Approved by:

W. J. North
Chief, Flight Crew Support Division

Donald K. Slayton
Director of Flight Crew Operations

Concurrence:

George M. Low
Manager, Apollo Spacecraft Program

Christopher C. Kraft, Jr.
Director of Flight Operations

Any comments or questions on this document should be forwarded to E. B. Pippert or W. M. Anderson, Flight Planning Branch, mail code CF34, extension 4271.

TABLE OF CONTENTS

INTRODUCTION

This Flight Plan has been prepared by the Flight Planning Branch, Flight Crew Support Division, with technical support by TRW Systems.

This document schedules the AS-505/CSM-106/LM-4 operations and crew activities to fulfill, when possible, the test objectives defined in the Mission Requirements, F Type Mission, Change A, dated April 9, 1969.

The trajectory parameters used in this Flight Plan are for May 18, 1969 launch, with a 72° launch azimuth and were supplied by Mission Planning and Analysis Division as defined by the Apollo Mission F Spacecraft Operational Trajectory.

The Apollo 10 Flight Plan is under the configuration control of the Crew Procedures Control Board (CPCB). All proposed changes to this document that fall in the following categories should be submitted to the CPCB via a Crew Procedures Change Request:

1. Items that impose additional crew training or impact crew procedures.

2. Items that impact the accomplishment of detailed test objectives.

3. Items that result in a significant RCS or EPS budget change.

4. Items that result in moving major activities to a different activity day in the Flight Plan.

5. Items that require a change to the flight data file.

The Chief, Flight Planning Branch (FCSD) will determine what proposed changes fall in the above categories.

Mr. W. M. Anderson will act as co-ordinator for all proposed changes to the Apollo 10 Flight Plan.

Any requests for additional copies or changes to the distribution lists of this document must be made in writing to Mr. W. J. North, Chief, Flight Crew Support Division, MSC, Houston, Texas.

ABBREVIATIONS

ACCEL	Accelerometer
ACQN	Acquisition
ACT	Activation
ACQ	Acquisition
AEA	Abort Electronics Assembly
AGS	Abort Guidance Subsystem
AH	Ampere Hours
ALT	Altitude
AMP or amp	Ampere
AMPL	Amplifier
ANG	Antigua
Ant	Antenna

SECTION 1 - GENERAL

MISSION DESCRIPTION

1. Launch and E.P.O. (Duration 2:33) T_0 - 2:33 GET

   (a) Nominal launch time is Sunday, 12:48 EDT, May 18, 1969, with a launch window duration of 4 hrs. 25 min.

   (b) Earth orbit insertion into a 100nm circular orbit at 11 min. 43 sec. after lift-off

   (c) CSM systems C/O in earth orbit

   (d) IMU realign (P52) to the pad REFSMMAT during the first night period

   (e) TLI occurs at 2:33:26 GET over the Pacific Ocean during the second revolution. (See Table 1-1 for burn data and Figure 1-3 for altitudes)

2. Translunar Coast (Duration 73:12) 2:33 - 75:45 GET

   After TLI which places the spacecraft in a free lunar return trajectory, the following major events occur prior to LOI:

   (a) TV at 3:48 p.m. May 18; 4:03 p.m. May 19; 6:48 p.m. May 20; 1:08 p.m. May 21 (EDT)

   (b) Transposition, docking and LM ejection including SIVB photography

   (c) SIVB separation and a CSM evasive maneuver at 4:28:48 GET

   (d) SIVB propulsive venting of propellants (slingshot)

   (e) Two batches of P23 cislunar navigation, star/earth horizon, consisting of five sets at 05:30 GET and five sets at 25:00 GET

   (f) The IMU will be realigned to the PTC REFSMMAT after MCC_1.

   (g) Four midcourse corrections which take place at TLI + 9 (SPS) TLI + 24, LOI - 22 and LOI - 5 hours with ΔV nominally zero (See Table 1-1) for MCC 2, 3, 4

(h) S-Band reflectivity test with the Ascention 30-ft. cooled antenna at 27:00 GET and at an altitude of 112,000nm.

(i) The HGA will be checked for the sleep Comm mode at 32:00 GET

(j) Passive thermal control (PTC) will be conducted at all periods when other activities do not require different attitudes

(k) LOI will be performed at 75:45 GET which ends the TLC phase

3. Lunar Orbit (Duration 61:35) 75:45 - 137:20 GET

LOI Day (Starts at 68:00 GET)

(a) TV at 1:08 p.m. and 9:33 p.m. May 21

(b) LOI-1

(c) Photos of targets of opportunity

(d) LOI-2

(e) Post LOI-2 LM entry and inspection. LM S-Band OMNI and steerable antenna tests

(f) Post LOI-2 Pseudo landmark tracking (two sets of sightings) (See Table 1-4)

(g) Rest period (8 hours)

DOI Day (Starts at 93:00 GET)

(a) TV at 3:01 p.m. May 22; 1:23 a.m. May 23 (EDT)

(b) Docked LM activation and checkout

(c) Docked Apollo landing site number two sighting (one set of sightings) (See Table 1-3)

(d) Undocking and separation (See Figure 1-2 Rendezvous Profile)

(e) Undocked Pre-DOI LM activities

(f) DPS DOI maneuver (See Figure 1-2 and Table 1-2)

(g) DPS phasing maneuver

(h) LM staging maneuver

(i) APS insertion maneuver

(j) LM active rendezvous
CSI
PC
CDH
TPI

(k) Docking

(l) Configure LM for APS burn to depletion and perform communications tests

(m) Unmanned LM APS burn to depletion

(n) Rest period (9 hours)

Landmark Tracking Day (Starts at 118:00 GET)

(a) TV at 7:08 p.m. May 23 (EDT)

(b) Landmark tracking for four revolutions (four landmarks per rev.) (See Table 1-4)

(c) One revolution of strip photography

(d) Rest period (3.5 hours)

TEI Day (Starts at 132:00 GET)

(a) SPS TEI maneuver at 137:20:22 GET

(b) Rest period (5.5 hours)

(c) One revolution of landmark tracking and photography

Lunar Orbit Particulars (Average Values for a 60 x 60nm Orbit)

(a) Revolutions start at 180° longitude

(b) Revolution duration - 1 hr. 58.5 min.

(c) S/C night period duration - 47 min.

(d) MSFN coverage per rev. - 72 min.

(e) Orbit inclination - 1.3°

(f) S/C orbital rate - 3^{o}/min. ($.05^{o}$/sec)

(g) Lighting change at fixed ground point - 1^{o}West/Rev.

(h) Ground track change - 1^{o} West/Rev.

(i) Horizon visibility $\pm$ 20^{o} selenocentric angle on the lunar surface

(j) One lunar degree on lunar surface is 16.38nm

(k) Site 3 will be visible (2.5^{o} sun angle) at Rev. 30

(l) S/C sublunar point to horizon 320nm.

4. Transearth Coast and Entry (Duration 54:25) 137:20 - 192:04

Transearth coast begins with TEI at 137:20 GET and consists of the following major events:

(a) TV at 6:33 a.m. May 24; 9:23 p.m. May 24; 7:38 a.m. May 26 (EDT)

(b) During transearth coast, 18 sets of navigation sightings will be performed. These are as follows:

151:00 GET 9 Sets - Star lunar landmark
165:00 GET 3 Sets - Minimum sun elevation
167:30 GET 3 Sets - Minimum sun elevation
171:00 GET 3 Sets - Minimum sun elevation
174:30 GET 3 Sets - Minimum sun elevation

(c) Three midcourse corrections are scheduled at TEI $\pm$ 15, EI - 15 and EI - 3 hours with ΔV nominally zero.

(d) CM/SM separation takes place at 191:35 GET and Entry Interface occurs at 191:50 GET

(e) Splashdown will occur in the Pacific Ocean at a longitude of about 165^{o} West at 192:04 GET. This will occur about one-half hour prior to sunrise local time on Monday, May 26, 12:52 EDT.

CSM FLIGHT PLAN NOTES

A. Crew

1. Crew designations are as follows:

Designation	Prime	Backup
Commander (CDR)	Stafford	Cooper
Command Module Pilot (CMP)	Young	Eisele
Lunar Module Pilot (LMP)	Cernan	Mitchell

2. Couch positions for thrusting maneuvers during the mission are listed below:

Couch Position	LIFT-OFF, TLI	TD&E SPS Burns, Entry
Left	CDR	CMP
Center	CMP	CDR
Right	LMP	LMP

3. The CDR will perform the TLI maneuver. The CMP will perform all SPS burns,transposition and docking and all work in the tunnel prior to LM extraction. The LMP will monitor CDR and CMP activities per checklist/timeline.

4. The crew will normally follow a 15-hour work,9-hour rest cycle. All crewmen will sleep simultaneously and be awake during all major burns.

5. The crew will eat together when possible during meal periods (normally of 1-hour duration). Additional activities will be held to a minimum during meals.

6. PGA's will be worn during the following periods, but will not be "hard suited".
   (a) Launch - With helmet and gloves
   (b) Earth Orbit – Without helmet and gloves
   (c) TLI - With helmet and gloves
   (d) Undocking and docking - With helmet and gloves

7. Two crew status reports will be made during each

activity day. The first report will be given after the first meal of the day and will concern the sleep obtained during the previous sleep period. The second report will be given following the final meal of the day and will concern the radiation dose received during the previous 24 hours. The following information should be transmitted or logged as appropriate:

(a) A daily report of each crewman's best estimate as to sleep quantity and quality

(b) A daily report of the integrated radiation dose each crewman receives

(c) An onboard record of food not eaten and exercise (no voice report required)

(d) Used fecal bags will be marked as to crewman and GET

(e) A daily report of all medication used by each crewman

8. General flight plan updates containing changes to the scheduled next day's activities will be voiced up once a day.

9. Negative reporting will be used in reporting completion of each checklist.

10. No CSM biomedical switching is required. Continuous biomedical data are automatically transmitted to the ground simultaneously for all crewmen.

11. Crewmen will sleep simultaneously. Two crewmen will normally be in the sleep stations under the couches and one in the couch. During the LOI Day sleep period, two crewmen will be in the couches because the probe and drogue will be stored in one of the sleep stations.

12. One crewman will wear headsets at all times during the mission.

13. All onboard gage readings will be read directly from the gages and will not be corrected by the appropriate calibration factors.

14. Periodic spacecraft systems monitoring is a continuing task and is not scheduled in the flight plan timeline.

B. Maneuvers

1. CSM/LM and CSM attitude maneuvers will normally be at a rate of

0.2^{o}/sec. or 0.5^{o}/sec. unless other rates are required to support mission objectives or time critical events.

Note: At 0.2^{o}/sec. 15 minutes is required to maneuver 180^{o}. At 0.5^{o}/sec, 6 minutes is required to maneuver 180^{o}.

2. Passive thermal control mode will be initiated after MCC_1 and maintained throughout the mission (except in lunar orbit) until at least three hours before entry except for interruptions for mid-course corrections, communications orientation, and/or performance of mission objectives (maximum interruption of three hours). PTC will not be initiated until approximately TLI + 12 hours.

3. In order to conserve SM RCS, the SPS engine will be used to "back up" all LM burns. The SPS gimbal motors will not be turned on during the "back-up" maneuver preparation.

4. The first SPS burn will be on engine valves BANK "A" and the second burn will be on BANK "B".

5. The CSM will perform the final docking maneuver after the LM active rendezvous.

6. The crew will manually back up all critical engine starts and cut-offs.

C. Electrical Power System and Water Management

1. Spacecraft lift-off switch positions are listed in the Apollo Operations Handbook (Volume 2) for CSM 106.

2. The spacecraft will remain fully powered up throughout the mission (CMC, IMU and SCS in the "operate" configuration and optics powered up as required).

3. Fuel cell H_2 and O_2 purging will be scheduled as follows:
   O_2 purge - each 12 hours
   H_2 purge - each 48 hours
   This schedule may change in real time depending on the purity of the O_2 and H_2. H_2 purge line heaters are activated 20 minutes before an H_2 purge.

4. Hydrogen VAC ION pumps will be inactive throughout the mission. The fuses will be pulled.

5. The O_2 VAC ION PUMP MAIN A/MAIN B CB (2) (PANEL NO. 229) will be open for launch and will be closed at 85% - 90% QTY (before pressure about the VAC ION pump increases significantly).

6. Potable water will be chlorinated before each sleep period starting at the first sleep period.

7. No FC purges or waste water dumps will be scheduled within one hour prior to optical sightings.

8. Waste H_2O dumping will be managed to allow:
   (a) Maximum QTY:85-90%
   (b) Minimum QTY:25%
   (c) At LOI:QTY = 75%
   (d) At CM-SM SEP:QTY = 90%
   (e) No dumping after MCC-4 until after LOI
   (f) Dumps will be performed (if required) within 2 hours preceding MCC maneuvers.
   (g) In lunar orbit if dumping is required, dumps will be performed immediately prior to sleep periods.
   (h) The water dump will not be operated in the automatic mode at anytime during the mission.

