Subject: Well Completion Report (WCR) for NASA White Sands Test Facility (WSTF)
300-001-GSV and 400-001-GW Analytical Results

NASA submitted the Response to Disapproval of the 300 Area Abbreviated Drilling Work Plan on July 14, 2021, which was approved by NMED on May 2, 2023. Field activities to install the second of two multiport soil vapor and groundwater monitoring (MSVGM) wells (300-001-GSV) commenced on May 8, 2024. NASA submitted a *Request for Extension of Time for Submittal of Three Well Completion Reports (WCRs) for NASA WSTF Wells 300-001-GSV, 300-002-GSV, and 400-001-GW* on April 18, 2024. In accordance with the NMED-approved Work Plan, NASA requested the WCR for well 300-001-GW be provided to NMED 180 days following equipment mobilization to the 300 Area and no later than October 4, 2024. NMED approved the request on May 6, 2024.

The 300-001-GSV borehole was completed to a total depth of 252 feet below ground surface on May 18, 2024. This depth is greater than the depth anticipated in the drilling work plan, and incorporated a supplemental bedrock matrix diffusion investigation that was described in the Expanded Scope Proposed for the 300 Area Supplemental Abbreviated Drilling Work Plan submitted to NMED on September 13, 2023. The expanded scope was approved by NMED on November 1, 2023. The matrix diffusion study is described, and the results presented in Appendix E of the WCR.

The initial set of soil vapor samples at well 300-001-GSV was shipped on September 9, 2024. However, the analytical laboratory determined that the soil vapor samples did not meet final canister pressure requirements. Replacement soil vapor samples must be collected following reconfiguration of the soil vapor connectors in the wellhead by the drilling subcontractor. The soil vapor results required to complete Appendix G will be provided immediately following connector replacement, soil vapor re-sampling, and the receipt and processing of laboratory analytical data.

NASA submitted the *Well Completion Report (WCR) for NASA WSTF 400-001-GW* on August 30, 2024. As part of the WCR, NASA indicated the groundwater analytical results would be provided as a separate addendum with the upcoming WCRs for the 300-001-GSV and 300-002-GSV wells scheduled for submittal to NMED no later than October 4, 2024.

This submittal includes a printed WCR for 300-001-GSV up to Appendix C as Enclosure 1, a CD-ROM with an electronic copy of the entire WCR as Enclosure 2, and analytical reports for the 400-001-GW WCR as Enclosure 3.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

If you have any questions or comments concerning this submittal, please contact Antonette Doherty of my staff at 575-202-5406.

1.0 Introduction and Purpose

The National Aeronautics and Space Administration (NASA) Johnson Space Center (JSC) White Sands Test Facility (WSTF) has supported testing of space flight equipment and hazardous materials from 1964 to the present. The facility contains five closed hazardous waste management units (HWMUs) that are under post-closure care (PCC). They are located within the 200, 300, 400, and 600 Areas. PCC requirements are specified by the WSTF Resource Conservation and Recovery Act (RCRA) Permit (Permit) issued by the New Mexico Environment Department (NMED, 2023a). The Permit requires that historical releases of hazardous waste or hazardous constituents from the former HWMUs be investigated to determine if continuing sources of contamination are present.

A groundwater contamination plume consisting of n-nitrosodimethylamine (NDMA), trichloroethene, tetrachloroethene, and Freons®[1] has been identified at WSTF. To characterize and monitor the horizontal and vertical extent of contamination, a monitoring well network consisting of single zone (referred to as conventional) and multi-zone (referred to as multiport) wells has been established. In the contaminant source areas, in addition to groundwater monitoring wells, soil vapor wells are used to monitor and evaluate the vadose zone. NASA utilizes multiport soil vapor monitoring (MSVM) wells to monitor the vadose zone and multiport soil vapor and groundwater monitoring (MSVGM) wells to monitor both the vadose zone and the underlying groundwater. Combined groundwater and soil vapor wells are defined by the acronym GSV in the well descriptor.

The 300 Area at WSTF is used for testing altitude propulsion systems. Facilities at this location include altitude chambers, engine test stands, and former wastewater treatment facilities. Between 1964 and 1985, several areas of the eastern impoundments were used to treat hazardous wastes derived from space hardware testing activities. These areas were later reinforced with a 4 to 6-inch (in.) structural caps (gunite liners). The discharge of wastes to the impoundments ceased by November 8, 1985. Based on the results of early investigations, NASA decided to close the impoundments in accordance with a closure plan approved by NMED. Closure activities consisted of constructing an erosion-resistant, low permeability cap over the impoundment areas and diversions to prevent accumulation of surface water drainage. Closure construction began in November 1988 and was completed in June 1989 (NASA, 1989). NMED approved the closure on November 1, 1989 (NMED, 1989).

Two MSVGM wells were recently added to the existing well network to monitor groundwater and soil vapor within each of the two closure areas located adjacent to the main 300 Area testing facility. The data collected from the MSVGM wells installed provide groundwater and soil vapor monitoring for WSTF contaminants of potential concern (COPC) as well as groundwater elevation data and other hydrogeological parameters.

This Well Completion Report (WCR; report) provides the field documentation associated with the drilling and installation of WSTF groundwater and soil vapor monitoring well 300-001-GSV, located within the southwestern closure pond. Under the supervision of the WSTF Environmental Contactor, Navarro Research and Engineering Inc. (Navarro), multiple subcontractors performed activities in relation to this project: drilling activities were performed by Yellow Jacket Drilling Services (YJD), matrix diffusion sample collections and preparation by Sanborn Head and Associates (Sanborn Head), and matrix diffusion laboratory services by Pace Environmental (Pace). Initial drilling activities were conducted between May 7, 2024 and May 18, 2024. Geophysical logging was completed on May 21, 2024. Additional reaming of the borehole was performed in accordance with the well completion protocol presented in the NMED-approved 300 Area Supplemental Abbreviated Drilling Work Plan (ADWP;

[1] Freon is a registered trademark of The Chemours Company CF, LLC.

NASA, 2021, p 3; NMED, 2023b) between May 22, 2024 and June 1, 2024. Well construction began on June 2, 2024 and was completed on June 4, 2024. Final well development was performed on June 26 and June 27, 2024.

2.0 Location and Description

2.1 Facility

WSTF, located in Doña Ana County, New Mexico, lies 18 miles (mi) northeast of Las Cruces, New Mexico, and 65 mi north of El Paso, Texas (Figure 2.1). WSTF was constructed in 1964 at a remote location adjacent to the San Andres Mountains (SAM). The land occupied by WSTF is owned by the Department of the Army and is used by NASA under a land use agreement with the Army (Department of Defense, 1982). Access to the site is provided by a paved road that intersects U.S. Highway 70, 1 mi west of Organ, New Mexico and leads 6 mi north to the test areas.

WSTF's primary activities in support of the United States space program are:

1. Development, qualification, refurbishment, and testing of spacecraft propulsion systems, subsystems, and ground support equipment.
2. Investigation of flight hardware anomalies.
3. Testing of materials and components.
4. Performance of hazard and failure analyses.

Following the completion of construction of WSTF in 1964, many wastes were historically managed in hazardous waste management units, including surface impoundments, within the WSTF industrial area. These hazardous waste management units contributed to groundwater contamination. As a result of the groundwater contamination, NASA operates a network of groundwater monitoring wells throughout the site.

2.2 300-001-GSV Well Location

The location of the 300 Area relative to other WSTF areas is shown in Figure 2.2 and the location of well 300-001-GSV relative to other infrastructure in the 300 Area is shown in Figure 2.3 MSVGM well 300-001-GSV was installed within the northeastern closure pond located southwest of the main 300 Area testing facility and immediately adjacent to the primary ephemeral drainage in the area referred to as the 300/400 Area Arroyo.

3.0 Regulatory Timeline

NASA submitted the *300 Area Supplemental Abbreviated Drilling Work Plan* on May 30, 2019 (NASA, 2019). NMED received and reviewed the report and issued a disapproval on March 19, 2021 (NMED, 2021) directing NASA to address all comments, provide a revised report by July 30, 2021. NASA submitted the *Response to Disapproval of the 300 Area Abbreviated Drilling Work Plan* on July 14, 2021 (NASA, 2021). NMED approved the *300 Area Supplemental Abbreviated Drilling Work Plan* on May 2, 2023 (NMED, 2023b).

NASA subsequently submitted a *Request for Extension of Time for Submittal of Three Well Completion Reports (WCRs) for NASA WSTF Wells 300-001-GSV, 300-002-GSV, and 400-001-GW* on April 18, 2024 (NASA, 2024). In accordance with the NMED-approved Work Plan, NASA requested the WCR for well 300-001-GW be provided to NMED 180 days following equipment mobilization to the 300 Area (April 9, 2024) no later than October 4, 2024. NMED approved this request on May 6, 2024 (NMED, 2024a).

4.0 Drilling of Well 300-001-GSV

The approved New Mexico Office of the State Engineer (NMOSE) Permit for drilling well 300-001-GSV is provided in Appendix A. Drilling at the well 300-001-GSV location (Figure 2.3) began on May 8, 2024, and the borehole was completed to a total depth of 252 feet (ft) below ground surface (bgs) on June 1, 2024. This total depth incorporated additional matrix diffusion work performed at this location that was described in the *Expanded Scope Proposed for the 300 Area Supplemental Abbreviated Drilling Work Plan* submitted to NMED on September 13, 2023 (NASA, 2023). The expanded scope, approved by NMED on November 1, 2023 (NMED, 2023d), consisted of a bedrock matrix diffusion study. The matrix diffusion study is described, and the results presented within this WCR. There were no issues or problems encountered during drilling activities.

4.1 Drilling Methods Utilized

YJD of Rancho Cucamonga, California was subcontracted to perform drilling services at WSTF for the 300-001-GSV location. The borehole was drilled in accordance with the NMED-approved ADWP using the rotary sonic method of drilling through the alluvium section and air rotary with coring after contacting bedrock. These drilling methods have been used successfully to install many source area monitoring wells at WSTF. The diameter of the cased sonic borehole in the upper alluvial section was 6-in to a depth of approximately 75 ft bgs. Coring in the borehole commenced at 75 ft bgs in a cemented conglomerate and then continued to the total depth of the borehole at 252 ft bgs. The cored borehole was installed using standard HQ-sized tooling, which resulted in a 3.8-in. diameter borehole, with 2.5-in. diameter cores collected in 5-ft length core barrels. Following geophysical logging and the selection of the groundwater screened zone, the upper borehole was reamed to a diameter of 9-in and depth of 159.5 ft bgs to accommodate emplacement of MSVGM well 300-001-GSV and annular materials. The total amount of water used during drilling activities at the 300-001-GSV location was approximately 8,000 gallons (Table 4.1).

4.2 Sampling During Drilling

Grab samples of soil and bedrock cuttings were collected and examined by qualified geologists as they were extruded from sonic core barrels. Samples in the vadose zone were collected on 10 ft intervals. Representative samples of the interval were placed in chip trays for subsequent detailed characterization using a binocular microscope. Soil descriptions were completed in accordance with ASTM D2488-17, “Standard Practice for Description and Identification of Soils.” Within the indurated lithologies toward the base of the cemented conglomerate and the underlying bedrock lithologies, continuous core samples were collected on 5-ft intervals. Lithologic descriptions are documented on the lithologic log included in Appendix B. Analytical samples were collected from the core barrel at 10 ft, 40 ft, and 80 ft for analysis (Section 8.1). No groundwater samples were collected during drilling activities.

4.3 Lithology Description

Alluvium in the vadose zone below the 300 Area closure cells consists of Quaternary to Tertiary intercalated fan, interfan valley, and erosion surface veneer deposits derived from the SAM adjacent and east of the WSTF industrial areas. The heterogeneous alluvial soil lithologies in the vadose zone typically have measured porosities between 20 to 40% and consist primarily of unconsolidated to moderately cemented, poorly sorted, pebble to boulder conglomerate with interbedded lenticular sandy gravels, and sandy silts.

Drilling operations at the 300-001-GSV encountered alluvium for the first 58 ft before intercepting cemented conglomerate (Appendix B). The alluvium primarily consisted of a sequence of silty to sandy

gravels deposited in a sequence of stacked alluvial fans. Gravel clasts ranged from 2 mm to greater than 4-in. diameter.

Bedrock underlying the cemented conglomerate was noted as highly varied. Bedrock consisted of greenish black aphanitic andesite from 80.6 to approximately 204.6 ft with irregular dispersed calcite veinlets. Veinlets ranged from reddish brown to bluish grey in color and were generally less than 1 mm in thickness. A purple to black micritic limestone with some minor fossils and increasing fractures with depth was observed from 204.6 to 233 ft. The final lithology recorded the borehole was a rhyolite unit. Rhyolite appears highly altered with large phenocrysts that appear to be weathered. The rhyolitic lithology is younger in age than the andesite and limestone units and may represent a sill.

4.4 Matrix Diffusion Evaluation

Sanborn Head and Pace performed the matrix diffusion evaluation under the supervision of the WSTF Environmental Contractor (Navarro) to support a program of rock core sampling within the 300-001-GSV borehole. The work was performed between May 14 and May 18, 2024 to assess potential distribution of chlorinated volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) within the bedrock matrix below the 300 Area closures.

The Core Discrete Fracture Network Approach ($CORE^{DFN}$) bedrock VOC sampling approach is a comprehensive fractured rock sampling method developed by Dr. Beth Parker, and Dr. Gorecki at the University of Guelph and University of Waterloo, respectively. This method has been previously applied to the bedrock section within the WSTF 200 Area (NASA, 2015, pp 22-28). The $CORE^{DFN}$ method includes detailed logging of bedrock core including fractures, field preparation and crushing of bedrock samples to increase the surface area of the sample, field preservation of crushed samples in methanol, and laboratory extraction and analysis of the samples. The unconsolidated portion of the 300-001-GSV borehole was cased to 75 ft bgs to stabilize the borehole for coring operations. Rock was cored over an interval of 177 linear feet in the 300-001-GSV borehole between 75 to 252 ft bgs.

4.5 Geophysical Logging

Geophysical logging was conducted at 300-001-GSV by Jet West Geophysical Services, LLC on April 23 and 24, 2024. Downhole geophysical logs included 16-in. resistivity, 64-in. resistivity, single point resistance, gamma, temperature, heat pulse flowmeter, and 3-arm caliper. The logger's total depth recorded was 252 ft bgs. The geophysical logs (Appendix C) were used in conjunction with the lithologic log (Appendix B) to confirm changes in lithology, identify the bedrock contact, and to evaluate borehole integrity depths favorable for the placement of well screen. Final placement of the well screen also required evaluation of the location of the potentiometric surface, hydraulic conditions within the aquifer, and a review of adjacent monitoring wells in the vicinity of the 300 Area closure (Figure 2.3).

