Subject: NASA White Sands Test Facility (WSTF) 400 Area Supplemental Groundwater and Soil Vapor Monitoring Report – Second Quarter 2024

Enclosed is the *NASA White Sands Test Facility (WSTF) 400 Area Supplemental Groundwater and Soil Vapor Monitoring Report – Second Quarter 2024*. This report is submitted in accordance with NMED's May 2, 2023 approval with modifications of the *400 Area Supplemental Groundwater and Soil Vapor Monitoring Plan*, and the July 31, 2024 approval for rescheduling the submittal date for the second of four quarterly reports to November 30, 2024.

This submittal includes an Executive Summary as Enclosure 1, a printed, bound report (up to Appendix A) as Enclosure 2, and a PDF of the report on a CD-ROM as Enclosure 3.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

If you have any questions or comments concerning this submittal, please contact Antonette Doherty of my staff at 575-202-5406.

Sincerely,

ANTONETT

Executive Summary

This 400 Area Supplemental Groundwater and Soil Vapor Monitoring Report – Second Quarter 2024 (Report) summarizes the second quarterly field groundwater and soil vapor sampling activities performed per the New Mexico Environment Department (NMED)-approved 400 Area Supplemental Groundwater and Soil Vapor Monitoring Plan (NASA, 2024b). The data collected from a total of four quarterly sampling events will be used in conjunction with a single dataset collected as a component of the 400 Area Closure Investigation Report (NASA, 2017) to perform trend analyses and to reevaluate and update the human health risk and hazard assessment at the 400 Area closure. The data will also be used to evaluate the need for additional investigation and future development of a Corrective Measures Evaluation encompassing the 400 Area and 300 Area closures.

The second quarter field sampling event was performed between May 28 and 30, 2024. Groundwater zones were accessible at five of the multiport soil vapor and groundwater monitoring (MSVGM) wells (400-EV-131, 400-FV-131, 400-GV-125, 400-HV-147, and 400-JV-150). Well 400-IV-123 was not sampled for the second quarter 2024 event due to the groundwater level falling below the pump intake. The pump intake was subsequently extended below the groundwater level to enable the collection of a groundwater sample during the next sampling event (third quarter 2024). For the 54 available soil vapor ports within the 15 MSVGM and multiport soil vapor monitoring (MSVM) wells, four of the soil vapor ports were reported to be blocked and/or inaccessible. These included the soil vapor ports at 400-FV-131 (104 and 130 feet [ft] below ground surface [bgs]), 400-JV-150 (145 ft bgs), and 400-KV-142 (137 ft bgs).

Twenty-seven analytes were identified above detection limits in groundwater collected from the five MSVGM wells. These comprised of volatile organic compound(s) (VOCs) - six analytes including trichloroethene [TCE]), semi-volatile organic compound(s) (SVOCs) - three analytes; N-Nitrodimethylamine [DMN], N-Nitrosodimethylamine [NDMA], and Bromacil), and metals - 18 analytes. Only NDMA was detected above White Sands Test Facility Groundwater Monitoring Plan cleanup levels (NASA 2023b) within all five of the sampled wells (400-EV-131, 400-FV-131, 400-GV-125, 400-HV-147, and 400-JV-150).

Five soil vapor analytes were identified from the 50 available soil vapor ports above NMED residential vapor intrusion screening levels (VISLs) as identified in the latest Risk Assessment Guidance (NMED, 2022). The following analytes were detected in the listed monitoring well sampling ports:

- 1,2,4-Trimethylbenzene (one location): 400-SV-03-10
- 1,3,5-Trimethylbenzene (one location): 400-SV-03-10
- 1,4-Dioxane (one location): 400-SV-03-50
- Freon 11 (four locations): 400-SV-10-125; 400-GV-125-105; 400-HV-147-130; and 400-IV-123-80
- TCE (two locations): 400-GV-125-120; and 400-IV-123-80

Soil vapor quality control samples indicated that most of the detected analytes were also identified in field blank and/or trip blank samples. Analytical reports from the off-site soil vapor

laboratory using Environmental Protection Agency Method TO-15 also showed that dilutions were necessary for soil vapor samples with elevated concentrations of trichlorofluoromethane and 1,1,2-trichloro-1,2,2-trifluoroethane. This was specific to the soil vapor samples that exceeded the upper calibration limits for the laboratory equipment. This resulted in the method detection limits for other constituents increasing to above the corresponding NMED vapor intrusion screening level.

In addition to the first and second quarterly groundwater and soil vapor sampling field events performed in February and May 2024, a third quarterly sampling event was performed in August 2024 (third quarter) and a fourth quarterly sampling event is scheduled for December 2024 (fourth quarter). Contaminant vertical profiles and a comprehensive statistical evaluation including a trend analysis will be included in the fourth quarterly report when a total of five sets of analytical results are available (the 2017 closure investigation report [NASA, 2017] combined with the four quarterly 2024 reports).

Executive Summary

This *400 Area Supplemental Groundwater and Soil Vapor Monitoring Report – Second Quarter 2024* (Report) summarizes the second quarterly field groundwater and soil vapor sampling activities performed per the New Mexico Environment Department (NMED)-approved *400 Area Supplemental Groundwater and Soil Vapor Monitoring Plan* (NASA, 2024b). The data collected from a total of four quarterly sampling events will be used in conjunction with a single dataset collected as a component of the *400 Area Closure Investigation Report* (NASA, 2017) to perform trend analyses and to reevaluate and update the human health risk and hazard assessment at the 400 Area closure. The data will also be used to evaluate the need for additional investigation and future development of a Corrective Measures Evaluation encompassing the 400 Area and 300 Area closures.

The second quarter field sampling event was performed between May 28 and 30, 2024. Groundwater zones were accessible at five of the multiport soil vapor and groundwater monitoring (MSVGM) wells (400-EV-131, 400-FV-131, 400-GV-125, 400-HV-147, and 400-JV-150). Well 400-IV-123 was not sampled for the second quarter 2024 event due to the groundwater level falling below the pump intake. The pump intake was subsequently extended below the groundwater level to enable the collection of a groundwater sample during the next sampling event (third quarter 2024). For the 54 available soil vapor ports within the 15 MSVGM and multiport soil vapor monitoring (MSVM) wells, four of the soil vapor ports were reported to be blocked and/or inaccessible. These included the soil vapor ports at 400-FV-131 (104 and 130 feet [ft] below ground surface [bgs]), 400-JV-150 (145 ft bgs), and 400-KV-142 (137 ft bgs).

Twenty-seven analytes were identified above detection limits in groundwater collected from the five MSVGM wells. These comprised of volatile organic compound(s) (VOCs) - six analytes including trichloroethene [TCE]), semi-volatile organic compound(s) (SVOCs) - three analytes; N-Nitrodimethylamine [DMN], N-Nitrosodimethylamine [NDMA], and Bromacil), and metals - 18 analytes. Only NDMA was detected above White Sands Test Facility Groundwater Monitoring Plan cleanup levels (NASA 2023b) within all five of the sampled wells (400-EV-131, 400-FV-131, 400-GV-125, 400-HV-147, and 400-JV-150).

Five soil vapor analytes were identified from the 50 available soil vapor ports above NMED residential vapor intrusion screening levels (VISLs) as identified in the latest Risk Assessment Guidance (NMED, 2022). The following analytes were detected in the listed monitoring well sampling ports:

- 1,2,4-Trimethylbenzene (one location): 400-SV-03-10
- 1,3,5-Trimethylbenzene (one location): 400-SV-03-10
- 1,4-Dioxane (one location): 400-SV-03-50
- Freon 11 (four locations): 400-SV-10-125; 400-GV-125-105; 400-HV-147-130; and 400-IV-123-80
- TCE (two locations): 400-GV-125-120; and 400-IV-123-80

Soil vapor quality control samples indicated that most of the detected analytes were also identified in field blank and/or trip blank samples. Analytical reports from the off-site soil vapor laboratory using Environmental Protection Agency Method TO-15 also showed that dilutions were necessary for soil vapor samples with elevated concentrations of trichlorofluoromethane and 1,1,2-trichloro-1,2,2-trifluoroethane. This was specific to the soil vapor samples that exceeded the upper calibration limits for the laboratory equipment. This resulted in the method detection limits for other constituents increasing to above the corresponding NMED vapor intrusion screening level.

In addition to the first and second quarterly groundwater and soil vapor sampling field events performed in February and May 2024, a third quarterly sampling event was performed in August 2024 (third quarter) and a fourth quarterly sampling event is scheduled for December 2024 (fourth quarter). Contaminant vertical profiles and a comprehensive statistical evaluation including a trend analysis will be included in the fourth quarterly report when a total of five sets of analytical results are available (the 2017 closure investigation report [NASA, 2017] combined with the four quarterly 2024 reports).

1.0 Introduction

National Aeronautics and Space Administration (NASA) performed a field investigation of the White Sands Test Facility (WSTF) 400 Area Closure between September 2016 and September 2017. The purpose of the investigation was to determine the nature, extent, and potential migration pathways of contaminant releases at the 400 Area Closure (formerly the 400 Area hazardous waste impoundments). Investigation activities included the installation of soil borings that were subsequently converted to multiport soil vapor and groundwater monitoring (MSVGM) wells and multiport soil vapor monitoring (MSVM) wells, and the collection and analysis of soil, soil vapor, and groundwater samples. An initial comprehensive groundwater and soil vapor sampling event at the newly installed wells was performed as part of the 400 Area closure investigation fieldwork in July and August 2017. NASA submitted the *400 Area Closure Investigation Report* (IR) to the New Mexico Environment Department (NMED) on December 27, 2017 (NASA, 2017). Following comments and revisions, NMED provided the *Approval with Modifications 400 Area Closure Investigation Report – Revision 3* on May 2, 2023 (NMED, 2023b). One of the required components of the approved IR was to provide a minimum four quarterly groundwater and soil vapor monitoring reports (GWSVMR) documenting 400 Area supplemental groundwater and soil vapor monitoring. The *Supplemental Groundwater and Soil Vapor Monitoring Report – First Quarter 2024* was provided to NMED on August 30, 2024 (NASA, 2024b). This *400 Area Supplemental Groundwater and Soil Vapor Monitoring Report – Second Quarter 2024* (Report) is the second of four planned quarterly reports intended to satisfy this requirement.

1.1 Site Location and Description

WSTF, located in Doña Ana County, New Mexico, lies 18 miles (mi) northeast of Las Cruces, New Mexico, and 65 mi north of El Paso, Texas. Access to the site is provided via NASA Road, a paved road with a guarded security gate. NASA Road intersects U.S. Highway 70, 1 mi west of Organ, New Mexico. Figure 1.1 provides a WSTF location map. The location of the WSTF 400 Area and 400 Area closure are provided in Figure 1.2.

1.2 Objective and Scope

This second quarter 2024 report identifies the MSVGM and MSVM monitoring wells utilized for the supplemental monitoring, presents sampling methods performed at the monitoring wells, analytical requirements, and provides the groundwater and soil vapor analytical results collected for the monitoring event performed between May 28 and 30, 2024. The data presented and summarized within the report is intended to supplement data from the initial groundwater and soil vapor event collected during the 400 Area closure investigation (NASA, 2017), and the first quarterly monitoring event (NASA, 2024b). The quarterly groundwater analysis provided includes volatile organic compounds (VOC), semi-volatile organic compounds (SVOC, including nitrosamines), inorganic compounds, and metals. The quarterly soil vapor analysis provided comprises only VOC. These data will be used to support evaluation of the vapor intrusion pathway in the 400 Area as required by NMED (NMED, 2018; Comments 17 and 18) and update the human health risk and hazard assessment at the 400 Area closure. The data collectively comprising the initial sampling event from 2017 and the four quarterly events will also be used to support evaluation for potential additional investigation at the 400 Area closure and future development of a corrective measures evaluation for the 400 and 300 Area closures contaminants of potential concern (COPCs). The fourth quarterly monitoring report will be used to evaluate and present all the 400 Area closure groundwater and soil vapor data collected to date.

Groundwater COPCs for the 400 Area closure includes un-combusted hydrazine; monomethyl hydrazine; unsymmetrical dimethylhydrazine; Aerozine 50 and nitrogen tetroxide from static hot firing rocket engine

tests. In addition, trichlorofluoromethane (Freon®[1] 11), dichlorofluoromethane (Freon 21), 1,1,2-trichloro-1,2,2-trifluoroethane (Freon 113), and isopropyl alcohol were used as referee propellants during early cold flow firings.

