Subject: NASA White Sands Test Facility (WSTF) 400 Area Supplemental Groundwater and Soil Vapor Monitoring Report – First Quarter 2024

Enclosed is the *NASA White Sands Test Facility (WSTF) 400 Area Supplemental Groundwater and Soil Vapor Monitoring Report – First Quarter 2024*. This report is submitted in accordance with NMED's May 2, 2023 approval with modifications of the *400 Area Supplemental Groundwater and Soil Vapor Monitoring Plan*, and the July 31, 2024 approval for rescheduling the submittal date for the first of four quarterly reports to August 30, 2024.

This submittal includes an Executive Summary as Enclosure 1, a printed, bound report as Enclosure 2, and a PDF of the report and Excel tables listed as Attachment 1 – Excel Tables on a CD-ROM as Enclosure 3.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

If you have any questions or comments concerning this submittal, please contact Antonette Doherty of my staff at 575-202-5406.

Executive Summary

This *400 Area Supplemental Groundwater and Soil Vapor Monitoring Report – First Quarter 2024* (Report) summarizes the first quarterly field groundwater and soil vapor sampling activities performed per the New Mexico Environment Department (NMED)-approved *400 Area Supplemental Groundwater and Soil Vapor Monitoring Plan* (NASA, 2023a; NMED 2023d). The data collected from a total of four quarterly sampling events will be used in conjunction with a single dataset collected as a component of the *400 Area Closure Investigation Report* (NASA, 2017) to perform trend statistics and to reevaluate and update the human health risk and hazard assessment at the 400 Area Closure. The data will also be used to evaluate the need for additional investigation and future development of a Corrective Measures Evaluation encompassing the 400 Area and 300 Area Closures.

The first quarter field sampling event was performed between February 26 and 28, 2024. Groundwater zones were accessible for all six Multiport Soil Vapor and Groundwater Monitoring Well (MSVGM) wells (400-EV-131, 400-FV-131, 400-GV-125, 400-HV-147, 400-IV-123, and 400-JV-150). Within all 15 MSVGM and Multiport Soil Vapor Monitoring Well (MSVM) wells, four of the 54 available soil vapor ports within the well network were reported to be blocked and/or inaccessible. These comprised the soil vapor ports at 400-FV-131 (104 feet [ft] and 130 ft), 400-JV-150 (145 ft), and 400-KV-142 (137 ft).

Twenty-seven analytes were identified above detection limits in groundwater collected from the six MSVGM wells. These comprised volatile organic compound(s) (VOCs) (six analytes including trichloroethene [TCE]), semi-volatile organic compound(s) (SVOCs) (three analytes; N-Nitrodimethylamine [DMN], N-Nitrosodimethylamine [NDMA], and Bromacil), and metals (18 analytes). Only NDMA was detected above White Sands Test Facility Groundwater Monitoring Plan levels (NASA 2023c) within five of the wells (400-EV-131, 400-FV-131, 400-GV-125, 400-HV-147, and 400-JV-150).

Four soil vapor analytes were identified from the 50 available soil vapor ports above NMED residential vapor intrusion screening levels (VISLs) as identified in the latest Risk Assessment Guidance (NMED, 2022). The exceedances were detected in the following monitoring well sampling ports:

- Benzene (2 locations): 400-EV-131-47.5’ and 400-EV-131-100’
- Ethylbenzene (1 location): 400-EV-131-130’
- Freon 11 (6 locations): 400-EV-131-10’; 400-EV-131-47.5’; 400-EV-131-100’; 400-EV-131-130 (also in duplicate); 400-FV-131-15’; and 400-FV-131-63’
- TCE (5 locations): 400-EV-131-47.5’; 400-EV-131-130’ (also in duplicate); 400-FV-131-63’; 400-GV-125-105’; and 400-GV-125-120’ (also in duplicate)

Soil vapor quality assurance/quality control samples indicated that the majority of detected analytes were also identified in field blank and/or trip blank samples. Analytical reports from the off-site soil vapor laboratory using Environmental Protection Agency Method TO-15 also showed that dilutions were necessary for soil vapor samples with elevated concentrations of Trichlorofluoromethane and 1,1,2-Trichloro-1,2,2-Trifluoroethane. This was specific to the soil vapor samples that exceeded the upper calibration limits for the laboratory equipment. This resulted in the method detection limits for other constituents increasing to above the corresponding NMED vapor intrusion screening level .

In addition to the first quarterly groundwater and soil vapor sampling event performed in February 2024, the three additional quarterly sampling events are scheduled for May 2024 (second quarter), August 2024 (third quarter), and November 2024 (fourth quarter). Contaminant vertical profiles and a comprehensive

statistical evaluation including a trend analysis will be included in the fourth quarterly Report when a total of five sets of analytical results are available (the 2017 closure investigation report combined with the four quarterly 2024 reports).

1.0 Introduction

National Aeronautics and Space Administration (NASA) performed a field investigation of the White Sands Test Facility (WSTF) 400 Area Closure between September 2016 and September 2017. The purpose of the investigation was to determine the nature, extent, and potential migration pathways of contaminant releases at the 400 Area Closure (formerly the 400 Area hazardous waste impoundments). Investigation activities included the installation of soil borings that were subsequently converted to multiport soil vapor and groundwater monitoring (MSVGM) wells and multiport soil vapor monitoring (MSVM) wells, and the collection and analysis of soil, soil vapor, and groundwater samples. An initial comprehensive groundwater and soil sampling event at the newly installed wells was performed as part of the 400 Area Closure investigation fieldwork in July and August 2017. NASA submitted the *400 Area Closure Investigation Report* (IR) to the New Mexico Environment Department (NMED) on December 27, 2017 (NASA, 2017). Following comments and revisions, NMED provided the *Approval with Modifications 400 Area Closure Investigation Report – Revision 3* on May 2, 2023 (NMED, 2023a). One of the required components of the approved IR was to provide a minimum four quarterly reports documenting 400 Area supplemental groundwater and soil vapor monitoring. This *400 Area Supplemental Groundwater and Soil Vapor Monitoring Report – First Quarter 2024* (Report) is the first of four planned quarterly reports intended to satisfy this requirement.

1.1 Site Location and Description

WSTF is located in Doña Ana County, New Mexico, 18 miles (mi) northeast of Las Cruces, New Mexico, and 65 mi north of El Paso, Texas. Access to the site is provided via NASA Road, a paved road with a guarded security gate. NASA Road intersects U.S. Highway 70, 1 mi west of Organ, New Mexico. Figure 1.1 provides a WSTF location map. The location of the WSTF 400 Area and 400 Area Closure are provided in Figure 1.2.

1.2 Objective and Scope

This first quarter 2024 report identifies the MSVGM and MSVM monitoring wells utilized for the supplemental monitoring, presents sampling methods performed at the monitoring wells, analytical requirements, and provides the groundwater and soil vapor analytical results collected for the monitoring period. The data presented and summarized within the Report is intended to supplement data from the initial groundwater and soil vapor event collected during the 400 Area closure investigation. The quarterly groundwater analysis provided includes volatile organic compounds (VOC), semi-volatile organic compounds (SVOC, including nitrosamines), inorganic compounds, and metals. The quarterly soil vapor analysis provided comprises VOC. These data will be used to support evaluation of the vapor intrusion pathway in the 400 Area as required by NMED (NMED, 2018; Comments 17 and 18) and update the human health risk and hazard assessment at the 400 Area closure. The data collectively comprising the initial sampling event from 2017 and the four quarterly events will also be used to support evaluation for potential additional investigation at the 400 Area closure and future development of a corrective measures evaluation for the 400 and 300 Area closures contaminants of concern.