9. The cryogenic heaters will be in AUTO during the mission and the fans will be operated manually. The fans will be cycled for one minute before and after each sleep cycle.

10. The batteries will be charged after TLI, LOI_2 and TEI. The tentative charging schedule is as follows:
    Battery A - GET 2:45 (interrupted for evasive maneuver)
    Battery B - GET 22:00
    Battery A - GET 87:30
    Battery B - GET 118:00
    Battery A - GET 146:00
    Battery B - GET 164:30

11. Inverter No. 1 and 2 will be used during the mission even though the C & W temperature light for inverter number one is inoperative. Inverter No. 3 will be used as the backup inverter.

D. Environmental Control System and Cabin Pressurization

1. One CO_2 odor absorber filter (LiOH canister) is changed every 12 hours or if CO_2 partial pressure is greater than 7.6mm Hg. There are 20 filters (2 in the canisters onboard and 18 stowed).

2. An ECS redundant component check is performed at 24-hour intervals (in order to prevent secondary evaporator dry out) and prior to TLI, LOI (4 to 10 hours before), and entry (2 to 10 hours before).

3. The ECS redundant component checks will include secondary evaporator operation and the secondary evaporator water control valves will be turned "OFF" at deactivation.

4. The evaporator operation will be as follows:

   (a) Launch -primary loop operation
   (b) Earth Orbit - primary loop operation and secondary loop test plus redundant operation test
   (c) Post TLI - deactivate both evaporators
   (d) LOI Minus 2 Hours - activate primary evaporator
   (e) Post TEI - deactive primary evaporator
   (f) Entry Interface Minus 1.5 hours - activate primary evaporator
   (g) Secondary evaporator may be activated (EI - 1 hour) at crew option for cold soak.

5. At lift-off the cabin will contain a 60% O_2/40% N_2 gas mixture. Cabin O_2 purge will be initiated after launch and will be terminated after transposition and docking and prior to LM pressurization.

6. After the LM is pressurized (before ejection from the SIVB), it will be isolated by placing the LM/CM pressurization valve in the OFF position (Panel 12). Eight hours of additional CM O_2 purge will be performed. A low LM leakage rate may necessitate a delta purge (to be determined in real time by MCC-H).

7. After the initial crew entry into the LM, the CM tunnel hatch will be installed during the docked lunar orbit sleep period and the probe and drogue will be stored in one of the sleep stations.

8. There is no CSM barbecue PTC mode required in lunar orbit, but a special attitude (see Communications Notes) will be maintained during the sleep period.

E. Guidance and Navigation

1. Fuel cell purges or waste water dumps will not be scheduled within one hour prior to optical sightings.

2. During lunar orbit, the CSM and LM will utilize the same landing site REFSMMAT such that the gimbal angles would be 0,0,0 at GET 100:43 with the LM sitting face forward on landing site number two and the CSM over the landing site pitched up 90° from local horizontal "heads up".

3. In order to avoid gimbal lock, the IMU will be pulse-torqued to a PTC REFSMMAT prior to setting up the PTC mode. Prior to a ΔV maneuver or midcourse navigation sightings, if yaw gimbal angle exceeds 60°, the IMU will be pulse-torqued back to the pad or landing site REFSMMAT and an IMU fine align (P52) will be performed. Pulse rate per axis is one-half degree per second. The accuracy for pulse-torquing the platform is 0.002 times the total angle.

4. During cislunar coasting flight, two IMU P-52 realignment and state vector updates are planned each day. After actual IMU

drift rates are established the P-52 realignments may be reduced to one a day.

5. The CMC will use the COLOSSUS 2 flight program.

6. The CSM tracking light will be on continuously from undocking to docking.

7. The "P23-NO COMM" navigation sightings are called out for planning purposes. These sightings will not be made unless communications with MSFN are lost.

8. During LM P-52 IMU realignments, the LM tracking light will be off and CM optical tracking of the LM will not be possible during these periods of activity.

F. Procedures

1. Crew procedures called out in the flight plan may be found in the following documents:
   (a) Apollo Operations Handbook - CSM 106 (AOH), Volume 2
   (b) Crew Checklist
   (c) Rendezvous Procedure document
   (d) Abort Summary document
   (e) Reentry Procedures document
   (f) Photography and TV Operations Plan

2. Specific procedures for accomplishing a particular DTO test are located in Section IV of this document. All DTO's and the page number location of each are listed in the applicable portion of the timeline, Section III.

G. CSM Photography

1. There are no DTO requirements for photography or TV but these will be scheduled on a non-interference basis with other mission activities.

2. Cameras and film are provided to photograph the following activities:
   (a) Transposition/Docking
   (b) LM Ejection

(d) SLA/LM/SIVB
(e) Earth Photography
(f) Lunar Surface Targets
(g) IVT (CDR)
(h) LM Undocking and Inspection
(i) Rendezvous (to within 300 ft. of CSM)
(k) IVA Photography - CM Activities
Folding, Unfolding Couch
Stowing equipment on Aft Bulkhead
Donning/Doffing Space Suits

H. The schedule for TV transmissions to earth is as follows:

T&D - 3:00 to 3:15

TLC-1 - 27:15 to 27:30

TLC-2 - 54:00 to 54:15

PRE LOI-1 - 72:20 to 72:35

POST LOI-2 - 80:45 to 81:55

UNDOCKING - 98:13 to 98:23

APS BURN TO DEPLETION - 108:35 to 108:50

AFTER 3RD LANDMARK TRACKING - 126:20 - 127:00

POST TEI - 137:45 to 138:00

TEC - 152:35 to 152:45

TEC - 186:50 to 187:05

I. SM RCS Propellant Usage

Table 1-5 shows RCS propellant usage in pounds for the SM and LM at various S/C weights and maneuver rates.

Table 1-6 gives SM RCS propellant usage for +x translation maneuvers at various S/C weights and for 2-jet, 20 second and 4 jet, 15 second ullage maneuvers.

Table 1-7 gives SM RCS propellant usage rates for steady state attitude holds at various S/C weights and deadbands.

J. Block Data Updates

Maneuver data for return to earth contingencies will be passed up to the crew as follows:

Type Data	GET	Type Data	GET
TLI + 90 MIN	1:30	TEI 10	84:40
TLI + 4 HR	1:30	TEI 22	107:00

LUNAR MODULE FLIGHT PLAN NOTES

A. LM Crew

1. The LM inspection and housekeeping activities will be performed by the LMP in flight coveralls.
2. The LMP will initiate the final LM activation and checkout in coveralls. The CDR will enter the LM in his PGA (without donning helmet and gloves). The LMP will return to the CM and don his PGA (without helmet and gloves). The LMP and CDR will don helmets and gloves and perform a PGA/ARS pressure integrity check just prior to the LM cabin regulator check.
3. It should not be necessary to change the primary LM LiOH cannister during the LM manned operations.
4. One PLSS and two OPS will be carried in the LM. The PLSS will not be checked out or used during the nominal mission. The OPS's will be checked out during the housekeeping activities on LOI day.
5. The CM transfer umbilical will not be used during LM activation and checkout.
6. The LM crew will be suited (without helmet and gloves) during most of the undocked portion of the mission. For undocking and staging the LM crew will be fully suited.
7. The LM switch settings at the initial entry will be as specified in the LM AOH, Volume 2.

B. LM Guidance and Navigation

1. The LGC will use the LUMINARY-69 flight program.
2. The LM AGS will use Flight Program 5 (Mission G will use Flight Program "X"). Flight Program 5 will not have the RR filter which increases the range for RR data update to AGS. The AGS RR update range will be limited to 100nm.

3. One LGC erasable memory dump and MCC-H verification will be accomplished prior to DOI. If a significant number of errors are found, DOI will be delayed to allow for memory correction and re-verification.

4. All maneuvers during the undocked manned LM operations will be under PGNCS control except for the LM staging maneuver and the LM CDH maneuver (if required). These two maneuvers will be under AGS control.

5. The capability for MCC-H to update the LGC via uplink will normally be blocked by the LM UP-DATA LINK switch (panel 12).

6. A LM COAS star sighting will be used during the DOI maneuver to check IMU drift rates. The star should be within 2^{o} of the initial COAS position prior to the maneuver. The AOT will not be used for this purpose. The lunar horizon will not be visible during the DOI maneuver.

7. A LM COAS accuracy check will be performed after the IMU alignment prior to staging.

8. The Apollo 10 Mission timeline will not include the time required for all PADS that are required on the Apollo 11 mission for LUNAR surface aborts or insertion maneuvers.

9. The LM IMU will be manually aligned to the CSM IMU during the DOI day LM activation and checkout. P-52/AOT alignments will be performed as soon as possible prior to:
   - DOI
   - Phasing
   - Insertion

   There will be no "back-to-back" PGNCS/AOT alignments performed during the mission which are not interrupted by a DPS, APS or RCS thrusting maneuver.

10. AGS alignments to the IMU will not be performed when IMU gimbal angles are at 0^{o} or multiples of 45^{o}.

11. In order to UPLINK data, TLM should be in HBR in order to facilitate MCC-H verification of LM receipt of the data via LM-TLM.

12. The time from rendezvous TPI to the rendezvous MCC-1 is 15 minutes and the time from rendezvous MCC-1 to rendezvous MCC-2 is 15 minutes.

13. In order to perform AGS initialization, the LM TLM must be in HBR in order to obtain state vector data from the LM-TLM downlink. AGS initialization is performed prior to each engine burn.

C. LM RCS Operation and Interface Constraints

1. LM RCS "+x" two jet ullage (System B) will be used for unstaged ullage maneuvers in order to prevent asymmetrical RCS thrust caused by impingement on the descent stage.

2. During CSM/LM docked checkout operations, the SM B3(-x) and C4 (-x) thrusters will be deactivated before the LM steerable and/or RR antennas have been unstowed in order to prevent SM-RCS impingement on these antennas.

3. The RCS interconnect will be used during the APS insertion maneuver and several of the rendezvous maneuvers in order to conserve LM RCS propellant. The interconnect can only be used for +x translations.

4. The maximum +x continuous RCS firing time is 55 seconds on LM-4 (85 seconds on LM-6). For multiple pulse firings approximately one minute of "off" time for cooling offsets approximately one second of previous "on" time. (See the Spacecraft Operational Data Book for specifics).

D. LM APS Burn to Depletion

1. Prior to LM jettison the CSM will be in narrow deadband attitude control and the LM will be in wide deadband control (CSM controlling CSM/LM attitudes.)

2. LM jettison will occur at 90 degrees east longitude approximately 30 minutes prior to the APS burn.

3. The LM S-Band steerable antenna will be set at a fixed position during the APS burn and DATA will be in the HBR position.

4. The APS burn to depletion will place the ascent stage in orbit around the sun.

5. The PGNCS (under MCC-H RTC) will control the start of the ullage maneuver and RTC will be used to switch to AGS control for the remainder of the ullage maneuver and the APS start and burn.

6. Both RCS interconnects will be closed during the unmanned APS burn to depletion.

7. The probe and drogue will be stored in the LM during the APS burn to depletion.

8. The APS will be approximately 50% propellant loaded at the start of the burn in order to ensure adequate backup RCS propellant to stabilize the LM during and after the burn.

9. MSFN will attempt to track the LM and obtain TLM data after the APS burn to depletion.

E. Pasive Thermal Control Maneuvers

1. There is no requirement to perform any LM passive thermal control maneuvers during lunar orbit.

2. There will be no telemetry or crew monitoring of LM temperatures (or any other LM data) between LM pre-launch checkout and the post LOI-2 LM entry and inspection.

F. Rendezvous Radar

1. The turn-on and turn-off times for the rendezvous radar will be scheduled in such a manner as to prevent overheating of the rendezvous radar antenna.

2. Accurate RR range and range rate telemetry data will not be obtainable on the lunar farside because a HBR TLM capability is not available. This situation prevents MSFN from analyzing the

operation of the RR system on the lunar farside via DSE data playback. LM RR LGC state vector updates will be checked against MSFN computed state vectors after each AOS.

3. Rendezvous radar lock will be broken just prior to TPI in order to make a +x axis TPI burn. (This is different from the Apollo 11 Mission).

4. The RR shaft and trunion angles will be at zero during each AGS RR update.

G. Rendezvous

1. The LM tracking light will be on continuously between separation and docking except during PGNCS/AOT P-52 realignments.

H. LM Pressurization

1. The LM cabin will contain N_2 and some ambient air at launch and will bleed down to a pressure of zero psi during the launch insertion maneuver. The LM will be pressurized after transposition and docking and will then be isolated before ejection and allowed to bleed down.