5.0 Well Construction

5.1 Planned Well Design

In the NMED-approved ADWP (NASA, 2021, pp 5-6), MSVGM well 300-001-GSV was proposed as a single groundwater monitoring zone in conjunction with four soil vapor ports to monitor vapor in the alluvial and bedrock portion of the vadose zone. The 300-001-GSV Well Completion Diagram (WCD; Figure 5.1) was designed accordingly, considering information acquired from lithological logs, geophysical logs (most significantly caliper, heat pulse flow, gamma, neutron, and resistivity), aquifer conditions (unconfined), and adjacent monitoring wells in the area.

The screened interval was placed from 130 to 145 ft bgs below the then current static water level at approximately 121.2 ft bgs. The screen extended over 15-ft in order to account for the limited number of producing fractures identified within the lithologic and geophysical logs. Four soil vapor ports to monitor the vertical delineation of soil vapor in the vadose zone were placed at 10, 40, 80, and 100 ft bgs. Casing was cut to 2.65 ft above ground surface. Specific details of the well's construction are illustrated in the WCD (Figure 5.1).

5.2 Well Completion Casing

MSVGM well 300-001-GSV well casing installation was performed on June 2 and June 3, 2024. Casing materials comprised conventional 4-in. nominal Schedule 80 polyvinyl chloride (PVC) flush joint casing with one 15 ft x 0.020-in. slotted screen with a 5-ft sump with a PVC end cap installed to a total well depth of 150.3 ft. The screen was set from 130 to 145 ft bgs (Figure 5.1). Steel centralizers were installed on the casing above and below the screened interval, and at 50 ft intervals along the length of the casing to prevent the casing and screen from contacting the borehole walls and encouraging a uniform thickness of the annular materials.

Soil vapor ports comprising 5/8-in. diameter x 12-in. length stainless steel screened implants were set at 10, 40, 80 and 100 ft bgs. Soil vapor ports were connected to the surface using ¼-in. diameter Type 304 stainless steel tubing secured to the outside of the PVC casing using stainless steel hose clamps every 5 ft between the port location and the surface. Each vapor port at surface was affixed with an aluminum tag engraved with port identification, and a quick-connect fitting to facilitate soil vapor sampling.

5.3 Annular Materials Installation

Annular materials installation for 300-001-GSV began June 2, 2024, and completed June 3, 2024 (Figure 5.1). Annular Completion materials were installed as follows:

- 6 ½ x 50 lbs bags of bentonite pellets were added to backfill the borehole from 150-159.5 ft bgs and to provide a lower seal
- 1 x 50 lbs bag of 20/40 sand was installed from 148-150 ft bgs
- 12 x 50 lbs bags of 10/20 sand were installed from 127-148 ft bgs
- 1 x 50 lbs bag of 20/40 sand was installed from 125-127 ft bgs
- 8 x 50 lbs bags of bentonite were installed from 102-125 f. bgs
- 4 x 50 lbs bags of 20/40 sand were installed from 97.5-102.5 ft bgs
- 6 x 50 lbs buckets of bentonite pellets were installed from 82.5-97.5 ft bgs
- 3 x 50 lbs bags 20/40 sand were installed from 77.5-82.5 ft bgs
- 3.5 x 50 lbs buckets of bentonite pellets were installed from 67.5-77.5 ft bgs
- 7 x 50 lbs bags of cement was installed from 50.5-67.5 ft bgs
- 6 x 50 lbs bags of bentonite pellets were installed from 43.5-50.5 ft bgs
- 5 x 50 lbs bags of 20/40 sand were installed from 37.5-43.5 ft bgs
- 9 x 50 lbs bags of bentonite were installed 27.5-37.5 ft bgs
- 3 x 50 lbs bags of cement installed from 22.5-27.5 ft bgs
- 10 x 50 lbs bags of bentonite installed from 13-22.5 ft bgs
- 6 x 50 lbs bags of 20/40 sand installed from 7.5-13 ft bgs
- 6 x 50 lbs bags of bentonite pellets installed from 1-7.5 ft bgs (ground surface)
- 3 x 50 lbs bags Portland neat cement for top surface seal 0-1 ft bgs

Completion materials were emplaced using a pneumatic diaphragm pump. All materials were installed using a 2-in. outer diameter tremie pipe maintained at a level approximately 10 to 20 ft above the top of

annular materials in the well. No water was added except that for mixing of the bentonite grout and neat cement. The bentonite grout was mixed by YJD per standard with the ratio of 5% bentonite added by weight and 8.5 gallons of non-chlorinated water per 94-pound sack of Portland cement used. Dry cement and bentonite were added to non-chlorinated water in a 55-gallon drum and mixed thoroughly with a mixing paddle attached to a power drill for smooth and uniform consistency. The neat Portland cement was mixed by YJD per standard with a ratio of 6 gallons of water per 94-pound sack of Portland cement used. Cumulative water usage is shown in Table 4.1.

6.0 Hydraulic Conditions

The initial groundwater level was identified within the 300-001-GSV borehole during drilling at approximately 58 ft bgs on May 16, 2024, after the sitting overnight. The groundwater level was subsequently measured in the borehole at 122 ft bgs after the total depth of borehole was reached and the borehole stabilized overnight on May 19, 2024. During geophysical logging performed on May 20, 2024, groundwater was reported at a depth of 122.5 ft bgs. Prior to development activities on June 26, 2024, the static water level of well 300-001-GSV were measured at 123.75 ft btoc. During the wells first groundwater sampling event the static water level was observed to be 122.7 ft btoc. However, based on the decline in water level over the period of borehole and well installation, coupled with information from the lithologic log, geophysical logs, and adjacent wells, the aquifer is considered to be semi-unconfined.

7.0 Well Development

YJD performed the development of well 300-001-GSV on June 25, 2024 (Table 7.1). The well casing was bailed and swabbed to remove mud from the well casing and develop the well in preparation for sampling. During development activities, WSTF Environmental Contractor personnel monitored discharged development water for parameters including pH, specific conductivity, temperature, and turbidity. Well development ideally is considered complete when measured water quality parameters are relatively stable (vary less than 10%) and turbidity is below 5 nephelometric turbidity units (NTUs).

The well was bailed with a decontaminated 2-in. steel bailer and swabbed only. YJD personal determined that due to the well low initial volume and recharge rate the pump would be unable to adequately pump the limited volumes up the draw pipe. During development, levels of pH varied from 7.47 to 7.65, temperature varied from 21.5 to 22 degrees Celsius (°C), and specific conductivity varied from 1760 to 2.05 µS/cm.

A total of 111.5 gallons were removed during well development. Groundwater quality parameters final results were as follows: pH = 7.47; temperature = 22 °C; and specific conductivity = 2.33 µS/cm. The final turbidity was reported at 38.5 NTUs.

8.0 Sampling

8.1 Soil Sampling

Soil samples were collected from the 300-001-GSV borehole from three locations in the alluvial vadose zone at 10 and 40 ft bgs as specified in the 300 Area ADWP (NASA, 2021, pp 5-6) between May 7 and May 8, 2024. However, bedrock was encountered before an 80 ft soil sample could be taken. The subsurface soil borings were drilled and sampled by YJD under WSTF Environmental Department supervision. Soil sampling locations were selected to provide soil analytical data to determine whether there are VOCs or SVOCs present in the vadose zone below the southwest cell of the 300 Area closure. The soil sample locations were selected to provide vertical delineation of the vadose zone and approximate the location of soil vapor sample ports subsequently installed in MSVGM well 300-001-GSV. Sufficient soil sample recovery volume was reported from the 5-ft core barrels used to collect the samples at this location.

Soil samples were field screened within the core barrels using a photoionization detector (PID) and observed for visual indicators of saturation or staining. There were no PID or visual indications of potential contamination, and the field geologist selected samples based on the lithology for analysis.

Soil chemical samples from the 300-001-GSV borehole were analyzed for the list of COPC and their analytical methods provided in the NMED-approved 300 Area ADWP (NASA, 2021, pp 18-21). Standardized analytical methods were used to analyze for the COPC that were determined based on the historic site activities and known results from previous soil borings installed in the 300 Area. Chemical analytical results for soil samples included VOC (SW-846 8260B), SVOC (SW-846-8270D), total metals (SW-846-6010C), cyanide (SW-846 Method 9012), perchlorate (Environmental Protection Agency [EPA] Method 6850), polychlorinated biphenyls (SW-846 8082), NDMA (EPA Method 607), hydrazines (SW-846 Method 8315), dioxins/furans (SW-846 Method 8290A), hexavalent chromium (SW-846 Method 7196A), nitrate/nitrite (SW-846 9056A), and per- and polyfluoroalkyl substances (PFAS; EPA Method 1633). There were no data quality exceptions that negatively impacted analytical data quality or project objectives. The soil analytical results and chain of custody (CoC) forms are provided in Appendix D.

8.2 Matrix Diffusion Sampling

A total of 341.0 linear feet of rock was cored from two boreholes installed at the same time in the area. These consisted of borehole 300-001-GSV installed in the 300 Area closure northeast cell described in this WCR, and nearby borehole 300-002-GSV in the southwest cell (Figure 2.3). The total recovery from the two boreholes was 291.40 ft, and a total of 147 rock samples were collected for VOC and SVOC analysis. In addition, 8 field duplicate (FD) samples, and 8 matrix spike and matrix spike duplicate (MS/MSD) sample pair (2 samples), 10 equipment blank (EB) samples, 3 method blank (MB) samples, and 6 trip blank (TB) samples were also collected for VOC and SVOC analysis.

Sixteen intact core samples were collected, and were sent for physical property analyses, in accordance with CORE^{DFN} procedure. Extraction and VOC and SVOC analyses of the rock core samples were conducted by the Pace analytical laboratory in Green Bay, WI. Physical properties samples were analyzed at WSP Canada Inc. in Mississauga, Ontario between April and June 2024. Results of physical property analyses for bulk density, porosity, water content, and organic carbon content were used in conjunction with the VOC data for the calculation of rock porewater concentrations.

Following sample retrieval from the borehole, the core was transferred from the liners to a PVC tray lined with aluminum foil. The core was logged, and samples were collected by a Sanborn Head scientist. Sample locations were selected for paired VOC and SVOC analysis based on fracture distributions and lithology with a target frequency of approximately one sample every 1.5 to 2.0 ft. Following sampling and wrapping, the samples were delivered to the sample processing area. Samples were individually unwrapped and placed in a stainless steel trimming cell. The outer portion of the sample was removed with a hammer and chisel. The remaining subsample was then placed in a stainless steel cell and crushed using a hydraulic press. For VOC samples, the crushed subsample was then transferred to a pre-labeled and pre-weighed 40 milliliters (mL) volatile organic analysis (VOA) vial containing 15 mL of purge-and-trap grade methanol. Purge-and-trap grade methanol is a high-grade methanol used for gas chromatography/mass spectrometry VOC analysis. For SVOC samples, the crushed subsample was transferred to a pre-labeled and pre-weighed unpreserved 40 mL amber VOA. Each sample was labeled with its sample identifier and submitted to Pace's laboratory in Green Bay, WI for analysis (see description of method below). Samples were kept on ice in coolers on-site by Sanborn Head until being shipped to the Green Bay Pace laboratory on ice by Sanborn Head and analyzed for VOCs and SVOCs.

Specific to the 300-001-GSV borehole, CORE^{DFN} sampling activities were performed between May 14 and May 18, 2024. A total of 75 VOC/SVOC samples, 4 VOC/SVOC duplicates, 4 MS/MSD samples,

and 8 physical property samples were collected and processed from the interval between 75 ft bgs and 252 ft bgs. A description of the CORE^{DFN} drilling and core collection, VOC and SVOC sample collection and processing, physical property sample collection, laboratory analysis and VOC extraction, and analytical results is provided within the Data Report for Rock Core Sampling and Analysis (Appendix E).

8.3 Groundwater Sampling

An initial set of groundwater samples for laboratory chemical analysis were collected and managed in accordance with the NMED-approved WSTF Groundwater Monitoring Plan (NASA, 2023b; NMED, 2023e) on August 18, 2024 from MSVGM well 300-001-GSV. Water quality field parameters (temperature; specific conductivity; pH; and turbidity) were monitored during the purging process prior to sampling to ensure sufficient purging had been performed and demonstrate that all groundwater within the well and gravel pack surrounding the screened zone had been removed. Groundwater characterization samples were collected for the analysis of VOCs by the current revision of SW-846 Method 8260D, SVOCs by the current revision of SW-846 Method 8270C, NDMA by Modified EPA Method 607M, and a variety of metals by the most effective laboratory-selected analytical method. The groundwater analytical results and CoC forms are provided in Appendix F.

8.4 Soil Vapor Sampling

Following well development and sampling system installation, and initial set of soil vapor samples were collected on September 9, 2024 from each the four soil vapor sampling ports in MSVGM well 300-001-GSV located at 10, 40, 80, and 100 ft bgs (Figure 5.1). All four soil vapor ports (300-001-GSV-10, 300-001-GSV-40, 300-001-GSV-80, and 300-001-GSV-100) were located above the potentiometric surface in the well located at depth of approximately 122.7 ft bgs and were not blocked.

Soil vapor sampling was performed in accordance with established WSTF procedures. The soil vapor sampling began with the shallowest port and continued sequentially until the deepest port had been sampled. The sampling ports and stainless steel tubing were purged of entrained soil vapor with a non-dedicated surface vacuum pump to evacuate stagnant air below the sample collection fitting. Each port was purged for a minimum of five minutes per zone to evacuate at least three volumes of the ¼-in. tubing and soil vapor implant. Carbon dioxide, oxygen, and methane indicator parameters were monitored during purging to ensure stabilization prior to sampling and recorded in a field logbook.

Soil vapor samples were collected in 1-liter stainless steel canisters. The initial pressure for all canisters verified by the analytical laboratory is -14.3 pounds per square inch (PSI). The final canister pressure was noted in the field logbook and CoC form. Soil vapor samples were shipped to the contracted analytical laboratory in California for VOC analysis using EPA Method TO-15. The soil vapor analytical results and CoC forms are provided in Appendix G.

8.5 Survey

During surface completion of the wells, a brass cap was permanently installed in the northwest corner of the cement well pad. The cap was installed to serve as a survey point to represent the location of the well. The location and elevation of well 300-001-GSV was surveyed by experienced NASA WSTF GPS personnel. The New Mexico State Plane Central Zone North American Datum 83 coordinate system in U.S. survey ft above mean sea level (amsl) were utilized for the field survey, and input into project documentation. The lithologic logs and well completion diagrams contained in Appendix B and Figure 5.1, respectively, include the survey data.

The top of the inner and outer well casing and the brass cap elevation and coordinates at ground surface will be re-surveyed for confirmation Following confirmation, the brass cap will be inscribed with the permanent well name and its surveyed ground surface elevation.

9.0 Investigation Work Plan Deviations – Well Construction

The following are deviations from the NMED-approved ADWP (NASA, 2021) for the installation of well 300-001-GSV dated July 14, 2021.