Table 1.1 provides the list of COPCs for the 400 Area including chemicals and wastes known to have been released and contaminants that were detected during previous soil, soil vapor, and groundwater investigations (NASA, 2017). The list of COPCs is comprehensive and the only screening applied was to exclude inorganic analytes considered to be non-toxic, not associated with potential contaminants, and essential nutrients (e.g., magnesium, potassium, iron, sodium, and fluoride; NASA, 2017).

2.0 Field Monitoring

2.1 Monitoring Well Network

For the second quarter 2024 report, NASA utilized all accessible ports and well screens in the 15 monitoring wells to collect the groundwater and soil vapor samples required to meet the objectives of the groundwater and soil vapor monitoring plan (GWSVMP; NASA, 2023a). The location of each of the wells in conjunction with other monitoring wells in the immediate vicinity of the 400 Area closure is provided in Figure 2.1, and a summary of the design characteristics of the 15 monitoring wells and current status of the sampling screens and ports is provided in Table 2.1.

2.2 Second Quarter 2024 Field Sampling Event

The second quarter field sampling event was performed at the 400 Area closure between May 28 and 30, 2024. Groundwater zones were accessible for five of the six MSVGM wells. Well 400-IV-123 was not sampled for the second quarter 2024 due to a decline in the water level below the pump intake. A copy of the WSTF external chain of custody (CoC) form for groundwater samples collected during the sampling event is provided in Appendix A.

Of the 54 soil vapor ports within the well network scheduled for sampling, four were reported to be blocked or inaccessible. These included soil vapor ports at well 400-FV-131 (104 and 130 feet [ft] below ground surface [bgs]), well 400-JV-150 (145 ft bgs), and well 400-KV-142 (137 ft bgs). A copy of the WSTF external CoC form for soil vapor samples collected during the sampling event is provided in Appendix A.

2.2.1 Groundwater Field and Sampling Activities

Groundwater samples from 400 Area MSVGM wells were all collected on May 28, 2024 using established site-specific procedures for low-flow sampling and for traditional purge and sample methods. Sampling was performed in accordance with the approved *Groundwater Monitoring Plan Update for 2023* (NMED, 2023d; NASA, 2023b) at wells 400-EV-131, 400-FV-131, 400-GV-125, 400-HV-147, and 400-JV-150 (Table 2.1, Figure 2.1). The pump intake at well 400-IV-123 was subsequently extended below the groundwater level to enable the collection of groundwater samples for the next sampling event (third quarter 2024).

Groundwater field and sampling activities were recorded in the appropriate field logbook (Appendix A). Prior to the collection of the groundwater samples, each well was purged of three well volumes and/or until dry using a dedicated low-flow bladder pump. Each pump is composed of polyvinyl chloride (PVC)

[1] Freon is a registered trademark of The Chemours Company CF, LLC.

with Teflon bladders and has a Teflon-lined ¼-inch outer diameter air supply and groundwater sample tube. The water level was allowed to recover in each MSVGM well before groundwater samples were collected. The groundwater samples were then dispensed into laboratory-provided sample containers, which were uniquely labeled and placed in cold storage. Groundwater samples were preserved in accordance with NASA's contracted off-site analytical laboratories requirements and shipped for analysis.

Groundwater samples collected from the five MSVGM wells were analyzed for the COPCs listed in the original NMED-approved 400 Area closure investigation workplan (IWP) (NASA, 2011a). Appendix B provides the chemical program quality assurance report (QAR) for groundwater sampling.

Groundwater samples were collected for analysis of:

- VOCs by SW-846 Method 8260C.
- SVOCs by SW-846 Method 8270D.
- Nitrosamines by EPA Method 607.
- Several metals by various SW-846 methods in accordance with the NMED-approved Groundwater Monitoring Plan (GMP; NMED 2023c; NASA, 2023b).

2.2.2 Soil Vapor Field and Sampling Activities

Soil vapor samples from 400 Area MSVM and MSVGM wells were collected between May 28 and May 30, 2024. A total of 50 soil vapor ports in the 15 MSVM and MSVGM wells were utilized for the monitoring event. Of the four blocked ports, two of the ports at 400-FV-131-130 (130 ft bgs) and 400-JV-150-145 (145 ft bgs) were located beneath the potentiometric surface at their respective locations and the inability to sample the soil vapor implants is attributed to the groundwater table rising above the implant depths. For both MSVGM well locations, the aquifer is semi-confined, and this layer was breached during drilling. Underlying pressurized groundwater continued to rise gradually until equilibrium was reached, which resulted in submergence of the deepest soil vapor implant at both MSVGM well locations.

Soil vapor sampling at each MSVM or MSVGM well was performed in accordance with established WSTF procedures. Each vapor port at surface is affixed with an aluminum tag engraved with the identification of that port to ensure port identification. The soil vapor sampling sequence began with the shallowest port and continued sequentially until the deepest port had been sampled. The sampling ports and stainless-steel tubing were purged of entrained soil vapor with a non-dedicated surface vacuum pump to evacuate stagnant air below the sample collection fitting. Each port was purged for a minimum of five minutes per zone to evacuate at least three volumes of the ¼ inch tubing and soil vapor implant. Carbon dioxide, oxygen, and methane indicator parameters were monitored during purging to ensure stabilization prior to sampling and recorded in the field logbook (Appendix A).

Soil vapor samples were collected in one-liter stainless steel Summa canisters. The initial pressure for all canisters verified by the analytical laboratory is -14.3 pounds per square inch (psi). The final canister pressure was noted in the field logbook and CoC form (Appendix A). Soil vapor samples were shipped to the laboratory for analysis for VOC using Environmental Protection Agency (EPA) Method TO-15. Soil vapor chemical samples were collected to evaluate as many COPCs as possible from the list originally provided in the NMED-approved 400 Area Closure IWP (NASA, 2011a). Appendix B provides the chemical program QAR for soil vapor sampling.

3.0 Quality Assurance/Quality Control

A total of 12 quality control (QC) samples were collected for groundwater as follows:

- Duplicate samples (6): 400-FV-131 (2405280853A for Method 8260, 2405280856A for Method 607, and 2405280858A for Metals), and 400-GV-125 (2405280841C for Method 8260, 2405280844C for Method 607, and 2405280846C for Metals).

- Field blanks (5): 400-EV-131 (2405281003A for Method 8260), 400-FV-131 (2405280854A for Method 8260), 400-GV-125 (2405280842C for Method 8260), 400-HV-147 (2405281431C for Method 8260), and 400-JV-150 (2405281011C for Method 8260).

- Trip blanks (1): 400-FV-131 (2405280700A for Method 8260).

The chemical program QAR for groundwater sampling is provided in Appendix B.

A total of 17 QC samples were collected for soil vapor as follows:

- Duplicate samples (6) all for Method TO-15: 400-EV-131-130 (2405281032), 400-GV-125-10 (2405280830), 400-IV-123-118 (2405290919), 400-KV-142-12.5 (2405290945), 400-SV-05-50 (2405291025), and 400-SV-10-50 (2405300842).
- Field blanks (8) all for Method TO-15: 400-EV-113-47.5 (2405281011), 400-GV-125-105 (2405280846), 400-HV-147-130 (2405281344), 400-IV-123-45 (2405290859), 400-JV-150-50 (2405280928), 400-KV-142-100 (2405291001), 400-SV-07-100 (2405300928), and 400-SV-15-10 (2405290816).
- Trip blanks (3) all for Method TO-15: 400-JV-150-12.5 (2405280915), 400-HV-147-45 (2405281245), and 400-LV-125-10 (2405291045).

The chemical program QAR for soil vapor sampling is provided in Appendix B.

4.0 Groundwater and Soil Vapor Analytical Results

The results section includes any issues encountered, quality parameter measurements, analytical results, a comparison of analytical results to screening and/or cleanup levels. In addition to the first and second quarterly groundwater and soil vapor sampling field events performed in February and May 2024, a third quarterly sampling event was performed in August 2024 (third quarter) and a fourth quarterly sampling event is scheduled for December 2024 (fourth quarter). Contaminant vertical profiles and a comprehensive statistical evaluation including a trend analysis will be included in the fourth quarterly report when five sets of analytical results are available for evaluation (the 2017 closure investigation report combined with the four quarterly 2024 reports).

4.1 Groundwater Results

4.1.1 Issues Encountered

Well 400-IV-123 was not sampled for the second quarter 2024 due to the groundwater level in the well falling below the pump intake. No issues were encountered during groundwater sampling for the other five available MSVGM wells.

4.1.2 Groundwater Quality Parameter and Depth Measurements

As part of groundwater sample collection for laboratory chemical analyses, four water quality field parameters (temperature; specific conductivity; pH; and turbidity) were measured in each MSVGM well during the purging process and prior to sampling. This was to ensure sufficient purging had been

performed and demonstrate that all groundwater within the well and gravel pack surrounding the screened zone had been removed. Table 4.1 provides the initial groundwater quality parameter measurements for MSVGM wells. The groundwater quality parameters and other sampling records including field/internal CoC forms are provided in Appendix A. The groundwater potentiometric surface based upon second quarter groundwater elevations is provided in Figure 4.1, with groundwater flow from east-northeast to west-southwest at a gradient of approximately 0.05 ft/ft.

4.1.3 Groundwater Chemical Analytical Results

The electronic analytical results for groundwater (Excel spreadsheet) are provided in Attachment 1 to this report. The laboratory analytical reports for groundwater samples are provided in Appendix C. A summary of the groundwater analytical results above laboratory detection limits is provided in Table 4.2. Twenty-seven analytes were identified above detection limits in groundwater samples collected from the MSVGM wells:

- VOCs (6 constituents): Freon 113; 1,2-dichloro-1,1,2-trifluoroethane (Freon 123a); chloroform; Freon 21; trichloroethene (TCE); and Freon 11.
- SVOC Nitrosamines (2 constituents): N-Nitrodimethylamine (DMN; and N-Nitrosodimethylamine (NDMA).
- SVOC Bromacil (1 constituent).
- Metals (18 constituents): antimony; arsenic; barium; boron; calcium; chromium; cobalt; magnesium; manganese; molybdenum; nickel; potassium; selenium; sodium; strontium; thallium; vanadium; and zinc.

A summary of 400 Area groundwater analytical results above WSTF GMP cleanup levels is provided in Table 4.3. The only analyte with detections above its cleanup level was NDMA within the five wells: 400-EV-131; 400-FV-131; 400-GV-125; 400-HV-147; and 400-JV-150 (Figure 4.2).

4.1.4 Groundwater Statistical Trends

For this quarterly report, no statistical evaluations were performed due to an insufficient sample size (<6) to make reliable decisions that affect human health and the environment (EPA, 2022). Therefore, no statistical trends will be performed for 400 Area groundwater during this study until after all four quarterly sampling events have been completed. With the original 400 Area 2017 sampling event presented in the IR and the four proposed quarterly sampling events, the sample size will be five. Statistical trends will be completed following the final (fourth) quarterly sampling event.

4.2 Soil Vapor Results

4.2.1 Issues Encountered

Second quarter soil vapor samples were attempted at 54 available soil vapor ports in the 15 MSVGM and MSVM monitoring wells. Soil vapor samples were collected on the same day as groundwater samples from MSVGM wells, and all MSVGM wells were sampled on the same day (May 28, 2024). All soil vapor samples were collected on schedule between May 28 and 30, 2024 as required by the GWSVMP (NASA, 2023a). Four blocked soil vapor ports were identified at 400-FV-131-104, 400-FV-131-130, 400-JV-150-145, and 400-KV-142-137 and were not sampled for the second quarter event.

4.2.2 Soil Vapor Quality Parameter Measurements

Soil vapor quality parameters are obtained from each sampling port through field measurements. Quality parameters and other specific sampling-related details associated with each monitoring well sampling event are recorded by technicians in the field sampling record. Table 4.4 provides a summary of the soil vapor quality parameter measurements prior to sampling for MSVGM and MSVM wells. Field notes detailing the soil vapor quality parameters and other sampling records including field/internal CoC forms are provided in Appendix A.