I. LM Procedures

Crew procedures called out in the flight plan may be found in the following documents:

(a) Apollo Operations Handbook LM-4 (AOH) Volume 2
(b) Crew Checklist
(c) LM Rendezvous Procedures Document
(d) Abort Summary Document
(e) Photography and TV Operations Plan

J. Photography

There are no photographic DTO requirements, but cameras and film will be carried aboard the LM to photograph the following:

(a) Lunar surface strip over landing site
(b) Braking/formation flying
(c) Photos of CSM from LM after rendezvous

K. LM Activation and Checkout Notes

Activities will be performed during the periods as shown below:

1. Post LOI-2

LMP IVT to LM and verify CSM to LM roll calibration angle
LM entry status check
Transfer required crew equipment and housekeeping
Transfer to LM power and comm activation
S-Band/VHF B comm test
OMNI and Steerable Antenna voice/TM Tests
LM and MSFN relay Tests
Comm deactivation and transfer to CSM power
LMP IVT to CSM and close LM hatch

2. Docked Pre-DOI

IVT to LM and verify CSM/LM roll calibration angle
Transfer to LM power and EPS Activation, S-Band TLM-LBR on OMNI
Activate Mission Timer
Backup S-Band comm activation and comm check
Primary glycol loop activation
Caution and Warning system checkout
PGNCS turn on and self test
Circuit breaker activation and talkback verification
ECS activation and checkout
Suit Fan/H_2O Separator check
Glycol pump checks (1, 2, and secondary)
S-Band Steerable Antenna checks
VHF activation and checkout
LGC/CMC Clock Sync and TEPHEM update
E Memory dump
LM docked manual IMU coarse align
Install drogue and close LM hatch
Ascent batteries activation and checkout
ARS/PGA pressure integrity check
Regulator checks

AGS activation and self test
Rate Gyro check and docked manual fine align IMU
LM IMU Drift check
AGS initialization
ORDEAL initialization
DAP data load, gimbal drive and throttle tests
RCS pressurization
RCS checkout (cold and hot fire)
Rendezvous Radar activation and self test
AGS accelerometer and gyro calibration
Update and align AGS to PGNCS
DPS pressurization and checkout
Landing gear deploy

3. Undocked Pre-DOI

LM inspection by CSM and formation flying
Rendezvous Radar/VHF ranging check
IMU AOT realign (P52)
System checks
Landing radar test
Align and update AGS

4. Undocked Prior to APS Insertion Burn

IMU Realign/COAS calibration
Parallel ascent and descent batteries
LM staging
Pressurize and check the APS

CSM & LM COMMUNICATIONS AND INSTRUMENTATION NOTES

A. CSM/LM Notes - All Mission Phases

1. Table 1-8 is a matrix that shows how the CSM and LM communications will be utilized throughout the mission. The matrix consolidates all communications requirements specified in the Detailed Test Objectives and the Operational Procedures (AOH Volume 2). This matrix shows the following:
   (a) The mission phase or event where each uplink, downlink, antenna, transceiver, power amplifier and data recorder is exercised
   (b) All communications modes used for the lunar earth side (MSFN coverage) and the lunar farside (no MSFN coverage)
   (c) Which S-Band antenna (omni, CSM high gain, LM steerable) is used for each uplink or downlink signal combination.
   (d) Which uplink signal combinations are exercised for CSM and which uplink signal combinations are exercised for the LM
2. The MSFN 85-ft. antennas will normally be used for all lunar distance communication. The Goldstone 210-ft. antenna may not be available for the Apollo 10 Mission. The "uncooled" 30-ft. MSFN antennas may be used for CSM lunar distance simulation communications tests at approximately 70Knm. The "cooled" 30-ft. MSFN antennas may be used at approximately 110Knm for CSM lunar distance simulation communications tests.
3. LM to CSM VHF TLM data cannot be transmitted and received during VHF ranging periods.
4. During communications, the spacecraft will be referred to by name (Apollo 10) and MCC-H will be referred to as "Houston". Code names assigned to the CSM and LM during undocked operations are:
   CSM - Charlie Brown
   LM - Snoopy

5. Voice silence (120 seconds) will be required during the CSM PRN ranging code acquisition sequence when the downlink signal combination is in mode 8 (TLM-LBR and Back-up Voice).

6. The preferred S-Band communications mode for CSM and LM is:

   (a) Uplink Mode 6 (Voice, PRN and Updata)

   (b) Downlink Mode 2 (Voice, PRN, TLM-HBR)

7. It is desirable to have the spacecraft TLM in HBR for all MSFN CSM or LM computer updates (via the uplink) in order to facilitate MCC-H verification of the updata receipt.

B. CSM/LM Notes - Lunar Orbit Phase

1. All CSM and LM HBR data at lunar distance will normally require the use of the high gain or steerable antennas with 85-ft. MSFN antennas. HBR can also be obtained by MSFN 30-ft. "cooled" antennas.

2. After each AOS in lunar orbit, it is desirable for MSFN to use PRN as much as possible.

3. During lunar orbit, the CSM and LM S-Band systems will not be shut down on the lunar farside.

4. The LM steerable antenna and the CSM HGA will not be in view of MSFN during any CSM tracking of a landing site while the vehicles are docked. TLM-LBR and OMNI antennas will be used during this activity.

5. VHF Ranging/Data Switching will be in accordance with the rendezvous procedure. Voice silence between vehicles should be maintained for approximately 10 seconds while acquiring VHF ranging.

6. VHF A Simplex is normally used for all VHF Voice Communications except during VHF ranging when VHF Duplex is used.

7. MCC-H will not normally switch S-Band antennas. This activity will be a crew action except during crew sleep period.

C. CSM Notes - Launch and Earth Parking Orbit

1. OMNI B and VHF LEFT will be selected for launch. OMNI D will be selected by the crew during boost phase if the launch azimuth is less than 96^{0}. OMNI C will be selected if the launch azimuth is greater than 96^{0}. OMNI D will probably be the best antenna for use during earth orbit.

2. VHF Duplex B will be used for launch and VHF Simplex A will be used for earth orbit operations (switch over at CYI LOS). VHF Simplex "A" will be used during entry in order to be compatible with the recovery forces.

3. CSM FM Modes are normally used for DSE playbacks and TV. HGA will be required for FM mode operation after TLI.

4. CSM S-Band backup communication modes checks will not be made. The LM communication system will be used as the backup communication system, if necessary.

5. All CSM communications checkouts and tests may be performed during translunar coast (post TD&E to pre-LOI). The lunar sleep comm mode will be checked in lunar orbit prior to the first sleep period

6. The CM communications system switches will be configured to permit MCC-H real time control of routine communications switching and maximum crew control of the communications without the crew having to use CMD RESET.

7. The CMC updata link input will normally be blocked by the crew UP TLM ACCEPT/BLOCK switch. This will not prevent MCC-H from using real time command to control the communications system.

8. The CSM S-Band system will normally be configured as follows unless preflight tests show that the secondary systems would have higher gain:

   (a) Primary transponder - ON
   (b) Primary Power Amplifier - HI

9. The translunar and transearth sleep communications mode will be as follows:

   The CSM x-axis will be placed normal to the ecliptic plane. The CSM will be placed in GNCS $\pm$ 20^{o} pitch and yaw attitude hold. All four SM RCS quads will be used with the roll channel disabled. The CSM will be rolled at a rate of approximately one revolution per hour. During the near earth sleep periods (range less than approximately 120Knm) omni antennas B and D may be used. During the other sleep periods (beyond approximately 120Knm) the high gain antenna may be used in the auto REACQ mode (panel 2). The auto REACQ configuration will provide almost 210 degrees of HGA coverage per CSM/LM revolution or 35 minutes of MSFN coverage per hour (for a CSM spin rate of one revolution per hour). The auto REACQ configuration will also allow MCC-H to use real time control to select TLM HBR or LBR and to dump the DSE during each spacecraft revolution. The auto REACQ sleep mode will be tested before the second translunar coast sleep period.

10. The communications mode for the lunar orbit sleep period will be as follows:

    The CSM will be referenced to the landing site number two REFSMMAT and will be in an attitude which will place two RCS quads toward the sun and two RCS quads toward the lunar surface.

    The CSM will be placed in an attitude which will allow the HGA to be used.

    The CSM will be placed in a GNCS 3-axis $\pm$ 10^{o} inertial hold mode using two adjacent quads.

The HGA will be in the auto REACQ mode (panel 2). The S-Band squelch will be enabled. The S-Band system will be controlled by RTC at HCC-H and will be in TLM-HBR on the lunar earthside and LBR/DSE recording on the lunar farside. This procedure will provide approximately 75 minutes of HBR for each lunar orbit and will permit MCC-H real time control of the DSE and playback of LBR data recorded on the lunar farside. This communications mode will be tested for suitability just prior to the lunar orbit sleep period.

11. During translunar and transearth coast crew-awake PTC periods, the crew will use manual antenna switching to maintain continuous communications with MSFN via OMNI and/or HGA. The S-Band squelch will be disabled to allow the crew to use the upvoice discriminator noise as a cue to indicate when to switch to another antenna.

12. In lunar orbit the crew will acquire MSFN using the CSM high gain antenna for each AOS unless specified differently in the flight plan timeline.

13. A small portable voice recorder will be carried in the CM to be used at the discretion of the crew.

14. CSM-TV may be scheduled in real time if the Goldstone 85-ft. antenna is in view of the spacecraft. CSM-TV via the Madrid 85-ft. antenna should be scheduled approximately 15 hours in advance in order to reserve communications satellite time.

D. LM Notes

1. LM voice recorder has a maximum utilization of 10 hours. This recorder will be used during LM operations to record all LM voice data during undocked operations (8.5 hours). The recorder will be operated in the continuous mode (not VOX).

2. As many LM communications special tests as possible will be performed between docking and LM jettison.

3. During "undocked" operation several LM communications test objectives will be performed as part of the normal mission communications procedures.

4. The LM S-Band System will normally be configured as follows unless preflight tests show that the secondary systems would have higher gains:

   (a) Primary transponder - ON

   (b) Primary Power Amplifier - ON

5. In lunar orbit MSFN will acquire the LM steerable antenna for each AOS unless specified differently in the flight plan timeline.

6. LM TLM will be switched to LBR at each LOS and to HBR at AOS by the LMP unless specified otherwise in the flight plan timeline.

7. LM Bio-Med switching will be checked out for the CDR and the LMP during LM checkout and will be switched from one crew member to the other approximately every two hours after LM undocking.

8. There will be no TV transmissions from the LM.

E. CSM DSE Notes

The CSM DSE is used as follows:

1. The DSE will normally be operated via ground command. In special cases the crew may be asked to operate the DSE.
2. DSE will be operated HBR during the launch phase. These data will be dumped if real time launch data are lost.
3. During the earth orbit period when the CSM is not over a MSFN station, CSM TLM-LBR data will be recorded on the DSE and will be dumped during the pass over the US and over CRO (if possible) just prior to TLI.
4. The DSE will be used for CSM HBR and voice recording during all CSM engine burns and during the accomplishment of certain specified DTO's.
5. DSE recordings will be made in CSM LBR mode whenever possible in order to minimize the DSE dump time.
6. All critical data will be hand recorded by the crew when not in voice contact with MSFN. DSE voice recording will be used as backup for recording critical data.
7. During translunar and transearth PTC simultaneous sleep periods using the HGA auto REACQ communications mode, the DSE will be used to record LBR data when the HGA is not in the MSFN field of view.
8. During lunar orbit LM operations, the DSE will be used to record LM-TLM-LBR data during all LM phases/events that occur on the lunar farside (unless VHF ranging is required).

9. During lunar orbit, time (in the attitude hold control mode) will be provided in the flight timeline to allow for MCC-H DSE dump, rewind and start of DSE after each MSFN AOS (acquisition of signal), except where a DSE dump would interfere with DSE recording of critical CSM backup TLM data or the HGA is not visible to MSFN.

10. LM data will normally be dumped first after each AOS during LM active operations.

11. Twenty-five minutes will normally be allowed for the complete data dump cycle for CSM and LM LBR data recorded on the lunar farside. HBR data will require additional dump time depending on the length of the recording.

12. DSE will be used to record all entry data in HBR during the blackout region.

13. In lunar orbit at LOS, the crew will initiate UP TLM CMD RESET (momentarily) then NORMAL (panel 3) if the DSE motion is not noted. This situation will occur if MSFN does not get the DSE started before LOS.

SECTION 2 - MANEUVER UPDATE FORMS

MANEUVER UPDATE FORMS SUMMARY

This section contains samples of the update pads which are contained in the In Flight Data File on board the spacecraft. The CSM forms are as follows:

1. TLI Maneuver
2. P37 Block Data
3. P27 Update
4. P30 Maneuver (External ΔV)
5. Entry
6. Earth Orbit Entry Update
7. Earth Orbit Block Data
8. CSM Sep
9. CSM Rescue
10. CSM Backup Insertion
11. P76 (DOI, Phasing, Insertion)
12. CSM Rendezvous Rescue (CSI, CDH, TPI)

The LM forms are:

1. P27 Update
2. AGS State Vector Update
3. P30 LM Maneuver
4. P32 CSI Update
5. P33 CDH Update
6. P34 TPI Update
7. P76 (DOI, Phasing, Insertion)

In addition, definitions of abbreviations used on the forms are presented on facing pages.

W-MATRIX

In the event of a loss of COMM the W-MATRIX will be initialized to the values listed before the next scheduled batch of sightings.