Groundwater contaminants of potential concern (COPC) for the 400 Area closure includes un-combusted hydrazine; monomethyl hydrazine; unsymmetrical dimethylhydrazine; Aerozine 50 and nitrogen tetroxide from static hot firing rocket engine tests. In addition, 11 trichlorofluoromethane (Freon®[1]),

[1] Freon is a registered trademark of The Chemours Company CF, LLC.

dichlorofluoromethane (Freon 21), 1,1,2-trichloro-1,2,2-trifluoroethane (Freon 113), and isopropyl alcohol were used as referee propellants during early cold flow firings.

Table 1.1 provides the list of COPC for the 400 Area including chemicals and wastes known to have been released and contaminants that were detected during previous soil, soil vapor, and groundwater investigations (NASA, 2017). The list of COPC is comprehensive, and the only screening applied was to exclude inorganic analytes considered to be non-toxic, not associated with potential contaminants, and essential nutrients (e.g., magnesium, potassium, iron, sodium, and fluoride; NASA, 2017).

2.0 Field Monitoring

2.1 Monitoring Well Network

For the first quarter 2024 report, NASA utilized all accessible ports and well screens in the 15 monitoring wells to collect the groundwater and soil vapor samples required to meet the objectives of the monitoring Plan (NASA, 2023a). The location of each of the wells in conjunction with other monitoring wells in the immediate vicinity of the 400 Area closure is provided in Figure 2.1, and a summary of the design characteristics of the 15 monitoring wells and current status of the sampling screens and ports is provided in Table 2.1.

2.2 First Quarter 2024 Field Sampling Event

The first quarter field sampling event was performed at the 400 Area closure between February 26 and 28, 2024. Groundwater zones were accessible for six multiport soil vapor and groundwater monitoring well (MSVGM) wells. A copy of the WSTF external chain of custody (CoC) form for groundwater samples collected during the sampling event is provided in Appendix A.

Of the 54 soil vapor ports within the well network scheduled for sampling, four were reported to be blocked or inaccessible. These comprised soil vapor ports at well 400-FV-131 (104 feet [ft] and 130 ft), well 400-JV-150 (145 ft), and well 400-KV-142 (137 ft). A copy of the WSTF external CoC form for soil vapor samples collected during the sampling event is provided in Appendix A.

2.2.1 Groundwater Field and Sampling Activities

Groundwater samples from 400 Area MSVGM wells were all collected on February 26, 2024 using established site-specific procedures for low-flow sampling and for traditional purge and sample methods. In accordance with the approved *Groundwater Monitoring Plan Update for 2023* (NMED, 2023c; NASA, 2023b) from wells 400-EV-131, 400-FV-131, 400-GV-125, 400-HV-147, 400-IV-123, and 400-JV-150 (Table 2.1, Figure 2.1).

Groundwater field and sampling activities were recorded in the technician's field logbook (Appendix A). Prior to the collection of the groundwater samples, each well was purged of three well volumes and/or until dry using a dedicated low-flow bladder pump. Each pump is composed of polyvinyl chloride (PVC) with Teflon bladders and has a Teflon-lined ¼-inch outer diameter air supply and groundwater sample tube. The water level was allowed to recover in each MSVGM well before groundwater samples were collected. The groundwater samples were then dispensed into laboratory-provided sample containers, which were appropriately labeled and placed in cold storage. Groundwater samples were preserved in accordance with NASA's contracted off-site analytical laboratories requirements and shipped for analysis.

Groundwater samples collected from the six MSVGM wells were analyzed for the COPCs listed in the original NMED-approved 400 Area closure investigation workplan (IWP) (NASA, 2011a). Appendix B provides the chemical program quality assurance report (QAR) for groundwater sampling.

Groundwater samples were collected for analysis of:

- VOCs by SW-846 Method 8260C.
- SVOCs by SW-846 Method 8270D.
- Nitrosamines by EPA Method 607.
- Several metals by various SW-846 methods in accordance with the NMED-approved Groundwater Monitoring Plan (GMP; NMED 2023c; NASA, 2023b).

2.2.2 Soil Vapor Field and Sampling Activities

Soil vapor samples from 400 Area MSVM and MSVGM wells were collected between February 26 and February 28, 2024. A total of 50 soil vapor ports in the 15 MSVM and MSVGM wells were utilized for the monitoring event. Of the four blocked ports, two of the ports at 400-FV-131-130 (130 ft below ground surface [bgs]) and 400-JV-150-145 (145 ft bgs) were located beneath the potentiometric surface at their respective locations and the inability to sample the soil vapor implants is attributed to the groundwater table rising above the implant depths. For both MSVGM well locations, the aquifer is semi-confined, and this layer was breached during drilling. Underlying pressurized groundwater continued to rise gradually until equilibrium was reached, which resulted in submergence of the deepest soil vapor implant at both MSVGM well locations.

Soil vapor sampling at each MSVM or MSVGM well was performed in accordance with established WSTF procedures. Each vapor port at surface is affixed with an aluminum tag engraved with the identification of that port to ensure port identification. The soil vapor sampling sequence began with the shallowest port and continued sequentially until the deepest port had been sampled. The sampling ports and stainless-steel tubing were purged of entrained soil vapor with a non-dedicated surface vacuum pump to evacuate stagnant air below the sample collection fitting. Each port was purged for a minimum of five minutes per zone to evacuate at least three volumes of the ¼ inch tubing and soil vapor implant. Carbon dioxide, oxygen, and methane indicator parameters were monitored during purging to ensure stabilization prior to sampling and recorded in the field logbook (Appendix A).

Soil vapor samples were collected in one-liter stainless steel Summa canisters. The initial pressure for all canisters verified by the analytical laboratory is -14.3 pounds per square inch (PSI). The final canister pressure was noted in the field logbook and CoC form (Appendix A). Soil vapor samples were shipped to the laboratory for analysis for VOC using Environmental Protection Agency (EPA) Method TO-15. Soil vapor chemical samples were collected to evaluate as many COPCs as possible from the list originally provided in the NMED-approved 400 Area Closure IWP (NASA, 2011a). Appendix B provides the chemical program QAR for soil vapor sampling.

3.0 Quality Assurance/Quality Control

A total of nine quality assurance/quality control (QA/QC) samples were collected for groundwater as follows:

- Duplicate samples (2): 400-FV-131 (2402260936 for Method 8260 and 2402260945 for Method 607), and 400-GV-125 (2402261031 for Method 8260 and 2402261045 for Method 607).
- Field blanks (6): 400-EV-131 (2402260901 for Method 8260), 400-FV-131 (2402260937 for Method 8260), 400-GV-125 (2402261032 for Method 8260), 400-HV-147 (2402261006 for

Method 8260), 400-IV-123 (2402261411 for Method 8260), and 400-JV-150 (2402261316 for Method 8260).
- Trip blanks (1): 400-FV-131 (2402260745 for Method 8260).

The chemical program QAR for groundwater sampling is provided in Appendix B.

A total of 16 QA/QC samples were collected for soil vapor as follows:

- Duplicate samples (5) all for Method TO-15: 400-GV-125-120 (2402261413), 400-LV-125-10 (2402270941), 400-SV-09-45 (2402280949), 400-SV-10-125 (2402281029), and 400-SV-15-10 (2402281056).

- Field blanks (8) all for Method TO-15: 400-EV-131-10 (2402260905), 400-HV-147-95 (2402261015), 400-IV-123-80 (2402261450), 400-KV-142-12.5 (2402270851), 400-SV-05-100 (2402271033), 400-SV-09-10 (2402280941), 400-SV-10-50 (2402281014), and 400-SV-15-90 (2402281111).