4.2.3 Soil Vapor Chemical Analytical Results

The electronic analytical results for soil vapor (Excel spreadsheet) are provided in Attachment 1 to this report. The laboratory analytical reports for soil vapor samples are provided in Appendix C. Soil vapor samples were analyzed for VOCs using EPA Method TO-15. Table 4.5 provides all analytes that were tested. Twenty-three of the analytes analyzed by Method TO-15 are COPCs defined for the 400 Area closure investigation (NASA, 2011a): 1,1,1-trichloroethane; 1,1-dichloroethane; 2-butanone; 2-hexanone; 2-propanol; acetone; bromodichloromethane; bromoform; chlorobenzene; chloroform; chloromethane; dibromochloromethane; Freon 11; Freon 113; Freon 123; Freon 21; m,p-xylene; methyl tert-butyl ether; methylene chloride; tetrachloroethene (PCE); toluene; trans-1,2-dichloroethene; and TCE.

White Sands Test Facility Resource Conservation and Recovery Act Permit, Part 4, Investigation and Sampling Methods and Procedures, Section 4.5, Chemical Analyses, states, " The detection and reporting limits for each method shall be less than applicable background, screening, and regulatory cleanup levels. The preferred method reporting (practical quantitation) limits are a maximum of 20 percent of the cleanup, screening, or background levels. Analyses conducted with detection limits that are greater than applicable background, screening, or regulatory cleanup levels shall be considered data quality exceptions, and the reasons for the elevated detection limits shall be reported to the NMED" (NMED, 2023a). An evaluation of all soil vapor analytical datasets collected during 400 Area monitoring with respect to the impact of sample dilution will be provided in the fourth quarterly Report.

The soil vapor analyte detections and concentration ranges are summarized in Table 4.5. Primary observations from the tabulated data are provided below:

- A total of 65 analytes were tested using EPA Method TO-15.
- 52 analytes were detected above laboratory detection levels for either soil vapor within monitoring well sampling zones or within field blank and trip blank samples.
- 13 analytes were reported as non-detect (ND) within both monitoring well sampling zones and field blank/trip blank samples.
- 25 analytes were detected only in monitoring well sampling zones.
- 27 analytes were detected in both monitoring well sampling zones and field blank/trip blank samples.
- No analytes were detected only in field blank/trip blank samples.
- 26 analytes' detection limits were higher than the regulatory screening level (RSL) due to dilution (bolded on Table 4.5).

Analytical reports from the off-site soil vapor laboratory (ALS Laboratory) indicate that dilutions were necessary for soil vapor samples with elevated concentrations of Freon 11 and Freon 113, which exceeded the upper calibration limits for the laboratory analytical equipment. Dilution is the total number of unit volumes in which the soil vapor was dissolved, calculated by dividing unit volume by the volume of soil vapor analyzed (liters) and multiplying by the container dilution factor. Soil vapor dilutions varied from 3.58 (400-KV-142-12.5) for the lowest concentration sample up to 8,050 for the highest concentration

sample (400-IV-123-80). For the samples with large dilutions and high concentrations reported for Freon 11 and Freon 113, elevated method detection limits (MDL) for other COPCs in the same samples potentially increase to above the corresponding NMED vapor intrusion screening level (VISL).

Based on consultations with the contracted analytical laboratory regarding EPA Method TO-15 sample dilution, NASA understands that there is no practical way to mitigate sample dilution that would remedy the effect on MDL for other COPCs. Each Method TO-15 soil vapor sample is analyzed collectively for the suite of target COPC. If the concentration of a single compound or multiple compounds in any sample exceeds the preliminary calibration range, the sample must be diluted for reanalysis at an optimum volume. The standard laboratory practice is to run at the greatest volume possible based on the matrix sample. There is no option other than multiple injections to analyze the largest volume possible for samples containing high concentrations of specific analytes (in this case Freon 11 and Freon 113). All steps performed in the dilution and analysis of field sample canisters are included in the MDL procedure. It is not possible to sample for specific soil vapor COPCs using Method TO-15 at lower concentrations before diluting the sample. NMED guidance (Comment 4b.; NASA, 2021) indicated that analyses conducted with detection limits that are greater than applicable background screening and regulatory cleanup levels should be considered data quality exceptions and the reasons reported. Furthermore, when detection limits exceed screening levels (VISLs and/or risk-based concentrations [RBCs]), the resulting data cannot be used for statistical analysis or risk assessment. NASA acknowledged this issue (response to Comment 4b.; NASA, 2021), and stated that constituents exhibiting detection limits greater than screening or regulatory cleanup levels will be identified and fully discussed in future reports.

The term “non-detect” is not appropriate for specific COPCs for diluted samples where MDL are above the respective screening levels. The reporting strategy used in Table 4.5 identifies the modified COPC MDL due to dilution and compares it to the corresponding screening level. Bold font indicates where the MDL exceeds the VISL (NMED, 2022)/RSL (EPA, 2024)/RBC (NASA, 2022). Of the 65 analytes detected and reported as non-detect within the EPA Method TO-15 suite, the MDL increased above the corresponding regulatory screening level (either NMED VISL, EPA RSL, or WSTF RBC) for 29 of the analytes identified in bold in Table 4.5.

A summary of 400 Area soil vapor analytical results above NMED residential VISLs is provided in Table 4.6 and Figure 4.3. A total of 11 analytical results for six analytes (1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, 1,4-Dioxane, benzene, Freon 11, and TCE) exceeded the NMED VISLs and are described below.

Detected in monitoring well sampling ports:

- 1,2,4-Trimethylbenzene (one location): 400-SV-03-10.
- 1,3,5-Trimethylbenzene (one location): 400-SV-03-10.
- 1,4-Dioxane (one location): 400-SV-03-50.
- Freon 11 (four locations): 400-SV-10-125; 400-GV-125-105; 400-HV-147-130; and 400-IV-123-80.
- TCE (two locations): 400-GV-125-120 and 400-IV-123-80.

Detected in QC samples (field blanks):

- Benzene (one location): 400-HV-147-130.
- TCE (one location): 400-HV-147-1300.

All analytical results that exceeded the NMED VISLs were below the equivalent depth sensitive WSTF RBC taken from the most recently approved version of the annual WSTF RBC report (NASA, 2022).

Following the disapproval of NASA's 2023 RBC update (NMED, 2023c), NASA responded with a proposal to work with a subcontractor to provide the 2024 RBC update using site-specific parameters to calculate more appropriate attenuation factors for use in RBC calculations (NASA, 2024a).

4.2.4 Soil Vapor Statistical Trends

For this quarterly report, no statistical evaluations were performed due to an insufficient sample size (<6) to make reliable decisions that affect human health and the environment. Therefore, no statistical trends will be performed for 400 Area soil vapor during this study until after all four quarterly sampling events have been completed. With the original 400 Area 2017 sampling event presented in the IR and the four proposed quarterly sampling events, the sample size will be five. Statistical trends will be completed following the final (fourth) quarterly sampling event.

5.0 Conclusions and Recommendations

In addition to the first and second quarterly groundwater and soil vapor sampling field events performed in February and May 2024, a third quarterly sampling event was performed in August 2024 (third quarter) and a fourth quarterly sampling event is scheduled for December 2024 (fourth quarter). NASA recommends providing contaminant vertical profiles and a comprehensive statistical evaluation including a trend analysis in the fourth quarterly Report when a total of five sets of analytical results are available (the 2017 closure investigation report combined with the four quarterly 2024 reports).

Notes:
[1] From the WSTF Groundwater Monitoring Plan (GMP; NASA, 2023b).
[2] No WSTF cleanup level; Cleanup level listed in parentheses is from the NMED Risk Assessment Guidance (2022).
D The reported result is from a dilution.
J The result is an estimated value less than the quantitation limit, but greater than or equal to the detection limit.
NA Not applicable. No WSTF cleanup level.

Table 4.3 Groundwater Analytical Results Above WSTF Cleanup-Screening Levels for Second Quarter 2024

Well Name	Sampling Date	Analytical Method	Analyte	Result (µg/L)	NDMA (607) Extraction Efficiency	QA Flag	WSTF GMP Cleanup Level[1] (µg /L)

Notes:
NA Not Applicable
NS Not Sampled (port below water level or blocked)
[1] The initial pre-set pressure for all soil vapor canisters at the ALS laboratory is -14.3 PSI. Any initial canister pressure with a different reading will be recorded in the Field Notes (Appendix A) and presented in this table. All initial canister pressures were reported at -14.3 PSI for the 2QTR field event.

Notes:
Shaded analytes are ND for sampling zone and field blank/trip blank samples for dataset.
Bold indicates MDL due to dilution was greater than the VISL/RSL/RBC for the constituent (residential, industrial, or both).
* = Analyte is on list of potential 400 Area COPCs identified in the IWP (NASA, 2011b – 400 Area IWP).
A = The result of an analyte for a laboratory control sample (LCS), initial calibration verification (ICV) or continuing calibration verification (CCV) was outside standard limits.
FB = The analyte was detected in the field blank.
J = The result is an estimated value less than the quantitation limit, but greater than or equal to the detection limit.
ND = The analyte was not detected above the detection limit.
[1] VISL from NMED Risk Assessment Guidance (NMED, 2022).
[2] From RSL EPA (EPA, 2024).
[3] From latest approved version of WSTF RBCs (NASA, 2022).

400-HV-147	130	5/28/24	Trichloroethene	230	J FB	69.5	18,000 @ 100’ bgs	78

Notes:
NA = Not available.
FB = The analyte was detected in the field blank.
J = The result is an estimated value less than the quantitation limit, but greater than or equal to the detection limit.
[1] Results are provided for all analyte occurrences that exceed the equivalent NMED VISL.
[2] VISL from NMED Risk Assessment Guidance (NMED, 2022).
[3] RSL from EPA Regional Screening Levels (EPA, 2024).
[4] From latest approved version of WSTF RBCs (NASA, 2022). Value taken from nearest available RBC calculation depth above port depth for more conservative value.
[5] This value reflects the ratio of the soil vapor result (µg/m^3) to the equivalent RBC (µg/m^3). This is the factor by which the equivalent RBC exceeds the result.

NASA/WSTF/Navarro
White Sands Test Facility

Craig Del Ferraro present. Weather is clear & warm. Soil/Vapor samples will collected from various well locations throughout the 400 area. Gas sample will be collected using Summa canisters. Parameters will be monitored using the Landtech GA5000 gas instrument. This instrument was calibrated prior to use.

Appendix B
Quality Assurance Report

National Aeronautics and Space Administration

Quality Assurance Report for White Sands Test Facility
400 Area Supplemental Groundwater and Soil Vapor Monitoring Report

Second Quarter 2024

November 2024

NM 8800019434

Report Submitted: November 2024

Report Prepared by:
Stephanie M. Portillo
Environmental Scientist IV, Quality Assurance Manager
Navarro Research and Engineering, Inc.

1.0 Introduction

The 400 Area Supplemental Groundwater and Soil Vapor Monitoring Report (400 Area GWSVMR) requires the preparation of an investigation report that includes soil analytical data reported. The Quality Assurance Report (QAR) prepared and reviewed by responsible environmental contractor data management personnel provides the following information:

- A summary of notable anomalies.
- A summary of notable data quality issues by analytical method, if any.
- A list of the sample events for soil vapor and groundwater samples collected in May 2024.
- The quantity and type of quality control samples collected or prepared in May 2024.
- Definitions of data qualifiers used in WSTF analytical data reporting.
- The quantity and type of data qualifiers applied to individual analytical results.
- A list of quality assurance narratives arranged by analytical method.
- A summary table of blank sample detections.

2.0 Data Quality

Samples collected during the second quarter of 2024 included soil vapor samples, groundwater samples, duplicates, field blanks, and trip blanks in accordance with the NMED approved 400 Area GWSVMP. Soil vapor samples and duplicates were obtained by evacuating three tubing volumes of stagnant vapor from soil vapor implants and stainless steel tubing prior to sample collection into laboratory-provided SUMMA canisters. Groundwater samples and duplicates were obtained by using low-flow purging procedures prior to sample collection from the dedicated low-flow bladder pump and disposable discharge tubing into laboratory-provided containers. Evacuation and purging procedures were completed in accordance with the 400 Area GWSVMP and the NMED-approved Groundwater Monitoring Plan.