- In the **Lithologic Sampling** section, it is stated: "The first sample will be collected at approximately 10 ft bgs directly beneath the closure cap. The two remaining soil samples will be collected at depths of approximately 40 ft and 80 ft bgs, the lower of the two samples being located as close as feasible to the bedrock surface." At 300-001-GSV only a 10 and a 40 ft soil sample was taken. Drilling at this location encountered cemented conglomerate at 65 ft and as such a soil sample could not be taken at 80 ft.
- In the **Drilling Approach** section, it is stated that the borehole will be 8-in. in diameter by air rotary casing advance. Based on preceding drilling activities performed in the WSTF 300 Area and the available equipment on-site, a 9-in. borehole was instead advanced using the rotary sonic drilling method.
- In the **Well Completion** section, it was stated that 4-in. nominal Schedule 40 PVC casing would be used. A 4-in. nominal Schedule 80 PVC was used instead during the well's completion.
- In the **Well Completion** section, it was stated that the drive casing would be removed to a depth of 20 ft bgs and cut to leave the remaining surface casing in place. Due to relatively stable conditions in the upper alluvial formation during well construction activities, all surface casing was removed during well completion.
- In the **Well Completion** section, it was stated that Colorado Silica sand (10/20 mesh) will be emplaced in the bottom of the boring using a tremie pipe to approximately 2 1/2 ft above the deepest soil vapor monitoring zone, covering the screen emplacement of the groundwater monitoring well and lowermost soil vapor sampling port. The soil vapor port was placed at 100 ft rather than 120 ft, to obtain representative samples and limit the sampling zone, a bentonite seal was placed between the groundwater screen and lower soil vapor port.
- In the **Well Completion** section, it was stated that Colorado Silica sand (10/20 mesh) will be emplaced in the bottom of the boring using a tremie pipe to approximately 2 1/2 ft above the deepest soil vapor monitoring zone, covering the screen emplacement of the groundwater monitoring well and lowermost soil vapor sampling port. A 2-ft zone of Colorado Silica sand (20/40 mesh) was emplaced above and below the 10/20 mesh Colorado Silica sand covering the screened zone.In the **Well Completion** section, it was stated that the upper 10 ft of the borehole and well pad would be completed with Type II Portland neat cement. During completion activities only the upper 1 ft and the well pad were completed using Type II Portland neat cement.
- In the **Well Development** section, it was stated that the well development will be considered complete when measured water quality parameters are relatively stable (vary less than 10%) and turbidity is below 5 NTUs. Poor well bore volumes and recharge rates precluded the use of a pump, and development activities were limited to swabbing and bailing. As a result, although 9.49 NTUs was achieved during development, the final parameter measurement of 38.5 NTUs indicates that additional development of this well may be warranted.

- In the **Groundwater Sampling** section, it was stated that Hexavalent Chromium would be analyzed. A sample for Hexavalent Chromium were not collected during the initial sampling event.

10.0 Investigation-Derived Waste Management, Characterization, and Disposal

Waste characterization as indicated in the 300 Area ADWP was conducted in accordance with Section 4.3.10 (Collection and Management of Investigation-Derived Waste) of the RCRA Permit (NMED, 2023a, p 59). All waste was properly managed and disposed of in accordance with NASA procedures and state and federal regulations. The waste streams that were generated during drilling and installation of MSVGM well 300-001-GSV included:

- **Drill cuttings.** Unsaturated drill cuttings are defined as soil cuttings or rock fragments generated from the vadose zone that have not come into contact with groundwater. Unsaturated cuttings are characterized as non-hazardous solid waste. Saturated drill cuttings are defined as soil cuttings or rock fragments generated from below the water table that may have come into contact with potentially contaminated groundwater. This environmental media potentially contains listed hazardous waste constituents from the WSTF groundwater plume and is initially characterized as hazardous waste.
- **Drilling fluids.** Non-chlorinated water was introduced as a medium into the circulated material during rotary sonic drilling, as necessary. Drilling fluid generated above the water table was characterized as non-hazardous solid waste. Drilling fluid generated below the water table potentially contain listed hazardous waste constituents that are present in the WSTF groundwater plume and was characterized initially as hazardous waste.
- **Groundwater.** Groundwater produced from within the WSTF groundwater plume during well drilling and development was characterized as environmental media containing listed hazardous waste with the F001 and F002 hazardous waste codes.
- **Decontamination fluids.** Decontamination fluids such as water and soap solutions used to wash and decontaminate equipment generated during drilling above the water table were characterized as non-hazardous solid waste. Decontamination fluids generated by cleaning equipment that has contacted potentially contaminated soil, cuttings, or fluids generated when drilling below the water table were characterized as hazardous waste.
- **Contact waste.** Contact waste, or debris, such as used disposable sampling equipment, personal protective equipment, plastic sheeting, and other debris generated during drilling above the water table was non-hazardous solid waste. Contact debris contaminated with soil, cuttings, or fluids that were generated when drilling below the water table were characterized as hazardous waste.
- **Petroleum Contaminated Debris.** Debris such as rags and plastic sheeting contaminated with petroleum products during routine drilling equipment maintenance and operation. The petroleum contaminated debris and environmental media was be characterized as hazardous waste with the D018 hazardous waste code.

Historical data from groundwater monitoring at the proposed location of well 300-001-GSV indicate that environmental media unearthed from zones containing regional groundwater during drilling operations may contain hazardous constituents at concentrations exceeding regulatory limits. The contaminants of concern include VOCs such as trichloroethene, tetrachloroethene, trichlorofluoromethane, dichlorofluoromethane, 1,1,2-trichloro- l,2,2-trifluoroethane, and semi-volatile VOCs such as NDMA. For this reason, generated waste that encountered groundwater during drilling operations were initially labeled as hazardous waste with EPA waste codes F001 and F002 following the application of the EPA's

"contained-in" policy (EPA, 1998). This waste stream was then managed in a central accumulation area in accordance with state (20.4.1.300 NMAC) and federal (40 CFR 262.17) regulations. Any free-standing water was decanted from this waste stream and transferred to the Mid-plume Interception and Treatment System for treatment and discharge in accordance with Discharge Permit (DP)-1255 (NMED, 2023c).

Samples of environmental media (i.e., drilling mud and cuttings) from below the water table were sent for chemical analysis to investigate the concentrations of contaminants of concern and determine if the media did contain listed hazardous waste or exhibit characteristics of a hazardous waste. On July 11, 2024, NASA submitted a *Request for a 'No Longer Contained-in' Determination for Drilling Mud and Cuttings Associated with the Expanded Scope Proposed for the 300 Area Supplemental Abbreviated Drilling Work Plan (ADWP)* (NASA, 2024b). On July 24, 2024, NASA received NMED approval for the "No Longer Contained-In" Determination (NMED, 2024b), and all environmental media previously labeled as hazardous waste was changed to solid waste and is to be shipped off-site and disposed of in a permitted RCRA treatment, storage, and disposal facility, along with environmental media generated from above the water table.

Township and Range: **SW 1/4 SW 1/4 NW 1/4 Sec. 36, T20 S, R3E**
Site Coordinates (NAD 83) (ft): **555,500.548 N, 1,533,997.263 E**
Elevation (Brass Cap): **4,930.868 ft amsl**
Elevation (Top of Casing): **4,933.518 ft amsl**
Drilling Contractor: **Yellow Jacket Drilling**
Driller: **J. Mungala**
Drilling Method: **Rotary-Sonic/Drive Casing, Mud Rotary**
Total Depth of Borehole (bgs): **159.5 ft**
Borehole Diameter: **6-in 0-75 ft, 3.77-in 75-252 ft, Reamed to 9-in. 0-159.5 ft**
Depth to Bedrock (bgs): **63 ft (Cemented Conglomerate) 80.6 ft (Andesite)**
Depth to Groundwater (bgs): **122.7 ft (8/15/24)**
Total Depth Surface Casing (bgs): **NA**
Diameter and Type Surface Casing: **NA**

Dates of Drilling: **5/8 - 6/1/24**
Dates Well Installed: **6/2 - 6/3/24**
Dates Well Developed: **6/26 - 6/27/24**
Field Representative(s): **J. Austin, S. Rees, K. Williams, P. Bolen**
Total Depth Well Casing (bgs): **150.3 ft**
Type of Casing: **Schedule 80 PVC**
Diameter Well Casing: **4.5-in OD, 3.786-in ID**
Soil Vapor Port Depth (bgs): **10, 40, 80, and 100 ft**
Groundwater Screened Zone Depth (bgs): **130-145 ft**
Comments: **Borehole Cored from 75-252 ft, Backfilled to 159.5 ft**
Note: Sampling System Currently NOT Installed

amsl= above mean sea level bgs = below ground surface toc= top of casing

Materials Explanation:

- Completion Casing: 4.5-in OD, 3.786-in ID, Schedule 80 PVC
- Well Screen: 4.5-in OD, 3.786-in ID, Schedule 80 PVC 0.020" Slots
- 0.25 ft Schedule 80 PVC Endcap
- Water Level
- 1/4" Stainless Steel Tubing
- Soil Vapor Port
- Neat Cement
- Cement with 5% Bentonite
- Bentonite Chip Seal
- 20/40 Filter Pack Sand
- 10/20 Filter Pack Sand

Depth ft bgs / ft amsl	Borehole/Well Description All depths listed are bgs	Annular Materials Description All depths listed are bgs
	Water Level 122.7 ft (8/15/24)	
	Three steel cage centralizers bolted together around casing at 130 ft.	125-127 ft - 20/40 Sand (1x 50 lbs bag)
	130 - 145 ft - 4.5-in. OD 3.786-in. ID nominal Schedule 80 PVC Screen with 0.020-in. slots.	127-148 ft - 10/20 Filter Pack Sand. (12x 50 lbs bags)
	Three steel cage centralizers bolted together around casing at 145 ft.	
	5 ft Sump with 4.5-in. OD 3.786-in. ID Schedule 80 PVC End Cap.	148-150 ft - 20/40 Sand. (1x 50 lbs bags)
	Borehole was drilled 0-75 ft by rotary sonic, cored to a 3.77-in diameter using the rotary sonic method 75-252 ft, then backfilled and reamed to 9-in. to a total depth of 159.5 ft.	150-159.5 ft - 3/8-in. Bentonite pellets. (6.5x 50 lbs bags)
	9-in. Borehole TD = 159.5 ft.

Dec. 20, 2023

NASA WHITE SANDS TEST FACILITY
TIMOTHY J. DAVIS
PO BOX 20
LAS CRUCES, NM 88004

Greetings:

Your approved copy of the above numbered permit to drill a well for non-consumptive purposes is enclosed. You must obtain an additional permit if you intend to use the water. It is your responsibility to provide the contracted well driller with a copy of the permit that must be made available during well drilling activities.

Carefully review the attached conditions of approval for all specific permit requirements.

* If use of this well is temporary in nature and the well will be plugged at the end of the well usage, the OSE must initially approve of the plugging. If plugging approval is not conditioned in this permit, the applicant must submit a Plugging Plan of Operations for approval prior to the well being plugged. The Plugging Record must be properly completed and submitted to the OSE within 30 days of the well plugging.
* If the final intended purpose and condition requires a well ID tag and meter installation, the applicant must immediately send a completed meter report form to this office.
* The well record and log must be submitted within 30 days of the completion of the well or if the attempt was a dry hole.
* This permit expires and will be cancelled if no well is drilled and/or a well log is not received by the date set forth in the conditions of approval.

Appropriate forms can be downloaded from the OSE website www.ose.state.nm.us.

Sincerely,

Cheryl Thacker
Water Resource Manager

WR-07 APPLICATION FOR PERMIT TO DRILL

A WELL WITH NO WATER RIGHT

(check applicable box):

For fees, see State Engineer website: http://www.ose.state.nm.us/

RECEIVED
DEC 19 2023
STATE ENGINEER OFFICE
LAS CRUCES, NM

Purpose:	☐ Pollution Control And/Or Recovery	☐ Ground Source Heat Pump
☐ Exploratory Well*(Pump test)	☐ Construction Site/Public Works Dewatering	☐ Other(Describe):
☒ Monitoring Well	☐ Mine Dewatering	

A separate permit will be required to apply water to beneficial use regardless if use is consumptive or nonconsumptive.

*New Mexico Environment Department-Drinking Water Bureau (NMED-DWB) will be notified if a proposed exploratory well is used for public water supply.

☐ Temporary Request - Requested Start Date: Requested End Date:

Plugging Plan of Operations Submitted? ☐ Yes ☐ No

Additional well descriptions are attached: ☐ Yes ☒ No **If yes, how many**

Other description relating well to common landmarks, streets, or other:

Refer to enclosed map

Well is on land owned by: Department of Defense (White Sands Missile Range)

Well Information: NOTE: If more than one (1) well needs to be described, provide attachment. **Attached?** ☒ Yes ☐ No
If yes, how many Three

Approximate depth of well (feet):	Outside diameter of well casing (inches):
Driller Name:	Driller License Number:

3. ADDITIONAL STATEMENTS OR EXPLANATIONS

Two (2) monitoring wells (300-001-SVG and 300-002-SVG) are required to evaluate groundwater conditions in the vicinity of the former 300 Area Hazardous Waste Management Unit (Closure). The wells will be installed into a poorly fractured andesite bedrock aquifer and are anticipated to yield < 1 gallon per minute (gpm) each based on information from nearby monitoring wells. The duration of monitoring is dependent in part on the requirements of the New Mexico Environment Department (NMED).

One (1) monitoring well (400-001-GW) is required to evaluate groundwater conditions in the vicinity of the former 400 Area Hazardous Waste Management Unit (Closure). The well will be installed into a poorly fractured andesite bedrock aquifer and is anticipated to yield < 1 gallon per minute (gpm) based on information from nearby monitoring wells. The duration of monitoring is dependent in part on the requirements of the NMED.

4. SPECIFIC REQUIREMENTS: The applicant must include the following, as applicable to each well type. Please check the appropriate boxes, to indicate the information has been included and/or attached to this application:

Exploratory:	**Pollution Control and/or Recovery:**	**Construction De-Watering:**	**Mine De-Watering:**
Is proposed well a future public water supply well? ☐ Yes ☒ NO If Yes, an application must be filed with NMED-DWB, concurrently. ☐ Include a description of the requested pump test if applicable.	☐ Include a plan for pollution control/recovery, that includes the following: ☐ A description of the need for the pollution control or recovery operation. ☐ The estimated maximum period of time for completion of the operation. ☐ The annual diversion amount. ☐ The annual consumptive use amount. ☐ The maximum amount of water to be diverted and injected for the duration of the operation. ☐ The method and place of discharge. ☐ The method of measurement of water produced and discharged. ☐ The source of water to be injected. ☐ The method of measurement of water injected. ☐ The characteristics of the aquifer. ☐ The method of determining the resulting annual consumptive use of water and depletion from any related stream system. ☐ Proof of any permit required from the New Mexico Environment Department. ☐ An access agreement if the applicant is not the owner of the land on which the pollution plume control or recovery well is to be located.	☐ Include a description of the proposed dewatering operation, ☐ The estimated duration of the operation, ☐ The maximum amount of water to be diverted, ☐ A description of the need for the dewatering operation, and, ☐ A description of how the diverted water will be disposed of.	☐ Include a plan for pollution control/recovery, that includes the following: ☐ A description of the need for mine dewatering. ☐ The estimated maximum period of time for completion of the operation. ☐ The source(s) of the water to be diverted. ☐ The geohydrologic characteristics of the aquifer(s). ☐ The maximum amount of water to be diverted per annum. ☐ The maximum amount of water to be diverted for the duration of the operation. ☐ The quality of the water. ☐ The method of measurement of water diverted. ☐ The recharge of water to the aquifer. ☐ Description of the estimated area of hydrologic effect of the project. ☐ The method and place of discharge. ☐ An estimation of the effects on surface water rights and underground water rights from the mine dewatering project. ☐ A description of the methods employed to estimate effects on surface water rights and underground water rights. ☐ Information on existing wells, rivers, springs, and wetlands within the area of hydrologic effect.
Monitoring ☒ The reason and duration of the monitoring is required.		**Ground Source Heat Pump:** ☐ Include a description of the geothermal heat exchange project, ☐ The number of boreholes for the completed project and required depths. ☐ The time frame for constructing the geothermal heat exchange project, and, ☐ The duration of the project. ☐ Preliminary surveys, design data, and additional information shall be included to provide all essential facts relating to the request.

