proposal to project maintenance needs beyond the annual work plan.
8. **OPR:** AS20 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** February 28 after Authority to Proceed (ATP), unless otherwise specified by the Contracting Officer.
12. **SUBMISSION FREQUENCY:** Annually; No later than February 28 of each contract year, unless otherwise specified by the Contracting Officer.
13. **REMARKS:** *Note to Data Type: The Government will review the plan within 10 working days of initial submittal. If there are no comments the Government will approve the plan. If the Government determines the plan to be unacceptable, a meeting will be held with the Contractor within the next 5 working days to resolve issues and make the plan acceptable to both parties.
14. **INTERRELATIONSHIP:** PWS paragraph 3.2C.3
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Five Year Maintenance Plan provides projected maintenance needs beyond those provided in the Annual Work Plans.
- 15.2 **APPLICABLE DOCUMENTS**
 NPR 8831.2 *Facilities Maintenance Management*
- 15.3 **CONTENTS:** The Five-Year Maintenance Plan shall meet the requirements of NPR 8831. 2 and contain:
- a. Approaches to control Backlog of Maintenance and Repair (BMAR) using the MSFC master plan and budget information provided by the Government.
 - b. Proposed maintenance changes to shift from time based preventive maintenance to condition based predictive testing and inspection.
 - c. Proposed schedule for long-term replacement of obsolete equipment.
 - d. Budget requirements to meet all proposals in the plan.
- 15.4 **FORMAT:** Contractor format is acceptable.
- 15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. **DPD NO.:** 1197 **ISSUE:** RFP
2. **DRD NO.:** **1197LS-006**
3. **DATA TYPE:** 3
4. **DATE REVISED:**
5. **PAGE:** 1/2
6. **TITLE:** Facility Condition Assessment Schedule and Reports
7. **DESCRIPTION/USE:** To identify and quantify facility conditions in order to support annual and five year work plans.
8. **OPR:** AS20 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** Facility Condition Assessment (FCA) Schedule: 30 calendar days after Authority to Proceed (ATP), unless otherwise specified by the Contracting Officer. FCA Report: Within 30 calendar days of the assessment completion date for the specific facility, as shown on the report schedule.
12. **SUBMISSION FREQUENCY:** FCA Schedule: Quarterly; update within 10 calendar days after end of fiscal quarter. FCA Report: 30 calendar days following the assessment completion date for the specific facility, as shown on the report schedule.
13. **REMARKS:**
14. **INTERRELATIONSHIP:** PWS paragraphs 3.2C.4 and 3.2C.5
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Facility Condition Assessment Schedule and Reports provides individual facility condition assessment planned completion dates for all MSFC facilities and the Center's infrastructure in such a way to insure a total assessment of MSFC within five years. The FCA reports provide results of completed assessments.
- 15.2 **APPLICABLE DOCUMENTS:**
MSFC Real Property Summary
- 15.3 **CONTENTS:** The Facility Condition Assessment Schedule and Reports shall contain:
 - a. Individual completion dates for all MSFC facilities and the Center's infrastructure.
 - b. Summary columns for BMAR using the system disciplines provided in the individual facility condition assessments.
 - c. Facility and infrastructure classification as shown in *MSFC Real Property Summary*.
 - d. Quarterly updates based on the fiscal year that reflect current BMAR based on the facility condition assessments that were completed in the previous quarter.
 - e. One-time BMAR inflation adjustment at the end of the fourth quarter for facilities that were not assessed in the fiscal year that has ended. The Government will reference the source of the inflation adjustment after contract award.

Individual Facility Condition Assessments Reports shall contain:

 - a. Narrative of the facility description and facility classification. Include a discussion of the components within the facility by discipline. Group components by architectural, mechanical, heating, ventilation and air conditioning (HVAC), or electrical disciplines, as appropriate.
 - b. Facility site plan.
 - c. Facility floor plan.
 - d. Narrative of the facility condition assessment procedure. This will include inspections and evaluations of available computerized maintenance management system data and the predictive testing and inspection data.

DRD Continuation Sheet

TITLE: Facility Condition Assessment Schedule and Reports

DRD NO.: 1197LS-006

DATA TYPE: 3

PAGE: 2/2

15. **DATA PREPARATION INFORMATION (CONTINUED):**

- e. Narrative of the assessment finding by component grouping with an overall adjective rating of those components. Components include, but not limited to, roofs, pumps, air conditioning, interior finishes, electrical devices and systems.
- f. Overall average rating for the facility.
- g. Evaluation for failure and failure consequences (risk assessment) to identify safety impacts for components rated as poor or replace. A safety impact (hazard to personnel or NASA property) must be identified to the COTR for appropriate action to alleviate the hazard.
- h. Summary BMAR estimate by discipline and a facility total BMAR for components rated as poor or replace.
- i. Individual discipline BMAR estimates that list components and their associated BMAR.
- j. List of discrepancies by discipline by location, discrepancy number, and recommendation.
- k. Discipline assessment that includes component identifier, description, location, year installed, age, life expectancy, projected replacement year, adjective assessment, discrepancy number if appropriate, and estimated repair or replacement cost for all components with a poor or replace adjective rating.
- l. Reliability centered maintenance (RCM) analysis for the facility which includes:
 - 1. RCM process description.
 - 2. Background information that includes failure criticality code and probability of failure code.
 - 3. Analysis by system by components within the system. This includes recommendations.
 - 4. A listing of all equipment analyzed including equipment identifier, description, failure criticality code, and probability of failure code.

15.4 **FORMAT:** Contractor format is acceptable.

15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 3. DATA TYPE: 3 6. TITLE: Automatic Fire Sprinkler System Quarterly Report 7. DESCRIPTION/USE: To verify automatic fire sprinkler systems are operational or system discrepancies are identified for resolution. 8. OPR: AS20 10. DISTRIBUTION: Per Contracting Officer's letter 11. INITIAL SUBMISSION: 10 calendar days following the end of the fiscal quarter after Authority to Proceed, unless otherwise specified by the Contracting Officer. 12. SUBMISSION FREQUENCY: Quarterly; 10 calendar days after the end of each fiscal quarter 13. REMARKS: 14. INTERRELATIONSHIP: PWS paragraph 8.3C 15. DATA PREPARATION INFORMATION: 15.1 SCOPE: The Automatic Fire Sprinkler System Quarterly Report provides documentation verifying that automatic fire sprinkler systems are operational or identifies system discrepancies. 15.2 APPLICABLE DOCUMENTS: None 15.3 CONTENTS: The Automatic Fire Sprinkler System Quarterly Report shall contain: a. Reporting period. b. Facility numbers. c. System type. d. System status (in service/out of service) e. Preventive Maintenance (PM) identification number for all PM's performed. f. Discrepancies found during PM performance. g. Discrepancies resolutions. h. PM inspection date. i. Modifications or repairs performed or in progress. j. System deficiencies that have not been addressed.	2. DRD NO.: 1197LS-007 4. DATE REVISED: 5. PAGE: 1/1 9. DM: AS20
- 15.4 **FORMAT:** The report shall be in spreadsheet format. Microsoft Excel is the preferred format.
- 15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. **DPD NO.:** 1197 **ISSUE:** RFP
2. **DRD NO.:** **1197LS-008**
3. **DATA TYPE:** 3
4. **DATE REVISED:**
5. **PAGE:** 1/1
6. **TITLE:** Facility Condition Assessment Project Recommendations Report
7. **DESCRIPTION/USE:** To provide project recommendations lists based on facility condition assessment (FCA) findings.
8. **OPR:** AS20 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** No later than 10 calendar days following the end of the first or third fiscal quarter after Authority to Proceed (ATP), unless otherwise specified by the Contracting Officer
12. **SUBMISSION FREQUENCY:** Biannually; no later than the 10 calendar days after the end of the first and third fiscal quarters
13. **REMARKS:** After initial submittal, the list shall be revised based on continuing FCA analysis combined with any Government direction associated with a specific Government need.
14. **INTERRELATIONSHIP:** PWS paragraphs 3.2C.6 and 5.0
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Facility Condition Assessment Project Recommendations Report provide the Contractor's recommendations for initiation of local construction projects or capital investment projects.
- 15.2 **APPLICABLE DOCUMENTS:** None
- 15.3 **CONTENTS:** The Facility Condition Assessment Project Recommendations Report shall contain the Contractor's recommendations for local construction or capital investment projects based on FCA findings. Each report shall contain:
 - a. List of 10 recommended projects that are estimated individually to be less than \$500,000 but total at least \$3,000,000.
 - b. List of 10 recommended projects that are estimated individually to exceed \$500,000 but total at least \$8,000,000.
 - c. Description of the recommended work associated with each project.
 - d. Preliminary project cost estimate for each project.
 - e. Completed project submittal forms provided by the Government.
- 15.4 **FORMAT:** Contractor format is acceptable for the initial list submittals. The Government will provide submittal forms for Government-selected projects.
- 15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 3 6. TITLE: Reliability Centered Maintenance Report 7. DESCRIPTION/USE: To provide documentation associated with reliability centered maintenance for collateral equipment. 8. OPR: AS20 9. DM: AS20 10. DISTRIBUTION: Per Contracting Officer's letter 11. INITIAL SUBMISSION: 10 calendar days following the second full month after Authority to Proceed (ATP), unless otherwise specified by the Contracting Officer 12. SUBMISSION FREQUENCY: Monthly; 10 calendar days following the end of each month 13. REMARKS: 14. INTERRELATIONSHIP: PWS paragraphs 3.2D.2 and 5.0 15. DATA PREPARATION INFORMATION: 15.1 SCOPE: The Reliability Centered Maintenance Report provides documentation of the contractor's effort on RCM activities that include Failure Mode Effects Analysis (FMEA), root cause failure analysis, trend analysis, and the combined application of reactive, preventive, condition based, and proactive maintenance practice to achieve cost effective maintenance program. 15.2 <u>APPLICABLE DOCUMENTS:</u> None 15.3 <u>CONTENTS:</u> The Reliability Centered Maintenance Report shall contain: a. Identify inherent reliability problems by performing root cause failure analysis for equipments that experience 2 identical failure modes in 12 months duration. No more than four (4) root cause failure analysis are required per month. b. Based on the root cause failure analysis, propose changes in terms of maintenance practice, design/ installation standard, or supplier improvements. c. Proposed changes shall include supporting technical rationale and/or statistical data and be reported by equipment type, manufacturer, location, and function as appropriate. d. Perform Failure Mode Effect Analysis with respect to loss of system availability and facility availability for age exploration recommendations. e. Trouble Call Trends: Trend trouble calls by types of equipment (i.e. chillers, air compressors, pumps, etc) for duration of 24 months with illustrative diagram. f. Provide the following RCM metric data for all MSFC collateral equipment: 1. <u>Percent of Facility Availability (Target = 96%):</u> % = Hours the Facility is Available to Run at Capacity/Total Hours during the Reporting Time Period Note: Assume 12 hours per day, 5 days per week except for Buildings 4663, 4629, 4436, and 4207. Assume 24 hours per day, 7 days per week for these buildings. 2. <u>Percent of PM Completed (Target = 97%):</u> % = Number of PMs Completed/Number of PMs Scheduled 3. <u>Percent of PM Completed on Schedule (Target = 95%):</u> % = (PMs Completed on Schedule – PMs Completed Outside Time Band)/ PMs Completed	2. DRD NO.: 1197LS-009 4. DATE REVISED: 5. PAGE: 1/2

DRD Continuation Sheet**TITLE:** Reliability Centered Maintenance Report**DRD NO.:** 1197LS-009**DATA TYPE:** 3**PAGE:** 2/2

15. **DATA PREPARATION INFORMATION (CONTINUED):**

4. Percentage of Emergency Work (Target = 10% or less):
% = Emergency TCs/Total TCs
5. Percent of Equipment Covered by PT&I:
% = Number of Equipment Items in PT&I Program/Total Equipment Candidates for PT&I
6. Ratio of Emergency Work to PT&I and PM (Target = 20% or less):
% = Total Emergency TCs/Total PM and PT&I Work Orders Performed
7. Percent of Faults Found in Thermographic Survey (Target = 3% or less):
% = Number of Faults Found/Number of Devices Surveyed
8. Percent of Faults Found in Steam Trap Survey (Target = 10% or less):
% = Number of Defective Steam Traps Found/Number of Steam Traps Surveyed

15.4 **FORMAT:** Contractor format is acceptable.15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 3 6. TITLE: Pre-Flight Facilities Checkout Report 7. DESCRIPTION/USE: To evaluate the integrity of electrical and HVAC systems related to launch activities. 8. OPR: AS20 9. DM: AS20 10. DISTRIBUTION: Per Contracting Officer's letter 11. INITIAL SUBMISSION: No later than five working days prior to the first flight after Authority to Proceed (ATP), unless otherwise specified by the Contracting Officer 12. SUBMISSION FREQUENCY: Five working days prior to each flight* 13. REMARKS: *Note: If flight is delayed more than 4 weeks, the pre-flight facilities checkout shall be repeated prior to the flight. 14. INTERRELATIONSHIP: PWS paragraphs 3.3 and 5.0 15. DATA PREPARATION INFORMATION: 15.1 SCOPE: The Pre-Flight Facilities Checkout Report documents evaluation of the integrity of electrical and HVAC systems related to launch activities. 15.2 <u>APPLICABLE DOCUMENTS:</u> None 15.3 <u>CONTENTS:</u> The Pre-flight Facilities Checkout Report shall: a. Identify all electrical and HVAC equipment that relate to the flight and equipment location. b. Include flight readiness review tasks performed and recommended operating limits for each piece of equipment. c. Record actual operating conditions, personnel performing the inspection (by first initial and last name), and date the tasks were performed. d. Include explanations of exceptions that are outside of recommended operating limits. e. Include actions taken to insure that exceptions will not hamper flights. f. Prepare review certification sheet similar to the example in Attachment 1. 15.4 <u>FORMAT:</u> Contractor format is acceptable for checkout report. The review certification sheet shall be similar to the one provided in Attachment 1, with the exception of signature titles. 15.5 <u>MAINTENANCE:</u> None required	2. DRD NO.: 1197LS-010 4. DATE REVISED: 5. PAGE: 1/2

Attachment 1
FACILITIES TEST READINESS REVIEW CERTIFICATION

Based on a thorough engineering evaluation of all information relating to the readiness of Building (insert number), (insert general area) and Building (insert number), (insert general area), the utility systems supporting these areas are fully capable of supporting Shuttle Flight (insert number). (Insert one of the following, as appropriate.) No exceptions were found during the pre-flight facilities check out. The following exceptions were found and the actions taken to mitigate the exceptions or the rational for acceptance are described below.