- Trip blanks (3) all for Method TO-15: 400-JV-150-12.5 (2402261050), 400-SV-02-10 (2402271050), and 400-SV-07-10 (2402280815).

The chemical program QAR for soil vapor sampling is provided in Appendix B.

4.0 Groundwater and Soil Vapor Analytical Results

The results section includes any issues encountered, quality parameter measurements, analytical results, a comparison of analytical results to screening and/or cleanup levels. In addition to the first set of quarterly groundwater and soil vapor samples collected in February 2024, three additional quarterly sampling events are scheduled for May 2024 (second quarter), August 2024 (third quarter), and November 2024 (fourth quarter). Contaminant vertical profiles and a comprehensive statistical evaluation including a trend analysis will be included in the fourth quarterly report when five sets of analytical results are available for evaluation (the 2017 Closure Investigation Report combined with the four quarterly 2024 reports).

4.1 Groundwater Results

4.1.1 Issues Encountered

No issues were encountered during groundwater sampling for the six available MSVGM wells.

4.1.2 Groundwater Quality Parameter and Depth Measurements

As part of groundwater sample collection for laboratory chemical analyses, four water quality field parameters (temperature; specific conductivity; pH; and turbidity) were measured in each MSVGM well during the purging process and prior to sampling. This was to ensure sufficient purging had been performed and demonstrate that all groundwater within the well and gravel pack surrounding the screened zone had been removed. Table 4.1 provides the initial groundwater quality parameter measurements for MSVGM wells. The groundwater quality parameters and other sampling records including field/internal CoC forms are provided in Appendix A. The groundwater potentiometric surface based on elevations measured in the six wells is provided in Figure 4.1, with groundwater flow from east-northeast to west-southwest at a gradient of approximately 0.05 ft/ft.

4.1.3 Groundwater Chemical Analytical Results

The electronic analytical results for groundwater (Excel spreadsheet) are provided in Attachment 1 to this report. The laboratory analytical reports for groundwater samples are provided in Appendix C . A summary of the groundwater analytical results above laboratory detection limits is provided in Table 4.2. Twenty-seven analytes were identified above detection limits in groundwater samples collected from the MSVGM wells:

- VOCs (6 constituents): Freon 113; 1,2-Dichloro-1,1,2-trifluoroethane (Freon 123a); Chloroform; Freon 21; Trichloroethene (TCE); and Freon 11.
- SVOC Nitrosamines (2 constituents): N-Nitrodimethylamine (DMN; and N-Nitrosodimethylamine (NDMA).
- SVOC Bromacil (1 constituent).
- Metals (18 constituents): antimony; arsenic; barium; boron; calcium; chromium; cobalt; magnesium; manganese; molybdenum; nickel; potassium; selenium; sodium; strontium; thallium; vanadium; and zinc.

A summary of 400 Area groundwater analytical results above WSTF GMP cleanup-screening levels is provided in Table 4.3. The only analyte with detections above WSTF GMP levels was NDMA within five of the six wells: 400-EV-131: 400-FV-131: 400-GV-125: 400-HV-147: and 400-JV-150 (Figure 4.2).

4.1.4 Groundwater Statistical Trends

For this quarterly report, no statistical evaluations were performed due to an insufficient sample size (<6) to make reliable decisions that affect human health and the environment (EPA, 2022a). Therefore, no statistical trends will be performed for 400 Area groundwater during this study until after all four quarterly sampling events have been completed. With the original 400 Area 2017 sampling event presented in the IR and the four proposed quarterly sampling events, the sample size will be the minimum six. Statistical trends will be completed following the final (fifth) quarterly sampling event.

4.2 Soil Vapor Results

4.2.1 Issues Encountered

First quarter soil vapor samples were attempted at 54 available soil vapor ports in the 15 MSVGM and MSVM monitoring wells. Soil vapor samples were collected on the same day as groundwater samples from MSVGM wells, and all MSVGM wells were sampled on the same day (February 26, 2024). All soil vapor samples were collected on schedule between February 26 – 28, 2024 as required by the plan (NASA, 2023a). Four blocked soil vapor ports were identified at 400-FV-131-104, 400-FV-131-130, 400-JV-150-145, and 400-KV-142-137 and were not sampled for the first quarter event.

4.2.2 Soil Vapor Quality Parameter Measurements

Soil vapor quality parameters are obtained from each sampling port through field measurements. Quality parameters and other specific sampling-related details associated with each monitoring well sampling event are recorded by technicians in the field sampling record. Table 4.4 provides a summary of the soil vapor quality parameter measurements prior to sampling for MSVGM and MSVM wells. Field notes detailing the soil vapor quality parameters and other sampling records including field/internal CoC forms are provided in Appendix A.

4.2.3 Soil Vapor Chemical Analytical Results

The electronic analytical results for soil vapor (Excel spreadsheet) are provided in Attachment 1 to this report. The laboratory analytical reports for soil vapor samples are provided in Appendix C. Soil vapor samples were analyzed for VOCs using EPA Method TO-15. Table 4.5 provides all analytes that were tested. Twenty-three of the analytes analyzed by Method TO-15 are COPCs defined for the 400 Area closure investigation (NASA, 2011a): 1,1,1-trichloroethane; 1,1-dichloroethane; 2-butanone; 2-hexanone; 2-propanol; acetone; bromodichloromethane; bromoform; chlorobenzene; chloroform; chloromethane; dibromochloromethane; Freon 11; Freon 113; Freon 123; Freon 21; m,p-Xylene; methyl tert-butyl ether; methylene chloride; Tetrachloroethylene (PCE); toluene; trans-1,2-dichloroethene; and TCE.

The soil vapor analyte detections and concentration ranges are summarized in Table 4.5. Primary observations from the tabulated data are provided below:

- A total of 64 analytes were tested using EPA Method TO-15.
- 53 analytes were detected above laboratory detection levels for either soil vapor within monitoring well sampling zones or within field blank and trip blank samples.
- 11 analytes were reported as non-detect (ND) within both monitoring well sampling zones and field blank/trip blank samples.
- 21 analytes were detected only in monitoring well sampling zones.
- 29 analytes were detected in both monitoring well sampling zones and field blank/trip blank samples.
- 3 analytes were detected only in field blank/trip blank samples (Bromodichloromethane, Bromoform, and Dibromochloromethane).
- The majority of soil vapor detections reported above screening levels corresponded to MSVGM wells where groundwater was also present.

Analytical reports from the off-site soil vapor laboratory (ALS Laboratory) indicate that dilutions were necessary for soil vapor samples with elevated concentrations of Freon 11 and Freon 113, which exceeded the upper calibration limits for the laboratory analytical equipment. Dilution is the total number of unit volumes in which the soil vapor was dissolved, calculated by dividing unit volume by the volume of soil vapor analyzed (liters) and multiplying by the container dilution factor. Soil vapor dilutions varied from 3.53 (400-SV-09) for the lowest concentration sample up to 9,200 for the highest concentration sample (400-HV-147-130). For the samples with large dilutions and high concentrations reported for Freon 11 and Freon 113, elevated method detection limits (MDL) for other COPCs in the same samples potentially increase to above the corresponding NMED vapor intrusion screening level (VISL).