NOTE

The W-MATRIX is initialized only once on the Transearth leg.

Batch 2 has two sets of values listed; if the MSFN State Vector update at GET 147:00 has not been received, the first set should be used; if received before loss of COMM occurr, the second set should be used. If loss of COMM occurs after EI-30 hrs (GET 161:50), and provided the EI-30 hrs entry pad update has been recieved, the current CMC state vector will provide reentry capability, and no navigation marks will be made.

SECTION 4 - DETAILED TEST OBJECTIVES

SECTION 4

DETAILED TEST OBJECTIVE ACTIVITIES

This section contains the activity summaries which reflect the test objectives for Mission F as described in "Mission Requirements F Type Mission", SPD9-R-037, dated February 11, 1969. These activity summaries are presented in the approximate sequence in which they are planned to occur during the mission. In the case of activities which are repeated in the mission plan, they are described only once in this summary. Those test objectives which do not relate to specific mission activities and require minimal support for accomplishment are grouped at the end of this section as "Passive Tests." Test objective requirements which are not scheduled in this flight plan are identified as being not implemented, "N.I."

Each activity summary provides the following information:

A. TEST OBJECTIVES. This is the listing of the Functional Test Objectives (complete or partial) which relate to the particular activity;

B. TEST REQUIREMENTS. Here the special test prerequisites (and mission phase if necessary) are presented in addition to brief statements of the requirements for performing the activity;

C. TEST PROCEDURES/CHECKLISTS. These are the procedural references for the performance of the activity as far as the test objectives are concerned; and

D. DATA REQUIREMENTS. This part of the summary identifies the gross data which are needed for evaluation of test results in terms of flight crew and ground support requirements.

Cross references for relating Detailed and Functional Test Objectives with the activity summaries and relating activities to Functional Test Objectives, are provided as the initial part of this section.

The following ground rules are to be used in implementing data requirements:

A. The collection of highly desirable (HD) data should not constrain the timeline of the crew procedures.

B. CSM data storage equipment (DSE) HBR recording is needed only when MSFN coverage is not available and when mandatory data are required.

C. Post-flight debriefing requirements which are fulfilled by real time transmission of data per the DATA REQUIREMENTS sections may be deleted from the post-flight debriefing.

REMARKS:

1) LM IMU back-to-back alignments will not be conducted per FTO S11.17-2 requirement. The station keeping time after rendezvous would have to be extended to implement the subject DTO requirement.

2) Some of the AGS controlled RCS maneuvers required by DTO S12.8 will be accomplished during the normal rendezvous activities and may be conducted without the benefit of HBR TM as required.

3) LR temp data per DTO P16.14 will not be recorded after the Phasing Burn. The Phasing Burn is done within MSFN line-of-sight and TM should be available.

4) Required data will be voiced to the ground rather than recorded by the crew during the communications tests per DTO's 16.10, 16.12 and 16.17

5) DTO 16.10 and 16.12 will be partially implemented.

TRANSPOSITION/DOCKING/EJECTION

A. TEST OBJECTIVES

S20.46-1 Transposition/Docking/Ejection Demonstration
S20.46-2 Transposition/Docking/Ejection Procedures and Timeline

B. TEST REQUIREMENTS

1. Accomplish transposition, docking and LM ejection. [20.46]

2. Following S-IVB TLI burn and in sunlight. [20.46]

3. S-IVB attitude and maximum limit cycle rates during docking and ejection will be in accordance with the Apollo Inter-Center ICD 80M90505, "Flight Mechanics Panel Interface Control Document for the Apollo-Saturn 505". Paragraph TBD. [20.46]

4. S-IVB in inertial hold. [20.46]

5. Lighting constraints as specified in MSC/MSFC Trajectory Document No. TBD, "Joint Operational Mission Constraints" for Mission F will be met. [20.46]

6. Photograph view through right hand rendezvous window from end of transposition until initial probe and drogue capture latching using 16 mm sequence camera with 18 mm lens and color film at 6 frames per second. [20.46]

7. MSFN coverage required for entire test. [20.46]

C. TEST PROCEDURES/CHECKLISTS

1. CSM-AOH "LM Interface"

2. FCAC "Separation Through Withdrawal", L9-1 through 3

D. DATA REQUIREMENTS

1. Flight Crew Reports/Logs

   a. Comment on CSM handling characteristics during transposition and docking. [20.46] (M)

   b. Comment on adequacy of docking alignment target on the LM. [20.46] (M)

   c. Comment on vehicle dynamics of CSM/LM during ejection from the S-IVB. [20.46] (M)

   d. Comment on adequacy of attitude control and stability characteristics of S-IVB prior to, during and immediately after the separation and ejection of the LM from the S-IVB/SLA. [20.46] (M)

e. Comment on any adverse effects of the SM RCS plumes on astronaut visibility or on S-IVB stability.[20.46] (HD)

f. Comment on adequacy of sunlight and CSM docking lights. [20.46] (HD)

g. Comment on adequacy of contact with ground operational facilities. [20.46] (M)

h. Log

(1) GET when transposition initiated.[20.46] (M)

(2) Radial, angular and rotational alignment at time of initial probe and drogue contact.[20.46] (M)

(3) Axial, radial and angular relative velocities at time of initial probe and drogue contact. [20.46] (M)

(4) After docking, the included angle between the CM and LM Z-X planes, measured about the CM X axis.[20.46] (M)

(5) GET when CSM/LM ejection was completed. [20.46] (M)

(6) Separation rate during ejection. [20.46] (HD)

2. Photographs

a. Photos through right hand rendezvous window from end of CSM transposition until initial probe and drogue capture latching. [20.46] (HD)

b. Log film mag, footage in Photographic Log. [20.46] (HD)

3. Ground Support

a. CSM TM HBR.[20.46] (HD)

b. CSM TM LBR.[20.46] (M)

c. LVDC TM Data.[20.46] (M)

d. Flight Director will assess ground operational support and determine its adequacy. [20.46] (M)

DOCKING VELOCITY AND ALIGNMENT

Final ∠ Between CSM -Z and LM +Z Axis			Deg.
GET CSM/LM Ejection Completed			

FIGURE 4-1 DOCKING VELOCITY AND ALIGNMENT

PASSIVE THERMAL CONTROL MODES

A. TEST OBJECTIVES

S7.26-1 TC System for Translunar and Transearth Flight
S20.79-1 PTC-Docked-Roll 0.1 DEG/SEC
S20.79-2 PTC-Docked-Roll 0.3 DEG/SEC
S20.79-3 PTC-CSM-Roll 0.1 DEG/SEC
S20.79-4 PTC-CSM-Roll 0.3 DEG/SEC

B. TEST REQUIREMENTS

1. At least four uninterrupted hours for each PTC Mode. [20.79-1,2,3,4]

2. MSFN Coverage. [7.26, 20.79-1,2,3,4]

3. Roll Modes - Orient the S/C to place the X axis perpendicular to the LOS to the sun within ±5 degrees attitude deadband. Roll about the X axis at the rate and within the attitude deadband specified below:

   a. 0.1 DEG/SEC roll, pitch & yaw D/B $\pm 20^{o}$

      (1) Translunar - Docked CSM/LM [20.79-1]

      (2) Transearth - CSM only [20.79-3]

   b. 0.3 DEG/SEC roll, pitch & yaw D/B $\pm 30^{o}$

      (1) Translunar - Docked CSM/LM [20.79-2]

      (2) Transearth - CSM only [20.79-3]

4. Roll jets should be disabled when the required roll rate is established & the computer procedure for PTC should be terminated before re-enabling the roll jets. [20.79-1,2,3,4]

C. TEST PROCEDURES/CHECKLISTS

1. CSM AOH 4.10.2.9 Passive Thermal Control

2. FCAC, "Passive Thermal Control", G2-95

D. DATA REQUIREMENTS

1. Flight Crew Reports/Logs

   a. Voice record of sequence of events. [20.79-1,2,3,4] (M)

   b. Comment on ease of operation and adequacy of procedures to accomplish required communications. [20.79] (M)

c. Comment on preferred technique for initiating and maintaining PTC. [20.79-1, 2, 3, 4] (M)

2. Ground Support

a. CSM TM HBR.[7.26, 20.79-1, 2, 3, 4] (M)

b. CSM TM LBR. [7.26, 20.79-1, 2, 3, 4] (M)

c. BET. [20.79-1, 2, 3, 4] (M)

MIDCOURSE NAVIGATION

A. TEST OBJECTIVES

S1.39-1 Star/Lunar Landmark Navigation Accuracy
S1.39-2 OSS Adequacy for Star/Lunar Landmark Navigation
S1.39-3 Crew Ability to Coordinate Optics and Vehicle Maneuvers and Identify Lunar Landmarks
S1.39-4 RCS Propellant and Time Required - Star/Lunar Landmark Navigation

B. TEST REQUIREMENTS

1. The trunnion calibation routine of P23 to be used if more than about 30 minutes has elapsed since the previous P23 trunnion calibration. [1.39]

2. The onboard state vector to be updated, utilizing the navigation sighting data, after each set of sightings. [1.39]

3. MSFN coverage. [1.39]

4. Transearth, less than 30,000 NM from moon center, five Star/Lunar Landmark sightings. [1.39]

5. RCS consumption data required during one tracking set. [1.39]

NOTE: The above sightings are defined as at least three marks on a common Star/LDMK combination.

C. TEST PROCEDURES/CHECKLISTS

1. CSM-AOH "Cislunar Navigation (P23)"

2. FCAC "P23 - Cislunar Midcourse Navigation Measurement", G2-26 thru 31

D. DATA REQUIREMENTS

1. Flight Crew Reports/Logs

   a. Comments on ease of handling optics and spacecraft. [1.39] (M)

   b. Comments on ability to identify lunar landmarks. [1.39] (M)

   c. Log star, LMK/horizon and GET. [1.39] (M)

2. Ground Support

   a. CSM TM HBR. [1.39] (M)

   b. CSM TM LBR. [1.39] (M)

   c. BET. [1.39] (M)

MIDCOURSE CORRECTIONS

A. TEST OBJECTIVES

S20.95-1 GNCS, SPS & RCS Performance on Midcourse Corrections

B. TEST REQUIREMENTS

1. Perform translunar MCC with SPS or RCS while docked. [20.95]

2. MSFN coverage. [20.95]

C. TEST PROCEDURES/CHECKLISTS

1. CSM - AOH "CSM/CMC Update P27"

2. CSM - AOH "G&N/SPS Orbit Change Thrusting (P40)" or

3. CSM - AOH "G&N SM RCS Orbit Change Thrusting (P41)"

4. FCAC "P27 CMC Update", G2-32 and 33

5. FCAC "P40 SPS Thrust", G2-44 thru 50

6. FCAC "P41 RCS Thrust", G2-51 thru 54

D. DATA REQUIREMENTS

1. Flight Crew Reports/Logs

   a. Comments on adequacy of procedures to prepare for and accomplish Midcourse Corrections. [20.95] (M)

2. Ground Support

   a. CSM TM HBR. [20.95] (M)

   b. CSM TM LBR. [20.95] (M)

   c. BET. [20.95] (M)

LUNAR ORBIT INSERTION

A. TEST OBJECTIVES

S20.117-1 Crew/Spacecraft/MSFN Preparation and Execution of LOI Maneuver
S20.117-2 Procedures and Timeline Adequacy for LOI Maneuver

B. TEST REQUIREMENTS

1. SPS operation to insert the docked CSM/LM into lunar orbit in two stages as follows; [20.117]

   a. The first burn of approximately 352 seconds in duration will insert the CSM into a 60 x 170 NM orbit.

   b. The second burn of approximately 10 seconds in duration will circularize the orbit to 60 NM.

2. DSE recording 40 seconds before, during and 2 minutes after both burns. [20.117]

3. IMU realignment performed as soon prior to LOI-1 as practicable. [20.117]

4. MSFN tracking prior to LOS before LOI. [20.117]

5. MSFN record dumped DSE data at AOS after LOI. [20.117]

C. TEST PROCEDURES/CHECKLISTS

1. CSM - AOH "G&N SPS Orbit Change Thrusting (P40)"

2. FCAC "SPS Thrusting (P40)", G2-44 thru 50

D. DATA REQUIREMENTS

1. Flight Crew Reports/Logs

   a. Procedural and/or timeline difficulties or inadequacies. [20.117] (M)

   b. Feasibility of monitoring abort parameters on FDAI's. [20.117] (M)

   c. Adequacy of contact with ground operational support facilities. [20.117] (HD)

2. Ground Support

   a. CSM TM LBR from DSE after AOS. [20.117] (M)

b. CSM TM HBR from DSE after AOS. [20.117] (HD)

c. BET before LOS and after AOS. [20.117] (M)

d. Flight Director's reports of procedural and/or timeline difficulties or inadequacies. [20.117] (M)

LM SENSOR BIASES

A. TEST OBJECTIVES

S11.17-1 LM PGNCS PIPA Bias During Coasting Flight
S12.6-1 AGS Gyro Bias and Accelerometer Data and PGNCS Gyro Data During Drifting Flight

B. TEST REQUIREMENTS

1. MSFN collection of LM PGNCS PIPA bias data at least three times during the mission using uninterrupted TM for at least five minute intervals as follows: [11.17]

   a. During LM systems activation and checkout.

   b. During LM activation prior to rendezvous.

   c. After LM rendezvous.