2.1 Notable Anomalies

The following notable anomalies were identified:

- No field blanks were collected for nitrosamines by Environmental Protection Agency (EPA) Method 607 for this investigation inconsistent to the NMED-approved monitoring plan (GWSVMR).
- No field blanks were collected for total metals for this investigation inconsistent to the NMED-approved GWSVMR.
- Nine results for nitrosamines by EPA Method 607 were identified for reanalysis due to calibration exceedances for N-nitrosodimethylamine (NDMA), N-nitrodimethylamine (DMN), and bromacil. Only one result is retained for each sample specific analyte. Results for original or diluted samples, identified in the laboratory report case narrative (SwRI M607-035) were qualified as rejected accordingly and received an “R” flag. Affected samples area as follows:
    - 2405281004A (400-EV-131)
    - 2405280843C (400-GV-125)
    - 2405280844C (400-GV-125)
- 400-IV-123 groundwater was not sampled due to insufficient water.

No other notable anomalies are associated with the soil vapor or groundwater analytical data in this QAR.

3.0 Data Tables

Table 1 summarizes the soil vapor and groundwater sample events for the second quarter collected in May 2024. This report is based on data quality issues related to the sample events listed in Table 1. Table 2 through Table 7 contain information related to the sample events identified in Table 1. As specified by the GWSVMR, specific quality control samples are utilized to assess the quality of analytical data. Table 2 presents the quantity of quality control samples collected for each analytical method. Table 3 compares the quality control sample percentages collected to the requirements in the GWSVMR. When data quality criteria are not met, data qualifiers are applied to the data. Definitions of data qualifiers used for WSTF chemical analytical data are listed in Table 4. Table 5 and Table 6 present the total number of individual result records and summarize the quantity of field and laboratory data qualifiers assigned to individual analyte result records in the White Sands Test Facility analytical database. Table 7 provides all quality assurance narratives associated with the sample events in Table 1. Narratives associated with qualified data are identified by bold text in Table 7.

Soil Gas Duplicates	NA	50	6	**12%**

Table 4 – Definitions of Data Qualifiers

Qualifier	Definition
*	User defined qualifier. See quality assurance narrative.
A	The result of an analyte for a laboratory control sample (LCS), initial calibration verification (ICV) or continuing calibration verification (CCV) was outside standard limits.
AD	Relative percent difference for analyst (laboratory) duplicates was outside standard limits.
D	The reported result is from a dilution.
EB	The analyte was detected in the equipment blank.
FB	The analyte was detected in the field blank.
G	The result is an estimated value greater than the upper calibration limit.
i	The result, quantitation limit, and/or detection limit may have been affected by matrix interference.
J	The result is an estimated value less than the quantitation limit, but greater than or equal to the detection limit.
NA	The value/result was either not analyzed for or not applicable.
ND	The analyte was not detected above the detection limit.
Q	The result for a blind control sample was outside standard limits.
QD	The relative percent difference for a field duplicate was outside standard limits.
R	The result is rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
RB	The analyte was detected in the method blank.

Qualifier	Definition
S	The result was determined by the method of standard addition.
SP	The matrix spike recovery and/or the relative percent difference for matrix spike duplicates was outside standard limits.
T	The sample was analyzed outside the specified holding time or temperature.
TB	The analyte was detected in the trip blank.
TIC	The analyte was tentatively identified by a GC/MS library search and the amount reported is an estimated value.

Table 5 – Quantity of Field Based Data Qualifiers Assigned to Individual Result Records

Method	Total Result Records	FB	EB	TB	Q	QD	SP	R
Nitrosamines by EPA Method 607	**30**	**---**	**---**	**---**	**---**	**---**	**---**	**9**
Volatile Organics by SW-846 Method 8260C	**462**	**---**	**---**	**---**	**---**	**---**	**---**	**---**
Total Metals by Various SW-846 Methods	**189**	**---**	**---**	**---**	**---**	**---**	**---**	**---**
Soil Gas - Volatile Organic Compounds	**3640**	**33**	**---**	**2**	**---**	**---**	**---**	**---**

Table 6 – Quantity of Laboratory-Based Data Qualifiers Assigned to Individual Result Records

Method	Total Result Records	*	A	AD	G	RB	T	D	i	J
Nitrosamines by EPA Method 607	**30**	**---**	**---**	**---**	**3**	**---**	**---**	**12**	**---**	**1**
Volatile Organics by SW-846 Method 8260C	**462**	**---**	**---**	**---**	**---**	**---**	**---**	**4**	**---**	**14**

Table 7 – Quality Assurance Narratives

Location Sample ID	Event Date	Modified EPA Method 607
400-EV-131	05/28/24	For Total Metals, an incorrect sample number (1405281005A) was used by the analytical laboratory that does not match the logbook or the chain of custody. 2405281005A is the correct sample number from the field notes and is used in the database.
400-EV-131	**05/28/24**	**For Modified EPA Method 607, Samples 2405280843C (400-GV-125), 2405280844C (400-GV-125) and 2405281004A (400-EV-131) were all diluted 5-fold due to Bromacil exceeding calibration curve in the initial analysis. Original NDMA and DMN samples are retained and the diluted samples are flagged with an "R" and maintained in the Q_disk only.**
400-EV-131	**05/28/24**	**For Modified EPA Method 607, Samples 2405280843C (400-GV-125), 2405280844C (400-GV-125) and 2405281004A (400-EV-131) were all diluted 5-fold due to Bromacil exceeding calibration curve in the initial analysis. Diluted Bromacil samples are retained and the original samples are flagged with an "R" and maintained in the Q_disk only.**
400-FV-131	05/28/24	For Modified EPA Method 607, relative percent differences (RPD) for duplicate samples 2405280855A and 2405280856A were within control limits or below the calculable range.
400-GV-125	**05/28/24**	**For Modified EPA Method 607, Samples 2405280843C (400-GV-125), 2405280844C (400-GV-125) and 2405281004A (400-EV- 131) were all diluted 5-fold due to**

Location Sample ID	Event Date	Modified EPA Method 607
		Bromacil exceeding calibration curve in the initial analysis. Diluted Bromacil samples are retained and the original samples are flagged with an "R" and maintained in the Q_disk only.
400-GV-125	05/28/24	For Modified EPA Method 607, relative percent differences (RPD) for duplicate samples 2405280843C and 2405280844C were within control limits or below the calculable range.
400-GV-125	**05/28/24**	**For Modified EPA Method 607, Samples 2405280843C (400-GV-125), 2405280844C (400-GV-125) and 2405281004A (400-EV- 131) were all diluted 5-fold due to Bromacil exceeding calibration curve in the initial analysis. Original NDMA and DMN samples are retained and the diluted samples are flagged with an "R" and maintained in the Q_disk only.**
400-HV-147	**05/28/24**	**For Modified EPA Method 607, Sample 2405281440C (400-HV-147) was diluted 150-fold due to NDMA and DMN exceeding calibration curve. Due to the high dilution factor, surrogate result was not reported in the dilution analysis.**

Location Sample ID	Event Date	SW-846 Method 8260C
400-EV-131	05/28/24	For SW-846 Method 8260C, The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.
400-EV-131	05/28/24	For SW-846 Method 8260C, The lower control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). Since there were no detections of the analyte(s) above the MRL in the associated field samples, the quantitation is not affected. The data quality was not significantly affected and no further corrective action was taken.
400-EV-131	**05/28/24**	**For SW-846 Method 8260C, Unknown was detected in the field blank (2405281003A) at 9.8 ug/L.**
400-EV-131	**05/28/24**	**For SW-846 Method 8260C, CFC 21 (0.42 ug/L) in sample 2405281002A is an estimated value less than the quantitation limit, but greater than or equal to the detection limit.**
400-EV-131	**05/28/24**	**For SW-846 Method 8260C, one unknown compound is an estimated value and tentatively identified by a GC/MS library search in samples 2405281002A and 2405281003A.**
400-EV-131	05/28/24	For SW-846 Method 8260C, The upper control criterion was exceeded for one or more analytes in the Laboratory Control Sample (LCS). There were no detections of the analyte(s) above the MRL in the associated field samples. The error associated with elevated recovery equates to a high bias. The sample data is not significantly affected. No further corrective action was appropriate.
400-EV-131	**05/28/24**	**For SW-846 Method 8260C, CFC 11 (410 ug/L) in sample 2405281002A is a result of a 5-fold dilution.**
400-FV-131	05/28/24	For SW-846 Method 8260C, relative percent differences (RPD) for duplicate samples 2405280852A and 2405280853A were within control limits or below the calculable range.
400-FV-131	**05/28/24**	**For SW-846 Method 8260C, Unknown was detected in the trip blank (2405280700A) at 9.3 ug/L.**
400-FV-131	**05/28/24**	**For SW-846 Method 8260C, one unknown compound is an estimated value and tentatively identified by a GC/MS library search in samples 2405280700A, 2405280852A ,2405280853A, 2405280853A.**
400-FV-131	**05/28/24**	**For SW-846 Method 8260C, Unknown was detected in the field blank (2405280854A) at 11.0 ug/L.**
400-FV-131	**05/28/24**	**For SW-846 Method 8260C, TCE (0.65 ug/L and 0.63 ug/L) in samples 2405280852A and 2405280853A is an estimated value less than the quantitation limit, but greater than or equal to the detection limit.**
400-FV-131	05/28/24	For SW-846 Method 8260C, The upper control criterion was exceeded for one or more analytes in the Laboratory Control Sample (LCS). There were no detections of the

Location Sample ID	Event Date	SW-846 Method 8260C
		analyte(s) above the MRL in the associated field samples. The error associated with elevated recovery equates to a high bias. The sample data is not significantly affected. No further corrective action was appropriate.
400-FV-131	05/28/24	For SW-846 Method 8260C, The lower control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). Since there were no detections of the analyte(s) above the MRL in the associated field samples, the quantitation is not affected. The data quality was not significantly affected and no further corrective action was taken.
400-FV-131	05/28/24	For SW-846 Method 8260C, The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.
400-GV-125	05/28/24	For SW-846 Method 8260C, relative percent differences (RPD) for duplicate samples 2405280840C and 2405280841C were within control limits or below the calculable range.
400-GV-125	**05/28/24**	**For SW-846 Method 8260C, Unknown was detected in the field blank (2405280842C) at 10.0 ug/L.**
400-GV-125	**05/28/24**	**For SW-846 Method 8260C, CFC 11 (200 ug/L and 190 ug/L) in samples 2405280840C and 2405280841C is a result of a 2.5-fold dilution.**
400-GV-125	**05/28/24**	**For SW-846 Method 8260C, one unknown compound is an estimated value and tentatively identified by a GC/MS library search in samples 2405280840C, 2405280841C, and 2405280842C.**
400-GV-125	05/28/24	For SW-846 Method 8260C, The lower control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). Since there were no detections of the analyte(s) above the MRL in the associated field samples, the quantitation is not affected. The data quality was not significantly affected and no further corrective action was taken.
400-GV-125	05/28/24	For SW-846 Method 8260C, The upper control criterion was exceeded for one or more analytes in the Laboratory Control Sample (LCS). There were no detections of the analyte(s) above the MRL in the associated field samples. The error associated with elevated recovery equates to a high bias. NARRATIVE

(M607-944)

CLIENT: **Navarro Research and Engineering Inc.**
SwRI PROJECT #: **26040.07.012**
BATCH #: **M607-944**
TASK ORDERS: **240524-2 and 240530-1**
REPORT DATE: **06/06/2024**

NARRATIVE FOR NDMA/DMN/BROMACIL ANALYSIS

1. Samples were extracted with dichloromethane (DCM) and analyzed by GC/MS in selective ion monitoring mode for N-Nitrosodimethylamine (NDMA), N-Nitrodimethylamine (DMN) and Bromacil according to the modified Method 607.

2. All aqueous samples were extracted within 7 days of collection date and were analyzed within 28 days from extraction date.

3. The sample reporting limit is 0.01 ppb for 1-L aqueous extraction of samples. All targets were quantified within the calibration curve range 0.01 - 5 µg/L.

4. Laboratory control sample (LCS) and matrix spike samples (if any) were spiked at 0.50 ppb based on 1000 mL, then extracted and analyzed. The recoveries for all target compounds were within method recovery criteria of 13-110% for NDMA, 30-150% for DMN, and 40-190% for Bromacil.

5. N-Nitroso-di-n-propylamine-d14 (surrogate) was spiked into every sample before extraction at 0.50 µg/mL in extract. The surrogate recoveries for all samples were within method recovery criteria of 40-160%.