From consultations with the contracted analytical laboratory regarding EPA Method TO-15 sample dilution, NASA was informed there is no practical way to mitigate sample dilution that would remedy the effect on MDL for other COPC. Each Method TO-15 soil vapor sample is analyzed collectively for the suite of target COPC. If the concentration of a single compound or multiple compounds in any sample exceeds the preliminary calibration range, the sample must be diluted for reanalysis at an optimum volume. The standard laboratory practice is to run at the greatest volume possible based on the matrix sample. There is no option other than multiple injections to analyze the largest volume possible for samples containing high concentrations of specific analytes (in this case Freon 11 and Freon 113). All steps performed in the dilution and analysis of field sample canisters are included in the MDL procedure. It is not possible to sample for specific soil vapor COPCs using Method TO-15 at lower concentrations before diluting the sample. NMED guidance (Comment 4b.; NASA, 2021) indicated that analyses conducted with detection limits that are greater than applicable background screening and regulatory cleanup levels should be considered data quality exceptions and the reasons reported. Furthermore, when detection limits exceed screening levels (VISLs and/or risk-based concentrations [RBCs]), the resulting

data cannot be used for statistical analysis or risk assessment. NASA acknowledged this issue (response to Comment 4b.; NASA, 2021), and stated that constituents exhibiting detection limits greater than screening or regulatory cleanup levels will be identified and fully discussed in future reports.

The term "non-detect" is not appropriate for specific COPCs for diluted samples where MDL are above the respective screening levels. The reporting strategy used in Table 4.5 identifies the modified COPC MDL due to dilution and compares it to the corresponding screening level. Bold font indicates where the MDL exceeds the VISL (NMED, 2022)/regional screening level (RSL; EPA, 2022b)/risk-based concentration (RBC; NASA, 2022). Of the 64 analytes detected and reported as non-detect within the EPA Method TO-15 suite, the MDL increased above the corresponding regulatory screening level (either NMED VISL, EPA RSL, or WSTF RBC) for 29 of the analytes identified in bold in Table 4.5.

A summary of 400 Area soil vapor analytical results above NMED residential VISLs is provided in Table 4.6 and Figure 4.3. A total of 21 analytical results for four analytes (benzene, ethylbenzene, Freon 11, and TCE) exceeded the NMED VISLs are described below.

Detected in monitoring well sampling ports:

- Benzene (2 locations): 400-EV-131-47.5' and 400-EV-131-100'.
- Ethylbenzene (1 location): 400-EV-131-130'.
- Freon 11 (6 locations): 400-EV-131-10'; 400-EV-131-47.5'; 400-EV-131-100'; 400-EV-131-130 (also in duplicate); 400-FV-131-15'; and 400-FV-131-63'.
- TCE (5 locations): 400-EV-131-47.5'; 400-EV-131-130' (also in duplicate); 400-FV-131-63'; 400-GV-125-105'; and 400-GV-125-120' (also in duplicate).

Detected in QA samples (field blanks):

- Benzene (2 locations): 400-EV-131-10' and 400-HV-147-195'.
- Freon 11 (2 locations): 400-EV-131-10' and 400-HV-147-195'.

All analytical results that exceeded the NMED VISLs were below the equivalent depth sensitive WSTF RBC taken from the most recently approved version of the annual WSTF RBC report (NASA, 2022). Following the disapproval of NASA's 2023 RBC update (NMED, 2023b), NASA responded with a proposal to work with a subcontractor provide the 2024 RBC update using site-specific parameters to calculate more appropriate attenuation factors for use in RBC calculations (NASA, 2024).

4.2.4 Soil Vapor Statistical Trends

For this quarterly report, no statistical evaluations were performed due to an insufficient sample size (<6) to make reliable decisions that affect human health and the environment. Therefore, no statistical trends will be performed for 400 Area soil vapor during this study until after all five quarterly sampling events have been completed. With the original 400 Area 2017 sampling event presented in the IR and the five proposed quarterly sampling events, the sample size will be the minimum six. Statistical trends will be completed following the final (fifth) quarterly sampling event.

5.0 Conclusions and Recommendations

NASA recommends continuing the quarterly sampling for a total of five quarters and then providing statistical trends and comparisons to regulatory screening levels in the fifth quarterly report.

Notes:
NA Not Accessible (transducer in well).
NS Not Sampled (port below water level or blocked)
[1] The initial pre-set pressure for all soil vapor canisters at the ALS laboratory is -14.3 PSI. Any initial canister pressure with a different reading will be recorded in the Field Notes (Appendix A) and presented in this table. All initial canister pressures were reported at -14.3 PSI for the 1QTR field event.

Table 4.5 Soil Vapor Analytes and Concentration Ranges for First Quarter 2024

Trichloroethene (TCE)*	ND	980 J	ND	140 J FB	0.25 - **570**	69.5[1]	328[1]
Vinyl Chloride	ND	ND	ND	ND	0.20 - **450**	55.9[1]	1,040[1]

Notes:
Shaded analytes are ND for sampling zone and field blank/trip blank samples for dataset.
Bold indicates MDL due to dilution was greater than the VISL/RSL/RBC for the constituent (residential, industrial, or both).
* = Analyte is on list of potential 400 Area COPCs identified in the IWP (NASA, 2011b – 400 Area IWP).
A = The result of an analyte for a laboratory control sample (LCS), initial calibration verification (ICV) or continuing calibration verification (CCV) was outside standard limits.
FB = The analyte was detected in the field blank.
J = The result is an estimated value less than the quantitation limit, but greater than or equal to the detection limit.
ND = The analyte was not detected above the detection limit.

SV - SOIL VAPOR

WSTF 381B (06/2023)

Appendix B
Quality Assurance Report

National Aeronautics and Space Administration

Quality Assurance Report for White Sands Test Facility
400 Area Supplemental Groundwater and Soil Vapor Monitoring Report

First Quarter 2024

August 2024

NM 8800019434

Report Submitted: August 2024

Report Prepared by:
Stephanie M. Portillo
Environmental Scientist IV, Quality Assurance Manager
Navarro Research and Engineering, Inc.

1.0 Introduction

The 400 Area Supplemental Groundwater and Soil Vapor (400 Area GWSV) Monitoring Plan requires the preparation of an investigation report that includes soil analytical data reported. The Quality Assurance Report (QAR) prepared and reviewed by responsible environmental contractor data management personnel provides the following information:

- A summary of notable anomalies.
- A summary of notable data quality issues by analytical method, if any.
- A list of the sample events for soil vapor and groundwater samples collected in February 2024.
- The quantity and type of quality control samples collected or prepared in February 2024.
- Definitions of data qualifiers used in WSTF analytical data reporting.
- The quantity and type of data qualifiers applied to individual analytical results.
- A list of quality assurance narratives arranged by analytical method.
- A summary table of blank sample detections.

2.0 Data Quality

Samples collected during the first quarter of 2024, included soil vapor samples, groundwater samples, duplicates, field blanks, and trip blanks in accordance with the NMED approved 400 GWSV Monitoring Plan. Soil vapor samples and duplicates, were obtained by evacuating three tubing volumes of stagnant vapor from soil vapor implants and stainless steel tubing prior to sample collection into laboratory-provided SUMMA canisters. Groundwater samples and duplicates, were obtained by using low-flow purging procedures prior to sample collection from the dedicated low-flow bladder pump and disposable discharge tubing into laboratory-provided containers. Evacuation and purging procedures were completed in accordance with the 400 Area GWSV Monitoring Plan and the NMED approved Groundwater Monitoring Plan.