2. IMU and LGC on [11.17, RCS off. [11.17, 12.6]

3. MSFN collection of AGS gyro bias and accelerometer data and PGNCS gyro data during drifting flight using uninterrupted TM for at least five minutes. [12.6]

4. MSFN coverage. [11.17, 12.6]

C. DATA REQUIREMENTS

1. LM TM HBR. [11.17, 12.6] (M)

LM IMU ALIGNMENT

A. TEST OBJECTIVES

S11.17-2 PGNCS IRIG Drift Rates During Coasting Flight

B. TEST REQUIREMENTS

1. One set of back-to-back LM IMU alignments during coasting flight. [11.17] N.I.

2. At least one hour between IMU alignments with no intervening thrust maneuvers. [11.17] N.I.

3. PGNCS powered up between alignments in a set. [11.17]

4. MSFN coverage. [11.17]

C. TEST PROCEDURES/CHECKLISTS

1. LM-AOH "IMU Orientation Determination Program (P51)" or

2. LM AOH "IMU Realign (P52)"

3. FCAC "P51 - IMU Orientation" or

4. FCAC "P52 - IMU Realign"

D. DATA REQUIREMENTS

LM TM HBR following the second alignment of each set of alignments. [11.17] (M) N.I.

LUNAR LANDMARK TRACKING

A. TEST OBJECTIVES

P20.91-1 Error Uncertainties - LDMK Tracking
P20.91-2 Crew Coordination of Sighting and Maneuvers
P20.91-3 RCS Propellant and Time Required Docked
P20.91-4 Adequacy of Equipment for LDMK Tracking Docked
P20.91-5 Low Sun Angle LDMK Tracking Evaluation
P20.121-1 Improve Lunar Gravity Model
P20.121-2 Adequacy of Equipment for LDMK Tracking Undocked
P20.121-3 RCS Propellant and Time Required Undocked

B. TEST REQUIREMENTS

1. IMU must be realigned on the dark side preceding each tracking pass. [20.91, 20.121]

2. MSFN coverage is reacquired on each earth side pass. [20.91, 20.121]

3. Time between marks should be a minimum of 25 seconds [20.91, 20.121]

4. First mark with S/C 45 to 55^{o} above local horizontal. [20.91, 20.121]

5. MSFN will support the tracking schedule with updates if necessary. If HBR TM data cannot be recorded in real time by MSFN, the data will be recorded on the DSE and dumped at the first opportunity during the same revolution. [20.91, 20.121]

6. With CSM/LM docked, track each of the following one time:

   a. One preselected landmark on the orbit preceding undocking. [20.91]

   b. Surveyor spacecraft. [20.91]

   c. A landmark at a sun elevation approximately 3 degrees. [20.91]

7. With the CSM/LM undocked one day after rendezvous, track each of the following three landmarks on each of four orbits:

   a. One landmark 27 degrees after the morning terminator. [20.121]

   b. The second landmark 57 degrees after the morning terminator. [20.121]

   c. The third landmark 8 degrees before the evening terminator. [20.121]

Photograph the above landmark through the S/C window using the highest resolution camera/lens combination. [20.121]

C. TEST PROCEDURES/CHECKLISTS

1. CSM-AOH "Orbital Navigation (P22)"

2. FCAC "P22 Orbital Navigation," G2-18 thru 24

D. DATA REQUIREMENTS

1. Flight Crew Reports/Logs

a. Comments on ease of handling optics and spacecraft.[20.91, 20.121] (M)

b. Comments on minimum sun elevation angle for lunar LDMK tracking. [20.91] (M)

c. Comments on the lunar landmark recognition on each successive revolution. [20.91, 20.121] (M)

d. "Landmark Tracking Log" (Flight Plan) [20.91, 20.121] (M)

e. Photographs of Landmarks. [20.121] (HD)

2. Ground Support

a. BET. [20.91] (M)

b. CSM TM HBR from DSE after AOS. [20.91] (M) [20.121] (HD)

c. CSM TM LBR from DSE after AOS. [20.91, 20.121] (M)

LM INSPECTION BY CSM

A. TEST OBJECTIVES

S20.86-1 Illumination and Time Required for CSM Inspection of LM in Lunar Orbit
S20.86-3 Visual Phenomena Observed from CSM During LM Inspection and LM Descent and Ascent

B. TEST REQUIREMENTS

1. Undocked. [20.86]

2. CSM pilot visually inspects LM in lunar orbit prior to DOI. [20.86]

C. DATA REQUIREMENTS

1. CSM pilot comment on illumination of LM and any unexpected visual phenomena during LM inspection. [20.86] (M)

2. CSM pilot comment on adequacy of time allotted for LM inspection. [20.86] (HD)

S20.86 LM INSPECTION PROCEDURE

REQUIRED

LANDING SITE REFSMMAT

DOCKED ATTITUDE:

CSM R 180.0°, P 14.3°, Y 0.0°

LM R 120.0°, P 204.0°, Y 0.0°

PROCEDURE

CMP Maintain inertial attitude hold in low rate, wide deadband.

CDR When clear of CSM by 40 to 50 feet, null separation velocity and maintain station keeping distance, inertial hold.

Yaw right 120° and pitch + 90°.

For inspection, yaw 360° at 2 deg/sec clockwise.

LMP Inspect the CM probe extension when in view.

CMP Inspect the following LM components through the CDR's window:

Landing Gear
Drogue
Descent Engine Nozzle
S-Band Antenna
Thermal Shields & Surfaces

DESCENT ORBIT INSERTION

A. TEST OBJECTIVES

P11.15-2	Capability of PGNCS to Execute the DOI Maneuvers
S13.14-1	Supercritical Helium Pressure Profile
S16.14-2	No Velocity/Altimeter Frequency Tracker Lock On to Spurious Doppler Signals
S20.82-1	Ground Monitoring of LM PGNCS/AGS
S20.82-2	Crew Monitoring of LM PGNCS/AGS
S20.86-2	Optical Tracking of LM by CSM Pilot During LM Descent to 50,000 Feet
S20.86-3	Unusual Visual Phenomena Observed by the CSM Pilot During LM Descent to 50,000 Feet

B. TEST REQUIREMENTS

1. DOI, including orientation, to be performed under PGNCS control with DPS. [11.15]

2. Burn profile to be the same as that planned for the LLM. (HD) [11.15]

3. CSM pilot to track LM with the SXT. [20.86]

4. DSE on HBR while taking marks and processing data. [20.86]

5. VHF ranging required during tracking. [20.82, 20.86]

6. LR to be operated during DOI/DPS burn with antenna in position 1. [16.14]

7. LM crew displays, procedures and computational aids shall be used in monitoring LM PGNCS/AGS performance to determine if guidance should be transferred at any point during the burn. [20.82]

C. TEST PROCEDURES/CHECKLISTS

1. LM AOH paragraph 4.10.1, "DPS Thrust Program (P40) with AGS Follow-Up/ In Control"

2. CSM AOH paragraph 4.6.2, "CSM Rendezvous Navigation", steps 1 through 7

3. FCAC, "P20 Rendezvous Navigation", G2-15

4. LM AOH paragraph 4.6.3.2, "Landing Radar Power Up"

D. DATA REQUIREMENTS

1. Flight Crew Reports/Logs

   a. Confirm that false LR lock did not occur. [16.14] (HD)

b. Comments on adequacy of procedures necessary to accomplish the DOI. [11.15] (M)

c. Comments on PGNCS performance during DOI. [11.15] (HD)

d. CSM pilot comments on LM tracking with SXT during LM descent including GET of loss of view. [20.86] (HD)

e. Comments on any significant unexpected visual phenomena. [20.86] (M)

f. Record LR antenna temperature at end of DPS burn and two minutes later. [16.14] (HD)

g. Comments on adequacy of LM displays, onboard procedures and onboard charts used to perform guidance monitor functions during lunar orbit operations. [20.82] (M)

h. Comments on adequacy and clarity of MSFN data concerning PGNCS/AGS residuals during lunar orbit operations as furnished by voice link to the LM. [20.82] (M)

i. Comments on adequacy and clarity of GNCS and VHF derived range rate data as furnished by voice link from the CM to the LM. [20.82] (M)

2. Ground Support

a. LM TM LBR [11.15, 13.4-1, 16.14] (M), recorded on DSE

b. BET LM [11.15, 20.86] (M); BET CSM/LM [20.82] (HD); [20.86] (M)

c. Flight Director's reports of timeline and/or procedural difficulties. (M)

d. Real time S-band ranging data from LM. [20.82, 20.86] (M)

e. Real time S-band ranging data from CSM. [20.82, 20.86] (HD)

f. MSFN doppler data during powered phases. [20.82, 20.86] (M)

g. CSM TM HBR. [20.86] (M)

NEAR LUNAR SURFACE ACTIVITY

A. TEST OBJECTIVES

P16.10-3 Evaluate Steerable Antenna During Simulated "G" Descent Maneuvers
P16.14-1 Lock on for Landing Radar Beams and Generation of Velocity/Altitude Data
S20.86-4 Extent/Severity of Washout When Viewing the Lunar Surface from the LM

B. TEST REQUIREMENTS

1. Landing radar to be operated during the 200 sec. period prior to and during the 200 sec. period after pericynthion.

   a. LR antenna in position 2. [16.14]

   b. Constant pitch rotation rate of .052 deg/sec. (Lunar Orb. Rate). [16.14]

   c. LM +X axis vertical, +Z axis forward, 0 degrees yaw. [16.14]

   d. Roll angle 0 ($\pm$1) degree. [16.14]

   e. Altitude above lunar surface not to exceed 10 NM. [16.14]

   f. Steerable antenna operational procedures to be exercised during 180° roll face up and 90° pitch up to local vertical. [16.10]

2. Commander to observe lunar surface near point of closest approach. [20.86]

C. TEST PROCEDURES/CHECKLISTS

1. LM AOH paragraph 4.6.3.2, "Landing Radar Power-Up"

2. LM AOH paragraph 4.6.3.4, "Landing Radar Checkout"

D. DATA REQUIREMENTS

1. Flight Crew Reports/Logs

   a. Commander comments on extent and severity of observed surface washout. [20.86] (M)

   b. LPD coordinates defining the area of loss of useful detail and time of observation. [20.86] (M)

   c. Data TBD for the steerable antenna test. [16.10] (M)

2. Ground Support

   a. BET [16.14] (M)

   b. LM TM HBR [16.14] (M)

   c. LM TM LBR [16.14] (M)

   d. MSFN records of received S-band signal strength. [16.10] (M)

NEAR LUNAR SURFACE ACTIVITY

P16.10 LM/MSFN Comm Lunar Distance
P16.14 Landing Radar
S20.86 Lunar Surface Washout

REQUIRED

LR Powered Up
Ordeal - Orb Rate
Steerable Antenna - MSFN Acquisition
To - Pericynthion
Antenna Position - 2

PROCEDURE

To -900 Sec. Acquire MSFN (Steerable Antenna)
Yaw Right 180° (Face Down to Face Up)
Pitch Up to Within 10° of Local Vertical
Start Orbit Rate ≈ .052 Deg/Sec Pitch Down
To -400 Sec, Checkout LR
To -200 Sec, Pitch Down 10° To Local Vertical
Observe Lunar Surface Through Front Window
Use LPD Markings to Designate Washout Area
Record Washout Area Coordinates and Time Observed

			TO				DEG.				HRS.
			TO				AHEAD	X			MIN.
							BEHIND	X			SEC.