Exception:

Mitigation or Rational For Acceptance:

Certified By:

Engineering Manager Date: _____

Program Manager Date: _____

Certification Date

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 2 6. TITLE: Maintenance Procedures 7. DESCRIPTION/USE: To provide maintenance procedures for electrical, fire and gas detection, mechanical, steam distribution and HVAC/R systems. 8. OPR: AS20 9. DM: AS20 10. DISTRIBUTION: Per Contracting Officer's letter 11. INITIAL SUBMISSION: 30 calendar days after Authority to Proceed (ATP) 12. SUBMISSION FREQUENCY: Update as required 13. REMARKS: 14. INTERRELATIONSHIP: PWS paragraphs 7.3B, 8.3B, 9.3B, 10.3B, 10.5E, 11.3B, 11.5R, 12.3B 12.5U and 13.3B 15. DATA PREPARATION INFORMATION: 15.1 SCOPE: The Maintenance Procedures cover electrical, fire and gas detection, mechanical, steam distribution and HVAC/R systems. 15.2 <u>APPLICABLE DOCUMENTS:</u> None 15.3 <u>CONTENTS:</u> The Maintenance Procedures shall contain: a. Equipment operating procedures including start-up, on-line or running parameters, shutdown, emergency and lay-up procedures. b. Plant systems equipment preventive maintenance procedures and maintenance schedules. c. Troubleshooting procedures for major equipment and systems. d. Corrective maintenance and repair procedures. e. Clearly defined duties, responsibilities and qualifications for all maintenance personnel positions and supervision. 15.4 <u>FORMAT:</u> Contractor format is acceptable. 15.5 <u>MAINTENANCE:</u> The procedures shall be maintained electronically in the TRL.	2. - 15.1 **SCOPE:** Headquarter Metrics Data provide data related to maintenance activities for the previous fiscal year.
- 15.2 **APPLICABLE DOCUMENTS:**
NPR 8831.2 *Facilities Maintenance Management*
- 15.3 **CONTENTS:** The Headquarters Metrics Data shall meet the requirements of NPR 8831.2 and contain the data identified in Attachment 1.
- 15.4 **FORMAT:** The report shall be in spreadsheet format. Microsoft Excel is the preferred format.
- 15.5 **MAINTENANCE:** None required

ATTACHMENT 1
HEADQUARTERS METRIC DATA

AGENCY PARAMETRIC MEASURES		UNIT	VALUE
	Facilities Sustainment Model (FSM) - FY06	\$M	
	Parametric Deferred Maintenance (DM) - FY06	\$M	
DATA INPUT FROM CENTERS			
1	Unconstrained Maintenance and Repair (M&R) Requirement, FY06 (Without CoF) (1) (5)	\$M	
2	Initial Operating Plan for Maintenance & Repair (M&R), FY06 (2)	\$M	
3	Actual Annual Maintenance and Repair (M&R) Funding (Without CoF)	\$M	
4	Cost of Scheduled Work (4)	\$M	
5	Cost of Unscheduled Work and Breakdown Repair	\$M	
6	Number of PT&I "Finds"	#	
7	Cost of Significant Failures from Constrained Resources (3)	\$M	
8	Reportable Incident Rate (RIR) (6)	*	
9	Lost Workday Case Incident Rate (LWCIR) (7)	*	
CALCULATED from DATA PROVIDED			
a.	Scheduled Maintenance Cost as a percentage of Total Maintenance Cost	%	
b.	Unscheduled Repair Cost as a percentage of Total Maintenance Cost	%	
c.	FY06 Total Site CRV	\$B	
d.	Initial Operating Plan as a percentage of CRV	%	
e.	Maintenance and Repair Funding as a percentage of CRV	%	
f.	Cost of Deferred Maintenance as a percentage of CRV	%	
ENERGY/UTILITY USAGE METRICS (Generated through HQ Energy Manager)			
11	Energy Used/Consumed		
12	Water Used/Consumed		
13	Natural Gas and Oil Used/Consumed		
NOTES			
(1)	The unconstrained Center-level funding amount that represents a manager's reasonable estimate of the full annual requirement that would maintain the Center's facility inventory in a "good commercial" level of condition, while not allowing DM to grow further, and providing a level of reliability that the supported programs find acceptable for their missions. A minor amount of DM reduction could be included in this figure.		
(2)	Initial Operating Plan for annual center-level maintenance & repair funding consisting of PM, PT&I, ROI, PGM, non-CoF repair, and TC.		
(3)	Due to or influenced by constrained resources (includes direct repair costs and other Center cost impacts).		
(4)	Scheduled Work consisting of PM, PT&I, PRM, ROI, and PT&I "Finds" repair costs.		
(5)	Annual Center-level M&R funding including PGM, PM, PT&I, ROI TC, and non-CoF repair.		
(6)	Reportable Incident Rate during FY06 for O&M and support services contracts. RIR = (Total annual # of injuries incurred x 200,000) /(Total annual # of hours worked).		
(7)	Lost Workday Case Incident Rate during FY06 for O&M and support services contracts. LWCIR represents the number of injuries and illnesses per 100 full-time equivalent workers and calculated as: (N/EH) x 200,000, where N = the number of injuries and illnesses, EH = the total hours worked by all employees during the calendar year, and 200,000 is the base for 100 equivalent full-time workers (working 40 hours per week, 50 weeks per year).		
*	Unitless measure		
ABBREVIATIONS			
\$B	Billions of Dollars		
CoF	Construction of Facilities		
DM	Deferred Maintenance		
FSM	Facilities Sustainment Model		
LWCIR	Lost Workday Case Incident Rate (aka DART, Days Away, Restricted, and Job Transfer)		
\$M	Millions of Dollars		
M&R	Maintenance and Repair		
PGM	Programmed Maintenance		
PM	Preventive Maintenance		
PT&I	Predictive Testing and Inspection		
RIR	Reportable Incident Rate		
ROI	Replacement of Obsolete Items		
TC	Trouble Call		

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 3 6. TITLE: Annual Crane and Hoist Inspection Report 7. DESCRIPTION/USE: To document annual inspections of all cranes and hoists. 8. OPR: AS20 9. DM: AS20 10. DISTRIBUTION: Per Contracting Officer's letter 11. INITIAL SUBMISSION: No later than July 15 following completion of the first annual crane and hoist inspection performed after ATP. Crane and hoist inspections are to be performed annually during the month of June. 12. SUBMISSION FREQUENCY: Annually; following completion of crane and hoist inspection, but no later than July 15. 13. REMARKS: The Annual Crane and Hoist Inspection is required to be performed by a qualified inspector not employed by the contractor. 14. INTERRELATIONSHIP: PWS paragraphs 5.0 and 10.2M 15. DATA PREPARATION INFORMATION: 15.1 SCOPE: The Annual Crane and Hoist Inspection Report documents annual inspections required to determine that cranes and hoists meet or exceed all Occupational Safety and Health Administration (OSHA) and American National Standards Institute (ANSI) standards relating to this type equipment. Each inspection shall encompass the pertinent requirements of applicable most recent and current OSHA and ANSI standards and regulations. 15.3 <u>APPLICABLE DOCUMENTS:</u> MWI 6430.1 <i>Lifting Equipment and Operations</i> NASA-STD-8719.9 <i>NASA Lifting Devices and Equipment</i> 15.3 <u>CONTENTS:</u> The Annual Crane and Hoist Report shall meet the requirements of MWI 6430.1 and NASA-STD-8719.9: a. Document the independent inspector's qualifications. b. Provide a signed verification of certification for each piece of equipment which meets all requirements, including hook inspection and wire rope or chain inspection results. c. Provide signed inspection summary reports for all equipment not in compliance with all requirements listing all deficiencies. d. Provide verification of certification for equipment found deficient after deficiencies are corrected. e. Provide, prepare, and affix a permanent certification sticker for each item of equipment which passes the inspection, as meeting all of the pertinent OSHA and ANSI standards. f. Provide index with page number, building and equipment number as part of the inspection report. 15.4 <u>FORMAT:</u> Contractor format is acceptable. 15.5 <u>MAINTENANCE:</u> None required	2. DRD NO.: 1197LS-013 4. DATE REVISED: 5. PAGE: 1/1