2.1 Notable Anomalies

The following notable anomalies were identified:

- SVOCs by SW-846 Method 8270D, nitrosamines by EPA Method 607, and several metals by various SW-846 Methods were collected in accordance with the GMP and in addition to the requirements of the NMED-approved IWP.
- No field blanks were collected for nitrosamines by EPA Method 607 for this investigation in accordance with the NMED approved AIWP and the GMP.
- No field blanks were collected for Total Metals for this investigation in accordance with the NMED approved AIWP and the GMP.
- Twelve results for nitrosamines by EPA Method 607 were identified for reanalysis due to calibration exceedances for NDMA, DMN, and Bromacil. Only one result is retained for each sample specific analyte. Results for original or diluted samples, identified in the laboratory report case narrative (SwRI M607-035) were qualified as rejected accordingly and received an “R” flag. Affected samples area as follows:
    - 2402260902A (400-EV-131)
    - 2402261040C (400-GV-125)

- 2402261045C (400-GV-125)
- 2402261007A (400-HV-147)

No other notable anomalies are associated with the groundwater analytical data associated with this QAR.

3.0 Data Tables

Table 1 summarizes the soil vapor and groundwater sample events for the first quarter collected in February 2024. This report is based on data quality issues related to the sample events listed in Table 1. Tables 2 through 7 contain information related to the sample events identified in Table 1. As specified by the IWP, specific quality control samples are utilized to assess the quality of analytical data. Table 2 presents the quantity of quality control samples collected for each analytical method. Table 3 compares the quality control sample percentages collected to the requirements in the IWP. When data quality criteria are not met, data qualifiers are applied to the data. Definitions of data qualifiers used for WSTF chemical analytical data are listed in Table 4. Table 5 and Table 6 present the total number of individual result records and summarize the quantity of field and laboratory data qualifiers assigned to individual analyte result records in the WSTF analytical database. Table 7 provides all quality assurance narratives associated with the sample events in Table 1. Narratives associated with qualified data are identified by bold text in Table 7.

Table 4 – Definitions of Data Qualifiers

Qualifier	Definition
*	User defined qualifier. See quality assurance narrative.
A	The result of an analyte for a laboratory control sample (LCS), initial calibration verification (ICV) or continuing calibration verification (CCV) was outside standard limits.
AD	Relative percent difference for analyst (laboratory) duplicates was outside standard limits.
D	The reported result is from a dilution.
EB	The analyte was detected in the equipment blank.
FB	The analyte was detected in the field blank.
G	The result is an estimated value greater than the upper calibration limit.
i	The result, quantitation limit, and/or detection limit may have been affected by matrix interference.
J	The result is an estimated value less than the quantitation limit, but greater than or equal to the detection limit.
NA	The value/result was either not analyzed for or not applicable.
ND	The analyte was not detected above the detection limit.

Qualifier	Definition
Q	The result for a blind control sample was outside standard limits.
QD	The relative percent difference for a field duplicate was outside standard limits.
R	The result is rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
RB	The analyte was detected in the method blank.
S	The result was determined by the method of standard addition.
SP	The matrix spike recovery and/or the relative percent difference for matrix spike duplicates was outside standard limits.
T	The sample was analyzed outside the specified holding time or temperature.
TB	The analyte was detected in the trip blank.
TIC	The analyte was tentatively identified by a GC/MS library search and the amount reported is an estimated value.

Table 5 – Quantity of Field Based Data Qualifiers Assigned to Individual Result Records

Method	Total Result Records	"FB"	"EB"	"TB"	"Q"	"QD"	"SP"	"R"

Table 7 – Quality Assurance Narratives

Location Sample_ID	Event Date	Modified EPA Method 607
400-EV-131	**2/26/2024**	**For Modified EPA Method 607, original results for N-Nitrodimethylamine, N-Nitrosodimethylamine, and Bromacil in sample 2402260902A are rejected due to sample dilution and reanalysis. Original samples maintained in the Q_disk only.**
400-EV-131	**2/26/2024**	**For Modified EPA Method 607, bromacil (6.82) in sample 2402260902A is an estimated value greater than the upper calibration limit.**
400-EV-131	**2/26/2024**	**For Modified EPA Method 607, concentrations of bromacil in sample 2402260902A exceeded calibration range. Sample extract was diluted 5-fold and reanalyzed.**
400-FV-131	2/26/2024	For Modified EPA Method 607, relative percent differences (RPD) for duplicate samples 2402260940C and 2402260945C were within control limits or below the calculable range.
400-GV-125	**2/26/2024**	**For Modified EPA Method 607, original results for N-Nitrodimethylamine, N-Nitrosodimethylamine, and Bromacil in sample 2402261045C and 2402261045C are rejected due to sample dilution and reanalysis. Original samples maintained in the Q_disk only.**
400-GV-125	2/26/2024	For Modified EPA Method 607, relative percent differences (RPD) for duplicate samples 2402261040C and 2402261045C were within control limits or below the calculable range.
400-GV-125	**2/26/2024**	**For Modified EPA Method 607, bromacil (6.06 ug/L and 5.79 ug/L) in sample 2402260902A is an estimated value greater than the upper calibration limit.**
400-GV-125	**2/26/2024**	**For Modified EPA Method 607, concentrations of bromacil in sample 2402261040C and 2402261045C exceeded calibration range. Sample extract was diluted 2-fold and reanalyzed.**
400-HV-147	**2/26/2024**	**For Modified EPA Method 607, original results for N-Nitrodimethylamine, N-Nitrosodimethylamine, and Bromacil in sample 2402261007A are rejected due to sample**

		dilution and reanalysis. Original samples maintained in the Q_disk only.
400-HV-147	**2/26/2024**	**For Modified EPA Method 607, concentrations of NDMA and DMN in sample 2402261007A exceeded calibration range. Sample extract was diluted 100-fold and reanalyzed.**
400-HV-147	**2/26/2024**	**For Modified EPA Method 607, NDMA (47.09 ug/L) and DMN (159.14 ug/L) in sample 2402261007A is an estimated value greater than the upper calibration limit.**

Location Sample_ID	Event Date	SW-846 Method 8260C
400-EV-131	**2/26/2024**	**For SW-846 Method 8260C, two unknown compounds were tentatively identified by a GC/MS library search in sample 2402260900A.**
400-EV-131	2/26/2024	For SW-846 Method 8260C, there were no detections in the field blank.
400-EV-131	**2/26/2024**	**For SW-846 Method 8260C, multiple compound results are estimated values less than the quantitation limit, but greater than or equal to the detection limit.**
400-FV-131	**2/26/2024**	**For SW-846 Method 8260C, one unknown compound was tentatively identified by a GC/MS library search in samples 2402260935A, 2402260936A (duplicate) and 2402260937A (field blank).**
400-FV-131	**2/26/2024**	**For SW-846 Method 8260C, Unknown was detected in the trip blank (2402260745C) at 8.5 ug/L.**
400-FV-131	**2/26/2024**	**For SW-846 Method 8260C, Unknown was detected in the field blank (2402260937C) at 9.2 ug/L.**
400-FV-131	**2/26/2024**	**For SW-846 Method 8260C, TCE results (0.55 ug/L and 0.54 ug/L) are estimated values less than the quantitation limit, but greater than or equal to the detection limit.**
400-FV-131	2/26/2024	For SW-846 Method 8260C, relative percent differences (RPD) for duplicate samples 2402260935C and 2402260936C were within control limits or below the calculable range.
400-GV-125	**2/26/2024**	**For SW-846 Method 8260C, Unknown was detected in the field blank (2402261032C) at 7.8 ug/L.**
400-GV-125	**2/26/2024**	**For SW-846 Method 8260C, unknown results are estimated values less than the quantitation limit, but greater than or equal to the detection limit.**
400-GV-125	**2/26/2024**	**For SW-846 Method 8260C, concentrations of CFC 11 in sample 2402261030C and 2402261031C exceeded calibration range. Sample extract was diluted 2.5-fold and reanalyzed.**
400-GV-125	**2/26/2024**	**For SW-846 Method 8260C, one unknown compound were tentatively identified by a GC/MS library search in sample 2402260900A.**
400-GV-125	**2/26/2024**	**For Total Metals, multiple compound results are estimated values less than the quantitation limit, but greater than or equal to the detection limit.**
400-HV-147	**2/26/2024**	**For SW-846 Method 8260C, multiple compound results are estimated values less than the quantitation limit, but greater than or equal to the detection limit.**
400-HV-147	**2/26/2024**	**For SW-846 Method 8260C, Unknown was detected in the field blank (2402261006A) at 8.2 ug/L.**
400-HV-147	**2/26/2024**	**For SW-846 Method 8260C, one unknown compound were tentatively identified by a GC/MS library search in sample 2402261005A.**
400-IV-123	**2/26/2024**	**For SW-846 Method 8260C, one unknown compound were tentatively identified by a GC/MS library search in sample 2402261410C.**
400-IV-123	**2/26/2024**	**For SW-846 Method 8260C, Unknown was detected in the field blank (2402261411C) at 8.9 ug/L.**
400-IV-123	**2/26/2024**	**For SW-846 Method 8260C, CFC 21 result (0.44 ug/L) is an estimated value less than the quantitation limit, but greater than or equal to the detection limit.**
400-JV-150	**2/26/2024**	**For SW-846 Method 8260C, Carbon Dioxide was detected in the field blank (2402261316A) at 9.5 ug/L.**
400-JV-150	**2/26/2024**	**For SW-846 Method 8260C, TCE (0.54 ug/L) and CFC 123a results (0.26 ug/L) are estimated values less than the quantitation limit, but greater than or equal to the detection limit.**

