Europa Clipper Payload Monster

Europa Clipper is NASA's largest spacecraft ever built for a planetary mission, carrying nine science instruments that will investigate Jupiter's icy moon Europa and help reveal whether it has conditions suitable for life. The Payload Monster depicted here is inspired by those instruments, playfully relating their functions to familiar senses.

EYES: EIS • E-THEMIS • MISE • Europa-UVS
EARS: PIMS • ECM • REASON
TONGUES: MASPEX • SUDA