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 3 6. TITLE: Annual Elevator Inspection Report 7. DESCRIPTION/USE: To document elevator inspection and dumbwaiter inspections required by ANSI/ASME A17.1. 8. OPR: AS20 9. DM: AS20 10. DISTRIBUTION: Per Contracting Officer's letter 11. INITIAL SUBMISSION: No later than January 31 following completion of the first annual elevator inspection performed after ATP. Elevator inspections are to be performed annually during December and January. 12. SUBMISSION FREQUENCY: Annually; following completion of elevator inspection, but no later than January 31. Separate annual elevator inspection reports are not required when five-year elevator inspections are performed. 13. REMARKS: The Annual Elevator Inspection is required to be performed by a certified inspector not employed by the contractor. 14. INTERRELATIONSHIP: PWS paragraphs 5.0 and 10.2N 15. DATA PREPARATION INFORMATION: 15.1 SCOPE: The Annual Elevator Inspection Report documents the result of the inspections and test required to be performed as set forth in ANSI/ASME A17.1, A17.2 and A17.3. 15.2 APPLICABLE DOCUMENTS: <table border="0" style="width: 100%;"> <tr> <td style="width: 30%;">ANSI/ASME A17.1</td> <td><i>Safety Code for Elevators and Escalators</i></td> </tr> <tr> <td>ANSI/ASME A17.2</td> <td><i>Guide for Inspection of Elevators, Escalators, and Moving Walks</i></td> </tr> <tr> <td>ANSI/ASME A17.3</td> <td><i>Safety Code for Existing Elevators and Escalators</i></td> </tr> <tr> <td>ANSI/ASME QE1-1</td> <td><i>Standard for the Qualification of Elevators Inspectors</i></td> </tr> </table> 15.3 CONTENTS: The Annual Elevator Inspection Report shall: a. Document that the independent inspector performing the inspections is certified in accordance with ANSI/ASME QE1-1. b. Provide a list of elevators and dumbwaiters in compliance with all provisions set forth in ANSI/ASME A17.1. c. Provide a list of elevators and dumbwaiters requiring maintenance, repairs, replacement or adjustments necessary to meet ANSI/ASME A17.1 and specify specific applicable code section and rules of ANSI/ASME A17.1. d. Provide a list of elevators and dumbwaiters requiring improvement to meet new code changes, including a detailed list of these recommendations with ANSI rule guidelines references. e. Provide recommendations to improve overall elevator performance. f. Provide 6 inch by 9 inch certificate of inspection for each elevator or dumbwaiter for display in the elevator performance. g. Provide index with page number, building and equipment number as part of the inspection report. 15.4 FORMAT: Contractor format is acceptable. 15.5 MAINTENANCE: None required	ANSI/ASME A17.1	<i>Safety Code for Elevators and Escalators</i>	ANSI/ASME A17.2	<i>Guide for Inspection of Elevators, Escalators, and Moving Walks</i>	ANSI/ASME A17.3	<i>Safety Code for Existing Elevators and Escalators</i>	ANSI/ASME QE1-1	<i>Standard for the Qualification of Elevators Inspectors</i>	2. DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 3 6. TITLE: Five Year Elevator Inspection Report 7. DESCRIPTION/USE: To document elevator inspection and dumbwaiter inspections required by ANSI/ASME A17.1. 8. OPR: AS20 9. DM: AS20 10. DISTRIBUTION: Per Contracting Officer's letter 11. INITIAL SUBMISSION: No later than January 31, 2011, following completion of the first five-year elevator inspection performed after ATP. The first five-year elevator inspection is scheduled to be performed December 2010 through January 2011. 12. SUBMISSION FREQUENCY: Every five years. 13. REMARKS: The Five Year Elevator Inspection is required to be performed by a certified inspector not employed by the contractor. 14. INTERRELATIONSHIP: PWS paragraphs 5.0 and 10.2N 15. DATA PREPARATION INFORMATION: 15.1 SCOPE: The Five Year Elevator Inspection Report documents the result of the inspections and test required to be performed as set forth in ANSI/ASME A17.1, A17.2 and A17.3. 15.3 APPLICABLE DOCUMENTS: <table border="0" style="width: 100%;"> <tr> <td style="width: 30%;">ANSI/ASME A17.1</td> <td><i>Safety Code for Elevators and Escalators</i></td> </tr> <tr> <td>ANSI/ASME A17.2</td> <td><i>Guide for Inspection of Elevators, Escalators, and Moving Walks</i></td> </tr> <tr> <td>ANSI/ASME A17.3</td> <td><i>Safety Code for Existing Elevators and Escalators</i></td> </tr> <tr> <td>ANSI/ASME QEI-1</td> <td><i>Standard for the Qualification of Elevator Inspectors</i></td> </tr> </table> 15.3 CONTENTS: The Five Year Elevator Inspection Report shall: a. Document that the independent inspector performing the inspections is certified in accordance with ANSI/ASME QEI-1. b. Provide a list of elevators and dumbwaiters in compliance with all provisions set forth in ANSI/ASME A17.1. c. Provide a list of elevators and dumbwaiters requiring maintenance, repairs, replacement or adjustments necessary to meet ANSI/ASME A17.1 and specify specific applicable code section and rules of ANSI/ASME A17.1. d. Provide a list of elevators and dumbwaiters requiring improvement to meet new code changes, including a detailed list of these recommendations with ANSI rule guidelines references. e. Provide recommendations to improve overall elevator performance. f. Provide index with page number, building and equipment number as part of the inspection report. 15.4 FORMAT: Contractor format is acceptable. 15.5 MAINTENANCE: None required	ANSI/ASME A17.1	<i>Safety Code for Elevators and Escalators</i>	ANSI/ASME A17.2	<i>Guide for Inspection of Elevators, Escalators, and Moving Walks</i>	ANSI/ASME A17.3	<i>Safety Code for Existing Elevators and Escalators</i>	ANSI/ASME QEI-1	<i>Standard for the Qualification of Elevator Inspectors</i>	2. DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 3 6. TITLE: IDIQ Schedule 7. DESCRIPTION/USE: To provide a graphical schedule of approved IDIQ work. 8. OPR: AS20 9. DM: AS20 10. DISTRIBUTION: Per Contracting Officer's letter 11. INITIAL SUBMISSION: No later than 30 days following Authority to Proceed (ATP) 12. SUBMISSION FREQUENCY: Weekly 13. REMARKS: 14. INTERRELATIONSHIP: PWS paragraph 3.2C.7 15. DATA PREPARATION INFORMATION: 15.1 <u>SCOPE:</u> The IDIQ Schedule will provide a graphical schedule showing all approved IDIQ work. 15.4 <u>APPLICABLE DOCUMENTS:</u> NA 15.3 <u>CONTENTS:</u> The IDIQ Schedule shall meet the following requirements: a. The horizontal axis shall indicate time in appropriate increments. b. Each approved IDIQ shall be represented by a horizontal bar. c. Appropriate data for each IDIQ shall be included as approved by the Government. d. Explanation for all discrepancies such as delays or missed dates. e. Discussion of anticipated problems or delays and actions being taken to mitigate impacts. f. Impacts and proposed changes to schedule to accommodate Government priorities. 15.4 <u>FORMAT:</u> Contractor shall submit format for Government approval. 15.5 <u>MAINTENANCE:</u> None required	2. DRD NO.: 1197LS-016 4. DATE REVISED: 5. PAGE: 1/1

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 3	2. DRD NO.: 1197MA-001 4. DATE REVISED: 5. PAGE: 1/4
6. **TITLE:** Evaluation Period Status Report
7. **DESCRIPTION/USE:** To provide documentation to the Contract Officer and Contract Officer's Technical Representative of firm fixed price and indefinite delivery indefinite quantity work performed during the evaluation period.
8. **OPR:** AS20 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** Eight calendar days following the end of the first full evaluation period after Authority to Proceed (ATP), unless otherwise specified by the Contracting Officer
12. **SUBMISSION FREQUENCY:** Eight calendar days following the end of each evaluation period
13. **REMARKS:** A Contractor and COTR representative shall meet informally prior to a Performance Evaluation Meeting to resolve all discrepancies between the Contractor's Evaluation Period Status Report and Government contract monitoring data. The Performance Evaluation Meeting shall be held based on a schedule mutually agreed to by the Contractor and the Contract Officer.
14. **INTERRELATIONSHIP:** PWS paragraphs 1.2A, 3.2E and 4.2G
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Evaluation Period Status Report provides data for the assessment of firm fixed price data, also referred to as lump sum data and indefinite delivery indefinite quantity data. These data are used to determine deductions associated with the performance period being evaluated and summarize the results of the entire contract work for the performance evaluation period.
- 15.2 **APPLICABLE DOCUMENTS:** None
- 15.3 **CONTENTS:** The Evaluation Period Status Report shall consist of two spreadsheets: (1) lump sum work performed and (2) completed indefinite delivery indefinite quantity data. The spreadsheets shall contain:
- a. Lump sum data:
 1. Contract line item number (CLIN).
 2. Contract requirements [Performance Requirements Summary (PRS Weight)].
 3. Quantity completed for period.
 4. CLIN value for period. Provide total CLIN value at end of column.
 5. Value per item (Value/Quantity) including value per item per weight ((Value/Quantity) *Weight)).
 6. Number of deficiencies.
 7. Acceptable Quality Level (AQL).
 8. AQL rating (Acceptable or Unacceptable).
 9. Value deducted per CLIN. Provide total value deducted at end of column.
 10. Sum of deductions.
 - b. Indefinite Delivery Indefinite Quantity Data:
 1. Facility Work Request (FWR) Number.
 2. FWR Description.
 3. FWR Value. Provide total FWR value at end of column.
 4. Partial payment. Provide total partial payment at end of column.

DRD Continuation Sheet**TITLE:** Evaluation Period Status Report**DRD NO.:** 1197MA-001**DATA TYPE:** 3**PAGE:** 2/4

15. **DATA PREPARATION INFORMATION (CONTINUED):**

5. Previous partial payment. Provide total previous partial payment at end of column.
6. FWR Deduction. Provide total FWR deduction at end of column.
7. Billable amount. Provide total billable amount at end of column.
8. NASA Project Manager.
9. Delivery Order Number.

15.4 **FORMAT:** The Evaluation Period Status Report shall be in two separate spreadsheets: (1) lump sum work and (2) IDIQ. Microsoft Excel is the preferred format for the spreadsheets. The report shall be formatted similarly to Attachments 1 and 2.

15.5 **MAINTENANCE:** None required

Attachment 2

INDEFINITE DELIVERY INDEFINITE QUANTITY DATA

[illegible]

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 1 6. TITLE: Management Plan 7. DESCRIPTION/USE: To provide a description of the Contractor's overall management and organization for accomplishing the requirements set forth in the contract. 8. OPR: AS20 9. DM: AS20 10. DISTRIBUTION: Per Contracting Officer's letter 11. INITIAL SUBMISSION: 5 working days after Authority to Proceed (ATP). Approved plan within 45 calendar days after the contract award date. 12. SUBMISSION FREQUENCY: Revise as required 13. REMARKS: The plan is based on selected portions of the management approach submitted with the Contractor's response to the Request for Proposal for this contract. 14. INTERRELATIONSHIP: PWS paragraph 1.2A 15. DATA PREPARATION INFORMATION: 15.1 SCOPE: The Management Plan shall describe, from an administrative and technical standpoint, how the Contractor intends to bring the services identified in the Performance Work Statement to full operational status, and the manner and means by which these services, once established, will be maintained. 15.2 <u>APPLICABLE DOCUMENTS:</u> None 15.3 <u>CONTENTS:</u> The Management Plan shall:	2. DRD NO.: 1197MA-002 4. DATE REVISED: 5. PAGE: 1/2
- a. Contain the Contractor's contract site organizational chart including the relationship to the corporate office and all subcontracting or teaming relationships.
 - b. Contain the rationale for the organizational structure. Rationale shall demonstrate an organized approach to:
 1. Integrated planning that includes interface for outage support and customer notification.
 2. Controls that include adherence to schedules and operational performance.
 3. Reports of contract activities.
 4. Interfaces for all other support activities identified in the Performance Work Statement (PWS).
 - c. Identify how the Contractor will plan, direct, control, and manage each of the services identified in the PWS.
 - d. Describe all manager functions, authority, and reporting structure.
 - e. Identify the access to corporate resources, the degree of local autonomy, and the authority of the on-site program manager.
 - f. Provide subcontractor management procedures used to plan, direct, control, and manage each work activity for each subcontract with a value over \$500,000.
 - g. Describe core values and correlation between those values and MSFC core values.
 - h. Provide the distribution of the work force to support MSFC 24 hours per day, 7 days per week, 365 days per year.
 - i. State the percentage of time each key person will devote to this contract.
 - j. Identify how the Contractor will identify and implement Contractor-provided training to insure personnel are qualified and adequately perform the services for the PWS.

DRD Continuation Sheet**TITLE:** Management Plan**DRD NO.:** 1197MA-002**DATA TYPE:** 2**PAGE:** 2/2

15. **DATA PREPARATION INFORMATION (CONTINUED):**15.4 **FORMAT**: Contractor format is acceptable.15.5 **MAINTENANCE**: Changes shall be incorporated by change page or complete reissue.

DATA REQUIREMENTS DESCRIPTION (DRD)