FOR OSE INTERNAL USE Application for Permit, Form WR-07 Version 07/12/22

File No.: LRG-16197	Trn No.: 754302

NEW MEXICO STATE ENGINEER OFFICE
PERMIT TO EXPLORE

SPECIFIC CONDITIONS OF APPROVAL

17-4 No water shall be appropriated and beneficially used under this permit.

17-7 The Permittee shall utilize the highest and best technology available to ensure conservation of water to the maximum extent practical.

17-B The well shall be drilled by a driller licensed in the State of New Mexico in accordance with 72-12-12 NMSA 1978. A licensed driller shall not be required for the construction of a well driven without the use of a drill rig, provided that the casing shall not exceed two and three-eighths (2 3/8) inches outside diameter.

17-C The well driller must file the well record with the State Engineer and the applicant within 30 days after the well is drilled or driven. It is the well owner's responsibility to ensure that the well driller files the well record.
The well driller may obtain the well record form from any District Office or the Office of the State Engineer website.

17-Q The State Engineer retains jurisdiction over this permit.

17-R Pursuant to section 72-8-1 NMSA 1978, the permittee shall allow the State Engineer and OSE representatives entry upon private property for the performance of their respective duties, including access to the ditch or acequia to measure flow and also to the well for meter reading and water level measurement.

LOG The Point of Diversion LRG 16197 POD16 must be completed and the Well Log filed on or before 12/19/2024.

WSTF 10-DIGIT SAMPLE NUMBER(S) (yrmmddtttt)	USCS Group	Color, sorting/grading, consistency/density, grain size proportions (%), rounding/shape, consolidation/cementation, moisture content, distinguishing features
120			111	120	100	Continuous core			Same as above, brecciated @114' w/ some iron staining
130			121	140	100	Continuous core			122 ft - Same as above, more iron staining, some patches of rhyolite mixed in w/ andesite. Rhyolite grayish color, andesite mostly greenish black. 124 ft - Rhyoloite, grayish green, large iron vein Same as above, iron filled vein @ 129.6', 2" clay inclusion @129.4' (traveled along fracture/vein)
140			131	140	100	Continuous core			137 ft - Same as above, less staining
150			141	150	100	Continuous core			Rhyolite w/ iron and calcite filled fractures. Heavily weathered zone @139'. Highly fractured throughout core Same as above, turns gray-dark gray @143.7', broken up zone @145.1'. Color back to green @146.1'.
160			151	160	100	Continuous core			Fractured andesite. Green black in color
170			161	170	95	Continuous core			172 - Fractured Andesite, green groundmass, some healed but mostly open fractures, density ~1 for every6" core
180			171	180	80	Continuous core			Fracures for every 1" core, andesite 10% @177' is rubble andesite

DEPTH (ft. bgs)	PID (PPM)	TEMP (F)	SOIL CORE			SOIL SAMPLE		LITHOLOGIC DESCRIPTION	
			Sample Depth (ft) From	To	% Core Rec.	TYPE (Soil Grab, Soil Gas, Soil Chemical, Soil Geotechnical, Hex. Chrom.)	WSTF 10-DIGIT SAMPLE NUMBER(S) (yrmmddtttt)	USCS Group	Color, sorting/grading, consistency/density, grain size proportions (%), rounding/shape, consolidation/cementation, moisture content, distinguishing features
190			181	190	**70**	Continuous core			182 - Andesite, green w/purple staining in fractures. Steady fracture rate, 5-11" approximately 1 per 1' Slight increase in open fractures. Andesite. Microcystaline groundmass 167-189.6' @189.6' change to deep purple color and groundmass in non- microcrystaline Andesite, purple, SAA, Iron staining in open fractures.
200			191	200	**95**	Continuous core			@196' highly fractured, infilled w/ weathered igneous, degraded clay clasts More competent rock @201.2', fracture w/ high flow, iron staining and calcite crystallization, highly weathered below fractures.
210			201	210	**100**	Continuous core			More competent rock @201.2', fracture w/ high flow, iron staining and calcite crystallization, highly weathered below fractures. Alternating solid and highly weathered andesite. Minor shale < ½" thick @203.8' and 204.6' (limestone contact determined) 5' Zone of fractures and weathering. @ 209-210' numerous wavy zones of discoloration, light and dark
220			211	220	**100**	Continuous core			@211' purple limestone with some possilbe fossils. Dissolution w/ secondary quartz crystallization @212-216' competent purple limestone w/ minimal fracturing & dissolution @216-218' Highly fractured secondary quartz crystallization, Limestone
230			221	230	**80**	Continuous Core			huge quartz veins @221-222' w/ large crystals Limestone, fractured, broken micro-fault cutting calcite veins @223.5' Lost interval 227 – 229 ft

DEPTH (ft. bgs)	PID (PPM)	TEMP (F)	SOIL CORE			SOIL SAMPLE		LITHOLOGIC DESCRIPTION	
			Sample Depth (ft) From	To	% Core Rec.	TYPE (Soil Grab, Soil Gas, Soil Chemical, Soil Geotechnical, Hex. Chrom.)	WSTF 10-DIGIT SAMPLE NUMBER(S) (yrmmddtttt)	USCS Group	Color, sorting/grading, consistency/density, grain size proportions (%), rounding/shape, consolidation/cementation, moisture content, distinguishing features
240			231	240	**100**	Continuous Core			Lots of clay @230-231' alternating to all clay. Limestone w/ calcite veins @232-233.25' Brecciated unit w/ calcite matrix clasts that are angular to subangular w/ Ryholite and maybe Andesite clasts. @233.25' – Rhyolite contact w/ Pyrolusite alternating dendrites & round chunks, large phenocrysts (altered?)
250			241	250	**30**	Continuous Core			@ 242' - Competent Rhyolite , orange/pink w/Pyrolusite, large phenocrysts appear to be altered, very soft, white, and high degree of iron staining Lost interval from 242 – 249 ft
252			251	252	**100**	Continuous Core			249-252 ft - Rhyolite, porphyritic w/ light phenocrysts likely altered (shows reaction), iron staining making this zone orange TD @252'

Case Narrative

Sample Receipt:

All samples on the Chain of Custody were received by OCA at 4.3ºC, on ice.

Holding Times:

All samples were analyzed within required holding times unless otherwise noted in the data qualifier section of the report.

Analytical Methods:

Sample analysis was performed following the analytical methods listed on the cover page.

Data Qualifiers:

Within this report, data qualifiers may have been assigned to clarify deviations in common laboratory procedures or any divergence from laboratory QA/QC criteria. If a data qualifier has been used, it will appear in the back of the report along with its description. All method QA/QC criteria have been met unless otherwise noted in the data qualifier section.

Definition of Terms:

The definitions of common terms and acronyms used in the report have been placed at the back of the report to assist data users.

Comments:

None

Data Qualifier Definitions

Qualifier

L1 = The associated blank spike recovery was above laboratory acceptance limits.

TP0520241	8260B	1,1-Dichloropropene	LCS	
TP0520241	8260B	1,2-Dichloroethane	LCS	

L2 = The associated blank spike recovery was below laboratory acceptance limits.

TP0520241	8260B	Acetone	LCSD	
TP0520241	8260B	Bromomethane	LCS/LCSD	
TP0520241	8260B	Chloroethane	LCS/LCSD	Compound co-elutes with methanol from extraction resulting in reduced recoveries.

M1 = Matrix spike recovery was high, the associated blank spike recovery was acceptable.

AZ14477-002	8260B	Tetrachloroethene	MS/MSD	Dechlorination of pentachloroethane in QC spike into tetrachloroethene due to sample matrix suspected.

M2 = Matrix spike recovery was low, the associated blank spike recovery was acceptable.

AZ14477-002	8260B	Pentachloroethane	MS/MSD	Dechlorination of pentachloroethane in QC spike into tetrachloroethene due to sample matrix suspected.

M7 = Matrix spike recovery was low. Data reported per ADEQ policy 0154.000. Matrix Interference was confirmed.

AZ14477-002	8260B	Acetone	MS/MSD	

R2 = RPD/RSD exceeded the laboratory acceptance limit.

AZ14477-002	8260B	Pentachloroethane	MS/MSD	

Definition of terms:

R	Result of unspiked laboratory sample used for matrix spike determination.
SP CONC (or Spike Conc.)	Spike concentration added to sample or blank
MS	Matrix Spike sample result
MSD	Matrix Spike Duplicate sample result
%MS	Percent recovery of MS: {(MS-R1) / SP CONC} x100
%MSD	Percent recovery of MSD: {(MSD-R1) / SP CONC} x 100
RPD (for MS/MSD)	Relative Percent Difference: {(MS-MSD) / (MS+MSD)} x 100 x 2
LCS	Laboratory Control Sample result
LCSD	Laboratory Control Sample Duplicate result
%LCS	Percent recovery of LCS: {(LCS) / SP CONC} x100
%LCSD	Percent recovery of LCSD: {(LCSD) / SP CONC} x 100
RPD (for LCS/LCSD)	Relative Percent Difference: {(LCS-LCSD) / (LCS+LCSD)} x 100 x 2
ACP %LCS	Acceptable percent recovery range for Laboratory Control Samples.
ACP %MS	Acceptable percent recovery range for Matrix Spike samples
ACP RPD	Acceptable Relative Percent Difference
D	Detectable, result must be greater than zero
Qual	A checked box indicates a data qualifier was utilized and/or required for this analyte see attached explanation.
ND	Analyte Not Detected

Case Narrative

Sample Receipt:

All samples on the Chain of Custody were received by OCA at 4ºC, on ice.

Holding Times:

All samples were analyzed within required holding times unless otherwise noted in the data qualifier section of the report.

Analytical Methods:

Sample analysis was performed following the analytical methods listed on the cover page.

Data Qualifiers:

Within this report, data qualifiers may have been assigned to clarify deviations in common laboratory procedures or any divergence from laboratory QA/QC criteria. If a data qualifier has been used, it will appear in the back of the report along with its description. All method QA/QC criteria have been met unless otherwise noted in the data qualifier section.

Definition of Terms:

The definitions of common terms and acronyms used in the report have been placed at the back of the report to assist data users.

Comments:

This is a complete final report. The information in this report applies to the samples analyzed in accordance with the chain-of-custody document. Weck Laboratories certifies that the test results meet all requirements of TNI unless noted by qualifiers or written in the Case Narrative. The report may include analytes that are not currently accreditable by some state agencies or accrediting bodies. This analytical report must be reproduced in its entirety.

Dear Mark Noorani,

Enclosed are the results of analyses for samples received 5/21/24 with the Chain-of-Custody document. The samples were received in good condition, at 2.8 °C and on ice. All analyses met the method criteria except as noted in the case narrative or in the report with data qualifiers.

Notes and Definitions

Item	Definition
%REC	Percent Recovery
Dil	Dilution
MRL	Method Reporting Limit (MRL) is the minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. The MRL is also known as Limit of Quantitation (LOQ)
ND	NOT DETECTED at or above the Method Reporting Limit (MRL). If Method Detection Limit (MDL) is reported, then ND means not detected at or above the MDL.
RPD	Relative Percent Difference
Source	Sample that was matrix spiked or duplicated.

Any remaining sample(s) will be disposed of one month from the final report date unless other arrangements are made in advance.

All results are expressed on wet weight basis unless otherwise specified.

All samples collected by Weck Laboratories have been sampled in accordance to laboratory SOP Number MIS002.

RE: 23EC043B

Dear Jerry Williams:

Order No.: 24051485

Summit Environmental Technologies, Inc. received 2 sample(s) on 5/17/2024 for the analyses presented in the following report.

There were no problems with the analytical events associated with this report unless noted in the Case Narrative.

Quality control data is within laboratory defined or method specified acceptance limits except where noted.

If you have any questions regarding these tests results, please feel free to call the laboratory.

Sincerely,

Salwa A. Najjar

Case Narrative

WO#: **24051485**
Date: **6/4/2024**

CLIENT: Navarro Research & Engineering Inc.
Project: 23EC043B

WorkOrder Narrative:
24051485: This report in its entirety consists of the following documents: Cover Letter, Case Narrative, Analytical Results, QC Summary Report, Applicable Accreditation Information, Chain-of-Custody, Cooler Receipt Form, and other applicable forms as necessary. All documents contain the Summit Environmental Technologies, Inc., Work Order Number assigned to this report.

Summit Environmental Technologies, Inc., holds the accreditations/certifications listed at the bottom of the cover letter that may or may not pertain to this report. Please refer to the "Accreditation Program Analytes Report" for accredited analytes list.

The information contained in this analytical report is the sole property of Summit Environmental Technologies, Inc. and that of the customer. It cannot be reproduced in any form without the consent of Summit Environmental Technologies, Inc. or the customer for which this report was issued. The results contained in this report are only representative of the samples received. Conditions can vary at different times and at different sampling conditions. Summit Environmental Technologies, Inc. is not responsible for use or interpretation of the data included herein.

All results for Solid Samples are reported on an "as received" or "wet weight" basis unless indicated as "dry weight" using the "-dry" designation on the reporting units.

This report is believed to meet all of the requirements of the accrediting agency, where applicable. Any comments or problems with the analytical events associated with this report are noted below.

Analytical Sequence Sample Notes:
24051485-001A Mtl-ICP_S(6010D): Corresponding MS/MSD exhibited outlying recoveries for several analytes possibly due to sample matrix issues. LCS-75471 demonstrates control for these analytes.

24051485-001A and 002A SVOC-MSTR_S(8270E): CCV demonstrated high recovery for Benzidine, indicating possible high bias. Sample was ND for this analyte.;
Possible low bias for 4-Chloroaniline and Hexachlorocyclopentadiene due to low recovery in CCV. Less than 10% of all analytes are outside of acceptable criteria. RLC demonstrates adequate instrument sensitivity for EPA 8270 requirement.

24051485-001A DX-Full_S(8290): Low lable recoveries confirmed by reanalysis; due to suspected

sample matrix effect. Associated analytes may be biased high.

24051485-001A and 002A DX-Full_S(8290): Possible low bias for 1,2,3,4,6,7,8-Heptachlorodibenzofuran due to low recovery in bracketing CS3. RLC demonstrates adequate sensitivity in RLC.