6. Laboratory process blanks (PB) were extracted and analyzed with every extraction batch.

7. A "J" value was reported if the associated value was below reporting limits but above the MDL value.

8. All analyte concentrations are expressed in µg/L (ppb). Sample calculation:

$$\text{Concentration (µg/L)} = \frac{C\left(\frac{\mu g}{mL}\right) \times FV\ (mL) \times DF}{Vsamp(L)}$$

where:
C = result of GC/MS analysis in µg/mL for water samples
FV = final volume of sample in mL
V_{samp} = sample volume taken for extraction in L
DF = dilution factor, if any

9. Samples 2405280843C (400-GV-125), 2405280844C (400-GV-125) and 2405281004A (400-EV-131) were all diluted 5-fold due to Bromacil exceeding calibration curve in the initial analysis. Sample 2405281440C (400-HV-147) was diluted 150-fold due to NDMA and DMN exceeding calibration curve. Due to the high dilution factor, surrogate result was not reported in the dilution analysis.

LABORATORY REPORT

July 2, 2024

Stephanie Portillo
NASA White Sands Test Facility
12600 NASA Rd., Bldg. 120
Las Cruces, NM 88012

RE: NASA White Sands Test Facility (WSTF)

Dear Stephanie:

Enclosed are the results of the samples submitted to our laboratory on June 5, 2024. For your reference, these analyses have been assigned our service request number P2402249.

All analyses were performed according to our laboratory's NELAP and DoD-ELAP-approved quality assurance program. The test results meet requirements of the current NELAP and DoD-ELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP and DoD-ELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. Results are intended to be considered in their entirety and apply only to the samples analyzed and reported herein.

If you have any questions, please call me at (805) 526-7161.

Client: NASA White Sands Test Facility
Project: NASA White Sands Test Facility (WSTF)

Service Request No: P2402249

CASE NARRATIVE

The samples were received intact under chain of custody on June 5, 2024 and were stored in accordance with the analytical method requirements. Please refer to the sample acceptance check form for additional information. The results reported herein are applicable only to the condition of the samples at the time of sample receipt.

Volatile Organic Compound Analysis

The samples were analyzed for volatile organic compounds and Freon 123a as a tentatively identified compound in accordance with EPA Method TO-15 from the Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition (EPA/625/R-96/010b), January, 1999. This procedure is described in laboratory SOP VOA-TO15. The analytical system was comprised of a gas chromatograph/mass spectrometer (GC/MS) interfaced to a whole-air preconcentrator. This method is included on the laboratory's NELAP and DoD-ELAP scope of accreditation. Any analytes flagged with an X are not included on the NELAP or DoD-ELAP accreditation.

The Method Blank associated with the samples analyzed on June 22, 2024 contained concentrations of 1,1,1-Trichloroethane, 2,2,4-Trimethylpentane, 2-Butanone (Methyl Ethyl Ketone), Ethyl Benzene, Hexane, m,p-Xylene, Tetrachloroethene, Toluene, and Trichloroethene above the Method Detection Limit (MDL) but below the Method Reporting Limit (MRL). The data has been qualified accordingly. No further corrective action was taken.

The containers were cleaned, prior to sampling, down to the method reporting limit (MRL) reported for this project. For projects requiring DoD QSM 5.4 compliance canisters were cleaned to <1/2 the MRL. Please note, projects which require reporting below the MRL could have results between the MRL and method detection limit (MDL) that are biased high.

The results of analyses are given in the attached laboratory report. All results are intended to be considered in their entirety, and ALS Environmental (ALS) is not responsible for utilization of less than the complete report.

Use of ALS Environmental (ALS)'s Name. Client shall not use ALS's name or trademark in any marketing or reporting materials, press releases or in any other manner ("Materials") whatsoever and shall not attribute to ALS any test result, tolerance or specification derived from ALS's data ("Attribution") without ALS's prior written consent, which may be withheld by ALS for any reason in its sole discretion. To request ALS's consent, Client shall provide copies of the proposed Materials or Attribution and describe in writing Client's proposed use of such Materials or Attribution. If ALS has not provided written approval of the Materials or Attribution within ten (10) days of receipt from Client, Client's request to use ALS's name or trademark in any Materials or Attribution shall be deemed denied. ALS may, in its discretion, reasonably charge Client for its time in reviewing Materials or Attribution requests. Client acknowledges and agrees that the unauthorized use of ALS's name or trademark may cause ALS to incur irreparable harm for which the recovery of money damages will be inadequate. Accordingly, Client acknowledges and agrees that a violation shall justify preliminary injunctive relief. For questions contact the laboratory.

WSTF CHAIN OF CUSTODY RECORD

Date 5/30/24 P2402249 Page 1 of 7

Laboratory: ALS PO# 23EC017B

Address shipping questions to:
☐ Lori Minnick, 575-524-5119
☑ Other GEOFF GILES, 575-524-5352 575-635-1284

Send sample receipt confirmation and analytical reports to:
☒ Stephanie Portillo stephanie.portillo@nasa.gov
☐ Other
☐ Other

Analytical Requirements: Method 10-15; Analytes VOC

Special Instructions
Return coolers and reusable packaging materials within 14 days as required in statement of work to:
Return Address:
NASA WSTF Environmental Department
12600 NASA Road; Bldg. 120
Las Cruces, NM 88012
Attn: Lori Minnick

Sample Acceptance Check Form

Client: NASA White Sands Test Facility Work order: P2402249

Project: NASA White Sands Test Facility (WSTF)

Sample(s) received on: 6/5/24 Date opened: 6/5/24 by: DENISE.POSADA

Note: This form is used for all samples received by ALS. The use of this form for custody seals is strictly meant to indicate presence/absence and not as an indication of compliance or nonconformity. Thermal preservation and pH will only be evaluated either at the request of the client and/or as required by the method/SOP.

		Yes	No	N/A
1	Were **sample containers** properly marked with client sample ID?	☒	☐	☐
2	Did **sample containers** arrive in good condition?	☒	☐	☐
3	Were **chain-of-custody** papers used and filled out?	☒	☐	☐
4	Did **sample container labels** and/or tags agree with custody papers?	☒	☐	☐
5	Was **sample volume** received adequate for analysis?	☒	☐	☐
6	Are samples within specified holding times?	☒	☐	☐
7	Was proper **temperature** (thermal preservation) of cooler at receipt adhered to?	☐	☐	☒
8	Were **custody seals** on outside of cooler/Box/Container?	☐	☒	☐
	Location of seal(s)? _____ Sealing Lid?	☐	☐	☒
	Were signature and date included?	☐	☐	☒
	Were seals intact?	☐	☐	☒
9	Do containers have appropriate **preservation**, according to method/SOP or Client specified information?	☐	☐	☒
	Is there a client indication that the submitted samples are **pH** preserved?	☐	☐	☒
	Were **VOA vials** checked for presence/absence of air bubbles?	☐	☐	☒
	Does the client/method/SOP require that the analyst check the sample pH and if necessary alter it?	☐	☐	☒
10	**Tubes:** Are the tubes capped and intact?	☐	☐	☒
11	**Badges:** Are the badges properly capped and intact?	☐	☐	☒
	Are dual bed badges separated and individually capped and intact?	☐	☐	☒
12	Lab Notification: Analyst and PM were alerted of Short HT or RUSH samples?	☐	☐	☒
13	Client Notification: Client has been notified regarding HT exceedances and/or other CoC discrepancies?	☐	☐	☒

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
D = The reported result is from a dilution.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
D = The reported result is from a dilution.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
D = The reported result is from a dilution.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
D = The reported result is from a dilution.
X = See case narrative.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
B = Analyte detected in both the sample and the associated method blank.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
B = Analyte detected in both the sample and the associated method blank.

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.
B = Analyte detected in both the sample and the associated method blank.

622-96-8	4-Ethyltoluene	ND	0.50	0.085	ND	0.10	0.017	

ND = Compound was analyzed for, but not detected above the laboratory detection limit.
MRL = Method Reporting Limit - The minimum quantity of a target analyte that can be confidently determined by the referenced method.
J = The result is an estimated concentration that is less than the MRL but greater than or equal to the MDL.

Response via : Initial Calibration
DataAcq Meth:TO15.M

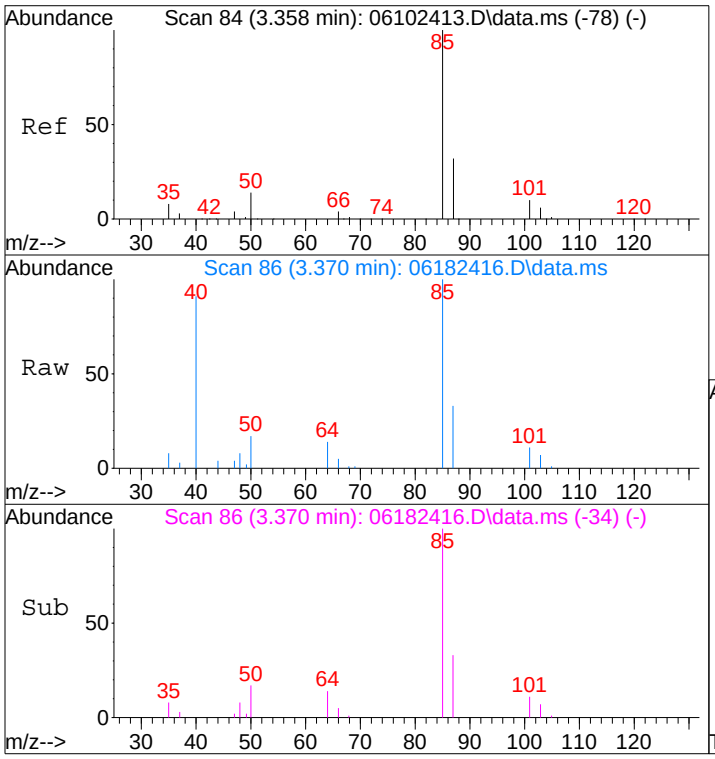
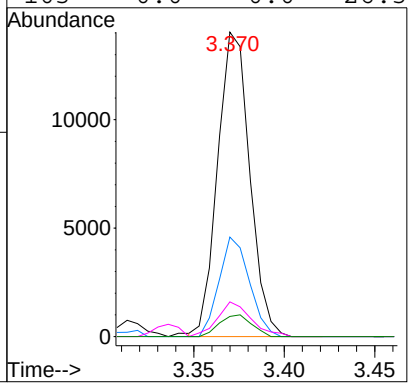
C-997

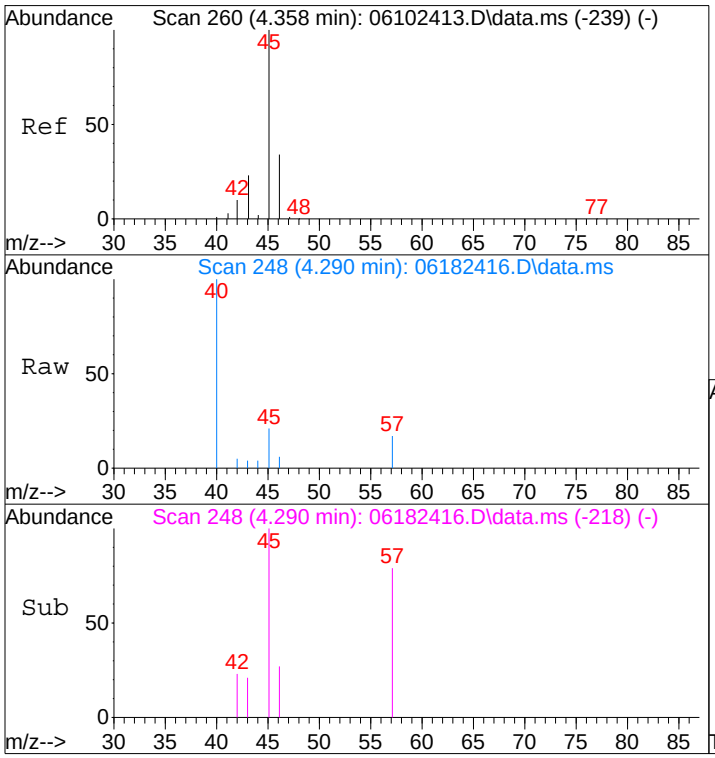


#3
Dichlorodifluoromethane (CFC 12)
Concen: 0.59 ng m
RT: 3.37 min Scan# 86
Delta R.T. 0.048 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion: 85 Resp: 17318