6. **TITLE:** Contractor Cost Report
7. **DESCRIPTION/USE:** To provide reports for monitoring contractor costs for fixed-price contracts.
8. **OPR:** CS40 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** After completion of first Performance Evaluation Meeting (PEM) following Authority to Proceed (ATP)
12. **SUBMISSION FREQUENCY:** After completion of each PEM
13. **REMARKS:**
14. **INTERRELATIONSHIP:** PWS paragraph 1.3
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Contractor Cost Report (CCR) provides contractor cost data for the performance evaluation period.
- 15.2 **APPLICABLE DOCUMENTS:** None
- 15.3 **CONTENTS:** Each Contractor Cost Report shall contain reports for both Lump Sum and H-Order/Indefinite Delivery Indefinite Quantity (IDIQ). The reports shall contain the data required by the formats in Attachments 1 and 2.
- 15.4 **FORMAT:** The CCR shall be submitted in hardcopy and electronic format (Microsoft Excel preferred) in accordance with Attachments 1 and 2. NOTE: Because of the early development stage of the Integrated Financial Management Program (IFMP), the contractor shall initially provide a hardcopy Contractor Cost Report (CCR). When IFMP is fully implemented, the contractor shall provide both electronic and hardcopy submission.
- 15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 3	2. DRD NO.: 1197MA-004 4. DATE REVISED: 5. PAGE: 1/1
6. **TITLE:** Badged Employee and Remote IT User Listing
7. **DESCRIPTION/USE:** To assist NASA in conducting contractor floor checks and to determine if the employees meet the minimum background investigation requirements.
8. **OPR:** AS50 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter. One copy shall go to MSFC Protective Services Office.
11. **INITIAL SUBMISSION:** No later than 10 working days after Authority to Proceed (ATP)
12. **SUBMISSION FREQUENCY:** Formal update quarterly and email changes as personnel changes occur to distribution. If deemed necessary by the Contracting Officer, the contractor shall submit the list at times other than stated.
13. **REMARKS:** Reference is made to Federal Acquisition Regulation (FAR) Clause, FAR 52.215-2, *Audit and Records--Negotiations* (June 1999), NPR 1600.1, *NASA Security Program Procedural Requirements*.
14. **INTERRELATIONSHIP:** PWS paragraph 1.4I.4
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Badged Employee and Remote IT User Listing provides NASA with a list of all MSFC badged contractor employees, as well as, any contractor remote IT users who will have access to the MSFC IT system.
- 15.2 **APPLICABLE DOCUMENTS:** None
- 15.3 **CONTENTS:** The Badged Employee and Remote IT User Listing shall include the following information for each employee: employee's full name (first and middle names must be birth names), last four digits of the Social Security Number (SSN), date of birth, place of birth, duty position, duty location (building/room number), shift assignment, and supervisor's name. Additionally, if applicable, the type of security background check already completed (NACLC or SSBI) and the date it was completed.
- 15.4 **FORMAT:** Contractor format using Excel Spreadsheet is acceptable.
- 15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. **DPD NO.:** 1197 **ISSUE:** RFP
2. **DRD NO.:** **1197MA-005**
3. **DATA TYPE:** 3
4. **DATE REVISED:**
5. **PAGE:** 1/1
6. **TITLE:** Contractor Employee Clearance Document
7. **DESCRIPTION/USE:** To ensure that badged contractor employees who no longer require Center access properly clear all accounts when the access is no longer needed.
8. **OPR:** AS50 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** Immediately when the access is no longer needed
12. **SUBMISSION FREQUENCY:** As required
13. **REMARKS:**
14. **INTERRELATIONSHIP:** PWS paragraph 1.4I.5
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Contractor Employee Clearance Document provides verification that all badged employees have properly cleared all accounts when the access is no longer needed.
- 15.2 **APPLICABLE DOCUMENTS:** None
- 15.3 **CONTENTS:** The Contractor Employee Clearance Document shall contain all the information required by MSFC Form 383-1.
- 15.4 **FORMAT:** MSFC Form 383-1, "Contractor Employee Clearance Document".
- 15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. DPD NO.: 1197 ISSUE: RFP 3. DATA TYPE: 3	2. DRD NO.: 1197MA-006 4. DATE REVISED: 5. PAGE: 1/1
6. **TITLE:** Position Risk Designation for Non-NASA Employee
7. **DESCRIPTION/USE:** To ensure that contractor employees are screened to an appropriate risk determination in accordance with NPR 1600.1, *NASA Security Program Procedural Requirements*, Chapter 4.
8. **OPR:** AS50 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter. One copy shall go to MSFC Protective Services Office.
11. **INITIAL SUBMISSION:** No later than 10 working days after Authority to Proceed (ATP)
12. **SUBMISSION FREQUENCY:** Update as personnel or position changes occur
13. **REMARKS:**
14. **INTERRELATIONSHIP:** PWS paragraph 1.4I.6
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Position Risk Designation for Non-NASA Employee provides information necessary to determine the type of investigation required and how closely an individual is screened for a position.
- 15.2 **APPLICABLE DOCUMENTS:**
 NPR 1600.1 *NASA Security Program Procedural Requirements*
- 15.3 **CONTENTS:** The Position Risk Designation for Non-NASA Employee shall contain all the information required by NASA Form 1760 in accordance with NPR 1600.1, *NASA Security Program Procedural Requirements*.
- 15.4 **FORMAT:** NASA Form 1760, "Position Risk Designation for Non-NASA Employee".
- 15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. **DPD NO.:** 1197 **ISSUE:** RFP
2. **DRD NO.:** **1197QE-001**
3. **DATA TYPE:** 3
4. **DATE REVISED:**
5. **PAGE:** 1/21
6. **TITLE:** Quality Control Plan (QCP) and QCP Quarterly Summary Report
7. **DESCRIPTION/USE:** To provide description of how the contractor intends to monitor work quality during the life of the contract and to provide documentation of quality control activities.
8. **OPR:** AS20 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** Quality Control Plan: Preliminary submittal as part of the Contractor's Technical Proposal submittal in response to the Request for Proposal. Approved QCP within 45 calendar days after contract award date. QCP Quarterly Summary Report: Within 10 calendar days following the end of the first contract quarter after Authority to Proceed (ATP).
12. **SUBMISSION FREQUENCY:** Quality Control Plan: Annually; update on contract anniversary date. QCP Quarterly Summary Report: Quarterly; 10 calendar days after end of contract quarter being evaluated.
13. **REMARKS:**
14. **INTERRELATIONSHIP:** PWS paragraphs 1.2B and 3.2A.2
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Quality Control Plan (QCP) and QCP Quarterly Summary Report identifies the methods or processes the Contractor will use to ensure quality requirements for each contract element are being met. The QCP Quarterly Summary Report provides details of quality control activities for the reporting period.
- 15.2 **APPLICABLE DOCUMENTS:**
ANSI/ISO/ASQ Q9001-2000 *American National Standard Quality Management Systems Requirements*
- 15.3 **CONTENTS:** The Quality Control Plan (QCP) and QCP Quarterly Summary Report shall contain:
 - a. The QCP shall:
 1. Address the Contractor's approach to ensuring quality control throughout each contract element.
 2. Discuss the Contractor's self-evaluation process.
 3. Identify approaches to meet applicable sections of ANSI/ISO/ASQ Q9001:2000 system related to facilities maintenance.
 4. Provide a description of the Contractor's quality system.
 5. Discuss obtaining and utilizing feedback from Center-wide customers to continuously evaluate the quality of products and services.
 - b. The QCP quarterly summary report shall provide:
 1. Quality inspections performed versus inspections scheduled.
 2. Details of all corrective actions taken and their completion date.
 3. Actions taken when the Acceptable Quality Level (AQL) is not met for any contract element in any performance evaluation period during the quarter.
 4. Extraordinary action to be taken when the Contractor fails to meet the AQL in two or more consecutive performance evaluation periods for the same contract element.
- 15.4 **FORMAT:** Contractor format is acceptable.
- 15.5 **MAINTENANCE:** None required

DATA REQUIREMENTS DESCRIPTION (DRD)

1. **DPD NO.:** 1197 **ISSUE:** RFP
2. **DRD NO.:** **1197SA-001**
3. **DATA TYPE:** 2
4. **DATE REVISED:**
5. **PAGE:** 1/4
6. **TITLE:** Safety, Health, and Environmental (SHE) Plan
7. **DESCRIPTION/USE:** To provide the contractor and the Government a baseline document to (1) prevent employee fatalities, (2) reduce the number of incidents, (3) reduce the severity of employee injuries and illnesses, and (4) protect the environment through the ongoing planning, implementation, integration and management control of the contractor's industrial safety, occupational health, and environmental program by compliance with the Marshall Space Flight Center (MSFC) SHE core program requirements in accordance with NFS 1852.223-73.
8. **OPR:** AS10/QD50 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** Preliminary with proposal
12. **SUBMISSION FREQUENCY:** Ten days after Authority to Proceed (ATP); update as required
13. **REMARKS:**
14. **INTERRELATIONSHIP:** NFS 1852.223-70, *Safety and Health*; NFS 1852.223-73, *Safety and Health Plan*; FAR 52.223-4, *Recovered Material Certification*; FAR 52.223-5, *Pollution Prevention and Right-to-Know Information*; FAR 52.223-9, *Estimate of Percentage of Recovered Material Content for EPA-Designated Products*; FAR 52.223-10, *Waste Reduction Program*; FAR 52.223-11, *Ozone Depleting Substances*; FAR 52.223-12, *Refrigeration Equipment and Air Conditioners*; and FAR 52.223-14, *Toxic Chemical Release Reporting*. DRD 1197SA-002, *Mishap and Safety Statistics Report*. PWS paragraphs 1.4F.1 and 3.2A.1
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Safety, Health, and Environmental Plan shall describe the contractor's methods of planning, implementing and controlling their industrial safety, occupational health, and environmental requirements over the duration of the contract.
- 15.2 **APPLICABLE DOCUMENTS:** Compliance with the following Occupational Safety and Health Standards and applicable requirements shall be specified in the plan (if applicable to the scope of this contract).

29 CFR 1910	<i>Department of Labor; Occupational Safety and Health Administration Standards for General Industry</i>
29 CFR 1926	<i>Department of Labor; Occupational Safety and Health Administration Standards for Construction Industry</i>

15.3 CONTENTS: The Safety, Health, and Environmental (SHE) Plan shall clearly describe how the contractor shall comply with the MSFC SHE core program requirements listed below to accomplish the following: (1) the methods to ensure compliance with the MSFC SHE core program requirements listed below, (2) the methods to ensure potentially hazardous conditions are identified and corrected, (3) the methods to ensure employees are trained to perform their tasks in a safe and healthful manner, and (4) the methods to ensure compliance with the applicable documents that pertain to the specific work tasks .

a. Management leadership and employee involvement:

1. A statement of the management policy and their commitment to (1) provide a safe and healthful workplace for personnel (i.e., employees, customers, and public), (2) protect the property and the environment, and (3) ensure compliance with EPA, OSHA and NASA requirements applicable to the contracted effort.
2. A description of how management and employees are held accountable for implementing their tasks in a safe and healthful manner while protecting the environment through the use of motivational or innovative techniques and when necessary through the use of a disciplinary program.
3. A description of safety, health, environmental awareness and motivation programs that, include documented safety meetings and safety awareness training for employees. (Onsite contractors shall document their safety meeting statistics in the MSFC Supervisors Safety Web page (SSWP).

15. DATA PREPARATION INFORMATION (CONTINUED):

4. A method of performing and documenting self evaluations of the contractor's safety, health and environmental program including the frequency of these evaluations.
5. A method of ensuring the flowdown of MSFC safety, health, and environmental responsibilities and requirements applicable to the contracted effort are passed between all company levels and to all subcontractors, when applicable.
6. The identification by title the individual who is assigned the responsibility for implementing the contractor's SHE program elements and serve as the SHE Point of Contact (POC) for the contracted effort.
7. A method to ensure compliance with MPR 8715.1 and all other SHE documents that are applicable to the contracted effort.
8. A method to ensure that each employee has read the SHE plan and fully understands their roles and responsibilities in supporting the MSFC SHE program.
9. A method to ensure the SHE plan is reviewed annually and updated as necessary.
 1. The methods of identifying potentially hazardous conditions in the work area and operations, e.g., hazard analysis, safety assessment, change analysis, risk assessment and employee identified concerns.
 2. A description of the OSHA programs that require documented programs that are applicable to the contracted effort (e.g., Respiratory Protection, Hazard Communication, Confined Space, and Lockout/Tagout, etc. Address their interrelationships with the applicable MSFC SHE programs.)
 3. The methods of conducting and documenting formal worksite safety inspections as required by OSHA.
 4. The methods of conducting and documenting supervisors' monthly safety visits. Onsite safety visits shall be performed once per month per supervisor and documented in the Supervisors Safety Web page.
- c. Hazard prevention and control:
 1. The methods of controlling potentially hazardous conditions in the work area or in operations. This includes the generation of plans, procedures, and other working documents which clearly identify the hazardous situations in the work area or operation and the necessary cautions taken to mitigate the hazards. NOTE: MSFC requires an annual review of these plans and procedures. MSFC Safety Department concurrence is required for onsite hazardous procedures.
 2. The methods of ensuring controls over the procurement, storage, issuance, and use of hazardous chemical and materials are in accordance with MPR 8500.1 and the recycling and disposal of any hazardous waste is in accordance with MWI 8550.1.
 3. The methods of ensuring a documented emergency management program. Include a list of contractor emergency points that are located onsite. (Note: Onsite contractors may use MPR 1040.3.)
 4. The methods of ensuring the investigation of all mishaps and close calls to determine root cause and the reporting requirements are in accordance with MWI 8621.1. (Reference DRD 1197SA-002, *Mishap and Safety Statistics Report*).
 5. The method for providing safety, health, and environmental services applicable to the contracted effort such as hazardous waste disposal, industrial hygiene monitoring, emergency medical support, hearing conservation program, respiratory protection, and hazard communication. (Note in the SHE plan which, if any of these services are to be provided by MSFC for onsite work.)
 6. The methods employees have to suspend work where safety, health or environmental conditions warrant such action.
- d. Safety, health and environmental training:
 1. The methods for ensuring each employee is trained to recognize hazards, avoid accidents, know the hazards specific to their job, and fully understands the contractor's disciplinary program.
 2. The methods for assessing employee training needs specific to their job. (Onsite employee assessments shall be performed using the SHE Training Assessment located on the MSFC Supervisor Safety Web Page.)

DRD Continuation Sheet**TITLE:** Safety, Health, and Environmental (SHE) Plan**DRD NO.:** 1197SA-001**DATA TYPE:** 2**PAGE:** 4/4**15. DATA PREPARATION INFORMATION (CONTINUED):**

3. The methods for training and documenting this training when designating employees to be competent, qualified, authorized or certified to perform operations that require specific training in accordance with 29 CFR 1910 or 29 CFR 1926.
4. A list of identified job categories under the contracted effort that require MSFC safety certification in accordance with MWI 3410.1, "Personnel Certification Program". Example job categories that require MSFC safety certification include, but not limited to, operating MSFC lifting equipment (forklifts, cranes, etc.), working with chemicals, hazardous waste, pressure systems, etc. Personnel Certification for onsite job categories identified in MWI 3410.1 shall be tracked in the MSFC Certification Database (CERTRAK). (NOTE: offsite contracts shall list the job categories under the contracted effort that require OSHA documented training and certification.)
- e. Environmental compliance – The methods to ensure compliance with environmental laws and regulations 40 CFR, Alabama Department of Environmental Management (ADEM), and MPR 8500.1 by:
 1. Reporting hazardous and toxic substance use.
 2. Implementing and reporting green procurements in accordance with MWI 8540.2.
 3. Reducing, reusing, and recycling of hazardous and toxic substances prior to disposal in accordance with MWI 8550.1.
 4. Minimizing stormwater pollution in accordance with MWI 8550.2.
 5. Ensuring equipment and processes permitted by applicable laws.
 6. Disposing of solid and liquid materials as permitted by applicable laws.