Qualifiers and Acronyms

WO#: **24051485**
Date: **6/4/2024**

These commonly used Qualifiers and Acronyms may or may not be present in this report.

Qualifiers

U	The compound was analyzed for but was not detected above the MDL.
J	The reported value is greater than the Method Detection Limit but less than the Reporting Limit.
H	The hold time for sample preparation and/or analysis was exceeded. Not Clean Water Act compliant.
D	The result is reported from a dilution.
E	The result exceeded the linear range of the calibration or is estimated due to interference.
MC	The result is below the Minimum Compound Limit.
*****	The result exceeds the Regulatory Limit or Maximum Contamination Limit.
m	Manual integration was used to determine the area response.
d	Manual integration in which peak was deleted
N	The result is presumptive based on a Mass Spectral library search assuming a 1:1 response.
P	The second column confirmation exceeded 25% difference.
C	The result has been confirmed by GC/MS.
X	The result was not confirmed when GC/MS Analysis was performed.
B	The analyte was detected in the Method Blank at a concentration greater than the RL.
MB+	The analyte was detected in the Method Blank at a concentration greater than the MDL.
G	The ICB or CCB contained reportable amounts of analyte.
QC-/+	The CCV recovery failed low (-) or high (+).
R/QDR	The RPD was outside of accepted recovery limits.
QL-/+	The LCS or LCSD recovery failed low (-) or high (+).
QLR	The LCS/LCSD RPD was outside of accepted recovery limits.
QM-/+	The MS or MSD recovery failed low (-) or high (+).
QMR	The MS/MSD RPD was outside of accepted recovery limits.
QV-/+	The ICV recovery failed low (-) or high (+).
S	The spike result was outside of accepted recovery limits.
W	Samples were received outside temperature limits (0° – 6° C). Not Clean Water Act compliant.
Z	Deviation; A deviation from the method was performed; Please refer to the Case Narrative for additional information

Acronyms

ND	Not Detected	**RL**	Reporting Limit
QC	Quality Control	**MDL**	Method Detection Limit
MB	Method Blank	**LOD**	Level of Detection
LCS	Laboratory Control Sample	**LOQ**	Level of Quantitation
LCSD	Laboratory Control Sample Duplicate	**PQL**	Practical Quantitation Limit
QCS	Quality Control Sample	**CRQL**	Contract Required Quantitation Limit
DUP	Duplicate	**PL**	Permit Limit
MS	Matrix Spike	**RegLvl**	Regulatory Limit
MSD	Matrix Spike Duplicate	**MCL**	Maximum Contamination Limit
RPD	Relative Percent Different	**MinCL**	Minimum Compound Limit
ICV	Initial Calibration Verification	**RA**	Reanalysis
ICB	Initial Calibration Blank	**RE**	Reextraction
CCV	Continuing Calibration Verification	**TIC**	Tentatively Identified Compound
CCB	Continuing Calibration Blank	**RT**	Retention Time
RLC	Reporting Limit Check	**CF**	Calibration Factor

This list of Qualifiers and Acronyms reflects the most commonly utilized Qualifiers and Acronyms for reporting. Please refer to the Analytical Notes in the Case Narrative for any Qualifiers or Acronyms that do not appear in this list or for additional information regarding the use of these Qualifiers on reported data.

NARRATIVE

(M607-943)

CLIENT:	**Navarro Research and Engineering Inc.**
SwRI PROJECT #:	**26040.09.001**
BATCH #:	**M607-943**
TASK ORDERS:	**240516-7**
REPORT DATE:	**05/29/2024**

NARRATIVE FOR NDMA/DMN/BROMACIL ANALYSIS

1. Sample discrepancy was noted for the soil sample collected on May 08. The 2405080836 number on the jar was the correct sample description per client. Both soil samples were extracted with dichloromethane (DCM) and analyzed by GC/MS in selective ion monitoring mode for N-Nitrosodimethylamine (NDMA), N-Nitrodimethylamine (DMN) and Bromacil according to the modified Method 607.

2. All soil samples were extracted within 14 days of collection date and were analyzed within 28 days from extraction date.

3. The sample reporting limit is 0.33 ppb (ng/g or µg/kg) for 30 g Soxhlet extraction of soil samples. All targets were quantified within the calibration curve range 0.33 - 163 ng/g.

4. Laboratory control sample (LCS) and matrix spike samples (if any) were spiked at 16.7 ppb, then extracted and analyzed. The recoveries for all target compounds were within method recovery criteria of 13-110% for NDMA, 30-150% for DMN, and 40-190% for Bromacil.

5. N-Nitroso-di-n-propylamine-d14 (surrogate) was spiked into every sample before extraction at 0.50 µg/mL in extract. The surrogate recoveries for all samples were within method recovery criteria of 40-160%.

6. Laboratory process blank (PB) was extracted and analyzed with every extraction batch.

7. A "J" value was reported if the associated value was below reporting limit.

8. All analyte concentrations are expressed in ng/g (ppb). Sample calculation:

$$\text{Concentration (ng/g; µg/kg)} = \frac{C\left(\frac{\mu g}{mL}\right) \times FV\ (mL) \times DF}{Wsamp(kg)}$$

where:
- C = result of GC/MS analysis in µg/mL
- FV = final volume of sample in mL
- W_{samp} = sample weight in kg
- DF = dilution factor, if any

1.0 INTRODUCTION

Sanborn Head & Associates, Inc. (Sanborn Head) was retained by Pace Analytical (Pace) and Navarro Research and Engineering, Inc. (Navarro) to support a program of rock core sampling at the NASA White Sands Test Facility in Las Cruces, New Mexico (Site). The purpose of this work was to assess the distribution of chlorinated volatile organic compounds (VOCs) and semi volatile organic compounds (SVOCs) within the bedrock matrix. Sampling was conducted during drilling of two core holes between the dates of April 17 and May 18, 2024.

The Core^{DFN} bedrock VOC sampling approach is a comprehensive VOC sampling method developed by Dr. Beth Parker, and Dr. Gorecki at the University of Guelph and University of Waterloo, respectively. This method has been previously applied at the Site. The Core^{DFN} method generally includes detailed logging of bedrock core including fractures, field preparation and crushing of bedrock samples to increase the surface area of the sample, field preservation of crushed samples in methanol, and laboratory extraction and analysis of the samples. This method was developed to improve quantification of VOCs in the bedrock matrix and pore water.

The unconsolidated portion of the core holes were cased to 75 and 86 feet below ground surface (ft bgs) at 300-001-GSV and 300-002-GSV, respectively. A total of 341.0 linear feet of rock was cored from 300-001-GSV and 300-002-GSV, with a total recovery of 291.40 feet. A total of 147 rock samples were collected for VOC and SVOC analysis. In addition, 8 field duplicate (FD) samples, and 8 matrix spike and matrix spike duplicate (MS/MSD) sample pair (2 samples), 10 equipment blank (EB) samples, 3 methanol blank (MB) samples, and 6 trip blank (TB) samples were also collected for VOC and SVOC analysis. Sixteen intact core samples were collected, and were sent for physical property analyses, in accordance with CORE^{DFN} procedure. Extraction and VOC and SVOC analyses of the rock core samples were conducted by the Pace Analytical (Pace) laboratory in Green Bay, Wisconsin. Physical properties samples were analyzed at WSP Canada Inc. (WSP) in Mississauga, Ontario between April and June of 2024.

Results of physical property analyses for bulk density, porosity, water content, and organic carbon content were used in conjunction with the VOC data for the calculation of rock porewater concentrations, as presented in this report. A full description of the methods used for the estimation of porewater concentrations is contained in Section 4.1.

2.0 FIELD SAMPLING COLLECTION METHODS

The following is a summary of the field methods used for drilling, rock sample collection and processing during the field program. The sampling was undertaken by two Sanborn Head Scientists working in collaboration with one Navarro geologist who logged the core and directed drilling operations from April 17 to May 18, 2024.

2.1 Drilling and Core Collection

The drilling was conducted by Yellow Jacket Drilling Services of Rancho Cucamonga, California. Coring was conducted using HQ size tooling. HQ size core barrels generate 5-foot long by 2.5-inch diameter cores. A triple-tube core barrel (HQ3) was utilized to minimize disturbance to the core. In HQ3 tooling, core samples are retained within a second inner stainless-steel tube, split

lengthwise (liners), within the core barrel. The liners are extruded from the outer core barrel after each core run using water pressure. This method was used as it limits the disturbance and mechanical breaks of the core samples and provides cores that better reflect the *in-situ* fracture distribution. Table 1 summarizes the drilling progression and the number of samples collected.

2.2 VOC and SVOC Sample Collection and Processing

Following retrieval, the core was transferred from the liners to a poly vinyl chloride (PVC) tray lined with aluminum foil. The PVC tray was placed on a table, where the core was logged, and samples were collected by a Sanborn Head scientist. Two PVC trays were utilized and decontaminated after each use; the aluminum foil was disposed between runs. Sample locations were selected for paired VOC and SVOC analysis based on fracture distributions and lithology with a target frequency of approximately one sample every 1.5 to 2.0 feet. Prior to sampling, the core was photographed with labels indicating the Site name, core hole name, run number, depth of the top and bottom of the run, and rock quality designation (RQD). Samples were collected both from fractured surfaces and from the intervening unfractured rock matrix. Samples approximately 0.1 feet thick were broken from the core using a hammer and chisel at the selected sample depths. The samples were then wrapped in aluminum foil and given a unique field ID. Following sampling and wrapping, the samples were delivered to the sample processing area. Details on sample depths, collection times, position relative to fractures, and other relevant information were recorded in the Sanborn Head electronic logs. After completion of geologic logging by Navarro and sample collection by Sanborn Head, the remainder of the core was placed in core boxes on-site.

Once samples arrived at the processing area, samples were individually unwrapped and placed in a stainless-steel trimming cell. The outer portion of the sample (that had been exposed to drill tooling and fluids) was removed with a hammer and chisel. The remaining subsample was then placed in a stainless-steel cell and crushed using a hydraulic press at a pressure of approximately 6,000 psi. For VOC samples, the crushed subsample was then transferred to a pre-labeled and pre-weighed 40 mL VOA vial containing 15 mL of purge-and-trap grade methanol. Purge-and-trap grade methanol is a high-grade methanol used for Gas chromatography/Mass spectrometry (GS/MS) VOC analysis. For SVOC samples, the crushed subsample was transferred to a pre-labeled and pre-weighed unpreserved 40 mL amber VOA.

Trimming cells, crushing cells, chisels, and all other equipment associated with sample processing were decontaminated between each subsample. Sanborn Head provided 6 sets of trimming cells, crushing cells, and chisels enabling staff to process all samples from a given run before starting the five-step decontamination process. The five-step decontamination process involves: (1) full immersion in detergent (Alconox™) wash with scrubbing to remove sediment, (2) full immersion and rinse in distilled or spring water, (3) spray rinse with clean high-performance liquid chromatography (HPLC) grade methanol, (4) spray rinse with clean distilled or spring water to remove any traces of methanol, and (5) drying with clean/disposable towels before next use.

Sample vials were prepared by Pace at their Green Bay, Wisconsin laboratory and sent to the Site. Vials were labeled and weighed after the addition of 15 mL of purge-and-trap grade

methanol, and again after the addition of crushed rock. Calibration of the balance was checked daily. Sample vial IDs were cross-referenced with the field ID, which in turn references a sample depth. Sample depths were used to generate sample IDs which are unique to each sample depth and drilling location. Each sample was labeled with its sample ID and submitted to Pace's laboratory in Green Bay, Wisconsin for analysis (see description of method, below). Samples were kept on ice in coolers on Site by Sanborn Head until being shipped to the Green Bay Pace laboratory on ice by Sanborn Head and analyzed for VOCs and SVOCs.

In total, 147 samples were collected for VOC and SVOC analysis from 291.40 ft of rock retrieved from the two core holes. During sample packing one soil sample vial broke (VOC-0175: 300-001-GSV-230.05-VOC_20240518); therefore, analysis of this sample could not be completed. Eight FDs were collected by crushing additional mass of selected field samples. Eight MS/MSD sample pairs were collected by crushing additional mass of selected field samples. Nine TBs were sent within the coolers shipped to Pace to determine possible cross contamination within the coolers during shipment.

2.3 Physical Property Sample Collection

Sixteen 0.5-0.6 ft long intact samples were collected from the rock cores and were sent for analysis of physical properties (porosity, bulk density, water content, specific gravity, and total organic carbon (TOC). Physical property samples were not collected until after VOC sample collection was completed for each applicable run. Details about lithology, grain size, sample depth interval, and other relevant information were recorded on field forms. Samples were wrapped first with parafilm, then foil, and then sealed in a plastic bag with a vacuum sealer to limit moisture loss. Each sample was shipped on ice under Chain of Custody to WSP for analysis by Sanborn Head.

WSP analyzed the porosity and bulk density via Method ASTM D7263; water content via Methods ASTM D2216 and ASTM D4318; specific gravity via Method ASTM D854; and TOC via the Walkley and Black method. A summary of the samples collected for these physical property analyses are presented in Table 2 and the results of these analyses are presented in Table 3. The physical property sample analytical reports are found in Appendix B.

3.0 LABORATORY ANALYSIS AND VOC EXTRACTION

Sample extraction and analysis was performed at Pace laboratory in Green Bay, Wisconsin. Samples were extracted into methanol for analysis by microwave assisted extraction (MAE) of VOCs and SVOCs from rock samples. The methanol extracts were analyzed for VOCs with GC/MS for 24 target VOCs: 1,1,1-trichloroethane, 1,1,2-trichlorotrifluoroethane, 1,1-dichloroethene, 1,2-dichloroethene, 2-butanone (MEK), 2-hexanone, 2-propanol, acetone, benzene, bromodichloromethane, bromoform, chlorobenzene, chloroform, chloromethane, dibromochloromethane, dichlorofluoromethane, m&p-xylene, methylene chloride, methyl-tert-butyl ether, tetrachloroethene, toluene, trans-1,2-dichloroethene, trichloroethene, and trichlorofluoromethane. The unpreserved vials were analyzed for SVOCs with EPA Method 8270E for five target SVOCs: 1,4-dioxane, bis(2-ethylhexyl) phthalate, di-n-butylphthalate, n-nitrodimethylamine, and n-nitrosodimethylamine.

Pace's laboratory report is presented in Appendix A.

4.0 RESULTS

The following sections provide the results of the rock core chemical analyses and a discussion of the method of estimation of porewater concentration and VOC mass estimated from that data.

4.1 Rock Core VOC Results and Porewater Estimates

A summary of core sample depths is provided in Table 1. VOC and SVOC concentrations from laboratory analysis of bedrock are provided in Table 4. Estimates of porewater concentrations are provided in Table 5 for those samples where analytes were detected above laboratory reporting limits. The estimated porewater calculations were not completed for the SVOC samples as no detections were reported in the samples.