Ion	Ratio	Lower	Upper
85	100		
87	1.3	12.2	52.2#
101	3.1	0.0	29.8
103	0.0	0.0	26.3

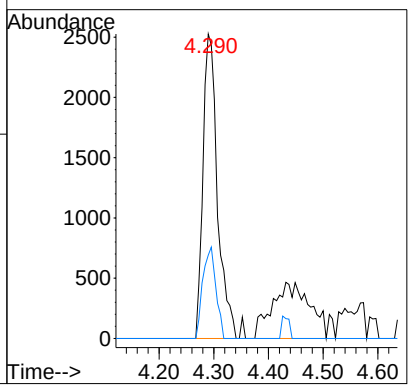


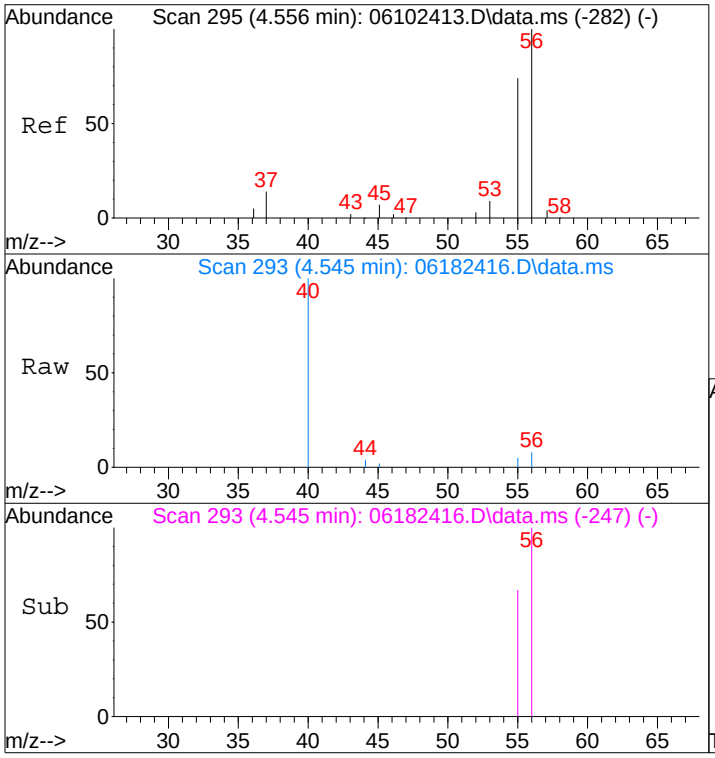


#10
Ethanol
Concen: 0.57 ng m
RT: 4.29 min Scan# 248
Delta R.T. -0.077 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion: 45 Resp: 6900

Ion	Ratio	Lower	Upper
45	100		
46	0.0	13.5	53.5#

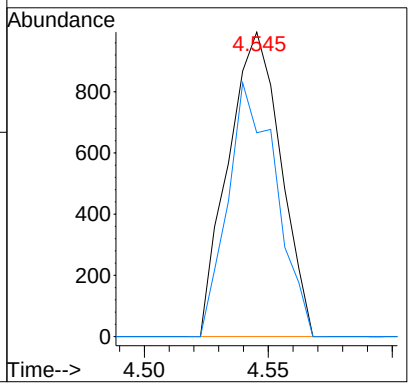


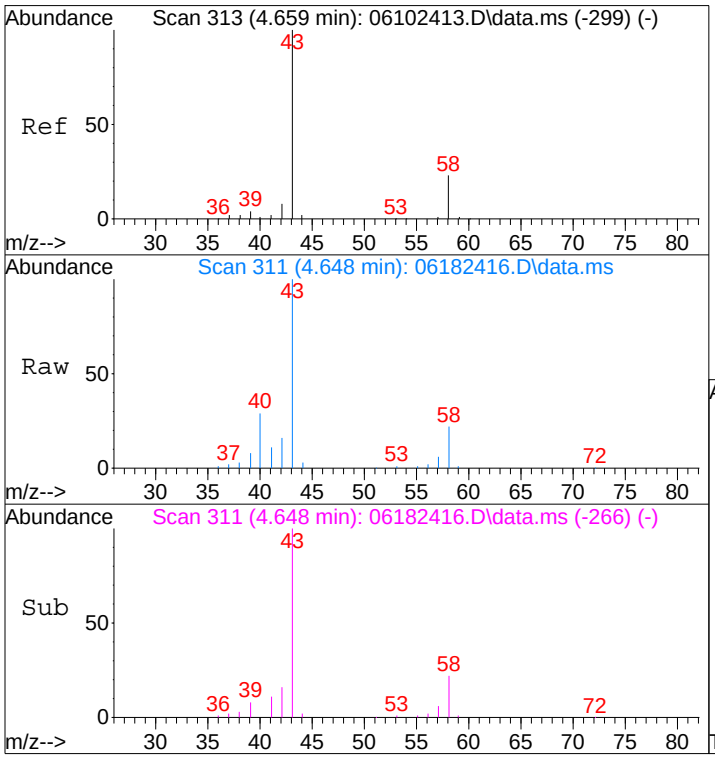


#12
Acrolein
Concen: 0.16 ng
RT: 4.55 min Scan# 293
Delta R.T. 0.010 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion: 56 Resp: 1470

Ion	Ratio	Lower	Upper
56	100		
55	76.5	55.5	95.5

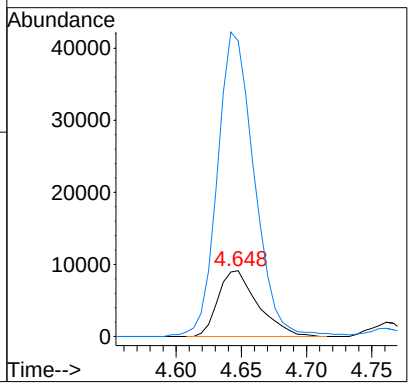


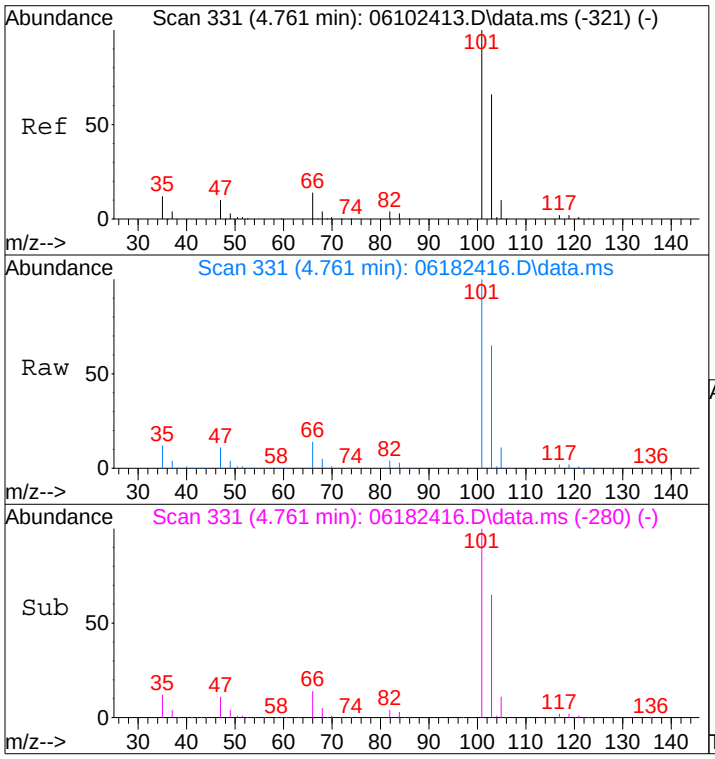


#13
Acetone
Concen: 1.98 ng
RT: 4.65 min Scan# 311
Delta R.T. 0.006 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion: 58 Resp: 19345

Ion	Ratio	Lower	Upper
58	100		
43	429.6	400.7	460.7

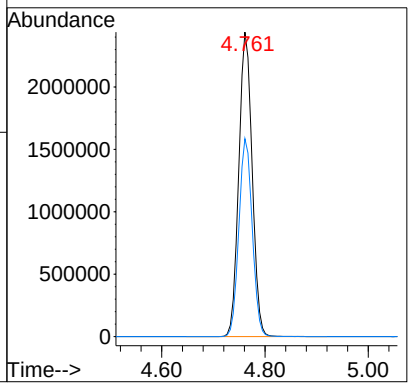


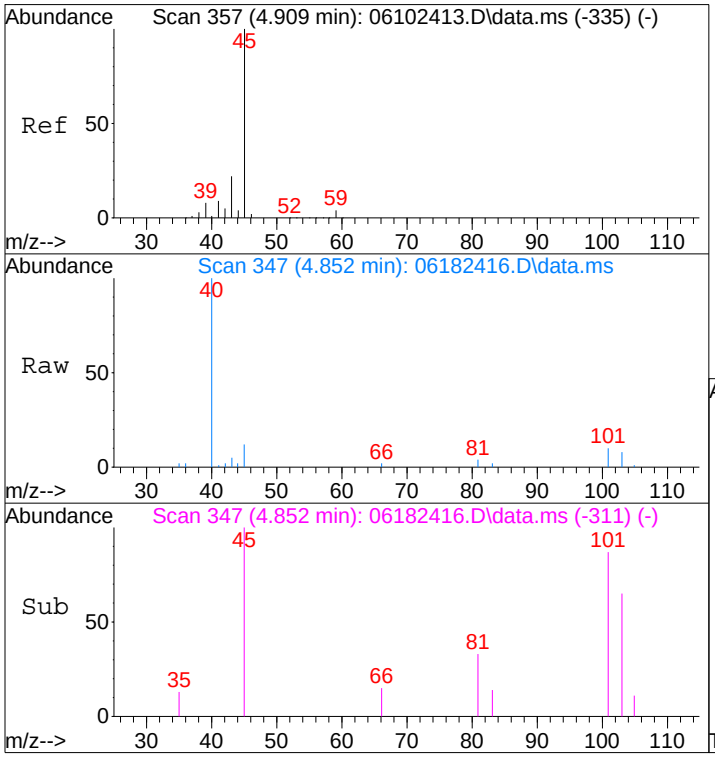


#14
Trichlorofluoromethane
Concen: 146.24 ng
RT: 4.76 min Scan# 331
Delta R.T. 0.040 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion:101 Resp: 4371494

Ion	Ratio	Lower	Upper
101	100		
103	65.1	44.9	84.9

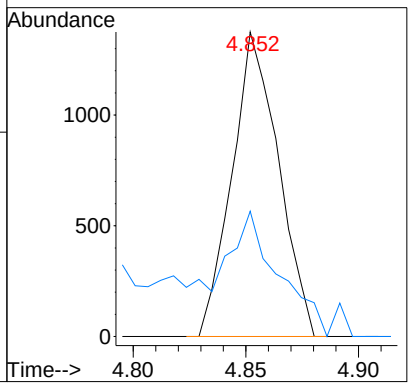


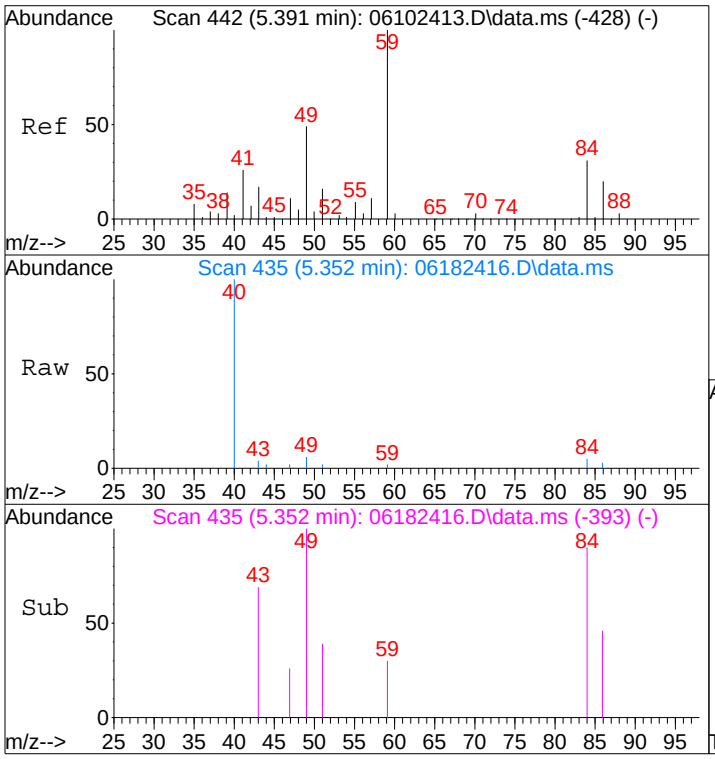


#15
2-Propanol (Isopropanol)
Concen: 0.05 ng
RT: 4.85 min Scan# 347
Delta R.T. -0.048 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion: 45 Resp: 1967