To +200 Sec, Pitch Down 90° (Face Down)
Observe Landing Site (Photographs HD)
Terminate LR Test
Terminate Orbit Rate
To +600 Sec, Mnvr to Phasing Burn Attitude

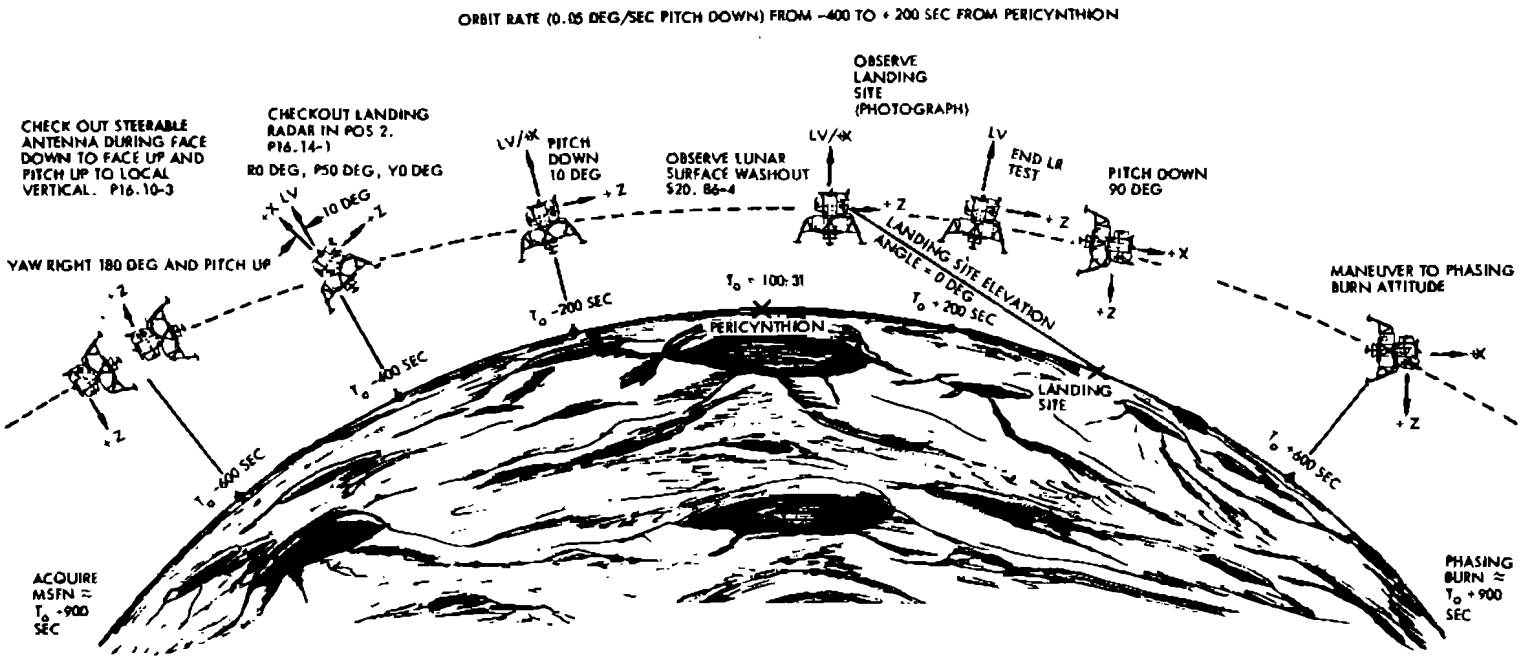

FIGURE 4-2 NEAR LUNAR SURFACE ACTIVITY

PHASING

A. TEST OBJECTIVES

P11.15-1 Capability of the PGNCS to Execute a DPS High Thrust Level Undocked Maneuver
S11.17-3 Overall PGNCS Errors During Thrusting Maneuvers

S12.6-1 AGS Overall Inertial Sensor Performance During an Undocked DPS Burn at Fixed Throttle
S13.14-1 Supercritical Helium Pressure Profile
S16.14-2 No Velocity/Altimeter Frequency Tracker Lock On to Spurious Doppler Signals
S20.82-1 Ground Monitoring of LM PGNCS/AGS
S20.82-2 Crew Monitoring of LM PGNCS/AGS

B. TEST REQUIREMENTS

1. At least 15 seconds of phasing DPS burn to be performed at a thrust level of 40 percent or higher, [11.15] with fixed throttle. [12.6].

2. AGS to be aligned to PGNCS prior to DPS burn. [12.6]

3. AGS sensor performance data and LM IMU performance data to be acquired during the DPS burn at fixed throttle point. [11.17, 12.6]

4. LR to be operated in position 2 during the DPS burn. [16.14]

5. MCC data, displays, procedures and computations shall be utilized in support monitoring of LM PGNCS/AGS performance to permit recommending guidance transfer if necessary in real time. [20.82]

6. LM crew displays, procedures and computational aids shall be used in monitoring LM PGNCS/AGS performance to determine if guidance should be transferred at any point during the burn. [20.82]

7. MSFN coverage. [11.17, 11.15]

C. TEST PROCEDURES/CHECKLISTS

1. LM AOH paragraph 4.10.1, "DPS Thrust Program (P40) With AGS Follow-Up/ In Control"

2. LM AOH paragraph 4.9.2.1, "PGNCS/AGS Align"

3. LM AOH paragraph 4.6.3.2, "Landing Radar Power Up"

D. DATA REQUIREMENTS

1. Flight Crew Reports/Logs

   a. Comments on adequacy of procedures necessary to accomplish the high thrust maneuver. [11.15] (M)

   b. Comments on PGNCS performance during the high thrust maneuver and on control response during start and throttle up periods. [11.15] (HD)

   c. Confirm that false LR lock did not occur. [16.14] (HD)

   d. Record LR antenna temperature at end of DPS burn and two minutes later. [16.14] (HD)

   e. Comments on adequacy of LM displays, onboard procedures and onboard charts used to perform guidance monitor functions during lunar orbit operations. [20.82] (M)

   f. Comments on adequacy and clarity of MSFN data concerning PGNCS/AGS residuals during lunar orbit operations as furnished by voice link to the LM. [20.82] (M)

   g. Comments on adequacy and clarity of GNCS and VHF derived range rate data as furnished by voice link from the CM to the LM. [20.82] (M)

2. Ground Support

   a. MSFN tracking 60 seconds prior to, during and 60 seconds after the high thrust maneuver. [11.15] (M)

   b. BET LM [11.15] (M); BET CSM/LM [20.82] (HD)

   c. LM TM HBR [11.17, 11.15, 12.6, 16.14, 20.82] (M)

   d. LM TM LBR [13.14-1, 16.14, 20.82] (M)

   e. Flight Director reports of timeline/procedural difficulties. (M)

   f. Real time S-band ranging data from LM. [20.82] (M)

   g. Real time S-band ranging data from CSM. [20.82] (HD)

   h. MSFN doppler data during powered phases. [20.82] (M)

   i. AGS/PGNCS downlink data on uninterrupted TM for at least 5 minutes during drifting flight prior to phasing with astronaut motions minimal. [12.6] (M)

INSERTION AND RENDEZVOUS

A. TEST OBJECTIVES

S12.10-1	Capability of AGS to Perform Guidance Functions Required to Accomplish a CFP Rendezvous
S12.10-2	AGS/CES Performance During an RCS ΔV Maneuver
S16.15-1	RR Capability of Monitoring Lock Near Maximum Range
S16.15-2	Accuracy of RR Range Data Obtained Near Maximum Range
S16.15-3	Accuracy of RR Range Rate Data Obtained Near Maximum Range
S16.15-4	RR Tracking Angle Data Near Maximum Range
S16.15-5	LM -X RCS Plume Effects On RR at Maximum Range
S20.77-1	Accuracy of VHF Ranging
S20.78-1	Demonstrate Nominal LM Rendezvous in Lunar Orbit
S20.78-2	Update Simulations Data for Nominal LLM Rendezvous
S20.82-1	Ground Monitoring of LM PGNCS/AGS
S20.82-2	Crew Monitoring of LM PGNCS/AGS
S20.86-2	Optical Tracking of LM by CSM Pilot During LM Ascent From 50,000 Feet
S20.86-3	Unusual Visual Phenomena Observed by CSM Pilot During LM Ascent From 50,000 Feet

B. TEST REQUIREMENTS

1. AGS to be aligned to PGNCS per "PGNCS/AGS Align" prior to insertion. [12.10]

2. AGS to be updated per "AGS Initialization Routine (R47)" prior to APS insertion burn. [12.10]

3. RR to be operated as much as feasible with SC separation distance between 350 and 450 NM. [16.15]

4. LM/CSM orientation at a separation of at least 300 NM to be such that the LM RR beam will illuminate the CSM transponder beam. [16.15]

5. LM -X RCS engines 1U and 4U to be fired at least once while the RR is tracking the CSM transponder at a range of 300 to 400 NM. [16.15]

6. Solutions for all rendezvous maneuvers through TPF to be computed by PGNCS, MSFN, GNCS and AGS. [12.10]

7. All PGNCS, AGS, GNCS solutions for the CFP maneuvers will be compared to MSFN solutions prior to ΔV. [20.78] (CSI not implemented)

8. PGNCS solutions to be used for targeting all burns. [12.10, 20.78]

9. All burns except CDH under PGNCS control. [20.78]

10. CDH burn to be under AGS/CES control. [12.10]

11. AGS state vector to be updated every 3 minutes from CDH +10 minutes to TPI. [12.10]

12. Prior to TPI, AGS to be updated for the last time. [12.10]

13. AGS will not be used as a reference post TPI. [12.10]

14. MCC data, displays, procedures and computations shall be utilized in support monitoring of LM PGNCS/AGS performance to permit recommending guidance transfer if necessary in real time. [20.82]

15. LM crew displays, procedures and computational aids shall be used in monitoring LM PGNCS/AGS performance to determine if guidance should be transferred at any point during the burn. [20.82]

16. CSM pilot to track LM with SXT from insertion through Rendezvous. [20.86]

17. DSE on HBR for all burns conducted during MSFN LOS. [20.77]

18. VHF ranging required during tracking except during DPS/APS burns conducted outside the MSFN line-of-sight. [20.77, 20.82, 20.86]

C. TEST PROCEDURES/CHECKLISTS

1. LM AOH paragraph 4.9.2.1, "PGNCS/AGS Align"

2. LM AOH paragraph 4.6.1.18, "AGS Initialization Routine (R47)"

3. LM AOH paragragh 4.8.2.2, "AGS Manual Rendezvous Radar LM State Vector Update"

4. CSM AOH paragràph 4.6, "Rendezvous"

5. LM AOH paragraph 4.6.3.1, "Rendezvous Radar Power Up"

6. CSM AOH paragraph 4.7.6.9, "Rendezvous Transponder Activation and Self Test"

7. MSC Document, "LM Rendezvous Procedures F Mission"

8. FCAC, "P17 TPI Search or P77 LM TPI Search", G2-14

9. FCAC, "P20 Rendezvous Navigation", G2-15

10. FCAC,"P34 TPI Prethrust (P74 LM)", G2-38

11. FCAC, "P35 TPM Prethrust (P75 LM)", G2-39

12. FCAC, "P38 SOR Targeting (P78 LM)", G2-42

13. FCAC, "P39 Stable Orbit Mid (P79 LM)", G2-43

14. FCAC, "V83 Rndz Parameter Display #1", G2-73

15. FCAC, "V85 Rndz Parameter Display #2", G2-74

16. FCAC, "V90 Out of Plane Display", G2-75

D. DATA REQUIREMENTS

1. Flight Crew Reports/Logs

a. Comments on adequacy of AGS/CES procedures and performance during the CDH burn. [12.10] (HD)

b. Comments on ability to maintain RR lock at a range greater than 350 NM. [16.15] (HD)

c. GET ± 1 minute at any deliberate break of RR lock. [16.15] (M)

d. Min/Max transponder AGC voltage readings during LM -X RCS firings. [16.15] (HD)

e. Comments on planned and actual crew procedures used. [20.78] (M)

f. Comments on AGS & RR performance. [20.78] (M)

g. Comments on PGNCS & RR performance. [20.78] (M)

h. Comments on single crewmember LM rendezvous capability. [20.78] (M)

i. Comments on usefulness of CSM rendezvous beacon light. [20.78] (M)

j. CSM crewman comments on adequacy of rendezvous procedures using VHF ranging and optics. [20.77] (M)

k. Rendezvous targeting solution data as recorded by the CSM and LM crewman. [20.77] (M)

l. Comments on adequacy of LM displays, onboard procedures and onboard charts used to perform guidance monitor functions during lunar orbit operations. [20.82] (M)

m. Comments on adequacy and clarity of MSFN data concerning PGNCS/AGS residuals during lunar orbit operations as furnished by voice link to the LM. [20.82] (M)

n. Comments on adequacy and clarity of GNCS and VHF derived range rate data as furnished by voice link from the CM to the LM. [20.82] (M)

o. Comments on LM tracking with SXT. [20.86] (HD)

p. Comments on significant unexpected visual phenomena. [20.86] (M)

2. Ground Support

a. BET of CSM and LM [16.15, 20.77, 20.78, 20.86] (M); [12.10, 20.82] (HD)

b. MSFN tracking data prior to, during and after CDH burn. [12.10] (M)

c. Flight Director's Post Mission Report. [20.78] (M)

d. LM TM HBR [12.10, 16.15, 20.78, 20.82] (M)

e. LM TM LBR [12.10, 20.82] (M); [16.15, 20.78] (HD)

f. Real time S-band ranging data from LM. [20.82, 20.86] (M)

g. Real time S-band ranging data from CSM. [20.82, 20.86] (HD)

h. MSFN doppler data during powered phases. [20.82, 20.86] (M)

i. CSM TM LBR [12.10, 16.15, 20.78] (M); [20.82] (HD)

j. CSM TM HBR [20.86] (M)

k. MSFN-RTCC trajectory profile. [20.77] (M)

STATION KEEPING

A. TEST OBJECTIVES

S12.8-1 AGS Automatic Attitude Hold - Min. Deadband
S12.8-2 AGS Automatic Attitude Hold - Max. Deadband
S12.8-3 Deleted
S12.8-4 Deleted
S12.8-5 AGS Manual Attitude Control - Pulsed Mode
S12.8-6 AGS Manual Attitude Control - Proportional Rate
S12.8-7 AGS Manual Translation Control
S12.8-8 RCS Propellant Usage During AGS Control
P20.78-2 Update Simulations Data for Nominal LLM Rendezvous

B. TEST REQUIREMENTS

1. AGS/CES attitude hold/control and translation to be demonstrated with a staged LM. [12.8]

2. MSFN coverage required for all modes. [12.8]

3. The following modes are to be demonstrated during normal operation or as special tests.

   a. Automatic hold in minimum deadband. MSFN coverage required with HBR for 0.5 minute. It is HD that the vehicle rates exceed 1 deg/sec in all axes prior to enabling attitude hold. [12.8]

   b. Automatic hold in maximum deadband. MSFN coverage required with HBR for 5 minutes. It is HD that the vehicle rates exceed 1 deg/sec in all axes prior to enabling attitude hold. [12.8]

   c. Manual attitude control using minimum pulse mode. [12.8]

      (1) Two jets operation, pitch and roll.