The concentrations of the analytes extracted into methanol (C_{MEOH}) were measured using GC/MS methods as µg/L in methanol. The concentrations of analytes in the bulk rock (C_t) sample were then calculated by Pace using the analysis of the methanol extract (C_{MEOH}) µg, mass of crushed rock in sample (M_{rock}) in g and volume of methanol (V_{MEOH}) in mL as follows:

$$C_t = \frac{C_{MeOH} \times V_{MeOH}}{M_{rock}}$$

This calculation reflects total VOC mass present in dissolved, sorbed, and immiscible phases.

Sample limits of detection (LDs) can be calculated for each sample from the above equation by setting the C_{MEOH} to the respective values for each analyte. For samples where the analyte was analyzed for, but was not detected above the limit of quantitation, the results are flagged with a "ND." Samples flagged with a "J" designation indicate the analyte was detected but is below the limit of quantitation but above the LD, the concentration is estimated.

The bulk rock VOC concentrations (C_t) are converted to matrix pore water concentrations (C_w) in µg/L of pore water utilizing the wet rock bulk density in grams per cubic centimeter (g/cm^3 - $P_{b(wet)}$); the dry rock bulk density ($P_{b(dry)}$) in g/cm^3; matrix porosity, a unitless factor (Ø); and the soil-water partitioning coefficient (K_d) in mL/g as shown below:

$$C_w = \frac{C_t P_{b(wet)}}{K_d P_{b[dry]} + \emptyset}$$

This equation assumes that the matrix porosity (i.e., primary porosity) is 100% saturated with water and that the VOC mass occurs in only the dissolved and sorbed phases (i.e., no NAPL is present). Pore water concentrations that approach or exceed aqueous solubility limits for given compounds may indicate the presence of DNAPL (Feenstra et al, 1991).

The partitioning coefficient (K_d) is based on the assumption that sorption is rapid, reversible, and that there is no variation with concentration. This coefficient is calculated using the organic carbon partitioning coefficient (K_{oc}) in mL/g for each compound, obtained from the literature (e.g., Pankow and Cherry, 1996) or other sources, and fraction of organic carbon (f_{oc}) in % obtained through physical property analysis using the following equation:

$$K_d = K_{oc} f_{oc}$$

This coefficient assumes that sorption is entirely dependent upon solid phase organic carbon in the rock matrix, based on the fact that the VOCs of interest have relatively low molecular weights (Schwarzenbach et al. 1993).

Physical property tests were conducted by WSP. Full laboratory reports for these analyses are provided in Appendix B. These results are summarized in Table 3. Physical properties samples were representative of the major rock types encountered on the Site (andesite, rhyolite, breccia, limestone, and conglomerate). The values for porosity (Ø) bulk density (ρ_b), and fraction of organic carbon (f_{oc}) used to estimate matrix porewater concentrations are based on the closest physical property sample collected, taking into consideration, and pairing the VOC sample with the physical property sample that was most representative, by depth and lithology, and applied to the VOC sample. The selection of physical properties has a direct correlation to the predicted porewater concentrations. As such, Navarro evaluated the appropriateness of the physical samples selected for these calculations based on its understanding of the geologic conditions at the Site. As necessary, Sanborn Head adjusted the porewater concentration calculations.

Table A lists the (K_{oc}) values used to calculate matrix porewater concentrations, and the source for these values for those compounds that were detected.

Table A: Organic Carbon Partitioning Coefficients

Volatile Organic Compound	Koc Value (mL/g)	Reference
1,1,2-Trichlorotrifluoroethane	372	http://www.epa.gov/chemfact/s_freon.txt
Benzene	59	Pankow and Cherry (1996)
Chlorobenzene	330	Pankow and Cherry (1996)
Methylene Chloride	25	http://epa.gov/chemfact/s_dcm.txt (1994)
Toluene	182	http://www.epa.gov/superfund/health/conmedia/soil/pdfs/appd_k.pdf
Trichlorofluoromethane	159	Pankow and Cherry (1996)

VOC concentrations in rock (as ug/kg) are shown in Table 4. Estimated pore water concentrations (as µg/L) for each sample for which a compound was detected are shown in Table 5. These concentrations were calculated using the porosity (Ø), bulk density (P_b), and (f_{oc}) calculated from the total organic carbon as reported by WSP. Sanborn Head, using the physical property groupings/zones established by Navarro, calculated porewater concentrations for each VOC sample for each analyte that was detected above laboratory reporting limits.

4.2 Figures

Concentrations of benzene and trichlorofluoromethane in µg/kg, along with other information are presented in the logs for borehole 300-001-GSV (Figure 1) and borehole 300-002-GSV (Figure 2).

4.3 Results from Field Blanks and Duplicates

EBs were collected at the beginning and end of the field effort and at a minimum frequency of 1 EB for every core hole. To collect EBs for VOCs, Kim-wipes® (or other disposable delicate task wipes) were removed from a pre-prepped and pre-labeled vial containing 15 mL of purge-and-trap grade methanol then used to wipe the inside of decontaminated crushing cells and other equipment that had come in contact with subsamples. Kim-wipes® were then placed back into the pre-labeled vials they were taken from. To collect EBs for SVOCs, laboratory provided deionized water was poured over decontaminated crushing cells and other equipment that had come in contact with the subsamples. The water was collected in a pre-labeled 100mL bottle and shipped for SVOC analysis.

Field blank results, including EBs, MBs and TBs are provided with the analytical report in Appendix A, and summarized in Table 6. No analytes were detected above laboratory quantitation limits in any of the blanks, EBs or TBs. One trip blank, TB-01_20240422 had an estimated value (analyte was detected below the quantitation limit, but above the detection limit) for methylene chloride (a common laboratory contaminant). This result was compared with all samples associated with the cooler of samples shipped with this trip blank. None of the samples associated with the shipment had any detection of methylene chloride and therefore no cross-contamination sourced from Site samples is likely for this analyte.

Comparisons for the field duplicate samples are provided in Table 7. Relative percent difference (RPD) is calculated by taking the absolute difference of the two values, dividing by the average of the two values and multiplying by 100. The target RPD for solid samples is less than 50% RPD for field duplicate samples. Field duplicates test and reflect the repeatability of the entire sample processing, extraction, and analytical procedures, and thus are expected to show more variability than laboratory duplicates. This dataset had one sample / FD pair where the calculated RPD was greater than the 50% value that is typically used for solid samples; therefore, the sample result was an estimated “J” flagged value.

TABLE 4
Total VOC Concentrations in Rock Core Samples

Samples (1)			Comments/Observations (2)			VOC Analytical Results µg/kg (3)																								
Sample ID	Top Depth (ft bgs)	Bottom Depth (ft bgs)	Sample Lithology (2a)	Sample Type (2b)	Position Relative to Feature (2c)	1,1,1-Trichloroethane	1,1,2-Trichlorotrifluoroethane	1,1-Dichloroethene	1,2-Dichloroethane	2-Butanone (MEK)	2-Hexanone	2-Propanol	Acetone	Benzene	Bromodichloromethane	Bromoform	Chlorobenzene	Chloroform	Chloromethane	Dibromochloromethane	Dichlorofluoromethane	m&p-Xylene	Methylene Chloride	Methyl-tert-butyl ether	Tetrachloroethene	Toluene	trans-1,2-Dichloroethene	Trichloroethene	Trichlorofluoromethane

Notes:
1. This table presents data recorded in conducting field sampling and laboratory analysis of rock core samples. The samd & Associates, Inc. (Sanborn Head) personnel and analyzed by Pace Analytical where they were extracted and analyzed for the listed target Volatile Organic Compounds (VOCs) and Semi Volatile Organic COmpounds (SVOCs). Refer to the Sanborn Head report text and tables for additional details regarding sampling, sample preparation, extraction, and analysis.

2. The Comments/Observations section includes general notes regarding the sample characteristics, field classified lithanborn Head standard protocols as explained further below.
   a) Lithology reflects Sanborn Head and Navarro personnel classification of the sample at the time of collection.
   b) Sample type differentiates between feature surface (e.g. including a fracture face) ; or a matrix sample = somence in 2c)
   c) Position relative to feature indicates the position of the sample relative to observed features (e.g. fractures) inf
      "Between Fracture"= between closely spaced fractures;
      "Above Fracture"=above fracture surface;
      "Below Fracture"=below fracture surface;
      "f#" = sample distance in tenths of feet from fracture surface;
      "NA" = not applicable.
3. The laboratory results for VOCs and SVOCs in rock are expressed in units of micrograms per kilogram (µg/kg) of rock compounds included.
   "<" indicates that the analyte was analyzed for, but was not detected above the indicated quantitation limit
   "J" indicates the analyte was detected below the quantitation limit, but above the detection limit, and the concent

Notes

1. This table presents data recorded in conducting field sampling and laboratory analysis of rock core samples from coring locations: 300-001-GSV and 300-002-GSV. The samples were collected, processed and preserved in the field by Sanborn Head & Associates, Inc. (Sanborn Head) personnel and analyzed in Pace Analytical's laboratory where they were extracted and analyzed for the listed target Volatile Organic Compounds (VOCs) and Semi Volatile Organic Compounds (SVOCs) using methods developed by the University of Guelph. Refer to the Sanborn Head report text and tables for additional details regarding sampling, sample preparation, extraction, and analysis.

2. The Comments/Interpretation section include general notes regarding the sample characteristics, field classified lithology, position relative to fracturing, and type of fracturing according to Sanborn Head standard protocols as explained further below.
   a) Lithology reflects Sanborn Head and Navarro personnel classification of the sample at the time of collection.
   b) Sample type differentiates between surface, lithology change or matrix some distance away from the nearest fracture or other feature (see "f#" reference in 2c).
   c) Position relative to feature indicates the position of the sample relative to observed features (e.g. fractures) inferred to reflect insitu features with the following legend:
      Above Feature = sampled above and inclusive of feature;
      Below Feature = sampled below and inclusive of feature;
      "f#" = sampled distance in tenths of feet from fracture surface;
      "NA" = not applicable.
   d) Physical Property Sample designates which physical property sample was used as part of the estimated porewater concentration calculations.

3. The Estimated Pore Water Concentration in micrograms per liter (ug/L) represents an estimate of the equivalent matrix porewater concentrations (Cw) computed based on the laboratory determined total mass concentration (µg/kg of wet rock), as outlined in the report text, using estimated or measured parameters including rock wet bulk density (g/cm3) as received in the field, matrix porosity, and matrix retardation factor (R). This simplified partitioning analysis assumes the rock matrix porosity was fully saturated with water, and that mass occurs at equilibrium in the dissolved and sorbed phase. Refer to the Pace report text for additional details.

4. Estimated Porewater concentrations have been calculated for select VOCs. These calculations were not completed for SVOCs as there were no detections observed in any of the samples. The values are rounded to two significant figures. Please refer to the analytical report text and appendices for information regarding detection and quantitation limits. The second column for each compound denotes quality assurance flags that have been carried through from the µg/kg analytical results including:
   "<" indicates that the analyte was analyzed for, but was not detected above the indicated quantitation limit.
   "J" indicates the analyte was detected below the quantitation limit, but above the detection limit, and the concentration is estimated.
   See Laboratory Analytical Report for further explanation.

Notes:

1. "EB" samples are equipment blanks. "TB" samples are trip blanks. "MB" samples are methanol blanks (blanks of the Purge&Trap methanol used for vial preparation). Results are reported as µg/kg. See report text for further explanation.

2. The laboratory results for volatile organic compounds and semi volatile organic compounds in rock are expressed in units of micrograms per kilogram (µg/kg) for the target compounds. The values are rounded to two significant figures. Please refer to the analytical report text and appendices for information regarding detection and quantitation limits. The second column for each compound denotes quality assurance flags including:

"<" indicates that the analyte was analyzed for, but was not detected above the indicated quantitation limit

"J" indicates the analyte was detected below the quantitation limit, but above the detection limit, and the concentration is estimated.

See Laboratory Analytical Report for further explanation.

Notes:

1. The laboratory results for volatile organic compounds in rock are expressed in units of micrograms per kilogram (µg/kg) of rock sample at field moisture conditions at the time of sampling for the target compounds. The values are rounded to two significant figures. Please refer to the analytical report text and appendices for information regarding detection and quantitation limits. The second column for each compound denotes quality assurance flags including:
"<" indicates that the analyte was analyzed for, but was not detected above the indicated quantitation limit
"J" indicates the analyte was detected below the quantitation limit, but above the detection limit, and the concentration is estimated.
See Laboratory Analytical Report for further explanation.