Ion	Ratio	Lower	Upper
45	100		
43	46.7	2.5	42.5#

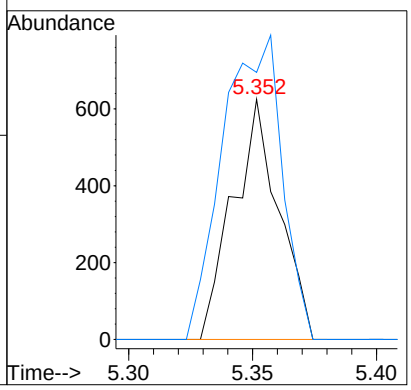


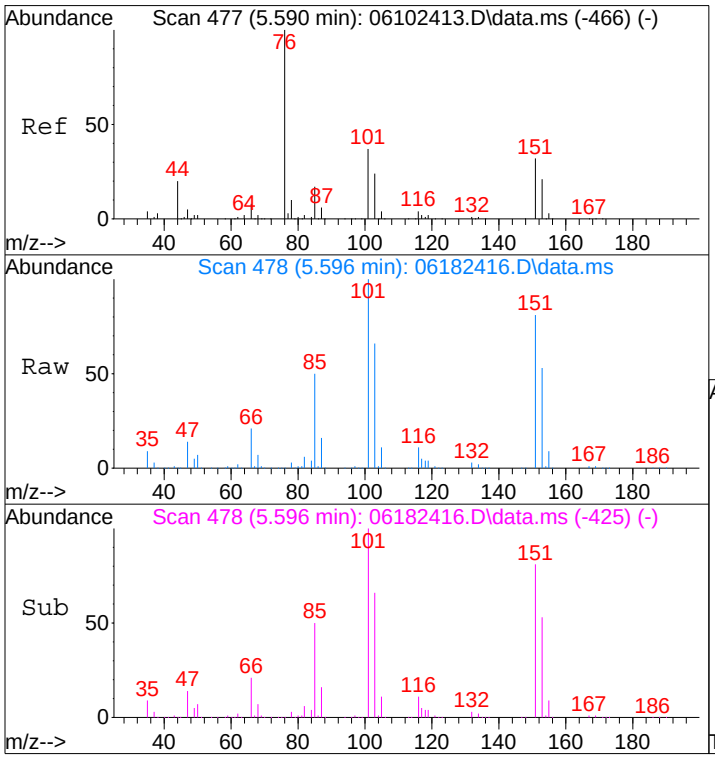


#19
Methylene Chloride
Concen: 0.06 ng
RT: 5.35 min Scan# 435
Delta R.T. -0.009 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion: 84 Resp: 805

Ion	Ratio	Lower	Upper
84	100		
49	164.0	132.9	182.9

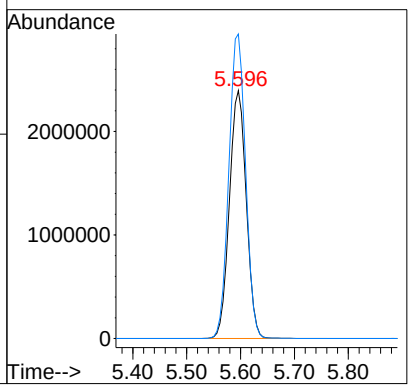


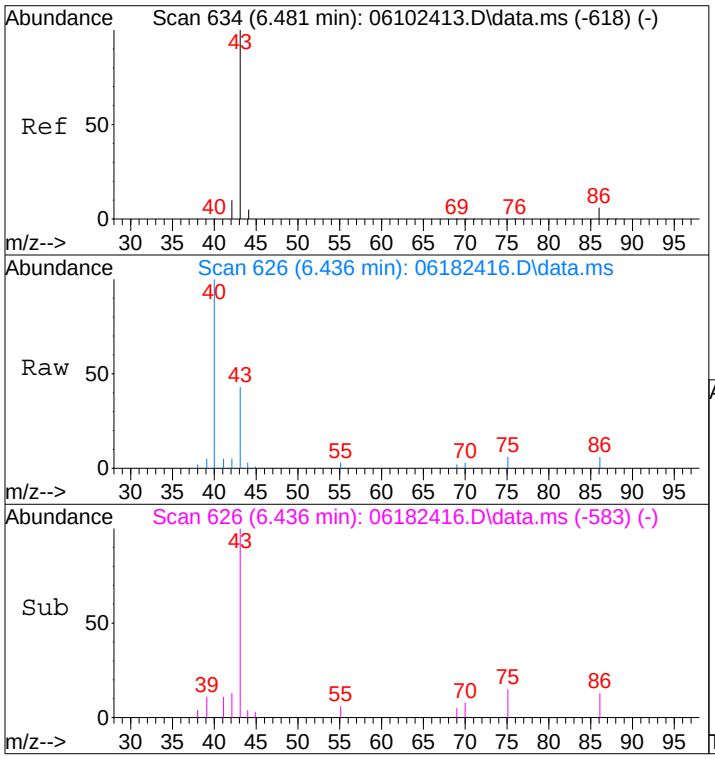


#21
Trichlorotrifluoroethane
Concen: 411.06 ng
RT: 5.60 min Scan# 478
Delta R.T. 0.050 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion:151 Resp: 5198218

Ion	Ratio	Lower	Upper
151	100		
101	121.9	95.0	135.0

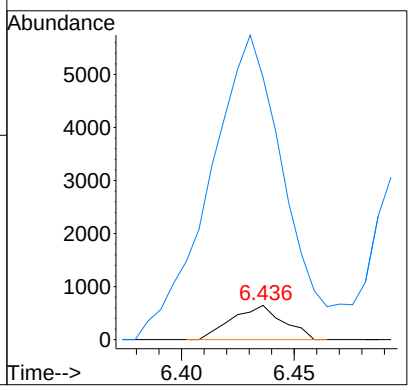


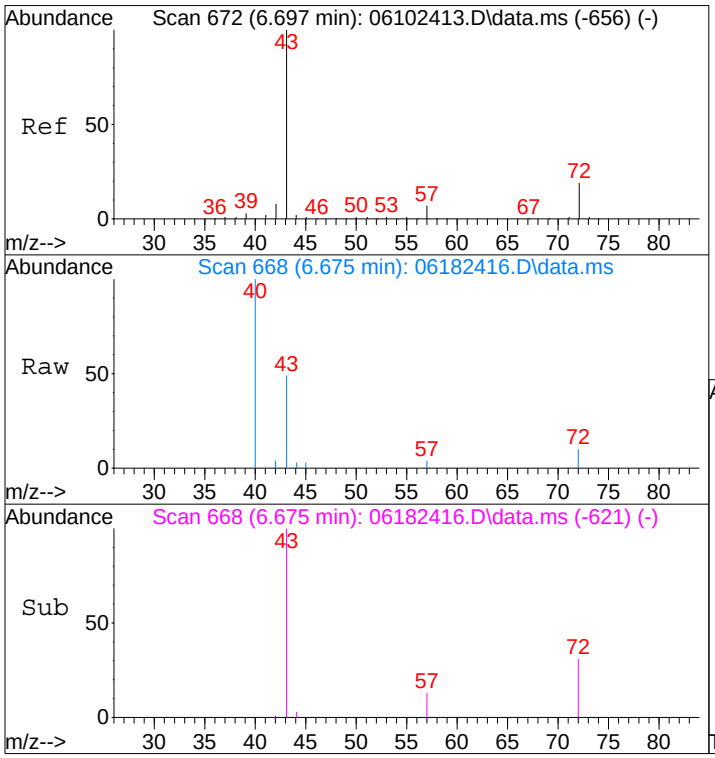


#26
Vinyl Acetate
Concen: 0.45 ng
RT: 6.44 min Scan# 626
Delta R.T. -0.003 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion: 86 Resp: 1022

Ion	Ratio	Lower	Upper
86	100		
43	1327.0	1668.9	1708.9#

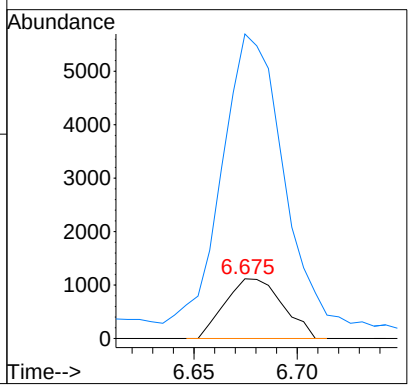


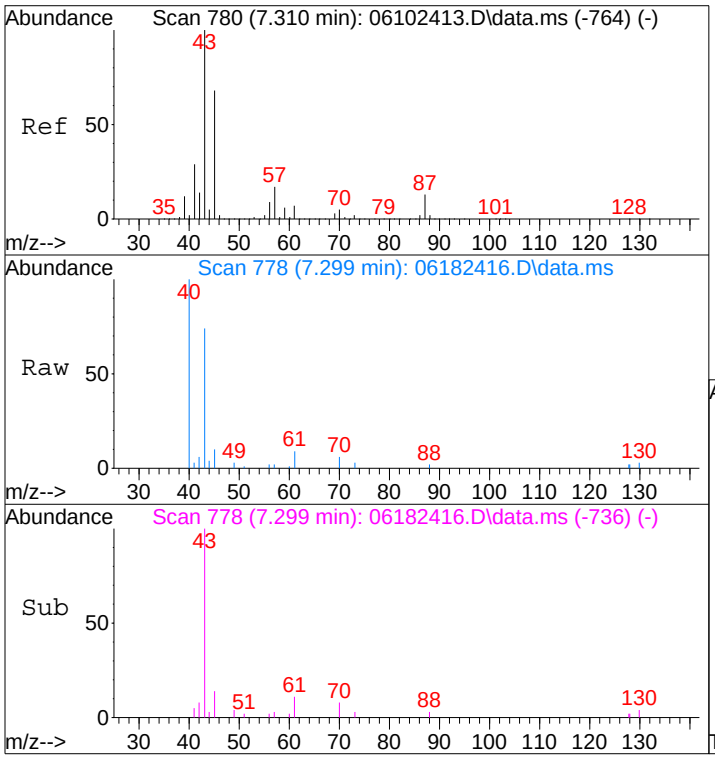


#27
2-Butanone (MEK)
Concen: 0.28 ng
RT: 6.67 min Scan# 668
Delta R.T. 0.016 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion: 72 Resp: 2162

Ion	Ratio	Lower	Upper
72	100		
43	541.1	506.8	546.8

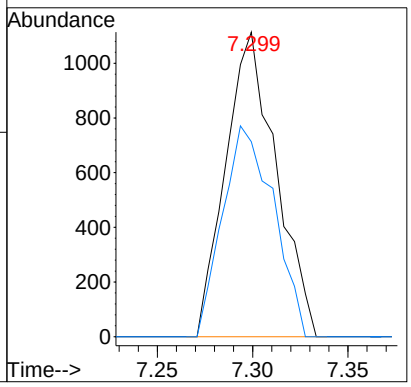


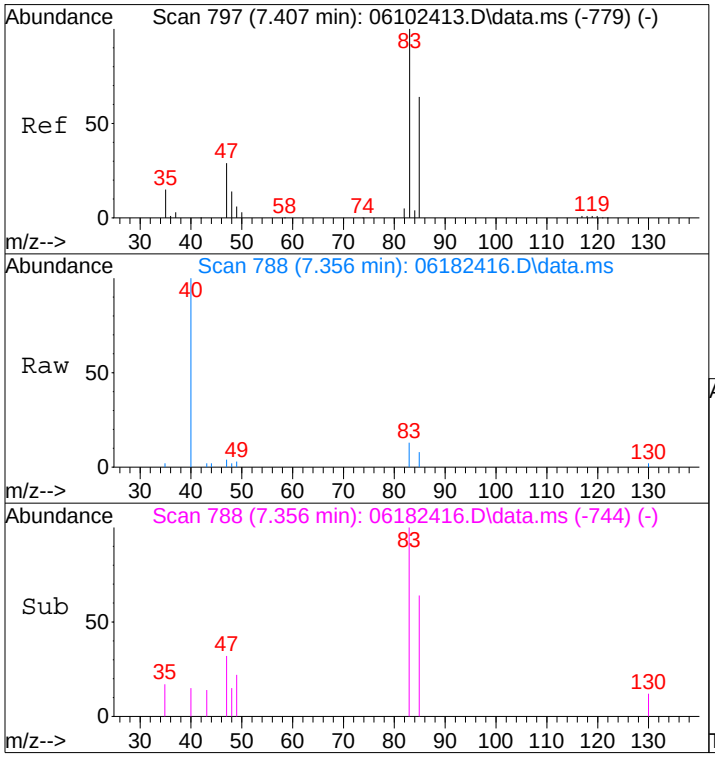


#30
Ethyl Acetate
Concen: 0.43 ng
RT: 7.30 min Scan# 778
Delta R.T. 0.040 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion: 61 Resp: 2045