15.4 FORMAT: Contractor format is acceptable.**15.5 MAINTENANCE:** Changes shall be incorporated by change page or complete reissue.

DATA REQUIREMENTS DESCRIPTION (DRD)

1. **DPD NO.:** 1197 **ISSUE:** RFP
2. **DRD NO.:** **1197SA-002**
3. **DATA TYPE:** 3
4. **DATE REVISED:**
5. **PAGE:** 1/2
6. **TITLE:** Mishap and Safety Statistics Reports
7. **DESCRIPTION/USE:** To provide reporting of metrics, mishaps, close calls, and serious non-occupational injuries or illnesses.
8. **OPR:** QD50 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:**
 - a. Safety Statistics submitted by the 10th of each month after contract award using one of the following methods: MSFC Form 4371, or electronic notification system equivalent, or direct to NASA Incident Reporting Information System (IRIS) database. Statistics required to be submitted include: contract number, subcontractors, NAISC codes, number of employees, and number of supervisors, hours worked. Access to IRIS database can be obtained from the Industrial Safety Department after contract award. (Applicable to all onsite contracts)
 - b. Mishaps, Close Calls, and serious non-occupational injuries or illnesses as defined in Section 15.6 and in NPR 8621.1:
 1. Type A, B, mishaps, high visibility mishaps or close calls: Upon occurrence or awareness of mishap:
 - a. Immediate notification to the Contracting Officer and Industrial Safety (256-544-HELP, Safety Option) (Include location and time of incident, number of fatalities, number hospitalized, type of damage, estimated cost, brief description, and contact person's name and phone number), accompanied by IRIS Quick Incident submittal.
 - b. Update within 24 hours through IRIS entry, or electronic submittal (per NPR 8621.1, paragraph 1.5.5).
 2. Non-occupational fatality or serious injury occurring onsite or to an onsite contractor employee: Notification to Contracting Officer and Industrial Safety within 24 hour of occurrence or awareness. (Offsite non-occupational injury or illness notification is at the discretion of the family.)
 3. Type C mishaps: Upon occurrence or awareness of mishap:
 - a. Immediate notification to the Contracting Officer and Industrial Safety (256-544-HELP, Safety Option) (Include location and time of incident, type of lost-time injury or damage, estimated cost, brief description, and contact person's name and phone number), accompanied by IRIS Quick Incident submittal.
 - b. Update within 6 days through IRIS entry, or electronic submittal.
 4. Type D, and Close Call mishaps (Onsite): Notification by telephone (256-544-HELP, Safety Option) or electronic submittal within 4 hours of occurrence or awareness, and within 24 hours with IRIS Quick Incident. Update within 6 days may be through IRIS entry, or electronic submittal.
 5. Type A, B, and Close Calls with high Type A or B potential: Mishap Board Report submitted after completion of investigation. Corrective Action Plan submitted upon Endorsing Official approval.
 6. All Mishaps: Follow-up Corrective Action Plan/Status 30 days after first mishap.
 - c. Safety Concerns, Hazards, and non-reportable mishaps should be reported per MPR 8715.1 (**Onsite**) or the appropriate contractor method (**Offsite**).
12. **SUBMISSION FREQUENCY:** Safety Statistics (MSFC Form 4371, IRIS entry, or equivalent) - By the 10th of each month. All Mishaps: Monthly Follow-up Corrective Action Plan/Status until corrective actions implemented and closure received by updating record in IRIS data base (preferred) or electronic submittal.
13. **REMARKS:**
14. **INTERRELATIONSHIP:** DRD 1197SA-001, *Safety, Health, and Environmental (SHE) Plan*. PWS paragraphs 1.4F.5 and 1.4F.7

DRD Continuation Sheet

TITLE: Mishap and Safety Statistics Reports

DRD NO.: 1197SA-002

DATA TYPE: 3

PAGE: 2/2

15. DATA PREPARATION INFORMATION:

15.1 SCOPE: The Mishap and Safety Statistics Reports document all mishaps and close calls as required in NPR 8621.1.

15.2 APPLICABLE DOCUMENTS:

NPR 8621.1	<i>NASA Procedural Requirements for Mishap and Close Call Reporting, Investigating, and Recordkeeping</i>
MPR 8715.1	<i>MSFC Safety, Health, and Environmental (SHE) Program</i>
MWI 8621.1	<i>Close Call and Mishap Reporting and Investigation Program</i>

15.3 CONTENTS: The Mishap and Safety Statistics Reports shall contain the information required by NPR 8621.1 and MWI 8621.1.

15.4 FORMAT: The following formats or electronic equivalent shall be submitted:

- a. MSFC Form 4370, "MSFC Flash Mishap Report."
- b. Additional Information Submittal per NPR 8621.1.
- c. MSFC Form 4371, "MSFC Contractor Accident and Safety Statistics."
- d. Mishap Board Report using the format provided in NPR 8621.1.

15.5 MAINTENANCE: None required

15.6 DEFINITIONS:

Close Call. An event in which there is no injury or only minor injury requiring first aid and/or no equipment/property damage or minor equipment/property damage (less than \$1000), but which possesses a potential to cause a mishap.

High Visibility (Mishaps or Close Calls). Those particular mishaps or close calls, regardless of the amount of property damage or personnel injury, that the Administrator, Chief/OSMA, CD, AA/OIA, or the Center SMA director judges to possess a high degree of programmatic impact or public, media, or political interest including, but not limited to, mishaps and close calls that impact flight hardware, flight software, or completion of critical mission milestones.

Type A Mishap. A mishap resulting in one or more of the following: (1) an occupational injury or illness resulting in a fatality, a permanent total disability, or the hospitalization for inpatient care of 3 or more people within 30 workdays of the mishap; (2) a total direct cost of mission failure and property damage of \$1 million or more; (3) a crewed aircraft hull loss; (4) an occurrence of an unexpected aircraft departure from controlled flight (except high performance jet/test aircraft such as F-15, F-16, F/A-18, T-38, OV-10, and T-34, when engaged in flight test activities).

Type B Mishap. A mishap that caused an occupational injury or illness that resulted in a permanent partial disability, the hospitalization for inpatient care of 1-2 people within 30 workdays of the mishap, or a total direct cost of mission failure and property damage of at least \$250,000 but less than \$1,000,000.

Type C Mishap. A mishap resulting in a nonfatal occupational injury or illness that caused any days away from work, restricted duty, or transfer to another job beyond the day or shift on which it occurred, or a total direct cost of mission failure and property damage of at least \$25,000 but less than \$250,000.

Type D Mishap. A mishap that caused any nonfatal OSHA recordable occupational injury and/or illness that does not meet the definition of a Type C mishap, or a total direct cost of mission failure and property damage of at least \$1,000 but less than \$25,000.

DATA REQUIREMENTS DESCRIPTION (DRD)

1. **DPD NO.:** 1197 **ISSUE:** RFP
2. **DRD NO.:** **1197SA-003**
3. **DATA TYPE:** 2
4. **DATE REVISED:**
5. **PAGE:** 1/2
6. **TITLE:** Personnel Certification Plan
7. **DESCRIPTION/USE:** To provide the contractor and the Government a baseline document for the identification and definition of personnel certification criteria and the procedures to be implemented by the contractor to ensure a certification program is implemented in accordance with NPR 8715.3 and MSFC program/project requirements.
8. **OPR:** QD50/QD40 9. **DM:** AS24
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** 30 days after Authority to Proceed (ATP)
12. **SUBMISSION FREQUENCY:** Revise as required
13. **REMARKS:**
14. **INTERRELATIONSHIP:** SOW paragraphs 1.2J and 1.2J.2
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Personnel Certification Plan is for the contractor to provide their processes for training, certification, and re-certification of personnel engaged in the performance of MSFC critical processes or potentially hazardous operations. The purpose of a certification program is to assure that all personnel performing MSFC critical processes or potentially hazardous operation are capable of performing these processes or operations without endangering themselves, fellow employees, equipment and/or facilities. It is mandatory that these MSFC critical processes or potentially hazardous operations are performed by trained and certified personnel.
- 15.2 **APPLICABLE DOCUMENTS:**
 MWI 3410.1 *Personnel Certification Program*
 NPR 8715.3 *NASA General Safety Program Requirements*
- 15.3 **CONTENTS:** The Personnel Certification Plan shall provide the processes the contractor implements to assure an effective certification program. The plan shall include criteria which the contractor can relate directly to work classifications or operations and the required skills, education, experience, training, and other qualifications necessary to perform work in these classifications or operations. The contractor shall assure work performed by these classifications is performed with high quality workmanship to produce a high quality product in a safe and efficient manner. The plan shall include the contractor processes to track these certifications. NOTE: Contractors onsite shall track their certifications for critical MSFC owned process or hazardous operations in the MSFC CERTRAK database in accordance with MWI 3410.1. The plan shall include the following:
 - a. Certification program:
 1. General:
 - (a) Program description.
 - (b) Program administration.
 - (c) Certification duration.
 - (d) Definitions.
 - (e) Job description summaries.
 - (f) Task assignments per job description.
 - (g) Skills required per job description.

DRD Continuation Sheet

TITLE: Personnel Certification Plan

DRD NO.: 1197SA-003

DATA TYPE: 2

PAGE: 2/2

15. DATA PREPARATION INFORMATION (CONTINUED):

2. Certification requirements/skills:
 - (a) Education.
 - (b) Experience/work history.
 - (c) Specialized training.
 - (d) Physical condition/attitude.
3. Certification process:
 - (a) Supervision responsibilities.
 - (b) Certifying authority.
 - (c) Formal/informal examination.
 - (d) Proficiency demonstration.
- b. Certification documentation.
- c. Specific critical MSFC owned process skills requiring certification and proficiency include the following:
 1. High pressure tubing fabrication and assembly.
 2. Welding:
 - (a) Carbon steel.
 - (b) Stainless steel.
 - (c) Aluminum.
 3. Control system operations.
 4. Schematic drawing comprehension.
 5. Other processes identified by the Performance Work Statement (PWS).

Potentially hazardous operation and skill certifications are listed in MWI 3410.1. Below are examples of some of the required MSFC certifications.

- a. Forklift, crane and hoist operators.
- b. Cryogenic and other hazardous pressure system operators.
- c. Propellant & Explosive Handlers.
- d. Hazardous chemical/toxic material handling.
- e. Confined space entry.
- f. Electrical/instrumentation cable fabrication (including test articles):
 1. Crimping.
 2. Cabling, Harnessing, and Wiring.
 3. Soldering including Surface Mount Technology (SMT).
 4. Staking and Conformal Coating.
 5. ESD Control.
- g. Welding inspection and nondestructive evaluation (NDE).
 1. Penetrant Testing.
 2. Magnetic Particle Testing.
 3. Eddy Current Testing.
 4. Radiographic Testing.
 5. Thermal/Infrared Testing.
 6. Visual Testing.

15.4 **FORMAT:** Contractor format is acceptable.

15.5 **MAINTENANCE:** Changes shall be incorporated by change page or complete reissue.

DATA REQUIREMENTS DESCRIPTION (DRD)

1. **DPD NO.:** 1197 **ISSUE:** RFP
2. **DRD NO.:** **1197SA-004**
3. **DATA TYPE:** 3
4. **DATE REVISED:**
5. **PAGE:** 1/1
6. **TITLE:** Quarterly Contractor Safety Self-Evaluation Report
7. **DESCRIPTION/USE:** To provide contractor performance metrics based on the elements of the MSFC safety program.
8. **OPR:** AS20 9. **DM:** AS20
10. **DISTRIBUTION:** Per Contracting Officer's letter
11. **INITIAL SUBMISSION:** Ten days following completion of contractor's first calendar quarterly reporting period after Authority to Proceed (ATP)
12. **SUBMISSION FREQUENCY:** Quarterly; 10 days following completion of calendar quarterly reporting period
13. **REMARKS:** The safety performance evaluation process, for which this report is the first step, is detailed in COSS Contract, Section H: Special Clauses.
14. **INTERRELATIONSHIP:** DRD 1197SA-002, *Mishap and Safety Statistics Reports*. COSS Contract, Section H: Special Clauses; PWS paragraph 1.4F.8
15. **DATA PREPARATION INFORMATION:**
- 15.1 **SCOPE:** The Quarterly Contractor Safety Self-Evaluation Report provides the contractor's performance measurement against required MSFC safety program elements.
- 15.2 **APPLICABLE DOCUMENTS:**
MWI 8715.9 *Occupational Safety Guidelines for MSFC Contractors*
- 15.3 **CONTENTS:** The Quarterly Contractor Safety Self-Evaluation Report shall meet the requirements of MWI 8715.9 and provide a contractor-assigned score (from 10 to 1), based on the criteria defined in the "Safety Health Management Implementation Guide and Assessment Matrix" provided in Section H for each of the following MSFC safety program elements:
 - a. Management commitment and employee involvement.
 - b. System and worksite hazard analysis.
 - c. Hazard prevention and control.
 - d. Safety and health training.