      (2) Four jets operation, yaw.

   d. Manual attitude control using proportional rate command in all axes (+ and -). [12.8]

   e. Manual translation control in + and - axes using THC. [12.8]

C. TEST PROCEDURES/CHECKLISTS

1. LM AOH paragraph 4.10.5, "AGS RCS Axis-by-Axis Thrust"

2. LM AOH Paragraph 4.5.1.6 "AGS Attitude Hold/Rate Command

D. DATA REQUIREMENTS

1. Flight Crew Reports/Logs

   a. Initial body rates prior to auto attitude control. [12.8] (M)

   b. Time auto attitude hold demonstration/periods begin. [12.8] (M)

   c. Time interval of attitude error zero crossings in each axis for the min/max deadband attitude hold demonstrations. [12.8] (M)

   d. Comments on the success of controlling the S/C in each of the mannual attitude control modes. [12.8] (M)

   e. Comments on the success of manually controlling the S/C during the translation maneuver. [12.8] (M)

   f. Comments regarding any unusual torques or venting detected. [12.8] (HD)

2. Ground Support

   a. LM TM HBR [12.8] (M)

   b. LM TM LBR [12.8] (M)

   c. BET CSM/LM [20.78] (M)

AGS CONTROL AND MANEUVER CAPABILITY

S12.8 AGS/CES Attitude/Translation Control

Required:

LM Staged
TM - HBR
AGS Control

Demonstrate the Following:

a) Automatic attitude hold - Min Dbnd
Max Dbnd

b) Manual attitude control - Prop Rate
Pulse Mode

c) Manual translation control

Procedure

Guidance Control - AGS
Mode Control - Attitude Hold
Attitude Control R, P, Y - Mode Cont
Deadband - Max
ACA - Mnvr S/C to any New Attitude. Exceed 1.0 Deg/Sec. in All Axis During Maneuver
Start Attitude Hold
GET ___ ___ ___ : ___ ___
Allow 5 Min. Attitude Hold With Continuous TM Coverage
Deadband - Min
ACA - Maneuver S/C To Any New Attitude. Exceed 1°/Sec. In All Axis During Maneuver
Start Attitude Hold
GET ___ ___ ___ : ___ ___
Allow 0.5 Min. Attitude Hold With Continuous TM Coverage
Attitude Control R, P, Y - Pulse
ACA - Maneuver S/C About 3 Axis (Free Drift)
Attitude Control, R, P, Y - Mode Control
TTCA Lever - Down
TTCA - Translate S/C Along All 3 Axis In The + and - Directions

APS BURN TO DEPLETION

A. TEST OBJECTIVES

S11.17-3 Overall PGNCS Errors During Thrusting Maneuvers
S12.9-1 AGS Controlled APS Burn Over An Extended Range Of Inertias
S12.9-2 Deleted
S12.9-3 RCS Fuel Consumption
S13.13-1 APS Performance Characteristics
S13.13-2 APS Propellant Depletion Shutdown Hazard Determination

B. TEST REQUIREMENTS

1. LM IMU performance data to be obtained by TM. [11.17]

2. Crew to preset LM switching prior to leaving LM for subsequent MCC control. [12.9]

   a. Set mode control switch to AUTO.

   b. Close the ABORT switch.

   c. Set AGS DEDA address 616 to 0.

3. PGNCS to be programmed as if it were controlling the burn. External ΔV prethrust program P30 will be called and targeting parameter input VIA the uplink. P42 will be called prior to initiation of the burn. [12.9]

4. Continuous tracking and telemetry data are required for a delta velocity of at least 1000 feet per second. [12.9]

5. The APS burn will be AGS controlled to depletion with the ascent engine operating continuously for a minimum duration of 100 seconds. [13.13]

C. TEST PROCEDURES/CHECKLISTS

1. LM AOH paragraph 4.10.6, "APS Burn to Depletion"

D. DATA REQUIREMENTS

1. LM TM HBR [11.17, 13.13] (M)

2. LM TM LBR [12.9, 13.13] (M)

3. BET [12.9, 13.13] (M)

4. Preflight data on isolation valve inlet pressures and tank temps from servicing to launch. [13.13] (M)

TELECOMMUNICATIONS

A. TEST OBJECTIVES

S6.9-1 CSM High Gain Antenna Reflectivity with CSM/LM Docked
P16.10-1 LM Steerable Antenna Comm Modes at Lunar Distance, Docked/Undocked
P16.10-2 Verify LM Steerable Antenna on Target Gain
P16.10-3 Evaluate Steerable Antenna Procedures During Maneuvers That Simulate Descent to Lunar Surface
S16.12-1 LM Omni Antenna Comm Modes at Lunar Distance, Docked/Undocked
S16.17-1 CSM/LM/MSFN Simultaneous Voice Communications Using S-Band & VHF
S16.17-2 LM/MSFN/CSM Voice Conference via S-Band using MSFN as Voice Relay
S16.17-3 LM/CSM/MSFN Voice Conference via S-Band and VHF using CSM as Voice Relay
S16.17-4 Simultaneous LM Voice/LBR Transmission to CSM with CSM Recording/Dumping to MSFN
S16.17-5 LM/CSM via VHF, LM/MSFN via S-Band, LM Relay.

B. TEST REQUIREMENTS

1. Lunar distance or equivalent is defined as: [6.9]

   a. 200K NM with 85' ground antenna.

   b. 110K NM with 30' ground antenna cooled.

   c. 70K NM with 30' ground antenna uncooled.

2. Manual acquisition will be demonstrated using wide beam width. [6.9]

3. Automatic tracking will be demonstrated with the CSM high gain antenna using wide, medium and narrow beamwidths. [6.9]

4.

Tests	Signal Combination (M)
a. Reflectivity Lunar Distance or Equivalent [6.9] (3 designated attitudes)	7.8
b. LM Steerable Antenna Lunar Distance [16.10]	6.2, 8.4 and 6.7
c. LM Omni Lunar Distance [16.12]	6.4, 6.1, 6.15 and 6.2

5. LM steerable antenna data will be obtained to verify on target gain at lunar distance. [16.10]

6. LM steerable antenna operational procedures will be performed to simulate maneuvers during LM descent to the lunar surface. [16.10]

7. At least one signal combination while docked and at least one signal combination while undocked. [16.10]

TELECOMMUNICATIONS

A. TEST OBJECTIVES

S6.9-1 CSM High Gain Antenna Reflectivity with CSM/LM Docked
P16.10-1 LM Steerable Antenna Comm Modes at Lunar Distance, Docked/Undocked
P16.10-2 Verify LM Steerable Antenna on Target Gain
P16.10-3 Evaluate Steerable Antenna Procedures During Maneuvers That Simulate Descent to Lunar Surface
S16.12-1 LM Omni Antenna Comm Modes at Lunar Distance, Docked/Undocked
S16.17-1 CSM/LM/MSFN Simultaneous Voice Communications Using S-Band & VHF
S16.17-2 LM/MSFN/CSM Voice Conference via S-Band using MSFN as Voice Relay
S16.17-3 LM/CSM/MSFN Voice Conference via S-Band and VHF using CSM as Voice Relay
S16.17-4 Simultaneous LM Voice/LBR Transmission to CSM with CSM Recording/Dumping to MSFN
S16.17-5 LM/CSM via VHF, LM/MSFN via S-Band, LM Relay.

B. TEST REQUIREMENTS

1. Lunar distance or equivalent is defined as: [6.9]

   a. 200K NM with 85' ground antenna.

   b. 110K NM with 30' ground antenna cooled.

   c. 70K NM with 30' ground antenna uncooled.

2. Manual acquisition will be demonstrated using wide beam width. [6.9]

3. Automatic tracking will be demonstrated with the CSM high gain antenna using wide, medium and narrow beamwidths. [6.9]

4.

Tests	Signal Combination (M)
a. Reflectivity Lunar Distance or Equivalent [6.9] (3 designated attitudes)	7.8
b. LM Steerable Antenna Lunar Distance [16.10]	6.2, 8.4 and 6.7
c. LM Omni Lunar Distance [16.12]	6.4, 6.1, 6.15 and 6.2

5. LM steerable antenna data will be obtained to verify on target gain at lunar distance. [16.10]

6. LM steerable antenna operational procedures will be performed to simulate maneuvers during LM descent to the lunar surface. [16.10]

7. At least one signal combination while docked and at least one signal combination while undocked. [16.10]

8. Simultaneous voice communications between the CSM and MSFN by S-band and between the LM and MSFN via S-band and between the LM and CSM via VHF will be demonstrated in the undocked configuration, using the S-band steerable antenna, CSM HI gain antenna and VHF inflight antennas. [16.17]

9. Voice conference capability among the LM, MSFN and the CSM will be demonstrated in the docked configuration using the LM S-band steerable and CSM High Gain antennas with MSFN acting as voice relay. [16.17]

10. Voice conference communications among the LM, CSM and MSFN will be demonstrated in the docked configuration using VHF voice communications between the LM and the CSM with CSM providing voice relay to MSFN via S-band. Use VHF inflight and CSM HI Gain antenna. [16.17]

11. LM voice will be transmitted via VHF-A simultaneous with LBR TM via VHF-B. The LM voice and LBR will be recorded by the CSM DSE. The LM TM data will be dumped by the CSM to MSFN via S-band FM mode 3. The LM voice data will be dumped by the CSM to MSFN via S-band FM mode 2. Use VHF inflight and CSM HI Gain antenna. [16.17]

12. Voice conference communications among the CSM, LM and MSFN will be demonstrated in the docked configuration using VHF voice between the CSM and LM and S-band voice between the LM and MSFN with LM relay. Use VHF inflight antennas and the LM steerable antenna. [16.17]

C. TEST PROCEDURES/CHECKLISTS

1. CSM AOH paragraph 4.7.6, "Telecommunications"

2. FCAC, "Telecomm Procedures", S2-19
3. LM AOH paragraph 4.13.2, "Communications"

D. DATA REQUIREMENTS

1. Flight Crew Reports/Logs

a. Comments on adequacy of communications quality and procedures. [6.9, 16.10, 16.17] (M) [16.12] (HD)

b. Time/Pitch/Yaw/S-Band antenna information to be recorded during the S/C reflectivity tests. [6.9] (M)

c. Data TBD for the steerable antenna pattern coverage test. [16.10] (M)

d. Data acquired during simulated LM descent to lunar surface maneuvers concerning S-Band antenna procedures. [16.10] (M)

e. LM tape recording of MSFN voice. [16.10] (M)

f. LM recording of CSM, MSFN and MSFN relayed to CSM voice. [16.17] (M)

2. Ground Support

   a. BET CSM [6.9] (M)

   b. Post Launch Instrumentation Message containing information on adequacy of CSM/MSFN communication procedures and quality. [6.9, 16.10, 16.12] (HD)

   c. Unified S-band telemetry bit stream. [16.10, 16.12] (M)

   d. Unified S-band tracking data processor output. [6.9, 16.10] (M) [16.12] (HD)

   e. BET LM [16.10] (M) [16.12] (HD)

   f. Flight Director's Post-Mission Report [6.9] (M) [16.10, 16.12] (M)

   g. MSFN tape recording of LM voice. [16.10, 16.12, 16.17] (M)

   h. MSFN records of received S-band signal strength. [16.10, 16.12] (M)

   i. LM TM HBR [16.10, 16.12] (M)

   j. LM TM LBR [16.10, 16.12] (M)

   k. MSFN tape recording of LM emergency key mode. [16.12] (HD)

   l. MSFN recording of CSM voice. [16.17] (M)

   m. MSFN recording of CSM playback of LM LBR TM. [16.17] (M)

   n. MSFN recording of CSM playback of LM voice. [16.17] (M)

   o. MSFN recording of the LM voice relayed from the CSM. [16.17] (M)

   p. LM recording of MSFN voice. [16.17] (M)

   q. LM recording of CSM voice. [16.17] (M)

   r. LM recording of MSFN voice for CSM. [16.17] (M)