Ion	Ratio	Lower	Upper
61	100		
70	69.9	53.5	93.5

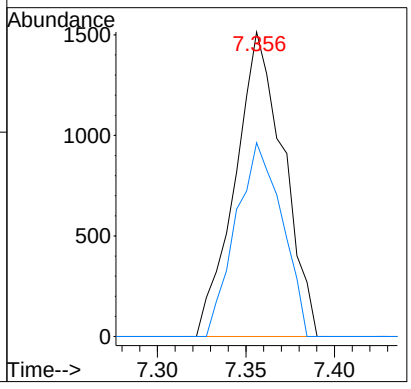


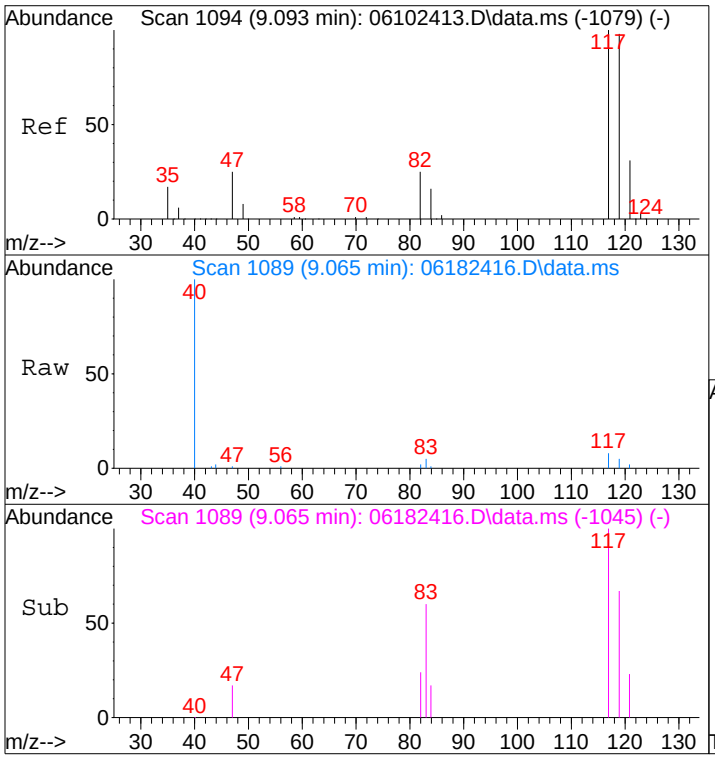


#32
Chloroform
Concen: 0.12 ng
RT: 7.36 min Scan# 788
Delta R.T. 0.001 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion: 83 Resp: 2872

Ion	Ratio	Lower	Upper
83	100		
85	60.9	44.4	84.4

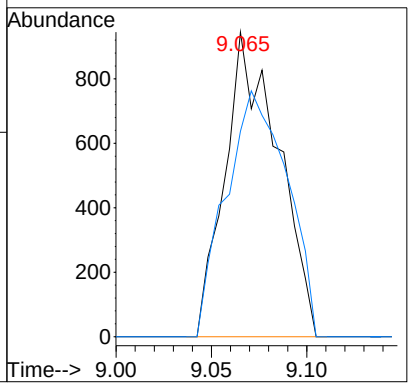


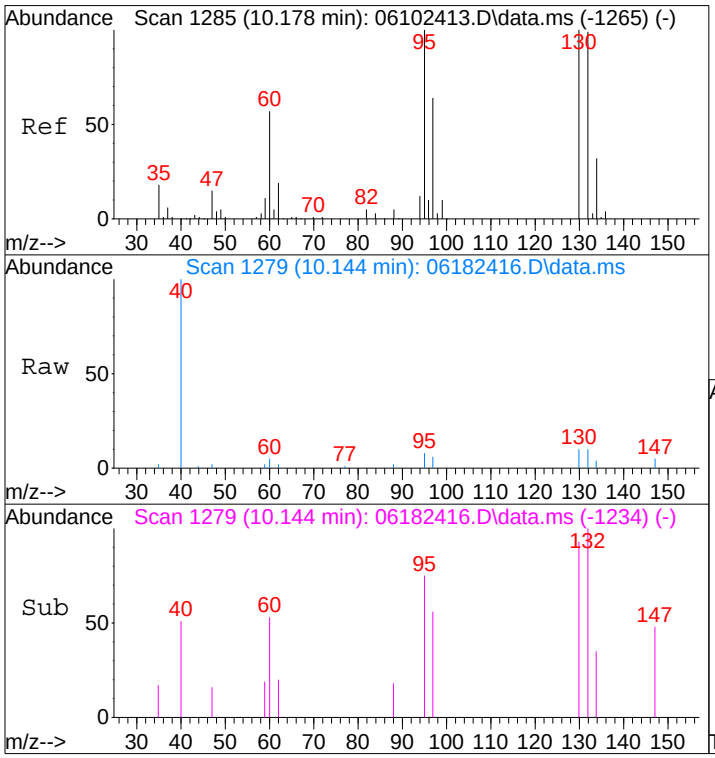


#42
Carbon Tetrachloride
Concen: 0.08 ng
RT: 9.07 min Scan# 1089
Delta R.T. -0.001 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion:117 Resp: 1830

Ion	Ratio	Lower	Upper
117	100		
119	93.2	77.3	117.3

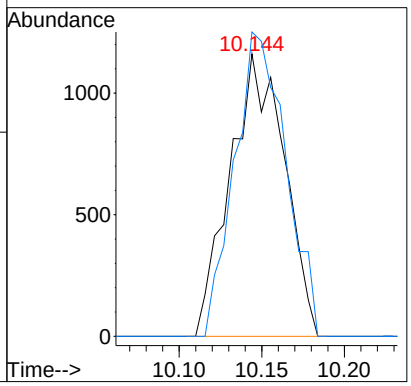


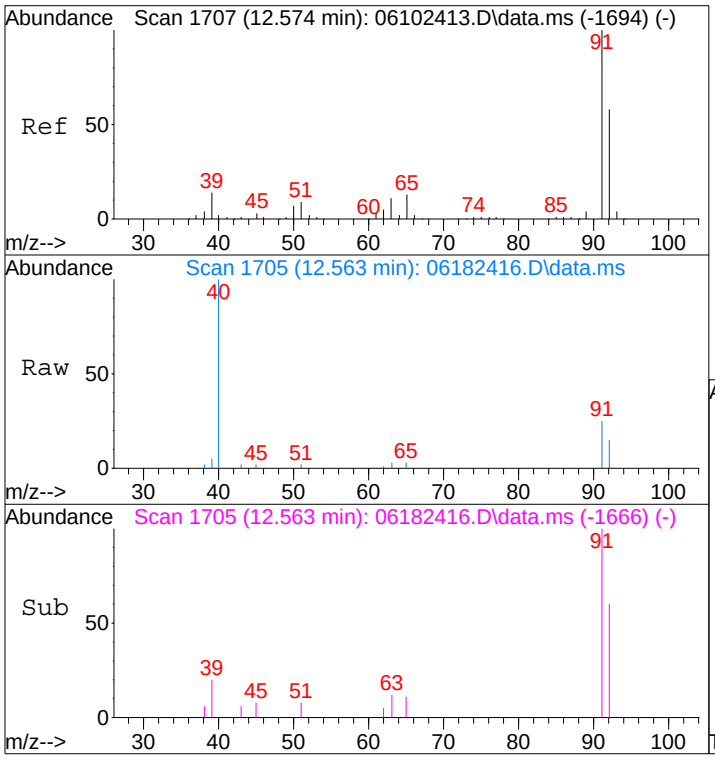


#47
Trichloroethene
Concen: 0.18 ng
RT: 10.14 min Scan# 1279
Delta R.T. 0.004 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion:130 Resp: 2656

Ion	Ratio	Lower	Upper
130	100		
132	101.7	77.9	117.9

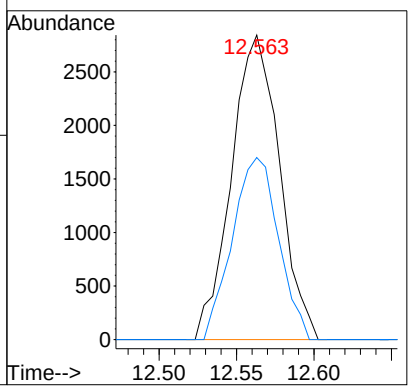


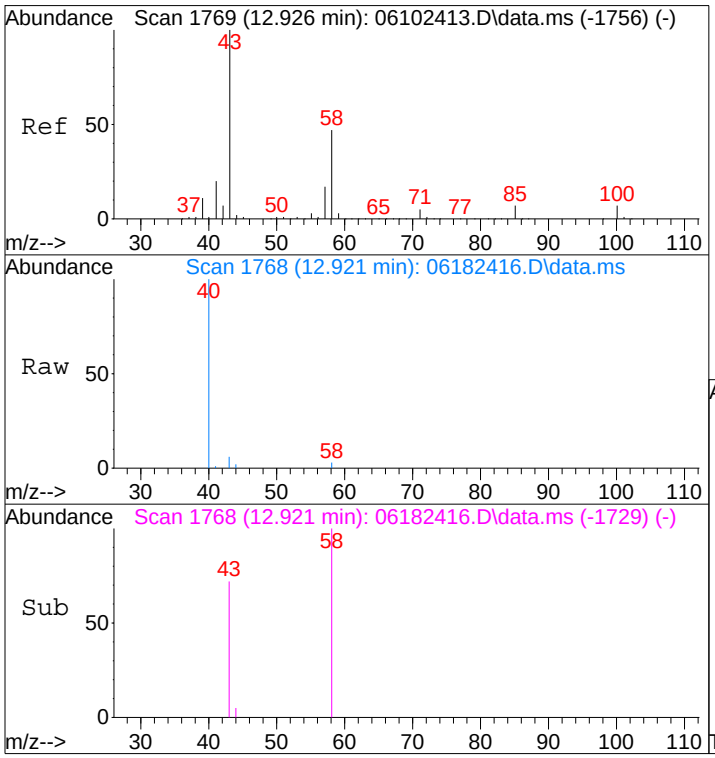


#58
Toluene
Concen: 0.12 ng
RT: 12.56 min Scan# 1705
Delta R.T. -0.028 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion: 91 Resp: 6134

Ion	Ratio	Lower	Upper
91	100		
92	57.6	37.4	77.4





#59
2-Hexanone
Concen: 0.05 ng
RT: 12.92 min Scan# 1768
Delta R.T. -0.028 min
Lab File: 06182416.D
Acq: 18 Jun 2024 17:56

Tgt Ion: 43 Resp: 1722

Ion	Ratio	Lower	Upper

33) 1,2-Dichloroethane-d4(...	8.00	65	354179	12.210	ng		0.02
Spiked Amount 12.500	Range 70 - 130		Recovery = 97.68%				
57) Toluene-d8 (SS2)	12.43	98	788030	12.706	ng		-0.03
Spiked Amount 12.500	Range 70 - 130		Recovery = 101.68%				
73) Bromofluorobenzene (SS3)	16.83	174	278025	12.415	ng		-0.01
Spiked Amount 12.500	Range 70 - 130		Recovery = 99.28%				
Target Compounds							Qvalue