NOTE: Reference Section H of this contract for complete listing of subelements for the major elements listed above.
- 15.4 **FORMAT:** Contractor format is acceptable.
- 15.5 **MAINTENANCE:** None required

ALL OCCUPATIONS LISTED ABOVE RECEIVE THE FOLLOWING BENEFITS:

HEALTH & WELFARE: Life, accident, and health insurance plans, sick leave, pension plans, civic and personal leave, severance pay, and savings and thrift plans. Minimum employer contributions costing an average of \$3.16 per hour computed on the basis of all hours worked by service employees employed on the contract.

VACATION: 2 weeks paid vacation after 1 year of service with a contractor or successor; 3 weeks after 10 years, and 4 after 20 years. Length of service includes the whole span of continuous service with the present contractor or successor, wherever employed, and with the predecessor contractors in the performance of similar work at the same Federal facility. (Reg. 29 CFR 4.173)

HOLIDAYS: A minimum of ten paid holidays per year, New Year's Day, Martin Luther King Jr's Birthday, Washington's Birthday, Memorial Day, Independence Day, Labor Day, Columbus Day, Veterans' Day, Thanksgiving Day, and Christmas Day. (A contractor may substitute for any of the named holidays another day off with pay in accordance with a plan communicated to the employees involved.) (See 29 CFR 4174)

THE OCCUPATIONS WHICH HAVE PARENTHESES AFTER THEM RECEIVE THE FOLLOWING BENEFITS (as numbered):

1) Under the SCA at section 8(b), this wage determination does not apply to any employee who individually qualifies as a bona fide executive, administrative, or professional employee as defined in 29 C.F.R. Part 541. Because most Computer System Analysts and Computer Programmers who are compensated at a rate not less than \$27.63

NNM08AA54C
ATTACHMENT J-3

(or on a salary or fee basis at a rate not less than \$455 per week) an hour would likely qualify as exempt computer professionals, (29 C.F.R. 541.400) wage rates may not be listed on this wage determination for all occupations within those job families. In addition, because this wage determination may not list a wage rate for some or all occupations within those job families if the survey data indicates that the prevailing wage rate for the occupation equals or exceeds \$27.63 per hour conformances may be necessary for certain nonexempt employees. For example, if an individual employee is nonexempt but nevertheless performs duties within the scope of one of the Computer Systems Analyst or Computer Programmer occupations for which this wage determination does not specify an SCA wage rate, then the wage rate for that employee must be conformed in accordance with the conformance procedures described in the conformance note included on this wage determination.

Additionally, because job titles vary widely and change quickly in the computer industry, job titles are not determinative of the application of the computer professional exemption. Therefore, the exemption applies only to computer employees who satisfy the compensation requirements and whose primary duty consists of:

(1) The application of systems analysis techniques and procedures, including consulting with users, to determine hardware, software or system functional specifications;

(2) The design, development, documentation, analysis, creation, testing or modification of computer systems or programs, including prototypes, based on and related to user or system design specifications;

(3) The design, documentation, testing, creation or modification of computer programs related to machine operating systems; or

(4) A combination of the aforementioned duties, the performance of which requires the same level of skills. (29 C.F.R. 541.400).

2) **APPLICABLE TO AIR TRAFFIC CONTROLLERS ONLY - NIGHT DIFFERENTIAL:** An employee is entitled to pay for all work performed between the hours of 6:00 P.M. and 6:00 A.M. at the rate of basic pay plus a night pay differential amounting to 10 percent of the rate of basic pay.

3) **AIR TRAFFIC CONTROLLERS AND WEATHER OBSERVERS - NIGHT PAY & SUNDAY PAY:** If you work at night as part of a regular tour of duty, you will earn a night differential and receive an additional 10% of basic pay for any hours worked between 6pm and 6am. If you are a full-time employed (40 hours a week) and Sunday is part of your regularly scheduled workweek, you are paid at your rate of basic pay plus a Sunday premium of 25% of your basic rate for each hour of Sunday work which is not overtime (i.e. occasional work on Sunday outside the normal tour of duty is considered overtime work).

HAZARDOUS PAY DIFFERENTIAL: An 8 percent differential is applicable to employees employed in a position that represents a high degree of hazard when working with or in close proximity to ordnance, explosives, and incendiary materials. This includes work such as screening, blending, dying, mixing, and pressing of sensitive ordnance, explosives, and pyrotechnic compositions such as lead azide, black powder and photoflash powder. All dry-house activities involving propellants or explosives. Demilitarization, modification, renovation, demolition, and maintenance operations on sensitive ordnance, explosives and incendiary materials. All operations involving regarding and cleaning of artillery ranges.

NNM08AA54C
ATTACHMENT J-3

A 4 percent differential is applicable to employees employed in a position that represents a low degree of hazard when working with, or in close proximity to

ordnance, (or employees possibly adjacent to) explosives and incendiary materials which involves potential injury such as laceration of hands, face, or arms of the employee engaged in the operation, irritation of the skin, minor burns and the like; minimal damage to immediate or adjacent work area or equipment being used. All operations involving, unloading, storage, and hauling of ordnance, explosive, and incendiary ordnance material other than small arms ammunition.

NOTE: These differentials are only applicable to work that has been specifically designated by the agency for ordnance, explosives, and incendiary material differential pay.

**** UNIFORM ALLOWANCE ****

If employees are required to wear uniforms in the performance of this contract (either by the terms of the Government contract, by the employer, by the state or local law, etc.), the cost of furnishing such uniforms and maintaining (by laundering or dry cleaning) such uniforms is an expense that may not be borne by an employee where such cost reduces the hourly rate below that required by the wage determination. The Department of Labor will accept payment in accordance with the following standards as compliance:

The contractor or subcontractor is required to furnish all employees with an adequate number of uniforms without cost or to reimburse employees for the actual cost of the uniforms. In addition, where uniform cleaning and maintenance is made the responsibility of the employee, all contractors and subcontractors subject to this wage determination shall (in the absence of a bona fide collective bargaining agreement providing for a different amount, or the furnishing of contrary affirmative proof as to the actual cost), reimburse all employees for such cleaning and maintenance at a rate of \$3.35 per week (or \$.67 cents per day). However, in those instances where the uniforms furnished are made of "wash and wear" materials, may be routinely washed and dried with other personal garments, and do not require any special treatment such as dry cleaning, daily washing, or commercial laundering in order to meet the cleanliness or appearance standards set by the terms of the Government contract, by the contractor, by law, or by the nature of the work, there is no requirement that employees be reimbursed for uniform maintenance costs.

The duties of employees under job titles listed are those described in the "Service Contract Act Directory of Occupations", Fifth Edition, April 2006, unless otherwise indicated. Copies of the Directory are available on the Internet. A link to the Directory may be found on the WHD home page at <http://www.dol.gov/esa/whd/> or through the Wage Determinations On-Line (WDOL) Web site at <http://wdol.gov/>.

REQUEST FOR AUTHORIZATION OF ADDITIONAL CLASSIFICATION AND WAGE RATE {Standard Form 1444 (SF 1444)}

Conformance Process:

The contracting officer shall require that any class of service employee which is not listed herein and which is to be employed under the contract (i.e., the work to be performed is not performed by any classification listed in the wage determination), be classified by the contractor so as to provide a reasonable relationship (i.e., appropriate level of skill comparison) between such unlisted classifications and the classifications listed in the wage determination. Such conformed classes of employees shall be paid the monetary wages and furnished the fringe benefits as are determined. Such conforming process shall be initiated by the contractor prior to the performance of contract work by such unlisted class(es) of employees. The conformed classification, wage rate, and/or fringe benefits shall be retroactive to the commencement date of the contract. {See Section 4.6 (C)(vi)} When multiple wage

NNM08AA54C
ATTACHMENT J-3

determinations are included in a contract, a separate SF 1444 should be prepared for each wage determination to which a class(es) is to be conformed.

The process for preparing a conformance request is as follows:

- 1) When preparing the bid, the contractor identifies the need for a conformed occupation) and computes a proposed rate).
- 2) After contract award, the contractor prepares a written report listing in order proposed classification title), a Federal grade equivalency (FGE) for each proposed classification), job description), and rationale for proposed wage rate), including information regarding the agreement or disagreement of the authorized representative of the employees involved, or where there is no authorized representative, the employees themselves. This report should be submitted to the contracting officer no later than 30 days after such unlisted class(es) of employees performs any contract work.
- 3) The contracting officer reviews the proposed action and promptly submits a report of the action, together with the agency's recommendations and pertinent information including the position of the contractor and the employees, to the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, for review. (See section 4.6(b)(2) of Regulations 29 CFR Part 4).
- 4) Within 30 days of receipt, the Wage and Hour Division approves, modifies, or disapproves the action via transmittal to the agency contracting officer, or notifies the contracting officer that additional time will be required to process the request.
- 5) The contracting officer transmits the Wage and Hour decision to the contractor.
- 6) The contractor informs the affected employees.

Information required by the Regulations must be submitted on SF 1444 or bond paper.

When preparing a conformance request, the "Service Contract Act Directory of Occupations" (the Directory) should be used to compare job definitions to insure that duties requested are not performed by a classification already listed in the wage determination. Remember, it is not the job title, but the required tasks that determine whether a class is included in an established wage determination. Conformances may not be used to artificially split, combine, or subdivide classifications listed in the wage determination.

4600-CHWP0002	Chill Water Pump, Rm 1002 - Disconnect at pump
4600-CNDP0001	Condensate Pump, Steam-Driven, Rm 1002
4600-COIL0001	VAV/Reheat Coil, Outside Rm 1102A (VAV 1-101)
4600-COIL0002	VAV/Reheat Coil, Rm 1102B (VAV 1-102)
4600-COIL0003	VAV/Reheat Coil, Rm 1102C (VAV 1-103)
4600-COIL0004	VAV/Reheat Coil, Rm 1102F (VAV 1-104)
4600-COIL0005	VAV/Reheat Coil, Rm 1102D (VAV 1-105)
4600-COIL0006	VAV/Reheat Coil, Rm 1102E (VAV 1-106)
4600-COIL0007	VAV/Reheat Coil, Rm 1102 (VAV 1-107)
4600-COIL0008	VAV/Reheat Coil, Rm 1105 (VAV 1-108)
4600-COIL0009	VAV/Reheat Coil, Rm 1107 (VAV 1-109)
4600-COIL0010	VAV/Reheat Coil, Hallway Outside Rm 1106 (VAV 1-110)
4600-COIL0011	VAV/Reheat Coil, Rm 1103 (VAV 1-111)
4600-COIL0012	VAV/Reheat Coil, Hallway Between Rm 1103/1107 (VAV 1-112)
4600-COIL0013	VAV/Reheat Coil, Rm 1108 (VAV 1-113)
4600-COIL0014	VAV/Reheat Coil, Outside Rm 1105 (VAV 1-114)
4600-COIL0015	VAV/Reheat Coil, Outside Rm 1106 (VAV 1-115)
4600-COIL0016	VAV/Reheat Coil, Rm 1007 (VAV 1-116)
4600-COIL0017	VAV/Reheat Coil, Rm 1304 (VAV 1-117)
4600-COIL0018	VAV/Reheat Coil, South of Rm 1304 (VAV 1-118)
4600-COIL0019	VAV/Reheat Coil, Rm 1005 (VAV 1-119)
4600-COIL0020	VAV/Reheat Coil, Entry to Rm 1327 (VAV 1-120)
4600-COIL0021	VAV/Reheat Coil, Rm 1327 (VAV 1-121)
4600-COIL0022	VAV/Reheat Coil, South of Rm 1327 (VAV 1-122)
4600-COIL0023	VAV/Reheat Coil, Rm 1321 (VAV 1-123)
4600-COIL0024	VAV/Reheat Coil, Hallway NW of Rm 1321 (VAV 1-124)
4600-COIL0025	VAV/Reheat Coil, Entry to Rm 1316 (VAV 1-125)
4600-COIL0026	VAV/Reheat Coil, Rm 1310 (VAV 1-126)
4600-COIL0027	VAV/Reheat Coil, Hallway N of Rm 1312 (VAV 1-127)
4600-COIL0028	VAV/Reheat Coil, Rm 1313 (VAV 1-128)
4600-COIL0029	VAV/Reheat Coil, Rm 1201 (VAV 3-101)
4600-COIL0030	VAV/Reheat Coil, Outside Rm 1201C (VAV 3-102)
4600-COIL0031	VAV/Reheat Coil, Outside Doorway to Rm 1201C (VAV 3-103)
4600-COIL0032	VAV/Reheat Coil, Outside Doorway to Rm 1201B (VAV 3-104)
4600-COIL0033	VAV/Reheat Coil, Rm 1201 (VAV 3-105)
4600-COIL0034	VAV/Reheat Coil, Outside Doorway to Rm 1201A (VAV 3-106)
4600-COIL0035	VAV/Reheat Coil, Rm 1201E (VAV 3-107)
4600-COIL0036	VAV/Reheat Coil, East of Rm 1207 (VAV 3-108)
4600-COIL0037	VAV/Reheat Coil, Rm 1208 (VAV 3-109)
4600-COIL0038	VAV/Reheat Coil, Outside Doorway to Rm 1208 (VAV 3-110)
4600-COIL0039	VAV/Reheat Coil, Outside Doorway to Rm 1212 (VAV 3-111)
4600-COIL0040	VAV/Reheat Coil, Rm 1214 (VAV 3-112)
4600-COIL0041	VAV/Reheat Coil, Outside Doorway to Rm 1213 (VAV 3-113)
4600-COIL0042	VAV/Reheat Coil, Rm 1204 (VAV 3-114)
4600-COIL0043	VAV/Reheat Coil, Rm 1204 (VAV 3-115)
4600-COIL0044	VAV/Reheat Coil, Hallway NW of Rm 1011 (VAV 3-116)
4600-COIL0045	VAV/Reheat Coil, Rm 1215 SW Corner (VAV 3-117)
4600-COIL0046	VAV/Reheat Coil, Outside Doorway to Rm 1011 (VAV 3-118)
4600-COIL0047	VAV/Reheat Coil, Rm 1012 NW Corner (VAV 3-119)
4600-COIL0048	VAV/Reheat Coil, Rm 1403 (VAV 3-120)
4600-COIL0049	VAV/Reheat Coil, Rm 1404 (VAV 3-121)
4600-COIL0050	VAV/Reheat Coil, Entrance to Rm 1404 (VAV 3-122)
4600-COIL0051	VAV/Reheat Coil, NE Corner of Rm 1404 (VAV 3-123)