Location Sample_ID	Event Date	SW-846 Method 8260C
400-JV-150	**2/26/2024**	**For SW-846 Method 8260C, one unknown compound were tentatively identified by a GC/MS library search in sample 2402261315A.**

Location Sample_ID	Event Date	Total Metals
400-EV-131	**2/26/2024**	**For Total Metals, multiple compound results are estimated values less than the quantitation limit, but greater than or equal to the detection limit.**
400-FV-131	2/26/2024	For Total Metals, relative percent differences (RPD) for duplicate samples 2402260950C and 2402260959C were within control limits or below the calculable range.
400-FV-131	**2/26/2024**	**For Total Metals, multiple compound results are estimated values less than the quantitation limit, but greater than or equal to the detection limit.**
400-GV-125	2/26/2024	For Total Metals, relative percent differences (RPD) for duplicate samples 2402261050C and 2402261052C were within control limits or below the calculable range.
400-HV-147	**2/26/2024**	**For Total Metals, multiple compound results are estimated values less than the quantitation limit, but greater than or equal to the detection limit.**
400-IV-123	**2/26/2024**	**For Total Metals, multiple compound results are estimated values less than the quantitation limit, but greater than or equal to the detection limit.**
400-JV-150	**2/26/2024**	**For Total Metals, multiple compound results are estimated values less than the quantitation limit, but greater than or equal to the detection limit.**

Location Sample_ID	Event Date	EPA Method TO-15 for Air
400-EV-010	2/26/2024	For EPA Method TO-15 (air), the compound (Freon 123a) was searched for but not found. See case narrative.
400-EV-010	2/26/2024	For EPA Method TO-15 (air), method blank contained low levels of alpha-Chlorotoluene above the Method Reporting Limit (MRL). Therefore, a potential for a high bias exists for those associated sample concentrations reported with positive results. No corrective action was taken.
400-EV-010	**2/26/2024**	**For EPA Method TO-15 (air), 1,4-Dioxane was detected in the field blank (2402260906) at 0.48 ng/L. 2-Butanone (Methyl Ethyl Ketone) was detected in the field blank (2402260906) at 2.6 ng/L. 2-Propanol was detected in the field blank (2402260906) at 1.2 ng/L. Acetone was detected in the field blank (2402260906) at 22.0 ng/L. Carbon Disulfide was detected in the field blank (2402260906) at 2.8 ng/L. Chloromethane was detected in the field blank (2402260906) at 1.2 ng/L. Ethanol was detected in the field blank (2402260906) at 2.8 ng/L. Freon 11 was detected in the field blank (2402260906) at 1.1 ng/L. Freon 113 was detected in the field blank (2402260906) at 0.47 ng/L. Freon 12 was detected in the field blank (2402260906) at 2.4 ng/L. Trichloroethene was detected in the field blank (2402260906) at 1.8 ng/L.**
400-EV-010	**2/26/2024**	**For EPA Method TO-15 (air), the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives. This statement applies to sample values near or below the reporting limit.**
400-EV-010	**2/26/2024**	**For EPA Method TO-15 (air), the samples were analyzed for volatile organic compounds and Freon 123a as a tentatively identified compound in accordance with EPA Method TO-15 from the Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition (EPA/625/R-96/010b), January, 1999.**
400-EV-047.5	2/26/2024	For EPA Method TO-15 (air), method blank contained low levels of alpha-Chlorotoluene above the Method Reporting Limit (MRL). Therefore, a potential for a high bias exists for those associated sample concentrations reported with positive results. No corrective action was taken.
400-EV-047.5	**2/26/2024**	**For EPA Method TO-15 (air), multiple analyte results are estimated values less than the quantitation limit, but greater than or equal to the detection limit. Affected data are appropriately qualified.**
400-EV-047.5	**2/26/2024**	**For EPA Method TO-15 (air), the samples were analyzed for volatile organic compounds and Freon 123a as a tentatively identified compound in accordance with EPA Method TO-15 from the Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition (EPA/625/R-96/010b), January, 1999.**

Location Sample_ID	Event Date	EPA Method TO-15 for Air
400-EV-047.5	**2/26/2024**	**For EPA Method TO-15 (air), laboratory control sample (LCS) recoveries Benzene (71%), cis-1,3-Dichloropropene (81%), and Metherlyne Chloride (70%) were outside the laboratory acceptance limits (73-128%, 87-137%, and 71-123%). Refer to ALS report P2400922, analytical batch P240319-LCS for details. All of the analytes were affected by low bias and have been qualified.**
400-EV-100	2/26/2024	For EPA Method TO-15 (air), method blank contained low levels of alpha-Chlorotoluene above the Method Reporting Limit (MRL). Therefore, a potential for a high bias exists for those associated sample concentrations reported with positive results. No corrective action was taken.