CSM COMMUNICATIONS TEST

S6.9 CSM High Gain Antenna Reflectivity

PROCEDURE

MNVR R 71.5 P 323.8 Y 318.5 (PTC REFSMMAT)

R _____ P _____ Y _____

COMMUNICATIONS MODE 7.8

SWITCH CONFIGURATION - BASIC, EXCEPT

S-BAND RANGING - OFF

SET UP HGA OPERATION

(HGA pitch -10^{o}, yaw 340^{o})

ATTITUDE HOLD - MAX D/B, LOW RATE

STEPS 1 THROUGH 7, COLUMN 1

1. VERIFY HGA TWO WAY LOCK

	COLUMN	1	2	3
2. MNVR S/C TO -	PITCH (HGA METER)	-10^{o}	-20^{o}	-30^{o}
	YAW (HGA METER)	340^{o}	350^{o}	360^{o}
3. SET HGA CNTL POSITION -	PITCH	-10^{o}	-20^{o}	-30^{o}
	YAW	320^{o}	330^{o}	340^{o}

4. BEAM WIDTH - WIDE, TRACK SW - MANUAL
   (when HGA indicators compare to cntl settings)
5. TRACK SW - AUTO, BEAM WIDTH - NARROW
6. RECORD:

COLUMN	1	2	3
M16 DEGREES PITCH	X _ _	X _ _	X _ _
M18 DEGREES YAW	_ _ _	_ _ _	_ _ _
M17 PERCENT SIGNAL	X _ _	X _ _	X _ _

7. EVALUATE VOICE COMMUNICATIONS
   REPEAT STEPS 1. THROUGH 7. COLUMN 2
   REPEAT STEPS 1. THROUGH 7. COLUMN 3
   RETURN TO COAST AWAKE COMMUNICATIONS MODE

LM S-BAND COMMUNICATIONS TESTS

P16.10 LM STEERABLE ANTENNA LUNAR DISTANCE

REQUIRED:

LM - S Band/Steerable Antenna
MSFN - Line of Sight
SW Configuration - LM Basic Per Crew Checklist

PROCEDURE

SIGNAL COMB	PANEL	SWITCH POSITION
6.2		BASIC
8.4		BASIC, Except
	12	Updata Link - VOICE BU
	12	Voice - DN VOICE BU
	12	S-Bd Range - OFF
	12	Audio Cont - BU
	12	TLM PCM - LOW
	12	S-Bd Pwr Ampl - OFF
	12	TLM BIOMED - OFF
	12	ICS Volume - AS REQD
	8	S-Bd - OFF
	8	VHF A - OFF
6.7		BASIC, Except
	12	S-Bd Range - OFF
	12	TLM PCM - LOW
	12	S-Bd Pwr Ampl - OFF

LM S-BAND COMMUNICATIONS TESTS

S16.12 LM OMNI ANTENNA LUNAR DISTANCE

REQUIRED

LM - OMNI Fwd or Aft
MSFN - Line of Sight
SW Configuration - LM Basic Per Crew Checklist

PROCEDURE

SIGNAL COMB	PANEL	SWITCH POSITION
6.4		BASIC, Except
	12	*S-Bd Antenna - FWD OR AFT
	12	TLM PCM - LOW
	12	Voice - DN VOICE BU
	12	TLM BIOMED - OFF
	12	S-Bd Range - OFF
6.1		BASIC, Except
	12	*S-Bd Antenna - FWD OR AFT
	12	S-Bd Range - OFF

PROCEDURE CONTD.

SIGNAL COMB	PANEL	SWITCH POSITION
6.15		BASIC, Except
	12	*S-Bd Antenna - FWD OR AFT
	12	Voice - OFF
	12	BIOMED - OFF
6.2		BASIC, Except
	12	*S-Bd Antenna - FWD OR AFT

* Maneuver LM to Permit Optimum Communications With Either the Forward or Rear Omniantenna.

COMMUNICATIONS RELAY MODES

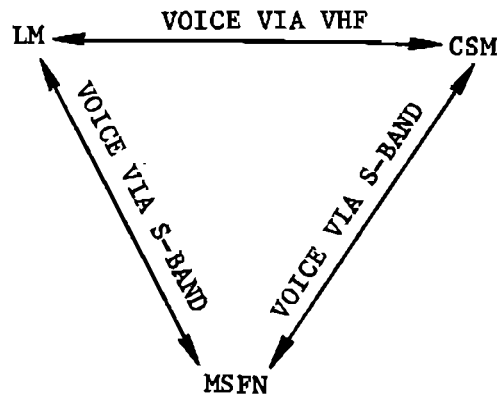
S16.17 LM/CSM/MSFN Voice/TM

REQUIRED

CSM - S-Band/VHF
LM - S-Band/VHF
MSFN - Line-of-Sight
SW. Configuration - CSM Basic Per Crew Checklist
LM Basic Per Crew Checklist

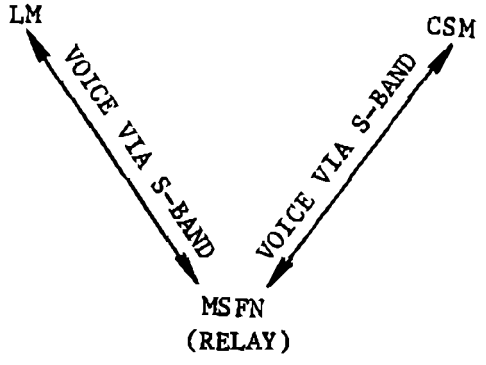
PROCEDURE

1.



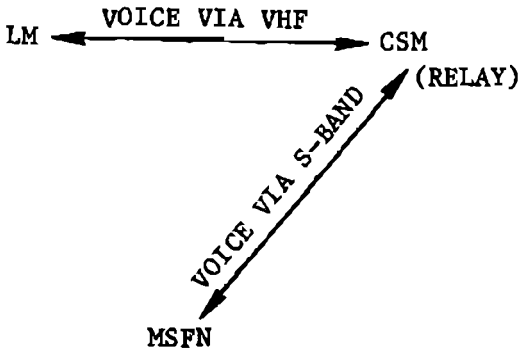
S/C	PANEL	SWITCH CONFIGURATION
CSM		BASIC
LM		BASIC

2.



S/C	PANEL	SWITCH CONFIGURATION
		BASIC, Except
CSM	10 or 9	VHF AM - OFF
LM	12	VHF A T/R - OFF
	8	VHF A T/R - OFF

3.

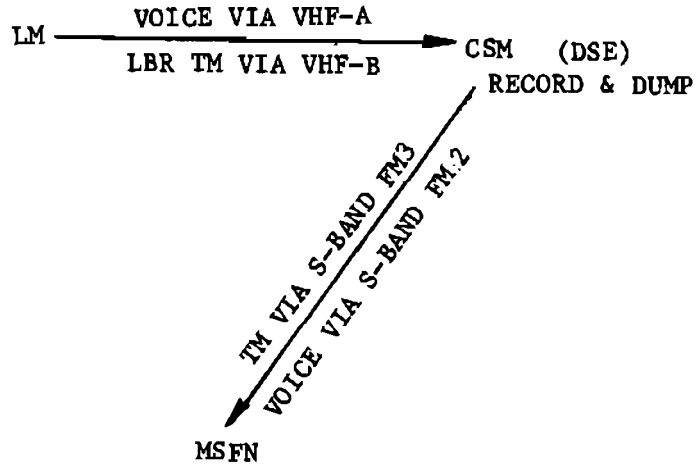


S/C	PANEL	SWITCH CONFIGURATION
		BASIC, Except
CSM	3	S-Bd Mode Voice - RELAY
	9	Mode - VOX
	10	Mode - VOX
	10	Control - BU
	10	S-Bd T/R - OFF
	10	VHF AM - T/R
	10	VOX Sense - 6

3. Continued

S/C	PANEL	SWITCH CONFIGURATION
CSM	10	VHF AMA - SIMPLEX
	10	Intercomm - OFF
LM	12	S-Bd T/R - OFF
	8	S-Bd T/R - OFF

4.



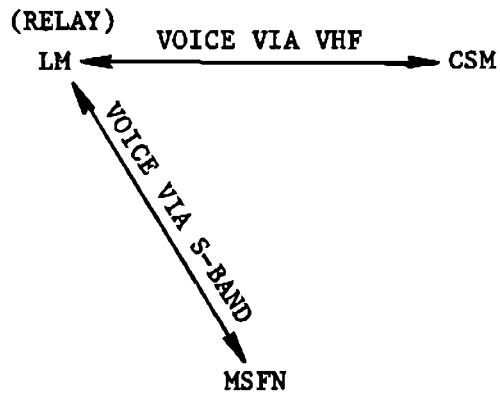
S/C	PANEL	SWITCH CONFIGURATION
		BASIC, Except
CSM	3	REWIND TAPE
	3	PCM BIT RATE - HIGH
	3	VHF AM RCV Only - B DATA (Wait 5 Min)
	3	PCM BIT Rate - LOW (Wait 5 Min)
	3	Tape Recorder - PLAY
	3	Tape Recorder - REWIND
	3	Tape Recorder - FWD (Wait 10 Min)
	3	Tape Recorder - REWIND (Rewind Complete)

(Continued)

4. Continued

S/C	PANEL	SWITCH CONFIGURATION
CSM	3	Tape Recorder - LM PCM
	3	Tape Recorder - FWD (Wait 10 Min)
LM	12	TLM PCM - LOW
	12	S-Bd T/R - OFF
	8	S-Bd T/R - OFF

5.



S/C	PANEL	SWITCH CONFIGURATION
		BASIC, Except
CSM	10 or 9	S-Bd T/R - OFF
	3	VHF B- DUPLEX
	3	VHF A - OFF
LM	8	VHF B - RCV
	8	Mode - VOX
	8	ICS T/R - OFF
	12	RELAY - ON
	12	Mode - VOX
	12	ICS T/R - OFF
	12	Audio Cont - BU
	12	VHF B RCVR - ON

LM CONSUMABLES

A. TEST OBJECTIVES

S20.83-1 Electrical Loads and Crew Procedures Affecting Demands on Batteries, Battery Capacity and Load Distribution
S20.83-2 Water/Oxygen Requirements Data
S20.83-3 LiOH Cartridge Requirements Data
S20.83-4 APS/DPS/RCS Propellant Requirements Data
S20.83-5 Crew Food Requirements Data

B. TEST REQUIREMENTS

1. Perform management and use of the EPS per the flight plan. [20.83]
2. Obtain data on water/oxygen consumption. [20.83]
3. Manage the replacement of LiOH cartridges per the flight plan. [20.83]
4. Manage the consumption of APS/DPS/RCS propellant as required. [20.83]
5. Utilize the food supply per the flight plan. [20.83]

C. TEST PROCEDURES/CHECKLISTS

1. LM AOH paragraph 4.13, "Subsystems Management"
2. FCAC: LM Subsystems Management

D. DATA REQUIREMENTS

1. Flight Crew Reports/Logs
   a. Deviations from the EP configuration (HD)
   b. LiOH log (M)
   c. Comments regarding crew comfort level (HD)
   d. Water Log (M)
   e. Food Log (HD)
2. Ground Support
   a. BET before and after APS/DPS burns (M)
   b. LM TM HBR (M)

PASSIVE TESTS

A. TEST OBJECTIVES

S7.26-1 TC System - Translunar and Transearth
S7.26-2 TC System - Lunar Orbit
S13.14-1 LM Supercritical Helium Pressure Profile
P20.66-1 Pre-LOI Through DOI Timeline
P20.66-2 Lunar Orbit Mission Timeline
S20.80-1 Ground Support for Lunar Mission

B. TEST REQUIREMENTS

1. All CM and LM crew procedures will be accomplished in the same manner, where feasible, as for the lunar landing mission. [20.66]

2. All CM and LM procedures will be accomplished within the same timeline as for the lunar landing mission from the pre-LOI preparation through DOI. [20.66]

3. MSFN will provide state vector update and targeting information for maneuvers. [20.80]

4. Translunar and transearth flight will be accomplished using the PTC modes identified under Passive Thermal Control. [7.26]

5. Lunar orbit flight will be accomplished in the CSM/LM docked and undocked configurations. [7.26]

6. LM supercritical helium pressure data will be acquired from LM activiation to LM staging. [13.14]

C. DATA REQUIREMENTS

1. Flight Crew Reports/Logs

   a. Recommended changes in procedures and/or equipment. [20.66] (M)

   b. Procedures requiring repeating or not accomplished. [20.66] (M)

2. Ground Support

   a. The Flight Director will assess the ground operational support and determine its adequacy for the entire mission. [20.80] (M)

   b. CSM TM HBR periodically to generate time history of temperatures during TL and TE phases. [7.26] (M)

   c. MSFN voice recordings of CSM/MSFN and LM/MSFN communications. [20.66] (HD)

d. LM TM HBR when LM is manned and activated while in lunar orbit of the front side of the moon. [7.26] (M)

e. LM TM LBR [13.14] (M)

TRANSEARTH INJECTION