4708-UH0013	Unit Heater, Steam, Rm B1C/E-07
4708-UH0014	Unit Heater, Steam, Rm 1193
4708-UH0015	Unit Heater, Steam, Rm 1193
4708-UH0016	Unit Heater, Steam, Rm 1193
4708-UH0017	Unit Heater, Steam, Rm 1193
4708-UPS0001	Ups Power System, E-68 (Battery Room)
4708-UPS0002	UPS Power System, Rm B18C/Rm E06B
4708-UPS0003	UPS Power System, Rm B18C/Rm E06B
4708-UPSS0001	Static Switch Meter Cabinet, Rm B18C/Rm E06B
4708-VSC0003	Variable Frequency Drive, Rm 1280
4708-WJET0003	Water Jet, Rm B1C/Rm E07 - Disconnect in room E7
4708-WJET0005	Water Jet, Basement Tunnel West Crossover - Disconnect at chiller
4708-WJET0006	Water Jet, Rm B38/Rm E02 - Disconnect in room E2
4708-WJET0007	Water Jet, Rm B39/Rm E01 - Disconnect room E1
4708-WSFT0001	Water Softener
4708-XFMR0002	Transformer, Rm 1108
4708-XFMR0003	Transformer, Rm 1108
4708-XFMR0004	Transformer, Outside Rm 1113A
4708-XFMR0005	Transformer, Rm 155 South Wall
4708-XFMR0006	Transformer, Rm 155
4708-XFMR0007	Transformer, Rm 155
4708-XFMR0008	Transformer, Rm 155 South Wall
4708-XFMR0009	Transformer, Rm 155 South Wall
4708-XFMR0010	Transformer, Rm 155, North Wall
4708-XFMR0011	Transformer, Rm 156/Rm E21
4708-XFMR0012	Transformer, Rm 156/Rm E21
4708-XFMR0013	Transformer, Rm 156/Rm E21
4708-XFMR0014	Transformer, Rm 156/Rm E21
4708-XFMR0015	Transformer, Rm 156/Rm E21
4708-XFMR0016	Transformer, Rm 156/Rm E21
4708-XFMR0017	Transformer, Rm 156/Rm E21
4708-XFMR0018	Transformer, Rm 156/Rm E21
4708-XFMR0019	Transformer, Rm 156/Rm E21
4708-XFMR0020	Transformer, Rm 153 North Wall
4708-XFMR0021	Transformer, Rm 153, North Wall
4708-XFMR0022	Transformer, Rm 153, South Wall
4708-XFMR0023	Transformer, Rm 153, Column G
4708-XFMR0024	Transformer, Rm 153, Column J
4708-XFMR0025	Transformer, Rm 153, Column J
4708-XFMR0026	Transformer, Rm 153, Column K
4708-XFMR0027	Transformer, Rm 153, North Wall
4708-XFMR0028	Transformer, Rm 153, North Wall
4708-XFMR0029	Transformer, Rm B1C/Rm E07
4708-XFMR0030	Transformer, Rm B5
4708-XFMR0031	Transformer, Rm B18D/Rm E06
4708-XFMR0032	Transformer, Adjacent to Rm B24D
4708-XFMR0033	Transformer, Adjacent to Rm B24D
4708-XFMR0034	Transformer, Mezzanine
4708-XFMR0035	Transformer, Mezzanine
4708-XFMR0036	Transformer, Mezzanine
4708-XFMR0037	Transformer, Mezzanine
4708-XFMR0038	Transformer, Mezzanine
4708-XFMR0039	Transformer, Mezzanine

INSTALLATION ACCOUNTABLE GOVERNMENT PROPERTY

- A. Government Equipment (GE). The Government will make available to the Contractor the GE described below. The equipment will be classified as either Special Purpose or General Purpose. At the end of the phase-in period, the Contractor shall notify the Government of any equipment they do not want to keep.
1. General Purpose Equipment (GPE). General Purpose Equipment which is commercially available and has historically been provided to the Contractor in performance of this contract is shown in the chart below. This equipment will be made available to the Contractor in an "as is" condition for their use in accomplishing work under this contract. Use of this equipment for work not directly associated with this contract is strictly prohibited. If the Contractor elects to use any of the equipment offered, they shall be fully responsible for maintenance and upkeep of the equipment. Costs for this activity shall be considered as indirect. The failure of any of this equipment to perform shall not excuse the Contractor for work performance under this contract. The Contractor shall return to the Government any used Government-owned GPE that can no longer economically be repaired or maintained. If the Contractor determines the equipment turned in is still necessary to accomplish the work, the Contractor shall replace the necessary equipment at no increase in the Lump Sum amount of this contract.

2. Special Purpose Equipment (SPE). Special Purpose Equipment is considered unique to this effort and essentially permanent in duration. The responsibility to control, provide maintenance, replace or otherwise modify the inventory of mobile SPE and SPE computer equipment lies with the Government. Maintenance and upkeep of all other SPE shall be the responsibility of the Contractor. Control and replacement will remain the responsibility of the Government for SPE. It shall be the duty of the Contractor to use and operate these items in the best possible manner to ensure that maximum utilization of this equipment is made toward carrying out the requirement of the Performance Work Statement.

The Contractor shall be responsible for routine daily operator inspections on all mobile SPE they use. In addition, for mobile cranes, the Contractor shall be responsible for performing the required load tests and shall provide Non-Destruction Evaluation (NDE) inspections of the hook for all load tests performed by the Contractor while the equipment is in their possession.

Title of this equipment will remain with the Government and the Government will determine when replacement of equipment is required. Government replaced equipment is subject to funding approval; therefore, specific replacement schedules are not available. If replacement is due to Contractor negligence in operation or maintenance of equipment, the Contractor shall reimburse the Government for the replacement of the equipment.

B. Government Fueling The Contractor may purchase fuel (unleaded gas and diesel) from the Government for Contractor-provided vehicles operated in conjunction with this contract. The rate of fuel is determined on a monthly basis and deducted from the contract payment. The Contractor may continue to purchase fuel at the new rates if they so desire. In order to purchase Government fuel, the Contractor shall use vehicles that comply with Executive Order 13149.

C. The Government will furnish six (6) Outsourcing Desktop Initiative for NASA (ODIN) seats that include Integrated Desktop Services (IDS) from the Government. Four (4) workstations will be required for operation of the Computerized Maintenance Management System (CMMS). One workstation will be required for the Sign Shop and one workstation will be required for the PT&I program. Each seat includes the following:

- Hardware (including replacement after 3 years)
- Integrated Desktop Services (IDS)
- Software (including MS Office, email, anti-virus, browser and other utilities)
- Hardware maintenance that includes 4-hour return to service
- Software maintenance that includes 4-hour return to service and software technology refresh in the form of upgrades, security patches, and bug fixes.
- One free move, add, or change per year per seat
- Network connectivity including security protection
- Help desk and desk-side support
- Network printer access within 60 feet of desktop

50 MB of server storage (file storage)
100 MB of email storage on server
Dial-in or Virtual Private Network (VPN) access

The contractor may purchase additional ODIN seats. These seats range in price from \$160.46 per month for a desktop system to \$212.46 for a laptop and docking station. Additional ODIN seat costs will be deducted from the Contractor's invoice on a monthly basis. If the Government's desktop service costs vary by more than plus or minus 10%, rates will be adjusted for the next year following the rate change. There will be no equitable adjustment provided for the previous year's rates. The Contractor may continue to purchase desktop services at the new rates if they so desire. No Contractor owned hardware will be connected to the Government owned system.

NNM08AA54C

ATTACHMENT J-9

SYSTEM DEFINITIONS

Introduction: The following attachment identifies the primary systems at MSFC and assigns a number to each type of system to be used as a cross reference with Attachment J-10. Each of the unique system numbers (1st column) identifies the system as shown in the 2nd column. For each system there is a system description which briefly defines the function of the system, an output description which defines the expected outputs from the systems and a section on components which describes the major components in the system.

RFP NNM08223562R
ATTACHMENT J-9
SYSTEM DEFINITIONS

SYSTEM NO	SYSTEM	SYSTEM DESCRIPTION, OUTPUT, AND COMPONENTS
1	Water Cooled A/C System	
	A. Description	That system which supplies conditioned air (cooled and or heated) to the occupied or utilized space, to include personnel, equipment or storage utilization as defined by the Government.
	B. Output	The occupied space shall be maintained at temperatures specified in the design specifications for personnel comfort. Air exchanges and indoor air quality shall be provided to meet current ASHRAE recommendations. Discharge Air temperatures from HVAC units shall be as directed in Spring/Summer and Fall/Winter Seasonal Adjustment plans.
	C. Components	Those systems are defined to include chilled water, direct expansion systems, and PTOA (Pre-Treated Outside Air), interior and exterior locations including mechanical rooms, computer rooms, and overhead installations. This may also include but not be limited to permanent chillers and portable chillers, spot coolers, window units, D/X split systems, fan coil units, condenser units, package units, and floor mounted computer room type units. This application includes a condenser water system. Components shall be defined as, but not limited to, coil (CW and refrigerant), fan and fan variable frequency drive unit, motor, belt, filters, control valves, reboiler, condensate collection pans an piping, overflow protection devices, humidity control heaters (hot water and electric) and instrumentation, humidifiers, compressor and associated instrumentation and controls, gauges and other instrumentation and controls specific to the air handler systems including flow devices, probes, delta-Pressure switches, etc., which are remotely recorded by the FMCS or manually recorded to provide energy management of FMCS data, and controls specific to the air handler systems, air distribution systems such as mixing boxes, variable air terminals, fans, heaters, ducting, dampers, insulation and accelerometers.

RFP NNM08223562R
ATTACHMENT J-9
SYSTEM DEFINITIONS

SYSTEM NO	SYSTEM	SYSTEM DESCRIPTION, OUTPUT, AND COMPONENTS
2	Air Cooled A/C System	
	A. Description	That system which supplies conditioned air (heated and or cooled) to the occupied or utilized space, to include personnel, equipment or storage utilization as defined by the Government.
	B. Output	The occupied space shall be maintained at temperatures specified in the design specifications for critical areas. Air exchanges and indoor air quality shall be provided to meet current ASHRAE recommendations. Discharge Air temperatures from HVAC units shall be as directed in Spring/Summer and Fall/Winter Seasonal Adjustment plans.
	C. Components	Those systems are defined to include direct expansion systems, and PTOA (Pre-Treated Outside Air), interior and exterior locations including mechanical rooms, computer rooms, and overhead installations. This may also include but not be limited to permanent chillers and portable chillers, spot coolers, window units, D/X split systems, fan coil units, condenser units, package units, and floor mounted computer room type units. Condenser water system is not used in this application. Components shall be defined as, but not limited to, coil (CW and refrigerant), fan, constant and variable frequency fan drive units, motor, belt, filters, control valves, reboiler, condensate collection pans and piping, overflow protection devices, humidity control heaters (hot water and electric), and instrumentation, humidifiers, compressor, and associated instrumentation and controls, gauges and other instrumentation and controls specific to the air handler systems including flow devices, probes, delta-pressure switches, etc., which are remotely recorded by the FMCS or manually recorded to provide energy management of FMCS data, air distribution systems such as mixing boxes, variable air terminals, fans, heaters, ducting, dampers, insulation, and accelerometers.