2. Percent RPD is calculated when applicable, see Rock Core Report for further explanation.

Figures

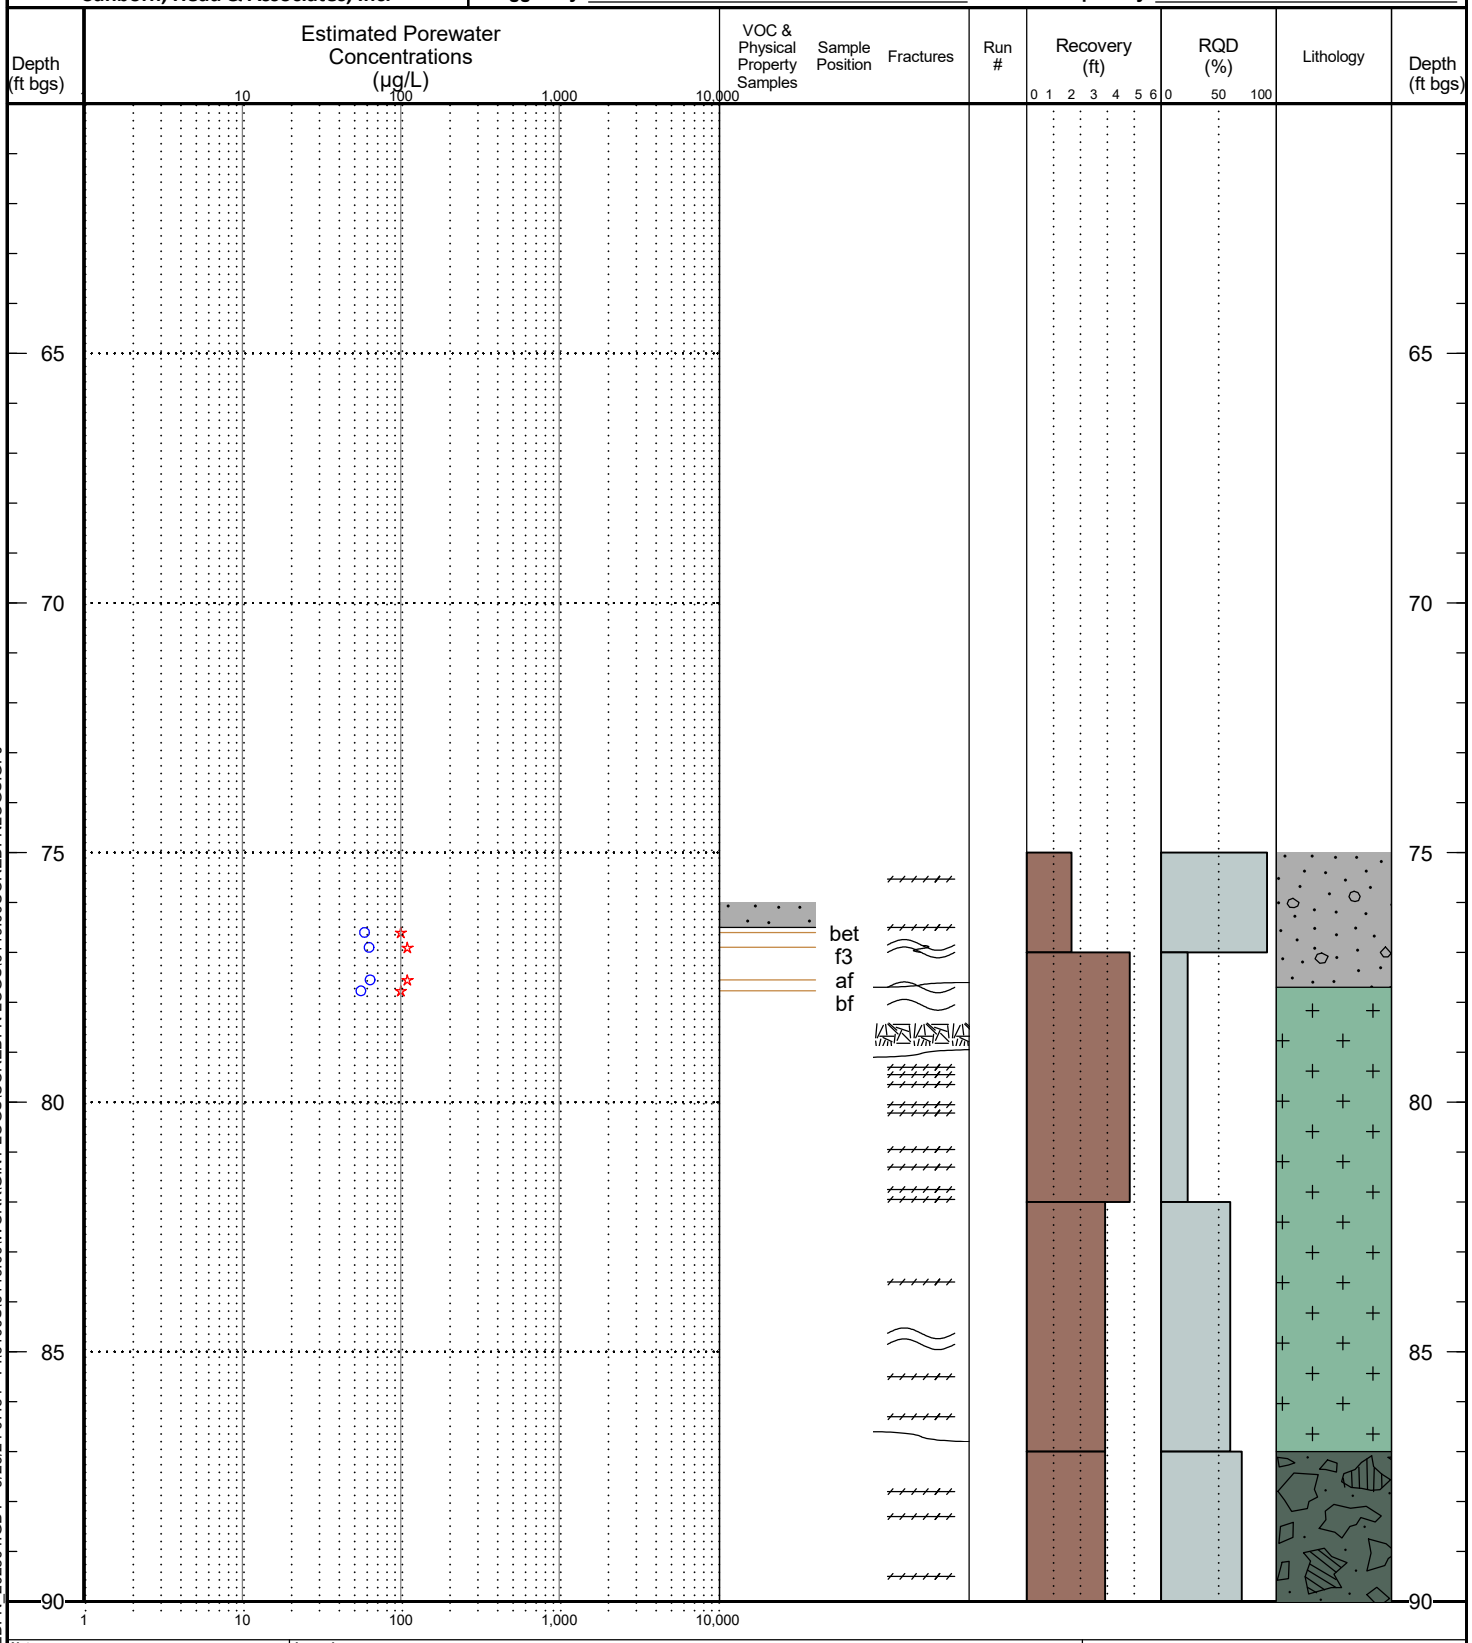
SANBORN HEAD

Sanborn, Head & Associates, Inc.

300.001.GSV

Project Name White Sands
Project Number 6119.00
Project Location White Sands, New Mexico
Logged By E. Bosse

Total Depth Below Ground Surface 252 ft.
Date Started 5/14/2024
Date Completed 5/18/2024
Drilling Contractor Yellowjacket
Sampled By D. Robinson



ROCK CORE - COREDFN 202304.GDT - 9/26/24 07:54 - P:\6100S\6119.00WORK\GINT LOGS\COREDFN LOGS\6119.00COREDFNLOGS.GPJ

Notes
Estimated Porewater Concentrations were calculated by Sanborn Head using VOC concentrations in the rock matrix in combination with physical property parameters.

Detects are noted by filled symbols.

Non Detects are noted by open symbols at the detection limit.

Values plotted on the minimum/maximum axis value may be lower/higher, respectively, than depicted on the graph.

Lithology and associated color are based on Sanborn Head geologist interpretation.

Legend

Contaminants denoted by color:
- Benzene
- Trichlorofluoromethane

Sample Position:
- af - Above fracture
- bf - Below fracture
- bet - Between fractures
- mat - Matrix
- f# - Tenths of feet from fracture

Fractures:
- Mechanical Fracture
- Fracture
- Extermely Fractured

Lithology:
- Conglomerate
- Breccia
- Limestone
- Andesite
- No Recovery
- Rhyolite

Notes
Estimated Porewater Concentrations were calculated by Sanborn Head using VOC concentrations in the rock matrix in combination with physical property parameters.

Detects are noted by filled symbols.

Non Detects are noted by open symbols at the detection limit.

Values plotted on the minimum/maximum axis value may be lower/higher, respectively, than depicted on the graph.

Lithology and associated color are based on Sanborn Head geologist interpretation.

RE: Project: WHITE SANDS 6119.00.020
Pace Project No.: 40277226

Dear Jessica Bulova:

Enclosed are the analytical results for sample(s) received by the laboratory on April 23, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tod Noltemeyer

PROJECT NARRATIVE

Project: WHITE SANDS 6119.00.020
Pace Project No.: 40277226

Method: **EPA 8270E**
Description: 8270E MSSV FULL LIST MICROWAVE
Client: Sanborn, Head & Associates
Date: May 06, 2024

General Information:
75 samples were analyzed for EPA 8270E by Pace Analytical Services Green Bay. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3546 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

QC Batch: 472660

CH: The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.

PROJECT NARRATIVE

Project: WHITE SANDS 6119.00.020
Pace Project No.: 40277226

Method: **EPA 8270E**
Description: 8270E MSSV FULL LIST MICROWAVE
Client: Sanborn, Head & Associates
Date: May 06, 2024

QC Batch: 472660

CH: The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.

  - 2,4,6-Tribromophenol (S)

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

QC Batch: 472917

S0: Surrogate recovery outside laboratory control limits.

- MS (Lab ID: 2708855)
  - Nitrobenzene-d5 (S)
- MSD (Lab ID: 2708856)
  - Nitrobenzene-d5 (S)

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

PROJECT NARRATIVE

Project: WHITE SANDS 6119.00.020
Pace Project No.: 40277226

Method: **EPA 8270E**
Description: 8270E MSSV FULL LIST MICROWAVE
Client: Sanborn, Head & Associates
Date: May 06, 2024

QC Batch: 472882

L2: Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.
- LCS (Lab ID: 2708621)
  - N-Nitrodimethylamine

R1: RPD value was outside control limits.
- LCSD (Lab ID: 2708622)
  - N-Nitrosodimethylamine

QC Batch: 473062

L2: Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.
- LCSD (Lab ID: 2709274)
  - N-Nitrodimethylamine

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 472917

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 40277353002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- MS (Lab ID: 2708855)
  - N-Nitrodimethylamine

R1: RPD value was outside control limits.
- MSD (Lab ID: 2708856)
  - N-Nitrodimethylamine

Additional Comments:

Batch Comments:

The LCS and DUPLICATE failed for N-Nitrodimethylamine. There are insufficient data points for laboratory generated limits so default limits were used. There was insufficient sample amount to re-extract and re-analyze.
- QC Batch: 472883

The LCSD failed for N-Nitrodimethylamine. There are insufficient data points for laboratory generated limits so default limits were used. There was an insufficient sample amount to re-extract and re-analyze.
- QC Batch: 473158

PROJECT NARRATIVE

Project: WHITE SANDS 6119.00.020
Pace Project No.: 40277226

Method: **EPA 8270E**
Description: 8270E MSSV Low Volume
Client: Sanborn, Head & Associates
Date: May 06, 2024

General Information:
5 samples were analyzed for EPA 8270E by Pace Analytical Services Green Bay. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3510 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 472533

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

This report shall not be reproduced, except in full,

QUALIFIERS

Project: WHITE SANDS 6119.00.020
Pace Project No.: 40277226

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

BATCH QUALIFIERS

Batch: 472597

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 472883

[1] The LCS and DUPLICATE failed for N-Nitrodimethylamine. There are insufficient data points for laboratory generated limits so default limits were used. There was insufficient sample amount to re-extract and re-analyze.

Batch: 473158

[1] The LCSD failed for N-Nitrodimethylamine. There are insufficient data points for laboratory generated limits so default limits were used. There was an insufficient sample amount to re-extract and re-analyze.

ANALYTE QUALIFIERS

CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
L2	Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.
S0	Surrogate recovery outside laboratory control limits.

RE: Project: WHITE SANDS 6119.00.020
Pace Project No.: 40277236

Dear Jessica Bulova:

Enclosed are the analytical results for sample(s) received by the laboratory on April 23, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

Some analyses were subcontracted outside of the Pace Network. The test report from the external subcontractor is attached to this report in its entirety.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tod Noltemeyer

PROJECT NARRATIVE

Project: WHITE SANDS 6119.00.020
Pace Project No.: 40277236

Method: **EPA 8260**
Description: 8260 MSV Med Level MAE
Client: Sanborn, Head & Associates
Date: May 10, 2024

General Information:
84 samples were analyzed for EPA 8260 by Pace Analytical Services Green Bay. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3546 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

QC Batch: 472531

v1: The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

PROJECT NARRATIVE

Project: WHITE SANDS 6119.00.020
Pace Project No.: 40277236

Method: **EPA 8260**
Description: 8260 MSV Med Level MAE
Client: Sanborn, Head & Associates
Date: May 10, 2024

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: 472531

L2: Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.
- LCS (Lab ID: 2706292)
  - Chloromethane

QC Batch: 472541

L2: Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.
- LCS (Lab ID: 2706327)
  - Chloromethane

QC Batch: 472668

L2: Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.
- LCS (Lab ID: 2707097)
  - Chloroform

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 472531

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 40277236025

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- MS (Lab ID: 2706293)
  - Chloromethane
- MSD (Lab ID: 2706294)
  - Chloromethane

QC Batch: 472541

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 40277236046

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- MS (Lab ID: 2706328)
  - Chloromethane
- MSD (Lab ID: 2706329)
  - Chloromethane

PROJECT NARRATIVE

Project: WHITE SANDS 6119.00.020
Pace Project No.: 40277236

Method: **EPA 8260**
Description: 8260 MSV Med Level MAE
Client: Sanborn, Head & Associates
Date: May 10, 2024

QC Batch: 472541

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 40277236046

R1: RPD value was outside control limits.

- MSD (Lab ID: 2706329)
  - 1,1,2-Trichlorotrifluoroethane
  - Trichlorofluoromethane

QC Batch: 472668

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 40277236067

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 2707098)
  - Trichloroethene

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: WHITE SANDS 6119.00.020
Pace Project No.: 40277236

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

L2	Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.
v1	The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.
v2	The continuing calibration verification was below the method acceptance limit. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.

RE: Project: 6119.00.020
Pace Project No.: 40278528

Dear Jessica Bulova:

Enclosed are the analytical results for sample(s) received by the laboratory on May 21, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tod Noltemeyer

PROJECT NARRATIVE

Project: 6119.00.020
Pace Project No.: 40278528

Method: **EPA 8260**
Description: 8260 MSV Med Level MAE
Client: Sanborn, Head & Associates
Date: May 30, 2024

General Information:
88 samples were analyzed for EPA 8260 by Pace Analytical Services Green Bay. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3546 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

QC Batch: 475115

v1: The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

PROJECT NARRATIVE

Project: 6119.00.020
Pace Project No.: 40278528

Method: **EPA 8260**
Description: 8260 MSV Med Level MAE
Client: Sanborn, Head & Associates
Date: May 30, 2024

QC Batch: 475242

v1: The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

- 2-Propanol
- 300-001-GSV-220.9_20240518 (Lab ID: 40278528066)
  - 2-Hexanone
  - 2-Propanol
- 300-001-GSV-224.4_20240518 (Lab ID: 40278528067)
  - 2-Hexanone
  - 2-Propanol
- 300-001-GSV-251.8_20240518 (Lab ID: 40278528079)
  - 2-Hexanone
  - 2-Propanol
- BLANK (Lab ID: 2721928)
  - 2-Hexanone
  - 2-Propanol
- TB-05 (Lab ID: 40278528062)
  - 2-Hexanone
  - 2-Propanol

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: 475000

L2: Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.

- LCS (Lab ID: 2720563)
  - Chloromethane

QC Batch: 475089

L2: Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.