400-SV-03-010	2/28/2024	For EPA Method TO-15 (air), the compound (Freon 123a) was searched for but not found. See case narrative.
400-SV-03-050	**2/28/2024**	**For EPA Method TO-15 (air), the samples were analyzed for volatile organic compounds and Freon 123a as a tentatively identified compound in accordance with EPA Method TO-15 from the Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition (EPA/625/R-96/010b), January, 1999.**
400-SV-03-050	2/28/2024	For EPA Method TO-15 (air), the compound (Freon 123a) was searched for but not found. See case narrative.
400-SV-03-050	**2/28/2024**	**For EPA Method TO-15, the compound's (Freon 113 and Freon 11) reported result is from a dilution**
400-SV-03-050	**2/28/2024**	**For EPA Method TO-15 (air), the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives. This statement applies to sample values near or below the reporting limit.**
400-SV-03-050	**2/28/2024**	**For EPA Method TO-15 (air), laboratory control sample (LCS) recoveries Benzene (71%), cis-1,3-Dichloropropene (81%), and Metherlyne Chloride (70%) were outside the laboratory acceptance limits (73-128%, 87-137%, and 71-123%). Refer to ALS report P2400922, analytical batch P240319-LCS for details. All of the analytes were affected by low bias and have been qualified.**
400-SV-03-092	2/28/2024	For EPA Method TO-15 (air), the lower control criteria were exceeded for Benzene and cis-1,3-Dichloropropene in the Laboratory Control Sample (LCS) for MS16 analyzed on March 19, 2024. The error associated with the reduced recoveries equates to a potential low bias. However, a Method Reporting Limit (MRL) check standard containing the analytes of concern was analyzed and verified that instrument sensitivity was adequate to detect the analytes at the MRL on the day of analysis. Since the sensitivity was verified and the samples were non-detect, the data quality has not been significantly affected. No further corrective action was taken.
400-SV-03-092	2/28/2024	For EPA Method TO-15 (air), the Method Blank associated with the samples analyzed on March 19, 2024 on MS16 contained a concentration of Benzene above the Method Detection Limit (MDL) but below the Method Reporting Limit (MRL). The data has been qualified accordingly. No further corrective action was taken.
400-SV-03-092	2/28/2024	For EPA Method TO-15 (air), the spike recoveries of Benzene, cis-1,3-Dichloropropene and Methylene Chloride for the Laboratory Control Sample (LCS) on MS16 analyzed on March 19, 2024 were outside the laboratory generated control criteria. The recovery errors equate to a potential low bias. However, the spike recoveries of the analytes in question were within the method criteria; therefore, the data quality has not been significantly affected. The data has been flagged accordingly. No corrective action was required.
400-SV-03-092	**2/28/2024**	**For EPA Method TO-15 (air), the samples were analyzed for volatile organic compounds and Freon 123a as a tentatively identified compound in accordance with EPA Method TO-15 from the Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition (EPA/625/R-96/010b), January, 1999.**

The data has been qualified accordingly. No further corrective action was taken.
400-SV-10-010	**2/28/2024**	**For EPA Method TO-15 (air), the samples were analyzed for volatile organic compounds and Freon 123a as a tentatively identified compound in accordance with EPA Method TO-15 from the Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition (EPA/625/R-96/010b), January, 1999.**
400-SV-10-010	**2/28/2024**	**For EPA Method TO-15 (air), laboratory control sample (LCS) recoveries Benzene (71%), cis-1,3-Dichloropropene (81%), and Metherlyne Chloride (70%) were outside the laboratory acceptance limits (73-128%, 87-137%, and 71-123%). Refer to ALS report P2400922, analytical batch P240319-LCS for details. All of the analytes were affected by low bias and have been qualified.**

Location Sample_ID	Event Date	EPA Method TO-15 for Air
400-SV-10-010	**2/28/2024**	**For EPA Method TO-15 (air), the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives. This statement applies to sample values near or below the reporting limit.**
400-SV-10-010	2/28/2024	For EPA Method TO-15 (air), the compound (Freon 123a) was searched for but not found. See case narrative.
400-SV-10-010	**2/28/2024**	**For EPA Method TO-15 (air), one compound (Benzene) was detected in the method blank. Affected data are appropriately qualified.**
400-SV-10-050	2/28/2024	For EPA Method TO-15 (air), the lower control criteria were exceeded for Benzene and cis-1,3-Dichloropropene in the Laboratory Control Sample (LCS) for MS16 analyzed on March 19, 2024. The error associated with the reduced recoveries equates to a potential low bias. However, a Method Reporting Limit (MRL) check standard containing the analytes of concern was analyzed and verified that instrument sensitivity was adequate to detect the analytes at the MRL on the day of analysis. Since the sensitivity was verified and the samples were non-detect, the data quality has not been significantly affected. No further corrective action was taken.
400-SV-10-050	2/28/2024	For EPA Method TO-15 (air), the spike recoveries of Benzene, cis-1,3-Dichloropropene and Methylene Chloride for the Laboratory Control Sample (LCS) on MS16 analyzed on March 19, 2024 were outside the laboratory generated control criteria. The recovery errors equate to a potential low bias. However, the spike recoveries of the analytes in question were within the method criteria; therefore, the data quality has not been significantly affected. The data has been flagged accordingly. No corrective action was required.
400-SV-10-050	2/28/2024	For EPA Method TO-15 (air), the Method Blank associated with the samples analyzed on March 19, 2024 on MS16 contained a concentration of Benzene above the Method Detection Limit (MDL) but below the Method Reporting Limit (MRL). The data has been qualified accordingly. No further corrective action was taken.
400-SV-10-050	**2/28/2024**	**For EPA Method TO-15 (air), the samples were analyzed for volatile organic compounds and Freon 123a as a tentatively identified compound in accordance with EPA Method TO-15 from the Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition (EPA/625/R-96/010b), January, 1999.**
400-SV-10-050	**2/28/2024**	**For EPA Method TO-15 (air), laboratory control sample (LCS) recoveries Benzene (71%), cis-1,3-Dichloropropene (81%), and Metherlyne Chloride (70%) were outside the laboratory acceptance limits (73-128%, 87-137%, and 71-123%). TASK ORDERS: 240228-3 and 240305-4
NAVARRO PO #: 23EC004B

NARRATIVE

(M607-935)

CLIENT:	**Navarro Research and Engineering Inc.**
SwRI PROJECT #:	**26040.07.009 and 26040.07.010**
BATCH #:	**M607-935**
TASK ORDERS:	**240228-3 and 240305-4**
REPORT DATE:	**03/18/2024**

NARRATIVE FOR NDMA/DMN/BROMACIL ANALYSIS

1. Samples were extracted with dichloromethane (DCM) and analyzed by GC/MS in selective ion monitoring mode for N-Nitrosodimethylamine (NDMA), N-Nitrodimethylamine (DMN) and Bromacil according to the modified Method 607.

2. All aqueous samples were extracted within 7 days of collection date and were analyzed within 28 days from extraction date.

3. The sample reporting limit is 0.01 ppb for 1-L aqueous extraction of samples. All targets were quantified within the calibration curve range 0.01 - 5 µg/L.

4. Laboratory control sample (LCS) and matrix spike samples (if any) were spiked at 0.50 ppb, then extracted and analyzed. The recoveries for all target compounds were within method recovery criteria of 13-110% for NDMA, 30-150% for DMN, and 40-190% for Bromacil.

5. N-Nitroso-di-n-propylamine-d14 (surrogate) was spiked into every sample before extraction at 0.50 µg/mL in extract. The surrogate recoveries for all samples were within method recovery criteria of 40-160%.

6. Laboratory process blanks (PB) were extracted and analyzed with every extraction batch.

7. A "J" value was reported if the associated value was below reporting limits but above the MDL value.

8. All analyte concentrations are expressed in µg/L (ppb). Sample calculation:

$$\text{Concentration (µg/L)} = \frac{C\left(\frac{\mu g}{mL}\right) \times FV\ (mL) \times DF}{Vsamp(L)}$$

where:
- C = result of GC/MS analysis in µg/mL for water samples
- FV = final volume of sample in mL
- V_{samp} = sample volume taken for extraction in L
- DF = dilution factor, if any

9. Bromacil slightly exceeded calibration in sample extracts of 2402260902A (400-EV-131), 2402261040C (400-GV-125) and 2402261045C (400-GV-125). All 3 samples were diluted for reanalysis. Sample 2402261007A (400-HV-147) was diluted 100-fold for NDMA and DMN based on prior results. Due to the low concentration of Bromacil in the 100-fold analysis, Bromacil result from the undiluted extract should be considered the primary result.