ATTACHMENT J-9
SYSTEM DEFINITIONS

SYSTEM NO	SYSTEM	SYSTEM DESCRIPTION, OUTPUT, AND COMPONENTS
3	Packaged A/C System	
	A. Description	That system which supplies conditioned air (cooled and or heated) to the occupied or utilized space, to include personnel, equipment or storage utilization as defined by the Government.
	B. Output	The occupied space shall be maintained at temperatures specified in the design specifications for personnel comfort. Air exchanges and indoor air quality shall be provided to meet current ASHRAE recommendations. Discharge air temperatures from HVAC units shall be as directed in Spring/Summer and Fall/Winter seasonal adjustment plans.
	C. Components	Those systems are defined to include Packaged A/C components that fit into a fixed ventilation system without the use of condenser water systems or exterior fans for heat removal. Removes heat by passing outside air or recirculated air over a cooling and or heating coil into building.
4	Split A/C System	
	A. Description	That system which supplies conditioned air to the occupied or utilized space, to include personnel, equipment, or storage utilization as defined by the Government.
	B. Output	The occupied space shall be maintained at temperatures specified in the design specifications for personnel comfort. Air exchanges and indoor air quality shall be provided to meet current ASHRAE recommendations. Discharge air temperatures from these HVAC units shall be as directed in Spring/Summer and Fall/Winter Seasonal Adjustment plans.
	C. Components	Those systems which are defined to include separate condensing units from the cooling units which operate on direct expansion from the refrigerant.

RFP NNM08223562R
ATTACHMENT J-9
SYSTEM DEFINITIONS

SYSTEM NO	SYSTEM	SYSTEM DESCRIPTION, OUTPUT, AND COMPONENTS
5	Secondary Chilled Water Loop System	
	A. Description	Those closed loop cooling systems that use a chilled water heat exchanger(s) to provide a secondary cooling water loop to provide cleaner cooling water (usually distilled water) for sensitive/critical equipment.
	B. Output	These systems shall meet the designed requirements for flow, temperature, and capacity and be free of leaks. Insulation shall be maintained intact.
	C. Components	Closed loop cooling systems may contain, but not be limited to, any combination of heat exchangers, pumps, piping, fittings, labels, valves, flow indicators, expansion tanks, strainers, filters, auto air eliminators, insulation, instrumentation, and controls.
6	Refrigeration System	
	A. Description	Those direct expansion refrigerant units or systems that provide for a closed loop cooled or frozen storage for food, film, samples or specimens as found in cafeterias or laboratories.
	B. Output	Those systems shall meet the design requirements of the manufacturer's and end-users for temperature and capacity and shall be maintained free of leaks and in accordance with all ASHRAE regulations.
	C. Components	Refrigerant units or systems may contain, but not be limited to; refrigerators, freezers, or combination units of either single unit sized (somewhat portable) or walk-in sized (usually built-in). Components shall include sealed doors, latches, compressors, coils, filters, piping, valves, strainers, insulation and instrumentation. Using various refrigerants such as R-12, R-22, and R-113, and R134a.

RFP NNM08223562R
ATTACHMENT J-9
SYSTEM DEFINITIONS

SYSTEM NO	SYSTEM	SYSTEM DESCRIPTION, OUTPUT, AND COMPONENTS
7	Cooling Towers and Condenser Water System	
	A. Description	Cooling towers/condenser water systems are heat rejection systems that provide cooling water for condensing refrigerants in HVAC/Chillers or other cooling applications.
	B. Output	These systems shall perform within designed performance specifications. Contractor shall provide water treatment system(s) to maintain corrosion rates less than 2.0 mils per year and shall maintain the water and tower areas free of algae and other foreign matter.
	C. Components	Cooling tower/condenser water systems are defined as containing, but not limited to, all or any combination of cooling towers, piping, fittings, strainers, labels, fans, gear boxes, flow elements, basins, pumps, valves, fire detection and protection equipment, controls, accelerometers, and instrumentation including flow devices, probes, delta-pressure switches, etc., which are remotely recorded by the FMCS or manually recorded to provide energy management of FMCS data.
8	Hot Water Heating System	
	A. Description	That system which supplies and distributes hot water to various buildings for use in the HVAC systems.
	B. Output	The hot water systems shall be maintained at between 80 and 180 degrees F at the coils as the system or seasonal plan requires.
	C. Components	The hot water system components shall include, but not be limited, to hot water boilers, heat exchangers, coils, pumps, valves, strainers, piping, instrumentation, and insulation. The system shall be maintained free of leakage.

RFP NNM08223562R
ATTACHMENT J-9
SYSTEM DEFINITIONS

SYSTEM NO	SYSTEM	SYSTEM DESCRIPTION, OUTPUT, AND COMPONENTS
9	Steam Heating System	
	A. Description	That system which supplies and distributes steam to the various buildings for use in HVAC. It shall also include the system which collects and return condensate (cooled steam to hot water) produced from the steam system.
	B. Output	The steam systems shall be maintained at between 7 and 100 psig at the steam boilers outlet as the systems or seasonal plan requires. Process use steam shall be provided to meet the design requirements for individual building users. The condensate return systems shall function to collect and return the condensate produced by the steam system to each condensate collection system or feed water tank. State Certification of all steam boilers that run above 15 psig shall be accomplished yearly and shall require at least a daily preventative maintenance watch. The systems shall be maintained free of leakage.
	C. Components	The steam system and condensate return system are defined to include but not limited to the steam and condensate return systems inside each building. The single central steam plant system shall be maintained from the plant to each building it serves. The components of the steam system shall include, but not be limited to, steam boilers, pressure reducing/regulating stations, instrumentation, pressure switches, FMCS components, heat exchangers; steam coils, relief valves, valves, traps, pumps, tanks, strainers, piping, and insulation.

RFP NNM08223562R
ATTACHMENT J-9
SYSTEM DEFINITIONS

SYSTEM NO	SYSTEM	SYSTEM DESCRIPTION, OUTPUT, AND COMPONENTS
10	Natural Gas Heating System	
	A. Description	Those systems that provide heating by use of direct natural gas burning in a heating device and heated air disbursement.
	B. Output	The natural gas heaters or systems shall be maintained to provide safe space heating as per the manufacturers requirements and their design parameters and as is adjustable at each thermostat (if applicable).
	C. Components	The natural gas heating systems components shall include but not be limited to; piping from each building gas regulator to each heating device, valves, regulators, strainers, electric fans, thermostats, and structural supports.
11	Electric Heating System	
	A. Description	That system which supplies and distributes electrically heated air.
	B. Output	The electric heaters shall be maintained to distribute heated air as per manufacturers requirements and as is adjustable at each thermostat.
	C. Components	The electric heaters or heating systems shall include but not limited to; heaters, thermostats, and the electric wiring from the main breakers.

RFP NNM08223562R
ATTACHMENT J-9
SYSTEM DEFINITIONS

SYSTEM NO	SYSTEM	SYSTEM DESCRIPTION, OUTPUT, AND COMPONENTS
12	Compressed Air System	
	A. Description	That system which supplies and distributes dry, compressed air to the building for use as control (HVAC) and shop service air.
	B. Output	The compressed air systems shall deliver compressed air to the buildings at between 80 and 120 PSI +/- 3 PSI with a dewpoint of -40F +/- 5F, as required. The downstream regulated pressure for control air shall be maintained at a nominal 20 PSI +/- 1 PSI. Certification of all pressure vessels (air receivers) shall be provided for every four (4) years as applicable. The systems shall be free of leakage, air or oil. Control air systems shall be maintained free of all oil.
	C. Components	The compressed air systems are defined to include the compressed air system inside the facility described as control air and shop service air. It will be supplied by the local compressor systems and be distributed throughout each building per the system drawings and available documentation. The components of this system may include, but not be limited to, control or service air compressors and receivers, piping, associated gauges, thermometers, and other instrumentation and controls; pressure regulating stations, associated instrumentation and controls; condensate traps; electric, and refrigerated air dryers; filters, relief valves, and valves.

RFP NNM08223562R
ATTACHMENT J-9
SYSTEM DEFINITIONS

SYSTEM NO	SYSTEM	SYSTEM DESCRIPTION, OUTPUT, AND COMPONENTS
13	Building Power System	
	A. Description	That system which supplies all electrical power to any given building to include backup power sources if present.
	B. Output	Power shall be at various standard voltages (120 volt single phase, 240 volt three phase, 480 volt three phase) and available amperage shall be consistent with wire size per the National Electric Code.
	C. Components	Those systems include the building transformers, the building feeds from the transformers (including current carrying conductor and conduit), distribution system to lighting and power panels (including all components, the current carrying conductor, and the conveyance system), backup emergency generators (if applicable), uninterruptible power supplies (if applicable),
14	Interior Building Power Distribution System	
	A. Description	That system which supplies electrical power to operate equipment such as machine tools, computers, etc. System limits include power distribution panels to the actual piece of equipment if hardwired or to the electrical outlet.
16	Exterior Lighting Systems	
	A. Description	That system which supplies lighting to exterior areas at the center including exterior building lights and parking lot lighting.
	B. Output	Appropriate lighting levels in various work areas in compliance with IEEE standards.
	C. Components	Those systems Include lighting distribution panels, all switches and other electrical components in the circuits, all current carrying conductors including their conveyance system, and all lamp fixtures.

RFP NNM08223562R
ATTACHMENT J-9
SYSTEM DEFINITIONS

SYSTEM NO	SYSTEM	SYSTEM DESCRIPTION, OUTPUT, AND COMPONENTS
17	Fire and Gas Detection systems	
	A. Description	That system which supplies alarms and alerts that either a fire or a hazardous gas is present.
	B. Output	Audible and visual alarms as well as remote alarms at either the RASA fire station, NASA Security Headquarters or the UCS desk.
	C. Components	System components include detector heads, wiring, multiplexer units, and transmitters.
18	Maintenance Detection System	
	A. Description	That system which supplies alarms and alerts that a system or component is in an abnormal condition.
	B. Output	Audible and visual alarms and remote alarms at the UCS desk.
	C. Components	System components include detector heads, wiring, multiplexer units, and transmitters.

ATTACHMENT J-10

SYSTEM AVAILABILITY REQUIREMENTS

Introduction: The following attachment provides a definition of the availability requirements for various systems in selected facilities at MSFC. Page 3 shows a Systems Availability Requirements Table with the relationship between the repair codes, the scope, the allowed total availability loss, the allowed partial availability loss, response time during core hours, response time during non-core hours, and repair time. The repair codes in column A are used as identifiers for use with the System Availability Requirements Matrix on page 2. The description in column B indicates the system or scope of the system. Note that the systems are not in a particular order and system criticality can only be determined by assessing the allowed outages and response and repair times. Column C indicates the allowable outages and is explained in note C at the bottom of the table. Column D likewise indicates allowable partial system outages that are explained in note D at the bottom of the table. Columns E and F show the allowable response times during core and non-core work hours respectively and column G indicates the allowable repair time.

The System Availability Requirements Matrix shows selected facilities on the Center by facility number cross-referenced with system numbers as defined in Attachment J-9. At the intersection point there will either be a number which references back to the repair code from the System Availability Requirements Table on page 3 indicating the availability requirement for that system in that facility, an "X" indicating that particular system exists in the building but is not covered by System Availability Requirements, or a blank indicating the system does not exist in that particular building. The Contractor is required to meet the availability requirements shown and failure to do so will result in deductions as defined in Section E. In general, failure to meet the requirements as set forth in the System Availability Requirements Table and Matrix will be considered a complete loss of quality for the affected CLINs. Because of the impact to the Center for repair codes 1 and 2 and the critically of these systems, the Government may choose to assess actual damages up to \$10,000 per event for a failure to meet the requirements of the System Availability Requirements Table and Matrix in addition to deductions calculated from the PRS (reference Clause E.9).

SYSTEM AVAILABILITY REQUIREMENTS
Repair Codes

A	B	C	D	E	F	G
REPAIR CODE	SCOPE	ALLOWED TOTAL AVAILABILITY LOSS (NUMBER OF OCCURENCES)	ALLOWED PARTIAL AVAILABILITY LOSS (NUMBER OF OCCURENCES)	RESPONSE TIME - CORE HOURS	RESPONSE TIME - NON- CORE HOURS	REPAIR TIME
1	NASA Wide Effect	0	1	15 MIN	15 MIN	1 HR
2	Fire Alarm	0	1	15 MIN	15 MIN	24 HR
2	Gas Alarm	0	2	15 MIN	4 HR	24 HR
3	Maintenance Alarm (UCS)	1	4	15 MIN	4 HR	72 HR

Notes:

Same repair code for fire and gas alarm but availability requirements differ.
Scheduled shutdowns properly planned by the Contractor do not count towards an unavailability loss.

- A. Repair or alarm code.
- B. Description of repair or alarm code.
- C. Allowed availability loss is the number of times per month the system is not performing its intended function, providing output, or performing redundancy. Losses over the amount will be subject to deduction.
- D. Allowed partial availability loss in the number of times per month a partial system loss of availability occurs while the system output is generally intact and performing its intended function. Losses over the amount will be subject to deduction.
- E. & F. Maximum allowable time the Contractor will be on-site investigating details of the problem, following notification. Column E refers to response time during core working hours and column F refers to time allowed during non-core working hours.
- G. Maximum allowable time to get system functional or time for completed expedited repairs. Repair time listed does not include the response times listed for core or non-core working hours. Repair times may be invalidated for items exceeding the TC limit as defined in Paragraph 4.9. However, for repair code 1, the Contractor shall take temporary measure to restore output provided by original system within the time frames specified in column G.