- LCS (Lab ID: 2721015)
  - Chloromethane

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: 6119.00.020
Pace Project No.: 40278528

Method: **EPA 8260**
Description: 8260 MSV Med Level MAE
Client: Sanborn, Head & Associates
Date: May 30, 2024

QC Batch: 475000

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 40278528019

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

- MS (Lab ID: 2720564)
  - Chloromethane
- MSD (Lab ID: 2720565)
  - Chloromethane

QC Batch: 475089

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 40278528039

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

- MS (Lab ID: 2721016)
  - Chloromethane
- MSD (Lab ID: 2721017)
  - Chloromethane

QC Batch: 475242

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 40278528079

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MSD (Lab ID: 2721931)
  - Trichloroethene

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: 6119.00.020
Pace Project No.: 40278528

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

L2	Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
v1	The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

RE: Project: WHITE SANDS 6119.00.020
Pace Project No.: 40278540

Dear Jessica Bulova:

Enclosed are the analytical results for sample(s) received by the laboratory on May 21, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tod Noltemeyer

PROJECT NARRATIVE

Project: WHITE SANDS 6119.00.020
Pace Project No.: 40278540

Method: **EPA 8270E**
Description: 8270E MSSV FULL LIST MICROWAVE
Client: Sanborn, Head & Associates
Date: June 05, 2024

General Information:
79 samples were analyzed for EPA 8270E by Pace Analytical Services Green Bay. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3546 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

QC Batch: 475338

CH: The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 475483

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 40278671004

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- MS (Lab ID: 2723303)
  - N-Nitrodimethylamine
- MSD (Lab ID: 2723304)
  - N-Nitrodimethylamine

QC Batch: 475755

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 40278540078

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- MS (Lab ID: 2724600)
  - N-Nitrodimethylamine
- MSD (Lab ID: 2724601)
  - N-Nitrodimethylamine

PROJECT NARRATIVE

Project: WHITE SANDS 6119.00.020
Pace Project No.: 40278540

Method: **EPA 8270E**
Description: 8270E MSSV Low Volume
Client: Sanborn, Head & Associates
Date: June 05, 2024

General Information:
5 samples were analyzed for EPA 8270E by Pace Analytical Services Green Bay. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

H3: Sample was received or analysis requested beyond the recognized method holding time.
- EB-06 (Lab ID: 40278540080)

Sample Preparation:
The samples were prepared in accordance with EPA 3510 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: 475007

L1: Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results may be biased high.
- LCS (Lab ID: 2720610)
  - N-Nitrosodimethylamine
- LCSD (Lab ID: 2720611)
  - N-Nitrosodimethylamine

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 475007

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

This report shall not be reproduced, except in full,

QUALIFIERS

Project: WHITE SANDS 6119.00.020
Pace Project No.: 40278540

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

BATCH QUALIFIERS

Batch: 475059

[M5]	A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

CH	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
H3	Sample was received or analysis requested beyond the recognized method holding time.
L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results may be biased high.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

NARRATIVE

(M607-952)

CLIENT:	**Navarro Research and Engineering Inc.**
SwRI PROJECT #:	**26040.10.003**
BATCH #:	**M607-952**
TASK ORDERS:	**240816-1 and 240822-1**
REPORT DATE:	**09/06/2024**

NARRATIVE FOR NDMA/DMN/BROMACIL ANALYSIS

1. Samples were extracted with dichloromethane (DCM) and analyzed by GC/MS in selective ion monitoring mode for N-Nitrosodimethylamine (NDMA), N-Nitrodimethylamine (DMN) and Bromacil according to the modified Method 607.

2. All aqueous samples were extracted within 7 days of collection date and were analyzed within 28 days from extraction date.

3. The sample reporting limit is 0.01 ppb for 1-L aqueous extraction of samples. All targets were quantified within the calibration curve range 0.01 - 5 µg/L.

4. Laboratory control sample (LCS) and matrix spike samples (if any) were spiked at 0.50 ppb based on 1000 mL, then extracted and analyzed. The recoveries for all target compounds were within method recovery criteria of 13-110% for NDMA, 30-150% for DMN, and 40-190% for Bromacil.

5. N-Nitroso-di-n-propylamine-d14 (surrogate) was spiked into every sample before extraction at 0.50 µg/mL in extract. The surrogate recoveries for all samples were within method recovery criteria of 40-160%.

6. Laboratory process blanks (PB) were extracted and analyzed with every extraction batch.

7. A "J" value was reported if the associated value was below reporting limits but above the MDL value.

8. All analyte concentrations are expressed in µg/L (ppb). Sample calculation:

$$\text{Concentration (µg/L)} = \frac{C\left(\frac{\mu g}{mL}\right) \times FV\ (mL) \times DF}{Vsamp(L)}$$

where:
- C = result of GC/MS analysis in µg/mL for water samples
- FV = final volume of sample in mL
- V_{samp} = sample volume taken for extraction in L
- DF = dilution factor, if any

9. NDMA and DMN were detected in sample 2408140832A (300-001-GSV) at levels exceeding calibration curve. Extract was diluted 100-fold prior to reanalysis. Surrogate recovery was reported from the non-diluted extract.

2408211405B (WW-5-459)

Client: Navarro Research and Engineering Inc.
Batch: M607-952
Task Order: 240822-1
Matrix: Aqueous
Sample Wt/Vol: 1040 mL

Project: 26040.10.003
Date Received: 8/23/2024
Date Extracted: 8/26/2024
Date Analyzed: 8/31/2024
Date Reported: 9/6/2024

Lab Sample ID: 724040
Lab File Name: A08302429.txt
Final Extraction Vol: 1000 uL
Dilution Factor: 1
Reporting Unit: µg/L
Method: TAP 01-0408-031

CAS No.	ANALYTE	RESULT	Q
62-75-9	N-Nitrosodimethylamine	<0.01	U
4164-28-7	N-Nitrodimethylamine	<0.01	U
314-40-9	Bromacil	<0.01	U

E - Concentration detected above calibration curve

D - Results from dilution analysis

U - Undetected, indicates not found above the detection limit

J - Estimated value, greater than the MDL but less than the PQL

August 28, 2024 Service Request No:R2407791

Stephanie Portillo
NASA/WSTF/Navarro
P.O. Box 20
Las Cruces, NM 88004

Laboratory Results for: White Sands Test Facility

Dear Stephanie,

Enclosed are the results of the sample(s) submitted to our laboratory August 16, 2024
For your reference, these analyses have been assigned our service request number **R2407791.**

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

Please contact me if you have any questions. My extension is 7472. You may also contact me via email at Janice.Jaeger@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Janice Jaeger

Service Request: R2407791
Date Received: 08/16/2024

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier level IV requested by the client.
Manual Integrations may have been used in the quantitation of the results in this report. Manual Integrations are readily identified in the raw data on the Quantitation Reports (Organics) by the automatic placement of an “m” next to the sample result. For Ion Chromatography, the manual integrations are identified by the automatic placement of “manipulated” or "manually integrated" in the upper left corner of the chromatogram (Hexavalent Chromium) or “M” by the result in the “Type” column (anions). The reason for the manual integration is noted on the “after” chromatogram, which is found with the original chromatogram and quantitation report. All integrations follow the lab SOP ADM-INT “Manual Integration.”

Sample Receipt:

Nine water samples were received for analysis at ALS Environmental on 08/16/2024. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Volatiles by GC/MS:

Method 8260D, 08/22/2024: The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.

Method 8260D, 08/22/2024: The lower control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). Since there were no detections of the analyte(s) above the MRL in the associated field samples, the quantitation is not affected. The data quality was not significantly affected and no further corrective action was taken.

Approved by _____ Date 08/28/2024

REPORT QUALIFIERS AND DEFINITIONS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
MRL LOQ	Method Reporting Limit. Also known as: Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
MDL	Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
LOD	Limit of Detection. A value at or above the MDL which has been verified to be detectable.
ND	Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Rochester Lab ID # for State Accreditations[1]

NELAP States
Florida ID # E87674
New Hampshire ID # 2941
New York ID # 10145
Pennsylvania ID# 68-786
Virginia #460167

Non-NELAP States
Connecticut ID #PH0556
Delaware Approved
Maine ID #NY01587
North Carolina #36701
North Carolina #676
Rhode Island LAO00333

[1] Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state or agency requirements. The test results meet requirements of the current NELAP/TNI standards or state or agency requirements, where applicable, except as noted in the case narrative. Since not all analyte/method/matrix combinations are offered for state/NELAC accreditation, this report may contain results which are not accredited. For a specific list of accredited analytes, contact the laboratory. To verify NH accredited analytes, go to https://www4.des.state.nh.us/CertifiedLabs/Certified-Method.aspx.

PREPARATION METHODS

The preparation methods associated with this report are found in these tables unless discussed in the case narrative.

INORGANIC

Water/Liquid Matrix

Analytical Method	Preparation Method
200.7	200.2
200.8	200.2
6010C or 6010D	3005A/3010A
6020A or 6020B	ILM05.3
9034 Sulfide Acid Soluble	9030B
SM 4500-CN-N-2016 Amenable and Residual Cyanide	SM 4500-CN-G and SM 4500-CN-B,C-2016
SM 4500-CN-E WAD Cyanide	SM 4500-CN-I

Solid/Soil/Non-Aqueous Matrix

Analytical Method	Preparation Method
6010C or 6010D	3050B
6020A or 6020B	3050B
6010C or 6010D TCLP (1311) extract	3005A/3010A
6010C or 6010D SPLP (1312) extract	3005A/3010A
7199	3060A
300.0 Anions/ 350.1/ 353.2/ SM 2320B/ SM 5210B/ 9056A Anions	DI extraction
For analytical methods not listed, the preparation method is the same as the analytical method reference.	

ORGANIC

Preparation Methods for Organic methods are listed in the header of the Results pages.

Regarding "Bulk/5035A":
For soil/solid samples submitted in soil jars for Volatiles analysis, the prep method is listed as "Bulk/5035A". The lab follows the closed-system EPA 5035A protocols once the sample is transferred to a sealed vial, but collection in bulk in soil jars does not follow the collection protocols listed in EPA 5035A. In accordance with the NYSDOH technical notice of October 2012, all results or reporting limits <200 ug/kg are to be considered estimated due to potential low bias.

September 25, 2024 Service Request No:R2407792

Stephanie Portillo
NASA/WSTF/Navarro
P.O. Box 20
Las Cruces, NM 88004

Laboratory Results for: White Sands Test Facility

Dear Stephanie,

Enclosed are the results of the sample(s) submitted to our laboratory August 16, 2024
For your reference, these analyses have been assigned our service request number **R2407792.**

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

Please contact me if you have any questions. My extension is 7472. You may also contact me via email at Janice.Jaeger@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Janice Jaeger
Project Manager

ALS Environmental

Client: NASA/WSTF/Navarro
Project: White Sands Test Facility
Sample Matrix: Water

Service Request: R2407792
Date Received: 08/16/2024

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier level IV requested by the client.
Manual Integrations may have been used in the quantitation of the results in this report. Manual Integrations are readily identified in the raw data on the Quantitation Reports (Organics) by the automatic placement of an “m” next to the sample result. For Ion Chromatography, the manual integrations are identified by the automatic placement of “manipulated” or "manually integrated" in the upper left corner of the chromatogram (Hexavalent Chromium) or “M” by the result in the “Type” column (anions). The reason for the manual integration is noted on the “after” chromatogram, which is found with the original chromatogram and quantitation report. All integrations follow the lab SOP ADM-INT “Manual Integration.”

Sample Receipt:

Fifteen water samples were received for analysis at ALS Environmental on 08/16/2024. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivolatiles by GC/MS:

Method 8270E, 08/23/2024: The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.
Method 8270E, 08/23/2024: The lower control limit for the spike recovery of the Laboratory Control Sample (LCS) was exceeded for one or more analyte. There were no detections of the analyte(s) in the associated field samples. The Duplicate Laboratory Sample was within limits. The analytes affected are flagged in the LCS Summary.

Method 8270E, 08/22/2024: The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.

Method 8270E, 08/22/2024: The control limit was exceeded for one or more surrogates in the Continuing Calibration Verification (CCV). The surrogates were within acceptance limits for the associated field samples. The data quality was not significantly affected and no further corrective action was taken.

Method 8270E, 08/22/2024: The upper control criterion was exceeded for one or more analytes in the Laboratory Control Sample (LCS). There were no detections of the analyte(s) above the MRL in the associated field samples. The error associated with elevated recovery equates to a high bias. The sample data is not significantly affected. No further corrective action was appropriate.

Method 8270E, 08/22/2024: The lower control limit for the spike recovery of the Duplicate Laboratory Control Sample (LCSD) was exceeded for one or more analyte. The Laboratory Control Sample (LCS) passed limits. There were no detections of the analyte(s) in the associated field samples. The analytes affected are flagged in the LCS Summary

Method 8270E, 08/22/2024: The lower control limit for the spike recovery of the Laboratory Control Sample (LCS) was exceeded for one or more analyte(s). The Duplicate Laboratory Control Sample (LCSD) passed limits. There were no detections of the analyte(s) in the associated field samples. The analytes affected are flagged in the LCS Summary.

REPORT QUALIFIERS AND DEFINITIONS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
MRL LOQ	Method Reporting Limit. Also known as: Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
MDL	Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
LOD	Limit of Detection. A value at or above the MDL which has been verified to be detectable.
ND	Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Rochester Lab ID # for State Accreditations[1]

NELAP States
Florida ID # E87674
New Hampshire ID # 2941
New York ID # 10145
Pennsylvania ID# 68-786
Texas ID#T104704581
Virginia #460167

Non-NELAP States
Connecticut ID #PH0556
Delaware Approved
Maine ID #NY01587
North Carolina #36701
North Carolina #676
Rhode Island LAO00333

[1] Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state or agency requirements. The test results meet requirements of the current NELAP/TNI standards or state or agency requirements, where applicable, except as noted in the case narrative. Since not all analyte/method/matrix combinations are offered for state/NELAC accreditation, this report may contain results which are not accredited. For a specific list of accredited analytes, contact the laboratory. To verify NH accredited analytes, go to https://www4.des.state.nh.us/CertifiedLabs/Certified-Method.aspx.

ALS Laboratory Group

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

6020A or 6020B	3050B
6010C or 6010D TCLP (1311) extract	3005A/3010A
6010C or 6010D SPLP (1312) extract	3005A/3010A
7199	3060A
300.0 Anions/ 350.1/ 353.2/ SM 2320B/ SM 5210B/ 9056A Anions	DI extraction
For analytical methods not listed, the preparation method is the same as the analytical method reference.	

ORGANIC

Preparation Methods for Organic methods are listed in the header of the Results pages.

Regarding "Bulk/5035A":
For soil/solid samples submitted in soil jars for Volatiles analysis, the prep method is listed as "Bulk/5035A". The lab follows the closed-system EPA 5035A protocols once the sample is transferred to a sealed vial, but collection in bulk in soil jars does not follow the collection protocols listed in EPA 5035A. In accordance with the NYSDOH technical notice of October 2012, all results or reporting limits <200 ug/kg are to be considered estimated due to potential low bias.

Lab Control Sample Summary
Semivolatile Organic Compounds by GC/MS

Sample Name:	Lab Control Sample	**Instrument ID:**	R-MS-64
Lab Code:	RQ2410083-02	**File ID:**	I:\ACQUDATA\5977-MS64\Data\082124\D8274.D\
Analysis Method:	8270E	**Analysis Lot:**	851525,851703
Prep Method:	EPA 3510C	**Extraction Lot:**	443361

This Lab Control Sample applies to the following analyses.

Sample Name	Lab Code	File ID	Date Analyzed
Duplicate Lab Control Sample	RQ2410083-03	I:\ACQUDATA\5977-MS64\Data\082124 \D8275.D\	08/21/24 20:28