LABORATORY REPORT

March 28, 2024

Stephanie Portillo
NASA White Sands Test Facility
12600 NASA Rd., Bldg. 120
Las Cruces, NM 88012

RE: NASA White Sands Test Facility (WSTF)

Dear Stephanie:

Enclosed are the results of the samples submitted to our laboratory on March 6-7, 2024. For your reference, these analyses have been assigned our service request number P2400922.

All analyses were performed according to our laboratory's NELAP and DoD-ELAP-approved quality assurance program. The test results meet requirements of the current NELAP and DoD-ELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP and DoD-ELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. Results are intended to be considered in their entirety and apply only to the samples analyzed and reported herein.

If you have any questions, please call me at (805) 526-7161.

Client: NASA White Sands Test Facility
Project: NASA White Sands Test Facility (WSTF)

Service Request No: P2400922

CASE NARRATIVE

The samples were received intact under chain of custody on March 6-7, 2024 and were stored in accordance with the analytical method requirements. Please refer to the sample acceptance check form for additional information. The results reported herein are applicable only to the condition of the samples at the time of sample receipt.

Volatile Organic Compound Analysis

The samples were analyzed for volatile organic compounds and Freon 123a as a tentatively identified compound in accordance with EPA Method TO-15 from the Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition (EPA/625/R-96/010b), January, 1999. This procedure is described in laboratory SOP VOA-TO15. The analytical system was comprised of a gas chromatograph/mass spectrometer (GC/MS) interfaced to a whole-air preconcentrator. This method is included on the laboratory's NELAP and DoD-ELAP scope of accreditation. Any analytes flagged with an X are not included on the NELAP or DoD-ELAP accreditation.

The lower control criteria were exceeded for Benzene and cis-1,3-Dichloropropene in the Laboratory Control Sample (LCS) for MS16 analyzed on March 19, 2024. The error associated with the reduced recoveries equates to a potential low bias. However, a Method Reporting Limit (MRL) check standard containing the analytes of concern was analyzed and verified that instrument sensitivity was adequate to detect the analytes at the MRL on the day of analysis. Since the sensitivity was verified and the samples were non-detect, the data quality has not been significantly affected. No further corrective action was taken.

The Method Blank (MB) associated with the samples analyzed on March 19, 2024 on MS9 and MS9 analyzed on March 22, 2024 contained low levels of alpha-Chlorotoluene above the Method Reporting Limit (MRL). Therefore, a potential for a high bias exists for those associated sample concentrations reported with positive results. No corrective action was taken.

The Method Blank associated with the samples analyzed on March 19, 2024 on MS16 contained a concentration of Benzene above the Method Detection Limit (MDL) but below the Method Reporting Limit (MRL). The data has been qualified accordingly. No further corrective action was taken.

The spike recoveries of Benzene, cis-1,3-Dichloropropene and Methylene Chloride for the Laboratory Control Sample (LCS) on MS16 analyzed on March 19, 2024 were outside the laboratory generated control criteria. The recovery errors equate to a potential low bias. However, the spike recoveries of the analytes in question were within the method criteria; therefore, the data quality has not been significantly affected. The data has been flagged accordingly. No corrective action was required.

The containers were cleaned, prior to sampling, down to the method reporting limit (MRL) reported for this project. For projects requiring DoD QSM 5.4 compliance canisters were cleaned to <1/2 the MRL.

right solutions.
right partner.

Please note, projects which require reporting below the MRL could have results between the MRL and method detection limit (MDL) that are biased high.

The results of analyses are given in the attached laboratory report. All results are intended to be considered in their entirety, and ALS Environmental (ALS) is not responsible for utilization of less than the complete report.

Use of ALS Environmental (ALS)'s Name. Client shall not use ALS's name or trademark in any marketing or reporting materials, press releases or in any other manner ("Materials") whatsoever and shall not attribute to ALS any test result, tolerance or specification derived from ALS's data ("Attribution") without ALS's prior written consent, which may be withheld by ALS for any reason in its sole discretion. To request ALS's consent, Client shall provide copies of the proposed Materials or Attribution and describe in writing Client's proposed use of such Materials or Attribution. If ALS has not provided written approval of the Materials or Attribution within ten (10) days of receipt from Client, Client's request to use ALS's name or trademark in any Materials or Attribution shall be deemed denied. ALS may, in its discretion, reasonably charge Client for its time in reviewing Materials or Attribution requests. Client acknowledges and agrees that the unauthorized use of ALS's name or trademark may cause ALS to incur irreparable harm for which the recovery of money damages will be inadequate. Accordingly, Client acknowledges and agrees that a violation shall justify preliminary injunctive relief. For questions contact the laboratory.

ALS Environmental
Sample Acceptance Check Form

Client: NASA White Sands Test Facility Work order: P2400922

Project: NASA White Sands Test Facility (WSTF)

Sample(s) received on: 3/6 - 7/24 Date opened: 3/6 - 7/24 by: ADAVID

Note: This form is used for all samples received by ALS. The use of this form for custody seals is strictly meant to indicate presence/absence and not as an indication of compliance or nonconformity. Thermal preservation and pH will only be evaluated either at the request of the client and/or as required by the method/SOP.

		Yes	No	N/A
1	Were **sample containers** properly marked with client sample ID?	☒	☐	☐
2	Did **sample containers** arrive in good condition?	☒	☐	☐
3	Were **chain-of-custody** papers used and filled out?	☒	☐	☐
4	Did **sample container labels** and/or tags agree with custody papers?	☒	☐	☐
5	Was **sample volume** received adequate for analysis?	☒	☐	☐
6	Are samples within specified holding times?	☒	☐	☐
7	Was proper **temperature** (thermal preservation) of cooler at receipt adhered to?	☐	☐	☒
8	Were **custody seals** on outside of cooler/Box/Container?	☐	☒	☐
	Location of seal(s)? _____ Sealing Lid?	☐	☐	☒
	Were signature and date included?	☐	☐	☒
	Were seals intact?	☐	☐	☒
9	Do containers have appropriate **preservation**, according to method/SOP or Client specified information?	☐	☐	☒
	Is there a client indication that the submitted samples are **pH** preserved?	☐	☐	☒
	Were **VOA vials** checked for presence/absence of air bubbles?	☐	☐	☒
	Does the client/method/SOP require that the analyst check the sample pH and if necessary alter it?	☐	☐	☒
10	**Tubes:** Are the tubes capped and intact?	☐	☐	☒
11	**Badges:** Are the badges properly capped and intact?	☐	☐	☒
	Are dual bed badges separated and individually capped and intact?	☐	☐	☒
12	Lab Notification: Analyst and PM were alerted of Short HT or RUSH samples?	☐	☐	☒
13	Client Notification: Client has been notified regarding HT exceedances and/or other CoC discrepancies?	☐	☐	☒

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
B = Analyte detected in both the sample and the associated method blank.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

75-69-4	Freon 11	**190,000**	1,700	270	**34,000**	300	48	**D**

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

B = Analyte detected in both the sample and the associated method blank.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.

J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

IS1 (BCM) = Bromochloromethane
IS2 (DFB) = 1,4-Difluorobenzene
IS3 (CBZ) = Chlorobenzene-d5

AREA UPPER LIMIT = 140% of internal standard area
AREA LOWER LIMIT = 60% of internal standard area
RT UPPER LIMIT = 0.33 minutes of internal standard RT
RT LOWER LIMIT = 0.33 minutes of internal standard RT

# Column used to flag values outside QC limits with an I.
I = Internal standard not within the speicified limits.
